This report proposes to increase the reliability of some single-degree of freedom servo systems by providing a degraded mode of operation in the event of feedback sensor failure. Normally, the system is operated in a closed-loop feedback mode. During normal operation, information is continuously gathered on the disturbing forces encountered and their statistical variations from cycle-to-cycle. This information is used to design an open-loop controller that can take over in the event of sensor malfunction. An ideal closed-loop controller for this purpose is the modified bang-bang controller because the operating cycle for this controller is readily divided into three sections: acceleration, constant velocity, and deceleration. Disturbing forces can be estimated in the three sections. The s-mean and s-variance of the disturbing forces can then be used to design a conservative open-loop cycle. The cycle is conservative in that the target position for open-loop is less than the desired target position by an amount that yields a specified small probability of exceeding the desired target at some specified s-confidence level. The total cycle is then finished using a constant or cyclic motor force or other technique depending on the specific application. We successfully applied the developed techniques to the loading cycle of a large caliber tank ammunition autoloader. DTIC

TENSORIAL STRUCTURE OF A q-DEFORMED sp(4,R) SUPERALGEBRA
A. Georgieva Mar. 1993 16 p
(DE93-624808; IC-93/50) Avail: CASI HC A03/MF A01 (US Sales Only)

A supersymmetric quantum algebra is generated by irreducible tensor operators in respect to the algebra su(sub q)(2). The even generators are realized as tensor products of q-boson creation and annihilation operators, transforming as su(sub q)(2) spinors and acting as odd generators. In this way the transformation properties of all the algebra's generators in respect to the q-deformed algebra of the angular momentum are simultaneously preserved, which is important in view of future applications in physics. In the limit q yields 1, the classical Lie superalgebra sp(4,R) or the osp(1 4) is recovered. DOE

MULTIDIMENSIONAL GEOMETRIC QUANTIZATION AND U(1)-COVERING
Tran Vui Mar. 1993 7 p
(DE93-624770; IC-93/56) Avail: CASI HC A02/MF A01 (US Sales Only)

Our geometric construction of unitary representation is based on the Orbit Method of A.A. Kirillov, and some ideas of Do Ngoc Diep and M. Duflo for constructing the unitary dual of a connected and simple connected Lie group. We lift the character of the stabilizer to U(1)-covering via metaplectic representation. Applying the pairing of vacuum states suggested by P.L. Robinson and J.H. Rawnsley in Lagrangian positive polarizations, we get the following main results: Firstly, in the Bargmann-Segal model we account explicitly the integral kernel of the character. Secondly, we construct the induced unitary representations from a U(1)-admissible K-orbit. Lastly, we prove that the constructed representations coincide with the representations obtained from the multidimensional quantization. DOE

FINITE-DIMENSIONAL SINGLETONS OF THE QUANTUM ANTI DE SITTER ALGEBRA
V. K. Dobrev and P. J. Moylan (Pennsylvania State Univ., Abington.) Mar. 1933 12 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(DE93-624771; IC-93/59) Avail: CASI HC A03 (US Sales Only)

We obtain the positive-energy unitary irreducible representations of the q-deformed anti de Sitter algebra U(sub q)(so(3,2)) by deformation of the classical ones. When the deformation parameter q is N-the root of unity, all these unitary representations become finite-dimensional. Generically, their dimensions are smaller than of the corresponding finite-dimensional non-unitary representation of so(3,2). We discuss in detail the singleton representations, i.e. the Di and Rac. When N is odd the Di has dimension (N(sup 2) - 1)/2 and the Rac has dimension (N(sup 2) + 1)/2, while if N is even both the Di and Rac have dimension N(sup 2)/2. These dimensions are classical only for N = 3 when the Di and Rac are deformations of the two fundamental non-unitary representations of so(3,2). DOE

EXACT SOLUTION OF THE GENERALIZED TIME-DEPENDENT JAYNES-CUMMINGS HAMILTONIAN
J. L. Gruver, J. Aliaga, H. A. Cerdeira, and A. N. Proto Apr. 1993 16 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(DE93-624773; IC-93/76) Avail: Issuing Activity (Department of Energy (DOE)) (US Sales Only)

A time-dependent generalization of the Jaynes-Cummings Hamiltonian is studied using the maximum entropy formalism. The approach, related to a semi-Lie algebra, allows to find three different sets of physical relevant operators which describe the dynamics of the system for any temporal dependence. It is shown how the initial conditions of the operators are determined via the maximum entropy principle density operator, where the inclusion of the temperature turns the description of the problem into a thermodynamical one. The generalized time-independent Jaynes-Cummings Hamiltonian is exactly solved as a particular example. DOE

A REDUCTION OF THE GLOBALIZATION AND U(1)-COVERING
Tran Dao Dong Mar. 1993 16 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(DE93-624769; IC-93/55) Avail: CASI HC A03 (US Sales Only)

We suggest a reduction of the globalization and multidimensional quantization to the case of reductive Lie groups by lifting to U(1)-covering. Our construction is connected with M. Duflo's third method for algebraic groups. From a reductive datum of the given real algebraic Lie group we firstly construct geometric complexes with respect to U(1)-covering by using the unipotent positive distributions. Then we describe in terms of local cohomology the maximal globalization of Harish-Chandra modules which correspond to the geometric complexes. DOE

MULTIVARIATE WAVELET REPRESENTATIONS AND APPROXIMATIONS Final Report, 1 Jun. 1990 - 31 May 1993
Wolodymyr Madych 31 May 1993 31 p
(Grant AF-AFOSR-0311-90)
(AD-A269350; TR-5; AFOSR-93-0689TR) Avail: CASI HC A03/MF A01

The following work has been completed: The recovery of irregularly samples band-limited functions via tempered splines. Band limited functions can be recovered from their values on certain irregularly distributed discrete sampling sets as the limits of the piecewise polynomial spline interpolants when the order of the splines goes to infinity. This significant extension of the classical case when the sampling set is a lattice which was considered by L. Collatz, W. Quade, I. J. Schoenberg, and others. Orthogonality criteria for compactly supported scaling functions. The question of whether the integer translates of the scaling function constructed from a prescribed scaling sequency in the standard way are mutually orthogonal is quite subtle. The various conditions and the supporting arguments which are currently in the literature are very complicated. DTIC

APPLICATIONS OF AN ALGEBRAIC MONGE PROPERTY
W. W. Bein (American Airlines, Inc., Fort Worth, TX.), P. Brucker (Osnabrueck Univ., Germany.), and J. K. Park 1993 5 p Presented at the 3rd Twente Workshop on Graphs and Combinatorial Optimization, Enschede, Netherlands, 2-4 Jun. 1993
(Contract DE-AC04-76DP-00789)
(DE93-016869; SAND-93-1393C; CONF-9306216-1) Avail: CASI HC A01/MF A01

When restricted to cost arrays possessing the sum Monge property, many combinatorial optimization problems with sum objective functions become significantly easier to solve. Examples include the usual sum-objective-function versions of the assignment problem, the transportation problem, the traveling-salesman problem, and several shortest-path problems. Furthermore, the more general algebraic assignment and transportation problems, which are formulated in terms of an ordered commutative semigroup (H, *, (le)), are similarly easier to solve given cost arrays possessing the corresponding algebraic Monge property, which requires that for all i less than k and j less than l, a(i,j) * a(k,l) (le) a(i,l) * a(k,j). In this paper, we show that Monge-array results for two sum-of-edge-costs shortest-path problems can likewise be extended to a general algebraic setting, provided the problems' ordered commutative semigroup (H, *, (le)) satisfies one additional restriction. We also show how our algorithms can be modified to solve certain bottleneck shortest-path problems, even though the ordered commutative semigroup ((Re), max, (le)) naturally associated with bottleneck problems does not satisfy our additional restriction. We also provide improved algorithms for several other bottleneck combinatorial optimization problems whose cost arrays possess the strict bottleneck Monge property. Finally, we show how our bottleneck shortest-path techniques can be used to obtain fast algorithms for a variant of Hirschberg and Larmore's optimal paragraph formation problem, a processor-allocation problem first formulated by Bokhari, and a special case of the bottleneck traveling-salesman problem. AN ANNEALING APPROACH TO MULTI-FACILITY LOCATION PROBLEMS IN EUCLIDEAN SPACES
Francesco Maffioli and Giovanni Righini Mar. 1993 25 p Sponsored in part by Ministry of University and Scientific Research and Technology
(Rept-93-022; ETN-93-94572) Avail: Issuing Activity (Politecnico di Milano, Piazza Leonardo da Vinci 32, 20133 Milan, Italy)

A methodology for applying annealing techniques to multiresource allocation problems in euclidean spaces is presented. Three kinds of locations are considered: medians, barycenters, and centers. For such problems, iterative algorithms were developed in the past; they alternate allocation and location phases until they converge to locally optimal solutions. It is shown how to make such algorithms more robust by the application of annealing techniques. Some experimental results on problems in R squared are summarized to show the usefulness of the approach. ESA

HEURISTICS FROM NATURE FOR HARD COMBINATORIAL OPTIMIZATION PROBLEMS
A. Colorni, M. Dorigo, F. Maffioli, V. Maniezzo, Giovanni Righini, and M. Trubian 1993 57 p Sponsored in part by Ministry of University and Scientific Research and Technology and CNR
(Rept-93-025; ETN-93-94574) Avail: Issuing Activity (Politecnico di Milano, Piazza Leonardo da Vinci 32, 20133 Milan, Italy)

An attempt to describe the main characters of nondeterministic heuristic algorithms derived from nature, a border area between operations research and artificial intelligence, with applications to graph optimization problems, is made. Algorithms derive from physics, biology, social sciences, and are obtained by a certain amount of repeated trials, given by one or more 'agents' operating with a mechanism of competition-cooperation, with procedures of learning and modification of their internal model of the environment. Six parts are presented; each of them concerned with a class of heuristics from nature and its application (with a specific software) to an NP hard combinatorial optimization problem. Two general parts, devoted to an introduction of some general concepts of computational complexity and to a brief analysis, with a tentative classification, of heuristics from nature are provided. The following topics are considered: genetic algorithms with timetable problems, simulated annealing with dial-a-ride problems, sampling and clustering with communication spanning tree problems, tabu search with job-shop-scheduling problems, neural nets with p-median problems, and system with quadratic assignment problems. ESA

AN EXTENSION OF WOLOVICH'S DEFINITION OF EQUIVALENCE OF LINEAR SYSTEMS
N. P. Karampetakis (Aristotle Univ. of Thessaloniki, Greece.), A. C. Pugh, A. I. Vardulakis (Aristotle Univ. of Thessaloniki, Greece.), and G. E. Hayton (Hull Univ., England.) Feb. 1993 21 p Sponsored in part by Greek National Foundation
(MATHS-Rept-A-183; ETN-93-94494) Avail: CASI HC A03/MF A01

Wolovich's classical definition of equivalence for linear systems is extended to the generalized study of linear systems. This new kind of equivalence is an alternative characterization of a notion of equivalence for general dynamical systems. The development is a natural extension of the Wolovich ideas since generalized state space systems are the most simple form of system equations which can simultaneously exhibit finite and infinite frequency behavior. It is shown that this notion of equivalence again implies a number of desirable invariants and reduces to complete system equivalence when both systems are in generalized state space form. It is subsequently shown that this new kind of equivalence is identical to full system equivalence and so has the property of preserving the system's finite and infinite frequency structure. ESA

FUNCTIONAL ANALYSIS OF SUBELLIPTIC OPERATORS ON LIE GROUPS
A. F. M. terElst and D. W. Robinson Oct. 1992 27 p See also PB93-194785
(PB93-194793; RANA-92-14) Avail: CASI HC A03/MF A01

Let G be a Lie group with a left Haar measure dg and L the action of G as left translations on Lp(G; dg). Further, let H = dL(C) denote an m-th order subelliptic operator associated with L. The authors establish that for a large family of holomorphic functions f one can use the Cauchy representation to define functions f(H) of the operator H and that these functions are bounded operators if p is a member of (1, infinity). Similar conclusions hold on the spaces formed with respect to right Haar measure, or in any unitary representation. As an application, the authors show that the C(sup n)-subspaces of the left regular representations, or the unitary representations, have natural interpolation properties relative to the complex method. NUMERICAL METHODS FOR ONE-DIMENSIONAL HYPERBOLIC CONSERVATION LAWS
A. C. Berkenbosch, E. F. Kaasschieter, and J. H. M. tenThijeBoonkkamp Oct. 1992 53 p
(PB93-194801; RANA-92-15) Avail: CASI HC A04/MF A01

The paper contains a survey of some important numerical methods for one-dimensional hyperbolic conservation laws. Weak solutions of hyperbolic conservation laws are introduced and the concept of entropy stability is discussed. Furthermore, the Riemann problem for hyperbolic conservation laws is solved. An introduction to numerical methods is given for which important concepts such as conservativity, stability, and consistency are introduced. Godunov-type methods are elaborated for general systems of hyperbolic conservation laws. Finally, flux limiter methods are developed for the scalar non-linear conservation law. NTIS

ON A POSSIBLE ALGEBRA MORPHISM OF U(SUB q)(osp1/2) ONTO THE DEFORMED OSCILLATOR ALGEBRA W(SUB q)(N)
T. D. Palev and N. I. Stoilova Mar. 1993 9 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(DE93-629857; IC-93/54) Avail: CASI HC A02 (US Sales Only)

We formulate a conjecture, stating that the algebra of n pairs of deformed Bose creation and annihilation operators is a factor-algebra of U(sub q)(osp(1/2n)), considered as a Hopf algebra, and prove it for n=2 case. To this end we show that for any value of qU(sub q)(osp(1/4)) can be viewed as a superalgebra, freely generated by two pairs B(sub 1)(sup (+-)), B(sub 2)(sup (+-)) of deformed para-Bose operators. We write down all Hopf algebra relations, an analogue of the Cartan-Weyl basis, the 'commutation' relations between the generators and a basis in U(sub q)(osp(1/2n)) entirely in terms of B(sub 1)(sup (+-)), B(sub 2)(sup (+-)). From a special class of systems, a Schroedinger equation with impulse effect in Minkowski space field theory with time dependent boundary conditions, i.e. those of moving mirrors were used. The field theoretical approach for studying the properties of the vacuum starts from an analysis of the behavior of local field quantities in Minkowski space with uniformly moving mirrors. For the impulsive moving mirror model is the real process of interaction between the quantum field and the external mirror a subject to disturbances in its evolution acting in time very short compared with the entire duration of the process. The stability of the solution of the Schroedinger evolution equation for the process in the stability of the vacuum of Casimir is discussed. DOE

(DE93-629868; JINR-R-2-92-302) Avail: CASI HC A03 (US Sales Only)

The Schroedinger wave functions of the hydrogen atom with the harmonic potential are considered. The harmonic potential is the solution of the Laplace equation on the 3-sphere of radius R. For large R the wave functions correspond to the Coulomb wave functions of the hydrogen atom in the flat three-dimensional space. The decompositions of the Schroedinger wave functions in free solutions are constructed and their correspondence with the known expansions of the Coulomb functions over free ones in the three-dimensional space is established. A numerical methodology which determines the quality (or robustness) of a-posteriori error estimators is described. The methodology accounts precisely for the factors which affect the quality of error estimators for finite-element solutions of linear elliptic problems, namely, the local geometry of the grid and the structure of the solution. The methodology can be employed to check the robustness of any estimator for the complex grids which are used in engineering computations. DTIC

SPECTRAL ANALYSIS ON THE CANONICAL AUTOREGRESSIVE DECOMPOSITION Final Report, 1 Oct. 1990 - 30 Sep. 1992
Fadil Santosa 30 Sep. 1992 43 p
(Grant AF-AFOSR-0024-91)
(AD-A270083; AFOSR-93-0705TR) Avail: CASI HC A03/MF A01

Time series modeling as the sum of an autoregressive (AR) process and sinusoids is proposed. When the AR model order is infinite, it is called Canonical AutoRegressive Decomposition (CARD) and is equivalent to the Wold decomposition. Maximum likelihood estimation of the sinusoidal and AR parameters is shown to require minimization with respect to only the unknown frequencies. Although the estimation problem is nonlinear in the sinusoidal amplitudes and AR parameters, it was reduced to a linear least squares problem by using a nonlinear parameter transformation. A general class of signals for which such parameter transformations are applicable, thereby reducing estimator complexity drastically, is derived. This class includes sinusoids as well as polynomials and polynomial-times-exponential signals. The ideas are based on the theory of invariant subspaces for linear operators. CARD serves as a powerful modeling tool in signal plus noise settings and therefore finds application in a large variety of statistical signal processing problems. DTIC

FUZZY HYPERGRAPHS AND FUZZY INTERSECTION GRAPHS Ph.D. Thesis
William L. Craine Aug. 1993 86 p
(AD-A270303; AFIT/CI/CIA-93-18D) Avail: CASI HC A05/MF A01

We use methods and definitions from fuzzy set theory to generalize results concerning hypergraphs and intersection graphs. For each fuzzy structure defined, we use cut-level sets to define an associated sequence of crisp structures. The primary goal is then to determine what properties of the sequence of crisp structures characterize a given property of the fuzzy structure. In Chapter 2 we pay particular attention to the family of fuzzy transversals of a fuzzy hypergraph. We give an algorithmic method to construct fuzzy transversals. We also generalize the vertex coloring lemma of Berge providing a characterization of the family of all minimal fuzzy transversals of a fuzzy hypergraph. In Chapter 3 we use similar methods to define and characterize the family of vertex colorings of a fuzzy hypergraph. In Chapter 4 we use the max and min operators to define the fuzzy Intersection graph of a family of fuzzy sets. We show that every fuzzy graph without loops is the intersection graph of some family of fuzzy sets. We show that the Gilmore and Hoffman characterization of interval graphs extends naturally to fuzzy interval graphs, but the Fulkerson and Gross characterization does not. DTIC

L(SUB p)-REGULARITY OF SUBELLIPTIC OPERATORS ON LIE GROUPS
R. J. Burns, A. F. M. terElst, and D. W. Robinson Oct. 1992 27 p
See also PB93-194793
(PB93-194785; RANA-92-13) Avail: CASI HC A03/MF A01

In an earlier paper, Theorem 5.3.I, it was established that the C(sup infinity)-structure of each continuous representation of a Lie group coincides with the C(sup infinity)-structure for each strongly elliptic, or subcoercive, operator, i.e., the C(sup infinity)-elements of the representation are precisely the C(sup infinity)-elements with respect to the subcoercive operator. In the present paper, the authors prove that the differential structure for the left regular representation on the L(sub p)-spaces with respect to the left-, or right-, Haar measure on the Lie group G coincides with the differential structure of each subcoercive operator if p is a member of (1, infinity). CATALOGUE OF SIMPLE PERFECT SQUARED SQUARES OF ORDERS 21 THROUGH 25
C. J. Bouwkamp and A. J. W. Duijvestijn Nov. 1992 213 p
(PB93-191971; EUT-92-WSK-03) Avail: CASI HC A10/MF A03

A perfect squared square of order n is a square dissected into a finite number n of squares no two of which are of equal size. It is called compound if it contains a subset of component squares, more than one and less than all, arranged in a rectangle or a sqaure. If it does not contain such subset it is called simple. The very first Simple Perfect Squared Square of this Catalogue was discovered by computer in March, 1978. It has the lowest possible order, n = 21, and it is the only one of that order. Since then, many more of higher order have been found. The Catalogue contains 207 simple perfect squared squares of which 182 were found by Duijvestijn, 13 by Bouwkamp, 5 by Wilson, 3 by Federico, 3 by Skinner, and 1 by Willcocks for the first time. DECOMPOSITION INVARIANCE OF GENERALIZED STEADY-STATE OF A 1-D DIFFUSION SYSTEM
L. Dekker 1993 12 p
(Rept-93-26; ETN-93-94653) Copyright Avail: CASI HC A03/MF A01

Decomposition invariance of the generalized steady state is elucidated for a 1-D (one dimensional) diffusion system. The boundary conditions are conceived to be corner input signals forcing the so called 'generalized steady state' solution upon the diffusion system. The discussion is based upon the use of the mathematical formulation of this system concept as an infinite series expansion of the derivatives of the corner inputs signals. For large scale systems the 'generalized steady state' is often the main part of the state. Computer simulation of large systems requires partitioning of the definition region into (many) small regions. Then application of the concept generalized steady state only makes sense if the generalized steady state is invariant under spatial decomposition. It is demonstrated that the generalized steady state of a 1-D diffusion system is decomposition invariant by nature. ESA

EXISTENCE OF A MAXIMAL SOLUTION FOR QUASIMONOTONE ELLIPTIC SYSTEMS
Enzo Mitidieri (Trieste Univ., Italy.) and Guido Sweers 1993 22 p
(Rept-93-30; ETN-93-94657) Copyright Avail: CASI HC A03/MF A01

Systems of elliptic equations are studied by using a consequence of the maximum principle, namely the 'sub-supersolution method'. Existence of a maximal solution between a subsolution and a supersolution is obtained under the following two conditions: F is a continuous function in the diagonal; F is increasing, not necessarily continuous, for off-diagonal terms (such F are called quasi monotone). A METHOD FOR FINDING THE PERIODIC SOLUTION OF AUTONOMOUS ORDINARY DIFFERENTIAL EQUATIONS
Jin-Jiang Chang Jan. 1993 11 p
(DE93-624725; IC-93/1) Avail: CASI HC A03/MF A01 (US Sales Only)

Using the least square method, the problem for computing periodic solution of autonomous ordinary differential equations has been reduced to a problem of minimization on a normal plane. The conjugate gradient method is used to yield successive initial value, and the Runge-Kutta method is used to solve the initial value problem in the ordinary differential equations. So a new method for this problem is formed. As examples, it is applied to the Brusselator model and Field-Noyes model of Belousov-Zhabotinskii reactions. The numerical results obtained show that this method is very efficient. DOE

A METHOD FOR SOLVING THE KDV EQUATION AND SOME NUMERICAL EXPERIMENTS
Jin-Jiang Chang Jan. 1993 10 p
(DE93-624726; IC-93/2) Avail: CASI HC A02/MF A01 (US Sales Only)

In this paper, by means of difference method for discretization of space partial derivatives of KDV equation, an initial value problem in ordinary differential equations of large dimensions is produced. By using this ordinary differential equations the existence and the uniqueness of the solution of the KDV equation and the conservation of scheme are proved. This ordinary differential equation can be solved by using implicit Runge-Kutta methods, so a new method for finding the numerical solution of the KDV equation is presented. Numerical experiments not only describe in detail the procedure of two solitons collision, soliton reflex and soliton produce, but also show that this method is very effective. DOE

ARE BILINEAR QUADRILATERALS BETTER THAN LINEAR TRIANGLES?
E. F. DAzevedo Aug. 1993 31 p
(Contract DE-AC05-84OR-21400)
(DE93-019223; ORNL/TM-12388) Avail: CASI HC A03/MF A01

This paper compares the theoretical effectiveness of bilinear approximation over quadrilaterals with linear approximation over triangles. Anisotropic mesh transformation is used to generate asymptotically optimally efficient meshes for piecewise linear interpolation over triangles and bilinear interpolation over quadrilaterals. The theory and numerical results suggest triangles may have a slight advantage over quadrilaterals for interpolating convex data functions but bilinear approximation may offer a higher order approximation for saddle-shaped functions on a well-designed mesh. This work is a basic study on optimal meshes with the intention of gaining insight into the more complex meshing problems in finite element analysis. DOE

Preconditioning methods to accelerate convergence to a steady state for the incompressible fluid dynamics equations are considered. The analysis relies on the inviscid equations. The preconditioning consists of a matrix multiplying the time derivatives. Thus the steady state of the preconditioned system is the same as the steady state of the original system. The method is compared to other types of pseudo-compressibility. For finite difference methods preconditioning can change and improve the steady state solutions. An application to viscous flow around a cascade with a non-periodic mesh is presented. Author (revised)

The spectral radii of iteration matrices and the spectra and condition numbers of preconditioned systems are important in forecasting the convergence rates for iterative methods. Unfortunately, the spectra of iteration matrices or preconditioned systems is rarely easily available. The Fourier analysis technique has been shown to be a useful tool in studying the effectiveness of iterative methods by determining approximate expressions for the eigenvalues or condition numbers of matrix systems. For non-symmetric matrices, the eigenvalues may be highly sensitive to perturbations. The spectral radii of nonsymmetric iteration matrices may not give a numerically realistic indication of the convergence of the iterative method. Trefethen and others have presented a theory on the use of (epsilon)-pseudo-eigenvalues in the study of matrix equations. For Toeplitz matrices, we show that the theory of c-pseudo-eigenvalues includes the Fourier analysis technique as a limiting case. For non-Toeplitz matrices, the relationship is not clear. We shall examine this relationship for non-Toeplitz matrices that arise when studying preconditioned systems for methods applied to a two-dimensional discretized elliptic differential equation. DOE

Converting the independent variables of the transport equation to dimensionless parameters, asymptotic analyses can be performed to show that, for an important class of problems, the diffusion equation is an asymptotic limit of the transport equation. A recent paper by Larsen, McGhee, and Morel provides a broadened view of the result discussed above. It deals with the steady-state transport equation and shows that the Simplified Spherical-Harmonics (SP(sub N)) equations are robust high-order asymptotic approximations of the transport equation in a physical regime in which the conventional diffusion equation is the leading-order approximation. According to the reported numerical results for the steady-state cases, for many problems, low-order SP(sub N) equations capture most of the transport corrections to the diffusion approximation. And Larsen shows that, in nearly all cases, the SP(sub 2) results are significantly more accurate than diffusion results in the steady-state problems. DOE

We have developed various finite element differencing schemes by applying lumping techniques in neutron streaming and removal terms of the S(sub N) even-parity transport equation in two-dimensional x-y geometry. We have derived an analytical form of the even-parity reflective boundary condition, which along with the vacuum boundary condition can be applied directly to solve second-order even-parity boundary value problems. We have also developed a new simplified even-parity equation that is much more computationally efficient than the even-parity equation. The developed schemes are numerically compared with the conventional first-order diamond-differencing (DD) scheme. DOE

ON THE NUMERICAL ANALYSIS OF NONLINEAR GALERKIN METHODS: SPECTRAL APPROXIMATION AND FINITE ELEMENTS Ph.D. Thesis [SUR L'ANALYSE NUMERIQUE DES METHODES DE GALERKIN NON LINEAIRE: APPROXIMATIONS SPECTRALES ET ELEMENTS FINIS]
Christophe Devulder 1992 113 p In FRENCH
(ETN-93-94900) Avail: CASI HC A06/MF A02

The nonlinear Galerkin methods are numerical schemes adapted to the long thermal integration of dissipative evolution partial differential equations. They consist of looking for approximate solutions lying in nonlinear manifolds that are 'close', in some sense, to the attractor: the Approximate Inertial Manifolds (AIM's). The aim of the work is to derive convergence results and error estimates for these methods. Spectral and finite elements approximations are considered. For the two dimensional Navier-Stokes equations, the convergence of spectral nonlinear Galerkin methods for a large class of AIMs and the corresponding errors are proven. Reaction-diffusion problems, for which AIM's are constructed as graphs of functions over a finite element space, are considered. The associated nonlinear Galerkin methods are studied and error estimates are proved. ESA

HIGH PRECISION ON-LINE STANDARD ARITHMETIC OPERATORS: DESIGN AND IMPLEMENTATION Ph.D. Thesis [OPERATEURS ARITHMETIQUES STANDARDS EN-LIGNE A TRES GRANDE PRECISION: CONCEPTION ET IMPLEMENTATION]
Yustina Kusumaputri-Hornik 1993 224 p In FRENCH
(ETN-93-95006) Avail: CASI HC A10/MF A03

The design and implementation of online, very high precision, standard arithmetic operators in Very Large Scale Integration (VLSI) is addressed. An n bits precision operation, using classic number representation, can provoke an addition with a carry which can propagate to n bits. To resolve this problem, an addition without carry propagation, using redundant number representation is presented. It allows the execution of very high precision operations, as the duration of the operation is independent of the length of the operand. The architectures of online standard arithmetic operators using radix-2 redundant number representation are presented. The online operations are executed in series, bit by bit starting at the most significant bit. Because of their architectural characteristics, simplicity, regularity and modularity, these operators can easily be implemented in VLSI. The circuit was realized in 2 micrometer CMOS technology, using full custom cells for most of circuit's blocks, in order to have a high area density. Two Design For Testability (DFT) techniques for the circuit designed are proposed. The first one is 'simple DFT', where the test sequence is in series and the other one is 'enhanced DFT', where the test sequence is in parallel. The latter needs larger area but reduces the time for testing. One of the advantages of an online operation is the reduction of the complexity of processors interconnection to one bit per operand, while the speed can be increased by pipelining successive calculations at the bit level. COMPUTATION OF LARGE NUMBERS AND VLSI: APPLICATION TO GCD, TO STRETCHED GCD AND AT EUCLIDIAN DISTANCE Ph.D. Thesis [CALCUL SUR LES GRANDS NOMBRES ET VLSI: APPLICATION AU PGCD, AU PGCD ETENDU ET A LA DISTANCE EUCLIDIENNE]
Rachid Bouraoui 1993 192 p In FRENCH
(ETN-93-95009) Avail: CASI HC A09/MF A02

The implementation of online arithmetic algorithms was studied. In particular, the design of two Very Large Scale Integration (VLSI) circuits destined for high precision applications is shown. In fact, in numerous fields, such as pseudorandom number generation, cryptography, computer algebra, exact arithmetic, reduction of fractions with infinite precision, modular computing, image processing, etc., classical operators are inefficient. A solution to this type of problem can be provided through online arithmetic by which computations are performed by introducing operands serially digit by digit in a redundant notation. The first circuit presented implements a Greatest Common Divider (GCD) algorithm known as EUCLIDE providing, according to simulations, the best hardware cost/performance compromise. It also provides the Bezout coefficients. This circuit is to be used in order to solve problems related to the classical GCD method found in many applications. A second application shows the possibility of cascading online operators in order to build up new ones. The example reported in this thesis is that of the online computation of the euclidean distance: Z = the square root of (x squared + y squared) used, among other things, in the least square resolution of linear systems. METHODS FOR DESCRIPTION AND CONTROL OF DYNAMICAL SYSTEMS AND THEIR APPLICATION Thesis [METHODEN ZUR BESCHREIBUNG UND STEUERUNG DYNAMISCHER SYSTEME UND DEREN ANWENDUNG]

Frank Ohle Jul. 1992 154 p In GERMAN
(MPIS-17/1992; ETN-93-95101) Avail: CASI HC A08/MF A02

A method to derive an autonomous system of ordinary differential equations from an experimental time series is proposed. The resulting model can describe quantitatively the transient behavior of a system with limit cycle dynamics and is reduced to an evolution equation, the Landau equation, for the amplitude and frequency. In addition, the model was used for a qualitative prediction of the influence of a periodic excitation on the experimental system using the van der Pol transformation and Floquet theory. The instability of the lock in solution, including the Hopf bifurcation, the intermittency scenario, and the period doubling cascade, was considered. The method of reconstructing a differential equation from an experimental time signal was successfully applied to velocity fluctuations of a laminar periodic wake behind a circular cylinder. With the obtained low dimensional model, the response of the vortex sheet to external sinusoidal and square wave signals was predicted and the nonlinear control theory of Huebler and Luescher was applied. Furthermore, by using the Cremers and Huebler approach, a low dimensional model was reconstructed for the regular state of a standard Taylor-Couette system at Re = 120. It can be shown that the model exhibits behavior similar to the experiment. A modeling procedure from which the optimal number of parameters as well as the minimal number of necessary experimental data can be estimated is presented. With this procedure, it is possible to control time dependent dynamical systems without feedback to preselected dynamics. ESA

STABILIZATION OF TIME-DELAY SYSTEMS: AN OVERVIEW OF THE ALGEBRAIC APPROACH

L. C. G. J. M. Habets Jun. 1992 120 p See also AD-A152871
Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(PB93-191989; EUT-92-WSK-02) Avail: CASI HC A06

Time-delay systems can be viewed as a rather simple generalization of classical finite-dimensional linear time-invariant systems. To investigate to what extent the classical theory can be generalized to this class of systems, two approaches are proposed in the literature: the functional analytic and the algebraic approach. In the report, the author gives an overview of the results in the literature on the stabilization problem for time-delay systems using the algebraic approach. In the method, a time-delay system is considered as a linear system over a commutative ring. After a short introduction to the theory of systems over rings, the author investigates how classical methods, such as pole placement by static state feedback, can be used to stabilize a system in the more general class. It turns out that static state feedback is not such a powerful tool to stabilize a time-delay system. Therefore, dynamic feedback is also considered. Moreover Hurwitz sets are introduced to generalize the notion of stability to arbitrary integral domains. In this way one finds necessary and sufficient conditions for the stabilizability by dynamic feedback of a system over an integral domain. NTIS

MATHEMATICAL COMMUNICATIONS, VOLUME 27, NUMBERS 1 AND 2, 1992. LIST AND ABSTRACTS OF MEMORANDA PUBLISHED IN THE PERIOD JULY - DECEMBER 1991

1992 22 p See also PB93-110369 Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(PB93-191997) Avail: Issuing Activity (National Technical Information Service (NTIS))

The Faculty of Applied Mathematics of the University of Twente publishes two series of reports: Memoranda and Mathematical Communications. A Memorandum is a mathematical paper of which at least one of the authors is a staff member or a visiting guest of the faculty. It contains new results in applied mathematics or a survey of some area in applied mathematics. Most of the Memoranda are preprints of papers that the author(s) have submitted or will submit for publication elsewhere. An issue of the Mathematical Communications contains abstracts of the most recent Memoranda. Previously, two issues (one volume) of the Communications were published each year. These issues contain the abstracts of the Memoranda which appeared in the half-year preceding the issue of the Communication. The present volume marks a departure from this arrangement. This volume, Volume 27 (Numbers 1 and 2 combined) contains the abstracts of the Memoranda which appeared from Jul. to Dec. 1991. Future volumes will run concurrently with the period of production of the Memoranda. NTIS

NONTRADITIONAL WINDOWS IN SPECTRAL ANALYSIS M.S. Thesis

Ramiro Moreira-Paredes 17 Jun. 1993 128 p
(AD-A271336) Avail: CASI HC A07/MF A02

This thesis studies a new data weighting function, which consists of a complex valued window known as the linear complex valued FM chirp window. This type of window, when used with the Fourier transform, produces a magnitude spectrum which permits identification of single sinusoids and multiple sinusoids which can be separated in frequency by less than one DFT bin. This allows determination of whether or not one or multiple signals are present. The chirp window seems to have better resolution properties than classical windows. When the chirp window is used with a signal that contains a frequency step (i.e., FSK), the resultant spectrum is markedly different for the upward shift and downward shift cases. The work of this thesis consists of replicating the results of J. Griffiths in his paper 'A Novel Window for High Resolution Fourier Transform' to establish the signal to noise ratio dependency of this type of window, and to study its behavior when damped sinusoids are present. Additionally, a review of classical windows and sidelobe behavior is presented. All simulations were performed using MATLAB. DTIC

A COMPARISON OF ITERATIVE METHODS FOR A MODEL COUPLED SYSTEM OF ELLIPTIC EQUATIONS

J. M. Donato Aug. 1993 15 p
(Contract DE-AC05-84OR-21400)
(DE93-040482; ORNL/TM-12447) Avail: CASI HC A03/MF A01

Many interesting areas of current industry work deal with non-linear coupled systems of partial differential equations. We examine iterative methods for the solution of a model two-dimensional coupled system based on a linearized form of the two carrier drift-diffusion equations from semiconductor modeling. Discretizing this model system yields a large non-symmetric indefinite sparse matrix. To solve the model system, various point and block methods, including the hybrid iterative method Alternate Block Factorization (ABF), are applied. We also employ GMRES with various preconditioners, including block and point incomplete LU (ILU) factorizations. The performance of these methods is compared. It is seen that the preferred ordering of the grid variables and the choice of iterative method are dependent upon the magnitudes of the coupling parameters. For this model, ABF is the most robust of the non-accelerated iterative methods. Among the preconditioners employed with GMRES, the blocked 'by grid point' version of both the ILU and MILU preconditioners are the most robust and the most time efficient over the wide range of parameter values tested. This information may aid in the choice of iterative methods and preconditioners for solving more complicated, yet analogous, coupled systems. DOE

EXPONENTIAL CHARACTERISTIC SPATIAL QUADRATURE FOR DISCRETE ORDINATES NEUTRAL PARTICLE TRANSPORT IN TWO-DIMENSIONAL CARTESIAN COORDINATES Ph.D. Thesis

Bryan M. Minor Sep. 1993 183 p
(AD-A270458; AFIT/DS/ENP/93-07) Avail: CASI HC A09/MF A02

The exponential characteristic spatial quadrature for discrete ordinates neutral particle transport with rectangular cells is developed. Numerical problems arising in the derivation required the development of exponential moment functions. These functions are used to remove indeterminant forms which can cause catastrophic cancellations. The EC method is positive and nonlinear. It conserves particles and satisfies first moment balance. Comparisons of the EC method's performance to other methods in optically thin and thick spatial cells were performed. For optically thin cells, the EC method was shown to converge to the correct answer, with third order truncation error in the thin cell limit. In deep penetration problems, the EC method attained its highest computational efficiencies compared to the other methods. For all the deep penetration problems examined, the number of spatial cells required by the EC method to attain a desired accuracy was less than the other methods. DTIC

ON HAMILTON-CONNECTEDNESS OF CAYLEY GRAPHS

Brian Alspach *In* Univ. Twente, Updated Contributions to the Twente Workshop on Hamiltonian Graph Theory Sep. 1992 p 7-8 (For primary document see N94-19683 04-64)
Avail: CASI HC A01/MF A02

The question of whether or not every connected Cayley graph has a Hamilton cycle is discussed. A result about Cayley graphs in abelian groups is stated. If a graph X has the property that given any two vertices u and v there is a Hamilton path whose end vertices are u and v, we say X is Hamilton connected. If a bipartite graph X, whose bipartition sets A and B have the same cardinality, has the property that for any vertex u belongs to A and v belongs to B there is a Hamilton path whose end vertices are u and v, we say X is Hamilton-laceable. The following theorem is discussed: let X be a connected Cayley graph of degree at least 3 in an abelian group. If X is bipartite, then X is Hamilton laceable. If X is not bipartite, then X is Hamilton connected. ESA

ON HAMILTONIAN PROPERTIES OF 2-TOUGH GRAPHS

D. Bauer, H. J. Broersma (Universiteit Twente, Enschede, Netherlands.), J. vandenHeuvel (Universiteit Twente, Enschede, Netherlands.), and H. J. Veldman (Universiteit Twente, Enschede, Netherlands.) *In* Univ. Twente, Updated Contributions to the Twente Workshop on Hamiltonian Graph Theory Sep. 1992 p 9-13 (For primary document see N94-19683 04-64)
Avail: CASI HC A01/MF A02

A graph, G, is called Hamiltonian if it contains a Hamiltonian cycle (a cycle containing every vertex of G). The graph is called t-tough if the absolute value of S is greater than or equal to (t w(G-S)) for every subset S subset of V(G), with w(G-S) greater than 1. The toughness of G is the maximum value of t for which G is t-tough. The relations between toughness and the existence of Hamiltonian factors or k factors are studied. The following conjectures and theorems are stated: a two-tough graph on at least 3 vertices is Hamitonian; the square of a two-connected graph is Hamiltonian; a four connected line graph is Hamiltonian; a 7 connected line graph is Hamiltonian; and a four-connected K(sub 1,3) free graph is Hamiltonian. ESA

TOUGHNESS AND THE CYCLE STRUCTURE OF GRAPHS

D. Bauer and E. Schmeichel (San Jose State Univ., CA.) *In* Univ. Twente, Updated Contributions to the Twente Workshop on Hamiltonian Graph Theory Sep. 1992 p 15-19 (For primary document see N94-19683 04-64)
(Contract MDA904-89-H-2008; NSF DMS-89-04520)
Avail: CASI HC A01/MF A02

The relationship between the toughness of a graph and its cycle structure is discussed. The study was motivated by the conjecture that there exists a constant t(sub zero) such that every t(sub zero)-tough graph is Hamiltonian. The following definitions are explained: the graph G is called t-tough if the absolute value of S is greater than or equal to (tw(G-S)) for every subset S subset of V(G), with W(G-S) greater than 1; the circumference of G is denoted by the length of a longest cycle in G. Directions for future research are given. ESA

CYCLES CONTAINING ALL VERTICES OF MAXIMUM DEGREE

H. J. Broersma, J. vandenHeuvel, H. A. Jung (Technische Univ., Berlin, Germany.), and H. J. Veldman *In its* Updated Contributions to the Twente Workshop on Hamiltonian Graph Theory Sep. 1992 p 49-53 (For primary document see N94-19683 04-64)
Avail: CASI HC A01/MF A02

The maximum degree of a graph is discussed. Let G be a graph and let C be a cycle of G and A and B subsets of V(G). The following definitions are given for a cycle C: A-longest; A-dominating; (A,B)-extendable; A-extendable. A variation of Woodall's Hopping Lemma is presented. It is shown that a Lemma and some of the corollaries presented remain valid if the set A is replaced by a subset S of V(G) - V(C) such that every pair of vertices in the intersection of N(S) and V(C) is joined by a path with all internal vertices in S and at least one internal vertex in A. The results and the open problems are discussed. An extension of Jackson's theorem is presented. ESA

CUBIC GRAPHS CONTAINING k VERTEX-DISJOINT SUBGRAPHS OF GIVEN CYCLOMATIC NUMBER
Heinz-Juergen Voss *In* Univ. Twente, Updated Contributions to the Twente Workshop on Hamiltonian Graph Theory Sep. 1992 p 101-105 (For primary document see N94-19683 04-64)
Avail: CASI HC A01/MF A02

Finite undirected graphs G = (V, E) with vertex set V and edge set E are considered. Loops and multiple edges are allowed. The cardinalities (absolute value of V) and (absolute value of E) are called the order and the size of G. The cyclomatic number z(G) of a graph G is the smallest number of edges such that the deletion of these edges results in a cycle-free graph. A parameter s(G) of graphs G = (V, E), where s(G) = def (absolute value of E) - (absolute value of V) is considered. This parameter is related with the cyclomatic number. If G is connected then s(G) = z(G) - 1, and if G has alpha components then s(G) = z(G) - alpha. ESA

FINDING THE STRONG COMPONENTS IN A DIRECTED GRAPH
E. Nuutila and E. Soisalon-Soininen 1993 22 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality (PB93-187342; TKO-B94) Copyright Avail: Issuing Activity (National Technical Information Service (NTIS))

The document presents two improved versions of Tarjan's algorithm for finding the strongly connected components in a directed graph. The original algorithm can be considered to contain two traversals of the graph. First, a depth-first search traverses all edges of the graph and constructs a depth-first spanning forest. Second, once a root of a strong component is found, all its descendants that are not elements of previously found strong components are marked as elements of this component. The second traversal is implemented by using a pushdown stack, where all nodes are pushed when entered by the depth-first search. The authors' versions of the algorithm minimize the use of the pushdown stack. The first version stores only those nodes that are not roots of strong components. The second version stores only possible roots of nontrivial (containing at least one cycle) components. For graphs that are almost trees or dags these improvements almost completely eliminate the second traversal. NTIS

Vortex methods originated from the observation that in incompressible, inviscid, isentropic flow vorticity (or, more accurately, circulation) is a conserved quantity, as can be readily deduced from the absence of tangential stresses. Thus if the vorticity is known at time t = 0, one can deduce the flow at a later time by simply following it around. In this narrow context, a vortex method is a numerical method that makes use of this observation. Even more generally, the analysis of vortex methods leads, to problems that are closely related to problems in quantum physics and field theory, as well as in harmonic analysis. A broad enough definition of vortex methods ends up by encompassing much of science. Even the purely computational aspects of vortex methods encompass a range of ideas for which vorticity may not be the best unifying theme. The author restricts himself in these lectures to a special class of numerical vortex methods, those that are based on a Lagrangian transport of vorticity in hydrodynamics by smoothed particles ('blobs') and those whose understanding contributes to the understanding of blob methods. Vortex methods for inviscid flow lead to systems of ordinary differential equations that can be readily clothed in Hamiltonian form, both in three and two space dimensions, and they can preserve exactly a number of invariants of the Euler equations, including topological invariants. Their viscous versions resemble Langevin equations. As a result, they provide a very useful cartoon of statistical hydrodynamics, i.e., of turbulence, one that can to some extent be analyzed analytically and more importantly, explored numerically, with important implications also for superfluids, superconductors, and even polymers. In the authors view, vortex 'blob' methods provide the most promising path to the understanding of these phenomena. DOE

LINEAR PARAMETER IDENTIFICATION METHODS FOR ARMA MODELS WITH PERIODIC COEFFICIENTS
Silvia Strada 1992 13 p Sponsored by Ministry of University and Scientific Research and Technology, Italy
(Rept-92-070; ETN-93-94506) Avail: Politecnico di Milano, Piazza Leonardo da Vinci 32, 20133 Milan, Italy

The class of Periodic AutoRegressive Moving Average (PARMA) models is considered. For the estimation of their coefficients, two different linear and noniterative algorithms are presented. The first one, is order recursive and designed for PAR models identification; the second, valid on more general cases where a moving average part is present, computes the solution in a closed form too. A time series of event related potentials is taken into consideration and analyzed in order to significantly test the developed algorithms. ESA

CRITICALITY BENCHMARK COMPARISONS LEADING TO CROSS-SECTION UPGRADES
H. P. Alesso, C. E. Annese, D. P. Heinrichs, W. R. Lloyd, and E. M. Lent 1 Mar. 1993 14 p Presented at the ANS Topical Meeting on Physics and Methods in Criticality Safety, Nashville, TN, 19-23 Sep. 1993
(Contract W-7405-eng-48)
(DE93-017184; UCRL-JC-112934; CONF-930907-5) Avail: CASI HC A03/MF A01

For several years criticality benchmark calculations with COG have been conducted. COG is a point-wise Monte Carlo code developed at Lawrence Livermore National Laboratory (LLNL). It solves the Boltzmann equation for the transport of neutrons and photons. The principle consideration in developing COG was that the resulting calculation would be as accurate as the point-wise cross-sectional data, since no physics computational approximations were used. The objective of this paper is to report on COG results for criticality benchmark experiments in concert with MCNP comparisons which are resulting in corrections and upgrades to the point-wise ENDL cross-section data libraries. Benchmarking discrepancies reported here indicated difficulties in the Evaluated Nuclear Data Livermore (ENDL) cross-sections for U-238 at thermal neutron energy levels. This led to a re-evaluation and selection of the appropriate cross-section values from several cross-section sets available (ENDL, ENDF/B-V). Further cross-section upgrades are anticipated. DOE

PHASE SPACE REPRESENTATIONS AND QUANTUM PROBABILITY THEORY
I. V. Polubarinov 1991 24 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(DE93-629863; JINR-E-2-91-579) Avail: CASI HC A03 (US Sales Only)

Phase space representations are constructed in quantum mechanics of spin 1. In these representations quantum mechanics and quantum probability theory acquire a similarity to the classical ones, however with essential distinctions. In some representations densities are not positive definite, in others densities are positive, but expectation values and other quantities are defined otherwise. For example, in the phase space representations the correlator of components of two spins 1 in the singlet state differs from its possible classical counterpart by extra numerical factors. This leads to the consistent quantum analogs of the Bell inequality. DOE

AN EMPIRICAL EVALUATION OF FIVE CIRCULAR ERROR PROBABLE ESTIMATION TECHNIQUES AND A METHOD FOR IMPROVING THEM
M.S. Thesis
William L. Tongue 10 Mar. 1993 438 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(AD-A266528; AFIT/GST/ENS/93M-13) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

This study compared five CEP estimation techniques under the assumption that the crossrange and downrange miss distances of the sample data follow a bivariate normal distribution. The analysis determined the sensitivities of these models to changes in sample size, bias, correlation, and ellipticity in terms of three measures of effectiveness: Mean relative error (RE), variance of RE, and mean squared error (MSE) of RE. In general, it was found that sample size was the most significant parameter in determining the best CEP method. Mean RE provided a 'strong' distinction between estimators, while variance and MSE provided 'weak' distinctions between estimators. An attempt to improve one of the better estimation techniques using least squares regression proved quite successful. DTIC

BAYESIAN MODEL CHOICE: ASYMPTOTICS AND EXACT CALCULATIONS
Alan E. Gelfand and D. K. Dey 15 Jun. 1993 21 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(Contract N00014-92-J-1264)
(AD-A269067; SU-TR-470) Avail: CASI HC A03

Model determination is a fundamental data analytic task. Here we consider the problem of choosing amongst a finite (with loss of generality we assume two) set of models. After briefly reviewing classical and Bayesian model choice strategies we present a general predictive density which includes all proposed Bayesian approaches we are aware of. Using Laplace approximations we can conveniently assess and compare asymptotic behavior of these approaches. Concern regarding the accuracy of these approximations for small to moderate sample sizes encourages the use of Monte Carlo techniques to carry out exact calculations. A data set fit with nested nonlinear models enables comparison between proposals and between exact and asymptotic values. DTIC

EDF TESTS FOR NORMALITY IN LINEAR MODELS AFTER A BOX-COX TRANSFORMATION
Gemai Chen, Richard Lockhart, and Michael A. Stephens 2 Jul. 1993 28 p
(Contract N00014-92-J-1264)
(AD-A269068; SU-TR-472) Avail: CASI HC A03/MF A01

The Box-Cox transformation procedure has been used extensively in data analysis, for example in regression, where the response variable is subjected to a suitable power transformation so that the standard normal-theory linear regression models can be fitted to the transformed values. In this paper, distribution theory is developed for a family of EDF statistics, including the Anderson-Darling statistic A(exp 2) and the Cramer-von Mises statistic W(exp 2), so that these statistics can be used to test for normality in the linear model after applying the Box-Cox transformation. A table of asymptotic critical points is given for A(exp 2) and W(exp 2) and numerical examples are given to illustrate the use of the table. DTIC

JSEP FELLOWSHIP: FRACTAL NOISE PROCESSES Final Report, 1 Apr. 1990 - 31 Mar. 1993
Steven B. Lowen, George W. Flynn, and Malvin C. Teich 31 May 1993 6 p
(Grant AF-AFOSR-0250-90)
(AD-A268841; AFOSR-93-0653TR) Avail: CASI HC A02/MF A01

Three fractal stochastic processes were developed and defined. Their statistical properties were derived, and examples were provided. Fractal shot noise (FSN), which is formed when a homogeneous Poisson process is passed through a filter with a power-law decaying impulse response function, was defined. For certain parameters FSN converges to fractional Gaussian noise, while for others it is a Levy-stable random process. The fractal shot-noise-driven Poisson process (FSNDP), formed when FSN becomes the rate function for a second Poisson process, was considered next. The FSNDP is a point process which has a power spectral density inversely proportional to frequency raised to an arbitrary power (between zero and unity) for certain ranges of parameters. Also developed were two fractal renewal processes with power spectral densities similar to that of the FSNDP: a standard renewal process with arbitrary power between zero and unity; and a finite-valued, alternating renewal process where the power extends to two. Several applications of these three processes were examined in detail. DTIC

(AD-A269530; ISI/RR-93-337) Avail: CASI HC A03/MF A01

Planning systems often make the assumption that omniscient world knowledge is available. Our approach makes the more realistic assumption that the initial knowledge about the actions is incomplete, and uses experimentation as a learning mechanism when the missing knowledge causes an execution failure. Previous work on learning by experimentation has not addressed the issue of how to choose good experiments, and much research on learning from failure has relied on background knowledge to build explanations that pinpoint directly the causes of failures. We want to investigate the potential of a system for efficient learning by experimentation without such background knowledge. This paper describes domain-independent heuristics that compare possible hypotheses and choose the ones most likely to cause the failure. These heuristics extract information solely from the domain operators initially available for planning (incapable of producing such explanation) and the planner's experiences in interacting with the environment. Our approach has been implemented in EXPO, a system that uses PRODIGY as a baseline planner and improves its domain knowledge in several domains. The empirical results presented show that EXPO's heuristics dramatically reduce the number of experiments needed to refine incomplete operators. DTIC

BAYESIAN ANALYSIS OF ARMA PROCESSES: COMPLETE SAMPLING BASED INFERENCE UNDER FULL LIKELIHOODS
John Marriott, N. Ravishanker, and A. E. Gelfand 24 Jun. 1993 36 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(Contract N00014-92-J-1264)
(AD-A269168; SU-TR-471) Avail: CASI HC A03

For a general stationary and invertible ARMA (p,q) process, this document shows how to carry out a fully Bayesian analysis. The approach is through the use of sampling based methods involving three novel aspects. First the constraints on the parameter space arising from the stationarity and invertibility conditions are handled by a convenient reparametrization to all of Euclidean (p+q)-space. Second, required sampling is facilitated by the introduction of latent variables which, though increasing the dimensionality of the problem, greatly simplifies the evaluation of the likelihood. Third, the particular sampling based approach used is a Markov chain Monte Carlo method which is a hybrid of the Gibbs sampler and the Metropolis algorithm. The authors also briefly show how straightforwardly the sampling based approach accommodates missing observations, outlier detection, prediction, and model determination. Finally the approach is illustrated with two examples. DTIC

A LEAST-SQUARES COMPUTATIONAL TOOL KIT
D. L. Smith Apr. 1993 77 p
(Contract W-31-109-eng-38)
(DE93-018400; ANL/NDM-128) Avail: CASI HC A05/MF A01

The information assembled in this report is intended to offer a useful computational 'tool kit' to individuals who are interested in a variety of practical applications for the least-squares method of parameter estimation. The fundamental principles of Bayesian analysis are outlined first and these are applied to development of both the simple and the generalized least-squares conditions. Formal solutions that satisfy these conditions are given subsequently. Their application to both linear and non-linear problems is described in detail. Numerical procedures required to implement these formal solutions are discussed and two utility computer algorithms are offered for this purpose (codes LSIOD and GLSIOD written in FORTRAN). Some simple, easily understood examples are included to illustrate the use of these algorithms. Several related topics are then addressed, including the generation of covariance matrices, the role of iteration in applications of least-squares procedures, the effects of numerical precision, and an approach that can be pursued in developing data analysis packages that are directed toward special applications. EXCURSION THEORY OF A FINITE SET VIA RESOLVENTS
John G. M. Schoenmakers 1993 16 p
(Rept-93-19; ETN-93-94646) Copyright Avail: CASI HC A03/MF A01

Let (Y(sup delta)(sub t)) t greater than or equal to 0 be a strong Markov process with state space S, which is killed when it reaches an element of the finite set A. An extension of Y(sup delta) is a process Y which behaves like Y(sup delta) up to the time that it reaches a point of the set A. In the case where A consists of only one point a, Ito studied an extension Y of Y(sup delta), by using the Poisson point process of excursions of Y from a. He showed that an extension Y of Y(sup delta) is characterized by an entrance law eta, stickiness constant gamma, and a killing constant delta. Rogers derived the characteristics eta, gamma, delta by using only the resolvent of the extension Y. This method is generalized for the case where A is a finite set. ESA

THE RANK OF THE PRESENT EXCURSION
Carel L. Scheffer 1993 17 p
(Rept-93-22; ETN-93-94649) Copyright Avail: CASI HC A03/MF A01

It is shown that for standard Brownian motion the present excursion from 0 has probability 0.80031 of establishing a record as far as its duration is concerned. This follows from a more general result concerning the rank of an excursion in the point process representation of a renewal process having inter-arrival times, the distribution of which varies regularly at infinity with exponent p 'a member of' open interval -1, 0. Using Palm probabilities for Poisson processes, the generating function of this rank is in fact found explicitly. ESA

SPECIFICATION AND VERIFICATION OF A DYNAMIC LEADER ELECTION PROTOCOL IN A BROADCAST NETWORK
Jacob Brunekreef (Amsterdam Univ., Netherlands.), Joost-Pieter Katoen, Ron Koymans (Philips Gloeilampenfabrieken N.V., Eindhoven, Netherlands.), and Sjouke Mauw (Technische Univ., Eindhoven, Netherlands.) 14 Dec. 1992 20 p
(Memo-INF-93-05; TIOS-93-03; ETN-93-94679) Copyright Avail: CASI HC A03/MF A01

Leader election, a well known problem in distributed systems, is addressed. A leader election protocol for a dynamic distributed system (process may join the election spontaneously) with buffered broadcasting as basic interprocess communication means is specified and verified. Existing solutions are mostly restricted to a fixed number of processes and do not exploit broadcast communication. A formal approach to the verification of the leader election protocol is adopted. The requirements are specified in a property oriented way and the protocol is denoted by means of an extended finite state machine. It is proven using linear time temporal logic that the protocol satisfies the requirements. ESA

BOUNDS FOR EXPECTED LOSS IN BAYESIAN DECISION THEORY WITH IMPRECISE PRIOR PROBABILITIES
F. P. A. Coolen 1992 36 p See also N92-29897
(PB93-197507; MEMO-COSOR-92-40) Avail: CASI HC A03/MF A01

Classical Bayesian inference uses the expected value of a loss function with regard to a single prior distribution for a parameter to compare decisions, and an optimal decision minimizes the expected loss. Recently interest has grown in generalizations of the framework without specified priors, to allow imprecise prior probabilities. Within the Bayesian context the most promising method seems to be the intervals of measures method. A major problem for the application of this method to decision problems seems to be the amount of calculation required, as for each decision there is no single value for expected loss, but a set of such values corresponding to all possible prior distributions. In the report the determination of lower and upper bounds for such a set of expected loss values with regard to a single decision is discussed, and general results are derived which show that the situation is less severe than would be expected at first sight. A simple algorithm to determine these bounds is described. NTIS

A LANGUAGE OF FINITE PROBABILISTIC PROCESSES AND ITS INTERLEAVING SEMANTICS
Rom Langerak and Diego Latella (Consiglio Nazionale delle Ricerche, Pisa, Italy.) 4 Apr. 1993 16 p Sponsored in part by CNR and North Atlantic Treaty Organization
(Memo-Inf-93-24; TIOS-93-14; ETN-93-94696) Copyright Avail: CASI HC A03/MF A01

A simple language of finite probabilistic processes is addressed. Alt is a probabilistic extension to a subset of Basic LOTOS (Language Of Temporal Ordering Specification) including stop, action-prefix, nondeterministic choice and parallel composition. Alt is based on the 'alternating' model of probabilistic processes, which requires that every process must alternate action-steps with probabilistics step, that is, steps in which nothing is done except a probabilistic choice of the next step. This feature of Alt makes the model too much 'clock-synchronous' and, together with the syntactical constraints imposed on the language, results in the presence of a lot of superfluous internal moves. A different algebra, Slip, which overcomes the drawbacks of Alt while still maintaining the correctness relation (that is, testing equivalence) with standard LOTOS is proposed. ESA

ADAPTIVE UNIFORMIZATION
Aad P. A. vanMoorsel and William H. Sanders (Arizona Univ., Tucson.) 1992 29 p Submitted for publication Sponsored in part by Digital

Faculty Program
(Grants NWO-R62-385; NWO-SIR13-1260)
(MEMO-INF-92-88; TIOS-92-33; ETN-93-94675) Copyright Avail: CASI HC A03/MF A01

Uniformization has been shown to be, in many cases, a good method to compute transient probabilities of a continuous time Markov chain. However, two elements limit its use: uniformization cannot be used for all desired model classes, for example models with not uniformly bounded transition rates; and uniformization can be computationally very intensive, for instance for stiff models. A study which introduces 'adaptive uniformization', a variation on standard uniformization which can overcome some of these problems, is presented. A formal definition of adaptive uniformization is given, along with a proof that it yields correct results, and examples of its use on simple systems. In particular, it is shown how systems with infinite state spaces and not uniformly bounded transition rates can be solved using the method. Implementation issues related to the use of adaptive uniformization are discussed, together with the complexity of the required computations. In the context of an extended machine repairmen model, a discussion on how stiff problems, for which standard uniformization is very computationally unattractive, can sometimes be solved with less computational effort by adaptive uniformization is given. SENSITIVITY AND UNCERTAINTY ANALYSIS OF MARKOV REWARD MODELS
Boudewijn R. Haverkort and Adrianus M. H. Meeuwissen 8 Jan. 1993 42 p
(MEMO-INF-92-89; TIOS-92-34; ETN-93-94676) Copyright Avail: CASI HC A03/MF A01

Two ways of dealing with uncertain model parameters are addressed: sensitivity analysis and Monte Carlo uncertainty analysis. These two approaches are elaborated in detail in the context of the class of Markov reward models, which are very well suited for system dependability (reliability and availability) and performability analysis. Whereas sensitivity analysis is relatively cheap as compared to a Monte Carlo uncertainty analysis, it only correctly describes the local behavior of the model outcome uncertainty as a result of the model parameter uncertainties. The more expensive Monte Carlo uncertainty analysis provides a more global view. Especially, when the modeled parameters are somehow dependent, sensitivity analysis falls short. From the examples, information derived with 'classical' sensitivity analysis is clearly sometimes overly optimistic as compared to Monte Carlo uncertainty analysis. Therefore, an extension of the classical sensitivity analysis which is still inexpensive to perform and of which the results better conform those of the Monte Carlo uncertainty analysis is presented. The study is useful for reliability, dependability, and system engineers in that it cearly indicates the differences and commonalities between sensitivity analysis and Monte Carlo uncertainty analysis. It also shows how and when sensitivity analysis is a good and cheaper alternative for Monte Carlo uncertainty analysis, when dealing with uncertain model parameters. ESA

UNCERTAINTY VERSUS INTERINDIVIDUAL VARIABILITY
K. T. Bogen Apr. 1993 12 p Presented at the EPA Workshop, Charlottesville, VA, 19-21 Apr. 1993
(Contract W-7405-eng-48)
(DE93-018105; UCRL-JC-113547; CONF-9304125-2) Avail: CASI HC A03/MF A01

Distinct treatment of uncertainty and interindividual variability in variates used to model risk ensures that quantitative assessments of these attributes in modeled risk are maximally relevant to potential regulatory concerns. For example, such a distinction is required for quantitative characterization of uncertainty in population risk or in individual risk. Yet, most quantitative uncertainty analyses undertaken as part of environmental health risk assessments have failed to systematically maintain this distinction among modeled distributed input variates, and so have had limited relevance to reasonable concerns that regulators may have about how uncertainty and variability ought to relate to risk acceptability. The distinction is of course impossible if quantitative treatment of distributed input variates is rejected in favor of using single-point estimates due to the perceived impracticality of complex Monte Carlo analyses that might erroneously be thought of as being necessarily involved. Here, some practical methods are presented that facilitate implementation of the analytic framework for uncertainty and variability proposed by Bogen and Spear. Two types of methodology are discussed: one that facilitates the distinction between uncertainty and variability per se, and another that may be used to simplify quantitative analysis of distributed inputs representing either uncertainty or variability. A simple and a complex form for modeled increased risk are presented and then used to illustrate methods facilitating the distinction between uncertainty and variability in reference to characterization of both population and individual risk. Finally, a simple form of discrete probability calculus is proposed as an easily implemented, practical alternative to Monte-Carlo based procedures to quantitative integration of uncertainty and variability in risk assessment. FINDING OPTIMAL POLICIES FOR MARKOV DECISION CHAINS: A UNIFYING FRAMEWORK FOR MEAN-VARIANCE-TRADEOFFS
Y. Huang and L. C. M. Kallenberg 1993 25 p Revised; See also PB93-191948 and PB91-198986 Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(PB93-191930; TW-92-13) Avail: Issuing Activity (National Technical Information Service (NTIS))

The paper proves constructively the existence of optimal policies for a maximum one-period mean to standard deviation ratio, negative variance with bounded mean, and mean penalized by variance Markov decision chains by reducing them to a related mathematical program. This program entails maximizing (xB/D(xb)) + C(xb) over x in a polytope and with given bounds on xb where C and D are convex and either D is constant or D is positive and nondecreasing, C is nondecreasing, and xB is nonpositive. The program is in turn reduced to maximizing x(B + theta b) over x in the polytope parametrically in theta. Along the way, under the nonnegative initial distribution assumption, the authors generalize the rule of constructing a stationary maximum average reward policy from an extreme optimal solution of the associated linear program. The paper unifies and extends formulations and existence results for problems discussed by other researchers and gives an effective computational procedure to solve them. NTIS

PRODUCTION AND TEST OF PSEUDO RANDOM ELEMENTS Ph.D. Thesis [UEBER DAS ERZEUGEN UND TESTEN VON PSEUDOZUFALLSELEMENTEN]
Werner Schindler 1991 174 p In GERMAN Sponsored by Studienstiftung des Deutschen Volkes Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(ETN-93-95070) Avail: CASI HC A08

The possibility of production of pseudorandom elements on homogeneous spaces, groups and random variables is examined. Theoretical principles, based on simulation concept and algebraic and topological structures, such as Hartmann-Winter and Glivenko-Cantelli lemmas, are presented and the properties of linear congruence factors are described. The case of distributions on a sphere surface is studied and a method is proposed in order to avoid defects due to the transformation which allow simulations to be transferred into a multidimensional space. Quality criteria of standard random numbers are reviewed, verifying the limits of fold method and introducing concepts such as isoperimetric and better quotients and isotropy number. The coupon collector test was applied to Markov dependent pseudorandom numbers, in order to asses their validity. The problem of the simulation on finite dimensional Lie groups is presented. A method for establishing equidistribution on Grassmann random variables is described and the results are successfully applied to the chirotope problem. ESA

GENERALIZED REGRESSION TREES: FUNCTION ESTIMATION VIA RECURSIVE PARTITIONING AND MAXIMUM LIKELIHOOD
Probal Chudhuri, Wen-Da Lo, Wei-Yin Loh, and Ching-Ching Yang 25 Jul. 1993 29 p
(Contract DAAL03-91-G-0222)
(AD-A271259; ARO-28679.13-MA) Avail: CASI HC A03/MF A01

A method that blends tree-structured nonparametric regression with classical maximum likelihood is used in a generalized regression setting. The function estimates constructed are piecewise polynomials and are produced together with decision trees containing useful information on the regressors. Fitting is carried out by applying maximum likelihood estimation to subsets of the data, where the subsets are selected via recursive partitioning and cross-validation pruning. Examples of Poisson and logistic regression trees are given to illustrate the method applied to count and binary response data. Large-sample properties of the estimates are derived under appropriate regularity conditions. DTIC

EQUIVALENCE AND REDUCTION OF HIDDEN MARKOV MODELS
Vijay Balasubramanian Jan. 1993 85 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(Contract N00014-91-J-4038)
(AD-A270762; AI-TR-1370) Avail: CASI HC A05

Hidden Markov Models are one of the most popular and successful techniques used in statistical pattern recognition. However, they are not well understood on a fundamental level. For example, we do not know how to characterize the class of processes that can be well approximated by HMM's. This thesis tries to uncover the source of the intrinsic expressiveness of HMM's by studying when and why two models may represent the same stochastic process. Define two statistical models to be equivalent if they are models of exactly the same process. We use the theorems proved in this thesis to develop polynomial time algorithms to detect equivalence of prior distributions on an HMM, equivalence of HMM's, and equivalence of HMM's with fixed priors. We characterize Hidden Markov Models in terms of equivalence classes whose elements represent exactly the same processes and proceed to describe an algorithm to reduce HMM's to essentially unique and minimal, canonical representations. These canonical forms are essentially 'smallest representatives' of their equivalence classes, and the number of parameters describing them can be considered a representation for the complexity of the stochastic process they model. On the way to developing our reduction algorithm, we define Generalized Markov Models which relax the positivity constraint on HMM parameters. This generalization is derived by taking the view that an interpretation of model parameters as probabilities is less important than a parsimonious representation of stochastic processes. DTIC

CONTRIBUTION TO THE ANALYSIS OF TABLEAUS BASED DECISION METHODS Ph.D. Thesis [CONTRIBUTION A L'ANALYSE DE LA METHODE DES TABLEAUX]
Joseph Levy 1991 56 p In FRENCH
(ETN-93-94355) Avail: CASI HC A04/MF A01

Interest in the tableau based decision method stems from the fact that formulas need not be put into some particular form, contrary to the usual methods of automatic demonstration by resolution. The rule for elimination of universal quantifiers (gamma rule) and of existential quantifers (delta rule) were reformulated. The delta time turned out to be insufficiently proved. The subject of the study is the analysis of this rule by means of a presentation of the tableau based decision method as an algorithm of construction of the list of goals to be satisfied. It was possible to accomplish the following: establish that the delta rule is in fact a skolemization for an existential quantifier with a positive occurrence in the goal list considered here as a disjunction of conjunctions; improve the delta rule such that the new function symbol added by the rule has the minimal number of arguments; and describe concisely classes of algorithms of automatic demonstration by tableau based methods for formulas with or without free variables. SYSTEM DYNAMICS AND COMPUTER MODELING EXPERTISE. A CONCEPTUAL STRUCTURE RESEARCH INQUIRY Final Report, 25 Jan. 1991 - 30 Sep. 1993
Mark E. Siegel 12 Jul. 1993 60 p
(Contract N00014-91-J-1360)
(AD-A269860) Avail: CASI HC A04/MF A01

This research examined the conceptual structures of 22 expert system dynamists from 10 countries in order to investigate the extent to which representations of their knowledge revealed similarities in conceptual structure properties. The results revealed less similarity than has been found in experts from other fields. It was hypothesized that the hetrogeneity of the sample combined with the fact that the field itself is still developing were the major contributing factors that produced the results. The methodology was then employed with graduate students to examine shifts in their conceptual structures as they acquired system dynamics knowledge. The results were reported in an appendix to the main study. DTIC

POLLING SYSTEMS: MOMENT STABILITY OF STATION TIMES AND CENTRAL LIMIT THEOREMS
E. Altman (Institut National de Recherche d'Informatique et d'Automatique, Valbonne, France.) and F. Spieksma 20 Oct. 1992 23 p See also N93-16726
(PB93-191955; TW-92-09) Avail: CASI HC A03/MF A01

The station times are an important measure of performance in polling systems, and are often used to determine efficiently other performance measures, such as waiting times. In this paper the authors give sufficient and necessary conditions for the existence of all moments of station times in steady state. Moreover, they show that the transient moments converge geometrically fast. They then address the question of the rate of convergence of the sample averages of functions of the station times. They establish the applicability of central limit theorems (CLT) and the law of iterated logarithm (LIL) for all moments of the station times. In particular, they compute explicitly the constants involved in the CLT and LIL for the cycle durations. NTIS

(DE93-629862; JINR-E-2-91-551) Avail: CASI HC A03 (US Sales Only)

The q-deformed traces and orbits for the two parametric quantum groups GL(sub qp)(2) and GP(sub qp)(1/1) are defined which are subsequently used in the construction of q-orbit invariants for these groups. A general qp-(super)-oscillator commutation relations are obtained which remain invariant under the coactions of groups GL(sub qp)(2) and GL(sub qp)(1/1). The GL(sub qp)(2)-covariant deformed algebra is deduced in terms of the bilinears of bosonic qp-oscillators which turns out to be a central extension of the Witten-type deformation of sl(2) algebra. IMPULSIVE MOVING MIRROR MODEL IN A SCHROEDINGER PICTURE WITH IMPULSE EFFECT IN A BANACH SPACE
G. Petrov 1992 36 p Limited Reproducibility: More than 20% of this document may be affected by poor print
(DE93-629864; JINR-E-2-92-272) Avail: Issuing Activity (Department of Energy (DOE)) (US Sales Only)

From a special class of systems has been used a Schroedinger equation with impulse effect in Minkowski space field theory with time dependent boundary conditions, i.e. those of moving mirrors. The field theoretical approach for studying the properties of the vacuum starts from an analysis of the behaviour of local field quantities in Minkowski space with uniformly moving mirrors. For the impulsive moving mirror model is the real process of interaction between the quantum field and the external mirror a subject to disturbances in its evolution acting in time very short compared with the entire duration of the process. So the stability of the solution of the Schroedinger evolution equation for the process is the stability of the vacuum of Casimir. The dependence of vacuum state energy on the distance between the uniformly relatively moving mirrors is used to calculate from the impulsive moving model the Schroedinger equation in a Banach space. A GENERAL SOLUTION OF THE BV-MASTER EQUATION AND BRST FIELD THEORIES
O. F. Dayi May 1993 12 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(DE93-628622; IC-93/94) Avail: CASI HC A03 (US Sales Only)

For a class of first order gauge theories it was shown that the proper solution of the BV-master equation can be obtained straightforwardly. Here we present the general condition which the gauge generators should satisfy to conclude that this construction is relevant. The general procedure is illustrated by its application to the Chern-Simons theory in any odd-dimension. Moreover, it is shown that this formalism is also applicable to BRST field theories, when one replaces the role of the exterior derivative with the BRST charge of first quantization. DOE

THE COMPLEXITY OF THE OPTIMAL SPANNING HYPERTREE PROBLEM
Marius Zimand Sep. 1993 19 p
(Grant NSF CCR-89-57604)
(TR-471) Avail: CASI HC A03/MF A01

The notion of h-hypertree was defined previously in order to improve the Bonferroni inequalities. It is proved that the problem of finding the optimal spanning h-hypertree of a complete hypergraph is NP complete, for h is greater than or equal to 3. Moreover, no polynomial time approximate algorithm even with poor approximation ratio seems to exist for this problem. The existence of such an algorithm for the minimum version achieving an approximation ratio of poly(n) implies P = NP, and, for the maximum version, the existence of a quasipolynomial algorithm achieving the ratio 2(sup log(sup epsilon)(n)) implies NP is contained in the set DTIME(n(sup log)(sup O(1))(n)). (Contract DE-FG05-88ER-25054)
(DE93-018151; DOE/ER-25054/T1) Avail: CASI HC A07/MF A02

In 1992 the Santa Fe Institute hosted more than 100 short- and long-term research visitors who conducted a total of 212 person-months of residential research in complex systems. To date this 1992 work has resulted in more than 50 SFI Working Papers and nearly 150 publications in the scientific literature. The Institute's book series in the sciences of complexity continues to grow, now numbering more than 20 volumes. The fifth annual complex systems summer school brought nearly 60 graduate students and postdoctoral fellows to Santa Fe for an intensive introduction to the field. Research on complex systems - the focus of work at SFI - involves an extraordinary range of topics normally studied in seemingly disparate fields. Natural systems displaying complex adaptive behavior range upwards from DNA through cells and evolutionary systems to human societies. Research models exhibiting complex behavior include spin glasses, cellular automata, and genetic algorithms. Some of the major questions facing complex systems researchers are: (1) explaining how complexity arises from the nonlinear interaction of simple components; (2) describing the mechanisms underlying high-level aggregate behavior of complex systems (such as the overt behavior of an organism, the flow of energy in an ecology, and the Gross National Product (GNP) of an economy); and (3) creating a theoretical framework to enable predictions about the likely behavior of such systems in various conditions. TEMPERATURE LOWERING IN CRYOGENIC CHEMICAL-SYNTHESIS TECHNIQUES AND SYSTEM
H. E. Martinez, T. O. Nelson, and L. N. Vikdal 1993 8 p Presented at the International Cryogenic Engineering and Material Conference, Albuquerque, NM, 12-16 Jul. 1993
(Contract W-7405-eng-36)
(DE93-018348; LA-UR-93-2372; CONF-930703-17) Avail: CASI HC A02/MF A01

When evaluating a chemical synthesis process for a reaction that occurs on cryogenically cooled walls, it is sometimes necessary to reduce the wall temperatures to enhance the chemical process. To evaluate the chemical process of lower than atmospheric boiling of liquid nitrogen, we built a system and used it to reduce the temperature of the liquid nitrogen. The technique of lowering the liquid nitrogen temperature by reducing the pressure of the boil-off is established knowledge. This paper presents the engineering aspects of the system, design features, equipment requirements, methods of control, and results of the chemical synthesis. The heat input to the system was approximately 400 watts, which placed a relatively large demand on the pumping system. Our system is a scale-up of the small laboratory experiment, and it provides the information needed to design an effective system. The major problem encountered was the large quantity of liquid escaping the system during the processing, which placed a large gas load on the vacuum system. DOE

COMMENTS ON COMPUTATIONAL UNDERWATER ACOUSTICS
G. Hedstrom Apr. 1993 6 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(Contract W-7405-eng-48)
(DE93-013789; UCRL-ID-113953) Avail: CASI HC A02

Two fundamental facts control the choice of computational methods in underwater acoustics. One is that over most of the ocean the sound speed varies much more rapidly with depth than in the horizontal directions. The other is that upon going down from the surface, the sound speed usually decreases to a minimum and then increases from there to the bottom. These properties of the medium imply that the ocean often acts as a waveguide, with energy trapped in a depth-band about the sound-speed minimum. One consequence of these facts is that approximation by normal modes is valid over large regions of the ocean, particularly if correction is made for the slow variation of the modes caused by variation in bottom depth and horizontal variation in sound speed. In portions of the ocean where approximation by normal modes is not valid, we may still often use a paraxial approximation. Paraxial approximations may be used when the wave motion is primarily in a single direction, with slow variation of the signal in directions tangent to the wave front. They are often called 'parabolic' equations in ocean acoustics, but the term 'paraxial' is standard in other branches of physics, including optics and seismology. Finite-difference approximations are also sometimes used in underwater acoustics, but they are much more computationally intensive than normal modes or paraxial approximations. Finite differences are therefore ordinarily used only where these other methods are not valid, such as in shallow water with rapidly varying depth. One could also use finite elements in these instances, but for acoustics problems finite elements are a special class of finite-difference methods. We discuss finite differences only briefly in this report, because they are not generally used in long-range acoustics. DOE

ACTIVE CONTROL OF PERIODIC NOISE WITH TIME-VARYING FREQUENCY
Fabrizio Lorito and Marco Campi (Brescia Univ., Italy.) 1993 10 p Sponsored by Ministry of University and Scientific Research and Technolgy, Italy, and CNR
(Rept-93-012; ETN-93-94516) Avail: Politecnico di Milano, Piazza Leonardo da Vinci 32, 20133 Milan, Italy

The basic idea behind Active Noise Control (ANC) is that an acoustic noise field can be canceled by generating a suitable 'anti-noise' field. In most applications, the disturbance is characterized by significant periodic components, whose fundamental frequency omega(sub 0) is not necessarily constant. This happens for example in cars, where the main source of vibration and noise, the fire frequency, is subject to change. The control techniques available in the literature do not seem to be appropriate, since they are usually conceived for constant omega(sub 0) and, when the frequency is variable, the common procedure is simply to substitute omega(sub 0) with omega(t). A 'dead-beat' controller for sinusoidal disturbances with time varying measured frequency is proposed. A correct dynamic model for such a signal is worked out, and, grounded on such a model, the controller is designed and its performances are analyzed both theoretically and in simulation. ESA

ACOUSTIC INTENSITY MEASUREMENTS IN THE PRESENCE OF LOW MACH NUMBER FLOW

Toby McNeal and G. C. Lauchle Sep. 1993 110 p
(AD-A269995; ARL/PSU/TR-93-11) Avail: CASI HC A06/MF A02

Acoustic intensity is an important analysis tool since it provides wave propagation directionality along with absolute magnitude, and it can be measured in the near or far field of a source. Acoustic intensity measurements acquired in the presence of a mean flow are susceptible to errors due to the effects of the flow noise on the sensor. To determine if this error could be accurately quantified, intensity measurements were acquired, with the standard two microphone cross spectral technique, in a sound field that contained both mean flow and an independent random broadband noise source. The microphones were flush mounted, at several different separation distances, in the test section of a wind tunnel that provided the desired flow conditions, while a large speaker provided the independent random noise source. The error calculations were based on a technique that had already been derived theoretically and published, but had not been proven experimentally. The experiments performed validate that the error is indeed a bias error and that it can be accurately quantified. In addition, accurate quantification of the error is not limited to one-dimensional sound fields that contain only plane waves, and the method can be easily extended to two or three directions with complex wave propagation. DTIC

MONOLITHIC LOW NOISE PREAMPLIFIER FOR PIEZOELECTRIC SENSORS Patent Application

Timothy B. Straw, inventor (to Navy) 12 Apr. 1993 14 p
(AD-D015860; US-Patent-Appl-SN-045143) Avail: CASI HC A02/MF A01

This patent application discloses a preamplifier for a piezoelectric sensor requiring a high-impedance, low noise interface circuit. The preamplifier is a single, monolithic integrated circuit that can be mounted directly onto or inside a miniature sensor without degrading the sensor's performance. The preamplifier performs signal amplification with a full-differential amplifier that includes common-mode feedback. A pair of feedback capacitors together with the sensor capacitance control the voltage gain of the preamplifier over much of its useful operating range of 100 Hz to 100 kHz. The preamplifier circuit also the feedback resistors that discharge any accumulated DC voltage which might appear on the capacitors. Also the feedback resistors form a high pass filter which rejects low frequency background noise from the sensor. DTIC

TRANSMISSION OF ACOUSTIC WAVES THROUGH STRONGLY HETEROGENEOUS, TWO-DIMENSIONAL VELOCITY MODELS

Gerard C. Herman 1993 48 p
(Rept-93-09; ETN-93-94636) Copyright Avail: CASI HC A03/MF A01

An explicit expression based on the second order Neumann expansion is derived for computing the gradual evolution of the pulse shape of a scalar seismic wave as it propagates through a medium, the slowness of which varies both horizontally and vertically. In particular, the case is considered where these variations take place on a scale, which is small with respect to the pulse width of the wavefield. The apparent absorption, time delay and dispersion caused by small scale multiple scattering effects are quantified and illustrated by a number of examples. The results indicate that the effects can be significant and should therefore be taken into account in seismic modeling and inversion. For monochromatic plane waves propagating in a particular direction, a medium containing small inhomogeneities can be replaced by a smoother apparent medium. The apparent medium accounts for both first and second order scattering effects, is frequency dependent and also depends on the direction of propagation. With the aid of these smoother apparent media, it can be analyzed how small scale inhomogeneities tend to decrease the temporal and spatial coherence of the wavefield and how they can be incorporated efficiently into forward and inverse wave propagation schemes. LIQUID SOUND SPEEDS AT PRESSURE FROM THE OPTICAL ANALYZER TECHNIQUE

J. N. Fritz, C. E. Morris, R. S. Hixson, and R. G. McQueen 1993 5 p Presented at the 14th International Conference of the International Association for the Advancement of High Pressure Science and Technology, Colorado Springs, CO, 27 Jun. - 2 Jul. 1993
(Contract W-7405-eng-36)
(DE93-018362; LA-UR-93-2468; CONF-930676-14) Avail: CASI HC A01/MF A01

The optical analyzer technique proved to be a useful means of obtaining wave velocities at high pressures. Stepped wedges of the investigated material emit shock, and later, rarefaction waves into a transparent analyzer covering the material. The time interval between shock and rarefaction plotted versus wedge thickness gives a linear plot whose intercept fixes the target/driver thickness ratio for exact wave overtake, and thus gives a relation between the shock velocity and overtaking wave velocity at pressure. The slope of this line is intimately related to the wave velocity at pressure of the analyzer in front of the wedge. This aspect of the technique has not yet been exploited. The appropriate analysis and some data on bromoform (one of the analyzers used) are presented, and some possible applications of this technique are discussed. DOE

COMMENTS ON COMPUTATIONAL UNDERWATER ACOUSTICS

G. Hedstrom Jul. 1993 13 p Revised
(Contract W-7405-eng-48)
(DE93-019880; UCRL-ID-113953-Rev-1) Avail: CASI HC A03/MF A01

The authors discuss some of the considerations to take into account regarding the choice of methods for computational acoustics. They examine finite differences and finite elements, normal modes, and paraxial (parabolic) approximations. For each of these methods there is a class of problems for which it is well suited. Thus, finite differences and finite elements are best for short-range computations, normal modes are restricted to nearly-stratified media, and paraxial approximations work well when the signal is confined to the underwater sound channel. The authors discuss the reasons behind this state of affairs. They also point out some characteristics of these methods which are important for the numerical applications. It is concluded that the method of normal modes is numerically the most efficient computational method for underwater acoustics when it is a valid approximation. That is, one should use normal modes when the medium is nearly horizontally stratified. Paraxial approximations are very attractive for propagation in an underwater sound channel. They may be modified to incorporate interaction with a solid bottom if the wave speeds in the bottom are close to the speed of sound in water. Thus, an uncompacted solid bottom is not a great difficulty for paraxial approximations. The numerical methods which are most flexible with respect to wide ranges of material properties use finite differences or finite elements, but such methods are only feasible for computation over short distances. NUMERICAL SIMULATION OF ACOUSTIC WAVES PROPAGATION IN TURBULENT MEDIA Ph.D. Thesis [SIMULATION NUMERIQUE DE LA PROPAGATION D'ONDES ACOUSTIQUES EN MILIEU TURBULENT]

Yves Hugon-Jeannin 1992 107 p In FRENCH Original contains color illustrations
(ECL-92-37; ETN-93-94594) Avail: CASI HC A06/MF A02

The propagation of acoustic waves in turbulent media has numerous applications in atmospheric and underwater acoustics. The theory of wave propagation in random media was developed by many authors following a statistical approach. Unfortunately, it is necessary to introduce a hypothesis concerning the correlation of the fluctuation index: the correlation is assumed to be microscopic along the direction of propagation. In order to avoid this assumption, a different approach in which statistical averaging is delayed until the final step is developed. The medium is assumed to have a slow evolution. Each realization is obtained by the superposition of discrete Fourier modes. The amplitude is obtained by the superposition of discrete Fourier modes. The amplitude of these modes is determined by the choice of the power spectrum. The deterministic propagation of acoustic waves is considered in either the geometric or the parabolic approximation through each realization of the modeled turbulent field. The results are then accumulated over an ensemble of realizations to permit the estimation of different statistical quantities. ESA

EXAMINATIONS OF CONVERGING CYLINDRICALLY SYMMETRIC SECOND SOUND PROPAGATION IN He2 Thesis [EXPERIMENTE ZUR KONVERGENTEN ZYLINDERSYMMETRISCHEN SECOND-SOUND-AUSBREITUNG IN HE2]
Thomas Olszok May 1992 65 p In GERMAN Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(MPIS-9/1992; ETN-93-95099) Avail: CASI HC A04

Converging second sound propagation under the influence of the spatial and temporal evolution of the vortex line density is investigated. An axisymmetric flow channel was developed consisting of a circular cylinder (inner diameter 34 mm, outer diameter 40 mm, length 6 mm) whose inner surface is covered by a thin film heater. The ends of the cylinder were closed by two glassplates onto which a bolometer for the temperature measurements and an additional heater to produce (axial running) testpulses are installed. From the damping of these testpulses the temporal and spatial evolution of the vortex line density can be determinated with a time resolution of 300 microseconds. By means of this convergent geometry, it is possible to produce near the focus, spatially separated from the heater surface, high counterflow velocities and thus to observe the increase of the vortex line density in the absence of boundaries. In the case of subcritical heat flux, acoustic wave propagation is found, as predicted by analytical and numerical results. By variation of heat flux, pulse duration, and repetition rate, it is shown that in the case of supercritical heat flux the crucial process of vortex line production is the growth of the remanent vorticity under the influence of the counterflow. There are no hints for any additional vortex line production on the heater surface. It can be concluded from comparison with numerical results that the drift velocity of the vortex tangle must be assumed as equidirectional with the counterflow. ESA

FORWARD SCATTERING OF A PULSED CONTINUOUS WAVE SIGNAL THROUGH LAMINAR AND TURBULENT THERMAL PLUMES M.S. Thesis
Stephen G. Bowen Sep. 1993 74 p
(Contract N00123-89-G-0580)
(AD-A271210) Avail: CASI HC A04/MF A01

The results of an experiment examining the forward propagation of an acoustic signal through a buoyant plume are discussed. Two distinct testing sights were used. One made use of a small fresh water tank in NUWC to provide a controlled plume. The other used a larger salt water tank at Woods Hole Oceanographic Institute (WHOI) to create a more realistic oceanic model. Using the Born and Rytov approximations, an estimation of the effects of the laminar plume on the propagated signal are shown. As the plume moves from laminar to turbulent, the scintillation index and the Fourier transform of the magnitude square response provide insight into the nature of the transition. Finally, from the turbulent response a model for the scattering function is developed. DTIC

ACOUSTIC PROPAGATION MODELING USING MATLAB Interim Report
John P. Powers 1 Sep. 1993 71 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(AD-A270905; NPS-EC-93-014) Avail: CASI HC A04

This report presents a computational technique for the rapid, efficient calculation of fields from transient acoustic sources in linear, isotropic media. The source velocity is separable in space and time. The method uses a spatial impulse response method based on linear systems concepts to express the output in terms of the Green's function of propagation equation and the boundary conditions. The output is expressed as the inverse spatial transform of the product of the transform of the spatial excitation and a time-varying spatial filter that represents propagation. The calculation technique has been implemented in MATLAB and sample cases are presented for the circular and square piston, as well as a Gaussian- and Bessel-weighted spatial excitation. Code for the MATLAB implementation is provided. DTIC

ON THE DIFFERENCE CAUSED BY CP VIOLATION IN THE ENERGY SPECTRA OF PIONS IN K(SUP (+-))(YIELDS)(PI)(+-)(PI)(+-)(PI)-+ DECAYS
E. P. Shabalin Mar. 1993 8 p
(DE93-624828; IC-93/58) Avail: CASI HC A02/MF A01 (US Sales Only)

A difference of the slope parameters g(sup +) and g(sup -) describing the energy distributions of odd pions in K(sup (+-)) yields pi(+-)pi(+-)(pi)-+ decays is calculated in the p(sup 4)-approximation of Chiral Theory. The result is (g(sup +) - g(sup -))/(g(sup +) + g(sup -)) = (-1.9(+-)0.8)10(exp -2)s(sub 2)s(sub 3)sin(delta), where s(sub 2), s(sub 3) and delta are the parameters of the Kobayashi-Maskawa matrix. THE INTENSE SLOW POSITRON SOURCE CONCEPT: A THEORETICAL PERSPECTIVE ON A PROPOSED INEL FACILITY
Henry Makowitz, James D. Abrashoff, William H. Landman, Richard K. Albano, Toshiki Tajima (Texas Univ., Austin.), and James Daniel Larson (Larson, James Daniel, Independence, MO.) 1992 30 p Presented at the 5th International Workshop on Slow-Positron Beam Techniques for Solids and Surfaces, Jackson, WY, 6-10 Aug. 1992
(Contract DE-AC07-76ID-01570)
(DE93-013675; EGG-M-92397; CONF-920829-3) Avail: CASI HC A03/MF A01

An analysis has been performed of the INEL Intense Slow Positron Source (ISPS) concept. The results of the theoretical study are encouraging. A full-scale device with a monoenergetic 5 KeV positron beam of greater than or equal to 10(exp 12) e(+)/s on a less than or equal to 0.03 cm diameter target appears feasible and can be obtained within the existing infrastructure of INEL reactor facilities. A 30.0 cm diameter, large area source dish, moderated at first with thin crystalline W films and later by solid Ne, is proposed as the initial device in order to explore problems with a facility scale system. A demonstration scale beam at greater than or equal to 10(exp 10) slow e(+)/s is proposed using a Co-58 source plated on a 6 cm diameter source dish insert, placed in a 30 cm adapter. DOE

CORRELATED CHARGE-CHANGING ION-ATOM COLLISIONS
J. A. Tanis Feb. 1993 35 p
(Contract DE-FG02-87ER-13778)
(DE93-018717; DOE/ER-13778/6) Avail: CASI HC A03/MF A01

This report summarizes the progress and accomplishments in accelerator atomic physics research supported by DOE grant DE-FG02-87ER13778 from February 16, 1990 through February 15, 1993. This work involves the experimental investigation of atomic interactions in collisions of charged projectiles with neutral targets or electrons, with particular emphasis on two-electron interactions and electron-correlation effects. The processes studied are of interest both from fundamental and applied points of view. In the latter case, results are obtained which are relevant to the understanding of laboratory and astrophysical plasmas, highly-excited (Rydberg) and continuum states of atoms and ions, atomic structure effects, the interaction of ions with surfaces, and the development of heavy-ion storage-rings. The results obtained have provided the basis for several M.A. thesis projects at Western Michigan and several Ph.D. dissertation projects are currently underway. Summaries of work completed and work in progress are given in Section 2. This research has resulted in 26 papers (in print and in press), 12 invited presentations at national and international meetings, and 28 contributed presentations as detailed in Section 3. DOE

(DE93-018862; DOE/ER-40162/T6) Avail: CASI HC A03/MF A01

We have continued working on essentially the same projects during the period 1991-92 as reported on in our previous progress report. That is, R&D work on a dimuon detector for RHIC and work with the group at LANL on neutron induced fission measurements using the white neutron source at LAMPF. Our work has included participation in the RD-10 experiment at the AGS to study calorimeter/absorber optimization for a RHIC experiment. We have actively participated in the setup of the apparatus, the data-taking, and the subsequent data analysis. We have used the Vax computer system in our department and the eight-processor Silicon Graphics system in the GSU computer center for most of the data analysis work. We have also continued our work on Monte Carlo simulations of various configurations of absorber/calorimeters for detection of electrons and muons in RHIC experiments. We have made increasing use of the Silicon Graphics computer for our work. Each processor has approximately the same power as a Decstation 5000 and we usually have essentially exclusive simultaneous use of three of the processors. We have installed GEANT 315 and PAW on this system. Since our Vaxstation was purchased before DECWINDOWS was a standard part of the Vax software, we have been unable to use the Silicon Graphics computer for doing graphics with PAW and GEANT. We are attempting to solve this problem by installing X-Windows software on our 386SX system which is connected to the campus network. Our work at Los Alamos has consisted of participation in the LAMPF run during the summer of 1991 including constructing and setting up two new neutron detectors for the experiment. These projects are discussed in further detail in this paper. DOE

COMPARISON OF THE MODELING SOLUTIONS WITH THE HYDROGEN DISCHARGE DATA
J. R. Hiskes Nov. 1992 10 p
(Contract W-7405-eng-48)
(DE93-015115; UCRL-JC-112225) Avail: CASI HC A02/MF A01

With the availability of experimental values for H(sub 2) vibrational population distributions up to v=8 and measured distributions up to v=5 with simultaneous measurements of the H(sup (minus)) concentration, it has become possible to test some features of the full-spectrum model of H(sup (minus)) generation. The application of the code developed by Gorse et al. to these discharges by the groups at both Bari and at the Ecole Polytechnique has extended the vibrational distribution calculation to include also the H(sup (minus)) concentration. Comparing the vibrational population calculated by these two groups at the higher levels, where the onset of H(sup (minus)) production occurs, one finds populations for the (upsilon)=5 level that are a factor of eight to ten larger than the experimental values. Since these workers have omitted the role of the H(sub 3)(sup +) ions known to be present in the discharge, the inclusion of the appropriate S-V process should increase the population discrepancies another factor of two or three. This excess population poses something of a dilemma: Since the Bari code simultaneously reproduces the observed H(sup (minus)) concentration but overestimates the vibrational population by a large factor, the standard model of vibrational excitation followed by dissociative attachment is open to question. If measured rather than calculated distributions were used in the H(sup (minus)) calculation, the calculated H(sup (minus)) concentration would presumably be an order-of-magnitude smaller than the observed value. The measured population distributions taken against the background of the modelling solutions would seem to imply alternate sources of H(sup (minus)) production other than dissociative attachment. To examine this problem, we have generated new modelling solutions for comparison with the data of Eenshuistra et al. DOE

SPIN-INTEGRATED AND SPIN-DEPENDENT PHOTOELECTRON DIFFRACTION
S. Y. Tong (Wisconsin Univ., Milwaukee.) Apr. 1993 6 p
(Contract W-7405-eng-48)
(DE93-016546; UCRL-CR-114138) Avail: CASI HC A02/MF A01

This report is the result of a program to develop a spin-polarized multiple scattering algorithm. The author calculates the spin dependent photoelectron diffraction intensities, which allow determination of surface structures in a more sensitive way than conventional photoemission spectra calculations. The code allows the study of magnetic properties of surfaces, such as layer-dependent magnetic moments, surface magnetic anisotropy, and surface exchange and spin-orbit interactions. For scattered electrons the spin-polarizations effects are mainly caused by exchange processes (e.g. ferromagnetic materials) or spin-orbit interactions (heavy atoms) or both (rare earth elements). This program takes both of these effects into account, by starting with the fully relativistic calculation of the single scattering matrix. DOE

NEUTRINO MASSES IN SUPERSTRING DERIVED STANDARD-LIKE MODELS
A. E. Faraggi and Edi Haylyo Jan. 1993 16 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(DE93-624802; WIS-PH-93-4) Avail: CASI HC A03 (US Sales Only)

We propose a new scenario in class of superstring derived standard-like models that explains the suppression of the left-handed neutrino masses. Due to nonrenormalizable terms and the breaking of the U(1)(sub Z') symmetry a generalized see-saw mechanism take place. Contrary to the traditional see-saw mechanism in Grand Unified Theories, the see-saw scale and the right-handed neutrino mass scale are suppressed relative to the U(1)(sub Z') breaking scale. DOE

BEAUTY WITHOUT CHARM IN B-MESON DECAYS
G. Martinelli 4 Apr. 1990 8 p
(Preprint-732; ETN-93-94370) Avail: CASI HC A02/MF A01

Experiments evidencing weak decays of beauty mesons without production of particles carrying the charm quantum number are discussed. The establishment of charmless semileptonic decays of B mesons is reported. The value of R = (V(sub ub))/(V(sub cb)) is found to be approximately 0.1--(the precise value depending on the theoretical model used in the analysis)--and definitively different from zero. A further improvement is expected and possibly a confirmation of the present determination of R from the observation of exclusive charmless semileptonic B decays such as B to rho(l)nu or B to pi(l)nu. MESON PRODUCTION IN RELATIVISTIC HEAVY-ION COLLISIONS AT AGS ENERGIES
S. G. Steadman 1993 8 p Presented at the 9th Winter Workshop on Nuclear Dynamics, Key West, FL, 30 Jan. - 6 Feb. 1993
(Contract DE-AC02-76CH-00016)
(DE93-016871; BNL-49091; CONF-930197-5) Avail: CASI HC A02/MF A01

Single particle inclusive spectra are presented for pion and kaon production in Si+Au reactions at an incident momentum of 14.6 A GeV/c and Au+Au reactions at an incident momentum of 11.6 A GeV/c. A simple geometric scaling of the pion production for central collisions as A(sub proj)(sup 1/3) and A(sub targ)(sup 2/3) results from the observed production of about one pion per participant. Kaon yields are shown to be proportional to the number of excited participants and consistent with RQMD and ARC calculations. DOE

(DE93-017312; BNL-49195; CONF-930831-1) Avail: CASI HC A02/MF A01

Recent work on the subject of solvation dynamics has concentrated on understanding the ultrafast dynamics of intermolecular interactions in strongly interacting, polar, and hydrogen-bonding solvents. In general, investigations into the effects of solvation dynamics on chemical reactions have concentrated on the highly polar liquids because it is in these solvents that the largest spectroscopic changes with solvent relaxation are observed. In these very polar liquids, however, the intermolecular dynamics are very complex, consisting of contributions from re-orientational diffusion, inertially limited rotations, intermolecular vibrations involving both reorientational (librational) and translational degrees of freedom, and interaction-induced collisional effects. The role of collisional interaction-induced effects in shaping the intermolecular dynamics of molecular liquids has been a subject of considerable discussion. Molecular dynamics simulations have suggested that collisional effects can have a significant role in shaping the femtosecond dynamics and nonlinear-optical properties of molecular liquids. However, for anisotropic molecules, it is difficult to separate experimentally the collisional effects from other phenomena. In this paper the authors examine the intermolecular dynamics of the weakly interacting liquid carbon tetrachloride (CCl4). Because carbon tetrachloride is a spherical top molecule (belonging to the T(sub d) point group), its intermolecular light-scattering spectrum is purely interaction-induced. By studying this purely collision-induced feature in CCl4, the authors hope to gain insight on the lowest-frequency intermolecular vibrational behavior of more complex systems. DOE

HEAVY-ION COLLISIONS AND THE NUCLEAR EQUATION OF STATE
D. Keane 1993 13 p
(Contract DE-FG02-89ER-40531)
(DE93-019263; DOE/ER-40531/4) Avail: CASI HC A03/MF A01

The overall goal of this project is to study nucleus-nucleus collisions experimentally at intermediate and relativistic energies, with emphasis on measurement and interpretation of correlation effects that provide insight into the nuclear phase diagram and the nuclear equation of state. During the course of this reporting period, the PI returned to Kent from a 15-month leave at Lawrence Berkeley Lab, which had been devoted 100% to work on this research project. The EOS Time Projection Chamber at LBL's Bevalac accelerator has continued to be the major focus of research for all of the supported personnel; about a year ago, this detector successfully took data in production mode for the first time, and accumulated in excess of 1000 hours of beam time before the termination of the Bevalac in February 1993. Reduction and analysis of these data is currently our first priority. Effort has also been devoted to the STAR detector at the Relativistic Heavy Ion Collider, in the form of contributions to the Conceptual Design Report, work on HV control hardware and software for use with the STAR Time Projection Chamber, and tracking software development. (Contract DE-FG02-91ER-25099)
(DE93-018321; DOE/ER-25099/2) Avail: CASI HC A03/MF A01

The objective is to find numerical algorithms suitable for large parallel computers that can much more efficiently model the dynamics of macromolecules such as proteins, DNA, and lipids. Emphasis is on the use of integration schemes, notably symplectic schemes, that can use large time steps to produce qualitatively correct simulations for long-time integrations. The goal is to obtain the desired information with the least computational effort, and the methodology is to use mathematical analysis and computational experiments on model problems. The techniques developed are to be tested on realistic molecular models as part of a different, complementary research project involving software development. Among the techniques to be considered, the better known ones are multiple time steps, constraint dynamics, and fast Coulomb solvers. DOE

MEASURING THE SEA QUARK POLARIZATION
Y. Makdisi 1993 7 p Presented at the Future Directions in Particle and Nuclear Physics at Multi-GeV Hadron Beam Facilities, Upton, NY, 4-6 Mar. 1993
(Contract DE-AC02-76CH-00016)
(DE93-015792; BNL-49015; CONF-930389-20) Avail: CASI HC A02/MF A01

Spin is a fundamental degree of freedom and measuring the spin structure functions of the nucleon should be a basic endeavor for hadron physics.

Polarization experiments have been the domain of fixed target experiments. Over the years large transverse asymmetries have been observed where the prevailing QCD theories predicted little or no asymmetries, and conversely the latest deep inelastic scattering experiments of polarized leptons from polarized targets point to the possibility that little of the nucleon spin is carried by the valence quarks. The possibility of colliding high luminosity polarized proton beams in the Brookhaven Relativistic Heavy Ion Collider (RHIC) provides a great opportunity to extend these studies and systematically probe the spin dependent parton distributions specially to those reactions that are inaccessible to current experiments. This presentation focuses on the measurement of sea quark and possibly the strange quark polarization utilizing the approved RHIC detectors. DOE

(Contract DE-AC05-84OR-21400)
(DE93-017776; CONF-930159-53) Avail: CASI HC A02/MF A01

We have investigated the use of micron-sized liquid droplets as sample medium to detect single fluorescent molecules in solution. The use of microdroplets (5-15 micron diameter) offers several powerful advantages over single-molecule detection schemes involving measurements on bulk liquids where the probe volume is defined by the laser beam. In addition, cavity-quantum electrodynamical (QED) effects have been observed which influence both spontaneous emission rates and fluorescence yields of dye molecules in these microspheres. DOE

TEMPERATURE, KINETIC ENERGY, AND ROTATIONAL TEMPERATURE DEPENDENCES FOR THE REACTIONS OF Ar(+)(2)P3/2 WITH O2 AND CO
I. Dotan and A. A. Viggiano 25 Jun. 1993 6 p Repr. from Chemical Physics Letters, v. 209, no. 1/2, 25 Jun. 1993 p 67-71
(AF Proj. 2303)
(AD-A268974; AD-E201577; PL-TR-93-2163) Avail: CASI HC A02/MF A01

Rate constants for the charge transfer reactions of Ar(+)(2P sub 3/2) with O2 and CO have been measured as a function of average center-of-mass kinetic energy (KE(sub cm)) at three temperatures: 93, 300, and 543 K. The rate constants for both reactions were to be slow at room temperature and to decrease with increasing kinetic energy or temperature in good agreement with previous data. No temperature dependence of the rate constants was found at any given (KE(sub cm)) for both reactions, indicating that neither O2 nor CO rotational excitation has much effect on the overall reactivity. The data also indicate that O2 vibrational excitation does not increase the rate constant to the collisional value. DTIC

VIBRATIONAL DYNAMICS IN PHOTOINDUCED ELECTRON TRANSFER
K. G. Spears Sep. 1993 3 p
(Contract DE-FG02-91ER-14228)
(DE93-040874; DOE/ER-14228/2) Avail: CASI HC A01/MF A01

The objective is to perform a new type of measurement for optically excited electron transfer processes that can provide unique experimental insight into the molecular mechanism of electron transfer. Measurements of optically excited electron transfer are done with picosecond infrared (IR) absorption spectroscopy to monitor the vibrational motions of the molecules immediately after electron transfer. Theory and experiment suggest that molecular vibrations and distortions are important controlling elements for electron transfer, and direct information has yet to be obtained on these elements of electron transfer mechanisms. The second period of funding has been dedicated to finishing technique development and performing studies of electron transfer in ion pair systems to identify if vibrational dependent electron transfer rates are present in this system. We have succeeded in measuring, for the first time, electron transfer rates as a function of vibrational state in an ion pair complex in solution. In a different area of electron transfer research we have proposed a new mechanism of solvent gated electron transfer. DOE

IONIC AND MOLECULAR ENVIRONMENTS IN HETEROGENEOUS ELECTROCATALYSIS: STUDIES BY RADIOACTIVE LABELING AND LEED/AUGER SPECTROSCOPY Final Report, 1 May 1989 - 30 Apr. 1993
Andrzej Wieckowski Jul. 1993 45 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(Grant AF-AFOSR-0368-89)
(AD-A268850; AFOSR-93-0656TR) Avail: CASI HC A03

Adsorption, catalytic activity, and metal deposition at the metal/solution interface have been studied in a coordinated fashion by radiochemistry, ultra-high vacuum spectroscopies of surface science, and electrochemistry. The metal part of the interface was usually a single-crystal of platinum, rhodium, or gold, or an ultra-thin metallic film of either cadmium, copper, or silver obtained via underpotential deposition processes. The adsorbates predominantly included bisulfate, perchlorate, phosphate, acetic acid, and urea. The integrative feature of the adsorbates was their capacity of a reversible adsorption on the platinum electrode. The molecule with which the catalytic rates have been measured was methanol in perchlorate, bisulfate, and phosphate solutions. These studies have focused on effects of anions on the catalytic oxidation of methanol on platinum single crystal electrodes, surface chemistry of the studied adsorbates on the clean and admetal covered electrodes, surface studies of the solid/liquid CO (as the most probable methanol chemisorption product), and phase transitions of urea induced by lateral adsorbate-adsorbate interactions. Two methods for in situ and ex situ electrode characterization, namely the radioactive labeling and the ultra-high vacuum-electrochemistry, have been used and advancements in their performance, or new areas of applications, have been reported. NONLINEAR OPTICAL PROPERTIES OF MOLECULES Final Report, Nov. 1989 - Jun. 1993
Henry A. Kurtz 31 Aug. 1993 8 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality

(Grant AF-AFOSR-0010-90)
(AD-A270199; AFOSR-90-0010TR) Avail: CASI HC A02

Final summary report on calculations of nonlinear optical properties at Memphis State University. Finite-field methods for static values and TDHF methods for frequency dependent quantities are implemented. Results are summarized for polyene oligomers with emphasis on their behavior as the number of subunits is increased. The usefulness of a relationship for the calculation of one type of hyperpolarizability in terms of another is demonstrated by example for the CH2O molecule. Other results on intermolecular effects on hyperpolarizabilities and vibrational contributions are also discussed. DTIC

MOLECULAR NONLINEAR OPTICAL SUSCEPTIBILITIES IN CONDENSED PHASES Final Report, 1 Nov. 1989 - 28 Feb. 1993
Shaul Mukamel 16 Sep. 1993 12 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(Grant AF-AFOSR-0054-90)
(AD-A270200; AFOSR-93-0708TR) Avail: CASI HC A03

A microscopic theory for the nonlinear optical response and susceptibilities of molecular materials with localized and delocalized electronic states (e.g. molecular assemblies, conjugated polymers, aggregates, and monolayers) was developed. The theory, which properly accounts for many-body effects, is based on the derivation of coupled reduced equations of motion for the material variables, which determine the optical response. The present formulation maps the calculation of optical nonlinearities onto solving the dynamics of coupled nonlinear oscillators and overcomes the difficulties associated with the local-field approximation. An operational definition of the nonlinear coherence-size N(c), which controls the cooperative enhancement of the optical response, is developed. A real-space representation of the optical response of conjugated polyenes is developed by using the Wannier representation to derive equations of motion for coupled two-site oscillators representing correlated electron-hole pairs. The resulting elementary excitations are shown to be intermediate between the molecular (Frankel) and the semiconductor (Wannier) excitons, and clearly resemble charge transfer excitons. DTIC

THE FOURTEENTH SYMPOSIUM ON MOLECULAR BEAMS Final Report, 1 Apr. 1992 - 31 Mar. 1993
Yuan T. Lee 9 Aug. 1993 493 p Symposium held in Pacific Grove, CA, 7-12 Jun. 1992 Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(Contract F49620-92-J-0170)
(AD-A268721; AFOSR-93-0630TR) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

The symposium was held on June 7-12, 1992 in Pacific Grove, California. It brought together scientists who work with isolated molecules to share conceptual and practical advances involved with the study of matter in a rarefied, collimated and isolated state represented by the beam. There were 26 invited talks, 25 submitted oral presentations and 78 poster papers in nine sessions on a broad range of topics. The invited talks gave general reviews and reported on recent advances on: the dissociation and predissociation dynamics of large molecular cluster ions and open shell clusters, low energy crossed beam ion-molecule reactions, the hydrogen exchange reaction, new method for manipulating laser cooled atoms, application of laser cooling to the time and frequency domain, molecular probes of quantum clusters, size dependence of elemental clusters, bouncing gases off liquid surfaces, high resolution UV and IR spectroscopy of molecular complexes, reaction dynamics beyond the Born-Oppenheimer approximation, the chemistry of hydrogen in bulk metal, and molecular dissociation on surfaces. The symposium successfully brought together chemists and physicists for a fruitful cross-fertilization of ideas and dissemination of results. The goal of facilitating students and young scientists to attend was fulfilled. There were 64 students and postdoctoral fellows among the 164 attendees. DTIC

THE QUANTUM DYNAMICS OF ELECTRONICALLY NONADIABATIC CHEMICAL REACTIONS Final Technical Report
Donald G. Truhlar 9 Apr. 1993 4 p
(Contract NCC2-526)
(NASA-CR-194309; NAS 1.26:194309) Avail: CASI HC A01/MF A01

Considerable progress was achieved on the quantum mechanical treatment of electronically nonadiabatic collisions involving energy transfer and chemical reaction in the collision of an electronically excited atom with a molecule. In the first step, a new diabatic representation for the coupled potential energy surfaces was created. A two-state diabatic representation was developed which was designed to realistically reproduce the two lowest adiabatic states of the valence bond model and also to have the following three desirable features: (1) it is more economical to evaluate; (2) it is more portable; and (3) all spline fits are replaced by analytic functions. The new representation consists of a set of two coupled diabatic potential energy surfaces plus a coupling surface. It is suitable for dynamics calculations on both the electronic quenching and reaction processes in collisions of Na(3p2p) with H2. The new two-state representation was obtained by a three-step process from a modified eight-state diatomics-in-molecules (DIM) representation of Blais. The second step required the development of new dynamical methods. A formalism was developed for treating reactions with very general basis functions including electronically excited states. Our formalism is based on the generalized Newton, scattered wave, and outgoing wave variational principles that were used previously for reactive collisions on a single potential energy surface, and it incorporates three new features: (1) the basis functions include electronic degrees of freedom, as required to treat reactions involving electronic excitation and two or more coupled potential energy surfaces; (2) the primitive electronic basis is assumed to be diabatic, and it is not assumed that it diagonalizes the electronic Hamiltonian even asymptotically; and (3) contracted basis functions for vibrational-rotational-orbital degrees of freedom are included in a very general way, similar to previous prescriptions for locally adiabatic functions in various quantum scattering algorithms. THE A((2)PI(SUB u))-X((2)PI(SUB g)) SYSTEM OF Br2(+) STUDIED BY VELOCITY MODULATION SPECTROSCOPY

M. Zackrisson Apr. 1993 21 p
(USIP-93-04; ETN-93-94852) Avail: CASI HC A03/MF A01

Observations of 27 bands of the A((2)pi sub u) - X((2)pi sub g) transition recorded in high resolution using the velocity modulation technique are presented. A vibrational and rotational analysis cosrresponding to 79 and 81 mixed isotopic species of Br2(+) and improved molecular constants of the upper and lower states was performed. The results show that the observed bands belong to the A((2)pi sub(u, 1/2)) - X((2)pi sub(g, 1/2)) subsystem and that A prime (sub e) is approximately equal to -710/cm. The analysis removes the anomalous difference in vibrational parameters for omega = 1/2 and 3/2 of the A state found in earlier investigations. ESA

EXPERIMENTAL CONSEQUENCES OF SUPERSYMMETRY

H. Baer and X. Tata (Hawaii Univ., Honolulu.) 1992 14 p Presented at the 23rd Workshop of the INFN Eloisatron Project Properties of SUSY Particles, Erice, Italy, 28 Sep - 4 Oct. 1992
(Contracts DE-FG05-87ER-40319; DE-AM03-76SF-00235)
(DE93-018270; CONF-9209321-1) Avail: CASI HC A03/MF A01

After a brief review of the assumptions of the Minimal Supersymmetric Model (MSSM) we study the constraints on the masses of various particles as well as on the MSSM Higgs bosons from experiments at the Fermilab Tevatron and at LEP. We also review the range of Higgs boson masses that can be searched for at LEP 200. We then discuss the simulation of supersymmetric particle production at hadron colliders and briefly discuss event generators that we have been using in our analyses. Next, we discuss various signals that can be searched for in the present run of the Tevatron. We conclude with a study of the prospects for the detection of particles as well as MSSM Higgs bosons in experiments at hadron supercolliders, assuming that these are too heavy to be discovered at the Tevatron or at LEP 200. CHARMONIUM PHYSICS FROM (BAR p)p INTERACTIONS

R. Ray Apr. 1993 49 p Presented at the International Conference on Hadron Spectroscopy, College Park, MD, 12-16 Aug. 1992
(Contract DE-AC02-76CH-03000)
(DE93-017809; FNAL/C-93/088; CONF-920847-2) Avail: CASI HC A03/MF A01

Heavy quarkonium is perhaps the best QCD laboratory in existence. Much of what we presently know about the fundamental interactions in nature has resulted from the study of two-body bound states. The hydrogen atom, the deuteron and positronium have provided valuable mechanisms for studying quantum mechanics, the theory of nuclear forces and QED. In the same way, one might hope that the study of two-body bound state systems built from heavy quarks will lead to a detailed understanding of at least some of the fundamental properties of strong interactions. While it is possible to gain some qualitative insights into strong interactions by studying bound states built from light quarks, it is not possible to reach more precise conclusions because of the additional complexities introduced by large relativistic corrections and long range confinement. Charmonium, c(anti c) bound states, has provided us with the first QCD laboratory where the system could be considered to be at least approximately non-relativistic while at the same time lending itself to perturbative calculations. The substantial mass of the charmed quark (m(sub c) approximately 1.5 GeV) corresponds to bound states sufficiently small to begin to probe the asymptotically free component of the strong interaction. The study of c(anti c) as well as b(anti b) bound states has greatly enhanced our understanding of the strong interaction between elementary particles. The scope of this article will be to review what has been learned to date, particularly on the experimental front, as well as to look at what remains to be done. DOE

A NUMERICAL STUDY OF HYBRID OPTIMIZATION METHODS FOR THE MOLECULAR CONFORMATION PROBLEMS

J. C. Meza and M. L. Martinez May 1993 26 p
(Contract DE-AC04-76DR-00789)
(DE93-017898; SAND-93-8233) Avail: CASI HC A03/MF A01

An important area of research in computational biochemistry is the design of molecules for specific applications. The design of these molecules depends on the accurate determination of their three-dimensional structure or conformation. Under the assumption that molecules will settle into a configuration for which their energy is at a minimum, this design problem can be formulated as a global optimization problem. The solution of the molecular conformation problem can then be obtained, at least in principle, through any number of optimization algorithms. Unfortunately, it can easily be shown that there exist a large number of local minima for most molecules which makes this an extremely difficult problem for any standard optimization method. In this study, we present results for various optimization algorithms applied to a molecular conformation problem. We include results for genetic algorithms, simulated annealing, direct search methods, and several gradient methods. The major result of this study is that none of these standard methods can be used in isolation to efficiently generate minimum energy configurations. We propose instead several hybrid methods that combine properties of several local optimization algorithms. These hybrid methods have yielded better results on representative test problems than single methods. DOE

SEARCH FOR RESONANT ELECTRON TRANSFER AND DOUBLE EXCITATION IN Kr(SUP 34+) + H2 COLLISIONS

K. E. Zaharakis, R. R. Haar, J. A. Tanis, M. W. Clark (Lawrence Livermore National Lab., CA.), and V. L. Plano (Michigan State Univ., East Lansing.) 1992 4 p Presented at the 6th International Conference on Physics of Highly Charged Ions, Manhattan, KS, 28 Sep. - 2 Oct. 1992
(Contract DE-FG02-87ER-13778)
(DE93-018776; CONF-920948-14) Avail: CASI HC A01/MF A01

Resonant electron transfer and double excitation (RME) is a correlated electron process which is expected to occur in an ion-atom collision when electron capture is accompanied by the simultaneous excitation of two inner-shell electrons. RT2 is similar to resonant transfer excitation (RTE) in which only a single electron is excited. RT2E was investigated experimentally for 38-42 MeV/u Kr34 + H2 collisions by observing x-ray emission associated with single-electron capture. No events associated with Kr K x rays (near 13 keV) were observed; however, events do occur at about twice (greater than 22 keV) the Kr K x-ray energy. Several possible sources of these latter x rays have been considered. DOE

SSC DETECTOR MUON SUB-SYSTEM BEAM TESTS

R. Downing, S. Errede, A. Gauthier, M. Haney, I. Karliner, T. Liss, T. OHalloran, P. Sheldon, V. Simiatis, and J. Thaler et al 1993 21 p
(Contract DE-FG06-90ER-40541)
(DE93-018415; DOE/ER-40541/1) Avail: CASI HC A03/MF A01

The authors propose to start a test-beam experiment at Fermilab studying the problems associated with tracking extremely high energy muons through absorbers. It is anticipated that in this energy range the observation of the muons will be complicated by associated electromagnetic radiation. Monte Carlo simulations of this background need to be tuned by direct observations. These beam tests are essential to determine important design parameters of a SSC muon detector, such as the choice of the tracking, geometry, hardware triggering schemes, the number of measuring stations, the amount of iron between measuring stations, etc. It is intended that the first phase of this program will begin in November of 1990 utilizing the Tevatron muon beam. The authors plan to measure the multiplicity, direction, and separation of secondary particles associated with the primary muon track as it emerges from an absorber. The second phase of beam test in 1992 or later will be a full scale test for the final design chosen in the muon subsystem proposal. DOE

LOW-ENERGY CONTINUUM-ELECTRON EMISSION AT 0 DEGREES FROM O(Q+) + He COLLISIONS
J. A. Tanis, R. R. Haar, D. Schneider (Lawrence Livermore National Lab., CA.), M. W. Clark (Lawrence Livermore National Lab., CA.), M. H. Prior (California Univ., Berkeley. Lawrence Berkeley Lab.), R. D. Dubois (Pacific Northwest Lab., Richland, WA.), and K. Randall (Wesleyan Univ., Middletown, CT.) 1992 5 p Presented at the 6th International Conference on Physics of Highly Charged Ions, Manhattan, KS, 28 Sep. - 2 Oct. 1992 Submitted for publication
(Contract DE-FG02-87ER-13778)
(DE93-018777; CONF-920948-16) Avail: CASI HC A01/MF A01

Low-energy continuum-electron emission along the beam direction, i.e., at 0 degrees, has been investigated for 1.1-6.2 keV/u O(8+) and 2.6 keV/u O(q+) (q = 3, 6, and 8) colliding with He. Spectra were obtained for continuum electrons associated with bound-state capture and with no projectile charge change, respectively. As for previous measurements for 3.75 keV/u O(6+) + He, continuum electrons at 0 degrees were observed only when accompanied by bound-state capture. Cross sections for these continuum electrons are found to be increasing functions of both the projectile energy and the charge state over the ranges investigated. DOE

LAHET CALCULATIONS FOR ACCELERATOR NEUTRON PRODUCTION
R. E. Prael 1993 6 p Presented at the ANS Winter Meeting, San Francisco, CA, 14-19 Nov. 1993
(Contract W-7405-eng-36)
(DE93-016518; LA-UR-93-2429; CONF-931160-4) Avail: CASI HC A02/MF A01

LAHET is a Monte Carlo code for the transport and interaction of nucleons, pions, muons, fight ions, and antinucleons in complex geometry; it is the result of a major effort at Los Alamos National Laboratory to develop a code system based on the LANL version of the HETC Monte Carlo code for the transport of nucleons, pions, and muons, which was originally developed at Oak Ridge National Laboratory. The system of codes based on LAHET is designated as the LAHET Code System (LCS). LAHET, as all the variants of HETC, has been widely used over the years for design of neutron production targets, facility shielding, and experimental analysis. LAHET is now widely used for medical accelerator facility design and application. Particle tracking uses the general geometry model of the LANL MCNP code, and shares the geometry description and input of MCNP, except for lattices and/or repeated structures. HMCNP is a modification of MCNP which accepts an external neutron/photon source created by LAHET. Neutron transport from 20 MeV to thermal and all photon/electron transport is done with HMCNP. DOE

ELECTRON IMPACT POLARIZATION AND CORRELATION PROPERTIES OF THE INERT GASES
G. Csanak, D. C. Cartwright, L. E. Machado (Universidade Federal de Sao Carlos, Brazil.), and G. D. Meneses (Universidade Estadual de Campinas, Brazil.) 1993 29 p Presented at the Polarization and Correlation in Electronic and Atomic Collisions, Bielefeld, Germany, 29-31 Jul. 1993
(Contract W-7405-eng-36)
(DE93-018358; LA-UR-93-2486; CONF-9307116-1) Avail: CASI HC A03/MF A01

For the heavier rare-gas targets, Ne, Ar, Kr, there is now a reasonable amount of experimental electron impact coherence parameter data available for excitation of the lowest J = 1 states. Theoretical results for those rare-gas targets have been restricted to distorted-wave approximation (DWA) type theories. A systemization of the experimental data is presented, and they are compared with available theoretical results. In the case of the heavy rare gases, the experimental and theoretical data available for the three species, Ne, Ar, Kr, are compared in order to identify trends. The experimental data are compared with results from available theories (mainly DWA type), and the importance of spin-orbit coupling effects and 'shell' effects is discussed. A physical picture that is emerging from all collisional data is presented, and future experimental and theoretical activities that will, provide new insight into the physics of these processes are recommended. DOE

COMPUTER CODES FOR CHECKING, PLOTTING AND PROCESSING OF NEUTRON CROSS-SECTION COVARIANCE DATA AND THEIR APPLICATION
Enrico Sartori (Organization for Economic Co-Operation and Development, Paris, France.) and Robert W. Roussin 1992 13 p Presented at the Nuclear Energy Agency Science Committee Specialists Meeting on Evaluation and Processing of Covariance Data, Oak Ridge, TN, 7-9 Oct. 1992
(Contract DE-AC05-84OR-21400)
(DE93-018459; CONF-9210173-7) Avail: CASI HC A03/MF A01

This paper presents a brief review of computer codes concerned with checking, plotting, processing and using of covariances of neutron cross-section data. It concentrates on those available from the computer code information centers of the United States and the OECD/Nuclear Energy Agency. Emphasis will be placed also on codes using covariances for specific applications such as uncertainty analysis, data adjustment and data consistency analysis. Recent evaluations contain neutron cross section covariance information for all isotopes of major importance for technological applications of nuclear energy. It is therefore important that the available software tools needed for taking advantage of this information are widely known as they permit the determination of better safety margins and allow the optimization of more economical designs of nuclear energy systems. RELATIVISTIC CONFIGURATION INTERACTION CALCULATION OF THE CORRELATION ENERGIES OF HELIUMLIKE IONS
Kwok-Tsang Cheng, Mau Hsiung Chen, and W. R. Johnson Sep. 1993 4 p Presented at the 2nd International Conference on Computational Physics, Beijing, China, 13-17 Sep. 1993
(Contract W-7405-eng-48)
(DE93-018093; UCRL-JC-114326; CONF-9309176-1) Avail: CASI HC A01/MF A01

In this paper, we present a new relativistic configuration interaction (CI) method for atomic structure calculations using finite basis sets constructed from B-spline functions of piecewise polynomials. This method is used to calculate the correlation energies of the low-lying states of two-electron helium-like ions. Our calculations are based on the relativistic no-pair Hamiltonian from quantum electrodynamics (QED). Eigenfunctions of the Hamiltonian are expanded on the basis of two-electron configuration state functions (CSF) constructed from products of one-electron orbitals. Eigenvalues and eigenfuctions of the low-lying two-electron states are then determined by diagonalizing the Hamiltonian matrix as in the usual CI approach. DOE

CALCULATION OF MOLECULAR EXCITATION RATES Final Technical Report, 1 Feb. 1992 - 31 Jan. 1993
George Flynn 31 Jan. 1993 3 p
(Contract NCC5-46)
(NASA-CR-193782; NAS 1.26:193782) Avail: CASI HC A01/MF A01

State-to-state collisional excitation rates for interstellar molecules observed by radio astronomers continue to be required to interpret observed line intensities in terms of local temperatures and densities. A problem of particular interest is collisional excitation of water which is important for modeling the observed interstellar masers. In earlier work supported by a different NASA Grant, excitation of water in collisions with He atoms was studied; after many years of successively more refined calculations that problem now seems to be well understood, and discrepancies with earlier experimental data for related (pressure broadening) phenomena are believed to reflect experimental errors. Because of interstellar abundances, excitation by H2, the dominant interstellar species, is much more important than excitation by He, although it has been argued that rates for excitation by these are similar. Under the current grant theoretical study of this problem has begun which is greatly complicated by the additional degrees of freedom which must be included both in determining the interaction potential and also in the molecular scattering calculation. We have now computed the interaction forces for nearly a thousand molecular geometries and are close to having an acceptable global fit to these points which is necessary for the molecular dynamics calculations. Also, extensive modifications have been made to the molecular scattering code, MOLSCAT. These included coding the rotational basis sets and coupling matrix elements required for collisions of an asymmetric top with a linear rotor. A new method for numerical solution of the coupled equations has been incorporated. Because of the long-ranged nature of the water-hydrogen interaction it is necessary to integrate the equations to rather large intermolecular separations, and the integration methods previously available in MOLSCAT are not ideal for such cases. However, the method used by Alexander in his HIBRIDON code is particularly suited for such cases. We have obtained this code and incorporated that part which solves the coupled differential equations as an option in the MOLSCAT program. Author (revised)

EXPERIMENTAL STUDY OF INTERACTIONS OF HIGHLY CHARGED IONS WITH ATOMS AT keV ENERGIES
V. O. Kostroun 29 Jan. 1993 30 p
(Contract DE-FG02-86ER-13519)
(DE93-040222; DOE/ER-13519/7) Avail: CASI HC A03/MF A01

The following experiments were done. We measured the absolute total and one- and two- electron transfer cross sections for Ar(sup q+) (8 less than or equal to q less than or equal to 16) on He and H2 at 2.3 qkeV, the angular distributions of the scattered projectiles in Ar(sup 8+,9+) collisions, with Ar and Kr at 2.3 qkeV, the electron emissions in low energy Ar(sup q+) on Ar collisions, the recoil ion charge state distributions in low energy Ar(sup q+) -Ar collisions, the absolute total and one- and two-electron transfer cross sections for Ar(sup 8+) on Ar at 2.3 qkeV, and the absolute total and one- and two-electron transfer cross sections for Ar(sup 8+) on Ar as a function of energy. We also used energy gain spectroscopy to study Ar(sup q+) on Ar collisions at 40 and 30 qeV, and time of flight spectroscopy to investigate ionization and dissociation of CO and N2 in collisions with low energy, highly charged argon ions. In addition, we applied the Goldberger and Watson transition theory to derive transition rates and cross sections for atomic radiative and/or non radiative processes, wrote a computer code TRANSIT which can calculate energies, wave functions and radiative and non radiative rates for atoms and ions. The code is highly modular and can easily be modified to calculate higher order processes. Finally, we have done an Ab-Initio molecular orbital electronic energy level calculation for the (ArAr)(sup 8+) system as a function internuclear separation. DOE

THERMAL NEUTRON MULTIPLICITY MEASUREMENTS USING THE PYROCHEMICAL MULTIPLICITY COUNTER AT LAWRENCE LIVERMORE NATIONAL LABORATORY
D. G. Langner, M. S. Krick, D. R. Parks, and K. S. Hooper (Lawrence Livermore National Lab., CA.) 1993 9 p Presented at the 34th Annual Meeting of the Inst. of Nuclear Materials Management, Scottscale, AZ, 18-21 Jul. 1993

(Contract W-7405-eng-36)
(DE93-018538; LA-UR-93-2610; CONF-930749-45) Avail: CASI HC A02/MF A01

The pyrochemical multiplicity counter designed and built at Los Alamos has been undergoing tests and evaluation at Lawrence Livermore National Laboratory (LLNL). Measurements have been performed using a variety of plutonium oxide and metal materials. The pyrochemical multiplicity counter uses the information contained in the higher moments of the neutron multiplicity distribution to deduce the three unknowns in the assay problem: Pu-240-effective mass, (alpha,n) neutron rate, and self-multiplication. This is an improvement over conventional neutron coincidence counting, which must rely on some estimate of the (alpha,n) neutron rate or self-multiplication to deduce an assay result. Such conventional techniques are generally unsatisfactory for impure materials for which these quantities are unknown. We present the assay results obtained with the pyro-chemical multiplicity counter and discuss the procedures necessary to produce good assay results. Using these procedures, we have obtained assay accuracies of 1%-2% for oxide materials in 1/2 hour measurement times. We also compare these results to those that would have been obtained using conventional neutron assay techniques and discuss the correlations we have observed between assay results and the ratio of total neutron counts in the different rings of the pyrochemical counter. HARMONIC GENERATION AT HIGH INTENSITIES
K. J. Schafer, J. L. Krause, and K. C. Kulander Jun. 1993 13 p Presented at the North Atlantic Treaty Organization/Advanced Studies Institute Summer School: From Statistical Physics to Statistical Inference and Back, Cargese, France, 31 Aug. - 12 Sep. 1992
(Contract W-7405-eng-48)
(DE93-018632; UCRL-JC-113768; CONF-9208188-2) Avail: CASI HC A03/MF A01

Atomic electrons subject to intense laser fields can absorb many photons leading either to multiphoton ionization or the emission of a single, energetic photon which can be a high multiple of the laser frequency. The latter process, high-order harmonic generation, has been observed experimentally using a range of laser wavelengths and intensities over the past several years. Harmonic generation spectra have a generic form: a steep decline for the low order harmonics, followed by a plateau extending to high harmonic order, and finally, an abrupt cutoff beyond which no harmonics are discernible. During the plateau the harmonic production is a very weak function of the process order. Harmonic generation is a promising source of coherent, tunable radiation in the XUV to soft X-ray range which could have a variety of scientific and possibly technological applications. Its conversion from an interesting multiphoton phenomenon to a useful laboratory radiation source requires a complete understanding of both its microscopic and macroscopic aspects. We present some recent results on the response of single atoms at intensities relevant to the short pulse experiments. The calculations employ time-dependent methods, which we briefly review in the next section. Following that, we discuss the behavior of the harmonics as a function of laser intensity. Two features are notable: the slow scaling of the harmonic intensities with laser intensity, and the rapid variation in the phase of the individual harmonics with respect to harmonic order. We then give a simple empirical formula that predicts the extent of the plateau for a given ionization potential, wavelength, and intensity. DOE

STUDIES OF CLUSTERS
J. W. Farley 1993 5 p
(Contract DE-FC08-90NV-10872)
(DE93-018961; DOE/NV-10872/T61) Avail: CASI HC A01/MF A01

Positive cluster ions were produced, and the mass spectrum was measured using a radiofrequency quadrupole mass spectrometer. Mass spectra are attached, showing the cluster ions produced using pure ammonia. They have the general formula (NH3)nH(m)(+), where n and m are integers. Peaks with different numbers of hydrogens can barely be resolved. This shows that the ion source can produce cluster ions. The development of sensitive laser techniques is necessary for probing the clusters. During this quarter, a weak diode laser was used to probe a beam of negative molecular ions. The work on the visible absorption spectrum of D(2)O(+) continues, and is now in the analysis phase. The work on the infrared vibrational-rotational spectrum of H(sup 15)NO(-) continues. In the second ion beam machine, a complete reworking of the voltages was completed, and is being reassembled. DOE

HIGH RATE RESISTIVE PLATE CHAMBERS: AN INEXPENSIVE, FAST, LARGE AREA DETECTOR OF ENERGETIC CHARGED PARTICLES FOR ACCELERATOR AND NON-ACCELERATOR APPLICATIONS
C. R. Wuest, E. Ables, R. M. Bionta, O. Clamp, M. Haro, G. J. Mauger, K. Miller, H. Olson, and P. Ramsey May 1993 4 p Presented at the 5th Annual International Industrial Symposium on the Super Collider and Exhibition, San Francisco, CA, 6-8 May 1993
(Contract W-7405-eng-48)
(DE93-018664; UCRL-JC-114015; CONF-930537-96) Avail: CASI HC A01/MF A01

Resistive Plate Chambers (RPC's) have been used until recently as large detectors of cosmic ray muons. They are now finding use as fast large-area trigger and muon detection systems for different high energy physics detectors such as the L3 Detector at LEP and future detectors to be built at the Superconducting Super Collider (SSC) and at the Large Hadron Collider (LHC) at CERN. RPC systems at these accelerators must operate with high efficiency providing nanosecond timing resolution in particle fluences up to a few tens of kHz/sq cm--with thousands of square meters of active area. RPC's are simple and cheap to construct. The authors report here recent work on RPC's using new materials that exhibit a combination of desirable RPC features such as low bulk resistivity, high dielectric strength, low mass, and low cost. These new materials were originally developed for use in electronics assembly areas and other applications, where static electric charge buildup can damage sensitive electrical systems. DOE

EXCITED ATOMIC BROMINE ENERGY TRANSFER AND QUENCHING MECHANISMS Ph.D. Thesis
Ray O. Johnson Aug. 1993 180 p
(AD-A270672; AFIT/DS/ENP/93-05) Avail: CASI HC A09/MF A02

Pulsed and steady-state photolysis experiments have been conducted to determine the rate coefficients for collisional deactivation of the spin-orbit excited state of atomic bromine, Br((sup 2)P(sub 1/2)). Pulsed lifetime studies for quenching by Br2 and CO2 established absolute rate coefficients at room temperature of k(sub Br2) = 1.2 +/- 0.1 x 10(exp-12) and k(sub CO2) = 1.5 +/0.2 x 10(exp-11) cu cm/molecule-s. Steady-state photolysis methods were used to determine the quenching rates for the rare gases, N2, 02, H2, D2, NO, NO2, N2O, SF6, CF4, CH4, CO, CO2, COS, SO2, H2S, HBr, HC1, and HI relative to that for Br2. Quenching rate temperature dependence was examined for Br2, CO2, N2O, HCl, COS, NO, and NO2 for temperatures from 300 to 420 K. Diffusion and three body effects were examined in order to determine the slowest relative quenching rate measurable by this experimental technique. DTIC

COMPOUND-LENS INJECTOR FOR A 19-MeV, 700-kA ELECTRON BEAM
T. W. L. Sanford, J. W. Poukey, J. A. Halbleib, and R. C. Mock (Ktech Corp., Albuquerque, NM.) 1992 4 p Presented at the International Particle Accelerator Conference, Washington, DC, 17-20 May 1993 Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(Contract DE-AC04-76DP-00789)
(DE93-013752; SAND-92-2221C; CONF-930511-3) Avail: CASI HC A01

A robust injector capable of controlling the radius and angle of incidence of the intense, pulsed, annular electron beam extracted from the HERMES-3 accelerator is described. The injector, called the compound lens, uses a tapered anode to control the beam electrostatically, followed by a gas cell with externally applied current to control the beam magnetically. Adjustment of the anode-cathode gap and external current of the injector permits the mean radius and injection angle of the beam to be defined independently of one another. Measurements of these quantities confirm model expectations. The extended planar-anode diode with a thin anode window has been used to inject a 25-ns, 19-MeV, 700-kA, annular electron beam into gas-filled drift cells for beam transport to bremsstrahlung targets located downstream of the HERMES-3 accelerator. By adjusting the anode-cathode (AK) gap of the diode, the radius and angle of incidence of the annular beam at injection can be varied. Here the authors theoretically model and experimentally characterize the electron flow in the compound-lens diode when it is used as a bremsstrahlung source. Results are presented as the AK gap is increased to 40 cm. The model combines the MAGIC code to simulate the time-dependent electron flow in the AK gap and lens with the CYLTRAN code of the ITS system to model window effects and the subsequent transport in the target. SYNCHROTRON BEAM-LOADING STABILITY WITH A HIGHER RF HARMONIC
Tai-Sen F. Wang 1993 4 p Presented at the International Particle Accelerator Conference, Washington, DC, 17-20 May 1993
(Contract W-7405-eng-36)
(DE93-014549; LA-UR-93-1845; CONF-930511-83) Avail: CASI HC A01/MF A01

This work is an attempt to extend Robinson's stability studies to include a higher RF harmonic. Using an equivalent circuit model, the stability of the 'O-mode' coherent dipole oscillation of bunched beams is studied for synchrotrons or storage rings, with RF systems operated at the fundamental and a higher harmonic, i.e., a 2nd or 3rd harmonic. Analytical expressions of the stability criteria are derived from the linearized circuit equations. Numerical solutions of the fully nonlinear equations are provided to compare with the analytical results. Simple feedback model for stabilization is discussed. DOE

DECOHERENCE AND RECOHERENCE OF BEAM IN PHASE SPACE
Jicong Shi and Shoroku Ohnuma 1993 4 p Presented at the International Particle Accelerator Conference, Washington, DC, 17-20 May 1993
(Contract DE-FG05-87ER-40374)
(DE93-014885; DOE/ER-40374/68; CONF-930511-143) Avail: CASI HC A01/MF A01

By use of the particle distribution in phase space, a new approach is introduced to study the decoherence and recoherence of a kicked beam when betatron tunes are far from any resonance. With this method, the decoherence and the recoherence of a beam can be analyzed easily in both 2-dimensional and 4-dimensional cases with any form of the tune spread. The decoherence of a beam initially trapped in a resonance island was also studied. Due to the tune modulation, the separatrix of island develops a chaotic layer and particles within the island can drift out of the island along the layer. Consequently, the beam decoheres gradually. The rate of decoherence is shown to be proportional to the modulation amplitude. As a function of the modulation frequency, it reaches a peak near the tune of trapped particles before decreasing to zero. DOE

The University of Maryland Dynamical Systems and Accelerator Theory Group has been carrying out long-term research work in the general area of Dynamical Systems with a particular emphasis on applications to Accelerator Physics. This work is broadly divided into two tasks: Charged Particle Beam Transport and the Computation of Electromagnetic Fields and Beam-Cavity Interactions. Each of these tasks is described briefly. Work is devoted both to the development of new methods and the application of these methods to problems of current interest in accelerator physics including the theoretical performance of present and proposed high energy machines. In addition to its research effort, the Dynamical Systems and Accelerator Theory Group is actively engaged in the education of students and postdoctoral research associates. DOE

ALTERNATING-PHASE FOCUSING WITH AMPLITUDE MODULATION
L. Sagalovsky and J. R. Delayen 1993 3 p Presented at the International Particle Accelerator Conference, Washington, DC, 17-20 May 1993
(Contract W-31-109-eng-38)
(DE93-018618; ANL/EP/CP-78372; CONF-930511-367) Avail: CASI HC A01/MF A01

We have previously developed a model of alternating-phase focusing (APF) applicable to ion linacs comprised of short independently controlled cavities. The main beam dynamical aspects of APF are adequately described by four parameters: equilibrium synchronous phase, phase modulation amplitude, length of APF period, and incremental energy gain. We report on an extension of the analysis to include simultaneous modulation of the accelerating field amplitude. Two additional parameters are included: relative phase between the amplitude and phase modulation and magnitude of the amplitude modulation. The effects of amplitude modulation on the stable regions and longitudinal acceptance are discussed. DOE

A BIT SERIAL FIRST LEVEL CALORIMETER TRIGGER FOR AN LHC DETECTOR
C. Bohm, G. Appelquist, Xing Zhao, N. Yamdagni, and N. Ellis (Birmingham Univ., England.) Nov. 1992 18 p
(USIP-92-08; ETN-93-94850) Avail: CASI HC A03/MF A01

A preliminary design of a compact first level calorimeter trigger, implemented as a farm of bit serial systolic arrays, and for use in a Large Hadron Collider (LHC) detector, is presented. Functionality can be incorporated into the Application Specific Integrated Circuits (ASIC's) that serve as the main processing elements. The trigger processor finds local electromagnetic clusters and evaluates isolation and leakage into the hadron calorimeter to detect electrons, uses cluster finding algorithms to identify jets and missing transverse energy to estimate neutrino energies. It provides means to spatially correlate electron and muon signals. The output is a histogram summarizing the classifications of different signatures detected by the trigger processor. This information serves as decision support for the central first level trigger and delivers region of interest positions to be used by the second level trigger. In its present form the trigger processor relies on optical fibers to transfer its data and provide the fan out needed to supply the ASIC's with their data. ESA

EXPERIMENTAL RESEARCH IN HIGH ENERGY PHYSICS Final Technical Progress Report, 1986-1992
1992 14 p
(Contract DE-AT03-86ER-40249)
(DE93-011912; DOE/ER-40249/T1) Avail: CASI HC A03/MF A01

This is the closeout report for DOE supported research in high energy physics for the period 1986-1992, under contract award AT03-86ER40249 at the Santa Cruz Institute for Particle Physics (SCIPP) at U.C. Santa Cruz. The research during this period consisted primarily of the following: (1) Data taking with the MARK II detector at the SLC at SLAC and construction of a silicon vertex detector for the MARK II. This effort included substantial work on commissioning of the SLC accelerator. (2) Preparation of the SLD experiment for the SLC, and initial data taking with this experiment. (3) Participation in the ALEPH physics program at LEP at CERN in Geneva, with an emphasis on its silicon vertex detector. (4) Analysis of data collected with the MARK III experiment at the SPEAR accelerator at SLAC. (5) Electronics development for the leading proton spectrometer for the Zeus experiment at DESY in Hamburg. (6) Design, testing and physics studies for a silicon tracker for the SSC. (7) Theoretical physics program emphasizing phenomenology, Higgs physics, supersymmetry, and some issues in cosmology. DOE

HALO FORMATION IN MISMATCHED, SPACE-CHARGE-DOMINATED BEAMS
C. L. Bohn and J. R. Delayen 1993 4 p Presented at the International Particle Accelerator Conference, Washington, DC, 17-20 May 1993
(Contract W-31-109-eng-38)
(DE93-018581; ANL/EP/CP-78375; CONF-930511-345) Avail: CASI HC A01/MF A01

A semianalytic formalism was recently developed for investigating the transverse dynamics of a mismatched, space-charge-dominated beam propagating through a focusing channel. It uses the Fokker-Planck equation to account for the rapid evolution of the coarse-grained distribution function in the phase space of a single beam particle. A simple model of dynamical friction and diffusion represents the effects of turbulence resulting from charge redistribution. The initial application was to sheet beams. In this paper, the formalism is generalized to fully two-dimensional beams. DOE

LONGITUDINAL BEAM DYNAMICS WITH RF NOISE
H. J. Shih, J. A. Ellison (Texas Univ., Austin.), R. Cogburn (Texas Univ., Austin.), and B. S. Newberger (Texas Univ., Austin.) Jun. 1993 41 p Revised
(Contract DE-AC35-89ER-40486)
(DE93-018649; SSCL-578-Rev-1) Avail: CASI HC A03/MF A01

The Dome-Krinsky-Wang (DKW) diffusion-inaction theory for RF-noise-induced emittance dilution is reviewed and related to recent work on the approximation of stochastic processes by Markov processes. An accurate and efficient numerical procedure is developed to integrate the diffusion equation of the DKW theory. Tracking simulations are undertaken to check the validity of the theory in the parameter range of the Superconducting Super Collider (SSC) and to provide additional information. The study of effects of rf noise is applied to two problems of interest at the SSC: (1) determination of noise tolerance levels in the rf system; and (2) feasibility of beam extraction using crystal channeling. DOE

SPICE MODELING OF A FET-SWITCHED INDUCTION ACCELERATOR CELL
C. W. Ollis, W. R. Cravey, S. A. Hawkins, H. C. Kirbie, and M. A. Newton 11 Jun. 1993 6 p Presented at the 9th IEEE Pulsed Power Conference, Albuquerque, NM, 21-23 Jun. 1993
(Contract W-7405-eng-48)
(DE93-018662; UCRL-JC-112511; CONF-930616-19) Avail: CASI HC A02/MF A01

A PSpice model of an induction accelerator cell switched by field-effect transistors (FET's) has been developed to simulate the modulator's circuit performance and induction core flux behavior. A FET switched induction cell has been built that can generate 4-kV, 1 micro-s pulses at pulse rates exceeding 100 kHz. The circuit architecture provides for core reset between pulses and produces bursts of pulses that are variable in amplitude, pulse width and prf. The transistor switching array, energy storage capacitors, reset circuit, and cell core are all combined into a compact, low-impedance package. This high-prf induction cell is being developed as the accelerating element for a proposed heavy-ion recirculator, which is an arrangement of many small induction cells in a 30 m diameter circle. The recirculator will accept 10-MeV ions from a linear ion accelerator, under development at the Lawrence Berkeley Laboratory, and continue their acceleration to 60-MeV by repeatedly passing the ion beam through the many 5-kV cells. As the ions gain speed, the cell prf must also keep pace by increasing from 70 kHz to 200 kHz. Simple PSpice models have been used to predict B-H loop behavior in the magnetic core and to analyze circuit performance. Simulations of the induction cell will be presented and compared with experimental data. DOE

HEAVY ION FUSION INJECTOR PROGRAM
S. Yu, S. Eylon, and W. W. Chupp May 1993 6 p Presented at the International Particle Accelerator Conference, Washington, DC, 17-20 May 1993
(Contract DE-AC03-76SF-00098)
(DE93-018706; LBL-33289; HIFAN-574; CONF-930511-335) Avail: CASI HC A02/MF A01

A program is underway to construct a 2 MV, 800 mA, K(+) injector for heavy ion fusion. The Electrostatic Quadrupole (ESQ) injector configuration consists of a zeolite source, a diode of up to 1 MV, together with several electrostatic quadrupole units to simultaneously focus and accelerate the beam to 2 MV. The key issues of source technology, high voltage breakdown, beam aberrations, and transient effects will be discussed. Results from ongoing experiments and simulations will be presented. DOE

CORRECTION OF LONGITUDINAL ERRORS IN ACCELERATORS FOR HEAVY-ION FUSION
W. M. Sharp, D. A. Callahan, J. J. Barnard, A. B. Langdon, and T. J. Fessenden (California Univ., Berkeley. Lawrence Berkeley Lab.) 10 Jun. 1993 5 p Presented at the International Particle Accelerator Conference, Washington, DC, 17-20 May 1993
(Contract W-7405-eng-48)
(DE93-018656; UCRL-JC-112377; CONF-930511-337) Avail: CASI HC A01/MF A01

Longitudinal space-charge waves develop on a heavy-ion inertial-fusion pulse from initial mismatches or from inappropriately timed or shaped accelerating voltages. Without correction, waves moving backward along the beam can grow due to the interaction with their resistively retarded image fields, eventually degrading the longitudinal emittance. A simple correction algorithm that uses a time-dependent axial electric field to reverse the direction of backward-moving waves is presented. The image fields then damp these forward-moving waves. The method is demonstrated by fluid simulations of an idealized inertial-fusion driver, and practical problems in implementing the algorithm are discussed. DOE

We have used the 2-D PIC code, GYMNOS, to study the transient behaviors in the Heavy Ion Fusion (HIF) injectors. GYMNOS simulations accurately provide the steady state Child-Langmuir current and the beam transient behavior within a planar diode. The simulations of the LBL HIF ESAC injector experiments agree well with the experimental data and EGUN steady state results. Simulations of the nominal HIF injectors have revealed the need to design the accelerating electrodes carefully to control the ion beam current, particularly the ion loss at the end of the bunch as the extraction voltage is reduced. SIMULATION OF THE ALS LONGITUDINAL MULTIBUNCH FEEDBACK SYSTEM
J. Byrd May 1993 6 p Presented at the International Particle Accelerator Conference, Washington, DC, 17-20 May 1993
(Contract DE-AC03-76SF-00098)
(DE93-019227; LBL-33271; ESG-229; CONF-930511-364) Avail: CASI HC A02/MF A01

Longitudinal coupled bunch growth rates in the Advanced Light Source (ALS), a 1.5 GeV electron storage ring for producing synchrotron radiation, indicate the need for damping via a feedback (FB) system. The design of the system is based on the proposed PEP-II longitudinal FB system which uses a digital filter to provide the required phase and amplitude response. We report the results of a detailed computer simulation of the FB system including single particle longitudinal beam dynamics, measured RF cavity fundamental and higher order modes, and response of major FB components such as the power amplifier and kicker. The simulation addresses issues such as required FB power and gain, noise, digital filter effects, and varying initial bunch conditions. DOE

We present an overview of the calculated longitudinal and transverse coupled-bunch (CB) growth rates using the measured RF cavity higher order mode (HOM) impedance for the Advanced Light Source (ALS), a 1.5 GeV electron storage ring for producing synchrotron radiation. We also describe a visual method of representing the effective beam impedance and corresponding growth rates which is especially useful for understanding the dependence of growth rate on HOM frequency and Q, for determining the requirements of the CB feedback system, and for interpreting measured beam spectra. THE ILSE EXPERIMENTAL PROGRAM
C. M. Celata, R. O. Bangerter, and W. Chupp May 1993 11 p Presented at the International Symposium on Heavy Ion Fusion, Frascati, Italy, 25-28 May 1993
(Contract DE-AC03-76SF-00098)
(DE93-019247; LBL-33800; HIFAN-579; CONF-9305136-11) Avail: CASI HC A03/MF A01

The Heavy Ion Fusion Accelerator Research Program at Lawrence Berkeley Laboratory has proposed building a 10 MeV Induction Linac Systems Experiment, ILSE, to investigate accelerator physics and beam manipulations which are needed or desirable for an induction linac driver. This paper describes the experiments proposed for ILSE: transverse beam combining, drift compression, bending of space-charge-dominated beams, final focus, recirculation, and some studies of beam propagation in the environment of the reactor chamber. TOTAL HEMISPHERICAL EMITTANCE OF NIOBIUM-1 PERCENT ZIRCONIUM FUEL CLADDING FOR THE SP-100 SPACE REACTOR M.S. Thesis
John E. Thomason, III Dec. 1992 71 p
(AD-A270456; AFIT/GNE/ENP/92D-1) Avail: CASI HC A04/MF A01

Total hemispherical emittance was measured for the SP-100 reactor fuel cladding alloy (Nb-1% Zr). Based on a standard test method (ASTM C 835-82), experiments were conducted on a reference sample of oxidized stainless steel and then on a sample of actual cladding. The sample is heated in a vacuum by passing DC current through it until reaching equilibrium. Measurements are made of the electrical power dissipated in the sample and of the surface temperature. Using the Stefan-Boltzmann Law and some key assumptions concerning conductive and radiative heat transfer, the measured quantities are used to calculate emittance. Calculated values for unoxidized cladding range from 0.159 +/- 5.35% at 913 K to 0.200 +/- 4.51% at 1091 K. The highest value measured after onset of visible oxidation was 0.339 +/- 3.92% at 1269 K. EXAMINATION OF METRICS AND ASSUMPTIONS USED IN CORRELATION FILTER DESIGN
G. Gheen (Lockheed Missiles and Space Co., Sunnyvale, CA.), F. Dickey, and J. DeLaurentis 1993 12 p Presented at the Annual Meeting of the SPIE, San Diego, CA, 11-16 Jul. 1993
(Contract DE-AC04-76DP-00789)
(DE93-017636; SAND-93-1491C; CONF-930722-8) Avail: CASI HC A03/MF A01

This paper examines some of the metrics that are commonly used to design correlation filters for optical pattern recognition, including: the Fisher ratio, the signal-to-noise ratio, the equal correlation peak (ECP) constraint, and normalized correlation. Attention is given to the underlying assumptions that are required to move from Bayesian decision theory to a particular metric or design principle. Since a Bayes classifier is statistically optimum, this provides a means for assessing the merit of a particular approach. Although the authors only examine a few metrics in this paper, the approach is general and should be useful for assessing the merit and applicability of any of the numerous filter designs that have been proposed in the optical pattern recognition community. COHERENT TRANSIENT SYSTEMS EVALUATION Final Report, 1 Sep. 1991 - 7 Jun. 1993
William R. Babbitt 17 Jun. 1993 45 p
(Contract F49620-91-C-0088)
(AD-A268808; AFOSR-93-0649TR) Avail: CASI HC A03/MF A01

This final report of contract F49620-91-C-0088 describes the development of the analytical tools required to evaluate optical coherent transient memory, triple-product correlator, and continuous signal processor systems. One key tool is a coherent transient simulator based on the optical Bloch equations. The coherent transient output signal that results from an arbitrary sequence of pulses, each having an arbitrary amplitude, duration, center frequency, chirp, phase, and timing can be calculated. The simulator was used to study excitation pulse saturation and its effects on the output signal efficiency and fidelity and to study frequency chirped reference pulse saturation. Analytical tools were developed to assess the effects of local heating and spatial crosstalk. A performance evaluation of a coherent transient continuous optical correlator is reported, along with new implementation techniques. The continuous processor's predicted time-bandwidth product, data bandwidth, and pattern storage density are 10000, 5 GHz, and 100000 patterns per square centimeter, respectively. A

proof of concept demonstration of the continuous optical processor was performed in europium doped yttrium silicate in collaboration with IBM Almaden Research Center. Research into divalent ion doped crystals as photon gated materials for coherent transient systems was performed.

(DE93-630228; IFVE-OP-91-142) Avail: CASI HC A03 (US Sales Only)

Using the conception of the single crystal as a region of electrical field, generated by spatially ordered atoms, we have determined the tensor of dielectric permeability for greater than or equal to 1 GeV photons in the region of crystal orientation, which corresponds to e (sup +-) pair coherent production. The polarization characteristics of normal EM wave propagation in the crystals were found with the help of this tensor. In particular, it was shown that there exist solutions of a dispersion equation for ellipted polarized waves. Other EM processes in the crystals, in particular, Cherenkov radiation of charged particles, were considered.

(Contract MDA972-92-C-0053; ARPA Order 8557)
(AD-A268849) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

During this quarter, we completed an important component of our work on the gradient corrections to the defect formation energies. This correction applies to all total energies calculated, including those for defects in HgCeTe, ZnSe, and LiNbO3, and permits us to calculate accurate absolute defect densities. We have developed a preliminary description of the tellurium inclusion formation process in HgCdTe, and proposed a mechanism for the mobility reduction in undoped mercury-annealed LPE material. We have begun the calculation of the lithium vacancy formation energies in LiNbO3. We have continued our work on the impact of dislocations on MCT device properties. We have calculated the electron mobility in Hg(0.22)Cd(0.78)Te by solving the Boltzmann transport equation with Fermi-Dirac statistics and the full band structure, and we have obtained excellent agreement with experiments. The transport-related properties (Hall coefficient, Fermi level, and energy gap) have also been calculated with accurate analytical band structures and Fermi-Dirac statistics, and we find that the results differ appreciably from those using traditional approximations. All of these results are being incorporated into processing strategies to increase yields and performance of devices.

ADVANCED OPTICAL FIBER COMMUNICATION SYSTEMS Status Report, 1 Mar. - 31 Jul. 1993
Leonid G. Kazovsky 31 Jul. 1993 28 p
(Contract N00014-91-J-1857)
(AD-A269120) Avail: CASI HC A03/MF A01

Our research is focused on three major aspects of advanced optical fiber communication systems: dynamic wavelength division multiplexing (WDM) networks, high dynamic range coherent analog optical links, and fiber nonlinearities. In the area of WDM networks, a prototype high-speed interface board between workstation and WDM network has been designed, implemented, and tested, with a highest data rate so far of 728 Mbps. We also began the theoretical investigation of a system using combined ASK/DPSK modulation formats. The results show the feasibility of using semiconductor lasers with ASK/DPSK combined modulation in future dynamic WDM network. In the area of high dynamic range coherent analog optical links, we completed analyses of the spurious-free dynamic range (SFDR) of coherent amplitude and coherent angle modulated links and compared the results with those for conventional and optically preamplified direct detection links. In the area of fiber nonlinearities, we showed that the pdf of four wave mixing interference is non-Gaussian and analyzed the impact of four wave mixing on the attainable receiver sensitivity of coherent WDM digital systems for both dispersion-shifted and non-dispersion-shifted fiber.

(Contract N00014-90-C-0244)
(AD-A268463; ERIM-232800-2-F) Avail: CASI HC A03

In blind tests, we successfully reconstructed images from data simulated to have some of the defects that data coming from the multi-aperture amplitude interferometer (MAAI) at the University of Maryland would have. We also successfully reconstructed good-quality images from phaseless data collected by ERIM's experimental range-angle interferometric imaging system. These successes in reconstructing images with phaseless interferometer data demonstrate the possibility of obtaining fine-resolution images with large, low-cost, light-weight, aberrated optical systems, despite the kinds of noise and other errors that are present in real data. We also showed that it is feasible to insert a beam deviator in the MAAI that would allow us to measure the lower spatial frequencies that are crucial for reconstructing images from low-light-level data. Past efforts in this program have been devoted to exploring the preparation, properties, and structures of various beta alumina compositions in which the mobile sodium ion content was replaced with a variety of divalent and trivalent cations. Though this line of work has produced a great number of new and unusual materials, in particular unusual solid electrolytes and new optical materials, as well as insight into the factors which control fast ion transport in solids, it seemed an appropriate time to move on to another topic. So, over the past year, most of the effort in this program has been devoted to investigations of the use of sol-gel chemistry to produce unusual electrochemical materials, such as solid state ionic conductors, new high rate cathode materials, and unusual organic-inorganic composite materials. APPLICATIONS OF NONLINEAR OPTIC EFFECTS IN NEW SPECIALTY FIBERS Report, Oct. 1991 - Dec. 1992
Reinhard Erdmann Jun. 1993 36 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(AF Proj. LDFP)
(AD-A268890; RL-TR-93-105) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

Nonlinear Optic effects are in general higher order processes. This dictates relatively weak interaction coefficients, so that the optical field intensity must be greater in order to observe effects. Optical fiber in particular being amorphous hence centro-symmetric, precludes second order effects, so the ones of interest for this study are already third order (X3). Fiber possesses, however, some unique properties which greatly enhance the interaction efficiency, and enable practical applications. The small area confinement (typically less than 50 sq um) over very long interaction lengths permits up to three orders of magnitude increase in efficiency over a free space focus. Brillouin scatter is examined even though it is not noticeable with normal sources, because key new applications require ultra narrow line widths, which are shown to bring the threshold to a disturbingly low value of only several mw. Stimulated Raman effects are examined because of their great versatility in frequency shifting for various practical applications. Fiber amplification is shown to enable fiber lasers with very promising properties; extremely short pulses at very low pump powers, fully integrated with only passive components. Interesting follow-on work is indicated in each of these areas. DTIC

METAL FILM SURFACE PLASMON RESONANCE (MFSPR) FIBRE COUPLERS Final Report, 30 Sep. 1990 - 31 Dec. 1992

J. Russell and S. Barcelos Feb. 1993 49 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality

(Grant AF-AFOSR-0353-90)

(AD-A268871) Avail: CASI HC A03

The project goal was to develop a mode selective coupler, based on long-range surface-plasmons (LRSP's), that provides tunable tapping of individual modes or small groups of modes from a multi-mode fiber carrying several communications channels simultaneously in different areas of its mode spectrum. When a thin metal layer, deposited on a side-polished fiber, supports a LRSP that phase-matches to a fiber mode, resonant tunneling of light from the core into the metal layer can occur; this may then be tapped off through a high index prism (or a second identical fiber) placed against the fiber face, the intervening space being filled with a layer of variable index. Mode selectivity might then be achieved by tuning the index of this layer. In the project, the fiber side-polishing apparatus was designed and built, the polishing procedure perfected, a fully automated computer-driven prism coupler and monochromator set up, and reliable film deposition achieved. The theory of the LRSP modes was fully developed, and a separate field matrix analysis carried out for modelling the behavior of the entire device both for excitation from the prism and the fiber modes. The general conclusion is that the modal selectivity is fundamentally limited by the unavoidable fact that higher order modes (those close to cut-off) couple much more strongly than do lower order modes. The result is that lower order modes cannot be coupled out without a substantial (of order 50% or worse) amount of cross-talk from higher order modes. These observations were confirmed in a number of experiments. DTIC

DESIGN AND FABRICATION OF A MULTICHANNEL ADAPTIVE OPTICAL PROCESSOR (MADOP) Report, Feb. 1991 - Sep. 1992

Michael J. Ward, Christopher W. Keefer, and Harold G. Andrews, II Dec. 1992 56 p

(AF Proj. 4600)

(AD-A270004; RL-TR-92-333) Avail: CASI HC A04/MF A01

We designed and built a multichannel adaptive optical processor (MADOP) for the purpose of adaptive cancellation of broadband jamming noise in C-Band antenna arrays. The processor operates at an intermediate frequency (IF) of 80 MHz and is designed to provide greater than 30 dB cancellation of two independent 10 MHz bandwidth noise jammers, where multiple reflections of the jamming energy collected in the sidelobes produce multipath delays of up to 5 micro-sec. The MADOP architecture is portable and designed to function as an on-line 'smart filter' which adaptively cancels broadband noise in the sidelobes. DTIC

INVESTIGATION OF A FIBER OPTIC FREQUENCY SHIFTER AND OPTICAL ISOLATOR Final Report, 30 Sep. 1990 - 30 Apr. 1993

Walter Johnstone, Graham Thursby, and Craig Michie 30 Apr. 1993 84 p

(Grant AF-AFOSR-0286-90)

(AD-A269820; EOARD-93-06) Avail: CASI HC A05/MF A01

This report documents a program of investigation of an in-line fiber optic frequency translator and optical isolator on behalf of AFOSR (90-0286). The proposed designs are based on evanescent field coupling from a single mode optical fiber to a multi-mode planar waveguide overlay. The program focused mainly on the development of a particular design of frequency translator and included extensive characterization of fiber optic overlay structures in general. Fabrication of the frequency translator based on bonding lithium niobate to a fiber block and polishing it thin to form the acousto-optic overlay proved to be difficult and yields were low. Several devices were completed but frequency shifting was not observed due to severe attenuation of the surface acoustic waves. On a more positive note the overlay structures demonstrated excellent wavelength selective properties leading to the realization of tunable high resolution (2 nm) dropping filters and band pass filters. Such devices have many applications in communications, sensing, and tuning of fiber lasers. DTIC

APPARATUS AND METHOD FOR VARYING A BRAGG WAVELENGTH OF A BRAGG GRATING FORMED IN AN OPTICAL FIBER Patent Application

Alan D. Kersey, inventor (to Navy) and C. A. Villarruel, inventor (to Navy) 30 Jun. 1993 32 p

(AD-D015876; US-Patent-Appl-SN-083953) Avail: CASI HC A03/MF A01

An apparatus and method uses a Bragg grating formed in the core of an optical fiber. An element is coupled to the optical fiber and serves to vary a Bragg wavelength (i.e., a wavelength at which reflection occurs) of the Bragg grating by varying a refractive index of the core and/or a cladding of the optical fiber. The element can be an electro-optical element, a magnetooptical element, or a chemo-optical element either sensing or being controllably varied, based on an electric signal, a magnetic signal, or a presence or absence of a chemical, respectively. Alternatively, a dopant, such as a rare-earth ion, can be formed in the core and/or cladding of the optical fiber and irradiated with laser light from a laser pump. A change in absorption spectra from ground state absorption to excited state absorption changes the refractive index of the core and/or cladding so that the Bragg wavelength of the Bragg grating is varied based on an intensity of the laser light. This study explores parametrically as a function of wavelength the degrading effects of several common optical aberrations (defocus, astigmatism, wavefront tilts, etc.), using the heterodyne mixing efficiency factor as the merit function. A 60 cm diameter aperture beam expander with an expansion ratio of 15:1 and a primary mirror focal ratio of f/2 was designed for the study. An HDOS copyrighted analysis program determined the value of merit function for various optical misalignments. With sensitivities provided by the analysis, preliminary error budget and tolerance allocations were made for potential optical wavefront errors and boresight errors during laser shot transit time. These were compared with the baseline l.5 m CO2 LAWS and the optical fabrication state of the art (SOA) as characterized by the Hubble Space Telescope. Reducing wavelength and changing optical design resulted in optical quality tolerances within the SOA both at 2 and 1 micrometers. However, advanced sensing and control devices would be necessary to maintain on-orbit alignment. Optical tolerance for maintaining boresight stability would have to be tightened by a factor of 1.8 for a 2 micrometers system and by 3.6 for a 1 micrometers system relative to the baseline CO2 LAWS. Available SOA components could be used for operation at 2 micrometers but operation at 1 micrometers does not appear feasible. Author

In many applications, x-ray multilayer mirrors are exposed to high peak fluxes of x-rays with subsequent damage to the mirror. Mirror damage is a particularly severe problem with the use of multilayers as cavity optics for short wavelength x-ray lasers. Intense optical and x-ray radiation, from the x-ray laser plasma amplifier, often damage the multilayer mirror on time scales of hundreds of picoseconds. The phenomenon of multilayer mirror damage by pulsed x-ray emission has been studied using short duration (500 psec) bursts of soft x-rays from a laser produced gold plasma. The results of the experiments will be compared with some simple models and the possibility of increasing the damage thresholds of short wavelength multilayer mirrors will be discussed. DOE

IMPROVED OPTICAL PSEUDOSPARK SWITCH Patent Application
Michael G. Grothaus, inventor (to Navy), Jack S. Bernardes, inventor (to Navy), and David C. Stoudt, inventor (to Navy) 3 May 1993 12 p
(AD-D015821; US-Patent-Appl-SN-056084) Avail: CASI HC A03/MF A01

Disclosed is a high-voltage, high-current, multichannel, optically-triggered switch with the potential for improved lifetime of operation. Triggering of the switch is accomplished by ultraviolet illumination of multiple cathode apertures via fiber-optic cables. The trigger optics for each channel, being composed of a fiber-optic cable terminated by some collimating optics, are protected from damaging metalization by enclosing them in an angled metal or dielectric tubes in the cathode back-space. The use of collimating optics at the output of the fiber allows the fiber to be recessed inside the shield tube, providing further protection from discharge by-products. DTIC

EVALUATION OF FIBER OPTIC PERFORMANCE IN THE ACRR
D. E. Bodette and P. J. Brannon May 1993 50 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(Contract DE-AC04-76DP-00789)
(DE93-018515; SAND-92-1094) Avail: CASI HC A03

Four fluorosilica clad, all silica core fibers with polyamide buffers were examined for radiation-induced, transient absorption in the central cavity of the Annular Core Research Reactor. The reactor operated 24 times in the pulse mode, typically yielding gamma doses of 15 krad(Si) and neutron fluences of 1.4x10(exp 14) nts/cm(sup 2) thermal and 1.0x10(exp 15) nts/cm(sup 2) (fast). The two low-OH fibers absorbed 90% of the light in the 400 to 500 nm region and 30% in the 700 and 800 nm region. The high-OH fibers absorbed 20% in the 400 to 500 nm region and 50% in the 700 to 800 nm region. Saturation of the transient induced absorption was observed in all the fibers. No systematic measurements were taken of long term induced absorption. However, excessive absorption was not a problem in any fibers, even those that received total gamma doses of 5 Mrad(Si). Scintillation in the 680 to 820 mn band was observed. This report documents the data from these experiments. DOE

SINGLE SIDED TOMOGRAPHY OF EXTREMELY LARGE DENSE OBJECTS
R. S. Thoe 24 Mar. 1993 14 p Presented at the Society of Photo-Optical Instrumentation Engineers (SPIE) OE/Aerospace Science and Sensing Meeting, Orlando, FL, 11-16 Apr. 1993
(Contract W-7405-eng-48)
(DE93-017993; UCRL-JC-111856; CONF-930445-19) Avail: CASI HC A03/MF A01

One can envision many circumstances where radiography could be valuable but is frustrated by the geometry of the object to be radiographed; for example, extremely large objects, the separation of rocket propellants from the skin of solid fuel rocket motor, the structural integrity of an underground tank or hull of a ship, the location of buried objects, inspection of large castings, etc. The author has been investigating ways to do this type of radiography and as a result has developed a technique which can be used to obtain three dimensional radiographs using Compton scattered radiation from a monochromatic source and a high efficiency, high resolution germanium spectrometer. This paper gives specific details of the reconstruction technique and presents the results of numerous numerical simulations and compares these simulations to spectra obtained in the laboratory. In addition, the author presents the results of calculations made for the development of an alternative single sided radiography technique which will permit inspection of the interior of large objects. As a benchmark, the author seeks to obtain three dimensional images with a resolution of about one cubic centimeter in a concrete cube 30 centimeters on a side. Such a device must use photons of very high energy. For example, 30 cm of concrete represents about 15 mean free paths for photons of 100 keV, whereas at 1 MeV the attenuation is down to about five mean free paths. At these higher energies, Compton scattering becomes much more probable. Although this would appear to be advantageous for single sided imaging techniques, such techniques are hampered by two side effects. In this paper, the results are given of numerous Monte Carlo calculations detailing the extent of the multiple scattering and the feasibility of a variety of imaging schemes is explored. DOE

The performance of thermal imagers is tested by means of test targets, put in the focal plane of a collimator. For Minimum Resolvable Temperature Difference (MRTD) measurements bar targets are used with a certain frequency and variable temperature contrast. The zoomcollimator described provides a variable spatial frequency, which is more comparable to the range variation of a target in the terrain with certain size and temperature contrast. In the focal plane also a line source and a circular source with variable temperature contrast can be used, in order to measure the MRTD. ESA

Examples of image sequence processing using motion estimation are presented. Results of noise reduction by motion compensated temporal filtering in a noisy image sequence and examples of the detection of moving targets in an air to ground infrared (IR) image sequence are included. The examples show what kind of improvements or detection results can be expected. Noise reduction in a noisy image sequence and some results on IR image sequences are included. The detection of moving objects in image sequences is discussed. These sequences are recorded from a moving platform. The aim is to detect objects moving relative to the moving background. ESA

We have pursued a vigorous program of experimental and theoretical research on a novel method of frequency division based on an optical parametric oscillator (OPO). We have successfully demonstrated optical frequency division in a nearly degenerate KTP OPO that is highly efficient and tunable. The difference frequency of the two subharmonic outputs of the OPO was phase locked to a 12-GHz microwave source with a residual phase noise spectral density of 0.3 mrad/VH-z. More recently the use of a THz optical frequency comb permitted the OPO to be phase locked at a difference frequency of 665 GHz. We have studied a number of potential applications including optical frequency counting for frequency standards and multi-THz optical frequency comb generation for optical communications. DTIC

(AD-A270948; RL-TR-93-149) Avail: CASI HC A06/MF A02

Extensive testing has been done on nonlinear interface optical switch (NIOS) devices fabricated from laser deposited nonstoichiometric tungsten oxide films. A Fresnel coefficient formalism for evaluating the indices of refraction of the films has been developed. Three cycles of testing involving changing the tungsten-oxygen stoichiometry have not produced extremely large photorefractive effects. It was decided, after using a mathematical model to determine the required incident and reflection angles, to make the next set of NIOS devices from a film deposited on ZnS prisms. ZnS more closely matches the low light intensity index of the films. Preliminary studies of further changes to produce stronger nonlinearity have been performed. Raman spectroscopy showed that these films heated in oxygen organize themselves into octohedra, which are thought to be necessary for the photorefractive effects observed in titanates and niobates. Heating the films in vacuum produces blue films which ESCA shows contain tungsten in the +4 oxidation state. Such electron rich species might be able to provide highly polarizable charge carriers. In addition to use as optical switches, use of these films to make reconfigurable Dammann gratings has been studied. These gratings would allow optical addressing of large size S-SEED arrays. DTIC

EVALUATION OF LASER DIODE BASED OPTICAL SWITCHES FOR OPTICAL PROCESSORS Final Report, Mar. - Dec. 1992
Paul D. Swanson, Michael A. Parker, and Stuart I. Libby Jul. 1993 21 p
(Contract F30602-92-C-0038)
(AD-A270949; RL-TR-93-145) Avail: CASI HC A02/MF A01

Three optical switching elements have been designed, fabricated, and tested for use in an integrated, optical signal processor. The first, an optical NOR logic gate, uses gain quenching as a means of allowing one (or more) light beam(s) to control the output light. This technique, along with the use of a two pad bistable output laser, is used in demonstrating the feasibility of the second device, an all optical RS flip flop. The third device consists of a broad area orthogonal model switching laser, whose corollary outputs correspond to the sign of the voltage difference between its two high impedance electrical inputs. This device also has possible memory applications if bistable mode switching within the broad area laser can be achieved. DTIC

SCHROEDINGER'S HOPE
Carlos Stroud Jul. 1993 11 p
(Contract DAAL03-92-G-0147)
(AD-A270988; ARO-30367.27-PH-URI) Avail: CASI HC A03/MF A01

Recent work at the University of Rochester that was supported by the Army Research Office through the University Research Initiative Program was featured in a recent book Taming the Atom by Hans Christian von Baeyer. An excerpt from that book is presented that shows that the work in Rochester is the realization of Erwin Schroedinger's hope in the earliest days of quantum theory that a solution to his equation could be found in the form of a localized wave packet moving along the elliptical orbit predicted by classical theory. In a series of calculations and experiments the group in Rochester was shown that a short laser pulse can be used to excite such a wave packet state and that as the wave packet moves many times around the orbit it undergoes a complicated time evolution in which it spreads all the way around the orbit, and then repeatedly relocalizes in the form of a single wave packet or a series of identical sub-wave packets equally spaced around the orbit. This work sheds new light on the boundary between microscopic quantum systems and macroscopic classical systems. DTIC

THE PHASE MIXING OF SHEAR ALFVEN WAVES
C. Uberoi Apr. 1993 7 p
(DE93-624920; IC-93/69) Avail: CASI HC A02/MF A01 (US Sales Only)

The phase mixing of shear Alfven waves is discussed as a current sheets crossover phenomena by using the well-behaved time dependent solution of the Alfven wave equation. This method is a more direct approach than the initial value problem technique to find the collisionless damping time of the surface waves, which as it represents the coherency loss is argued to be the phase mixing time. The phase mixing time obtained by both the methods compares well. The direct method, however, has an advantage that no particular profile for the magnetic field variation need to be chosen and secondly the phase mixing time and the time scale for which the resistivity effects become important can be expressed conveniently in terms of Alfven transit times before crossover. DOE

N94-17689# Ceskoslovenska Akademie Ved, Prague.
TRANSFORMATION OF ENERGY AND MOMENTUM DUE TO LANDAU DAMPING IN SPACE
J. Lacina Aug. 1992 21 p
(DE93-624921; IPPCZ-325) Avail: CASI HC A03/MF A01 (US Sales Only)

General expressions are derived for the time-averaged flow of kinetic energy and of kinetic momentum, valid in the second order approximation. While the time-averaged density of kinetic energy is constant in time, the time-averaged flow of kinetic energy is constant in space. Therefore, no deposition of energy in a plasma occurs, despite the fact that Landau damping in space takes place for stable plasmas. The constant value of the averaged flow of kinetic energy is given by the contribution of the undamped coherent free oscillations, while the spatial damping of the forced oscillations sets off the effect of the phase interference between forced and free oscillations. (Contract DE-AC05-84OR-21400)
(DE93-013208; CONF-9304112-7) Avail: CASI HC A01

A system has been designed to allow operation of the JET A2 antenna arrays with phasing between elements of other than 0 or pi at increased power. The system uses a hybrid coupler to transfer power in the direction opposite to that occurring at the antenna elements. This results in nearly equal currents and voltages on the feed lines and antenna structures, with nearly equal input powers at the RF generators. The direction and magnitude of the power transfer is controlled by adjustable tuning elements mounted on two of the four coupler ports. Much insight has been gained on optimization of the circuit design to maximize bandwidth (approximately 10 MHz for the present JET design with 20 MHz a possibility) and power-handling capability. The concept has been tested initially on the D3-D tokamak, with a compensator installed in the feed circuit for the four-element FWCD antenna array. In this application it acts to equalize input impedances and will eventually be used to allow operation with multiple transmitters. DOE

LIMITS ON m = 2, n = 1 ERROR FIELD INDUCED LOCKED MODE INSTABILITY IN TPX WITH TYPICAL SOURCES OF POLOIDAL FIELD COIL ERROR FIELD AND A PROTO TYPE CORRECTION COIL, C-COIL
R. J. LaHaye Dec. 1992 21 p
(Contract DE-AC03-89ER-51114)
(DE93-014408; GA-A-21167) Avail: CASI HC A03/MF A01

Irregularities in the winding or alignment of poloidal or toroidal magnetic field coils in tokamaks produce resonant low m, n = 1 static error fields. Otherwise stable discharges can become nonlinearly unstable, and locked modes can occur with subsequent disruption when subjected to modest m = 2, n = 1 external perturbations. Using both theory and the results of error field/locked mode experiments on DIII-D and other tokamaks, the critical m = 2, n = 1 applied error field for locked mode instability in TPX is calculated for discharges with ohmic, neutral beam, or RF heating. Ohmic discharges are predicted to be most sensitive, but even co-injected neutral beam discharges (at beta(sub N) = 3) in TPX will require keeping the relative 2,1 error field (B(sub r21)/B(sub T)) below 2 x 10(exp -4). The error fields resulting from 'as-built' alignment irregularities of various poloidal field coils are computed. Coils if well-designed must be positioned to within 3 mm with respect to the toroidal field to keep the total 2,1 error field within limits. Failing this, a set of prototype correction coils is analyzed for use in bringing 2,1 error field down to a tolerable level. DOE

We report preliminary results from the analysis of streaked soft x-ray neon spectra obtained from the interaction of a picosecond Nd:glass laser with a gas jet target. In these experiments streaked spectra show prompt harmonic emission followed by longer time duration soft x-ray line emission. The majority of the line emission observed was found to originate from Li- and Be-like Ne and the major transitions in the observed spectra have been identified. Li-like emission lines were observed to decay faster in time than Be-like transitions, suggesting that recombination is taking place. Line ratios of n = 4-2 and n = 3-2 transitions supported the view that these lines were optically thin and thick, respectively. The time history of Li-like Ne 2p-4d and 2p-3d lines is in good agreement with a simple adiabatic expansion model coupled to a time dependent collisional-radiative code. Further x-ray spectroscopic analysis is underway which is aimed at diagnosing plasma conditions and assessing the potential of this recombining neon plasma as a quasi-steady-state recombination x-ray laser medium. USING THE TRITIUM PLASMA EXPERIMENT TO EVALUATE ITER PFC SAFETY
Glen R. Longhurst (Edgerton, Germeshausen and Grier, Inc., Idaho Falls, ID.), Robert A. Anderl (Edgerton, Germeshausen and Grier, Inc., Idaho Falls, ID.), John R. Bartlit, Rion A. Causey (Sandia National Labs., Livermore, CA.), and John R. Haines (McDonnell-Douglas Corp., Saint Louis, MO.) 1993 11 p Presented at the International Atomic Energy Agency (IAEA) Technical Committee Meeting on Developments in Fusion Safety, Toronto, Ontario, 7-11 Jun. 1993
(Contracts W-7405-eng-36; DE-AC07-76ID-01570)
(DE93-016614; LA-UR-93-2148; CONF-9306191-1) Avail: CASI HC A03/MF A01

The Tritium Plasma Experiment was assembled at Sandia National Laboratories, Livermore to investigate interactions between dense plasmas at low energies and plasma-facing component materials. This apparatus has the unique capability of replicating plasma conditions in a tokamak divertor with particle flux densities of 2 x 10(exp 19) ions/((sq cm)(s)) and a plasma temperature of about 15 eV using a plasma that includes tritium. With the closure of the Tritium Research Laboratory at Livermore, the experiment was moved to the Tritium Systems Test Assembly facility at Los Alamos National Laboratory. An experimental program has been initiated there using the Tritium Plasma Experiment to examine safety issues related to tritium in plasma-facing components, particularly the ITER divertor. Those issues include tritium retention and release characteristics, tritium permeation rates and transient times to coolant streams, surface modification and erosion by the plasma, the effects of thermal loads and cycling, and particulate production. A considerable lack of data exists in these areas for many of the materials, especially beryllium, being considered for use in ITER. Not only will basic material behavior with respect to safety issues in the divertor environment be examined, but innovative techniques for optimizing performance with respect to tritium safety by material modification and process control will be investigated. Supplementary experiments will be carried out at the Idaho National Engineering Laboratory and Sandia National Laboratory to expand and clarify results obtained on the Tritium Plasma Experiment. DOE

RAPID ANALYSIS OF MIXED WASTE SAMPLES VIA THE OPTICAL EMISSION FROM LASER INITIATED MICROPLASMAS
J. E. Barefield, II, M. D. Ferran, and D. A. Cremers 1993 20 p Presented at the 2nd International Mixed Waste Symposium, Baltimore, MD, 17-20 Aug. 1993
(Contract W-7405-eng-36)
(DE93-014563; LA-UR-93-1795; CONF-930873-16) Avail: CASI HC A03/MF A01

Wavelength resolved optical emission from laser initiated microplasmas in samples containing Pu, Am, Pb, Cr, and Be was used to determine elemental compositions. Traditionally, samples of this type are analyzed by neutron activation, X-ray fluorescence, atomic absorption (AA), inductively coupled plasma - atomic emission spectroscopy (ICP-AES), and inductively coupled plasma mass spectroscopy (ICP-MS). Analysis via the traditional analytical spectroscopic techniques involves extensive sample separation and preparation which results in the generation of significant quantities of additional waste. In the laser based method, little to no sample preparation is required. The method is essentially waste free since only a few micrograms of material is removed from the sample in the generation of the microplasma. Detection limits of the laser based method typically range between subppm to tens of ppM. In this report, the optical emission from samples containing Pu, Am, Pb, Cr, and Be will be discussed. We will also discuss the essential elements of the analysis method. DOE

MAGNETIC FUSION ENERGY TECHNOLOGY FELLOWSHIP: REPORT ON SURVEY OF INSTITUTIONAL COORDINATORS

Feb. 1993 23 p
(Contract DE-AC05-76OR-00033)
(DE93-014646; DOE/OR-00033/T530) Avail: CASI HC A03/MF A01

In 1980, the Magnetic Fusion Energy Technology (MFET) Fellowship program was established by the US Department of Energy, Office of Fusion Energy, to encourage outstanding students interested in fusion energy technology to continue their education at a qualified graduate school. The basic objective of the MFET Fellowship program is to ensure an adequate supply of scientists in this field by supporting graduate study, training, and research in magnetic fusion energy technology. The program also supports the broader objective of advancing fusion toward the realization of commercially viable energy systems through the research by MFET fellows. The MFET Fellowship program is administered by the Science/Engineering Education Division of Oak Ridge Institute for Science and Education. Guidance for program administration is provided by an academic advisory committee. DOE

SELF-REGULATED SHEAR FLOW TURBULENCE IN CONFINED PLASMAS

B. A. Carreras, L. A. Charlton, K. Sidikman, P. H. Diamond (California Univ., San Diego, La Jolla.), and L. Garcia (Universidad Complutense, Madrid, Spain.) 1993 4 p Presented at the 20th European Conference on Controlled Fusion and Plasma Physics, Lisbon, Portugal, 26-30 Jul. 1993
(Contract DE-AC05-84OR-21400)
(DE93-015823; CONF-930720-13) Avail: CASI HC A01/MF A01

The need for a radially inhomogenous fluctuation spectrum in a cylindrical plasma has been shown analytically and numerically. For the long wavelength drift wave turbulence model, where a radial inhomogeneity can result from self-binding effects near low-q resonances and edge effects, the calculated Reynolds stress is nonzero only in these spatial regions. In tokamaks, the radial inhomogeneity of the turbulence is particularly important at the plasma edge. Tokamak edge plasmas in OH or L-mode are characterized by large fluctuation levels and strong radial symmetry breaking. Thus, it is clear that edge flows will be regulated by fluctuations. Indeed, the only real question is the mechanism for radial propagation. The possibilities include diamagnetically induced radial wave propagation in the ambient fluctuations, and seed shears and dilatations, which in turn induce radial propagation. The second mechanism is considered in this document. DOE

PROFILE STABILIZATION OF TILT MODE IN A FIELD REVERSED CONFIGURATION

J. W. Cobb, T. Tajima, and D. C. Barnes (Los Alamos National Lab., NM.) Jun. 1993 38 p
(Contract DE-FG05-80ET-53088)
(DE93-016770; DOE/ET-53088/608; IFSR-608) Avail: CASI HC A03/MF A01

The possibility of stabilizing the tilt mode in Field Reversed Configurations without resorting to explicit kinetic effects such as large ion orbits is investigated. Various pressure profiles, P(psi), are chosen, including 'hollow' profiles where current is strongly peaked near the separatrix. Numerical equilibria are used as input for an initial value simulation which uses an extended magnetohydrodynamic (MHD) model that includes viscous and Hall terms. Tilt stability is found for specific hollow profiles when accompanied by high values of separatrix beta, beta(sub sep). The stable profiles also have moderate to large elongation, racetrack separatrix shape, and lower values of 3, average ratio of Larmor radius to device radius. The stability is unaffected by changes in viscosity, but the neglect of the Hall term does cause stable results to become marginal or unstable. Implications for interpretation of recent experiments are discussed. DOE

PLASMA PROPERTIES RESEARCH: TASK 3

1992 21 p
(Contract DE-FG02-86ER-53223)
(DE93-017087; DOE/ER-53223/207) Avail: CASI HC A03/MF A01

The principal research activities of the Magneto-Fluid Dynamics Division relate to magnetic fusion plasma physics. In addition, there is a modest amount of work in closely related areas including space plasma physics, fluid dynamics, and dynamical systems. Members of the Magneto-Fluid Dynamics Division maintain close contacts with fusion researchers in the US and abroad. Some of the work of the Division is clearly directed towards ITER and TPX, while other problems relate to the broader development of fusion plasma physics and to the support of other issues arising in the many experimental programs. Topics that are discussed in this report are as follows: application of sophisticated statistical techniques to tokamak data reduction, including time series analysis of TFTR fluctuation data and spline analysis of profile data; continuing development of edge plasma and divertor modelling, including initial ergodic divertor studies; analysis of energetic fusion products losses from TFTR plasmas; examination of anomalous transport in dynamical systems induced by chaotic-like Hamiltonian motion; numerical simulation of the development of singular MHD equilibria; exploration of the validity of moment expansions of kinetic equations for weakly collisional systems; studies of RF- and ripple-induced helium ash removal; ballooning mode studies in fluids and rotating stars; and studies in dynamical systems, including explosive instabilities, development of chaos, and motion of collisionless particles in a domain with overlapping islands. LABORATORY MICROFUSION CAPABILITY STUDY

May 1993 208 p
(Contract DE-AC01-91DP-00239)
(DE93-014373; DOE/DP-0017) Avail: CASI HC A10/MF A03

The purpose of this study is to elucidate the issues involved in developing a Laboratory Microfusion Capability (LMC) which is the major objective of the Inertial Confinement Fusion (ICF) program within the purview of the Department of Energy's Defense Programs. The study was initiated to support a number of DOE management needs: to provide insight for the evolution of the ICF program; to afford guidance to the ICF laboratories in planning their research and development programs; to inform Congress and others of the details and implications of the LMC; to identify criteria for selection of a concept for the Laboratory Microfusion Facility; and to develop a coordinated plan for the realization of an LMC. As originally proposed, the LMC study was divided into two phases. The first phase identifies the purpose and potential utility of the LMC, the regime of its performance parameters, driver independent design issues and requirements, its development goals and requirements, and associated technical, management, staffing, environmental, and other developmental and operational issues. The second phase addresses driver-dependent issues such as specific design, range of performance capabilities, and cost. The study includes four driver options: the neodymium-glass solid state laser, the krypton fluoride excimer gas laser, the light-ion accelerator, and the heavy-ion induction linear accelerator. The results of the Phase 2 study are described in the present report. DOE

FILAMENTARY MAGNETOHYDRODYNAMIC PLASMAS

R. Kinney, T. Tajima, N. Petviashvili, and J. C. McWilliams (National Center for Atmospheric Research, Boulder, CO.) May 1993 57 p
(Contract DE-FG05-80ET-53088)
(DE93-015616; DOE/ET-53088-606; IFSR-606) Avail: CASI HC A04/MF A01

A filamentary construct of magnetohydrodynamical plasma dynamics, based on the Elsasser variables was developed. This approach is modeled after discrete vortex models of hydrodynamical turbulence, which cannot be expected in general to produce results identical to ones based on a Fourier decomposition of the fields. In a highly intermittent plasma, the induction force is small compared to the convective motion, and when this force is neglected, the plasma vortex system is described by a Hamiltonian. For a system with many such vortices we present a statistical treatment of a collection of discrete current-vorticity concentrations. Canonical and microcanonical statistical calculations show that both the vorticity and the current spectra are peaked at long wavelengths, and the expected states revert to known hydrodynamical states as the magnetic field vanishes. These results differ from previous Fourier-based statistical theories, but it is found that when the filament calculation is expanded to include the inductive force, the results approach the Fourier equilibria in the low-temperature limit, and the previous Hamiltonian plasma vortex results in the high-temperature limit. Numerical simulations of a large number of filaments are carried out and support the theory. A three-dimensional vortex model is outlined as well, which is also Hamiltonian when the inductive force is neglected. DOE

FILAMENTATION, CURRENT PROFILES AND TRANSPORT IN A TOKAMAK
J. B. Taylor Jun. 1993 18 p
(Contract DE-FG05-80ET-53088)
(DE93-016768; DOE/ET-53088/613; IFSR-613) Avail: CASI HC A03/MF A01

A Tokamak with slightly imperfect magnetic surfaces should have a microscopically filamented current structure. If so, its equilibrium has an exact analog in the dynamics of interacting charged rods. Then there will be a natural current-profile, analogous to thermal equilibrium of the rods (and the natural profile can be calculated by conventional statistical mechanics). This would account for the phenomenon of profile consistency or resilience in Tokamaks. In addition to the natural profiles, this filamentary model also predicts an anomalous inward flux of both heat and particles in a Tokamak, as well as an anomalous diffusion. These 'inward-pinch' components are related to the current gradient. DOE

A FREE BOUNDARY EIGENVAUE PROBLEM
Rita Meyer-Spasche Sep. 1992 17 p
(IPP-6/310; ETN-93-94612) Copyright Avail: Fachinformationszentrum Karslruhe, 7514 Eggenstein-Leopoldschafen 2, Germany

The equilibrium equations for a confined axisymmetric plasma lead to a free boundary problem. A simple model problem is considered. Related equations are known from other applications. If all but one parameter are kept fixed, it is a nonlinear elliptic eigenvalue problem which generalizes a related 'linear' eigenvalue problem. Given a branch of explicitly known solutions, there exist countably infinitely many bifurcation points. This is shown by a perturbation approach and generalizes results by Sijbrand. The structure of the solutions on the bifurcating branches is investigated numerically: their rapid changing near the bifurcation points as well as their asymptotics. The numerical error caused by the free boundary is well understood and was kept small in the investigations. ESA

TRANSPORT IN THE SELF-ORGANIZED RELAXED STATE OF ION TEMPERATURE GRADIENT INSTABILITY
T. Tajima, M. J. LeBrun, M. G. Gray, J. Y. Kim, W. Horton, V. Wong, M. Kotschenreuther, and Y. Kishimoto (Japan Atomic Energy Research Inst., Ibaraki.) Jun. 1993 23 p
(Contract DE-FG05-80ET-53088)
(DE93-016769; DOE/ET-53088/612; IFSR-612) Avail: CASI HC A03/MF A01

The anomalous heat conduction in a tokamak plasma is investigated analytically and computationally. Our toroidal particle simulation shows a new emerging physical picture that the toroidal plasma exhibits marked properties distinct from a cylindrical plasma: (1) the development of radially extended potential streamers localized to the outside of the torus; (2) more robust ion temperature gradient instability; (3) radially constant eigenfrequency; (4) global temperature relaxation; and (5) radially increasing heat conductivity chi(sub i). These results are analyzed by linear and quasilinear kinetic theory. A relaxation theory based on the reductive perturbation theory in the quasilinear equation is developed. The theory constrains the thermal flux so that chi(sub i) increases radially. The Bohm-like scaling is found in connection with the radially extended mode structure. DOE

EVALUATION OF MATERIALS PROPOSED FOR THE CONSTRUCTION OF THE PLASMA ELECTRODE POCKELS CELL (PEPC) ON BEAMLET
D. Roberts, C. Robb, J. DeYoreo, and J. Atherton Nov. 1992 26 p
(Contract W-7405-eng-48)
(DE93-016952; UCRL-ID-112219) Avail: CASI HC A03/MF A01

The proposed upgrade of the NOVA laser system at Lawrence Livermore National Laboratory employs a multipass architecture that requires an optical switch to emit the laser light at the appropriate fluence. This Pockels cell-based optical switch does not use traditional ring or thin-film electrodes because of the large aperture and high fluence of the laser system. Rather, it uses a plasma electrode Pockels cell with a KD*P crystal as the electro-optical medium. A discharge plasma is formed on each side of the electro-optic crystal and high voltage is applied across the crystal through the plasma electrode to initiate optical switching. In October 1991 we began evaluating materials suggested for the large aperture plasma electrode optical switch. Previous experiments suggested that switching performance could be significantly affected by the deterioration of cell materials. The final prototype switch tested used polyethylene for the switch body, Mykroy for the mid-plane and a silicone vulcanite to encapsulate the KD*P crystal. The encapsulant easily compensated for the effect of assembling the optical switch and no strain-induced birefringence in the crystal after encapsulation was measured. Oxygen was eventually added to the plasma to react with the sputtered carbon from the cathode and produce a gaseous effluent. As an added benefit, the production of ozone absorbed most of the ultraviolet radiation affecting the encapsulant. All the materials tested decomposed and produced volatiles, although no change in the damage threshold of exposed optical surfaces tested to date was seen. An evaluation of the recommended materials for major cell components using published manufacturers data, experimental results from our Material Evaluation Apparatus, and outgassing performance and sputtering data produced at the Laboratory's Vacuum Process Lab is presented. CONFIGURATION INTERACTION IN LTE SPECTRA OF HEAVY ELEMENTS
A. Bar-Shalom, J. Oreg (Negev Univ., Beersheva, Israel.), and W. Goldstein Nov. 1992 26 p Presented at the Radiative Properties of Hot Dense Matter Conference, Santa Barbara, CA, 2-6 Nov. 1992
(Contract W-7405-eng-48)
(DE93-017166; UCRL-JC-113642; CONF-9211211-3) Avail: CASI HC A03/MF A01

A method for including the effects of configuration interaction (CI) between relativistic subconfigurations of an electron configuration in the calculation of emission and absorption spectra of plasmas in local thermodynamic equilibrium (LTE) is presented. Analytical expressions for the correction to the intensities, owing to CI, of an unresolved transition array (UTA) and of a supertransition array (STA) are obtained when the correction is small compared to the spin-orbit splitting, bypassing the need to diagonalize energy matrices. These expressions serve as working formulas in the STA model and, in addition, reveal a priori the conditions under which CI effects are significant. Examples of the effect are presented. DOE

PRODUCTION OF DENSE VAPOR TARGETS FOR LASER-PLASMA INTERACTION STUDIES WITH INTENSE, ULTRA-SHORT PULSES
P. R. Bolton, D. C. Eder, G. Guethlein, R. E. Stewart, and P. E. Young 19 Mar. 1993 14 p Presented at the OE/LASE 1993: International

Society for Optical Engineering Conference, Los Angeles, CA, 16-23 Jan. 1993
(Contract W-7405-eng-48)
(DE93-017175; UCRL-JC-113302; CONF-930159-46) Avail: CASI HC A03/MF A01

The technique of laser-induced ablation of thin films from glass slide substrates has been investigated as a candidate vapor target production method for studies of both tunneling-driven x-ray/xuv recombination lasers and relativistic propagation using intense, ultra-short laser pulses. It is shown by simultaneous two-wavelength interferometry that particle densities of order 10(exp 19)/cm(exp 3) are readily achieved and that some intrinsic ionization accompanies the plume formation. Absorption measurements with both 100 picosecond and 125 femtosecond pulses are consistent with observed edge velocities near 10(exp 6) cm/sec. The level of ionization driven by the intense 125 femtosecond laser pulse has been coarsely estimated. Averaged estimates from spectral blue shifting of spectra transmitted through the plume are consistently lower than those obtained from evaluation of saturation intensity thresholds based on the sequential nonresonant optical field ionization (OFI) process. DOE

ANALYSIS OF THE ITER H-MODE CONFINEMENT DATABASE
D. P. Schissel, O. Kardaun, F. Ryter, and U. Stroth May 1993 4 p Presented at the 20th European Conference on Controlled Fusion and Plasma Physics, Lisbon, Portugal, 26-30 Jul. 1993 Submitted for publication
(Contract DE-AC03-89ER-51114)
(DE93-016984; GA-A-21310; CONF-930720-16) Avail: CASI HC A01/MF A01

In order to predict the global energy confinement time in the next generation of large tokamaks it is essential to have data from machines of different sizes and operating parameter regimes. This data can also be used to construct dimensionless scalings and thereby attempt to differentiate between Bohm and gyro-Bohm based transport models. Previously, at the request of the ITER project, H-mode global confinement data was assembled from six machines, ASDEX, DIII-D, JET, JFT-2M, PBX-M, and PDX, into a single database. This collaboration has continued with the initial database being expanded by extending the plasma parameter space as well as by improving the precision of some of the relevant calculated plasma parameters. This paper summarizes work that has been performed on the newest version (ITERH.DB2) of the confinement database. DOE

(Contracts DE-AC03-89ER-51114; W-7405-eng-48)
(DE93-016985; GA-A-21309; CONF-930720-15) Avail: CASI HC A01/MF A01

Transiently high internal inductance discharges are used to check the validity of evolvement of current profiles obtained with the MHD/transport coupled scheme presented below. Both a current ramp and an elongation ramp discharge are examined. To simulate energy confinement the Rebut-Lallia-Watkins model is used for the current ramp discharge. In our simulation of experimental discharges external circuit behavior is accounted for by using measured, time dependent flux loops, magnetic probes, field shaping, and ohmic coil currents. The small effect of eddy currents in the plasma vessel are neglected. We use measured, time dependent electron and ion temperature profiles, electron density, Z(sub eff), toroidal rotation, and radiated power profiles to constrain our analyses. For the RLW simulation measured values of T(sub e) and T(sub i) at the plasma edge are used as boundary conditions in the electron and ion energy equations. DOE

The removal of helium (He) ash from the plasma core with high efficiency to prevent dilution of the D-T fuel mixture is of utmost importance for future fusion devices, such as the International Thermonuclear Experimental Reactor (ITER). A variety of measurements in L-mode conditions have shown that the intrinsic level of helium transport from the core to the edge may be sufficient to prevent sufficient dilution (i.e., tau(sub He) /tau(sub E) less than 5). Preliminary measurements in biased-induced, limited H-mode discharges in TEXTOR suggest that the intrinsic helium transport properties may not be as favorable. If this trend is shown also in diverted H-mode plasmas, then scenarios based on ELMing H-modes would be less desirable. To further establish the database on helium transport in H-mode conditions, recent studies on the DIII-D tokamak have focused on determining helium transport properties in H-mode conditions and the dependence of these properties on plasma current and ELM frequency. TIME-RESOLVED PROBING OF ELECTRON THERMAL CONDUCTION IN FEMTOSECOND-LASER-PULSE-PRODUCED PLASMAS
B. T. V. Vue (California Univ., Berkeley. Lawrence Berkeley Lab.), A. Szoke, and O. L. Landen Jun. 1993 6 p Presented at the 2nd International Conference on Laser Ablation: Mechanisms and Applications, Knoxville, TN, 19-22 Apr. 1993
(Contract W-7405-eng-48)

(DE93-016996; UCRL-JC-113165; CONF-9304144-10) Avail: CASI HC A02/MF A01

We present time-resolved measurements of reflectivity, transmissivity, and frequency shifts of probe light interacting with the rear of a disk-like plasma produced by irradiation of a transparent solid target with 0.1ps FWHM laser pulses at peak intensity 5(10)(exp 14) W/sq cm. Experimental results show a large increase in reflection revealing rapid formation of a steep gradient and overdense surface plasma layer during the first picosecond after irradiation. Frequency shifts due to a moving ionization created by thermal conduction into the solid target are recorded. Calculations using a nonlinear thermal heat wave model show good agreement with the measured frequency shifts, further confining the strong thermal transport effect. DOE

ENHANCED ACCELERATION IN A SELF-MODULATED-LASER WAKEFIELD ACCELERATOR Interim Report

J. Krall, A. Ting, E. Esarey, and P. Sprangle 15 Jul. 1993 21 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality

(AD-A268452; NRL/MR/6790-93-7348) Avail: CASI HC A03

A new configuration of the laser wakefield accelerator is proposed in which enhanced acceleration is achieved via resonant self-modulation of the laser pulse. This requires laser power in excess of the critical power for relativistic guiding and a plasma wavelength that is short compared to the laser pulse-length. Relativistic and density wake effects strongly modulate the laser pulse at the plasma wavelength. This resonantly excites the plasma wave and leads to enhanced acceleration. DTIC

AEOLUS-IT MHD SIMULATION CODE BASED ON A TOROIDALLY INCOMPRESSIBLE PLASMA MODEL

Gen-ichi Kurita, Masafumi Azumi, and Tatsuoki Takeda Feb. 1993 57 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality

(DE93-788461; JAERI-M-93-004) Avail: CASI HC A04

A three dimensional toroidal MHD code, AEOLUS-IT, has been developed, on the basis of the new reduced set of resistive MHD equations with the assumption of toroidal incompressibility instead of the tokamak ordering in the conventional reduced set of resistive MHD equations. The code can carry out an overall MHD calculation with the effect of finite plasma resistivity--linear and nonlinear, of low aspect ratio, and low-q tokamak because the basic equations include the ideal m = 1 mode. The implicit time integration scheme for the linear term of the perturbation is employed dividing the variables into the equilibrium and perturbation parts. The huge CPU time due to solution of the large matrix can be reduced by the high efficiency of vectorialization. The linear calculations, an eigenvalue problem, show the linear growth rates of an ideal m = 1 mode and show the comparison of the growth rates between cylindrical and toroidal configurations of a low-q tokamak. The linear calculations and nonlinear simulations of resistive ballooning modes are carried out and the results are in good agreement with those obtained by the toroidal MHD code, AEOLUS-RT, using the conventional reduced MHD equations. The linear and nonlinear calculations of tearing modes for the numerical equilibrium are also carried out, and approximately the same results are obtained as the one obtained using the analytical equilibrium of approximately the same parameters. RESONANT ABSORPTION OF ALFVEN WAVES NEAR A NEUTRAL POINT

C. Uberoi May 1993 10 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality

(DE93-628761; IC-93/89) Avail: CASI HC A02 (US Sales Only)

The resonant absorption of Alfven waves at the neutral point is discussed by using the existing mathematical theories of the Alfven wave equation both for ideal and resistive plasmas. It is found that in the case of ideal system the resonant phenomena of Alfven waves does not show any different behaviour near a finite or a zero singular point. In case of resistive plasma initially the evolution of the system in time proceeds without any difference from the ideal system till time t (less than or equal to) t(sub n). When t is greater than t(sub h), the high frequency surface waves are resonantly mode converted to the resistivity modified shear Alfven wave at non-zero singular points but at the neutral point the zero-frequency surface waves which are symmetrical surface modes of the structured neutral layer couple to the tearing mode of instability of the layer. The importance of this study to the energy balance in tearing modes and the association of surface waves to driven magnetic reconnection is also pointed out. DOE

USER'S MANUAL OF TOKAMAK SIMULATION CODE

Yukiharu Nakamura, Tooru Nishino, Toshihide Tsunematsu, and Masayoshi Sugihara Dec. 1992 80 p

(DE93-788388; JAERI-M-92-189) Avail: CASI HC A05/MF A01

The user's manual for the Tokamak Simulation Code (TSC), which simulates the time-evolutional process of deformable motion of an axisymmetric toroidal plasma, is summarized. For use on the JAERI computer system, the TSC is linked with the data management system GAEA. This manual is concerned with the procedure for the input and output by using the GAEA system. Model equations for axisymmetric motion, an outline of the code system, and an optimal method for the well converged solution are also described. DOE

PLASMA PRODUCTION BY HELICON WAVES

T. Shoji, Y. Sakawa, S. Nakazawa, K. Kadota, and T. Sato Nov. 1992 26 p

(DE93-788396; PSC-27) Avail: CASI HC A03/MF A01

Recent works on high density plasma production using m = +1 and -1 helicon waves are reviewed. The characteristics of cylindrical helicon waves including effects of a vacuum space between the plasma and the conducting wall and of a nonuniform density profile are presented. The m = +1 and -1 helicon modes are excited separately by a helical antenna and dependencies of plasma density and antenna loading resistance on RF power are shown to be different for these modes. ACTIVE NEUTRAL PARTICLE DIAGNOSTICS FOR HIGH TEMPERATURE PLASMA

Kenji Tobita Jan. 1993 113 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality

(DE93-788457; JAERI-M-92-214) Avail: CASI HC A06

This paper describes experimental studies related to active neutral particle diagnostics in the JT-60 tokamak. Detection efficiencies of a micro-channel plate (MCP), which has been widely used in plasma diagnostics, were determined for ions and neutrals. Multi-step processes for a neutral beam are predicted to enhance the beam stopping cross section in a plasma. In order to confirm the predictions, shine-through for a hydrogen and for a helium beam was measured in the JT-60 ohmic plasmas. The measurements for a hydrogen beam resulted in the cross sectional enhancement in the beam stopping. The same experiment using a helium beam indicated that the cross sectional enhancement for helium was much smaller than that for hydrogen at almost the same plasma parameters. Ion temperature diagnostics using active beam scattering were developed in a data processing technique, in consideration of the device function of a neutral particle analyzer and in estimation of the effect of beam ion component. Fundamental experiments for detecting helium ions in a plasma were performed using the two-electron transfer reaction between a helium atomic beam and helium ions, and the energy distribution and the density of the helium ions were determined. These experiments demonstrated the promise of the two-electron transfer reaction as an alpha ash detection in a burning plasma. A parasitic neutral efflux accompanied by active beam injection was investigated. DOE

STUDY OF MULTI-PHASE FLOW CHARACTERISTICS IN AN MHD POWER TRAIN

S. L. Chang, S. A. Lottes, J. X. Bouillard, and M. Petrick 1993 13 p Presented at the 31st Symposium on Engineering Aspects of Magnetohydrodynamics, Whitefish, MT, 29 Jun. - 1 Jul. 1993

(Contract W-31-109-eng-38)

(DE93-018570; ANL/ES/CP-79722; CONF-930626-13) Avail: CASI HC A03/MF A01

Computer simulation was used to predict two-phase flow processes in the CDIF MHD power train system. The predictions were used to evaluate the effects of operating and design parameters on the performance of the system and a parametric evaluation provides information to enhance the performance of the system. Major components of the system under investigation are the two-stage combustor, the converging/diverging nozzle, the supersonic MHD channel, and the diffuser. Flow in each component was simulated using a computer code. Integrating the computer codes, the two-phase flow processes in the system was calculated. Recently, the computer codes were used to investigate problems of nozzle erosion and the non-uniform iron oxide coverage on the cathode wall in the channel. A limited parametric study was conducted. The results indicated that (1) among the three nozzle geometries under investigation a no. 5 nozzle has the smoothest flow development in the nozzle and has the lowest droplet deposition on wall, and (2) smaller particle size and lower injection velocity tend to disperse the iron oxide particles more uniformly in the nozzle.

HYDRODYNAMIC INSTABILITY MODELING FOR ICF
S. W. Haan 31 Mar. 1993 8 p Presented at the 4th International Workshop on the Physics of Compressible Turbulent Mixing, Cambridge, England, 29 Mar. - 1 Apr. 1993
(Contract W-7405-eng-48)
(DE93-018634; UCRL-JC-112167; CONF-9303126-8) Avail: CASI HC A02/MF A01

The intent of this paper is to review how instability growth is modeled in ICF targets, and to identify the principal issues. Most of the material has been published previously, but is not familiar to a wide audience. Hydrodynamic instabilities are a key issue in ICF. Along with laser-plasma instabilities, they determine the regime in which ignition is possible. At higher laser energies, the same issues determine the achievable gain. Quantitative predictions are of the utmost importance to planning the ICF program, as well as to understanding current Nova results. The key fact that underlies all this work is the stabilization of short wavelengths. DOE

NONPARAXIAL MHD STABILIZERS FOR AN AXISYMMETRIC MAGNETIC MIRROR
Dmitri Ryutov (Institute of Nuclear Physics, Novosibirsk, USSR.) Dec. 1992 3 p
(Contract W-7405-eng-48)
(DE93-017996; UCRL-CR-112568) Avail: CASI HC A01/MF A01

This report details the theoretical and experimental activity performed this month. The analysis of the MHD stability of flute perturbations in axisymmetric nonparaxial mirrors has been started. The preliminary screening has been completed of the possible candidates for a stabilizer. The experimental portion of the work commenced with preparations for experiments on the plasma equilibrium response to an externally applied small magnetic field in the MHD-anchor region. A brief discussion of the results of the preliminary experiments is provided. Plans for future studies are described. DOE

ION MOBILITY AND TRANSPORT BARRIERS IN THE TOKAMAK PLASMAS
H. Xiao, R. D. Hazeltine, P. M. Valanju, and Y.-Z. Zhang (International Centre for Theoretical Physics, Trieste, Italy.) Jun. 1993 13 p
(Contract DE-FG05-80ET-53088)
(DE93-040320; DOE/ET-53088/609; IFSR-609) Avail: CASI HC A03/MF A01

The character of charged particle motion in an axisymmetric toroidal system with a constant radial electric field is investigated both analytically and numerically. Ion radial mobility caused by the combined effects of the radial electric field and charge exchange is found. A simple moment argument in the banana regime matches the simulation results well. Relation of present work and high confinement (H-mode) experiment is also discussed. DOE

PHASE-SPACE DESCRIPTION OF PLASMA WAVES: LINEAR AND NONLINEAR THEORY
Thomas Biro (Umea Univ., Sweden.) Nov. 1992 35 p
(IRF-SR-211; ETN-93-94854) Avail: CASI HC A03/MF A01

A (r,k) phase description of waves in plasmas is developed by introducing Gaussian window functions to separate short scale oscillations from long scale modulations of the wave fields and variations in the plasma parameters. To obtain a wave equation that unambiguously separates conservative dynamics from dissipation also in an inhomogeneous and time varying background plasma, the proper form of the current response function, is discussed. On the analogy of the particle distribution function f(v,r,t), a wave density N(k,r,t) is introduced on phase space. This function is proven to satisfy a simple continuity equation. Dissipation is also included, and this allows the damping or growth of wave density along rays to be described. Problems involving geometric optics of continuous media often appear simpler when viewed in phase space, since the flow of N in phase space is incompressible. Within the phase space representation, a very general formula for the second order nonlinear current is obtained in terms of the vector potential. This formula is a convenient starting point for studies of coherent as well as turbulent nonlinear processes. Kinetic equations for weakly inhomogeneous and turbulent plasmas are derived, including the effects of inhomogeneous turbulence, wave convection and refraction. ESA

Plasma contactors have been baselined for the Space Station (SS) to control the electrical potentials of surfaces to eliminate/mitigate damaging interactions with the space environment. The system represents a dual-use technology which is a direct outgrowth of the NASA electric propulsion program and, in particular, the technology development effort on ion thrustor systems. The plasma contactor subsystems include the plasma contactor unit, a power electronics unit, and an expellant management unit. Under this pre-flight development program these will all be brought to breadboard or engineering model status. Development efforts for the plasma contactor include optimizing the design and configuration of the contactor, validating its required lifetime, and characterizing the contactor plume and electromagnetic interference. The plasma contactor unit design selected for the SS is an enclosed keeper, xenon hollow cathode plasma source. This paper discusses the test results and development status of the plasma contactor unit subsystem for the SS. Author (revised)

CENTER OF EXCELLENCE IN THEORETICAL GEOPLASMA RESEARCH

Tom Chang 31 Aug. 1993 67 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(Grant AF-AFOSR-0085-90)
(AD-A270210; AFOSR-93-0748TR) Avail: CASI HC A04

The Center for Theoretical Geoplasma Physics was established at MIT in 1986 through an AFOSR University Research Initiative grant. The goal of the Center since its inception has been to develop and maintain a program of excellence in interdisciplinary geoplasma research involving the mutual interaction of ionospheric scientists, aeronomists, plasma physicists, and numerical analysts. During the past six years, members of the center have made germinal contributions to a number of definitive research findings in the fundamental understanding of ionospheric turbulence, particle acceleration, and the phenomenon of coupling between the ionosphere and magnetosphere. Some of the results of these research activities have already found practical applications toward the mission of the Air Force by scientists at the Geophysics Directorate of the Phillips Laboratory, particularly those affiliated with the research group headed by Dr. J.R. Jasperse of the Ionospheric Effects Branch. Theoretical geoplasma physics, URI Program. DTIC

THERMAL ANALYSIS OF COATINGS AND SUBSTRATE MATERIALS DURING A DISRUPTION IN FUSION REACTORS

A. Hassanein Jun. 1993 8 p Presented at the Annual Meeting of the Society of Photo-Optical Instrumentation Engineers, San Diego, CA, 11-16 Jul. 1993
(Contract W-31-109-eng-38)
(DE93-017688; ANL/EP/CP-78902; CONF-930722-9) Avail: CASI HC A02/MF A01

In a tokamak fusion reactor, the frequency of occurrence and the severity of a plasma disruption event will determine the lifetime of the plasma facing components. Disruptions are plasma instabilities which result in rapid loss of confinement and termination of plasma current. Intense energy fluxes to components like the rust wall and the divertor plate are expected during the disruptions. This high energy deposition in short times may cause severe surface erosion of these components resulting from melting and vaporization. Coatings and tile materials are proposed to protect and maintain the integrity of the underneath, structural materials from both erosion losses as well as from high thermal stresses encountered during a disruption. The coating thickness should be large enough to withstand both erosion losses and to reduce the temperature rise in the substrate structural material. The coating thickness should be minimized to enhance the structural integrity, to reduce potential problems from radioactivity, and to minimize materials cost. Tile materials such as graphite and coating materials such as beryllium and tungsten on structural materials like copper, steel, and vanadium are analyzed and compared as potential diverter and first wall design options. The effect of the sprayed coating properties during the disruption is investigated. Porous sprayed material may be found to protect the structure better than condensed phase properties. The minimum coating thickness required to protect the structural material during disruption is discussed. The impact of self shielding effect by the eroded material on the response of both the type/coating and the substrate is discussed. DOE

MHD INTEGRATED TOPPING CYCLE PROJECT

Apr. 1993 55 p
(Contract DE-AC22-87PC-90274)
(DE93-040520; DOE/PC-90274/T22; MHD-ITC-93-040) Avail: CASI HC A04/MF A01

Combustor spare and contingency hardware was shipped to the CDIF. Manufacture of spare and replacement hardware for the IA4 channel and diffuser continued. Fabrication of a modified/spare channel inlet frame which enables iron oxide injection. The cathode power cabinets and associated control system were successfully tested at Westinghouse and met all design requirements. The cathode system was delivered to the CDIF and installed in the current consolidation building. With the delivery of tills component, all prototypical power train components have been delivered to the CDIF. The hot-fire checkout of the channel subsystem and the design verification test series of the integrated power train were completed. A total of 29 tests were performed accumulating 120 thermal and 52 electrical hours. The test series demonstrated the adequacy of the overall cooling of the channel subsystem and provided an initial evaluation of the integrated combustor and channel performance in terms of operating conditions, power output, conductivity, heat loss, slagging behavior, and gas-side wear characteristics. During the test series localized wear in the supersonic nozzle was observed on the right sidewall. Cause of wear is being investigated. At conclusion of DVT test series, the channel was removed for inspection. DOE

VISCOSITY IN THE EDGE OF TOKAMAK PLASMAS

W. M. Stacey May 1993 35 p
(Contract DE-FG05-87ER-52141)
(DE93-018039; GTFR-108) Avail: CASI HC A03/MF A01

A fluid representation of viscosity has been incorporated into a set of fluid equations that are maximally ordered in the 'short radial gradient scale length' (srgsl) ordering that is appropriate for the edge of tokamak plasmas. The srgsl ordering raises viscous drifts and other viscous terms to leading order and fundamentally alters the character of the fluid equations. A leasing order viscous drift is identified. Viscous-driven radial particle and energy fluxes in the scrape-off layer and divertor channel are estimated to have an order unity effect in reducing radial peaking of energy fluxes transported along the field lines to divertor collector plates. OVERVIEW OF WARP: A PARTICLE CODE FOR HEAVY ION FUSION

Alex Friedman, David P. Grote, Debra A. Callahan, A. Bruce Langdon, and Irving Haber (Naval Research Lab., Washington, DC.) 22 Feb. 1993 12 p Presented at the Computational Accelerator Physics Conference, Pleasanton, CA, 22-26 Feb. 1993
(Contracts W-7405-eng-48; DE-AI05-92ER-54177; DE-AI05-83ER-40112)
(DE93-018637; UCRL-JC-112246; CONF-930269-17) Avail: CASI HC A03/MF A01

The beams in a heavy ion beam driven inertial fusion (HIF) accelerator must be focused onto small spots at the fusion target, and so preservation of beam quality is crucial. The nonlinear self-fields of these space-charge-dominated beams can lead to emittance growth; thus, a self-consistent field description is necessary. We have developed a multi-dimensional discrete-particle simulation code, WARP, and are using it to study the behavior of HIF beams. The code's 3D package combines features of an accelerator code and a particle-in-cell plasma simulation, and can efficiently track beams through many lattice elements and around bends. We have used the code to understand the physics of aggressive drift-compression in the MBE-4 experiment at Lawrence Berkeley Laboratory (LBL). We have applied it to LBL's planned ILSE experiments, to various 'recirculator' configurations, and to the study of equilibria and equilibration processes. Applications of the 3D package to ESQ injectors, and of the r, z package to longitudinal stability in driver beams, are discussed in related papers. DOE

GENERALIZED ENERGY PRINCIPLE FOR FLUTE PERTURBATIONS IN AXISYMMETRIC MIRROR MACHINES

I. M. Lansky and D. D. Ryutov 20 Jan. 1993 20 p
(Contract W-7405-eng-48)
(DE93-019399; UCRL-CR-113135) Avail: CASI HC A03/MF A01

Axial symmetry is a very desirable property of the mirror devices both for fusion and neutron source applications. The main obstacle to be circumvented in the development of such systems, is the flute instability of axisymmetric mirrors. In recent years, there appeared a number of proposals devoted to the stabilization of the flute perturbations in the framework of axisymmetric magnetic configurations, which are based on the combining of the MHD unstable central cell with various types of end-cell stabilizers. In the present paper, we concentrate ourselves just on this scheme, including long solenoid with a uniform field, conjugated with the end stabilizing anchor, intended to provide MHD stability of the system as a whole. The attractive feature of such a configuration is that it allows to exploit finite larmor radius (FLR) effects for the stabilization of the flute perturbations. As is well known, FLR effects, being strong, stabilize all flute modes, except the one with azimuthal number $m = 1$, corresponding to the 'rigid' displacement of the plasma column (the 'global' mode). Consequently, in the conditions when FLR effects dominate, the anchor has to stabilize the 'global' mode only. Bearing in mind a favorable influence of FLR effects, we don't restrict our paper by discussion of only 'global' mode stability and consider a general case of an arbitrary azimuthal mode. DOE

MHD INTEGRATED TOPPING CYCLE PROJECT

Apr. 1993 54 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(Contract DE-AC22-87PC-90274)
(DE93-040521; DOE/PC-90274/T21; MHD-ITC-92-236) Avail: CASI HC A04

Manufacture, assembly, and checkout of combustion subsystem hardware was completed and the hardware was delivered to CDIF along with the water electrical isolators. A successful nozzle proof test was concluded; its purpose was to evaluate adequacy of the nozzle structure and sealing of sidewall-to-electrode wall joints, water tubes, and stud and wire penetrations at operating pressure. Design modifications to spare channel inlet frame were made to enable iron oxide injection. Results of tests in the CDIF 1A1 channel which compared effect of different cathode wall iron oxide injection locations indicated that injection through the side port may be more effective, particularly if one of the two ports becomes clogged. Design confirmation testing of a pneumatically driven ram to clear a plugged iron oxide injector tip was performed. Manufacture of spare and replacement parts for 1A4 channel and diffuser was begun. Construction of the cathode power cabinets and associated control system was completed. Hot-fire checkout series was completed for the combustion subsystem; 16.8 thermal hours were accumulated during seven tests. This test series demonstrated adequacy of overall cooling of combustion subsystem and provided an initial evaluation of heat losses and slagging characteristics. Several major facility activities at the CDIF were accomplished including installation and testing of new iron oxide pumps, initial on-line checkout of coal feed system modifications, modification of seed system including replacement of silo rotary feeder, installation of new filter receiver on the silo, conversion of fly ash bin to dust collector, removal of all of the electrical wiring (used for 1A1 channel) between the channel and HVR in order to install 1A4 wiring, and installation of the 1A4 channel. DOE

LOWER HYBRID COUNTER CURRENT DRIVE FOR EDGE CURRENT DENSITY MODIFICATION IN D3-D

M. E. Fenstermacher, W. M. Nevins, M. Porkolab (Massachusetts Inst. of Tech., Cambridge.), P. T. Bonoli (Massachusetts Inst. of Tech., Cambridge.), and R. W. Harvey (General Atomic Co., San Diego, CA.) Jul. 1993 6 p
Presented at the 10th Topical Conference on Radio Frequency Power in Plasmas, Boston, MA, 1-3 Apr. 1993
(Contracts W-7405-eng-48; DE-AC03-89ER-53277)
(DE93-019157; UCRL-JC-113264; CONF-9304112-23) Avail: CASI HC A02/MF A01

Each of the Advanced Tokamak operating modes in DIII-D is thought to have a distinctive current density profile. So far these modes have only been achieved transiently through experiments which ramp the plasma current and shape. Extension of these modes to steady state requires non-inductive current profile control, e.g. with lower hybrid current drive (LHCD). Calculations of LHCD have been done for DIII-D using the ACCOME and CQL3D codes, showing that counter driven current at the plasma edge can cancel some of the undesirable edge bootstrap current and potentially extend the VH-mode. Results are presented for scenarios using 2.45 GHz LH waves launched from both the midplane and off-axis ports. The sensitivity of the results to injected power, n(sub e) and T(sub e), and launched wave spectrum is also shown. DOE

EXPERIMENTS ON NONLINEAR ABSORPTION OF ECH WAVES IN MTX AND A COMPARISON WITH THEORY

B. W. Stallard, S. L. Allen, J. A. Byers, T. A. Casper, B. I. Cohen, R. H. Cohen, C. J. Lasnier, M. E. Fenstermacher, J. H. Foote, and E. B. Hooper et al Jul. 1993 11 p Presented at the 10th Topical Conference on Radio Frequency Power in Plasmas, Boston, MA, 1-3 Apr. 1993
(Contract W-7405-eng-48)
(DE93-019158; UCRL-JC-113265; CONF-9304112-22) Avail: CASI HC A03/MF A01

Intense pulse electron cyclotron heating (ECH) experiments have been carried out on the MTX tokamak. RF pulses at 140 GHz, peak power of 1-2 GW, and 25 ns pulse length were generated by the ETA-III/IMP FEL and transported quasi-optically to MTX for o-mode launch. Because of the intense RF electric fields (approximately 250 keV/cm), reduction of plasma absorption by nonlinear effects were expected and several RF beam geometries (k(sub parallel) gradient) were investigated to study their effect on the absorption. As predicted by theory, measurements of beam transmission showed increases compared to low power (2 kW). For these experiments x-ray, ECE, and Thomson diagnostics showed evidence for localized absorption at the cyclotron resonance and hot electron production. A comparison of these results with the orbit following code ORPAT is presented. DOE

Key among various issues of ignited plasmas is understanding the physics of energy transfer between thermal plasma particles and magnetically confined, highly energetic charged ions in a tokamak device. The superthermal particles are products of fusion reactions. The efficiency of energy transfer by collisions, from charged fusion products (e.g., (alpha)-particles) to plasma ions, grossly determines whether or not plasma conditions are self-sustaining without recourse to auxiliary heating. Furthermore, should energy transfer efficiency be poor, and substantial auxiliary heating power is required to maintain reacting conditions within the plasma, economics may preclude commercial viability of fusion reactors. The required charged fusion product information is contained in the energy distribution function of these particles. Knowledge of temporal variations of the superthermal particle energy distribution function could be used by a fusion reactor control system to balance plasma conditions between thermal runaway and a modicum of fusion product energy transfer. Therefore, diagnostics providing data on the dynamical transfer of alpha-particle and other charged fusion product energy to the plasma ions are essential elements for a fusion reactor control system to insure that proper plasma conditions are maintained. The objective of this work is to assess if spectral analysis of RF radiation emitted by charged fusion products confined in a magnetized plasma, called ion cyclotron emission (ICE), can reveal the vital data of the distribution function of the superthermal particles. FINITE BETA PLASMA EQUILIBRIUM IN TOROIDALLY LINKED MIRRORS
V. I. Ilgisonis, H. L. Berk, and V. P. Pastukhov Jul. 1993 36 p
(Contract DE-FG05-80ET-53088)
(DE93-040318; DOE/ET-53088/616; IFSR-616) Avail: CASI HC A03/MF A01

The problem of finite pressure plasma equilibrium in a system with closed magnetic field lines consisting of quadrupole mirrors linked by simple toroidal cells with elliptical cross-sections is analyzed. An appropriate analytical procedure is developed. The procedure uses conformal mapping techniques. This enables one to obtain the magnetic field structure for the free boundary equilibrium problem. This method has general applicability for finding analytic solutions of the two-dimensional Dirichlet problem outside of an arbitrary closed contour. Using this method, the deformations of the plasma equilibrium configuration due to finite plasma pressure in the toroidal cell are calculated analytically to the second order in lambda-expansion, where lambdais approximately equal to beta/(epsilon)E, beta is the ratio of plasma pressure to the magnetic field pressure, epsilon is the inverse aspect ratio and E is the ellipticity of the plasma cross-section. The outer displacement of the plasma column is shown to depend nonlinearly on the increase of plasma pressure and does not prevent the achievement of substantial beta approximately equal to 10% in the toroidal cells. We examine the conditions for the existence of spectrally stable neutral modes in a Vlasov-Poisson plasma and show that for stable equilibria of systems that have unbounded spatial domain, the only possible neutral modes are those with phase velocities that correspond to stationary inflection points of the equilibrium distribution function. It is seen that these neutral modes can possess positive or negative free energy. DOE

The superconducting magnets in fusion reactors are subjected to pulsed, nuclear, and resistive heating. The thermo-hydraulic response of the helium forced-flow cooled conductors to the various heat sources is critical to magnet design and performance. Recently developed computer codes allow accurate modeling of conductor response and have been used as an aid to design of the toroidal field (TF) magnets for the Tokamak Physics Experiment (TPX). We present results of design studies that determine the trade-off between double- and single-pancake helium flow configurations, the minimum-temperature margin, and the stability against rapid heat input. The results guide the choice and design of the liquid helium refrigerator. DOE

Direct electron damping of the fast wave is a prerequisite to a viable current drive scenario for future steady-state tokamaks. It is also an attractive heating alternative to the standard ion resonance heating methods for DT experiments on TFTR because it does not require the addition of non-reactive ion species and avoids minority ion tails during studies of alpha-particle effects. The absence of minority ions in direct electron heating (DEH) also allows the use of RF power modulation to determine power deposition profiles and to carry out modulation transport studies to characterize electron transport in supershot plasmas, as described in this paper. This paper presents the results from a series of Electron Cyclotron Resonance Heating (ECRH) experiments on the Microwave Tokamak Experiment (MTX). On-axis heating at B(sub T) = 5T (f(sub ce) = 140 GHz) has been performed at electron densities up to cutoff. We have used both a long-pulse gyrotron (approximately 200 kW, approximately 0.1s) and a pulsed Free Electron Laser (FEL) as microwave sources. Gyrotron experiments with power densities corresponding to 4 MW m(exp -3) are presented. A far infrared (FIR) polarimeter measured peaking of plasma current profiles in some discharges during the ECRH pulse. During high-power single-pulse FEL experiments, single-pass microwave transmission measurements show nonlinear effects (i.e., higher transmission than predicted by linear theory). A corrugated-wall duct was used in the tokamak port to increase the gradient of the parallel refractive index n(sub parallel) of the incident wave, and increased absorption was observed. Evidence of electron tail heating during FEL pulses was observed on soft x-ray and ECE diagnostics. These results are in agreement with predictions of nonlinear theory; extrapolation of this theory to reactor-like conditions indicates efficient absorption and heating. A Laser Assisted Particle Probe Spectroscopy (LAPPS) diagnostic provided estimates of the vacuum electric field of the FEL which were consistent with the measured power. Multiple pulse operation of the ETA-2 accelerator for the FEL has also been demonstrated indicating the feasibility of high-average power FEL operation. DOE

A two-dimensional fluid code called UEDGE is used to simulate the edge plasma in tokamak divertors and to evaluate methods for reducing the heat load on divertor plates by radiating some of the power before it reaches the plates. UEDGE is a fully-implicit code. For these studies, UEDGE uses a banded matrix solver and a fixed-fraction impurity model. Work is presently underway to include a memory-efficient iterative solver and a model of impurity transport. Simulations of the proposed TPX device show that a few percent nitrogen concentration in the scrape-off layer can radiate up to 80% of the divertor power, thus reducing the peak heat flux and electron temperature at the divertor plate to acceptable values. A comparison of the neutral gas distribution from UEDGE with results from the DEGAS Monte Carlo neutrals code confirms the validity of our fluid neutrals model. DOE

BEHAVIOR OF THE PARTICLE TRANSPORT COEFFICIENTS NEAR THE DENSITY LIMIT IN MTX Ph.D. Thesis
M. M. Marinak Apr. 1993 202 p
(Contract W-7405-eng-48)
(DE93-019108; UCRL-LR-113984) Avail: CASI HC A10/MF A03

The perturbed particle transport coefficients were determined for a range of plasma conditions in the Alcator C tokamak, a component of the Microwave Tokamak Experiment (MTX), from analysis of density perturbations created in gas modulation experiments. Density measurements from a 15 chord far-infrared interferometer were sufficiently detailed to allow radial profiles of the transport coefficients to be resolved. Gas modulation experiments were carried out on plasmas over a range of relatively low currents and a wide variety of line-averaged densities including values near the Greenwald density limit. With this technique the perturbed diffusion coefficient D and the perturbed convection velocity V can be determined simultaneously. Measured profiles of D rise toward the outside of the plasma column in a manner generally similar to those determined previously for (chi)(sub e,HP) from sawtooth heat pulse propagation. Values of D are typically smaller than those of (chi)(sub e,HP) given for the same line-averaged densities by a factor of 2 - 5. Diffusion coefficients from a series of discharges at constant current showed little variation with density through most of the saturated ohmic confinement regime. At the Greenwald density limit threshold, a dramatic increase occurred in both the perturbed convective and diffusive transport coefficients in the outer region of the plasma. The increases were most pronounced at the outermost range of the radii where coefficients were determined (r/a = 0.8), but were apparent over a region which extended well into the plasma interior. Density profiles maintained a similar shape near the density limit, congruous with the similar behavior of the transport coefficients. No dramatic deterioration was evident in the global energy confinement. DOE

Partial differential equations describing a tokamak plasma are presented. The plasma stability is calculated by applying finite element method and Newton algorithm. Particular attention is given to the stability control. It consists of calculating the required tokamak circuit currents to produce a precise plasma configuration. The optimal configuration is calculated by means of a Lagrangian and a gradient combined algorithm. A model describing the plasma configuration during a discharge is developed. Newton algorithm and numerical simulations are applied. The laws describing the evolution of currents and voltages in the tokamak's circuits were developed. ESA

PLASMA-PUFF INITIATION OF HIGH COULOMB TRANSFER SWITCHES Final Technical Report, 1 Mar. 1989 - 30 Jun. 1993
D. D. Venable and K. S. Han 1993 33 p
(Grant NAG1-970)
(NASA-CR-193186; NAS 1.26:193186) Avail: CASI HC A03/MF A01

The plasma-puff triggering mechanism based on a hypocycloidal pinch geometry was investigated to determine the optimal operating conditions for an azimuthally uniform surface flashover which initiates plasma-puff under wide ranges of fill gas pressures of Ar, He and N2. The optimal fill gas pressures for the azimuthally uniform plasma-puff were about 120 mTorr less than P(opt) less than 450 Torr for He and N2. For Argon 120 mTorr less than P(opt) less than 5 Torr for argon. The inverse pinch switch was triggered with the plasma-puff and the switching capability under various electrical parameters and working gas pressures of Ar, He and N2 was determined. It was also shown that the azimuthally uniform switching discharges were dependent on the type of fill gas and its fill pressure. A new concept of plasma-focus driven plasma-puff was also discussed in comparison with hypocycloidal pinch plasma-puff triggering. The main discharge of the inverse pinch switch with the plasma-focus driven plasma-puff trigger is found to be more azimuthally uniform than that with the hypocycloidal pinch plasma-puff trigger in a gas pressure region between 80 mTorr and 1 Torr. In order to assess the effects of plasma current density on material erosion of electrodes, emissions from both an inverse-pinch plasma switch (INPIStron) and from a spark gap switch under test were studied with an optical multichannel analyzer (OMA). The color temperature of the argon plasma was approximately 4,000 K which corresponded with the peak continuum emission near 750 nm. There are the strong line emissions of argon in the 650 - 800 nm range and a lack of line emissions of copper and other solid material used in the switch. This indicates that the plasma current density during closing is low and the hot spot or hot filament in the switch is negligible. This result also indicates considerable reduction of line emission with the INPIStron switch over that of a spark-gap switch. However, a strong carbon line emission exists due to vaporization of the plastic insulator used. In order to reduce the vaporization of the insulator, the plexiglass insulating material of INPIStron was replaced with Z-9 material. A comparative study of the INPIStron and a spark gap also reveals that the INPIStron, with a low impedance of Z equals 9 ohms, can transfer a high voltage pulse with a superior pulse-shape fidelity over that of a spark gap with Z equals 100 ohms.

INDUCTION ACCELERATOR DEVELOPMENT FOR HEAVY ION FUSION
L. L. Reginato May 1993 18 p Presented at the International Symposium on Heavy Ion Fusion, Frascati, Italy, 25-28 May 1993
(Contract DE-AC03-76SF-00098)
(DE93-019228; LBL-33805; HIFAN-584; CONF-9305136-8) Avail: CASI HC A03/MF A01

For approximately a decade, the Heavy Ion Fusion Accelerator Research (HIFAR) group at LBL has been exploring the use of induction accelerators with multiple beams as the driver for inertial fusion targets. Scaled experiments have investigated the transport of space charge dominated beams (SBTE) and current amplification and transverse emittance control in induction linacs (MBE-4) with very encouraging results. In order to study many of the beam manipulations required by a driver and to further develop economically competitive technology, a proposal has been made in partnership with LLNL to build a 10 MeV accelerator and to conduct a series of experiments collectively called the Induction Linac System Experiments (ILSE). The major components critical to the ILSE accelerator are currently under development. We have constructed a full scale induction module, and we have tested a number of amorphous magnetic materials developed by Allied Signal to establish an overall optimal design. The electric and magnetic quadrupoles critical to the transport and focusing of heavy ion beams are also under development. The hardware is intended to be economically competitive for a driver without sacrificing any of the physics or performance requirements. This paper will concentrate on the recent developments and tests of the major components required by the ILSE accelerator. DOE

TRANSVERSE BEAM COMBINER FOR ILSE
K. Hahn, C. Celata, A. Faltens, D. Judd, P. Seidl, and E. Lee May 1993 11 p Presented at the International Symposium on Heavy Ion Fusion, Frascati, Italy, 25-28 May 1993
(Contract DE-AC03-76SF-00098)
(DE93-019239; LBL-33803; HIFAN-582; CONF-9305136-7) Avail: CASI HC A03/MF A01

Previous Heavy Ion Fusion driver system studies suggest that transverse beam combining significantly reduces driver cost. In a combiner, several beams are brought together to a common transport channel which accommodates the increased line charge density. Combining intense beams increases the transverse emittance mainly due to the heating of the beam by space charge forces as the non-uniform original beam configuration becomes more uniform. The combiner itself introduces additional aberrations, which are small for the present design. Those aberrations are due to the reduced available space for the focusing electrodes and reduced clearance from the beamlets to the surrounding electrodes, thereby generating field aberrations and larger image forces. These aberrations can also lead to particle loss. We have studied a particular design of the proposed Induction Linac System Experiment (ILSE) combiner which is a first-order achromat that tolerates a rather large fractional head-to-tail momentum tilt of +/- 10%. Using a 2-D particle-in-cell code we have found that approximately 7% of particles are lost in the combiner. The emittance growth after the combiner is large enough so that the emittance growth due to combiner aberrations is unimportant. The scaled projection to a driver shows the growth is small enough to be tolerated. At present, methods of improving combiner design to reduce particle loss and to minimize emittance growth are being studied. DOE

MODELLING IDEAL GAS FLUORIDES LASER PLASMAS Ph.D. Thesis [MODELLIERUNG VON EDELGASFLUORID-LASERPLASMEN]
Karin Stein 1991 169 p In GERMAN Sponsored by BMFT Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(ETN-93-95073) Avail: CASI HC A08

A model of spatially homogeneous ideal gas fluorides discharges is developed for estimation of charge carrier densities, electron energies and drift, and their time dependence is a function of gas composition, partial pressure, geometry and electrical input data. The calculations were based on the Boltzmann equation and the transport equation with the density, impulsion and energy of the electron gas. The equations of the discharge model were analytically evaluated, using a Maxwell distribution for the electron velocity. The electron collision frequencies were assumed to be time dependent so that the operating voltage could be directly calculated from gas composition. Measurements were performed with KrF and ArF laser systems. A KrF laser gas discharge was simulated with helium and neon as buffer gases and it is noticed that velocity distribution of helium systems is dominated by elastic electron/helium interaction and is similar to a Maxwell distribution. THEORETICAL STUDIES OF TURBULENCE AND ANOMALOUS TRANSPORT IN TOROIDAL CONFINEMENT DEVICES
P. W. Terry 1993 10 p
(Contract DE-FG02-89ER-53291)
(DE93-040684; DOE/ER-53291/4) Avail: CASI HC A02/MF A01

The research performed under this grant has focused on key issues with respect to turbulence and transport in toroidal confinement devices. Progress and publications in these areas are summarized in this report. This work includes the following: analytical and numerical studies of spectral energy transfer and the saturation dynamics and transport of dissipative and collisionless trapped electron turbulence, the role of flow curvature in L-H mode transition physics, fully nonlinear calculations of the anomalous particle transport from the ion mixing mode, and the development of a theory for the drift wave frequency spectrum. Novel aspects of this work include an elucidation of the role of nonlinear frequency shifts in producing nonstationary saturated states, an identification of reverse and non-conserved flows in Hasegawa-Mima turbulence, and a description of the way incoherent emission affects the frequency of turbulent fluctuations. ON RELATION BETWEEN BERRY PHASE AND ONE-DIMENSIONAL MODELS WITH LONG-RANGE 1/r(SUP 2)-INTERACTION
S. A. Bulgadaev Feb. 1993 14 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(DE93-624967; IC-92/142) Avail: CASI HC A03 (US Sales Only)

It is shown, that the effective action of Berry phase type is connected with some one-dimensional models with long-range 1/r(sup 2)-interaction. In particular, the Caldeira-Leggett action for Josephson junction with dissipation and classical spin systems are related with local effective action of holomorphic Berry phase type through the Hilbert reduction. Some consequences of this relation are discussed, including conformal symmetry of Caldeira-Leggett action and a possibility of exact solution of these models. DOE

LECTURES OF FERMI LIQUID THEORY
K. S. Bedell 1993 40 p Presented at the Australian Summer School on Many Body Physics, Canberra, Australia, 11-22 Jan. 1993
(Contract W-7405-eng-36)
(DE93-016630; LA-UR-93-2029; CONF-9301117-1) Avail: CASI HC A03/MF A01

The Fermi liquid theory was first introduced by Landau in 1956 to provide a theoretical basis for the properties of strongly correlated Fermi systems. This theory has proven to be crucial for our understanding of a broad range of materials. These include liquid He-3, He-3/He-4 mixtures, simple metals, heavy-fermions, and nuclear matter to name a few. In the high temperature superconductors, questions have been raised regarding the applicability of Fermi liquid theory to the normal state behavior of these materials. This issue is not addressed in these lectures. The focus will be to summarize the foundations of this theory and to explore the consequences. In the absence of reading the original materials that this work draws upon, the lectures should provide the essentials of a mini-course in Fermi liquid theory. DOE

REORIENTATION OF MISFIT DISLOCATIONS DURING ANNEALING IN InGaAs/GaAs(001) INTERFACES
Y. Chen, Z. Liliental-Weber, J. Washburn, J. F. Klem (Sandia National Labs., Albuquerque, NM.), and J. Y. Tsao (Sandia National Labs., Albuquerque, NM.) Apr. 1993 6 p Presented at the Spring Meeting of the Materials Research Society, San Francisco, CA, 12-16 Apr. 1993
(Contracts DE-AC03-76SF-00098; DE-AC04-76DP-00789)
(DE93-015046; LBL-34070; CONF-930405-19) Avail: CASI HC A02/MF A01

Transmission electron microscopy is applied to investigate the effect of post-annealing on misfit dislocations in an In(0.2)Ga(0.8)As/ GaAs(001) heterostructure. An orthogonal array of 60 degree dislocations along (110) and (1(bar-1)0) directions was observed in the interfaces of the samples grown by MBE at 520 C. When the as-grown samples were annealed at temperatures ranging from 600 to 800 C, the 60 degree dislocations were gradually reoriented by dislocation reactions occurring at the 90 degree intersections followed by nonconservative motion driven by dislocation line tension and the residual elastic misfit strain. The final result of this process was a dislocation array lying along (100) and (010) directions. The reoriented u = (100) dislocation has a Burgers vector b = a/2 (101), which is the same as that of 60 degree dislocation, but the edge component of its Burgers vector in the (001) interfacial plane is larger than that of 60 degree dislocation by a factor of square root of 2, resulting in a greater contribution to elastic strain relaxation. This nonconservative reorientation of 60 degree dislocations to form the u=(100) dislocations represents a new strain relaxation mechanism in diamond or zinc blend semiconductor heterostructures. SELECTIVE ELECTROCHEMICAL WAFER THINNING FOR SILICON CHARACTERIZATION
J. W. Medernach, H. J. Stein, and J. O. Stevenson Mar. 1993 24 p
(Contract DE-AC04-76DP-00789)
(DE93-015083; SAND-91-2764) Avail: CASI HC A03/MF A01

A new technique is reported for rapidly determining interstitial oxygen (O(sub i)) in heavily doped n(sup +) and p(sup +) silicon. This technique includes applying a selective electrochemical (SE) thinning process and infrared transmittance to measure the Si-O band on a limited area of a silicon wafer. Oxygen reference material was used to establish a Fourier transform infrared-selective ion mass spectrometry, (FTIR-SIMS) calibration curve for the thinned samples. Internally developed software offers the capability of using different algorithms for calculating O(sub i). The O(sub i) concentrations in Czochralski (CZ) silicon with resistivities as low as 0.009 Ohm cm were determined using the SE technique on bulk and thermally processed silicon. In contrast to mechanical thinning, localized SE area thinning maintains wafer integrity for additional material or device processing. Stress generated during the formation of thick PS layers can exceed the elastic limit of silicon and induce interfacial defects. We identified in n(sup +) silicon a stress-induced dislocation network at 45 degree with a (010) direction for (100) silicon. Orthogonal dislocation networks observed in the (110) direction are identified in boron-doped silicon with concentrations of greater than 3 x 10(exp 17) atoms/cu cm. These dislocation networks show a tendency to agglomerate into bundles as the boron concentration increases. The interfacial defects observed by optical microscopy did not interfere with O(sub i) determination. DOE

(DE93-016607; LA-UR-93-2170; CONF-930860-1) Avail: CASI HC A01/MF A01

UCu3Al2 crystallizes in an ordered variant of the hexagonal CaCu5 structure. By neutron powder-diffraction, the U atoms were found to occupy the 1a sites, while the 2c sites are occupied by Cu atoms only and a random occupation of the 3g sites by the remaining Cu and Al is found. The magnetic susceptibility, measured on a single crystal grown by the Czochralski tri-arc technique, is found to be maximal within the hexagonal basal plane with a maximum at about 10 K. For fields applied within the basal plane, the magnetization at 4.2 K exhibits a slight S-shape starting slightly below 15 T. No such anomalies are found for fields applied along the c-axis where the magnetic response is found to be much lower. No additional magnetic peaks, which could be related with long-range antiferromagnetic ordering, were detected in the neutron powder-patterns at low temperatures. DOE

OXYGEN REDUCTION AT A STABILIZED ZIRCONIA INTERFACE WITH Y(1-x)Ca(x)MnO3 OR La(1-x)Sr(x)MnO3 CATHODE MATERIALS
G. E. Youngblood, L. R. Pederson, J. L. Bates, and A. S. Rupaal (Washington Univ., Bellingham.) May 1993 14 p Presented at the 183rd Electrochemical Society Meeting, Honolulu, HI, 16-21 May 1993
(Contract DE-AC06-76RL-01830)
(DE93-015681; PNL-SA-21637; CONF-930571-20) Avail: CASI HC A03/MF A01

Impedance spectroscopy, combined with an unbonded interface cell, was used to assess oxygen reduction behavior at interfaces between an yttria-stabilized zirconia electrolyte and perovskite or platinum cathode materials. Intrinsic oxygen reduction specific activities of Y(1-x)Ca(x)MnO(3) (x = 0.5, 0.6, and 0.7) and La(1-x)Sr(x)MnO(3) (x = 0.1 and 0.3) were determined as a function of temperature and oxygen partial pressure, independent of the interface morphology. The overall cathodic interfacial polarization consists of two or more fundamental processes. In the temperature range of 900-1000 C and in air, the operating conditions for a solid oxide fuel cell, charge transfer, and oxygen dissociation processes were approximately equivalent relative to the overall oxygen reduction kinetics. DOE

RENORMALIZATIONS IN SUPERSYMMETRIC AND NONSUPERSYMMETRIC NON-ABELIAN CHERN-SIMONS FIELD THEORIES WITH MATTER
L. V. Avdeev, D. I. Kazakov, and I. N. Kondrashuk 1992 27 p
(DE93-626646; JINR-E-2-92-270) Avail: CASI HC A03/MF A01 (US Sales Only)

The renormalization of nonabelian Chern-Simons field theories with matter in (2+1 dimensions) was carried out explicitly. All the renormalization constants are calculated to the leading two-loop order both in terms of component fields and N=1 superfields for the fundamental representation of the SU(n), Sp(n) and SO(n) groups. Renormalization-group fixed points are found, and their stability properties are examined. It is shown that the N=2 supersymmetry is realized as an infrared fixed-point solution, where the ultraviolet divergencies cancel. DOE

POLARON TUNNELING IN HIGH-TEMPERATURE SUPERCONDUCTORS
A. R. Bishop, J. MustredeLeon, and M. I. Salkola 1993 8 p Presented at the NATO Workshop on Nonlinear Coherent Structures in Physics and Biology, Bayreuth, Germany, 1-4 Jun. 1993
(Contract W-7405-eng-36)
(DE93-016880; LA-UR-93-2320; CONF-9306194-1) Avail: CASI HC A02/MF A01

Nonlinear self-trapping effects are frequently proposed in the nonlinear science community -- in contexts from excitons, magnons, and polarons in solid state materials, to molecular crystals and polypeptides, to nonlinear optics. The general phenomena of self-trapping involves the self-consistent response of one field to one or more with which it is coupled, and provides excellent examples of coexisting influences of nonlinearity, lattice discreteness, quantum and thermal fluctuations, disorder, competing timescales, etc. Correspondingly, many approximate analytical and numerical techniques have been used to approach these complex issues. Here we consider a simple copper-oxygen cluster which appears in many high-temperature superconductors, which displays unusual structural and optical behavior, and which we model in terms of 'dynamic polaron tunneling'. We introduce a Peierls-Hubbard model to describe this cluster and use exact diagonalization to evaluate its properties. We emphasize the importance of nonlinear and nonadiabatic aspects of structural measurements, inelastic neutron scattering, and phonon spectroscopy (infrared and Raman). DOE

CONICAL GEOMETRY FOR SAGITTAL FOCUSING AS APPLIED TO X RAYS FROM SYNCHROTRONS
G. E. Ice and C. J. Sparks Jun. 1993 37 p
(Contract DE-AC05-84OR-21400)
(DE93-017238; ORNL/TM-12327) Avail: CASI HC A03/MF A01

A method for simultaneous focusing and monochromatization of x rays from a fan of radiation having up to 15 mrad divergence in one dimension is described. This geometry is well suited to synchrotron radiation sources at magnifications of one-fifth to two and is efficient for x ray energies between 3 and 40 keV (0.48 and 6.4 fJ). The method uses crystals bent to part of a cone for sagittal focusing and allows for the collection of a larger divergence with less mixing of the horizontal into the vertical divergence than is possible with x ray mirrors. The geometry required to achieve the highest efficiency when a conical crystal follows a flat crystal in a nondispersive two-crystal monochromator is described. At a magnification of one-third, the geometry is identical to a cylindrical focusing design described previously. A simple theoretical calculation is shown to agree well with ray-tracing results. Minimum aberrations are observed at magnifications near one. Applications of the conical focusing geometry to existing and future synchrotron radiation facilities are discussed. DOE

ATLAS OF FORMABILITY: WASPALOY Final Report, 30 Apr. - 31 Jul. 1992
Prabir K. Chaudhury and Dan Zhao 31 Jul. 1992 32 p
(Contract N00140-88-C-RC21)
(AD-A268323) Avail: CASI HC A03/MF A01

In this investigation, flow behavior of Waspaloy alloy was studied by conducting compression tests over a wide range of temperatures and strain rates. Constitutive relations were determined from the flow behavior, and a dynamic material modeling was conducted on this alloy. Thus, the optimum processing condition in terms of temperature and strain rate was identified. Microstructural changes during high temperature deformation were also characterized. DTIC

LATTICE DAMAGE IN ION-IMPLANTED COMPOUND SEMICONDUCTORS AND ITS EFFECT ON ELECTRICAL ACTIVATION
T. E. Haynes, R. Morton (California Univ., San Diego, La Jolla.), and S. S. Lau (California Univ., San Diego, La Jolla.) Apr. 1993 13 p Presented at the Spring Meeting of the Materials Research Society, San Francisco,

CA, 12-16 Apr. 1993
(Contracts DE-AC05-84OR-21400; DE-FG03-84ER-45156)
(DE93-015907; CONF-930405-1) Avail: CASI HC A03/MF A01

In recent years, a number of experimental observations have indicated that interactions between mobile point defects generated during ion implantation play an important role in the damage production in III-V compound semiconductors, and particularly GaAs. This paper reviews a set of such observations based on ion channeling measurements of the lattice damage in GaAs implanted with Si ions. Selected independent observations are also surveyed to illustrate the importance of point-defect interactions. Taken together, these show that at least two contributions to the lattice damage must often be considered: a 'prompt' contribution attributed to direct-impact amorphization, and a 'delayed' contribution attributed to point-defect clustering. New measurements are then described which show the different effects that these two damage components have on the electrical activation in annealed, Si-implanted GaAs. The aim is to indicate the potential to exploit the balance between these two damage contributions in order to improve the electrical performance and reproducibility of ion-implanted and annealed layers. Finally, the applicability of these concepts to other ion species and other compound semiconductors (GaP and InP) is briefly discussed. DOE

PHASE TRANSITIONS AND NEUTRON SCATTERING
G. Shirane 1993 7 p Presented at the International Symposium on Advanced Nuclear Energy Research-Neutrons as Microscopic Probes, Mito Ibaraki, Japan, 10-12 Mar. 1993
(Contract DE-AC02-76CH-00016)
(DE93-016748; BNL-49092; CONF-9303190-3) Avail: CASI HC A02/MF A01

A review is given of recent advances in neutron scattering studies of solid state physics. The author has selected the study of a structural phase transition as the best example to demonstrate the power of neutron scattering techniques. Since energy analysis is relatively easy, the dynamical aspects of a transition can be elucidated by the neutron probe. He will discuss in some detail current experiments on the 100 K transition in SrTiO3, the crystal which has been the paradigm of neutron studies of phase transitions for many years. This new experiment attempts to clarify the relation between the neutron central peak, observed in energy scans, and the two length scales observed in recent x-ray diffraction studies where only scans in momentum space are possible. PHENOMENOLOGICAL EXPLANATION OF ELASTIC ANOMALIES IN SUPERLATTICES
M. Grimsditch, E. E. Fullerton, and I. K. Schuller (California Univ., San Diego, La Jolla.) Jun. 1993 10 p Presented at the Spring Meeting of the Materials Research Society, San Francisco, CA, 12-16 Apr. 1993
(Contract W-31-109-eng-38)
(DE93-017475; ANL/MSD/CP-79602; CONF-930405-32) Avail: CASI HC A02/MF A01

The experimental fact that measured elastic and structural properties of superlattices are strongly correlated can be understood on the basis of a simple model based on the packing of hard spheres. The model is consistent with features of many models that have been proposed to explain the supermodulus effect; but contrary to previous explanations, it allows predictions for a given pair of constituents to be made. For an arbitrary pair of elements, it predicts the existence or non-existence of an elastic anomaly, and a rough estimate of its magnitude. DOE

PLASTIC ANISOTROPY IN MoSi2 SINGLE CRYSTALS
T. E. Mitchell and S. A. Maloy 1993 12 p Presented at the Critical Issues in the Development of High Temperature Structural Materials Meeting, Kona, Japan, 8-12 Mar. 1993
(Contract W-7405-eng-36)
(DE93-012650; LA-UR-93-1282; CONF-9303161-1) Avail: CASI HC A03/MF A01

Single crystals of MoSi2 are an order of magnitude stronger when compressed along (001) than along any other orientation. This is because the easy slip systems, (101)(100) and (110)(111), have a zero Schmid factor acting on them so that harder slip systems are forced into operation. We find that (001) crystals compressed at 1000 C yield by slip on (103)(331). TEM shows that the 1/2(331) dislocations tend to decompose into 1/2(111) and (110) dislocations. This decomposition process apparently inhibits the mobility of 1/2(331) dislocations at higher temperatures and another system, (101)(111), becomes operative at 1300 C and above. The (021) crystals have been tested for comparison and are found to yield at much lower stresses on the easy systems. In the design of advanced high temperature structural materials based on MoSi2, the large plastic anisotropy should be used to advantage. DOE

PHASE SEPARATION AND SUPERCONDUCTIVITY IN La2CuO(4 + DELTA): EFFECTS OF OXYGEN DIFFUSION
A. P. Reyes, P. C. Hammel, E. T. Ahrens, J. D. Thompson, P. C. Canfield, Z. Fisk, and J. E. Schirber (Sandia National Labs., Albuquerque, NM.) 1993 10 p Presented at the Conference on Spectroscopies in Novel Superconductors, Santa Fe, NM, 17-19 Mar. 1993
(Contract W-7405-eng-36)
(DE93-016610; LA-UR-93-2162; CONF-930367-7) Avail: CASI HC A02/MF A01

In oxygen-annealed La2CuO(4+delta) (delta approximately 0.03), bulk magnetization measurements show an increase of approximately 4K in the superconducting T(sub c) when the sample is cooled slowly through a narrow temperature range near 195K. At this temperature, La-139 NQR spectra exhibit a concomitant appearance of an anomalous feature associated with the metallic phase whose spectral weight increases with cooling rate. The data suggests a distribution of local structures and annealing-dependent volume fraction on this part of the sample. Interpretation of these results in terms of oxygen diffusion in a phase separated material is considered and a picture consistent with the observed changes in T(sub

c) is obtained. Other possible origins of these anomalies and the role they play in determining the superconducting properties of this system are discussed. DOE

KINETIC GROWTH OF RANDOM-LIKE AND BALLISTIC-LIKE DEPOSITION MODELS
Wei Wang and Hilda A. Cerdeira Mar. 1993 21 p
(DE93-624946; IC-93/42) Avail: CASI HC A03/MF A01 (US Sales Only)

The pattern structure and the scaling behavior of the surface width for two deposition models of two kinds of particles, particle-A with a probability 1-P and particle-C with a probability P, depositing on a (1+1)-dimensional substrate are studied. For model 1, a random-like deposition model, the pattern has a compact structure, and the surface width growth only depends on the time, W approximately t(sup 1/2) for the early stage and W approximately t(sup beta(P)) for the intermediate time where beta is a function of P, as well as W approximately P(sup -gamma) for the later time. For model 2, a ballistic-like deposition model, the pattern and scaling behaviour are similar to the ballistic deposition. The scaling of the surface width is W approximately t(sup beta(P)) for the early stage of growth, and W approximately L(sup alpha) for later stage. The exponent beta is of function of P while alpha is independent of P. DOE

INFRARED DETECTION WITH HIGH-(Tc BOLOMETERS AND RESPONSE OF Nb TUNNEL JUNCTIONS TO PICOSECOND VOLTAGE PULSES Ph.D. Thesis
S. Verghese May 1993 103 p
(Contract DE-AC03-76SF-00098)
(DE93-016963; LBL-34171) Avail: CASI HC A06/MF A02

Oxide superconductors with high critical temperature (T(sub c)) make sensitive thermometers for several types of infrared bolometers. Composite bolometers with YBa2Cu3O(7 -delta) thermometers on sapphire substrates which have higher sensitivity than competing thermal detectors which operate at temperatures above 77 K were built. A 1 x 1 mm bolometer with gold black serving as the radiation absorber has useful sensitivity for wavelengths 20-100 microns. A 3 x 3 mm bolometer with a bismuth film as the absorber operates from 20-100 microns. High-(T(sub c)) bolometers which are fabricated with micromachining techniques on membranes of Si or Si3N4 have potential application to large-format arrays which are used for infrared imaging. A nonisothermal high-(T(sub c)) bolometer can be fabricated on a membrane of yttria-stabilized zirconia (YSZ) which is in thermal contact with the heat sink along the perimeter of the membrane. A thermal analysis indicates that the YSZ membrane bolometer can have improved sensitivity compared to the sapphire bolometer for spectrometer applications. The quasiparticle tunneling current in a superconductor-insulator-superconductor (SIS) junction is highly nonlinear in the applied voltage. The first measurement of the linear response of the quasiparticle current in a Nb/AlO(x)/Nb junction over a broad bandwidth from 75-200 GHz was made. Nonlinear measurements made with these pulses may provide information about the quasiparticle lifetime. Preliminary data from such measurements are presented. DOE

HIGH- AND LOW-TEMPERATURE BONDING TECHNIQUES FOR MICROSTRUCTURES
D. R. Ciarlo 22 Jun. 1993 14 p Presented at the 183rd Electrochemical Society Meeting, Honolulu, HI, 16-21 May 1993
(Contract W-7405-eng-48)
(DE93-017173; UCRL-JC-112189; CONF-930571-23) Avail: CASI HC A03/MF A01

The ability to bond together two or more silicon wafers greatly expands the variety and complexity of silicon microstructures that can be designed and fabricated. At LLNL, microstructures have been used for many years as hardware in scientific experiments. The activity has recently been expanded into other areas to include microinstruments for biomedical applications and for chemical analysis. Both high temperature (1100 C) bonding techniques have been used, depending on the application. This paper discusses these applications with emphasis on the most extensive which is the fabrication of microchannel coolers for diode arrays. DOE

DEFECTS IN GaAs BULK CRYSTALS AND MULTI-LAYERS CAUSED BY In DIFFUSION
P. Werner, Z. Liliental-Weber, W. Swider, H. Sohn, W. Yau, E. R. Weber, and J. Baranowski (Warsaw Univ., Poland.) Apr. 1993 5 p Presented at the Spring Meeting of the Materials Research Society, San Francisco, CA, 12-16 Apr. 1993
(Contract DE-AC03-76SF-00098)
(DE93-016968; LBL-34143; CONF-930405-29) Avail: CASI HC A01/MF A01

The objective was to study by transmission electron microscopy the lattice defects in GaAs bulk crystals and heterostructures formed by In diffusion. In such samples hints for the existence of superconductivity have been found. Indium was found to move more than 100 micron into bulk GaAs during 1 hour annealing at 550 C (such conditions are typical for molecular beam epitaxy growth on GaAs wafers). This rapid diffusion is accompanied by the creation of dislocation networks and metallic In droplets that show evidence for lattice strain. To study the interaction of In with the GaAs lattice, In/GaAs multi-layers were grown by MBE at about 450 C on a GaAs buffer layer. The interfaces of these structures showed misfit dislocations at islands of InAs besides the presence of lattice strain. Both types of samples showed microwave absorption signals typical for superconductivity. The most likely superconductive phases are small metastable inclusions, probably consisting amorphous Ga or In. DOE

FEASIBILITY SURVEY OF THERMOELECTRIC CONVERSION TECHNOLOGY USING SEMICONDUCTORS
Mar. 1993 105 p In JAPANESE
(DE93-520882; NEDO-P-9212) Avail: CASI HC A06/MF A02

The paper takes notice to thermoelectric conversion technology using semiconductors and investigates it in a wide range from high temperature to low temperature to study its feasibility. It is found that in Bi-Te alloy elements applicable to a temperature range of around 200(degree)C, some are over 3.5(times)10(sup -3)K(sup -1) in performance index, and performance of the element can be practically improved in the near future. The thermoelectric power generation system using waste heat from the fuel cell power plant, which is 5-6% in conversion efficiency, can generate output more than 100kW and is expected to improve by approximately 1% in plant overall efficiency. The construction cost, however, is around 1.6-1.9 million yen/kW. The thermoelectric power generation plant which is modeled on No.2 generator of Hatchobaru geothermal power plant can generate electric output of 10-12.5MW, which is smaller than that of the conventional geothermal power generation. The construction cost is around 3.2-4.1 million yen/kW. Even if advantage of the system in running cost is considered, attractive systematization seems to be difficult. DOE

OMEGA PHASE FORMATION IN SHOCK-LOADED ZIRCONIUM
Shihong Song and G. T. Gray, III 1993 5 p Presented at the 14th International Conference of the International Association for the Advancement of High Pressure Science and Technology, Colorado Springs, CO, 27 Jun. - 2 Jul. 1993
(Contract W-7405-eng-36)
(DE93-018343; LA-UR-93-2292; CONF-930676-15) Avail: CASI HC A01/MF A01

A shock recovery experiment and post-shock mechanical measurements were conducted on high-purity Zr. Mechanical properties of the Zr samples before and after the shock loading are compared and discussed in terms of the substructure evolution during the shock loading. Metastable omega-phase was found in the Zr sample following shock-loading to 7 GPa. A new orientation relationship between the alpha and omega phases was derived which does not agree with those previously reported in hydrostatic pressure experiments. A mechanism is proposed for the observed alpha yields omega transformation. DOE

STUDY OF MECHANICAL BEHAVIOR AND INTERNAL STRUCTURE OF FERRITIC NANOCRYSTALLINE MATERIAL
J. R. Weertman Mar. 1993 35 p
(Contract DE-FG02-86ER-45229)
(DE93-019264; DOE/ER-45229/33) Avail: CASI HC A03/MF A01

Investigation continued of effect of heat treatment on strength and internal structure of nanocrystalline metals. It is found that low temperature annealing increases the microhardness of nanocrystalline Pd. The anomalous Hall-Petch effect reported in literature is result of strengthening of as-compacted nanocrystalline material by annealing. Tests made up entirely of as-compacted samples or entirely of heat-treated specimens show a normal dependence of strength on grain size. X ray measurements show that short-range strains increase over the same range of annealing temperatures as hardness while long-range strains rapidly drop. SANS measurements of as-compacted and annealed nanocrystalline Pd gave quantitative information on the size and number density of a class of scatterers identified with triple point pores and of a class of larger scatterers interpreted as pores associated with 'missing' grains. A new compaction unit was designed and built that should produce larger samples with greatly reduced flaw content and lowered environmental contamination. DOE

COMPUTER SIMULATION OF MACROMOLECULAR CRYSTALS AND THEIR DEFECTS
B. Wunderlich, B. G. Sumpter, D. W. Noid, and G. L. Liang 1993 16 p
(Contract DE-AC05-84OR-21400)
(DE93-015213; DOE/OR-21400/T475) Avail: CASI HC A03/MF A01

Computational results on dynamics of polyethylene, are reviewed and connected to experiment. It can be demonstrated that conformational defects can be created at temperatures as much as 100 K below the melting point and that the concentration continues to increase exponentially with temperature, ultimately leading to disordered crystals along the polymer chains (high temperature CONDIS crystals). Although rate of formation of these defects is high, approximately 1 x 10(exp 10) s(sup -1) at 350 K, the defects do not, by themselves, lead at low temperature to lamellar thickening or deformation. Diffusion mechanisms involve coupling of large-amplitude torsional motion with transverse and longitudinal vibrations of the crystal, which lead to formation of dispirations and twists. Such defects can, move towards the end of the crystal, thereby causing a chain diffusion process leading to lamellar thickening and deformation processes. Collective twisting of the chains without major influence of conformational defects leads to hexagonal or pseudo-hexagonal structures of the asymmetric motifs, involving dynamic multidomain arrangements of the chains. The especially efficient molecular dynamics simulation-code produces reasonable agreement with experiment on density, defect concentration, heat capacity, vibrational spectra (including stress-induced frequency shifts), melting temperature, and speed of sound. The simulations produced data on crystals of up to 30,000 atoms for times of up to 100 picoseconds (10(exp -10) s). Total simulation efforts needed 8,000 hours of supercomputer CPU time between 1988 and 1993. DOE

MECHANICAL MODELING OF THE GROWTH OF SALT STRUCTURES Ph.D. Thesis
R. A.M. Alfaro May 1993 217 p
(Contract DE-FG05-87ER-13711)
(DE93-015342; DOE/ER-13711/T3) Avail: CASI HC A10/MF A03

A 2D numerical model for studying the morphology and history of salt structures by way of computer simulations is presented. The model is based on conservation laws for physical systems, a fluid marker equation to keep track of the salt/sediments interface, and two constitutive laws for rocksalt. When buoyancy alone is considered, the fluid-assisted diffusion model predicts evolution of salt structures 2.5 times faster than the power-law creep model. Both rheological laws predict strain rates of the order of 4.0 times 10(exp -15)s(exp -1) for similar structural maturity level of salt structures. Equivalent stresses and viscosities predicted by the fluid-assisted diffusion law are 10(exp 2) times smaller than those predicted by the power-law creep rheology. Use of East Texas Basin sedimentation rates and power-law creep rheology indicate that differential loading is an effective mechanism to induce perturbations that amplify and evolve to mature salt structures, similar to those observed under natural geological conditions. THE TEMPERATURE AT THE PHASE BOUNDARY DURING QUASI-STATIC MOTIONS OF A TWO-PHASE THERMOELASTIC BAR
Jim M. Restuccio Jun. 1993 26 p
(Contract N00014-90-J-1871)
(AD-A268769; TR-13) Avail: CASI HC A03/MF A01

In this paper, a thermo-mechanical problem involving a finite bar is considered. It is assumed that the bar initially consists of two phases, one of which was obtained from the other by a martensitic phase transformation. It is also assumed that both phases of the bar have thermoelastic constitutive behavior. The two-phase bar is subject to different temperatures at each boundary and to a boundary traction. A quasi-static thermo-mechanical process is considered and the temperature, static equilibrium positions, and quasi-static motions of the phase boundary are studied as the material coefficients, temperature boundary conditions, and end loading are varied. Martensitic phase transformations are diffusionless solid-solid phase transformations which have continuous displacements, with possible discontinuous strains, at their phase boundary. They are also characterized by the parent and product phases having different crystal structures, or at least different crystal orientations, and by the product phase having a shape deformation relative to the undeformed parent phase, which corresponds to an unstressed undeformed state of that product phase. The high-temperature phase of a material that can undergo such a transformation is usually referred to as the austenite phase of the material, and the low-temperature phase that can be created from the austenite by a martensitic phase transformation is usually referred to as the martensite phase of the material. The project has involved advanced studies of diamond nucleation and the diamond growth surface utilizing scanning tunneling microscopy. For diamond growth on Si substrates, diamond nucleation was observed at scratches on the surface. These results were the first reports of nuclei with dimensions less than 100 A. While nucleation was apparently random, many nuclei exhibited growth surfaces which paralleled the substrate. Nuclei which exhibited a nearly hemispherical structure were considered to exhibit 3-dimensional type growth. It was found that both flat or 2 dimensional and three dimensional nucleation were observed on the same sample. Scanning tunneling spectroscopy was applied to the nuclei. It was found that the nuclei exhibited characteristics similar to that expected for diamond. In contrast, the substrate showed an electronic structure similar to graphite, thus indicating that graphitic layers form on the surface prior to nucleation. The interface of a continuous film was examined by etch removal of the Si, and electronic features characteristic of SiC were observed. A detailed analysis of the STS from diamond surfaces indicated Fowler-Nordheim tunneling. The effect indicated that the valence band minimum was essentially coincident with the vacuum level. The results are consistent with a negative electron affinity for diamond. DTIC

THE EFFECT OF CRYSTALLOGRAPHIC ORIENTATION ON THE PERFORMANCE OF SINGLE CRYSTAL TUNGSTEN SUBSCALE PENETRATORS Final Report, Mar. 1989 - Mar. 1990
W. J. Bruchey, E. J. Horwath, and W. R. Rowe Aug. 1993 36 p
(DA Proj. 1L1-62618-AH-80)
(AD-A268988; ARL-MR-89) Avail: CASI HC A03/MF A01

The performance of tungsten single crystals as kinetic energy penetrator materials was investigated in high length to diameter (L/D) rod geometry at subscale (1/4 geometric scale). (111), (110), and (100) crystal orientations were tested in this 74-g UD - 15 geometry penetrator (6.90-mm dia. x 102.5-mm length). Several 93% tungsten alloy and uranium 3/4 titanium rod geometries were also tested to baseline expected performance of typical penetrator material/geometry combinations. Performance was determined for semi-infinite penetration into rolled homogenous armor (RHA) steel and finite penetration into 76.20-mm RHA steel. Of the orientations tested, the (100) orientation provided the best ballistic results, with performance equal or better than mass and geometric equivalent 93% tungsten alloy rods. The (100) orientation also provided similar performance to the geometric equivalent uranium 3/4 titanium rods. Favorable dislocation motion during the compressive loading of the penetration process to allow penetrator material mass flow away from the penetration interface contribute to the (100) orientation crystal's excellent performance. The net result was less energy expenditure during penetrator flow and, therefore, more energy for deformation of RHA. DTIC

NANOSTRUCTURED MATERIALS: MIND OVER MATTER
R. W. Siegel May 1993 14 p Presented at the Conference on Nanostructured Materials, Cancun, Mexico, 21-25 Sep. 1992
(Contract W-31-109-eng-38)
(DE93-017690; ANL/MSD/CP-79845; CONF-920947-6) Avail: CASI HC A03/MF A01

Considerable interest is being exhibited in novel, enhanced properties of nanostructured materials. These materials, with constituent phase or grain structures modulated on a length scale less than 100 mn, are now artificially synthesized by a wide variety of physical, chemical, and mechanical methods. Nanostructured material, with modulation dimensionalities of zero (clusters), one (multilayers), two (ultrafine-grained overlayers), and three (nanophase materials) are considered. The basic principles involved in synthesis of these new materials are discussed in terms of the special properties sought using selected examples from particular synthesis and processing methodologies. Some examples of property changes that can result from one of these methods, cluster assembly of nanophase materials, are presented. DOE

PHOTOEMISSION STUDIES OF Zn, Co, AND Gd SUBSTITUTED YBa2Cu3O(7-DELTA)
Chun Gu, B. W. Veal, and R. Liu Jun. 1993 9 p Presented at the Conference on Spectroscopies in Novel Superconductors, Santa Fe, NM, 17-19 Mar. 1993
(Contract W-31-109-eng-38)
(DE93-017403; ANL/MSD/CP-80258; CONF-930367-8) Avail: CASI HC A02/MF A01

Zn and Co substitute for Cu in YBa2Cu3O(7-delta) at the plane and chain sites, respectively. We report a high resolution angle-resolved photoemission study on Zn and Co substituted YBa2Cu3O(7-delta) single crystals to determine the effects on electronic structure. The valence states near E(sub F) along gamma-S are virtually unaffected by the substitutions for samples that are superconducting. However, the spectral weight near E(sub F) disappears for a higher Co-doped, nonsuperconducting crystal. Results are compared with earlier studies on pure YBa2Cu3O(7-delta) with controlled oxygen stoichiometry. Measurement on Gd-123 crystals with reduced oxygen stoichiometries show gradual reduction of spectral weight for a band along gamma-Y(X), in contrast to the results for the bands along gamma-S. The differences are probably due to a different admix of Cu-O chain and plane characters in these bands. We also measured Gd 4f resonance spectra which exhibit complex structure, indicating the presence of Gd atoms in chemically inequivalent (probably bulk and near surface) sites. DOE

FABRICATION AND MICROSTRUCTURAL DEVELOPMENT OF Ag-CLAD TlBa2Ca2Cu3O(x) TAPES
A. C. Biondo, M. T. Lanagan, K. C. Goretta, J. Hu, D. J. Miller, C. T. Wu, C. A. Youngdahl, B. Fisher, and R. B. Poeppel Jul. 1993 11 p Presented at the International Cryogenic Engineering Conference and International Cryogenic Materials Conference, Albuquerque, NM, 12-16 Jul. 1993
(Contract W-31-109-eng-38)
(DE93-017407; ANL/ET/CP-78557; CONF-930703-8) Avail: CASI HC A03/MF A01

Three different 1223 powders with varied phase distributions were used to fabricate tapes by the powder-in-tube process. It was found that powders consisting primarily of phase pure 1223 were superior to a phase assemblage of Ca2CuO3, BaCuO2, and Tl2O3 powders. No texturing in the microstructure was observed for any of the annealing times or temperatures. Critical current densities over 5,000 A/cm(exp 2) were measured at 77 K, and J(sub c) degraded as the number of impurity phases increased. Further work will focus on other phase assemblages in the starting powder to determine if grain growth and alignment can be achieved in 1223. DOE

KINETIC ASPECTS OF LATTICE MISMATCH IN MOLECULAR BEAM EPITAXIAL GROWTH ON PLANAR AND PATTERNED SUBSTRATES Final Report, 1 Feb. 1990 - 31 Mar. 1993
A. Madhukar 31 Mar. 1993 69 p
(Grant AF-AFOSR-0184-90)
(AD-A270424; AFOSR-93-0744TR) Avail: CASI HC A04/MF A01

This final scientific report summarizes the salient accomplishments under the grant AFOSR 90-0184 which include (1) the first demonstration of the realization of 3-dimensionally confined (i.e. quantum box) GaAs structures via a one-step MBE growth on pre-patterned nonplanar GaAs(111)B and GaAs(100) substrates and exhibiting optical activity, (2) the first demonstration of the kinetics of highly strained InGaAs 3D island and defect formation and the potential use of such coherent islands as quantum boxes, (3) introduction of the idea of substrate encoded size-reducing epitaxy (SESRE) that underlies (1) above and provides a means for exploiting (2) for the creation of a regular array of coherent 3D InAs islands as a quantum box array, (4) realization of high quality, highly strained GaAs/InGaAs/AlGaAs single and multiple quantum well structures via RHEED optimized growth kinetics control and their application to high performance resonant tunnelling diodes, doped-channel MISFETs, and asymmetric Fabry-Perot spatial light modulators in a novel inverted cavity geometry, (5) the impact of ex-situ processing steps such as dielectric encapsulation and rapid thermal annealing, and (6) the use of Ga+ focused ion beam for in-situ direct-write patterning of GaAs. MESOEPITAXY: A UNIVERSAL ROUTE TO ORIENTED MATERIALS Final Report, 15 Jun. 1990 - 14 Jun. 1993
Alan J. Heeger and Paul Smith 14 Jun. 1993 85 p
(Grant AF-AFOSR-0283-90)
(AD-A270437; AFOSR-93-0746TR) Avail: CASI HC A05/MF A01

The friction-deposited PTFE layers and their ability to act as orientation inducing substrates were fully characterized. The PTFE layers were studied by optical microscopy, scanning electron microscopy, atomic force microscopy, and by electron diffraction. Both the topology and the molecular structure were determined. The mechanism of mesoepitaxy was explored and clarified in detail through the use of overlayers. The mesoepitaxy technique was expanded from planar surfaces to the internal surfaces of polyethylene oriented by gel processing. There is serious interest by industry in using the PTFE layers for orientation. Areas of specific interest include polarizers for liquid crystal displays, and thin film transistors fabricated from oriented organic semiconductors. UNIAX Corp. (Santa Barbara) has taken an option on exclusive license on the technology and is working with several companies toward development of the technology. DTIC

Low-pressure metalorganic chemical vapor deposition (LPMOCVD) has been used to grow GaAs epitaxially on GaAs substrates by reacting triethylgallium and arsine. Various deposition parameters such as substrate temperature, total pressure, and V/III ratio were varied systematically. Optical and scanning electron microscopy revealed the presence of oval defects. Photoluminescence shows bandgap luminescence at 1.5 eV. Hall effect data indicate that the deposited GaAs is p-type with a carrier concentration of 10(exp 17) /cu cm and a mobility of 275 sq cm/V.s at room temperature. Secondary ion mass spectrometry analysis shows a high concentration of carbon that acts as a shallow acceptor. Raman spectroscopy shows that the ratio of the intensity of the LO to the TO mode is much larger for the deposited GaAs epilayer than for the bare substrate using the same scattering geometry. DTIC

THE USE OF CHOPPER SPECTROMETERS FOR COLD-TO-EPITHERMAL NEUTRON SCATTERING AT IPNS
C. K. Loong, L. I. Donley, G. E. Ostrowski, R. Kleb, J. P. Hammonds, L. Soderholm, and S. Takahashi 1993 9 p Presented at the 12th International Collaboration of Advanced Neutron Sources Meeting (ICANS), Abingdon, England, 24-28 May 1993
(Contract W-31-109-eng-38)
(DE93-017798; ANL/IPNS/CP-78912; CONF-9305177-10) Avail: CASI HC A02/MF A01

A multi-detector chopper spectrometer enables measurements of the scattering function S(Q,E) to be made over a wide range of momentum and energy transfer (Q,E). The application of pulsed-source chopper spectrometers for inelastic measurements at thermal and epithermal energies (50 meV less than E less than 1000 meV) is well known. Recently at IPNS, we have extended the energy-transfer region down to about 0.5 meV with a resolution of the order of 150 (mu)eV. It is made possible by utilizing the cold-neutron incident spectrum of the 100 K methane moderator in conjunction with a dual beryllium-body rotor system. Neutron incident energies can be changed efficiently over the 4 to 1000 meV region while maintaining an undisturbed sample environment. We describe the operation of the IPNS chopper spectrometers (HRMECS and LRMECS), the instrumental resolution and the background-suppression performance. The capability of measuring inelastic features from 0.5 to 100 meV with an energy resolution of (Delta)E/E(sub 0) = 2.5% is demonstrated by experimental results of crystal-field excitation spectra of a high-T(c) superconductor ErBa2Cu3O7. Preliminary data of quasielastic scattering from a room-temperature molten salt AlCl3-EMIC are presented. DOE

The strong collaboration between Arizona State University and General Electric Corp. has resulted in a comprehensive program to develop intelligent, in-situ sensors for monitoring and control of semiconductor thin film growth by Molecular Beam Epitaxy (MBE). An intimate collaboration with a commercial MBE manufacturer (DCA Instruments) has resulted in a new ultra-stable substrate manipulator which is compatible with in-situ optical measurements. Another long time collaboration with an ellipsometer manufacturer (Woollam Co.) has generated a new prototype high speed in-situ spectroscopic ellipsometer. Both the manipulator and the ellipsometer have become commercial products. Adaptation of spectroscopic ellipsometry to real time MBE growth monitoring and development of advanced computer algorithms have enabled the tracking of epitaxial layer thickness, temperature and alloy composition. Temperature dependent (from room temperature to 650 deg C) optical constants of GaAs have been measured and verified. Work is continuing on obtaining optical constants for AlGaAs compound semiconductors. DTIC

INTEGRATION OF FERROELECTRIC/SEMICONDUCTOR THIN FILMS FOR SLM AND PHOTOREFRACTIVE APPLICATIONS Final Report, 24 Sep. 1990 - 23 Mar. 1993
R. R. Neurgaonkar 9 Aug. 1993 175 p
(Contract F49620-90-C-0084)
(AD-A268645; SC-71040-FR; AFOSR-93-0650TR) Avail: CASI HC A08/MF A02

This report covers work on the integration of ferroelectric and semiconductor materials for SLM's carried out over the period of September 24, 1990, through March 23, 1993, in the Ferroelectric Materials Department of the Rockwell International Science Center under Contract No. F49620-90-C-0084. During this period, significant progress has been made in the growth of highly grain-oriented perovskite PZT and BaTiO3 thin films on lattice matched SBN, SrTiO3 and MgO substrates. The oriented

PZT films show high polarization in the range of 30 - 38 microcoul/Sq cm, indicating the strong electro-optic effect necessary for photorefractive applications. This report also includes the growth of individual PZT and SBN:75 thin films on semiconducting Si substrates and the successful fabrication of ferroelectric multilayers consisting of alternating PZT and SBN films for spatial light modulators (SLM's). Because excellent quality and optical property PZT, BaTiO3 and multilayer (consisting of PZT and SBN) films are now available, a wide range of optical devices are currently under investigation. Under this program, we are concentrating SLM applications at UCSD using the multilayer stack films; while photorefractive applications are being developed at Rockwell using the grain-oriented PZT and BaTiO3 films deposited on SBN substrates DTIC

HIGH PERFORMANCE YBCO FILMS R & D Status Report, 1 May - 31 Jul. 1993

Edgar J. Denlinger, Aly Fathy, David Kalokitis, Valerie Pendrick, and Barry Thaler 31 Jul. 1993 15 p
(Contract N00014-91-C-0216)
(AD-A269090) Avail: CASI HC A03/MF A01

A number of attempts were made to attach a metal handle consisting of Cu/Stainless 409/Cu composite to YBCO using a crystallizing lead-zinc-borate glass as a bonding agent. A strong, well adhering bond was achieved to MgO and SrTiO3 as buffer layers on top of the YBCO. Unfortunately, a substantial portion of the buffer layers and the YBCO appear to have been dissolved by the bonding glass. Experiments with thicker buffer layers and other buffer materials are underway. Initial results with Y2O3 as a buffer layer look very promising. A glass/metal handle attached to a YBCO/Y2O3 layer combination at 460 C showed good adherence and no apparent damage to the YBCO layer. This system is being evaluated further. DTIC

SCALING LAWS FOR DIAMOND CHEMICAL VAPOR DEPOSITION. DIAMOND SURFACE CHEMISTRY

David G. Goodwin 15 Sep. 1993 20 p
(AD-A269874) Avail: CASI HC A03/MF A01

A simplified model of the gas-surface chemistry occurring during chemical vapor deposition of diamond thin films is presented. The model results in simple scaling relations, useful for process scale-up and optimization, for growth rate and defect density in terms of the local chemical environment at the substrate. A simple two-parameter expression for growth rate is obtained, which with suitable parameter choices reproduces the results of more detailed mechanisms and experiment over two orders of magnitude in growth rate. The defect formation model suggests that the achievable growth rate at specified defect density scales approximately quadratically with the atomic hydrogen concentration at the substrate. DTIC

MATERIALS PROCESSING AND MANUFACTURING TECHNOLOGIES FOR DIAMOND SUBSTRATES MULTICHIP MODULES Technical Report, Apr. - Jun. 1993

Evelio Sevillano 29 Jul. 1993 3 p
(Contract N00014-93-C-2026)
(AD-A268989; DARPA-BAA-92-20) Avail: CASI HC A01/MF A01

We have been able to run diamond chemistry plasmas for only short periods of time, due to the instability of the power supply at higher powers. Under these conditions, we have seen the spectral signature of high growth rate deposition, but were unable to sufficiently heat the substrate nor to hold the discharge stable enough to observe growth. With increased isolation and stable high power operation, we expect to achieve first diamond growth in the near future. An experimental plan to transfer the high growth rate process on 6 diameter substrates will initiate after first growth, and will proceed in parallel with other reactor upgrades. We are continuing to investigate potential improvements in plasma shape. We have already found a significant flattening of the plasma, indicative of higher growth and uniformity, by minor modifications to the chamber cavity scaled from the prototype experiments. As the modeling passes experimental benchmaking, other more significant changes may be incorporated. Other chamber design issues that will be investigated early in these experiments include uniformity of gas delivery, diagnostic window location and orientation, and sufficiency of cooling to the chamber walls. DTIC

GROWTH, CHARACTERIZATION AND DEVICE DEVELOPMENT IN MONOCRYSTALLINE DIAMOND FILMS Quarterly Report, 1 Apr. - 30 Jun. 1993

Robert F. Davis Jun. 1993 27 p
(Contract N00014-90-J-1604)
(AD-A270074) Avail: CASI HC A03/MF A01

A series of computer-based statistical experimental designs have been conducted to determine the optimum conditions for negative bias-enhanced nucleation of diamond. The concentration of CH4 and the effects of pressure and bias voltage on the time for complete coverage of the substrate, film uniformity, and nucleation density were the experimental parameters and the desired results were investigated. Time to complete film formation, uniformity, and nucleation density were all improved with the use of both a negative bias voltage and high CH4 concentrations. Diamond has also been formed on diamond seeds placed on nickel substrates via microwave plasma CVD. The long range nucleation density was low and the formation of clusters of diamond more common. Polycrystalline Si-Ge films have been grown by e-beam deposition on naturally occurring p-type semiconducting diamond C(001) substrates. Room temperature and 300 C 1-5 data show the formation of low-barrier rectifying contacts which exhibit ohmic behavior. Annealing at 850 C under UHV conditions resulted in apparent degradation in the 1-5 characteristics. DTIC

HIGH ENERGY RESOLUTION ARPES MEASUREMENTS OF THE NORMAL AND SUPERCONDUCTING STATES OF Bi2Sr2CaCu2O(8 + DELTA)

D. S. Dessau, D. M. King, and Z. X. Shen (Stanford Univ., CA.) 1993 6 p Presented at the Spring Meeting of the Materials Research Society, San Francisco, CA, 12-16 Apr. 1993
(Contract W-7405-eng-36)
(DE93-018294; LA-UR-93-2693; CONF-930405-34) Avail: CASI HC A02/MF A01

The near-E(sub F) electronic structure and Fermi surface of Bi2212 has been mapped out with ARPES. A key feature of our measured bandstructure is the existence of an extended region of flat CuO22-derived bands at E(sub F). Comparative analysis of this data with that from NdCeCuO and YBCO7 suggests that many of the anomalous (normal) physical properties of Bi2212 and YBCO7 (NdCeCuO) may be related to the existence (absence) of such bands at E(sub F). Superconducting gap anisotropy at least an order of magnitude larger than that of the conventional superconductors has been observed in the a-b plane of Bi2212 in ARPES. For samples with (T(sub c)) of 88 K, the gap size reaches a maximum of approximately 20 MeV along the Cu-O bond direction, and a minimum of much smaller or vanishing magnitude 450 away. The experimental data is discussed within the context of various theoretical models. In particular, a detailed comparison with what is expected from a superconductor with a d(sub x2-y2) order parameter is carried out, yielding a consistent picture. DOE

IN SITU OBSERVATION OF RADIATION INDUCED AMORPHIZATION OF CRYSTALS WITH APATITE STRUCTURE

L. M. Wang (New Mexico Univ., Albuquerque.), R. C. Ewing (New Mexico Univ., Albuquerque.), M. Cameron (National Science Foundation, Washington,

DC.), and W. J. Weber (Pacific Northwest Lab., Richland, WA.) Jun. 1993 6 p Presented at the Spring Meeting of the Materials Research Society, San Francisco, CA, 12-16 Apr. 1993
(Contracts DE-AC06-76ER-01830; DE-FG04-84ER-45099)
(DE93-018450; PNL-SA-22730; CONF-930405-35) Avail: CASI HC A02/MF A01

Temperature dependence of amorphization doses for 1.5 MeV Kr ion-irradiated Ca10(PO4)(sub 6)F2 and Ca2La8(SiO4)(sub 6)O2 were studied with in situ transmission electron microscopy. At low temperatures, Ca10(PO4)(sub 6)F2 became amorphized at lower dose than Ca2La8(SiO4)(sub 6)O2. However, the critical amorphization dose increased much more rapidly for the former above 350 K than the latter. At 475 K, Ca10(PO4)(sub 6)F2 required nearly five times of a higher dose to become amorphous than Ca10La8(SiO4)(sub 6)O2. Based on the dose-temperature curves, activation energies for the crystal structure recovery process were determined to be 0.07 eV for Ca10(PO4)(sub 6)F2 and 0.13 eV for Ca2La8(SiO4)(sub 6)O2 respectively. The lower critical amorphization dose and lower activation energy for recovery of Ca10(PO4)(sub 6)F2 are attributed to the weaker P-O bond and the higher fluorine mobility in the structure. DOE

THIN FILM STUDIES OF THE PROXIMITY JOSEPHSON EFFECT Final Technical Report, 15 Apr. 1991 - 14 Apr. 1993
E. L. Wolf Sep. 1993 11 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(Grant AF-AFOSR-0245-91)
(AD-A270129; AFOSR-93-0742TR) Avail: CASI HC A03

The topics of theoretical and experimental interest in this research have been: The Proximity Induced Josephson Effect (PIJE), an effect occurring at a Normal Metal/Superconductor (N/S) interface which displays many of the features of the Josephson effect, the device potential of which has not been at all explored; the design and construction of a cryogenic scanning tunneling microscope capable of operating in ultra high vacuum. The Proximity Induced Josephson Effect (PIJE) has been observed at a Normal Metal/Superconductor (N/S) interfaces in point contact NS systems, and displays features resembling the Josephson effect. In experiments with Nb and Ta probes contacting MO and UBe13 (normal state) surface, the I(V) exhibit a low resistance segment centered at zero bias current resembling a Josephson current with a small series resistance R*, which has been interpreted as a spreading resistance in the normal state electrode. FUNDAMENTAL PROPERTIES AND DEVICE APPLICATIONS OF Ge(x)Si(1-x)/Si SUPERLATTICES (SUPPLEMENTAL) Technical Report, 1 Sep. 1990 - 28 Feb. 1991
Kang L. Wang Jun. 1993 6 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(Contract N00014-90-J-4141)
(AD-A269212) Avail: CASI HC A02

The objectives of this contract is to expand the work on the current ONR supported research in the study of Ge(x)Si(1-x)/Si superlattice and quantum well structures into the electromagnetic wave generation and detection applications. The control parameters such as the band offsets as well as the strain induced critical thickness limitation will be investigated. The band-gap engineered superlattices and quantum structures will be designed for tunable frequency detector applications and studied for their strain induced electrical characteristics. Devices to be considered for this study are based on the concept of the band-gap engineering. In the case of Si-Ge heterosystem, strain induced tunability adds a new degree of freedom on the structure design. The effect of strain on the critical thickness limitation and the band offset is investigated. Resonant tunneling diodes with several different structures, grown at low temperature, are studied by tunneling spectroscopy. DTIC

TUNNELING MICROSCOPY OF SEMICONDUCTORS Final Report, 1 Jul. 1990 - 30 Jun. 1993
S. K. Theiss 31 Aug. 1993 4 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(Grant AF-AFOSR-0248-90)
(AD-A270232; AFOSR-93-0743TR) Avail: CASI HC A01

This is the final report of research activities on Tunneling Microscopy of Semiconductor Surfaces, accomplished during a 3-year JSEP Graduate Fellowship awarded to Silva K. Theiss for work in the Harvard JSEP Laboratory under the guidance of Prof. J. Golovchenko. The work includes the following: construction of a two-tip tunneling microscope, study of low coverage phases of Pb on Si(111), study of surface diffusion of Pb on Ge(111)-c(2x8), and study of Ge growth on Si(111). NEUTRON-INDUCED COLLISION CASCADE MIXING IN Nb/V SUPERLATTICES
Dale E. Alexander, Eric E. Fullerton, P. M. Baldo, C. H. Sowers, and L. E. Rehn Jul. 1993 11 p Presented at the 15th International Conference on Atomic Collision in Solids, London, Canada, 26-30 Jul. 1993
(Contract W-31-109-eng-38)
(DE93-018575; ANL/MSD/CP-79243; CONF-930712-1) Avail: CASI HC A03/MF A01

High-angle X-ray diffraction was used to determine cascade mixing efficiencies, Dt/dpa, in Nb/V superlattices irradiated to small doses (less than 0.26 dpa). Samples were neutron irradiated in the core of the High Flux Beam Reactor at Brookhaven National Laboratory and ion irradiated with 1.5 MeV Ne. No significant differences were observed in cascade mixing efficiencies between the two types of irradiation. Values of Dt/dpa were observed to vary with the modulation wavelength of the superlattice, with thicker wavelength samples yielding values approaching that determined from ion mixing thick Nb/V bilayers (Dt/dpa approximately 110 sq A/dpa). The decrease in mixing efficiency observed at lower wavelengths may be related to an observed structural transition in which the interfaces of the superlattice become coherent. DOE

SPECIFIC HEAT OF La(1.875-x)Nd(x)Sr(0.125)C(LC UO4: MAGNETIC AND STRUCTURAL TRANSITIONS
D. A. Wright, R. A. Fisher, N. E. Phillips, M. K. Crawford (Du Pont de Nemours, E. I. and Co., Wilmington, DE.), and E. M. McCarron, III (Du Pont de Nemours, E. I. and Co., Wilmington, DE.) May 1993 6 p Presented at the Conference of the International Union of Pure and Applied Physics on Low Temperature Physics (LT 20), Eugene, OR, 1-11 Aug. 1993
(Contract DE-AC03-76SF-00098)
(DE93-016978; LBL-34030; CONF-930801-6) Avail: CASI HC A02/MF A01

Near 70K (La,Ba)2CuO4 undergoes a structural transition from orthorhombic to tetragonal symmetry (LTO (yields) LTT). Partial substitution of La by Nd produces an additional transition that has been observed in structural studies. The specific heats of La(1.475)Nd(0.4)Sr(0.125)CuO4 and La(1.275)Nd(0.6)Sr(0.125)CuO4 samples exhibit anomalies near 75K, which are associated with these structural transitions, and additional smaller anomalies near 30K, which may be associated with a magnetic transition detected by (mu)SR. PRESSURE INDUCED METALLIZATION OF THE MOTT INSULATOR 6(SUB 2)
E. Sterer, M. P. Pasternak (Tel-Aviv Univ., Israel.), and R. D. Taylor 20 Jul. 1993 5 p Presented at the 14th International Conference of the International Association for the Advancement of High Pressure Science and Technology, Colorado Springs, CO, 27 Jun. - 2 Jul. 1993
(Contract W-7405-eng-36)
(DE93-018296; LA-UR-93-2690; CONF-930676-31) Avail: CASI HC A01/MF A01

Using diamond anvil cells, (sup 129)I Moessbauer spectroscopy (MS) and resistivity measurements were carried out in the layered antiferromagnet VI(sub 2) at 0-45 GPa and 4-300 K. MS to 15 GPa revealed an impressive increase in Neel temperature and a slight increase in transferred hyperfine field. Pressure behavior of R(P,T), in particular near the metal-insulator pressure P(sub c)=44 GPa, is described. Being the lightest transition metal (TM) in the isostructural (TM)I(sub 2) series, the V(sup 2+) (d(sup 3) configuration) represents a typical candidate for a pure Mott-Hubbard gap closure. Results are compared with the heavy TM diodides such as NiI(sub 2) and CoI(sub 2), where it is expected that the charge transfer regime prevails. DOE

FABRICATION AND CHARACTERIZATION OF HIGH-T(SUB c) TAPES AND COILS MADE FROM Ag-CLAD Bi-2223 SUPERCONDUCTORS

U. Balachandran, A. N. Iyer, C. A. Youngdahl, L. R. Motowidlo (IGC/Advanced Supercomputers, Inc., Waterbury, CT.), J. G. Hoehn, Jr. (Intermagnetics General Corp., Guilderland, NY.), and P. Haldar (Intermagnetics General Corp., Guilderland, NY.) Jul. 1993 6 p Presented at the 3rd International Conference on Advanced Materials, Tokyo, Japan, 31 Aug. - 4 Sep. 1993 Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(Contract W-31-109-eng-38)
(DE93-018615; ANL/ET/CP-78928; CONF-9308122-1) Avail: CASI HC A02

Prereacted Pb-doped Bi-Sr-Ca-Cu-O powders were packed into Ag tubes, drawn, rolled, and given intermediate heat treatment to prepare long lengths of Ag-clad Bi-2223 superconductor tapes. With the use of improved process conditions, transport critical current density (J(sub c)) values exceeding 10(exp 5) A/sq cm at 4.2 K and 27 K, and greater than 4 x 10(exp 4) A/sq cm at 77 K, were obtained in zero applied field with short tape samples. Detailed microstructural analysis and J(sub c) measurements in applied fields up to 20 T are reported. Rolled tapes were cut into lengths of up to 10 m, and several such tapes were used in parallel to fabricate small superconducting pancake coils by the 'wind-and-react' technique. Recently, we fabricated a test magnet with six pancake coils, each containing three 10-m lengths of rolled tapes and tested at 4.2, 27, and 77 K as a function of applied fields up to 14.5 T. A maximum generated field of 1.25 T was measured in zero applied field at 4.2 T. Detailed measurements made on the pancake coils and test magnets are reported in this paper. DOE

GROWTH OF EPITAXIAL SEMICONDUCTOR ALLOYS AND SUPERLATTICES WITH CONTINUOUSLY VARIABLE COMPOSITION BY PULSED-LASER ABLATION

J. W. McCamy (Tennessee Univ., Knoxville.) and D. H. Lowndes 1993 11 p Presented at the 2nd International Conference on Laser Ablation: Mechanisms and Applications, Knoxville, TN, 19-22 Apr. 1993
(Contract DE-AC05-84OR-21400)
(DE93-018726; CONF-9304144-11) Avail: CASI HC A03/MF A01

We describe a new method to grow epitaxial semiconductor alloys with continuously variable composition, while using a single pulsed laser ablation target of fixed composition. Epitaxial ZnSe(1-x)S(x) films with continuously variable sulfur content 'x' were grown by ablating a ZnSe target through low-pressure ambient H2S gas. The sulfur content was easily controlled by varying the H2S partial pressure. The composition of ZnSe(1-x)S(x) films differs by as much as x = 0.52 from the pure ZnSe target. We have used this method to grow heteroepitaxial structures with either continuously graded or periodically repeating, abrupt compositional changes (compositional superlattices). Structures that simultaneously incorporate both types of compositional modulation also have been grown. This development removes the principal barrier to convenient pulsed-laser ablation (PLA) growth of compositionally graded semiconductor thin-film materials, namely that the film and target normally have the same composition. The method appears to have broad application for PLA growth of other compound semiconductor films and heterostructures, as well as for doping individual layers. DOE

SURFACE PHASES AND THEIR INFLUENCE ON METAL-OXIDE INTERFACES

J. Blakely Jan. 1993 23 p
(Contract DE-FG02-87ER-45328)
(DE93-019931; DOE/ER-45328/7) Avail: CASI HC A03/MF A01

This project is concerned with adsorbed monolayers on metal surfaces and their effects on oxidation kinetics and metal-oxide adhesion; the proposed work is a study of the metallurgy of 2-dimensional systems with emphasis on binary adsorbed layers. Experimental techniques which can be used include electron diffraction, atomic force and tunneling microscopy, environmental SEM, and secondary electron spectroscopies. Our intent is to try to extract information on adsorbate interactions through comparison with model predictions; initially, only simple pair interaction potentials will be used. Atomic steps on single crystal surfaces, which affect the nucleation/growth of overlayers, will be extended to metal oxide systems to form atomic step arrays as preferential sites for surface nucleation of oxides. Adsorbed (or segregated) monolayers at metal/oxide interfaces also affect adhesion and further oxidation. S and O adsorption on Ni and NiFe alloy surfaces were studied and are discussed. DOE

GAMMA SCATTERING IN CONDENSED MATTER WITH HIGH INTENSITY MOESSBAUER RADIATION

1993 5 p
(Contract DE-FG02-85ER-45199)
(DE93-019461; DOE/ER-45199/3) Avail: CASI HC A01/MF A01

The first Moessbauer studies of diffusion in liquid state was carried out using (sup 183)Ta ME sources. Liquids studied included pentadecane, polydimethylsiloxane in benzene, and glycercol. Recoilless fractions and Debye-Waller factors were measured. Because of the results of Schecter, we remeasured the ME for dilute tin in lead; no anomalous cutoff was found in the Debye-Waller factor over 4-300 K, and there was a large broadening in the linewidth for 1.6 at.% (50% at 4.5 K). Advances in ME method are described. DOE

SUPERCONDUCTIVITY AND MAGNETISM IN NIOBIUM DOPED YBa2Cu3O7 RELATED HIGH-(Tc) CERAMICS

M. Bennahmias and H. B. Radousky Feb. 1993 21 p Presented at the Annual Meeting of the Minerals, Metals and Materials Society, Denver, CO, 21-25 Feb. 1993
(Contract W-7405-eng-48)
(DE93-018086; UCRL-JC-111591; CONF-9302103-4) Avail: CASI HC A03/MF A01

Magnetic characterization has been performed on the members of the cuprate-niobate RBa2Cu2NbO8 (R = Pr, Nd, and La) series and R(l.5)Ce(0.5)Sr2Cu2N bO10 (R = Pr, Eu, Nd, and Sm) series. The PrBCNO samples show a signature in the magnetization of a magnetic ordering at 12 K. The PrCSCNO sample is non-superconducting and shows two distinct orderings at 17 and 53 K. No such magnetic phase transition is observed down to 2 K in the Nd and La based RBCNO materials or the Nd, Sm, and Eu based RCSCNO materials. Measurements of the lower critical field curve, dc irreversibility line, and critical current densities are reported for each of the superconducting NdCSCNO, SmCSCNO, and EuCSCNO compounds. DOE

X RAY STUDIES OF MICROSTRUCTURES IN SEMICONDUCTOR AND SUPERCONDUCTING MATERIALS

Y. H. Kao 1993 9 p Limited Reproducibility: More than 20% of this

document may be affected by microfiche quality
(Contract DE-FG02-87ER-45283)
(DE93-040690; DOE/ER-45283/12) Avail: CASI HC A02

A summary of research work performed from Nov. 1, 1986 to Apr. 10, 1993 is presented. Synchrotron x rays were used to probe the short-range-order (SRO) structures in these materials, especially layered semiconductors and high-T(sub c) oxide superconductors. X-ray absorption fine structure spectroscopy, grazing incidence x-ray scattering and fluorescence, and total electron yield as probe for surfaces and interfaces were used. A new soft x-ray detector was developed. DOE

SURFACE MODIFICATION OF SAPPHIRE FOR IR WINDOW APPLICATION
C. J. McHargue and W. B. Snyder, Jr. 1993 9 p Presented at the Annual Meeting of the Society of Photo-Optical Instrumentation Engineers, San Diego, CA, 11-16 Jul. 1993
(Contract DE-AC05-84OR-21400)
(DE93-019168; CONF-930722-22) Avail: CASI HC A02/MF A01

Two surface modification techniques, a super polish (SP) and ion implantation, were evaluated for improving the mechanical performance of sapphire IR window material. Both techniques increased the average strength as measured by 4-point bend tests and were effective in preventing the propagation of surface flaws. Ion implantation improved the reliability at lower stresses more than the SP. Neither process significantly affected the IR transmission. The SP produced a smoother surface as shown by optical scatter measurements. DOE

FABRICATION, PROPERTIES, AND MICROSTRUCTURES OF HIGH (Tc) TAPES AND COILS MADE FROM Ag-CLAD Bi-2223 SUPERCONDUCTOR
U. Balachandran, A. N. Iyer, C. A. Youngdahl, L. R. Motowidlo (IGC/Advanced Supercomputers, Inc., Waterbury, CT.), J. G. Hoehn, and P. Haldar (Intermagnetics General Corp., Waterbury, CT.) Jul. 1993 19 p Presented at the International Cryogenic Engineering and Materials Conference, Albuquerque, NM, 12-16 Jul. 1993
(Contract W-31-109-eng-38)
(DE93-017405; ANL/MCT/CP-78646; CONF-930703-7) Avail: CASI HC A03/MF A01

Bi-2223 precursor powders were prepared via a solid-state reaction using carbonates and oxides of Bi, Pb, Sr, Ca, and Cu. Results indicate that an in-situ reaction between constituent phases with the formation of a transient liquid that is consumed during final heat treatment, is essential to obtain increased density with greater connectivity between the 2223 grains. Relative amounts of the constituent phases were adjusted in the powder by varying the calcination conditions, and the powder was then used to fabricate Ag-clad tapes by a powder-in-tube technique. By improving process conditions, transport critical current density (J(sub c)) values greater than 4 (times) 10(exp 4) A/cm(sup 2) at 77 K and 2 (times) 10(exp 5) A/cm(sup 2) at 4.2 and 27 K have been obtained in short tape samples. Long tapes were cut into lengths upto 10 m long and used in parallel to fabricate small superconducting pancake coils. The coils were characterized at 77, 27 and 4.2 K and results are discussed. DOE

LLE REVIEW Quarterly Report, Jan. - Mar. 1993
D. D. Meyerhofer, ed. 1993 25 p
(Contracts DE-FC03-92SF-19460; DE-FC03-85DP-40200)
(DE93-017618; DOE/DP-40200/251) Avail: CASI HC A03/MF A01

This volume of the LLE Review covers the three-month period January-March 1993. The OMEGA laser facility was decommissioned during this quarter to make room for the OMEGA Upgrade laser facility. The decommissioning is described in this volume. Electron thermal transport in the corona and laser-irradiation uniformity are related issues for direct-drive laser fusion. Thermal transport can affect the laser-irradiation uniformity requirements. The status of Fokker-Planck modeling of electron transport at LLE is reviewed and is followed by a description of a new technique for achieving high laser uniformity using zero-correlation phase masks. The use of fast, optically triggered, superconducting opening switches can, in principle, reduce the peak electrical load requirements of systems like the OMEGA Upgrade. Recent research in this area is described. The last three articles discuss vacuum ultraviolet and x-ray emission from short-pulse, laser-matter interactions. The generation of a high spectral brightness, picosecond K(alpha) source is described. The subsequent articles describe the generation of high-order harmonics of a high-intensity laser system laser system in low- density, laser-atom interactions and the novel gas target used. DOE

STUDIES OF DEEP LEVELS IN HIGH RESISTIVITY SILICON DETECTORS IRRADIATED BY HIGH FLUENCE FAST NEUTRONS USING A THERMALLY STIMULATED CURRENT SPECTROMETER
Z. Li, H. W. Kraner, W. Chen, R. Beuttenmuller, U. Biggeri, M. Bruzzi, E. Borchi, A. Baldini, and P. Spillantini Apr. 1993 13 p Presented at the Nuclear Science Symposium, San Francisco, CA, 2-5 Nov. 1993
(Contract DE-AC02-76CH-00016)
(DE93-016133; BNL-49017; CONF-931107-2) Avail: CASI HC A03/MF A01

Measurements of deep level spectrum of high resistivity silicon detectors irradiated by high fluence fast neutrons (Phi(sub n): 2 x 10(exp 12) n/cm(exp 2)) have been made using a thermally stimulated current (TSC) spectrometer. It has been found that at least nine new defect levels, with peaking temperature of 19K, 27K, 36K, 44K, 49K, 83K, 93K, 105K, and 120K, begin to appear when Phi(sub n) greater or equal to 1 x 10(exp 13) n/cm(exp 2). All peaks have strong dependences on the filling voltage (V(sub fill), forward bias) or injection current especially for high fluence Phi(sub n) greater or equal to 10(exp 13) n/cm(exp 2) situations. The defect concentration, energy level in the band gap, and cross section of each deep level, totaling at least 13, have been studied systematically and possible identifications of the levels have been discussed. EFFECTS OF PRESSURE ON THE ORIENTATIONAL ORDERING AND PHASE TRANSITIONS IN SOLID C(60) AND C(70)
G. A. Samara, L. V. Hansen, B. Morosin, and J. E. Schirber 1993 4 p
Presented at the 14th International Conference of the International Association for the Advancement of High Pressure Science and Technology, Colorado Springs, CO, 27 Jun. - 2 Jul. 1993
(Contract DE-AC04-76DP-00789)
(DE93-018858; SAND-93-0809C; CONF-930676-37) Avail: CASI HC A01/MF A01

The temperature-pressure phase diagrams of solid C(60) and C(70) have been determined and compared. A significant finding is the large influence of interstitial species and of the pressure transmitting medium on the orientational ordering processes. The pressure results reveal different, nearly degenerate configurations in both solids, which are believed to be due to hindered molecular rotations by interstitial species, and possibly different stacking modes in C(70). DOE

OPTICAL FREQUENCY DOUBLING AT ADSORBATES OF SILVER(110) SURFACE Ph.D. Thesis [OPTSICHE FREQUENZVERDOPPLUNG AN ADSORBATEN DER SILBER-(110)-OBERFLAECHE]
Stefan Reiff 1993 163 p In GERMAN
(ETN-93-94837) Avail: CASI HC A08/MF A02

The adsorption of cesium and oxygen on silver (110) surface is investigated, combining second harmonic generation method, diffraction of low energy electrons, and thermodesorption spectrosopy. A macroscopic property so called phi was defined as the difference between the electrochemical potential of electrons in a metallic conductor and the electrostatic potential energy of an electron in vacuum in the neighborhood (a few microns) of the conductor; phi was measured with the Kelvin probe. The real time development of a local cesium induced reconstruction of Ag(110) surface was observed and it is noticed that this phase transformation is activited by an increase of crystal temperature. Oxygen in Ag(110) is shown to produce by adsorption temperatures in the 300 to 500K range an 'added row' reconstruction structure due to a resonance effect. The adsorption of oxygen on cesium coated Ag(110) surface was investigated, in order to obtain the dissociation rate of oxygen molecules with alkali metal atoms. ESA

STUDY OF GaAs SUBSTRATES BY AMBIENT TEMPERATURE PHOTOLUMINESCENCE IMAGERY Ph.D. Thesis [ETUDE DES SUBSTRATS DE GAAS PAR L'IMAGERIE DE PHOTOLUMINESCENCE A TEMPERATURE AMBIANTE]
Fara Rahambinintsoa-Krafft 1992 161 p In FRENCH Original contains color illustrations
(ECL-92-61; ETN-93-94894) Avail: CASI HC A08/MF A02

The purpose of the study was to establish correlations between ambient temperature photoluminescence technique and the Diluted Sirtl like with Light (DSL) chemical etching method. The nature of GaAs structural defects was investigated. The application of photoluminescence imagery, at ambient temperature, to GaAs surface treatment studies is discussed. The results show that, for all the GaAs substrates considered, the correlation between photoluminescence images and DSL method exists. The influence of the Arsenic excess distribution on the carrier's lifetime is demonstrated. It is shown that heat treatments under PH3, in the range of 450 to 500C, decrease the surface recombination velocity. X-ray photoelectron spectroscopy analysis showed that the development of passivation GaP films improves surface properties. ESA

SYNCHROTRON/CRYSTAL SAMPLE PREPARATION Final Report, 24 Sep. 1992 - 23 Mar. 1993
R. Barry Johnson Jul. 1993 4 p
(Contract NAS8-38609)
(NASA-CR-193837; NAS 1.26:193837) Avail: CASI HC A01/MF A01

The Center for Applied Optics (CAO) of the University of Alabama in Huntsville (UAH) prepared this final report entitled 'Synchrotron/Crystal Sample Preparation' in completion of contract NAS8-38609, Delivery Order No. 53. Hughes Danbury Optical Systems (HDOS) is manufacturing the Advanced X-ray Astrophysics Facility (AXAF) mirrors. These thin-walled, grazing incidence, Wolter Type-1 mirrors, varying in diameter from 1.2 to 0.68 meters, must be ground and polished using state-of-the-art techniques in order to prevent undue stress due to damage or the presence of crystals and inclusions. The effect of crystals on the polishing and grinding process must also be understood. This involves coating special samples of Zerodur and measuring the reflectivity of the coatings in a synchrotron system. In order to gain the understanding needed on the effect of the Zerodur crystals by the grinding and polishing process, UAH prepared glass samples by cutting, grinding, etching, and polishing as required to meet specifications for witness bars for synchrotron measurements and for investigations of crystals embedded in Zerodur. UAH then characterized these samples for subsurface damage and surface roughness and figure. Author (revised)

AN AB INITIO MONTE CARLO STUDY OF LOW ENERGY POSITRON AND ELECTRON IMPLANTATION IN ELEMENTAL METALS AND MULTILAYERS
V. J. Ghosh, M. McKeown, D. O. Welch, and K. G. Lynn 1993 7 p
Presented at the 15th International Conference on Atomic Collision in Solids, London, Canada, 26-30 Jul. 1993
(Contract DE-AC02-76CH-00016)
(DE93-019847; BNL-48823; CONF-930712-4) Avail: CASI HC A02/MF A01

A Monte Carlo code developed at Brookhaven to study positron and electron implantation in solids will be discussed. This code models the trajectories of a large number of positrons or electrons as they move through the material and uses this information to calculate stopping profiles, backscattered fractions, and transmitted fractions. The particle-atom interactions are incorporated via elastic and inelastic scattering cross-sections. The incident particle energies vary from 1 to 10 keV and the simulation stops when the particle energy goes down to 25 eV or if the particle is backscattered. The results of our Monte Carlo simulations of the mean implantation depth and implantation profiles for both semi-infinite metallic elements and multilayers will be discussed. DOE

THE ELECTROMECHANICAL PROPERTIES OF TETRAGONAL BaTiO3 AND PbTiO3 SINGLE CRYSTALS
Z. Li, C. M. Foster, M. Grimsditch, and S. K. Chan Jul. 1993 7 p
Presented at the 8th International Meeting on Ferroelectricity, Gaithersburg, MD, 8-13 Aug. 1993
(Contract W-31-109-eng-38)
(DE93-019008; ANL/MSD/CP-78507; CONF-930852-2) Avail: CASI HC A02/MF A01

The velocities of propagation for longitudinal and transverse sound waves in various directions have been measured by Brillouin scattering on high-quality mono-domain single crystals of BaTiO3 and PbTiO3. Using these velocities and also the dielectric permittivities measured by the impedance method and by Raman spectroscopy, a complete set of elastic stiffness moduli C(sub ijkl), piezoelectric constants e(sub rij), and dielectric permittivity epsilon(sub ij) has been determined at ambient temperature. Dependence of these electromechanical properties on orientation and frequency is presented for both materials and the physical implications will be discussed. DOE

Work continued on synthesis of borates A6MM'(BO3)6, where A = Sr or Ba, M = lanthanide, Y, Sc, In, or Ca, and M' = heavier lanthanide, Sc, Cr, Mn, Fe, Co, In, Ga, Al, Ru, Rh, Ti, Zr, Hf, or Sn. Their structures are discussed, in particular Sr6HoSc(BO3)6. Other new borates and gallates are being studied. In the fluoride program, single crystals were grown of RbY2ScF10; samples codoped with Cr and Nd ions show only Nd fluorescence when excited by Ar laser. Structures of the laser materials LiCaGaF6, LiSrAlF6, and Sr2ScF7, and fluorescence of the Cr-doped form of the last fluoride were determined. Finally, work on frequency converters include the following: Optical nonlinearities of new borates were calculated. New borates containing Be are being synthesized: SrBe2(BO3)2, BaCuB2O5. Structures of Rb2 Na(NO3)3, RbNO3, and other nitrates will be used to determine the nitrate group's hyperpolarizability coefficient. Work on organic frequency converters covered L-arginine derivatives, lactones, etc. DOE

CROSSOVER FROM BCS TO BOSE SUPERCONDUCTIVITY: A FUNCTIONAL INTEGRAL APPROACH
M. Randeria, C. A. R. SadeMelo, and J. R. Engelbrecht (Illinois Univ., Urbana.) Apr. 1993 3 p Presented at the Conference of the International Union of Pure and Applied Physics on Low Temperature Physics (LT 20), Eugene, OR, 1-11 Aug. 1993
(Contract W-31-109-eng-38)
(DE93-019503; ANL/MSD/CP-79538; CONF-930801-8) Avail: CASI HC A01/MF A01

We use a functional integral formulation to study the crossover from cooperative Cooper pairing to the formation and condensation of tightly bound pairs in a 3D continuum model of fermions with attractive interactions. The inadequacy of a saddle point approximation with increasing coupling is pointed out, and the importance of temporal (quantum) fluctuations for normal state properties at intermediate and strong coupling is emphasized. In addition to recovering the Nozieres-Schmitt-Pink interpolation scheme for T(sub c), and the Leggett variational results for T = 0, we also present results for evolution of the time-dependent Ginzburg-Landau equation and collective mode spectrum as a function of the coupling. DOE

PICOINDENTATION HARDNESS MEASUREMENTS USING ATOMIC FORCE MICROSCOPY
Bharat Bhushan and Vilas N. Koinkar 10 Oct. 1993 11 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(Contract N00014-93-1-0067)
(AD-A270877) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

An atomic force microscope (AFM), with a specially prepared diamond tip, has been modified to measure indentation hardness with an indentation depth as low as 1 nm. This indentation depth is much smaller than the depth of more than 20 nm that have been reported to date. The AFM indentation technique allows the hardness measurements of surface monolayers and ultrathin films in multilayered structures at very shallow depths and low loads. The picoindentation hardness of single crystal silicon are measured using this technique. A subtraction technique is also described which allows the actual hardness measurements of rough surfaces such as magnetic thin film rigid disks. DTIC

IONIZED-CLUSTER BEAM/PARTIALLY IONIZED BEAM DEPOSITION OF ELECTRO-OPTICAL AND NONLINEAR OPTICAL ORGANIC MATERIALS AND DEVICE DEVELOPMENT Final Report, 1 Apr. 1990 - 15 Jul. 1993
Toh-Ming Lu, J. F. McDonald, N. Vlannes, and G. E. Wnek 29 Aug. 1993 21 p
(Contract DAAL03-90-G-0082)
(AD-A270832; ARO-27605.2-MS) Avail: CASI HC A03/MF A01

Our multidisciplinary research efforts over the last few years have been focused on the preparation and characterization of high quality, thermally stable thin film that exhibit high nonlinear optical properties using vacuum vapor deposition and in-situ poling (ionized cluster beam/partially ionized beam (PIB) deposition) techniques. The project's primary accomplishments are the vapor deposition of oriented organic thin films and polymer-chromophore complexes, and the development of novel nonlinear optical materials systems, such as side-chain polymers and particle-polymer complexes. Highlights of the research are as follows: (1) Organic crystals called DAST with the highest known nonlinearity have been grown and characterized; (2) PIB deposited highly transparent MNA films on FM substrates demonstrate a large second harmonic generation (SHG) signal; (3) Vapor deposited chromophore-polymer composite thin films show large EO effect (several pm/V); (4) Seven synthetic diol and triol chromophores developed have been copolymerized into polyurethane cross-linked EO polymer; (5) Vapor deposited polyurethane based side-chain polymeric thin films demonstrate large EO effects with r33 = 5.6 pm/V; (6) Spin-coated BaTiO3/PMMA composite thin films show large electrooptical effect; (7) Two novel techniques, electrooptical characterization and subpicosecond optical rectification, have been implemented. SUPPRESSED ELECTRON-PHONON SCATTERING IN SUPERLATTICES Final Report
Y.-P. Chen, A. Clark, L. F. Eastman, T. LeTran, and P. Mandeville 23 Aug. 1993 85 p
(Contract DAAL03-90-G-0083)
(AD-A270834; ARO-26755.5-EL) Avail: CASI HC A05/MF A01

This report covers a three-year study of scattering of electrons by phonons in superlattices. The usual bulk polar optical phonons were confined to the quantum wells by the abrupt interfaces with the barriers. In short period superlattices this in turn would be expected to lower the rate of scattering of electrons by these phonons. This study showed that the room temperature mobility was reduced, rather than enhanced as expected from the phonon confinement. Interface phonon scattering was studied to show that it was the cause of the reduced mobility at room temperature. At lower temperatures, such as 77K and lower, the electron mobility measured was higher in the short period superlattice case when the barriers seen by the electrons were A1As. In order to avoid the interface phonon scattering, a graded composition quantum well was used. Devices made from such structures had improved electron mobility, breakdown voltage, and gate leakage. NONLINEAR DYNAMICS AND INSTABILITIES IN FERROMAGNETIC RESONANCE EXPERIMENTS: EXAMINATIONS OF SPHERES FROM YTTRIUM IRON GARNET IN COINCIDENCE AREA OF THE FIRST SUHL INSTABILITIES Ph.D. Thesis [NICHTLINEARE DYNAMIK UND INSTABILITAETEN IN FERROMAGNETISCHEN RESONANZEXPERIMENTEN. UNTERSUCHUNGEN AN KUGELN AUS YTTRIUM-EISENGRANAT IM KOINZIDENZBEREICH DER ERSTEN SUHL-INSTABILITAET]
Garrelt Wiese 1991 108 p In GERMAN Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(ETN-93-95072) Avail: CASI HC A06

Mechanisms of temperature induced nonlinearities, observed in yttrium iron garnet behavior, such as autooscillations and strong multistability, are explained. Samples were excited by centimeter microwaves, using a spectrometer with a microspool in order to avoid interactions between the resonator and the samples. Measurements were carried out with four different orientations of the sample, relative to the static field; a model for describing the parametrical excitation, using spherical eigenmodes of the sphere instead of spin wave approximation was developed: the modes were classified through a spin quantum number, an effective wave vector and an angle. Nonlinear couplings between the parametrically excited modes were considered, so that the role of indirect resonant excitation of the logwave magnetostatic mode is highlighted. ESA

THE DEPOSITION OF ELECTRO-OPTIC FILMS ON SEMICONDUCTORS Interim Report, 1 Jan. 1992 - 30 Apr. 1993
Angus I. Kingon, Orlando H. Auciello, and Klaus J. Bachmann 8 Oct. 1993 42 p
(Contract N00014-91-J-1307)
(AD-A270823) Avail: CASI HC A03/MF A01

High quality potassium niobate thin films have been grown on magnesium oxide, spinel, potassium tantalate, and sapphire by Ion Beam Sputter Deposition. The effects of substrate preparation, process conditions, and film stoichiometry are being correlated with optical properties. The factors contributing to optical losses is the present focus of our research since low losses are an essential criteria for building device structures. Electro-optic properties of KNbO3 films on MgO are found to be similar to bulk, although the scattering losses are very high for these films. In comparison KNbO3 films grown on KTaO3 exhibit low losses of less than 8 dB, while losses for films on spinel showed to be in between those two. The variety of substrates provide us with differences in lattice mismatch, refractive index mismatch, surface morphologies, and microstructure, all of which influence loss characteristics. DTIC

ATOMIC-SCALE FRICTION AND MICROFRICTION OF GRAPHITE AND DIAMOND USING FRICTION FORCE MICROSCOPY
Ju-Ai Ruan and Bharat Bhushan 7 Oct. 1993 39 p
(Contract N00014-93-1-0067)
(AD-A270952) Avail: CASI HC A03/MF A01

Friction of graphite and diamond surfaces against a sharp silicon nitride tip was measured using a friction force microscope (FFM). Atomic-scale friction of a freshly cleaved highly oriented pyrolytic graphite (HOPG) exhibited the same periodicity as that of corresponding topography. However, the peaks in friction and those in corresponding topography profiles were displaced relative to each other. Using Fourier expansion of the interaction potential, the interatomic forces between the FFM tip and graphite surface were calculated. It was shown that the variations in atomic-scale friction and the observed displacement between the peaks in friction and those in corresponding topography can be explained by the variations in interatomic forces in the normal and lateral directions. At large scan sizes (50 nm x 50 nm or larger), the variation of friction for graphite and a single-crystal (IIa) diamond was found to follow the local slope of the sample surface, suggesting that a ratchet mechanism is operative in microscale friction. ISOLATION MECHANISMS IN III-V DEVICES Final Report, 15 May 1989 - 15 Nov. 1992
George N. Maracas 17 Aug. 1993 10 p
(Contract DAAL03-89-K-0038)
(AD-A271197; ARO-26686.18-EL) Avail: CASI HC A02/MF A01

This is the final technical report for ARO contract DAAL03-89-K-0038. In the report we describe our progress in the areas of III-V electronic device isolation and how they apply to the phenomena of sidegating and backgating in GaAs based devices. The program evolved into a highly collaborative effort between industry and university with several joint publications resulting. The sidegating/backgating problem in field effect transistors (FET's) has essentially been eliminated by the development of GaAs and other compounds grown at low temperatures by MBE. Research included the developing techniques for synthesis of MBE material at low temperatures (LT), establishment of electrical and optical characterization techniques specifically designed for the study of such materials and the effect of electrical buffer layers made from the LT material on devices. We have made advances in several areas including first realizations of LT GaAs by GSMBE, first realization of LT InP, observation of variable range hopping conductivity in various LT III-V materials, determination of device degradation effects of LT buffer layers and thermal stability of these materials. Additionally we (with MOTOROLA) obtained an enhancement of mobility in two dimensional electron gas structures by separately confining electrons and phonons. DTIC

NUMERICAL MODELLING OF CRYSTAL GROWTH Final Report, Apr. 1990 - 31 Mar. 1993
John Strain 30 Sep. 1992 4 p
(Grant AF-AFOSR-0165-91)
(AD-A271206; AFOSR-93-0786TR) Avail: CASI HC A01/MF A01

A code which solves the two-dimensional Euler equations for inviscid incompressible fluid flow was developed. It is based on (1) adaptive triangulation of initial data, (2) fast summation of the velocity field induced by a piecewise linear vorticity distribution, and (3) Delaunay triangulation of the vortices at each step. The Euler equations were chosen as a model problem for crystal growth because they share the numerical structure of moving points without the added difficulties of finding curvature and normal; instead, the velocity field is simply found from the Biot-Savart law. The code was tested on multiple rotating patches of constant and smooth vorticity. It is second-order in space and fourth-order in time, even on piecewise constant solutions. The errors are much smaller that standard blob-based vortex methods with the same number of degrees of freedom. DTIC

Uranium, along with other actinides and lanthanides, forms a large group of ternary intermetallic compounds of stoichiometry UTX (T = transition metal, X = p-electron metal). These compounds are formed in several structure types and the occurrence and stability of particular structures with respect to the transition metal content suggests reasonable systematics. The authors have also investigated the magnetic structures of selected UTX compounds and it is revealing to relate the crystallographic and magnetic structures, because of the relationship between the magnetic symmetry and that of the U-atom environment produced by the 5f-ligand hybridization, and the consequent anisotropic exchange. Those of ZrNiAl structure type are collinear, with moments along the hexagonal c-axis. In the orthorhombic NiSiTi structure type, the moments are confined to the b-c plane (perpendicular to the uranium chains) and the structures are often incommensurate. In the hexagonal CaIn2 (or GaGeLi) structure type, the magnetic structures form in an orthorhombic cell, and at least in the disordered centric group, again the moments lie perpendicular to the nearest-neighbor uranium spacing. This work presents a phenomenology of trends in UTX ternary compounds. It is shown that there is an apparent strong hybridization parallel to nearest neighbor U-U directions, with ferromagnetic coupling in the same directions. There may be a systematic relationship between the hybridization anisotropy and the magnetic anisotropy, in which the quantization axes are the same and the moments point along directions of relatively weak hybridization. DOE

SINGLE SOURCE PRECURSORS FOR THE OMCVD OF 3/5 COMPOUND SEMICONDUCTORS Final Report, 1 Jan. - 31 May 1993
Richard A. Jones and John G. Ekerdt 31 Jul. 1993 10 p
(Contract DAAL03-89-K-0164)
(AD-A271147; ARO-26748.31-CH) Avail: CASI HC A02/MF A01

The overall goals are to develop the fundamental chemistry of group III and group V compounds in several key areas. The underlying rationale is to ultimately improve on the preparation and properties of important materials used in the semiconductor industries. The research comprises a collaboration between a synthetic inorganic chemist and a chemical engineer. The three main areas are single source precursors for OMCVD of III/V semiconductors; alternative precursors for OMCVD studies, group III or V hydrides; and the organometallic chemistry of bismuth. The first area will employ compounds of the general type (R2M(mu-R'2E))2 (M = Al, Ga, In; E = P, As; R, R' = alkyl, aryl, etc.) and the second will employ similar compounds but with R or R' replaced by the hydride ligand. The paper explores the relationships between precursor structures, mechanisms of decomposition and thin film formation, and the morphological and electrical properties of the grown films. In the third area the document explores the organometallic chemistry of bismuth and compounds which may serve as precursors to important materials such as InBiSb. DTIC

THEORETICAL AND EXPERIMENTAL STUDIES OF QUANTUM WELLS Final Report, 15 Mar. 1990 - 15 Jul. 1993
Raphael Tsu 15 Sep. 1993 12 p
(Contract DAAL03-90-G-0067)
(AD-A271180; ARO-27443.5-EL) Avail: CASI HC A03/MF A01

As the dimension of devices continues to shrink below the mean free path of the electrons, the physics is dominated by the wave nature of the electrons. The transport through a cluster of nanoscale Si-particles in a diode configuration shows discrete steps and peaks in conductance vs voltage at room temperature, attributed to the formation Coulomb blockade, results of Pauli's exclusion principle for the occupation of quantum states in these dots. The extrinsic conduction in these nanoparticles generally disappears due to a significant increase of the binding energy of donors and acceptors because of the decrease of the dielectric screening and the attractive interaction of the quantized electrons with their images at the interface. The disappearance of the extrinsic conduction constitutes a self-limiting factor in the electrochemical etching of porous silicon. DTIC

MOCVD-GROWN InGaAsP HETEROSTRUCTURE DIODE LASERS
M. Razeghi Aug. 1993 19 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(Contract DAAH04-93-G-0044)
(AD-A270848; ARO-31108.1-PH) Avail: CASI HC A03

InGaAsP/InGaP/GaAs compound has been recently proposed to replace AlGaAs/GaAs as advantageous material for high-power laser applications. In this work, we report successful fabrication and study of broad-area double-heterostructure InGaAsP/InGaP laser diodes reproducibly grown by MOCVD. The diodes demonstrated near-100% efficiency of spontaneous radiative recombination in the active region. Threshold current densities of 700 A/sq cm obtained for 900 micron-long cavities were close to the theoretically predicted low limit and lower than respective values experimentally obtained for similar AlGaAs/GaAs diodes. Narrow far-field distribution with FWHM of 28 deg in the direction transverse to p-n junction plane may be of practical interest. Saturation of spontaneous emission above the threshold as well as a flat near field pattern confirm the uniformity of lasing intensity across a 100 micron-wide stripe and the homogeneity of the structures studied. Relatively high internal losses of approximately 40/cm and low differential quantum efficiency of 25% were shown to be inherent for this laser structure design and should be overcome by a combination of the advantages of separate-confinement heterostructures with this laser-quality material. PRESSURE AND TEMPERATURE EFFECTS ON THE KINETICS AND QUALITY OF DIAMOND FILMS
Stephen J. Harris and Anita M. Weiner 27 Sep. 1993 36 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(AD-A270876) Avail: CASI HC A03

The first measurements of the effects of pressure on the kinetics and quality of diamond films grown with hot filament chemical vapor deposition are reported. Pressure affects growth kinetics largely because it affects heat transfer between the filament and the substrate and because it affects transport of precursors to the growing surface. H and CH3 concentrations at the growth surfaces are determined with our recombination enthalpy technique combined with appropriate transport analyses. The growth rate rises and then falls with increasing pressure, although there is a saturation in the concentration of CH3 and atomic H at the surface. The fall in-growth rate at higher pressure is explained with our chemical kinetics model as due to an increase in substrate temperature at higher pressures. Since the rate of thermal desorption of the CH3 precursor increases more rapidly with temperature than the competing rate of its incorporation, and since these two rates are comparable, higher substrate temperatures lower incorporation rates, and the growth rate decreases. GAUGE COUPLING UNIFICATION IN SUPERSTRING DERIVED STANDARD-LIKE MODELS
A. E. Faraggi Nov. 1992 14 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(DE93-624801; WIS-PH-92-17) Avail: Issuing Activity (Department of Energy (DOE)) (US Sales Only)

I discuss gauge coupling unification in a class of superstring standard-like models, which are derived in the free fermionic formulation. Recent calculations indicate that the superstring unification scale is at O(10(sup 18)GeV) while the minimal supersymmetric standard model is consistent with LEP data if the unification scale is at O(10(sup 16))GeV. A generic feature of the superstring standard-like models is the appearance of extra color triplets (D,bar-D) , and electroweak doublets (l,bar-l), in vector-like representations, beyond the supersymmetric standard model. I show that the gauge coupling unification at O(10(sup 18)GeV) in the superstring standard-like models can be consistent with LEP data. I present an explicit standard-like model that can realize superstring gauge coupling unification.

CABIBBO MIXING IN SUPERSTRING DERIVED STANDARD-LIKE MODELS
A. E. Faraggi and E. Halyo Jan. 1993 17 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(DE93-624814; WIS-PH-93-3) Avail: Issuing Activity (Department of Energy (DOE)) (US Sales Only)

We examine the problem of generation mixing in realistic superstring derived standard-like models, constructed in the free fermionic formulation. We study the possible sources of family mixing in these models. In a specific model we estimate the Cabibbo angle. We argue that a Cabibbo angle of the correct order of magnitude can be obtained in these models.

THERMODYNAMIC THEORY OF EXERGY ANALYSIS
M. J. Lampinen and M. A. Heikkinen 1993 40 p
(PB93-187847) Avail: CASI HC A03/MF A01

A comprehensive general theory of exergy analysis with several new results is presented. A stationary flow system and its exergy is studied in three cases: there is only one heat input to the system, there are several heat inputs to the system, and also several heat outputs from the system to the surroundings at different temperatures. A relevant reference temperature of the surroundings is derived for each case. The results are applied to mechanical multi-circuit heat pump cycles and to an absorption heat pump. NTIS

ISING MODEL ON TANGLED CHAIN. PART 2: MAGNETIZATION AND SUSCEPTIBILITY
R. Mejdani May 1993 22 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(DE93-628794; IC-93/90) Avail: CASI HC A03 (US Sales Only)

In the preceding paper we have considered an Ising model defined on tangled chain to study the behavior of the free energy and entropy, particularly in the zero-field and zero-temperature limit. In this paper, following the main line and based on some results of the previous work, we shall study in the 'language' of state configurations the behavior of the magnetization and the susceptibility for different conditions of the model, to understand better the competition between the ferromagnetic bonds along the chain and the antiferromagnetic additional bonds across the chain. Particularly interesting is the behavior of the susceptibility in the zero-field and zero-temperature limit. Exact solutions for the magnetization and susceptibility, generated by analytical calculations and iterative algorithms, are described. The additional bonds, introduced as a form of perfectly disorder, indicate a particular effect on the spin correlation. We found that the condition J=-J' between the ferromagnetic interaction J along the chain and the antiferromagnetic interaction J' across the chain is somewhat as a 'transition-region' condition for this behavior. STRUCTURE, THERMODYNAMICS, AND DYNAMICAL PROPERTIES OF SUPERCOOLED LIQUIDS
Shaw Kambayashi Dec. 1992 135 p
(DE93-788387; JAERI-M-92-181) Avail: CASI HC A07/MF A02

The equilibrium properties of supercooled liquids with repulsive soft-sphere potentials, u(r) = (epsilon)(sigma/r)(sup n), have been obtained by solving the integral equation of the theory of liquids and by performing constant-temperature molecular dynamics (MD) simulations. A thermodynamically consistent approximation, proposed recently by Rogers and Young (RY), has been examined for the supercooled soft-sphere fluids. Then, a new approximation for the integral equation, called MHNCS (modified hypernetted-chain integral equation for highly supercooled soft-sphere fluids) approximation, is proposed. The solution of the MHNCS integral equation for highly supercooled liquid states agrees well with the results of computer simulations. The MHNCS integral equation has also been applied for binary soft-sphere mixtures. Dynamical properties of soft-sphere fluids have been investigated by molecular dynamics (MD) simulations. The reduced diffusion constant is found to be insensitive to the choice of the softness of the potential. On the other hand, the spectrum of the velocity autocorrelation function shows a pronounced dependence on the softness of the potential. These significant dynamical properties dependent on the softness parameter (n) are consistent to dynamical behavior observed in liquid alkali metals and liquefied inert gases. The self-part of the density-density autocorrelation function obtained shows a clear nonexponential decay in intermediate time, as the liquid-glass transition is approached. DOE

NON LINEAR DYNAMICS AND CHAOS [LA DYNAMIQUE NON-LINEAIRE ET LE CHAOS]
Jun. 1993 191 p Lecture series held in Stanford, CA and Sophia Antipolis, France, Jun. 1993
(AGARD-LS-191; ISBN-92-835-0714-2) Copyright Avail: CASI HC A09/MF A02

Many efforts were oriented towards the understanding of the unexpected behavior of systems - linear or non-linear. These could be large (weather systems, biological life) or small (automatic pilot). A new branch of dynamics is now considered; it is called 'chaos'. Some general theories emerged and reconsideration of concepts of non-linear control to determine the stability of such systems is now intensively studied in the scientific community. The following topics are covered: linear (including time varying coefficients equations) vs non-linear systems; types of non-linearity; curved characteristics, jumps, bifurcation; nonlinear dynamics; sensibility to initial conditions and/or uncertainties on the system parameters; robustness; neuronal-type machines; chaos - random process behavior; reversibility; irreversibility; Newtonian mechanics and thermodynamics; fractals; and applications. For individual titles, see N94-18237 through N94-18241.

This communication is the first part of the three papers which are presented by the author in the same AGARD Lecture Series (LS 191). It aims at the study of asymptotic solutions of non-linear differential equations depending on parameters. The first part is devoted to a brief presentation of the basis of Bifurcation Theory which is limited to the non-linear phenomena observed by the author when he analyzed high performance aircraft behavior. In particular, complex bifurcations and chaotic motions are not treated. Numerical procedures developed to use results from Bifurcation Theory are presented. Then, some remarks are stated to establish a connection between asymptotic and quasi-stationary behavior. Finally, a methodology dedicated to the analysis of non-linear systems is proposed. Author (revised)

This communication follows a previous communication which was presented in the same Agard Lecture Series (LS 191). In the previous communication, some theoretical foundations of Bifurcation Theory were recalled and a methodology aiming at a systematic prediction of the behavior of non-linear differential equations was presented. This communication mentions some problems which are connected with the introduction of control laws in order to stabilize an unstable dynamic system and presents a brief state of the art related to the determination of the attracting region of a stable equilibrium point. In Flight Dynamics, aircraft motion is described by a set of non-linear differential equations, depending on parameters, associating the state vector (angle of attack, sideslip angle, speed, angular rates, etc.) with the control vector (motivators, etc.) through flight dynamics equations, aerodynamic model, and flight control system. Some works which aim at improving the knowledge and the prediction of aircraft behavior, in particular flight phases for which classical linearized analysis of non-linear differential equations is insufficient or not valid, are presented. INTRODUCTION TO QUANTITATIVE FEEDBACK THEORY (QFT) TECHNIQUE c63
Constantine H. Houpis *In* AGARD, Non Linear Dynamics and Chaos Jun. 1993 20 p (For primary document see N94-18236 04-77)
Copyright Avail: CASI HC A03/MF A02

Quantitative Feedback Theory (QFT) has achieved the status as a powerful design technique for the achievement of assigned performance tolerances over specified ranges of plant parameter uncertainties without and with control effector failures. It is a frequency domain design technique utilizing the Nichols chart (NC) to achieve a desired robust design over the specified region of plant parameter uncertainty. An introduction to QFT analog and discrete design techniques is presented for both multiple-input single-output (MISO) and multiple-input multiple-output (MIMO) control systems. QFT computer aided design (CAD) packages are readily available to expedite the design process. The purposes of these lectures are: (1) to provide a basic understanding of QFT, (2) to provide the minimum amount of mathematics necessary to achieve this understanding, (3) to discuss the basic design steps, and (4) to present two practical examples. ABOUT SYMMETRY OF THE GRAVITATIONAL ACTION
M. N. Tentyukov 1991 8 p Submitted for publication Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(DE93-629955; JINR-E-2-91-580) Avail: CASI HC A02 (US Sales Only)

The Einstein equations are investigated by imbedding of the metric tensor to the affinely connected space. It is shown that if using of the Einstein equations, then, despite the action functional invariance being violated with respect to the diffeomorphism group by the background object, a new infinite-parameter invariance appears, i.e., the action invariance can be extended from the group of motions of the background object to any infinite-parameter group. THE RISE OF ACCURACY FOR THE MULTICHANNEL SCATTERING PROBLEM SOLVING [POVYSHENIE TOCHNOSTI RESHENIYA MNOGOKANAL'NOJ ZADACHI RASSEYANIYA]
S. I. Vinitskij, I. V. Puzynin, and Yu. S. Smirnov 1992 28 p In RUSSIAN Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(DE93-630145; JINR-R-11-92-126) Avail: CASI HC A03 (US Sales Only)

The Newton's iterative algorithm for solving the multichannel scattering problem for a system of the Schroedinger radial equations is presented. A discrete approximation of the problem is based on the finite-difference scheme of the n-th order accuracy with respect to a characteristic step h of the quasi-uniform mesh Omega(sub h). The calculations of the wave functions, phase shifts, and cross sections of elastic and inelastic collisions of mesic atoms (d(mu))(sub 1s) and (p(mu))(sub 1s) with nuclei t and p were fulfilled in framework of simple approach of two-level adiabatic approximation for the collision energy values 0.001 eV - 50 eV. As compared with other works more accurate results for the characteristics of the scattering processes (d(mu))(sub 1s)+t and (t(mu))(sub 1s)+d near thresholds in the region 0.001 eV less than or equal to E less than or equal to 0.3 eV were obtained. A correct monotonic behaviour of the partial reaction matrix K(sup 1) elements was achieved for this region of the energy and for values of the total orbital momentum 1 = 0, 1, 2, and 3. DOE

PHASE STRUCTURE OF (PHI(4))(SUB 3) FIELD THEORY AT FINITE TEMPERATURE
G. V. Efimov and S. N. Nedelko (Tomsk State Univ., USSR.) 1992 23 p Submitted for publication Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(DE93-629907; JINR-E-2-92-287) Avail: CASI HC A03 (US Sales Only)

Phase structure of phi(sup 4) field theory in the space-time R(sup 3) is investigated at arbitrary coupling constant and temperature. The critical values of the coupling constant and temperature, corresponding to the phase transitions in the system, are calculated by the canonical transformation method within formalism of thermo field dynamics. The Hamiltonians describing the system in each phase are obtained straightforwardly. Comparison with the two-dimensional case shows a crucial influence of higher order renormalization on the phase structure of the model. DOE

ON THE MICHELSON-MORLEY EXPERIMENT [OB OPYTE MAJKEL'SONA-MORLI]
V. N. Streltsov 1991 16 p In RUSSIAN Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(DE93-629908; JINR-R-2-91-569) Avail: CASI HC A03 (US Sales Only)

The opinion about the important role of the Michelson-Morley experiment in the establishment of the principle of the constancy of the light velocity is expressed. It is noted that Fitzgerald-Lorentz contraction introduced for the explanation of its negative result contradicts the Galilei transformations (and consequently, to ether theory). The theorem is proved that if a length of a moving rod is given by the instantaneous length, the propagation velocity of light along the rod is an inconstant quantity. It is stressed that the using of the radar length for the treatment of Michelson-Morley experiment leads to elongation formula for a longitudinal arm of the interferometer. DOE

TECHNIQUES FOR THE ESTIMATION OF HEATS OF EXPLOSION (HEX) USING THERMOCHEMICAL CODES Final Report, Sep. 1990 - May 1992
Robert A. Fifer and Jeffrey B. Morris Sep. 1993 48 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(DA Proj. 1L1-61102-AN-43)
(AD-A268584; ARL-TR-195) Avail: CASI HC A03

Procedures are outlined for calculating the heats of explosion (HEX) of neat energetic materials or propellant/explosive formulations using thermochemical codes. The 'exact' method and three approximate techniques are described; the approximate techniques either eliminate the need to sum the internal energies of the predicted products, or eliminate the need to specify a freeze-out temperature. The various techniques are illustrated for HMX and a nitrocellulose/nitroglycerine (NC/NG) mixture. DTIC

SPACE AND TIME FROM QUANTUM MECHANICS
G. F. Chew 16 Sep. 1992 7 p
(Contract DE-AC03-76SF-00098)
(DE93-015263; LBL-32852) Avail: CASI HC A02/MF A01

Classical mechanics historically preceded quantum mechanics and thus far has not been displaced from primary status; the path to construction of quantum theory has remained rooted in classical ideas about objective reality within space and time. Use of a less correct theory as underpinning for a more correct theory not only is unaesthetic but has spawned the perplexing and never-resolved puzzle of measurement. A growing number of physicist-philosophers torture themselves these days over the collapse of the quantum-mechanical state vector when measurement is performed. Additionally, the pointlike structure of the spacetime manifold underlying local classical fields has endowed quantum theory with mathematical dilemmas. It has been proposed by Gell-Mann and Hartle that objectively-realistic ideas such as measurement may lack a priori status, the predominantly classical present universe having evolved as a relic of the big bang. Other authors have suggested that spacetime itself need not be a priori but may stem from quantum mechanics. Haag has written recently that spacetime without (quantum) events is probably a meaningless concept. Henry Stapp and I have for several years been exploring a simple quantum system devoid of classical underpinning, even spacetime, but admitting within the Hilbert space a special Lie-group-related category of vector known as a coherent state. Groups unitarily representable in our Hilbert space include the Poincare group, which relates to 3 + 1 spacetime. Coherent states generally are labeled by parameters associated with unitary group representations, and it has long been recognized that when such parameters become large a classical objective interpretation may result. Stapp and I have been attempting to understand space and time via large coherent-state parameters. Six years ago I presented to this gathering a preliminary report on our enterprise; in this paper I provide an update. DOE

THERMODYNAMIC q-DISTRIBUTIONS THAT AREN'T
S. Vokos and C. Zachos 1993 7 p Presented at the 2nd Prague Colloquium on Quantum Groups, Prague, Czech Republic, 24-26 Jun. 1993
(Contracts W-31-109-eng-38; DE-FG06-91ER-40614)
(DE93-017385; ANL-HEP-CP-93-39; CONF-9306203-1) Avail: CASI HC A02/MF A01

Bosonic q-oscillators commute with themselves and so their free distribution is Planckian. In a cavity, their emission and absorption rates may grow or shrink - and even diverge - but they nevertheless balance to yield the Planck distribution via Einstein's equilibrium method, (a careless application of which might produce spurious q-dependent distribution functions). This drives home the point that the black-body energy distribution is not a handle for distinguishing q-excitations from plain oscillators. A maximum cavity size is suggested by the inverse critical frequency of such emission/absorption rates at a given temperature, or a maximum temperature at a given frequency. To remedy fragmentation of opinion on the subject, we provide some discussion, context, and references. DOE

APPLICATION OF DIFFERENTIAL SENSITIVITY THEORY TO CONTINUUM MECHANICS
P. J. Maudlin, R. J. Henninger, and E. N. Harstad 1993 11 p Presented at the Annual Winter Meeting of the ASME, New Orleans, LA, 28 Nov. - 3 Dec. 1993
(Contract W-7405-eng-36)
(DE93-012732; LA-UR-93-1562; CONF-931121-6) Avail: CASI HC A03/MF A01

A sensitivity technique used successfully in the early eighties, called Differential Sensitivity Theory (DST), is applied to a system of time-dependent continuum mechanics equations. DST uses adjoint techniques to determine exact sensitivity derivatives, i.e., if R is a calculational result of interest (response R) and alpha is a calculational input (parameter alpha(sub i) where the subscript is usually not indicated for convenience), then (partial derivative)R/(partial derivative)(alpha)(sub i) is defined as the sensitivity. The advantage of using DST over other sensitivity analysis techniques is mainly economic: for an n-parameter problem all n sensitivities can be obtained by integrating the solutions from only two calculations, a so-called forward (physical) calculation and its corresponding adjoint calculation. This work describes the derivation and solution of the appropriate set of adjoint and sensitivity equations for the ultimate purpose of computing sensitivities for high-rate two dimensional, multi-component, high deformation problems. INVESTIGATIONS IN GAUGE THEORIES, TOPOLOGICAL SOLITONS, AND STRING THEORIES
1993 23 p
(Contract DE-AS05-80ER-10713)
(DE93-015029; DOE/ER-10713/T5) Avail: CASI HC A03/MF A01

This is the final report on a supported research project on theoretical particle physics entitled 'Investigations in Gauge Theories, Topological Solitons, and String Theories.' The major theme of particle theory pursued has been within the rubric of the standard model, particularly on the interplay between symmetries and dynamics. Thus, the research has been carried out primarily in the context of gauge with or without chiral fermions and in effective chiral Lagrangian field theories. The topics studied include the physical implications of abelian and non-abelian anomalies on the spectrum and possible dynamical symmetry breaking in a wide range of theories. A wide range of techniques of group theory, differential geometry, and function theory have been applied to probe topological and conformal properties of quantum field theories in two and higher dimensions, the breaking of global chiral symmetries by vector-like gauge theories such as QCD, the phenomenology of a possibly strongly interacting Higgs sector within the minimal standard model, and the relevance of solitonic ideas to non-perturbative phenomena at SSC energies. ESSENTIAL SHIFT: SCIENTIFIC REVOLUTION IN THE 20TH CENTURY
David K. Ismay 17 May 1993 83 p
(AD-A270810; USNA-TSPR-202) Avail: CASI HC A05/MF A01

With the publishing of Sir Isaac Newton's Principia Mathematica in 1687, a scientific paradigm was established that clearly dominated society for two and half centuries. Many historians of science have identified the Copenhagen interpretation of the quantum theory, formulated c.1927, as having completed a scientific revolution that ended the reign of classical Newtonian science. A rival claim to contemporary scientific revolution, however, has been put forward by Ilya Prigogine and the Brussels school of thermodynamics based on Prigogine's work in non-equilibrium thermodynamics. Using the historical consensus model of scientific revolution first articulated by Thomas S. Kuhn in 1962, this analysis examines the extent to which the Copenhagen interpretation of the quantum theory and the work of Ilya Prigogine complete the conceptual, scientific paradigm-shift necessary for a scientific revolution. The resulting historical evidence shows that the Copenhagen interpretation did not complete a paradigm-shift; instead, it was a self-revelation by the scientific community which revealed the essence and fundamental limitations of Newtonian science. Evidence further indicates that the valid claim to scientific revolution in the 20th century lies with the contemporary work of Prigogine and the Brussels school. By abandoning the deterministic, mechanical world-view of the Newtonian paradigm and accepting a new reality of process and irreversible time, Prigogine and his associates have established the foundations for a revolutionary new scientific paradigm. SUPERCRITICAL THERMODYNAMICS OF SULFUR AND NITROGEN SPECIES
C. A. Eckert 1993 12 p
(Contract DE-FG22-91PC-91287)
(DE93-041221; DOE/PC-91287/9) Avail: CASI HC A03/MF A01

Significant opportunity exists for the application of supercritical fluid (SCF) technology to coal processing, both for pretreatment of high sulfur coals, as well as liquefaction and treatment of coal liquids. Supercritical fluids are attractive solvents for a variety of coal processing applications because of their unusual solvating and mass transfer properties. Solubility studies have been carried out for a number of model coal and coal-liquid compounds, primarily in pure supercritical fluids. We are extending this database of model coal compound equilibria using modern techniques that have the advantage of being much more rapid than traditional techniques. Cosolvent effects on solubility are being investigated over a variety of solvent properties. In addition, specific molecular interactions are being investigated through spectroscopic techniques. The resulting data are being used to develop a chemical-physical equation of state (EOS) model of SCF solutions with meaningful parameters. The equation of state will be used to predict solubility behavior, which will permit the design and tailoring of SCF cosolvent systems for specific coal processing applications. DOE

UNDERGRADUATE COURSE AND CURRICULUM DEVELOPMENT PROGRAM AND CALCULUS AND THE BRIDGE TO CALCULUS PROGRAM: 1992 AWARDS
1992 154 p
(NSF-93-24) Avail: CASI HC A08/MF A02

The National Science Foundation's Directorate for Education and Human Resources (EHR) is responsible for providing national leadership, examples of model programs, and support for enhancing the quality of education in science, mathematics, and engineering at all levels of the educational system. Within EHR, the Division of Undergraduate Education (DUE) focuses on ensuring that the best possible undergraduate education is provided to meet the Nation's need for high-quality scientists, engineers, mathematicians, and technologists, dedicated and able teachers of pre-college science and mathematics, and scientifically literate citizens. The Undergraduate Course and Curriculum Development (UCC) Program supports model curriculum reform projects in all disciplines within the Foundation's mission. Initially, the UCC program is concentrating on the crucial lower division and introductory-level courses. The enormous interest from the academic community during the first two years of the comprehensive program clearly reflects a national need and underscores NSF's important leadership role at the undergraduate level. The purpose of the continuing program in 'Curriculum Development in Mathematics: Calculus and the Bridge to Calculus' is to support projects that reform curriculum and instruction in both calculus and the preparation for calculus. Through the Calculus program, NSF has responded to the clear need expressed within the mathematic's community that the teaching of calculus and preparation for calculus must be improved. The projects described in this book were selected for their creativity, scientific and educational quality, and potential for utility at multiple institutions and national impact. We are proud of these projects and hope that they will be of interest to science, mathematics, and engineering faculty at all U.S. colleges and universities. Author (revised)

FIRST RESULTS WITH UTILE DISTINCTION MEMORY FOR REINFORCEMENT LEARNING
R. Andrew McCallum Dec. 1991 17 p
(Grant NSF IRI-89-03582)
(TR-446) Avail: CASI HC A03/MF A01

A method by which a reinforcement learning agent can solve the incomplete perception problem using memory is presented. The agent uses a Hidden Markov Model (HMM) to represent its internal state space and creates memory capacity by splitting states of the HMM. The key idea is a test to determine when and how a state should be split: the agent only splits a state when the split will help the agent predict utility. Thus the agent can build an internal state space proportionate to the task at hand, not as large as would be required to represent all of its perceivable world. The technique is called UDM, Utile Distinction Memory. Author (revised)

BIAS IN PLANNING AND EXPLANATION-BASED LEARNING Research Report
Paul S. Rosenbloom, Soowon Lee, and Amy Unruh May 1993 41 p
(Contract N00014-89-K-0155)
(AD-A269608; ISI/RR-93-346) Avail: CASI HC A03/MF A01

Biases enable systems to make decisions in realms where all legitimate sources of knowledge have been exhausted. This article investigates the application of biases to the problem of planning, and how this can indirectly induce effective biases in a learning process that is based on planner's experiences. Experimental results from six biased planners, plus several more complex multimethod planners, indicate complex tradeoffs among planner completeness, planning efficiency, and length. Learning also varies in complex ways among these planners, with one notable result being the ease with which some planners learn rules that can generalize from one object to many: a phenomenon known in machine learning as generalization to N. (PB93-169829) Avail: CASI HC A14

The book arises from the White House Technology Reinvestment Project (TRP) Briefings given in New York City, Detroit, Orlando, Dallas, and Los Angeles respectively during the week of 12 - 16 April 1993. The TRP is comprised of representatives from the following five agencies: Department of Defense (DOD), National Institute of Standards and Technology (NIST), Department of Energy (DOE), National Aeronautics and Space Administration (NASA), and the National Science Foundation (NSF). Although this is a multi-governmental agency effort, the funding and management of this effort is the responsibility of DOD's Advanced Research Projects Agency (ARPA). The conferences were held to give the TRP representatives the opportunity to discuss and answer questions on both the programmatic and funding aspects of this new national effort called the TRP. The book is comprised of the presentation charts used and transcripts taken during the conferences. The question and answer sessions are included in their entirety, but only the New York City speaker/presenter transcripts are included in the book. NTIS

APPLICATION OF NEW TECHNOLOGIES IN THE VIRTUAL LIBRARY: SEMINARS IN TURKEY, PORTUGAL, AND SPAIN

Judy F. Hunter and Gladys A. Cotter Jan. 1994 24 p

(NASA-TM-109718; NAS 1.15:109718) Avail: CASI HC A03/MF A01

This paper focuses on the technologies that are available today to support the concept of a virtual library. The concept of a 'virtual library' or a 'library without walls' is meant to convey the idea that information in any format should be available to the end-user from the desktop as if it were located on the local workstation. Discussed here are the background, trends, technology enablers, end-user requirements, and the NASA Access Mechanism (NAM) system, one example of how it is possible to apply existing technologies to the client server architecture to logically centralize geographically distributed applications and information. SCALE SENSITIVITY IN THE MULTIPLICATIVE AHP AND SMART

F. A. Lootsma 1993 32 p

(Rept-93-37; ETN-93-94664) Copyright Avail: CASI HC A03/MF A01

A variant of the Analytic Hierarchy Process (AHP) with a one parametric class of geometric scales to quantify human comparative judgement and with a multiplicative structure, logarithmic regression to calculate the impact scores of the alternatives at the first evaluation level, and geometric mean aggregation rule to calculate the final scores at the second level is considered. The rank order of the impact scores and the final scores is demonstrated to be scale independent. The multiplicative AHP is shown to be an exponential version of the Simple Multi Attribute Rating Technique (SMART). In fact, the multiplicative AHP is concerned with ratios of intervals on the dimension of desirability, whereas SMART analyzes differences of the corresponding orders of magnitude. ESA

CONTEXT-RELATED SCALING OF HUMAN JUDGEMENT IN THE MULTIPLICATIVE AHP, SMART AND ELECTRE

F. A. Lootsma 1993 26 p

(Rept-93-38; ETN-93-94665) Copyright Avail: CASI HC A03/MF A01

Since decisions are invariably made within a given context, relative preferences are modeled as ratios of increments or decrements in an interval on the axis of desirability. The ratio magnitudes are then sorted into a small number of categories, represented by numerical values on a geometric scale. An explanation as to why the Analytic Hierarchy Process (AHP) and the French collection of ELECTRE systems, typically based on pairwise comparison methods, are concerned with category judgement of ratio magnitudes, whereas the Simple Multi Attribute Rating Technique (SMART) essentially uses the orders of magnitude of these ratios, is presented. This phenomenon, well known in psychophysics, provides a common basis for the analysis of the methods in question and for a cross validation of their results. The approach is illustrated throughout via a well known case study, the choice of a location for a nuclear power plant. ESA

STRATEGIC PLAN, 1991: A STRATEGY FOR LEADERSHIP IN SPACE THROUGH EXCELLENCE IN SPACE SCIENCE AND APPLICATIONS

1991 68 p

(NASA-TM-109256; NAS 1.15:109256) Avail: CASI HC A04/MF A01

In 1988, the Office of Space Science and Applications (OSSA) developed and published a Strategic Plan for the United States' space science and applications program during the next 5 to 10 years. The Plan presented the proposed OSSA program for the next fiscal year and defined a flexible process that provides the basis for near-term decisions on the allocation of resources and the planning of future efforts. Based on the strategies that have been developed by the advisory committees both of the National Academy of Sciences and of NASA, the Plan balances major, moderate, and small mission initiatives, the utilization of Space Station Freedom, and the requirements for a vital research base. The Plan can be adjusted to accommodate varying budget levels, both those levels that provide opportunities for an expanded science and applications program, and those that constrain growth. SSA's strategic planning is constructed around five actions: establish a set of programmatic themes; establish a set of decision rules; establish a set of priorities for missions and programs within each theme; demonstrate that the strategy can yield a viable program; and check the strategy for consistency with resource constraints. The outcome of this process is a clear, coherent strategy that meets both NASA's and OSSA's goals, that assures realism in long-range planning and advanced technology development, and that provides sufficient resiliency to respond and adapt to both known and unexpected internal and external realities. The OSSA Strategic Plan is revised annually to reflect the approval of new programs, improved understanding of requirements and issues, and any major changes in the circumstances, both within NASA and external to NASA, in which OSSA initiatives are considered. A FOUNDATION FOR THE 21ST CENTURY: A PROGRESSIVE FRAMEWORK FOR THE NATIONAL SCIENCE FOUNDATION. REPORT OF THE NATIONAL SCIENCE BOARD COMMISSION ON THE FUTURE

OF THE NATIONAL SCIENCE FOUNDATION
20 Nov. 1992 20 p
(NSB-92-196) Avail: CASI HC A03/MF A01

This report of the National Science Board Commission on the future of the National Science Foundation stresses the fundamental importance of continuing the NSF's basic mission of supporting first-rate research, identified and defined by the best researchers within the academic community. At the same time, the commission underscores the importance of supporting key strategic research areas in response to scientific opportunities to meet national goals. Throughout the report, the commission identifies challenging issues that will require NSF attention. These include evolving research fields, interdisciplinary opportunities, increasing dependencies among stages in technology development, grant size, student support, improved science education, knowledge diffusion, and facility needs. The commission strongly recommends that the NSF's responsibilities and opportunities--both present and proposed--and its budgetary needs be examined within the context of a newly conceived Federal R&D budget capable of responding to national needs. To this end, the commission urges that its recommendations be considered by the National Science Board in the context of the board's own responsibility to develop and carry out national policy for science and engineering research and education more broadly. OSSA INFORMATION SYSTEMS PROGRAM Annual Report, 1992
David H. Brown (Center for Space and Advanced Technology, Fairfax, VA.) 1993 30 p
(Contract NASw-4561)
(NASA-TM-108774; NAS 1.15:108774) Avail: CASI HC A03/MF A01

The Office of Space Science and Applications Information Systems Program was established to coordinate and enhance activities that support the processing, analysis, transport, archival, and access of space science data. Within OSSA, the science discipline divisions have the ultimate responsibility for the proper management of the data generated by their missions. The OSSA Information Systems Branch works in concert with the divisions to provide an infrastructure of information system services and expertise in operations, policy, planning, and technology. Discipline specific and infrastructure activities are coordinated through participation in the OSSA Information Systems Management Board. The Information Systems Program is organized into four program areas: scientific computing, networking, data management and archiving, and applied information systems technology. Together, these program areas form a solid technical and policy development base that supports the overall OSSA information systems strategy. The underlying theme of each element is to facilitate science research and ensure the efficient implementation and utilization of OSSA information systems resources. The program activities for this year are discussed. Derived from text

EXPECT: INTELLIGENT SUPPORT FOR KNOWLEDGE BASE REFINEMENT Research Report
Cecile L. Paris and Yolanda Gil Jan. 1993 18 p
(Contract DABT63-91-C-0025)
(AD-A269602; ISI/RR-93-339) Avail: CASI HC A03/MF A01

Effective knowledge acquisition amounts to having good sources of expectations that can provide guidance about what knowledge needs to be acquired from users. Current approaches to knowledge acquisition often rely on strong models of the problem-solving method used in the task domain to form expectations. These methods are often implicit in the tool, which is a strong limitation for their use in different domains. Additionally, these tools require an understanding of the method to be used that most experts find difficult to overcome. We present EXPECT, a novel approach to knowledge acquisition based on the EES architecture that forms expectations based on the current knowledge contained in the system about the task, and are not hard-coded in the tool. We show how the explicit representation of domain principles and its relation to compiled procedural knowledge enables a system to form expectations as to what knowledge is missing or incorrect. This capability coupled with a dialogue-based explanation facility makes communication with the knowledge acquisition tool more natural to domain experts. DTIC

DATA FUSION THROUGH SIMULATED ANNEALING OF REGISTERED RANGE AND REFLECTANCE IMAGES
M. Beckerman and F. J. Sweeney 1993 13 p Presented at the SPIE/OE Aerospace Science and Sensing Meeting, Orlando, FL, 11-16 Apr. 1993 Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(Contract DE-AC05-84OR-21400)
(DE93-015910; CONF-930445-16) Avail: CASI HC A03

We present results of a study of registered range and reflectance images acquired using a prototype amplitude-modulated CW laser radar. Ranging devices such as laser radars represent new technologies which are being applied in aerospace, nuclear, and other hazardous environments where remote inspections, 3D identifications and measurements are required. However, data acquired using devices of this type may contain non-stationary, signal-dependent noise, range-reflectance crosstalk, and low-reflectance range artifacts. Low level fusion algorithms play an essential role in achieving reliable performace by handling the complex noise, systematic errors, and artifacts. The objective of our study is the development of a stochastic fusion algorithm which takes as its input the registered image pair and produces as its output a reliable description of the underlying physical scene in terms of locally smooth surfaces separated by well-defined depth discontinuities. To construct the algorithm, we model each image as a set of coupled Markov random fields representing pixel and several orders of line processes. Within this framework we impose local smoothness constraints, introducing a simple linearity property in place of the usual sums over clique potentials; fuse the range and reflectance images through line process couplings, and use nonstationary, signal-dependent variances, adaptive thresholding, and a form of Markov natural selection. We show that the resulting algorithm yields reliable results even in worst-case scenarios. DOE

RESTRICTING QUERY RELAXATION THROUGH USER CONSTRAINTS
T. Gaasterland 1993 14 p Presented at the International Conference on Intelligent and Cooperative Information Systems, Rotterdam, Netherlands, 11-14 May 1993
(Contract W-31-109-eng-38)
(DE93-017413; ANL/MCS/CP-80152; CONF-9305242-1) Avail: CASI HC A03/MF A01

This paper describes techniques to restrict and to heuristically control relaxation of deductive database queries. The process of query relaxation provides a user with a means to automatically identify new queries that are related to the user's original query. However, for large databases, many relaxations may be possible. The methods to control and restrict the relaxation process introduced in this paper focus the relaxation process and make it more efficient. User restrictions over the database domain

may be expressed as user constraints. This paper describes how user constraints can restrict relaxed queries. Also, a set of heuristics based on cooperative answering techniques are presented for controlling the relaxation process. Finally, the interaction of the methods for relaxing queries, processing user constraints, and applying the heuristic rules is described.

DOCUMENT CONTROL AND CONDUCT OF OPERATIONS
S. K. Collins and F. L. Meltzer 1993 6 p Presented at the 4th Conduct of Operations Workshop: The Key to Continued Success, Tampa, FL, 4-6 May 1993
(Contract DE-AC07-76ID-01570)
(DE93-016555; EGG-M-92690; CONF-930538-3) Avail: CASI HC A02/MF A01

Department of Energy (DOE) Order 5480.19, Conduct of Operations, places stringent requirements on a wide range of activities at DOE facilities. These requirements directly affect personnel at the Advanced Test Reactor (ATR), which is located in the Test Reactor Area of the Idaho National Engineering Laboratory and operated for DOE by EG&G Idaho, Inc. In order for the ATR to comply with 5480.19, the very personality of the reactor facility's document control unit has had to undergo a major change. The Facility and Administrative Support Unit (FAS) is charged with maintenance of ATR's controlled documents - thousands of operating and administrative procedures. Prior to the imposition of 5480.19, FAS was content to operate in a clerical support mode, seldom questioning or seeking to improve. This manner of doing business is inappropriate within the framework of DOE 5480.19 and is also at odds with the approach to Total Quality Management (TQM) promulgated by EG&G Idaho. To comply with the requirements of 5480.19, FAS has actively applied TQM principles, empowered personnel to improve operations through the establishment of a team approach, and begun an automation process that is already paying large dividends in terms of improved procedure accuracy and compliance. A state-of-the-art text retrieval system is already in place. We are vigorously pursuing fully automated document tracking and document management. This paper describes in detail the steps taken to date, the improvements, and the lessons learned. It also discusses plans for the future that will enable FAS to support the ATR in increasing its responsiveness to the Conduct of Operations Order.

INFORMATION TECHNOLOGY RESOURCES ASSESSMENT
S. C. Loken, ed. Jan. 1993 63 p
(Contract DE-AC03-76SF-00098)
(DE93-015276; LBL-33700) Avail: CASI HC A04/MF A01

The emphasis in Information Technology (IT) development has shifted from technology management to information management, and the tools of information management are increasingly at the disposal of end-users, people who deal with information. Moreover, the interactive capabilities of technologies such as hypertext, scientific visualization, virtual reality, video conferencing, and even database management systems have placed in the hands of users a significant amount of discretion over how these resources will be used. The emergence of high-performance networks, as well as network operating systems, improved interoperability, and platform independence of applications will eliminate technical barriers to the use of data, increase the power and range of resources that can be used cooperatively, and open up a wealth of possibilities for new applications. The very scope of these prospects for the immediate future is a problem for the IT planner or administrator. Technology procurement and implementation, integration of new technologies into the existing infrastructure, cost recovery and usage of networks and networked resources, training issues, and security concerns such as data protection and access to experiments are just some of the issues that need to be considered in the emerging IT environment. As managers we must use technology to improve competitiveness. When procuring new systems, we must take advantage of scalable resources. New resources such as distributed file systems can improve access to and efficiency of existing operating systems. In addition, we must assess opportunities to improve information worker productivity and information management through technologies such as distributed computational visualization and teleseminar applications. THE STABILITY AND UTILITY OF THE ESPRIT PROJECT, MUSIC, PERFORMANCE-BASED INDICATORS OF USABILITY AND TOOLS: AN EVALUATION OF THE USABILITY OF THE NPL ISDX TELEPHONE SYSTEM
Rosemary Bowden and Jurek Kirakowski (University Coll., Cork, Ireland.) Dec. 1992 53 p
(NPL-DITC-213/92; ETN-93-94546) Copyright Avail: National Physical Laboratory, Teddington, Middlesex, TW11 0LW, United Kingdom

An evaluation to assess and measure the validity and reliability of a set of performance based measures and indicators of usability of information technology based projects is described. The iSDX telephone system was selected as a suitable product to test. The attempts to use some of the features offered by the system were recorded on video. The task goals achieved by each subject during the session were recorded by one analyst who watched the subject and listened to the verbal exchanges. The recorded data was analyzed using the procedures and tools in the MUSiC (Metrics for Usability Standards in Computing) user performance measurement method. The stability of the indicators was tested by evaluating the variance of the results, and the time taken to derive each indicator was recorded to assess the utility of the measurement method. For any size sample of subjects the stability of the metrics can be quoted in terms of confidence intervals about the mean. To obtain a narrow confidence interval with high probability large numbers of subjects may need to be tested and therefore significant time is required to carry out the analysis. However, the mean values of the metrics for carefully selected small groups may be within acceptable confidence intervals particularly if a lower probability level, for example 80 percent, is used. It is up to the promoters of a usability evaluation to decide what is acceptable. The utility of the metrics depends on the circumstances of the evaluation. For a software developer, long analysis periods during development will delay the development cycle thereby affecting the cost of the product. However any assessment of the cost effectiveness of the metrics must include their individual diagnostic value which may compensate for their derivation time. ESA

TANGO: A NOTATION FOR DESCRIBING ADVANCED TRANSACTION MODELS
M. Felder Feb. 1993 27 p
(Rept-93-014; ETN-93-94518) Avail: Politecnico di Milano, Piazza Leonardo da Vinci 32, 20133 Milan, Italy

The classical transaction model, that guarantees atomicity, consistency, isolation, and durability of transactions, has proved to be very useful in the development of traditional database applications. However, these properties are not adequate for modeling non traditional applications, such as software engineering environment, CAD (Computer Aided Design), office automation, and cooperative work applications. New transaction models were proposed in order to capture the semantics of nontraditional database applications. These extensions to the traditional transaction model are surveyed and a formal notation, called TANGO, that may be used to describe existing models and, in general, to design nontraditional database applications, involving complex dependencies among transactions, is proposed. TANGO is based on a high level Petri net formalism, and includes a modularization construct that permits to structure a TANGO specification in work units.

AN ENVIRONMENT FOR REQUIREMENT REUSE
R. Bellinzona, M. G. Fugini (Pavia Univ., Italy.), and B. Pernici (Udine Univ., Italy.) 16 Dec. 1992 27 p Sponsored in part by EEC, and CNR
(Rept-92-082; ETN-93-94508) Avail: Politecnico di Milano, Piazza Leonardo da Vinci 32, 20133 Milan, Italy

A method and tool for reusing requirement specifications, which are part of a Development Information System, are presented. A centralized repository, named Software Information Base, stores artifacts related to requirements, detailed design and implementation. In particular, it contains information for component reuse, based on development knowledge. Components are formally specified using an object oriented specification model. The same model is used to represent development knowledge.

Focus is on the RECAST (Requirements Composition and Specification Tool) of the Development Information System. The Development Information System and its associated development method are reviewed and the functionalities of RECAST are described: retrieval of specification classes and active assistance in reusing these classes--that is in adapting and composing them into the current requirements. Design guidelines are illustrated; an example of reusable specifications and of their composition with RECAST is given. ESA

A MODEL AND AN EXECUTION MECHANISM FOR ACTIVE DATA BASES Ph.D. Thesis [UN MODELE ET UN MECANISME D'EXECUTION POUR LES BASES DE DONNEES ACTIVES]
Maria Francisca GhiraZinhoAntunes 1991 267 p In FRENCH Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(ETN-93-94404) Avail: CASI HC A12

A model and mechanisms to support the development of active databases are proposed. The model allows an integrated description of static and dynamic aspects. In order to describe the information processing stucture, three concepts are required: focal entity, activity and procedure. The mechanisms and tools applied allow an automatic start of procedures, to control and to follow processing activities. Special attention is given to the mechanism for automatically starting an activity or procedure. The two phases required to establish previous conditions connected to activities and procedures are described. ESA

USING SEMANTIC INFORMATION FOR PROCESSING NEGATION AND DISJUNCTION IN LOGIC PROGRAMS
T. Gaasterland and J. Lobo (Illinois Univ., Chicago.) 1993 12 p Presented at the 7th International Symposium on Methodologies for Intelligent Systems, Trondheim, Norway, 15-18 Jun. 1993
(Contract W-31-109-eng-38)
(DE93-017412; ANL/MCS/CP-80151; CONF-9306151-1) Avail: CASI HC A03/MF A01

There are many applications in which integrity constraints can play an important role. An example is the semantic query optimization method developed by Chakravarthy, Grant, and Minker for definite deductive databases. They use integrity constraints during query processing to prevent the exploration of search space that is bound to fail. In this paper, the authors generalize the semantic query optimization method to apply to negated atoms. The generalized method is referred to as semantic compilation. They show that semantic compilation provides an alternative search space for negative query literals. They also show how semantic compilation can be used to transform a disjunctive database with or without functions and denial constraints without negation into a new disjunctive database that complies with the integrity constraints. BETTER TERMINATION ANALYSIS FOR ACTIVE DATABASES
Elena Baralis (Politecnico di Torino, Italy.), Stefano Ceri, and Jennifer Widom (International Business Machines Corp., San Jose, CA.) 1993 21 p
(Rept-93-026; ETN-93-94575) Avail: Issuing Activity (Politecnico di Milano, Piazza Leonardo da Vinci 32, 20133 Milan, Italy)

An important problem for the usability of active databases is to determine by syntactic analysis whether a given set of rules is guaranteed to terminate. Rule processing in active databases does not terminate when rules activate each other indefinitely. Previous approaches to termination analysis in active databases use very conservative algorithms to determine when rules may activate each other. An algebraic model for a class of active database rules is introduced and a theory by which it can be determined much less conservatively when rules may activate each other is presented. The theory thus forms the basis of better termination analysis for active databases. ESA

GREPOS: A GENESIS DATABASE REPOSITIONING PROGRAM
G. D. Sjaardema Jun. 1993 33 p
(Contract DE-AC04-76DP-00789)
(DE93-018517; SAND-90-0566-Rev) Avail: CASI HC A03/MF A01

GREPOS is a mesh utility program that repositions or modifies the configuration of a two-dimensional or three-dimensional mesh. GREPOS can be used to change the orientation and size of a two-dimensional or three-dimensional mesh; change the material block, nodeset, and sideset ID's; or 'explode' the mesh to facilitate viewing of the various parts of the model. GREPOS also updates the EXODUS quality assurance and information records to help track the codes and files used to generate the mesh. GREPOS reads and writes two-dimensional and three-dimensional mesh databases in the GENESIS database format; therefore, it is compatible with the preprocessing, postprocessing, and analysis codes in the Sandia National Laboratories Engineering Analysis Code Access System (SEACAS). THE ORGANIZATIONAL PREPARATION OF EXISTING RELATIONAL DATABASES FOR THE INTEGRATION OF EXPERT SYSTEMS M.S. Thesis
Warren W. Snow Jun. 1993 74 p
(AD-A268823) Avail: CASI HC A04/MF A01

This thesis is a management guide for strategically planning a future integration of relational databases and expert systems. It relates best to an organization with large established relational database(s) that is trying to access the changes required to integrate expert systems with those databases. Technical considerations for such a change are discussed, and they include the role of database normalization and the requirement to maintain applications that are independent of the database structure. The organizational considerations of such an integration are examined, and they focus on the people skills required within an organization to develop and maintain database and expert system combinations. Three product categories are established to represent an integrated system, and a commercial off the shelf product from each category is reviewed to illustrate its specific capabilities. The combination of relational databases and expert systems has the potential to deliver information systems of future strategic importance. This thesis serves to assist the information systems management of military organizations in planning the transition to such a system. DTIC

The thrust of this research concerns associative processors. Many new aspects exist in this effort: large storage capacity; use of storage density as a measure of efficiency; use of new output recollection vector encoding schemes; general 1:1 and pattern recognition; many:one associative processors; new algorithms and architectures; and applications and laboratory realization. We have devised a new higher-order neutral network concept with increased many:one pattern recognition performance. We have also demonstrated a new technique to improve neural network storage capacity and performance by modeling various nonideal components and accuracy during synthesis. DTIC

A RUGGED, LOW-COST ADVANCED DATA ACQUISITION SYSTEM FOR FIELD TEST PROJECTS
D. A. Simms and K. L. Cousineau (Zond Systems, Inc., Tehachapi, CA.) Jun. 1993 11 p Presented at the 29th Annual International Telemetering Conference, Las Vegas, NV, 25-28 Oct. 1993
(Contract DE-AC02-83CH-10093)
(DE93-010041; NREL/TP-442-5617; CONF-9310131-1) Avail: CASI HC A03/MF A01

The National Renewable Energy Laboratory (NREL) has teamed up with Zond Systems, Inc., to provide a rugged, low-cost, advanced data-acquisition system (ADAS) for use in field test projects. The ADAS simplifies the process of making accurate measurements on mechanical equipment exposed to harsh environments. It provides synchronized, time-series measurement data from multiple, independent sources. The ADAS is currently being used to acquire data from large wind turbines in operational wind-plant environments. ADAS modules are mounted on rotating blades, turbine towers, nacelles, control modules, meteorological towers, and electrical stations. The ADAS has the potential to meet the testing and monitoring needs of many other technologies as well, including vehicles, heavy equipment, piping and power transmission networks, and building energy systems. RETRIEVING AND INTEGRATING DATA FROM MULTIPLE INFORMATION SOURCES Research Report
Yigal Arens, Chin Y. Chee, Chun-Nan Hsu, and Craig A. Knoblock 30 Apr. 1993 31 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(Contract F30602-91-C-0081)
(AD-A269588; ISI-RR-93-308) Avail: CASI HC A03

With the current explosion of data, retrieving and integrating information from various sources is a critical problem. Work in multi-database systems has begun to address this problem, but it has primarily focused on methods for communicating between databases and requires significant effort for each new database added to the system. This paper describes a more general approach that exploits a semantic model of a problem domain to integrate the information from various information sources. The information sources handled include both databases and knowledge bases, and other information sources could potentially be incorporated into the system. This paper describes how the domain and the information sources are modeled, shows how a query at the domain level is mapped into a set of queries to individual information sources, and presents algorithms for automatically improving the efficiency of queries using knowledge about both the domain and the information sources. This work is implemented in a system called SIMS and has been tested in a transportation planning domain using nine Oracle databases and a LOOM knowledge base. DTIC

TOWARDS VERSATILE AND PRACTICAL KNOWLEDGE ACQUISITION Research Report
Yolanda Gil and Cecile L. Paris Jun. 1993 20 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(Contract DABT63-91-C-0025)
(AD-A269596; ISI/RR-93-343) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

Rapid prototyping and tool reusability have pushed knowledge acquisition research to investigate method-specific knowledge acquisition (KA) tools appropriate for predetermined problem-solving methods. We believe that method-dependent KA is not the only approach. The aim of our research is to develop powerful but versatile machine learning mechanisms that can be incorporated into general-purpose but practical knowledge acquisition tools. This paper shows through examples the practical advantages of this approach. In particular, we illustrate how existing knowledge can be used to facilitate KA through analogy mechanisms in a logistics transportation domain and use the same general-purpose mechanism for knowledge acquisition in a different domain through plan generalization. Our hypothetical knowledge acquisition dialogs with a domain expert illustrate which parts of the process are addressed by the human and which parts are automated by the tool, in a synergistic cooperation for knowledge-based extension and refinement. The paper also describes briefly the EXPECT problem-solving architecture and knowledge representation language that facilitate this approach to KA. DTIC

TRENDS IN INFORMATION MANAGEMENT AT DEPARTMENT OF ENERGY HEADQUARTERS
Jun. 1993 55 p
(DE93-017197; DOE-93017197) Avail: CASI HC A04/MF A01

The Trends in Information Resource Management at DOE Headquarters (Trends) is published annually to inform the DOE Headquarters community about changes in the information management environment. The document, in its second year of publication, is becoming more robust as more historical data is available and as the information management environment at Headquarters evolves. One of the purposes of the Trends document is to acquire evidence that Headquarters organizations are assimilating guidance offered in the Emerging Technologies Planning Guide into their IRM strategies. Another purpose is to identify areas of interest and requirements of the Headquarters organizations to direct technology research for future issues of the Guide. These categories have been tentatively established as indicators of the degree of implementation of information management. The main source of data is the Headquarters Organization Plans, which were updated during the long-range update cycle conducted from August to January. Since these plans were published, the Secretary has announced a reorganization of DOE. For the purpose of this document, the information in the various plans is considered to be valid to accomplish the departmental missions. DOE

COGNITIVE LIMITATIONS IN COORDINATION IN HIERARCHICAL INFORMATION PROCESSING STRUCTURES M.S. Thesis
Robert R. Armbruster Jun. 1993 126 p
(AD-A268825) Avail: CASI HC A07/MF A02

In Command and Control, the majority of decisions require the fusion of inputs from a number of subordinate decision-makers to arrive at a team decision. Part of the Navy's attempt to address the issue of hierarchical decision making is the Tactical Decision Making Under Stress (TADMUS) program. Under this program, the Coordination in Hierarchical Processing Structures (CHIPS) experiment was conducted at the Naval Postgraduate School during May and Jun. 1993. The CHIPS experiment is described, and data collected during the experiment was used to assess the impact of human cognitive limitations on team performance. Team performance was found to be degraded by increased stress, increased risk, and increased feedback to subordinates in the hierarchy. These effects were found to be due to a reduced ability to distinguish between types of contact, rather than use of a less optimal decision criterion. It was further found that increasing the amount of information available to subordinates increased their ability to distinguish between types of contacts, but not by as much as is theoretically possible. There were also indications that there may be an upper limit on the amount of information that can be successfully integrated by the subordinates, beyond which performance declines rather than improving. AUTOMATIC DOCUMENTATION GENERATION: THE INTERACTION OF TEXT AND EXAMPLES Research Report
Vibhu O. Mittal and Cecile L. Paris Mar. 1993 6 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(Contract DABT63-91-C-0025)
(AD-A269670; ISI/RR-93-333) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

Good documentation is critical for user acceptance of any system, and empirical studies have shown that examples can greatly increase effectiveness of system documentation. However, studies also show that badly integrated text and examples can be actually detrimental compared to using either text or examples alone. It is thus clear that in order to provide useful documentation automatically, a system must be capable of providing well-integrated examples to illustrate its points. Precious work on example generation has concentrated on the issue of retrieving or constructing examples. In this paper, we look at the integration of text and examples. We identify how text and examples co-constrain each other and show that a system must consider example generation as an integral part of the generation process. Finally, we present such a system together with example. DTIC

A COMPARISON OF AIR FORCE DATA SYSTEMS Final Report, Jan. - Aug. 1993
Waynard C. Devers, Elizabeth K. Bailey, Lee H. Dymond, William A. Florac, and Stanley A. Horowitz Aug. 1993 244 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(Contract MDA903-89-C-0003)
(AD-A269691; IDA-P-2863; IDA/HQ-93-44150) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

This report evaluates the effectiveness and cost of two alternative Air Force maintenance information systems: CAMS/REMIS and TICARRS. The evaluation considers six dimensions of effectiveness: functionality, scope, operating characteristics, data accuracy and completeness, adaptability, and logistics and operational effectiveness. Each system was found to have shortcomings. CAMS/REMIS suffers from problems in availability, responsiveness, and data integrity, and TICARRS is limited in functionality and scope. IDA considers two alternatives, each one based on one of the systems supporting the entire Air Force. A set of enhancements needed to make the two systems roughly equivalent is provided, along with their costs. The cost analysis includes estimates of the nonrecurring costs to address the system limitations and the recurring costs in system operations and maintenance from FY 1994 through FY 2003. The TICARRS-based alternative is found to be superior in effectiveness but must be expanded in scope and functionality if it is to become the Air Force's standard system. The estimated costs for the TICARRS alternative over the ten-year period are approximately $100 million less (in terms of present value) than the costs for the CAMS/REMIS alternative. DTIC

LEARNING DATABASE ABSTRACTIONS FOR QUERY REFORMULATION
Chun-Nan Hsu and Craig A Knoblock 30 Apr. 1993 15 p
(Contract F30602-91-C-0081)
(AD-A269531; ISI-RR-93-309) Avail: CASI HC A03/MF A01

The query reformulation approach takes advantage of the semantic knowledge about the contents of databases for optimization. The basic idea is to use the knowledge to reformulate a query into a less expensive yet equivalent query. Previous work on semantic query optimization has shown the cost reduction that can be achieved by reformulation; we further point out that when applied to distributed multibase queries, the reformulation approach can reduce the cost of moving intermediate data from one site to another. However, a robust and efficient method to discover the required knowledge has not yet been developed. This paper presents an example-guided, data-driven learning approach to acquire the knowledge needed in reformulation. We use example queries to guide the learning to capture the database usage pattern. In contrast to the heuristic-driven approach, the data-driven approach is more likely to learn the required knowledge for the various reformulation needs of the example queries. Since this learning approach minimizes the dependency on the database structure and implementation, it is applicable to heterogeneous multidatabase systems. DTIC

EMERGING TECHNOLOGIES PLANNING GUIDE, 1993 EDITION
Nov. 1992 57 p
(Contract DE-AC01-88MA-33222)
(DE93-017196; DOE/MA-33222/T1) Avail: CASI HC A04/MF A01

Information system technology enhancements during the next five years are expected to provide some of the most significant individual and organization work improvements ever made in the office environment. This guide is an aid to planning these technologies and assessing their roles in improving the effectiveness of Headquarters programs. Their implementation will cost-effectively support Departmental operations and the National Energy Strategy. At the heart of this process is an understanding of the relationship which exists between technology introduction and the planning, budgeting and the acquisition process. The 1993 edition of this guide covers the 1993-1997 time frame. DOE

DIRECTORY OF ENERGY INFORMATION ADMINISTRATION MODELS 1993
Jul. 1993 137 p
(DE93-016987; DOE/EIA-0293(93)) Avail: CASI HC A07/MF A02

This directory contains descriptions about each model, including the title, acronym, and purpose, followed by more detailed information on characteristics, uses, and requirements. Sources for additional information are identified. Included in this directory are 35 EIA models active as of May 1, 1993. Models that run on personal computers are identified by 'PC' as part of the acronym. EIA is developing new models, a National Energy Modeling System (NEMS), and is making changes to existing models to include new technologies, environmental issues, conservation, and renewables, as well as extend forecast horizon. Other parts of the department are involved in this modeling effort. A fully operational model is planned which will integrate completed segments of NEMS for its first official application--preparation of EIA's Annual Energy Outlook 1994. Abstracts for the new models will be included in next year's version of this directory. DOE

CORPORATE INFORMATION MANAGEMENT (CIM) REPORT ON THE SIMULATION PROCESSES, VERSION 2.0
John Tieso 15 Apr. 1993 73 p Prepared in cooperation with Assistant Secretary of Defense (Communications Command Control and Intelligence), Washington, DC Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(Contract DAAB07-91-D-B519)
(AD-A269119) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

This report discusses three pilot projects simulating command and control processes. The projects chosen were: Message Processing Center (MPC), Integrated Satellite Control System (ISCS), Theater Missile Defense (TMD). All three projects used the commercial off-the-shelf (COTS) simulation tool, Design/CPN. Design/CPN investigates color petri nets (CPNs) as a mathematical or algorithmic underpinning for analyzing complex information systems and validates claims that Design/CPN could be viewed as an extension of IDEFO activity models. Other tools and algorithms were selectively considered for comparisons. DTIC

NASA ELECTRONIC LIBRARY SYSTEM (NELS) OPTIMIZATION
William L. Pribyl (Datacraft, Inc., Gardena, CA.) Jul. 1993 39 p
(Contract NCC9-16; RICIS Proj. RB-07)
(NASA-CR-193688; NAS 1.26:193688) Avail: CASI HC A03/MF A01

This is a compilation of NELS (NASA Electronic Library System) Optimization progress/problem, interim, and final reports for all phases. The NELS database was examined, particularly in the memory, disk contention, and CPU, to discover bottlenecks. Methods to increase the speed of NELS code were investigated. The tasks included restructuring the existing code to interact with others more effectively. An error reporting code to help detect and remove bugs in the NELS was added. Report writing tools were recommended to integrate with the ASV3 system. The Oracle database management system and tools were to be installed on a Sun workstation, intended for demonstration purposes. CASI

NASA AERONAUTICS: PROTECTING SENSITIVE TECHNOLOGY. REPORT TO CONGRESSIONAL REQUESTERS
Aug. 1993 16 p
(GAO/NSIAD-93-201) Avail: CASI HC A03/MF A01; GAO, PO Box 6015, Gaithersburg, MD 20877 HC

The National Aeronautics and Space Administration's (NASA) efforts to control the transfer of agency-developed competitively sensitive aeronautics information to U.S. industry's foreign competitors was reviewed. Specifically, areas addressed were: (1) identify how NASA currently controls the disclosure of sensitive information; (2) determine whether NASA has an information control problem; and (3) ascertain what actions, if any, NASA planned to take to improve its information control program. A management review of Ames Research Center and NASA's procedures for handling requests for competitively sensitive information under the Freedom of Information Act was also evaluated. Results are presented.

NETWORKED MS WINDOWS 3.1 BASED CLASSIFIED DOCUMENT CONTROL SYSTEM (CDOCS)
L. M. Desonier 1993 3 p Presented at the 34th Annual Meeting of the Inst. of Nuclear Materials Management, Scottsdale, AZ, 18-21 Jul. 1993
(Contract DE-AC04-76DP-00789)
(DE93-017880; SAND-93-1701C; CONF-930749-16) Avail: CASI HC A01/MF A01

Current classified document management systems require a tremendous amount of space and extensive manpower to account for, inventory, and protect the documents. Comprehensive analysis of current control and accountability procedures reveal the main problem is the actual handling of the paper itself. The purpose of the Networked Microsoft Windows 3.1 based Classified Document Control System (CDOCS) is to eliminate the paper by scanning and storing images of pages on a personal computer using 'write once read mostly' (WORM) high density optical media. By saving images on the computer, not only can manpower and space requirements be reduced, but the chance of compromise is diminished. As an added benefit, the information is now more readily available to the authorized user and is provided to the user at the user's PC. The network target for CDOCS is Microsoft Windows for Workgroups. Thus, the system is also readily applicable to unclassified document imaging uses. DOE

AN ORACLE CASE HISTORY: EXPERIENCES WITH ORACLE CASE TOOLS
E. Z. Faby, B. R. Hancock (Tennessee Univ., Knoxville.), and L. F. Truett 16 Feb. 1993 15 p Presented at the 17th Annual International Computer Software and Applications Conference, Phoenix, AZ, 3-5 Nov. 1993
(Contract DE-AC05-84OR-21400)
(DE93-010827; CONF-931148-1) Avail: CASI HC A03/MF A01 (US Sales Only)

ORACLE CASE tools were used with limited success during development of a database system for the Army. During project development, the set of tools was used for analysis, design, database implementation, and documentation. The CASE tools provided an acceptable user interface for data entry and data correction; they provided standardized reports and views from which data for customized reports could be extracted. However, they had a number of limitations that significantly increased the effort required to maintain and use the CASE data in each phase of development. In particular, the CASE tools were especially limited in essential functions for modifying the system analysis and design. In addition, a decision was made during system development to change to a different version of the ORACLE Relational Database Management System (RDBMS), thus further reducing the value of the CASE tools. DOE

AXIOMATIZATION, DECLARATIVE SEMANTICS AND OPERATIONAL SEMANTICS OF PASSIVE AND ACTIVE UPDATES IN LOGIC DATABASES
P. Spruit, R. Wieringa, and J. J. C. Meyer Jun. 1992 71 p
(PB93-195956; IR-294) Avail: CASI HC A04/MF A01

The use of logic in database theory is commonly restricted to the specification of a database state. Reasoning about state changes (the database updates) must then be done outside the logic. The report considers a logic that also takes the updates into account. Taking propositional dynamic logic as a starting point, it defines PDDL: propositional dynamic database logic. The main features of PDDL are: There are two kinds of atomic updates in PDDL, passive and active updates. Passive updates just change the truth value of an atom to true/false and active updates set one atom to true/false and then compute derived updates using a Horn clause program; The declarative semantics for formulas and updates is based on Kripke structures; There is a proof system for PDDL, which is sound and complete for the class of 'full' structures. For non-full structures, the main problem is the axiomatization of successor worlds; There is a Plotkin-style operational semantics for update programs. The operational semantics allows one to compute the result of executing an update in some database state. NTIS

ADVISORY CIRCULAR: INDEX OF ARTICLES (MATERIALS, PARTS, PROCESSES, AND APPLIANCES) CERTIFIED UNDER THE TECHNICAL STANDARD ORDER SYSTEM
Oct. 1993 533 p
(AC-20-36S; ISBN-0-16-042982-X) Avail: CASI HC A23/MF A04

This publication lists those manufacturers who hold a Technical Standard Order (TSO) Authorization or a letter of TSO Design Approval. The requirements for obtaining an authorization or letter are prescribed in Part 21, Subpart O of the Federal Aviation Regulations. The page layout is arranged as follows. Column one lists the specific TSO number. A letter F in this column denotes foreign manufacturers. Column two identifies the person to whom the approval was issued. Column three lists the FAA region which issued the authorization or letter of approval. Column four shows the TSO descriptive title. This title appears one time at the beginning of each group of TSO holders meeting the requirements of a specific TSO. Column five lists the model or part number of the article approved. SECURE OPEN SYSTEMS: AN INVESTIGATION OF CURRENT STANDARDISATION EFFORTS FOR SECURITY IN OPEN SYSTEMS Final Report
P. L. Overbeek Jun. 1992 31 p Presented at the 8th International Security Conference and Exhibition, Singapore, 27-29 May 1992
(FEL-92-B225; TD-92-1906; ETN-93-94948) Copyright Avail: Issuing Activity (TNO Physics and Electronics Laboratory, P.O. Box 96864, 2509 JG The Hague, Netherlands)

The achievements of standardization in the area of secure open systems are outlined. Security in open systems is a special problem since each element in an open system must be able to offer security in coordination with other elements. A new view on requirements for security is presented. Security requirements concerning openness, organizational structures, the value of information and services, social structures, and security of the system itself are studied. The results of the investigation of current standardization initiatives in the area of technical security in open systems are presented and main conclusions are given. ESA

EVALUATION OF MASS SPECTRA FOR A VERIFICATION DATABASE Final Report
E. Wils and A. deJong Mar. 1993 62 p Sponsored by DMKL, The Hague, Netherlands
(Contract A93/D/402)
(PML-1993-12; TD92-3702; ETN-93-94939) Copyright Avail: Issuing Activity (TNO Prins Maurits Laboratory, P.O. Box 45, 2280 AA Rijswijk, Netherlands)

The possibility of creating a mass spectral database for verification analysis starting from data already recorded was investigated. Electron impact mass spectra of sixteen compounds submitted by seven laboratories were evaluated. The evaluation was carried out by means of the concept of quality indices used for the quality control of a commercially available database. This concept proved to be insufficient to evaluate and select mass spectra for a verification database. A visual inspection of the mass spectra turned out to be necessary. Based on the hundred spectra studied it was concluded that a database can be established from data submitted by various laboratories. Recommendations for recording, submission and review of spectra are discussed. ESA

MODELS AND BUILDING BLOCKS FOR SECURE OPEN SYSTEMS Final Report
P. L. Overbeek Nov. 1992 119 p
(FEL-92-B365; TD92-3313; ETN-93-94950) Copyright Avail: Issuing Activity (TNO Physics and Electronics Laboratory, P.O. Box 96864, 2509 JG The Hague, Netherlands)

Technical security in 'open' systems is discussed. Security in open systems is a special problem since each element in an open system must be able to offer security in coordination with other elements. Concepts found in preceding studies are further developed and new concepts are introduced. The concepts of current international standards are generalized such that they are applicable to open systems. The different concepts are confronted with one another and unified using new models. Models and building blocks to create secure open elements make up a secure open system. The study shows that it is possible to offer security services in open systems that are able to fulfill the majority of today's and tomorrow's requirements for security. The study also shows that there still is a long way to go: standardized interfaces, protocols, and data structures must still be defined. ESA

RESULTS OF A JOINT NAVY/AIR FORCE OPERATIONAL TEST TO EVALUATE USAF INTEGRATED MAINTENANCE INFORMATION SYSTEMS (IMIS), INTERACTIVE ELECTRONIC TECHNICAL MANUAL (IETM) TECHNOLOGY APPLIED TO THE F/A-18 AIRCRAFT Final Report, 1 Oct. 1989 - 1 Oct. 1991
Mark T. Kramer, Theodore J. Rainey, and C. Samuel 14 Jun. 1993 151 p
(AD-A271322; CarderockDiv-93/007) Avail: CASI HC A08/MF A02

In a joint effort, the U.S. Navy and Air Force have tested under operational conditions a series of improved techniques developed under the Air Force Integrated Maintenance Information System (IMIS) program for delivering maintenance technical information to squadron technicians. These improvements included use of a portable maintenance aid (PMA) for technical information display. In this test, carried out in an F/A-18 fighter squadron at Marine Corps Air Station, Beaufort, South Carolina each of 16 technicians performed six fault-isolation tasks, three supported by an Interactive Electronic Technical Manual (IETM) displayed on a PMA, and three supported by conventional paper-based work package (WP) technical manual (TM). This report presents a comparison of technician performance supported by the ITEM/PMA combination with performance using conventional paper TM's. The performance data collected during the test showed considerable reduction in performance times for complex multiple fault isolations and maintenance errors, when technicians used the IETM/PMA combination. Also, technician-preference data based on questionnaires showed strong support for virtually all IETM/PMA features. Technicians also made suggestions for improving the IETM and the PMA. DTIC

Relational systems are extended in several ways. The author considers extensions with rules and integrity constraints to so-called deductive databases. There are several problems in handling these rules and constraints. One problem is to check, in an efficient way, the integrity of a deductive database when an insertion or deletion is made. There exist several integrity maintenance methods. All these methods avoid a full check of the integrity constraints in order to keep them efficient. Therefore, the database is supposed to be consistent before a transaction is made. The author takes a look at one of the most efficient methods. It determines from the updates, rules, and constraints and without accessing the fact base the so called update constraints which have to be checked in the updated database. Although this method is more efficient than other ones, it is still susceptible to improvement. The goal in the article was to show by some well-chosen examples that in some regards the proposed method is still very inefficient. By these examples it becomes clear where the inefficiencies come from. NTIS

IDA Paper P-2863 reports on a comparison by IDA of two Air Force maintenance information systems. One of the systems is CAMS/REMIS, which combines the Core Automated Management System (CAMS) with the Reliability and Maintainability Information System (REMIS). The other is the Interim CAMS and REMIS Reporting System (TICARRS). Before Paper P-2863 was released in its final version, IDA gave interested parties the opportunity to comment upon it. This document contains the comments provided to IDA by the Office of the Secretary of Defense, the Air Force, Litton Computer Services, and Dynamics Research Corporation. It also contains IDA's responses to the comments received. DTIC

A metamodel was developed to support a topdown design of data distribution which makes the least possible use of detailed knowledge of location and user frequency of data on different nodes. Semantic concepts for fragmentation, allocation, and local mapping are introduced. The metamodel defines the relation between these concepts. The metamodel makes it possible to decide about data distribution on the basis of reasonable assumptions. The new concepts allow the design of a fragmentation scheme and an allocation scheme based on an existing data model whereby return to a previous phase can be avoided. The use of the new concepts allows automatic control if schemes for distribution fulfill the requirements. ESA

The Technology Benefits Model tool is a spreadsheet implementation of various models for estimating the effect on the cost of software development due to using some new technology in the software development process. The Technology Benefits Model tool was designed to provide estimates on the impact of one or more technology capabilities on a software development organization. The model provides these estimates for a period of time up to 15 years. The estimates are provided in terms of the impacts on several cost measures, including unit costs, and the total costs to develop a software system of some given size. The tool provides both spreadsheet and graphics capabilities. It requires the use of Microsoft Excel, version 4.0 and can operate on either a Macintosh or an IBM-compatible PC. You can use the Technology Benefits Model tool to help you estimate the potential effect of a technology on the cost of conducting each development activity, such as requirements analysis, preliminary design, or detailed design. The tool will enable you to see the impact of such estimates over a number of years. You can use the Technology Benefits Model tool to estimate the effect on unit labor rate, unit labor cost, product development cost, market cost, and market cost savings due to incorporating some new technologies into the development process. Please be aware that the model implemented in this tool is at an early level of validation. DTIC

ISTP GLOBAL GEOSPACE SCIENCE. ENERGY TRANSFER IN GEOSPACE

1990 31 p Original contains color illustrations
(NASA-TM-109239; NAS 1.15:109239) Avail: CASI HC A03/MF A01; 25 functional color pages

Solar-terrestrial physics concerns the study of the generation, flow, and dissipation of mass, momentum, and energy between the Sun and the Earth. Mass, momentum, and energy are carried by charged particles that compose the solar wind. When the solar wind reaches the Earth, some solar-wind particles enter the magnetosphere; this coupling between the solar wind and the Earth means that the solar wind can influence the Earth's upper atmosphere. As the first step in addressing the behavior of this solar-terrestrial system, the Global Geospace Science (GGS) Initiative will use the Wind and Polar satellites, provided by NASA, and the Geotail satellite provided by the Japanese Institute of Space and Astronautical Science (ISAS), to perform simultaneous and closely coordinated measurements of the key geospace regions and will add data from equatorial missions. Magnetic field and particle changes that occur when particles are energized during auroral events will be monitored. The intention behind the GGS Initiative is to understand the physical mechanisms and various regions controlling the transport of mass, momentum, and energy in geospace. A summary of the GGS Initiative is presented.

MAXIMAL HYPERSURFACES IN ASYMPTOTICALLY STATIONARY SPACETIMES
Piotr T. Chrusciel and Robert M. Wald (Chicago Univ., IL.) Dec. 1992 45 p Submitted for publication
(MPA-708; ETN-93-94915) Copyright Avail: Issuing Activity (Max-Planck-Institut fuer Physik und Astrophysik, Karl-Schwarzschild-Strasse 1, 8046 Garching, Germany)

The purpose of the work is to extend the results on the existence of maximal hypersurfaces to encompass some situations considered by other authors. The existence of maximal hypersurface in asymptotically stationary spacetimes is proven. Existence of maximal surface and of foliations by maximal hypersurfaces is proven in two classes of asymptotically flat spacetimes which possess a one parameter group of isometries whose orbits are timelike 'near infinity'. The first class consists of strongly causal asymptotically flat spacetimes which contain no 'blackhole or white hole' (but may contain 'ergoregions' where the Killing orbits fail to be timelike). The second class of space times possess a black hole and a white hole, with the black and white hole horizon intersecting in a compact 2-surface S. ESA

PULSE-TIMING STUDIES OF X RAY PULSARS Final Technical Report, 1 Jan. 1988 - 31 Dec. 1991
John E. Deeter and Paul E. Boynton 16 Apr. 1992 7 p
(Grant NAG8-695)
(NASA-CR-193778; NAS 1.26:193778) Avail: CASI HC A02/MF A01

The pulse-timing projects supported by NASA Grant NAG8-695 were motivated in large part by our long-standing interest in the physics of rotating neutron stars and particularly the variations in rotation due to internal and external fluctuating torques. For accretion-powered pulsars, observed as compact galactic X-ray sources, our work has been motivated by questions regarding the physics of matter accretion, mass transfer, and mass loss in these X-ray binary systems. For rotation-powered pulsars using X-ray, optical, and radio observations, we have examined the internal structure of neutron stars and mechanisms for secular spin-down. These issues are still central to the continuing process of understanding the complex behavior of these fascinating systems. The work supported by this grant is based mainly on Ginga observations of three pulsating X-ray sources. We observed two of these sources (Her X-1 and SMC X-1) within the framework of a NASA-ISAS program for U.S.-Japan collaborations to obtain and analyze Ginga observations. In addition, we joined with members of the Ginga team to apply our pulse-timing methods to PSR 0540-69 data obtained as a collateral benefit of the regular monitoring by Ginga of SN 1987A. In addition to these Ginga observations, there exist other relevant data on all three of these sources. The direction of our investigations has been affected by the necessity of including these supporting data in our analyses, and setting up the necessary collaborations has sometimes entailed extra work that was not anticipated in our proposals. Indeed, we have often taken the initiative in establishing these joint projects. Author (revised)

Perez (Computer Sciences Corp., Greenbelt, MD.), D. deWinter (Astronomical Inst., Amsterdam, Netherlands.), and P. S. The (Astronomical Inst., Amsterdam, Netherlands.) 6 Jul. 1993 14 p
(Contracts NAS5-32059; NASw-4756; NAG5-1783; NAG5-1740)
(NASA-CR-189312; NAS 1.26:189312) Avail: CASI HC A03/MF A01

We report detection of high velocity, accreting gas toward the Be star with IR excess and bipolar nebula, HD 45677. High velocity (+200 to +400 km/s), variable column density gas is visible in all IUE spectra from 1979-1992 in transitions of Si II, C II, Al III, Fe III, Si IV, and C IV. Low-velocity absorption profiles from low oscillator-strength transitions of Si II, Fe II, and Zn II exhibit double-peaked absorption profiles similar to those previously reported in optical spectra of FU Orionis objects. The UV absorption data, together with previously reported analyses of the IR excess and polarization of this object, suggest that HD 45677 is a massive, Herbig Be star with an actively accreting circumstellar, proto-planetary disk. THE 0.15 SECONDS NEAR-INFRARED IMAGING OF THE CENTRAL PARSEC OF THE GALAXY
A. Eckart, R. Genzel, R. Hofmann, B. J. Sams, and L. E. Tacconi-Garman Feb. 1993 25 p Submitted for publication Original contains color illustrations
(MPE-Preprint-239; ETN-93-94919) Copyright Avail: Issuing Activity (Max-Planck-Institut fuer Physik und Astrophysik, Giessenbackstrasse, 8046 Garching, Munich, Germany)

Deep 1.6 (H) and 2.2 micrometers (K) images of the central parsec of the Galaxy at a resolution of 0.15 seconds are presented. Most of the flux in earlier seeing limited images comes from about 340 unresolved stellar sources with K magnitudes less than or equal to 14. Most of the fainter stars in the central parsec are likely M rather and K giants. The infrared

Research Satellite (IRS) 16 and 13 complexes are resolved into about 25 and 6 sources, a number of which are probably luminous hot stars. The presence of a blue near infrared object at the position of the compact radio source Sgr A (star) is confirmed. The spatial centroid of the number distribution of compact sources is consistent with the position of Sgr A (star) but not with a position in the IRS 16 complex. The stellar surface density is very well fit by an isothermal cluster model with a core radius of 0.15 +/- 0.05 pc. The central stellar density is a few times 10 to the 7th power of the solar mass/cubed pc. Buildup of massive stars by collisional merging of lower mass stars and collisional disruption of giant atmospheres are very probable processes in the central 0.2 pc. ESA

THE MOLECULAR ENVIRONMENT OF S106 IR
J. S. Richer (Cambridge Univ., England.), R. Padman (Cambridge Univ., England.), D. Ward-Thompson (Cambridge Univ., England.), R. E. Hills (Cambridge Univ., England.), and A. I. Harris Jan. 1993 32 p Submitted for publication Sponsored in part by United Kingdom Science and Engineering Research Council, and Cambridge Univ., England
(MPE-Preprint-241; ETN-93-94921) Copyright Avail: Issuing Activity (Max-Planck-Institut fuer Physik und Astrophysik, Giessenbachstrasse, 8046 Garching, Munich, Germany)

Millimeter and submillimeter images of the bipolar nebula S106 are presented. The structure of the circumstellar material around the exciting star S106IR is investigated. The previously unresolved 'dust bar' is seen to break up into a number of sources: there is no evidence for a smooth disc about the star. There is a bright, previously undetected far infrared point source in the dust lane which is not detected at 20 micrometers, suggesting it is an extremely embedded object of moderate luminosity which may be a very young protostellar companion to S106 IR. DETERMINATION OF NITROGEN TO CARBON ABUNDANCE RATIOS FROM TRANSITION LAYER EMISSION LINES Final Report, Sep. 1990 - Aug. 1992
Erika Boehm-Vitense Aug. 1992 10 p
(Grant NAG5-1255)
(NASA-CR-191921; NAS 1.26:191921) Avail: CASI HC A02/MF A01

We have finished studying the nitrogen to carbon abundance ratios for stars with different effective temperatures T(sub eff) and luminosities using transition layer emission lines and using spectra available in the IUE archives. The N/C abundance ratio determinations using transition layer emission lines are as accurate as the photospheric abundance determinations as found by comparison of results obtained by both methods for the same stars. Our measurements confirm photospheric abundance determinations in regions of the HR diagram where they can be obtained. Our studies have extended the temperature range to higher temperatures. They have shown the exact positions in the HR diagram where the mixing due to the outer convection zones reaches deep enough to bring nuclear processed material to the surface. This occurs at effective temperatures which are higher by delta log T(sub eff) approximately 0.04 or roughly 400 K than expected theoretically. Since the depth of the convection zone increases rapidly with decreasing T(sub eff) this may indicate considerable overshoot beyond the lower boundary of the convection zone. Our N/C abundance ratio determinations from transition layer emission lines have confirmed that the actual enrichment observed for some cool giants is larger than expected theoretically, again indicating a larger degree of mixing in several stars either from below or from above. For the supergiants it probably indicates overshoot above the convective core in the progenitor main sequence stars. For the more massive giants this may also be the case, though we did not find a correlation between delta log N/C and the absolute magnitudes, but these are rather uncertain. As byproducts of these studies we also found anomalies in Si/C and N/C abundance ratios for F giants which can be understood as the relict of surface abundance changes for their main sequence progenitors due to diffusion. This anomaly disappears for G giants, for which the depths of the convection zones are apparently deep enough to wipe out these element separations (Bohm-Vitense 1992). Derived from text

ULTRAVIOLET OBSERVATIONS OF CLUSTERS OF WOLF-RAYET STARS IN THE SBm3 GALAXY NGC 4214 AND ULTRAVIOLET AND OPTICAL OBSERVATIONS OF LINER'S Final Technical Report
Alexei V. Filippenko 1992 4 p
(Grant NAG5-1800)
(NASA-CR-194307; NAS 1.26:194307) Avail: CASI HC A01/MF A01

The purpose of the grant was to obtain and analyze IUE (UV) and ground-based (optical) spectra of the central bar of NGC 4214, which contains several bright H II regions, in order to further explore the properties of the Wolf-Rayet stars in this galaxy. Several spatially distinct regions, with widely different equivalent widths of optical Wolf-Rayet lines, could be sampled by the large IUE entrance aperture. By using newly developed extraction techniques, the spectra of these H II regions could be isolated, and differences in their stellar populations would be systematically studied. Data were obtained with IUE in late February and early March, 1992. Some of the shifts were successful, but a few were not -- apparently the blind offset from the nearby star did not work equally well in all cases. Thus, the signal-to-noise ratio is somewhat lower than we had hoped. This necessitated a more careful extraction of the spectra of individual H II regions from the two-dimensional spectra. (A program that models the point spread function in the spatial direction was used to deblend the distinct H II regions.) The IUE data are currently being analyzed in conjunction with ground-based optical spectra. There appear to be obvious variations in the stellar population over angular scales of only a few arc seconds. The second part of the research performed under this grant was a continuation of a project that uses IUE (UV) and ground-based (optical) spectra to infer the physical conditions in Low-Ionization Nuclear Emission-Line Regions (LINER's). We have obtained spectra of a few key objects that cover a representative range in LINER continuum and emission-line properties. The overall goals are to (1) separate the emission into spatially distinct components, (2) establish whether the observed nuclear ultraviolet continua indicate sufficient photoionizing fluxes to account for the emission lines, (3) determine whether the nuclear emission can be explained by hot stars alone, (4) detect and measure the strengths of UV emission lines, and (5) search for systematic differences in the UV spectra of LINER's whose other properties differ in some respects. ROSAT AND OPTICAL OBSERVATIONS OF TWO X-RAY TRANSIENTS: MX 0836-42 AND GS 0834-430
T. Belloni, G. Hasinger, W. Pietsch, S. Mereghetti (Consiglio Nazionale delle Ricerche, Milan, Italy.), G. F. Bignami (Consiglio Nazionale delle Ricerche, Milan, Italy.), and P. Caraveo (Consiglio Nazionale delle Ricerche, Milan, Italy.) Nov. 1992 19 p Submitted for publication
(MPE-Preprint-237; ETN-93-94917) Copyright Avail: Issuing Activity (Max-Planck-Institut fuer Physik und Astrophysik, Giessenbachstrasse, 8046 Garching, Munich, Germany)

Two transient sources were detected in hard X-rays by several instruments at the end of 1990. Both sources were observed with Rosat in the all the sky survey and during the pointing phase. The positive detection of the sources in the Rosat pointing observations made possible to derive accurate positions for both sources. Optical images of the Rosat error boxes obtained with the European Southern Observatory new technology telescope are presented. Pulsations are clearly detected from GS 0834-430 with a period of 12.3203 +/- 0.0015s. The pulse profile is roughly sinusoidal with a 13 percent rms variation. The comparison with hard X-ray data and the possible nature of the sources are discussed. ESA

EGRET MISSION AND DATA ANALYSIS
Oct. 1992 10 p Submitted for publication
(MPE-Preprint-223) Avail: CASI HC A02/MF A01

Results of the Energetic Gamma Ray Experiment Telescope (EGRET) observations in the Compton Gamma Ray Observatory are presented. Data acquired on high energy gamma radiation above 30 MeV from the sun is discussed. The gamma radiation in the range around 100MeV was observed for at least 8 hours following the flare. Implications for the storage and release mechanisms of the primary particles with energy of typically a GeV implied by these gamma ray observations are discussed. Preliminary results from two observations of 3C 273 with the EGRET instrument aboard the Compton Observatory are reported. The 3C 273 ($z = 0.158$), an optically very bright quasar is a well known source in all energy regimes ranging from the radio, infrared, optical, and ultraviolet up to the x-rays. For individual titles, see N94-19463 through N94-19464.

(Grant BMFT-50-QV-90955)
Avail: CASI HC A01/MF A01

On 11 Jun. 1991, the Energetic Gamma Ray Experiment Telescope (EGRET) on the Compton Gamma Ray Observatory (Comption-GRO) observed high energy gamma radiation above 30 MeV from the Sun following an intense flare around 2:00 Universal Time (UT). After the decay of most of the x ray flare, which caused nearly complete deadtime losses in EGRET, high energy emission was registered during the interval from about 3:30 UT to at least 10:30 UT. Gamma rays were detected up to energies above 1 GeV. The solar origin of the emission is assured by the time profile of the gamma ray count rate and by time resolved sky maps, which show a clear maximum at the position of the sun. The gamma ray lightcurve of the flare can be described with two components: a fast decaying emission with an e-folding time constant of about 25 minutes and a slow decay with about 255 minutes. There are indications for a spectral evolution with time, such that the emission below 100 MeV fades away earlier than the 100 to 300 MeV radiation, roughly in the time scale of the fast component. The spectrum of the flare can be fitted with a composite of a proton generated pion neutral spectrum and an electron bremsstrahlung component. The latter can be identified with the fast decaying component of the lightcurve. ESA

(Grant BMFT-50-90955)
Avail: CASI HC A01/MF A01

The quasar 3C 273 was detected by the Compton Observatory Satellite (COS-B) in the 1970's. Energetic Gamma Ray Experiment Telescope (EGRET) observations of this sky region in Jun. and Oct. 1991 revealed a flux from 3C 273 lower than that measured by COS-B. The flux observed by EGRET in the June period is approximately 0.0000003/sq cm(exp -2) sec(exp -1) for energies greater than 100 MeV. During the Oct. observation it appears to be even lower. For the first observation a preliminary spectrum was derived which was a photon index of 2.4. ESA

[ROSAT AND IRAS OBSERVATIONS]
Sep. 1992 9 p Presented at ESO/EIPC Workshop on Star Forming Galaxies and Their Interstellar Medium, Elba, France, Jun. 1992 Submitted for publication
(MPE-Preprint-231; ETN-93-94614) Copyright Avail: Issuing Activity (Fachinformationszentrum Karlsruhe, 7514 Egeenstein-Leopoldshafen 2, Germany)

Rosat X-ray observations of the 30 Dor giant H2 region and the sample of the Infrared Astronomy Satellite galaxies observed in the Rosat survey are reported. The evaluation of the contribution of the stellar component to X-ray luminosity of the 30 Dor region shows that the presence of a hot interstellar medium is necessary for explaining the total X-ray emission. Concerning starburst or central activity, three issues may be highlighted: the results reveal that such galaxies reach exceptionally high X-ray luminosities; the question on whether the abnormally luminous objects could fit arises; and in order to explain X-ray luminosities for starburst galaxies it is necessary to develop detailed population synthesis models. For individual titles, see N94-19527 through N94-19528.

A well defined sample of IRAS (Infrared Astronomy Satellite) galaxies were studied from the Rosat All Sky Survey data. Among the detections are Seyfert 2, LINER, and Starburst galaxies with X-ray luminosities more than an order of magnitude higher than observed before. The All Sky Survey carried out with the Rosat satellite offers an opportunity to examine the X-ray characteristics of particular classes of object. A comparison of the infrared and X-ray properties of galaxies is of interest regarding the relative importance of star formation processes and central active nuclei. A statistical investigation of the X-ray emission for IRAS galaxies is reported. Subsequent optical spectroscopy of the most luminous cases reveals that outstanding objects in various categories were detected. ESA

Copyright Avail: Issuing Activity (Fachinformationszentrum Karlsruhe, 7514 Egeenstein-Leopoldshafen 2, Germany)

The Rosat PSPC (Position Sensitive Proportional Counter) pointed observations were used for a morphological and spectral study of the 30 Dor region. 30 Dor region is a high surface brightness giant H2 region located in the Large Magellanic Cloud. Its position in the sky, out of the galactic plane, together with the fact that it is the closest giant extragalactic H2 region renders it an ideal place to study the physics of such a star forming region. A contour map is presented and the contribution of the stellar component of the X-ray luminosity is evaluated. It is important to understand whether the diffuse X-ray emission could be attributed entirely to the stellar population. Otherwise the contribution of a hot interstellar medium would be required. THE SOUTH AFRICAN ASTRONOMICAL OBSERVATORY Report for period ending 31 Dec. 1992
1992 49 p
(SAAO-17; ISBN 0-9583227-3-2) Avail: CASI HC A03/MF A01

The South African Astronomical Observatory report for the year ending 31 Dec. 1992 is presented. Areas of research include: galaxies and quasars; Magellanic clouds; galactic structure; star clusters and associations; ground-based observations of celestial x ray sources; pulsating variables; binary star phenomena; stellar astrophysics; photometric standards and photometry; and Sutherland site characteristics. Telescopes and instruments are described. In addition, symposiums, summer school, and other programs are described. CASI

UNIFIED NLTE MODEL ATMOSPHERES INCLUDING SPHERICAL EXTENSION AND STELLAR WINDS, 4: IMPROVED LINE TRANSFER AND WIND CONTAMINATION OF H, He PROFILES

F. Sellmaier (Technische Univ., Munich, Germany.), J. Puls (Technische Univ., Munich, Germany.), R. P. Kudritzki (Technische Univ., Munich, Germany.), A. Gabler (Technische Univ., Munich, Germany.), R. Gabler (Technische Univ., Munich, Germany.), and S. A. Voels (Technische Univ., Munich, Germany.) Nov. 1992 16 p Submitted for publication
(MPA-905; ETN-93-94912) Copyright Avail: Issuing Activity (Max-Plank-Institut fuer Physik und Astrophysik, Karl-Schwarzchild-Strasse 1, 8046 Garching, Germany)

The treatment of NLTE (Nonlocal Thermodynamic Equilibrium) multilevel radiative transfer in the presence of sub and supersonic velocity fields of unified model atmospheres is discussed. The solution of the line transfer in the comoving frame is obtained via accelerated lambda iteration. This method yields excellent convergence also in cases, where many strong, intermediate and weak lines have to be treated simultaneously and where other operators failed to achieve convergencve. This algorithm is used to investigate the contamination of photospheric hydrogen and helium absorption lines by emission of the stellar wind. It is found that in the case of early O-supergiants close to the Eddington-limit wind contamination is significant and leads to systematic errors in the determination of stellar parameters, if purely hydrostatic, plane parallel NLTE models are used for the spectral analysis. A specific behavior of the mean line intensity, namely a local minimum around the sonic point, is discussed. ESA

Observations of reddened stars in the Small Magellanic Cloud (SMC) indicate that the interstellar grains in that galaxy may show distinct optical properties from those in the Galaxy. In a careful study of three SMC objects, Prevot showed that the UV extinction law in the SMC is almost linear with inverse wavelength and the 2200A feature is generally absent. The first results of a program to determine the wavelength dependence of the interstellar optical polarization in the SMC indicate that highly polarized objects are scarce. Our study has uncovered, however, several objects with optical polarization greater than around 1 percent: AZV 126, AZV 211, AZV 221, AZV 398, and AZV 456. The latter two have already had their UV extinction law determined. Our aim was to obtain International Ultraviolet Explorer (IUE) data and determine the UV extinction law also for AZV 126, AZV 211, and AZV 221. AZV 456, which presents a 'galactic' extinction law, has a 'normal' value for its wavelength of maximum polarization, lmax, while AZV 398, which shows a 'typical' SMC extinction curve, shows a somewhat smaller value for such wavelength. AZV 126, AZV 211, and AZV 221 all present extreme small values of lmax but had not had its extinction curve in the W determined yet. We therefore aimed at ultimately determining the extinction law in the direction of these three objects. Such results, in combination with the optical polarization data, have an important bearing on constraining the composition and size distribution of the interstellar dust in the SMC. In the last report, the images gathered with IUE, their processing, and the extinction curves derived from them were described. Such extinction curves and the theoretical models developed to interpret the SMC extinction and polarization data are discussed. Details are presented in an enclosed preprint. The activities in our ongoing polarimetric program of determining the magnetic field structure of the SMC and the images collected at Cerro Tololo Interamerican Observatory during the period are also briefly described. Other activities are also described. Author (revised)

OBSERVATIONS OF COMETS WITH THE IUE Final Report, 1 Jul. 1979 - 30 Sep. 1992

Paul D. Feldman 1992 2 p
(Grant NsG-5393)
(NASA-CR-193652; NAS 1.26:193652) Avail: CASI HC A01/MF A01

Comet Shoemaker-Levey was observed on several dates in June and July 1992. Comparison of the relative brightness of a given emission between IUE and the Hubble Space Telescope (HST) Faint Object Spectrograph apertures provides information about the spatial distribution of the emitting species from which the excitation mechanisms can be inferred. The comparison between the HST and IUE spectra was abetted by the fact that comet Shoemaker-Levy did not show any indication of short-term temporal variability. Comet Swift-Tuttle is a moderately bright periodic comet that shows relatively strong temporal variations on a scale of hours and days. IUE observations of this comet were made in November 1992 and the detected variability was reported on IAU circular 5663. Coordinated ground-based observations led to the first detection of the CI(lambda)9850 transition that complements CI(lambda)1931 observed by the IUE short wavelength spectrograph and provides a means of indirectly determining the CO abundance. We review some of the recent arguments as to why the r-process is thought to be associated with supernovae and how the high-temperature, high-entropy inner region of a core-collapse supernova is an ideal r-process site. We present preliminary extensions of our earlier work on the formation of the high-entropy 'bubble' that describe more accurately its late-time evolution and the ejection of the neutrino-energized wind from the surface of the nascent neutron star. This site leads naturally to a distribution of temperature, density, neutron excess, and entropy for material ejected at different times in the wind as required by Solar abundances. We present simple analytic expressions which approximate these distributions. This site also predicts an amount of reprocess material ejected per event in agreement with simple galactic evolution arguments. However, it is not yet clear whether the entropy in this model is high enough (or the electron fraction is low enough) to produce an optimum fit to the Solar r-process abundance curve and additional mechanisms may be required to increase the entropy per baryon. We conclude with a discussion of nuclear measurements which would help to probe this r-process environment. DOE

SPACE AND TIME AS OUTCOME OF DECOHERENCE IN AN EXPANDING UNIVERSE

G. F. Chew Nov. 1992 10 p
(Contract DE-AC03-76SF-00098)
(DE93-016199; LBL-33027) Avail: CASI HC A02/MF A01

This paper discusses a quantum-cosmological model. The model avoids a priori classical ideas, even spacetime, by invoking a pair of established general principles that relate to each other: (1) Parameter largeness can endow physical approximations with accuracy; and (2) Coherent states labeled by large parameters provide a quantum basis for classical ideas. Generally speaking, the technical term 'coherent state' refers to a special category of Hilbert-space vector that relates to some Lie group unitarily representable within Hilbert space. In the Hilbert space of the quantum-cosmological model discussed, labels on basis vectors lack physical interpretation, but groups unitarily represented include not only the Heisenberg-Weyl group but the Poincare group. Corresponding large-parameter coherent states are interpretable in terms of events and particles: a quantam-based meaning of classical objective reality in 3+1 spacetime is thereby achievable. DOE

The Einstein Observatory (HEAO-2, launched November 13, 1978) achieved radically improved sensitivity over previous x-ray missions through the use of focusing optics which simultaneously afforded greatly reduced background and produced true images. During its 2.5-yr mission, the Einstein X-Ray Telescope was pointed toward some 5,000 celestial targets, most of which were detected, and discovered several thousand additional 'serendipitous' sources in the observed fields. This catalog contains contour diagrams and source data, obtained with the imaging proportional counter in the 0.16 to 3.5 keV energy band, and describes methods for recovering upper limits for any sky position within the observed images, The main catalog consists of six volumes (numbered 2 through 7) of right ascension ordered pages, each containing data for one observation. Along with the primary documentaion describing how the catalog was constructed, volume 1 contains a complete source list, results for merged fields, a reference system to published papers, and data useful for calculating upper limits and fluxes. Most of the activity of the Working Group and Task Group of the IAU during these three years has been centered on the nomenclature of Neptune's satellites and rings as revealed by the Voyager spacecraft. The emphasis is now shifting to Venus, in preparation for the detailed radar mapping of that planet begun by the Magellan spacecraft in August 1990.

Approval has been asked for nomenclature of the Earth's moon, Venus, Mars, and Triton features as well as 4 other Neptune satellites and three Neptune rings. Derived from text

COMPUTATIONAL ASTROPHYSICS: PULSATING STARS
C. G. Davis 1993 10 p Presented at the 2nd International Conference on Computational Physics, Beijing, China, 13-17 Sep. 1993
(Contract W-7405-eng-36)
(DE93-018369; LA-UR-93-2541; CONF-9309176-2) Avail: CASI HC A02/MF A01

The field of computational astrophysics in pulsating star studies has grown considerably since the advent of the computer. Initially calculations were done on the IBM 704 with 32K of memory and now we use the CRAY YMP computers with considerably more memory. Our early studies were for models of pulsating stars using a 1D Lagrangian hydrodynamic code (SPEC) with radiation diffusion. The radiative transfer was treated in the equilibrium diffusion approximation and the hydrodynamics was done utilizing the approximation of artificial viscosity. The early calculations took many hours of 704 CPU time. Early in 1965 we decided to improve on the usual treatment of the radiative transfer used in our codes by utilizing the method of moments, the so-called variable Eddington approximation. In this approximation the material energy field is uncoupled from the radiation energy field and the angular dependence is introduced through the Eddington factor. A multigroup frequency dependent method may also be applied. The Eddington factor is determined by snapshots of the stars structure utilizing a y-line approximation. The full radiative transfer approximation appears necessary in order to understand the light curves for W Virginia stars and may be important for the light curves of RR Lyrae stars. A detailed radiative transfer method does not appear to be necessary for the understanding of Cepheid light curves. A recent improvement to our models for pulsating stars is in the use of an adaptive mesh scheme to resolve the sharp features in the nonlinear hydrodynamic structure. From these improved structures, better analysis of the radius, velocity, and light curves could be obtained. DOE

SEARCH FOR LUNAR WATER ICE IN COMETARY IMPACT CRATERS M.S. Thesis
Steve S. Brandt Aug. 1993 64 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(AD-A270130; AFIT/CI/CIA-93-138) Avail: CASI HC A04

The search for water on the moon began with the introduction of the idea of polar cold traps as a region where large deposits of water could be stored. James Arnold (1979) presented this hypothesis after reviewing many methods by which water was delivered to the moon. The principle method is cometary impacts. Carl Sagan and Christopher Chyba (1990) further stated that enough water was delivered to the earth by comets to account for the volume of the terrestrial ocean. We investigate the possibility that large amounts of water are deposited in the floors of cometary impact craters. The impact of a 1-2 km comet brings over 10(15) g of water to the lunar surface. If 1% of the mass survives the impact to be trapped in the crater and 1% of that is retained over the 3-4 billion years required for it to be present today, there will still be a 10(exp 10) g of H2O per impact. With the impact ofa few hundred comets, up to 10(exp 12) g of H2O is trapped in lunar craters. DTIC

Since 1974, the neutrino processes mediated by neutral currents have been a part of supernova (SN) modeling calculations. In this report, only present day SN calculations will be discussed. First, I will give a brief description of the SN computer model and an outline of the explosion process as depicted by that model. Then, I will discuss the role weak neutral current (WNC) processes play in this explosion process. Finally, I will discuss inelastic scattering of tau neutrinos by heavy elements in WNC processes or Earth as a mechanism for measuring the mass of tau neutrino. DOE

DYNAMICAL BEHAVIOR OF OCTAHEDRITE FROM THE HENBURY METEORITE
M. D. Furnish, G. T. Gray, III (Los Alamos National Lab., NM.), and J. L. Remo (Quantametrics, Inc., Saint James, NY.) 1993 5 p Presented at the 14th International Conference of the International Association for the Advancement of High Pressure Science and Technology, Colorado Springs, CO, 27 Jun. - 2 Jul. 1993
(Contract DE-AC04-76DP-00789)
(DE93-018834; SAND-93-0457C; CONF-930676-26) Avail: CASI HC A01/MF A01

A suite of dynamic property measurements and characterization studies on an iron-nickel single crystal from the Henbury octahedrite containing Widmanstaetten intergrowths of kamacite and taenite (initial density 7.810) has been performed. These measurements include six impact tests (wave profile compression/release) over the stress range 2-20 GPa, metallography, quasi-static and Hopkinson bar mechanical testing, and ultrasonic mapping and sound velocity measurements. A cryogenic impact test was included to evaluate effects of a brittle/ductile transition which has been reported at 200 K. Temperature sensitivity of the dynamic behavior was measured at high and low strain rates. The impact test results show loading strength (HEL), Hugoniot, and alpha yields epsilon transition signatures to be similar to those for Armco iron and do not show evidence for a ductile-brittle transition at these extremely high strain rates. Metallographic analyses, quasi-static, and Hopkinson bar testing suggest that the material is in a work-hardened state and that kamacite properties dominate the bulk octahedrite properties. DOE

SPECTROPHOTOMETRY OF EMISSION-LINE STARS IN THE MAGELLANIC CLOUDS Final Report
Bruce Bohannan 10 Sep. 1990 4 p
(Grant NAG5-833)
(NASA-CR-194082; NAS 1.26:194082) Avail: CASI HC A01/MF A01

The strong emission lines in the most luminous stars in the Magellanic Clouds indicate that these stars have such strong stellar winds that their photospheres are so masked that optical absorption lines do not provide an accurate measure of photospheric conditions. In the research funded by this grant, temperatures and gravities of emission-line stars both in the Large (LMC) and Small Magellanic Clouds (SMC) have been measured by fitting of continuum ultraviolet-optical fluxes observed with IUE with theoretical model atmospheres. Preliminary results from this work formed a major part of an invited review 'The Distribution of Types of Luminous Blue Variables'. Interpretation of the IUE observations obtained in this grant and archive data were also included in a talk at the First Boulder-Munich Hot Stars Workshop. Final results of these studies are now being completed for publication in refereed journals. Derived from text

The spatial and temporal development of protoplanetary accretion disks is investigated. Flat, homogeneous, mixed gas/dust disks with interstellar elementary frequencies, whose motion is estimated by the gravitation field of the central object, are considered as a starting point. The existence of the turbulent viscosity was assumed with the alpha parameterization for determining spectral energy distribution of radiation emitted at disk surface. Local vertical disk structure was estimated with the approximation of gray atmospheres and allowed the coupled system to be self consistently treated. One dimensional, radial time development calculations show that the radial surface temperature variation due to dust opacity modification is only transient. If preferential particle growth is only considered in main condensation zones, radial development calculations show a strong increase of column thickness in radially limited areas. Two dimensional development calculations were carried out in order to estimate radial and axial structures of protoplanetary accretion disks; a numerical process was introduced in a particle simulation for the treatment of shear viscosity. In a local simulation, a cutting of a viscous Kepler disk was considered and the eigen gravitation was taken into account, so that the ring instability predicted with a linear theory is found. ESA

X-ray data, both detections and upper limits, from the Rosat all sky survey for most known M dwarfs later than type M5 are presented. Selected Rosat pointed observations of some of these stars are included. These data are compared to similar data for early M dwarfs in an attempt to probe the nature of the magnetic dynamo and coronal heating mechanism for the very late M dwarfs, which are presumably totally convective. The results indicate that late M dwarfs can have coronae which are just as active as those for the early M dwarfs and that coronal heating efficiency for 'saturated' stars does not drop at spectral type M6. DETAILED ANALYSIS OF LOW ENERGY PLASMA DATA UNDER THE VOYAGER URANUS DATA ANALYSIS PROGRAM Final Report, 1 Oct. 1987 - 30 Sep. 1991
Ralph L. McNutt, Jr. (Visidyne, Inc., Burlington, MA.), John W. Belcher, Frances Bagenal, and John D. Richardson 1992 8 p
(Grant NAGw-1209)
(NASA-CR-193668; NAS 1.26:193668) Avail: CASI HC A02/MF A01

Research effort included the PLS data analysis program where modifications to the data fitting procedure and elimination of possible noise and electron contamination were made. The analysis code corrections were used in checking the Neptune data gathered during the Voyager 2 encounter and for analyzing selected plasma spectra from the warm Io torus. A major task accomplished was the summary of Uranus-related research in the U.S. National Report to the International Union of Geodesy and Geophysics for the 1987 - 1990 quadrennium. A limited amount of work was accomplished on assessing the Pedersen conductivity of the ionosphere and comparing it with inferred values from shielding by the Uranian ring current. Under this grant there has been a great deal of effort expended on identifying and classifying plasma waves and oscillations in the magnetosheath and solar wind downstream from Uranus. Large amplitude oscillations in plasma parameters are found in the magnetosheath, with density changes of up to a factor of ten occurring on times scales of minutes. New algorithms developed for analyzing the inbound bow shock crossing of Neptune will probably be applied to a more detailed analysis of the Uranus shock in the near future. Derived from text

(NASA-CR-194295; U-of-Iowa-93-7; NAS 1.26:194295) Avail: CASI HC A03/MF A01

The primary types of plasma waves observed in the vicinity of the planets Venus, Mars, Earth, Jupiter, Saturn, Uranus, and Neptune are described. The observations are organized according to the various types of plasma waves observed, ordered according to decreasing distance from the planet, starting from the sunward side of the planet, and ending in the region near the closest approach. The plasma waves observed include: electron plasma oscillations and ion acoustic waves; trapped continuum radiation; electron cyclotron and upper hybrid waves; whistler-mode emissions; electrostatic ion cyclotron waves; and electromagnetic ion cyclotron waves. VENUS LOWER THERMOSPHERE STUDIES Final Technical Report, 1 Oct. 1990 - 31 Dec. 1992
Stephen W. Bougher 31 Dec. 1992 5 p
(Grant NAG2-679)
(NASA-CR-193546; NAS 1.26:193546) Avail: CASI HC A01/MF A01

Studies undertaken in this project have sought to understand lower thermospheric structure and dynamics (less than or equal to 145 km), particularly the processes responsible. This is a region just below the reach of in-situ instruments onboard PVO (Pioneer Venus Orbiter) during the first few diurnal cycles. PVO remote airglow observations (nitric oxide, O2, visible, O 1304A) have been coupled with ground-based observations (CO densities, winds, temperatures, O2 IR nightglow) to address the behavior of lower thermospheric winds and chemistry over 95 to 150 km. This interpretation of PVO and related data is accomplished by using the NCAR Venus thermospheric general circulation model (VTGCM) (Bougher et al., 1988; 1990). This model has been modified over the last two years to improve its ability to calculate O, CO, and O2 densities, temperatures, nightglow, and subsolar-to-antisolar and zonal winds over 95 to 150 km (Bougher and Borucki, 1992). Our VTGCM studies show that: (1) O2 visible and IR nightglow distributions can be used to trace lower thermosphere / upper mesosphere winds over 100-130 km. Typically, weak zonal winds (less than or equal to 25 m/sec) and nightglow maximum patches near 0100 LT prevail. Occasionally, strong zonal winds (30-60 m/sec) and airglow patches peaking near 0300 LT characterize the Venus lower thermosphere. (2) It is clear that the dynamics of the Venus 90-130 km region is highly variable on time scales as short as an hour. This is most likely due to the time variable nature of upward propagating gravity waves, which grow in amplitude and eventually break. The resulting turbulence gives rise to local time variable eddy diffusion and momentum drag, both of which strongly impact global density and nightglow distributions. (3) The oxygen chemistry (O, O2, etc.) over 90-120 km is strongly dependent on HO(x) and CLO(x) tracer species that must be properly included in any coupled chemical dynamical model. (4) The density profiles of light species (O, CO, N, He) are strongly affected by large-scale transport by the winds. Strong eddy diffusion is not a suitable model parameterization for approximating these light species, especially for extrapolation into the region below 140 km where PVO in-situ data is lacking. Instead, the fully coupled chemical dynamical VTGCM model should be used to improve estimates of densities within the VTS3 empirical model (Hedin et al., 1983) below 140 km. Derived from text

(Contract N00014-90-J-1466)
(AD-A269495) Avail: CASI HC A03/MF A01

This performance report covers work accomplished under ONR Grant N00014-90-J-1466 related to the radiation environment in near-Earth space. The goal of the research is to measure and describe, quantitatively, the Geospace radiation environment in which men and spacecraft must survive and function. The tools for this investigation are the data returned by the ONR-602 and ONR-604 experiments, both flown under the auspices of ONR and the Air Force Space Test Program, augmented by correlative databases of both space-based and ground-based data. The investigation involves data analysis, modeling and applications to a variety of space equipment and environments. This report builds upon the detailed Technical Report (Fall, 1992) and the previous performance reports. For the current period, the principal effort was in the analysis of the solar energetic particle events that occurred during the CRRES mission, focusing upon the helium component. In addition, we have looked at the galactic quiet-time helium to help determine the modulation level during the CRRES Mission. DTIC

RADIAL EVOLUTION OF THE SOLAR WIND TURBULENCE WITH APPLICATION TO CHARGED PARTICLE TRANSPORT Final Technical Report
Charles W. Smith 29 Jul. 1991 6 p
(Grant NAG2-553)
(NASA-CR-194081; NAS 1.26:194081) Avail: CASI HC A02/MF A01

The proposed research efforts funded by the Pioneer-Venus Guest Investigator Grant to the Bartol Research Institute center on a study of the radial and temporal variation of the large-scale interplanetary magnetic field (IMF) and include a study of the radial variation of the observed north-south asymmetry of the IMF spiral based on the previous results of Bieber (1988). The preliminary results of Bieber demonstrated that at Earth orbit there exists an asymmetry between the yearly average winding angles of toward and away sector fields that can be as large as 10 degrees. The Bieber (1988) analysis employed the NSSDC omnitape data set of 1 AU measurements. When the observed asymmetry is related to the state of the solar magnetic dipole, it is possible to conclude that the IMF north of the heliospheric current sheet is more tightly wound than the IMF spiral south of the current sheet. The average difference in the winding angle as measured over a 21 year period spanning 1965 through 1985 was 3.1 degrees + 1.1 degrees. The Bieber analysis was able to rule-out several possible sources for the observed behavior including a possible asymmetry in the solar wind speed or the observed hemispherical dependence of solar rotation. The object of this research was to extend this previous result to include observations within the inner and outer heliosphere, to examine the radial dependence of the reported asymmetry, and to better resolve the possible source of the observations. The Pioneer-Venus Orbiter has proven to be the perfect monitor for the inner heliospheric observations. It has provided 9 years of continuous observations at a fixed heliocentric distance (except for those periods when the spacecraft was within the region of space where the magnetic field is influenced by the presence of the planet). Comparisons between the 1 AU observations recorded on the NSSDC omnitape and the 0.7 AU observations of the Pioneer-Venus Orbiter have greatly improved our understanding of the IMF winding angle asymmetry. Further comparison with outer heliospheric measurements have proven interesting, although less conclusive. Derived from text

INVESTIGATION OF THE RELATIVE ABUNDANCE OF HEAVY VERSUS LIGHT NUCLEI IN PRIMARY COSMIC RAYS USING UNDERGROUND MUON BUNDLES Ph.D. Thesis
N. Sundaralingam Jun. 1993 152 p
(Contract DE-FG02-92ER-40702)
(DE93-017601; DOE/ER-40702/3) Avail: CASI HC A08/MF A02

We study multiple muon events (muon bundles) recorded underground at a depth of 2090 mwe. To penetrate to this depth, the muons must have energies above 0.8 TeV at the Earth's surface; the primary cosmic ray nuclei which give rise to the observed muon bundles have energies at incidence upon the upper atmosphere of 10 to 10(exp 5)TeV. The events are detected using the Soudan 2 experiment's fine grained tracking calorimeter which is surrounded by a 14 m x 10 m x 31 m proportional tube array (the 'active shield'). Muon bundles which have at least one muon traversing the calorimeter, are reconstructed using tracks in the calorimeter together with hit patterns in the proportional tube shield. All ionization pulses are required to be coincident within 3 microseconds. A goal of this study is to investigate the relative nuclear abundances in the primary cosmic radiation around the "knee" region (10(exp 3) - 10(exp 4) TeV) of the incident energy spectrum. Four models for the nuclear composition of cosmic rays are considered: The Linsley model, the Constant Mass Composition model (CMC), the Maryland model, and the Proton-poor model. A Monte Carlo which incorporates one model at a time is used to simulate events which are then reconstructed using the same computer algorithms that are used for the data. Identical cuts and selections are applied to the data and to the simulated events. DOE

WIDGET: A DATA ACQUISITION SYSTEM FOR A BALLOON BORNE SI PARTICLE CALORIMETER
A. Colavita, F. Aversa, S. Venkataraman, P. Picozza, F. Fratnik (Italian National Inst. of Nuclear Research, Tor Vergata.), and P. Battaiotto (La Plata Univ., Argentina.) Apr. 1993 8 p
(DE93-624668; IC-93/64) Avail: CASI HC A02/MF A01 (US Sales Only)

We describe Widget, a complete data acquisition system (DAS) designed for a balloon-borne calorimeter using silicon strip detectors. The design includes a general purpose CPU as well as five to twenty Digital Signal Processors in order to control the acquisition of the data. This local intelligence also allows the instrument to re-calibrate itself, to perform calculations on the data, and to control the functionality of the instrumentation. The DSP's filter the data to avoid overflowing the radio link to ground. In principle, the system could control the instruments, without direct intervention from the ground, on flights with durations of several days. DOE

(Grant NAG8-590)
(NASA-CR-193615; NAS 1.26:193615) Avail: CASI HC A01/MF A01

The Final Technical Report on a number of related investigations on the physics of high energy emission from active galactic nuclei, such as Seyfert galaxies and quasi-stellar objects is presented. The chief conclusions of the work are briefly described, and citations to the papers supported by this grant and published in the refereed scientific literature are provided. Areas of research included: 'warm' galaxies observed in x rays; x ray/infrared correlations in galaxies; the contribution of active galaxies to the cosmic x ray background radiation; and an unusual x ray emitting starburst galaxy. SCIENTIFIC STUDIES IN ASSOCIATION WITH THE SHUTTLE SOLAR BACKSCATTER ULTRAVIOLET (SSBUV) PROJECT Semiannual Progress Report, 1 Jan. - 30 Jun. 1993
John E. Frederick 30 Jun. 1993 52 p
(Grant NAG5-873)
(NASA-CR-193404; NAS 1.26:193404) Avail: CASI HC A04/MF A01

During the past reporting period efforts focused on performing detailed comparisons between measurements made by the SBUV/2 V instruments carried on NOAA-9 and NOAA-11 and the first three flights of the Shuttle Solar Backscatter Ultraviolet (SSBUV) project. The quantities to be compared are the measurables, being the ratio of emergent radiance (I) in the vertical direction to the incoming solar irradiance (F). The backscatter albedo, A(w,j), was defined by: A(w,j) = I(w,j)/F(w,j) where w = 1,2,..., 12 refers to wavelength, and j indicates the instrument and flight on which the data were obtained. The comparisons to be made are NOAA-9 to SSBUV-1, NOAA-11 to SSBUV-2, and NOAA-11 to SSBUV-3. For the comparisons the N-values contained in the data files supplied by GSFC were converted to albedos via: A(w,j) = 10(exp N(w,j)/100). The comparisons described were designed to characterize the differences between the NOAA and SSBUV data sets. Author (revised)

ENERGY LOSS MEASUREMENT OF COSMIC RAY MUONS [MESSUNG DES ENERGIEVERLUSTES VON MYONEN DER KOSMISCHEN STRAHLUNG]

Joseph Unger Feb. 1993 78 p In GERMAN
(KfK-5158; ETN-93-95080) Avail: CASI HC A05/MF A01

Measurements of energy losses of high energy cosmic ray muons in an ionization chamber are presented. The chamber consists of 16 single gap layers, and the liquid tetra methyl silane (TMS) was used as active medium. The absolute energy loss and the relativistic rise were measured and compared with theoretical calculations. The importance of the measurements within the framework of the cosmic ray experiment KASCADE (German acronym for Karlsruhe Shower Core and Array Detector) are discussed, especially with respect to energy calibration of hadrons and high energy muons above 1 TeV. ESA

MEASUREMENT OF THE ENERGY OF HORIZONTAL COSMIC RAY MUONS Thesis - Karlsruhe Univ. [MESSUNG DER ENERGIE VON HORIZONTALEN MYONEN DER KOSMISCHEN STRAHLUNG]

Michael Gettert Mar. 1993 102 p In GERMAN
(KfK-5163; ETN-93-95081) Copyright Avail: CASI HC A06/MF A02

An experiment in which the energy of cosmic ray muons is determined by measuring the electron positron pairs that they radiate off when passing through matter is described. The detector is a stack of lead converters interspersed with ionization chambers for particle detection. The chambers use as active medium the liquid tetra methyl silane (TMS). The radiated quanta initiate electromagnetic cascades in the lead and are recognized due to the characteristic shower development. The energy spectrum of horizontal muons is presented and from this the primary cosmic ray spectrum is deduced. ESA

MEASUREMENTS OF COSMIC RAY MUONS WITH MULTI-WIRE PROPORTIONAL CHAMBERS WITH A PROTOTYPE SETUP FOR KASCADE [MESSUNGEN DER MYONEN DER HOEHENSTRAHLUNG MIT VIELDRAHTPROPORTIONALKAMMERN AN EINEM PROTOTYPAUFBAU FUER KASCADE]

Hermann-Josef Mathes Mar. 1993 77 p In GERMAN
(KfK-5173; ETN-93-95082) Copyright Avail: CASI HC A05/MF A01

The cosmic ray experiment KASCADE (German acronym for Karlsruhe Shower Core and Array Detector) designed for measuring simultaneously the electromagnetic, muonic, and hadronic components of extensive air showers to determine the primary cosmic ray mass composition in the energy range 300 Tev to 100 Btu is described. Beneath the central hadron calorimeter of this experiment, measurements of muons with an energy threshold of 2 GeV are planned. Four large position sensitive multi-wire proportional chambers were brought into operation after the required supply units were installed. This test setup was extended with a trigger system for cosmic ray muons. The trigger allows muon detection efficiencies and the spatial resolution of the chambers to be measured. To enhance the content of multiple track events in the data a trigger system for air showers was required. A small detector array was installed with the possibility to determine roughly the arrival direction of the shower. For that configuration of chambers an algorithm for track reconstruction was developed. It led to satisfying results for single and double track events. It is demonstrated that the determination of hits with only one chamber is influenced by the ambiguities resulting from the chamber layout. In addition this effect is shown to be enhanced by electronic noise and electromagnetic background. An extension with a time measuring system of an accuracy better than 2 ns allowed the arrival times of the muons to be measured for some events. The resulting arrival time distribution could be qualitatively understood. ESA

PARTICLE INDUCED BACKGROUND BY ROENTGEN SATELLITES Thesis - Tech. Univ. Munich [TEILCHENINDUZIERTER HINTERGRUND BEI ROENTGENSATELLITEN]

Rudolf Danner 20 Jan. 1993 90 p In GERMAN Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(MPE-242; ETN-93-95097) Copyright Avail: CASI HC A05

Detailed results concerning a possible particle induced background in highly eccentric orbital trajectories for future X-ray satellite missions using charge coupled device detectors are presented. The different components were characterized and an order of magnitude was given. Several methods were proposed for the reduction of isolated component effects. Existing numerical models of the radiation belt for electrons and protons were examined and assessed. Background events, which are caused by minimal ionizing particles, could be recognized by appropriate discrimination methods, such as neighbor anticoincidence, and were differentiated from X-ray events. Electrons scattered by the mirrors on the detectors are ascertained to strongly contribute to the background, so that some scientific observations can be severely limited or even impossible. An accumulation of background sources by induced radioactivity is found to be negligible in the sensitive energy area of the detector. ESA

[ACTIVITIES REPORT OF THE RUTHERFORD APPLETON LABORATORY] Annual Report, 1992

Andy Kurzfeld, ed. and Jacky Hutchinson, ed. 1992 91 p Original contains color illustrations
(ETN-93-94555) Avail: CASI HC A05/MF A01

The annual report of this scientific establishment, whose facilities support work across many fields of science and engineering including physics, chemistry, space, materials, the environment, microelectronics, and information technology, is presented. During 1992 the emphasis of the particle physics department changed from building and commissioning the most challenging detectors ever designed for particle physics research to analyzing the massive volumes of data that they produce. The laboratory's flagship facility, Isis, operated with unprecedented reliability and intensity completing more experiments and serving more users than ever before. The central laser facility's SPRITE laser became the world's brightest ultraviolet laser source opening up exciting new possibilities in areas of physics involving very high electric field interactions with matter. The space science department's work with the Along Track Scanning Radiometer (ATSR), on ESA's ERS-1 satellite, broke new ground in the study of the Earth from space providing unprecendented precision in the determination of the surface temperature of the world's oceans. The instrument worked with perfect reliability and produced images of the Earth of astonishing definition and beauty. In the technology department the Laboratory embarked on a large scale collaboration with industry on high definition lithography. The informatics department attracted funding for a broad portfolio of research projects and played an increasingly important role in the direction and management of ERCIM (European Research Consortium for Informatics and Mathematics). The central computing department entered a new phase with the replacement of the CRAY X-MP which the Laboratory operated for all research councils with a Cray model Y-MP machine with three times the performance of the earlier installation. Ferroelectric oxides deform appreciably under an electric field. They are used now as large strain ceramic actuators where a moderate electric voltage can deliver an appreciable mechanical motion. The electrostrictive and piezoelectric strains are incompatible around inhomogeneities, such as electro edge and inclusions. Cracking under electric loading has been identified in recent years. This program seeks to quantify various cracking mechanisms so that future actuator design will have scientific basis. Crack growth under cyclic polarization switching is studied experimentally using a lead lanthanum zirconate-titanate ceramic. We find that the crack growth rate is sensitive to temperature, loading magnitude and frequency. Several mechanisms have been proposed to account for the cyclic crack growth. One such model has been analyzed in detail. More detailed experiments on such cracks are in progress. DTIC

ENGINEERING RESEARCH, DEVELOPMENT AND TECHNOLOGY THRUST AREA REPORT, FY92

R. T. Langland, ed. and C. Minichino, ed. Mar. 1993 252 p
(Contract W-7405-eng-48)
(DE93-016334; UCRL-53868-92) Avail: CASI HC A12/MF A03

The mission of the Engineering Research, Development, and Technology Program at Lawrence Livermore National Laboratory (LLNL) is to develop the technical staff and the technology needed to support current and future LLNL programs. To accomplish this mission, the Engineering Research, Development, and Technology Program has two important goals: (1) to identify key technologies and (2) to conduct high-quality work to enhance our capabilities in these key technologies. To help focus our efforts, we identify technology thrust areas and select technical leaders for each area. The thrust areas are integrated engineering activities and, rather than being based on individual disciplines, they are staffed by personnel from Electronics Engineering, Mechanical Engineering, and other LLNL organizations, as appropriate. The thrust area leaders are expected to establish strong links to LLNL program leaders and to industry; to use outside and inside experts to review the quality and direction of the work; to use university contacts to supplement and complement their efforts; and to be certain that we are not duplicating the work of others. This annual report, organized by thrust area, describes activities conducted within the Program for the fiscal year 1992. Its intent is to provide timely summaries of objectives, theories, methods, and results. The nine thrust areas for this fiscal year are: Computational Electronics and Electromagnetics; Computational Mechanics; Diagnostics and Microelectronics; Emerging Technologies; Fabrication Technology; Materials Science and Engineering; Microwave and Pulsed Power; Nondestructive Evaluation; and Remote Sensing and Imaging, and Signal Engineering. Activities of the ESA space science department during 1990 to mid 1992 in the support of projects and studies covering solar and heliospheric science, planetary and space science, and astrophysics are reported. Within the research area of solar and heliospheric physics the following projects were supported: Ulysses, Soho, Solar Terrestrial Science Program (STSP), Space Physics Analysis Network (SPAN), Polar Platform. Studies supported include PRISMA (Probing Rotation and Interior of Stars: Microvariability and Activity), STEP (Satellite Test of the Equivalence Principle), and SIMURIS (a Solar system and stellar Interferometric Mission for Ultrahigh Resolution Imagery and Spectroscopy). Within the space plasma and planetary physics division projects supported include Giotto extended mission, Cluster, and Huygens/Cassini; studies supported include Rosetta, Marsnet, lunar studies, and optical planetary telescope. Within the astrophysics division projects supported include Exosat, International Ultraviolet Explorer (IUE), Hipparcos, Hubble Space Telescope (HST), Infrared Space Observatory (ISO), and the X-ray Multiple Mirror Telescope (XMM); studies supported include FIRST (Far Infrared and Submillimeter space Telescope), INTEGRAL (International Gamma Ray Astrophysics Laboratory), PRISMA, lunar studies, optical planetary telescope, and the international very long baseline interferometry satellite. GUIDE TO PROGRAMS, FISCAL YEAR 1993

1993 84 p Supersedes NSF-91-80

(NSF-92-78) Avail: CASI HC A05/MF A01; SOD HC

The Guide to Programs Fiscal Year 1993 for the National Science Foundation (NSF) is presented. The NSF is an independent agency of the Federal Government established in 1950 to promote and advance scientific and engineering progress in the United States. The Foundation does this primarily by sponsoring scientific and engineering research and education. Areas of this research include: biological sciences; computer and information science and engineering; education and human resources engineering; geoscience; mathematical and physical sciences; and social, behavioral, and economic sciences. SUBJECT INDEX

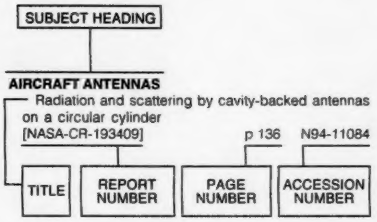
SCIENTIFIC AND TECHNICAL AEROSPACE REPORTS VOLUME 32 NUMBER 4

Typical Subject Index Listing



The subject heading is a key to the subject content of the document. Titles, report numbers, and accession numbers of pertinent documents are provided under each subject heading. When the title is insufficiently descriptive of the document content, a title extension is added, separated from the title by three hyphens. The report number helps to indicate the type of document cited (e.g., NASA report, NASA translation, NASA contractor report). The accession number is the number by which the document abstracts are arranged in this journal and by which the document is sold or requested. The page number helps you locate the citation in the abstract section. The titles, with title extensions if present, are arranged under each subject heading in ascending accession number order. The subject headings have been selected from the latest revision of the *NASA Thesaurus*.

ACOUSTIC PROPAGATION
Constraints on crustal structure from long period pressure and displacement measurements on the deep seafloor
[AD-A269931] p 1498 N94-18663
Parallel and vector adaptations of the underwater finite element parabolic equation model
[AD-A269990] p 1563 N94-18678
Estimating the oceanic sound speed environmental for long-range acoustic propagation
[AD-A270231] p 1499 N94-18903
Numerical simulation of acoustic waves propagation in turbulent media
[ECL-92-37] p 1563 N94-19413
Examinations of converging cylindrically symmetric second sound propagation in He2
[MPIS-9/1992] p 1564 N94-19715
Forward scattering of a pulsed continuous wave signal through laminar and turbulent thermal plumes
[AD-A271210] p 1564 N94-19723

Seismic studies of the geologic structure and physical properties of the seabed
[AD-A270895] p 1500 N94-19747
Acoustic propagation modeling using MATLAB
[AD-A270905] p 1564 N94-19750

ACOUSTIC PROPERTIES
A register of underwater acoustic test facilities in the US, Canada, and the United Kingdom
[AD-A270884] p 1500 N94-19785

ACOUSTIC SCATTERING
Design of a general purpose and autonomous transmitter and receiver system for underwater acoustic experiments at sea
[AD-A269268] p 1495 N94-17822
Processing and analysis of SeaMARC 2 data: Fieberling guyot; raw phase experiment in Norwegian-Greenland Sea
[AD-A269930] p 1498 N94-18662
Parallel and vector adaptations of the underwater finite element parabolic equation model
[AD-A269990] p 1563 N94-18678
BACKSCATTER.FOR: A program to calculate the backscattering strength of an inhomogeneous seabed
[AD-A269235] p 1499 N94-18910
Low frequency acoustics of laminated composite axisymmetric structures
[DRA-TM(USGR)-93302] p 1344 N94-19391
Measurements of ocean surface and bottom backscattering strengths in the northwestern Atlantic Ocean
[AD-A270893] p 1500 N94-19786

ACOUSTIC SOUNDING
Boundary layer heat budgets from wind profiler/RASS data: A feasibility study
[DE93-013187] p 1489 N94-18052

ACOUSTIC VELOCITY
Comments on computational underwater acoustics
[DE93-013789] p 1562 N94-17873
Estimating the oceanic sound speed environmental for long-range acoustic propagation
[AD-A270231] p 1499 N94-18903
Transmission of acoustic waves through strongly heterogeneous, two-dimensional velocity models
[REPT-93-09] p 1563 N94-19083
Liquid sound speeds at pressure from the optical analyzer technique
[DE93-018362] p 1563 N94-19151
Comments on computational underwater acoustics
[DE93-019880] p 1563 N94-19270
Acoustic travel time perturbations due to an internal tide and internal wave field in the Barents Sea
[AD-A270879] p 1499 N94-19580
Measurements of ocean surface and bottom backscattering strengths in the northwestern Atlantic Ocean
[AD-A270893] p 1500 N94-19786

ACOUSTO-OPTICS
Investigation of a fiber optic frequency shifter and optical isolator
[AD-A269820] p 1579 N94-18738

ACTINIDE SERIES
Kinetic studies of electrochemical generation of Ag(II) ion and catalytic oxidation of selected organics
[DE93-016601] p 1352 N94-19240

ACTIVATION
Modified aequorin shows increased bioluminescence activity
[AD-A268774] p 1347 N94-18185

ACTIVATION ANALYSIS
In vivo animal models of body composition in aging
[DE93-012527] p 1501 N94-17889

ACTIVATION ENERGY
In situ observation of radiation induced amorphization of crystals with apatite structure
[DE93-018450] p 1599 N94-18816

ACTIVE CONTROL
Active control of periodic noise with time-varying frequency
[REPT-93-012] p 1562 N94-17934
Active control of a multivariable system by way of polynomial neural networks: Computer simulation evaluations and laboratory experimental results
[AD-A270033] p 1541 N94-18790
ISAC: A tool for aeroservoelastic modeling and analysis
[NASA-TM-109031] p 1321 N94-19316

ACTIVE GALACTIC NUCLEI
Related investigations on the physics of high energy emission from active galactic nuclei
[NASA-CR-193615] p 1630 N94-18836

ACTIVITY CYCLES (BIOLOGY)
A comparison of polygraphic and actigraphic monitoring of sleep using a 5-channel programmable-sensitivity actigraph
[AD-A270731] p 1507 N94-19608

ACTUATORS
Magnetostrictive actuators for human sensory feedback
[AD-A269266] p 1511 N94-17841
Silicon micro-actuator p 1408 N94-18017
Generalization of optimal control theory: Linear and nonlinear structures
[PB93-188621] p 1540 N94-18125
A wind tunnel model control surface actuator interface
[AD-A268729] p 1322 N94-18324
Office of Naval Research Publications/Patents /Presentations/Honors report, 1 October 1992 - 30 September 1993
[AD-A270037] p 1632 N94-18791
Cooperative control of multiple space manipulators
[AD-A270291] p 1445 N94-18813
The effects of initial conditions and control time on optimal actuator placement by way of a max-min genetic algorithm
[DE93-017640] p 1525 N94-19124
Six degree of freedom fine motion positioning stage based on magnetic levitation
[DE93-017651] p 1446 N94-19547

ACUITY
Electro-optics display research, test, and evaluation laboratory program
[AD-A270947] p 1408 N94-19751

ADA (PROGRAMMING LANGUAGE)
Teaching a computer simulation course with Ada
[AD-A267901] p 1521 N94-18308

ADAPTATION
Characterization of fluid physics effects on cardiovascular response to microgravity (G-572)
p 1323 N94-19163

ADAPTIVE CONTROL
Autonomous neural network controllers for adaptive material handling
[AD-A268908] p 1540 N94-18331
Fuzzy control of magnetic bearings
p 1399 N94-18357
Comparative examinations of several field oriented position control structures for asynchronous servomotors with a multitransputer system
[ETN-93-95051] p 1406 N94-19390
Notes on multi-step ahead prediction based on the principle of concatenation
[MATHS-REPT-A-189] p 1544 N94-19410
Use of shape memory alloys in the robust control of smart structures
[AD-A270827] p 1366 N94-19594

ADAPTIVE OPTICS
Laser guide star measurements at Lawrence Livermore National Laboratory
[DE93-018081] p 1441 N94-19251

ADDITIVES
Ultra-shallow box-like profiles fabricated by pulsed UV-laser doping process
[DE93-017221] p 1437 N94-18083
Photorefractive tungsten bronze crystals for optical computing
[AD-A268859] p 1596 N94-18320
Analysis of deposit precursors in jet fuels using Fourier transform infrared spectroscopy
[AD-A269035] p 1377 N94-18489
The efficiency of continuous output of some titanium-doped gem-crystal lasers has exceeded 1 W
[AD-A269953] p 1439 N94-18674
Tunable ytterbium-doped solid state laser
[AD-D015878] p 1440 N94-18747
Bench-scale screening tests for a boiling sodium-potassium alloy solar receiver
[DE93-018512] p 1469 N94-19040
Low-aluminum-content iron-aluminum alloys
[DE93-017862] p 1365 N94-19274
The effect of composition on the mechanism of continuous recrystallization and superplastic response of aluminum-scandium alloys
[DE93-018594] p 1365 N94-19280
Microstructure of the interfacial zone around aggregate particles in concrete
[PB93-195790] p 1380 N94-19322
Physico chemical and mechanic approach of lubricating properties of graphite + additive powders
[ECL-93-02] p 1373 N94-19405
Contribution to the study of a symmetric film flow (with or without tensio-active elements)
[ECL-93-13] p 1421 N94-19461

ADHESION
Joining and Adhesion of Advanced Inorganic Materials Symposium
[AD-A269748] p 1342 N94-18720

ADHESIVE BONDING
Mathematical modelling of bonded fibre-composite repairs to aircraft
[AD-A268732] p 1341 N94-18327
Joining and Adhesion of Advanced Inorganic Materials Symposium
[AD-A269748] p 1342 N94-18720

ADHESIVES
Analysis of bolted and bonded composite
[AD-A267792] p 1453 N94-18382

ADIABATIC CONDITIONS
The quantum dynamics of electronically nonadiabatic chemical reactions
[NASA-CR-194309] p 1568 N94-18837

ADIPOSE TISSUES
Nuclear Medicine Program
[DE93-013896] p 1504 N94-17699
In vivo animal models of body composition in aging
[DE93-012527] p 1501 N94-17889
Metabolic changes and hemodynamic dysfunction following hypothermic shock
[AD-A269780] p 1506 N94-18598

ADSORPTION
Experimental and theoretical investigation of surface chemistry induced by direct and indirect electronic excitation
[AD-A268846] p 1348 N94-18221
Nitridation of GaAs(100) by laser-induced decomposition of HN3
[AD-A269147] p 1438 N94-18258
Hydrolysis reaction and positronium decay in silica gels
[AD-A270028] p 1371 N94-18713
Ionic and molecular environments in heterogeneous electrocatalysis: Studies by radioactive labeling and LEED/AUGER spectroscopy
[AD-A268850] p 1567 N94-18766
Surface phases and their influence on metal-oxide interfaces
[DE93-019931] p 1601 N94-19020
Optical frequency doubling at adsorbates of silver(110) surface
[ETN-93-94837] p 1603 N94-19355
Adsorption analysis of ammonia in an aqueous solution
[DE93-019512] p 1353 N94-19552

ADVANCED TEST REACTORS
Document control and conduct of operations
[DE93-016555] p 1613 N94-17880

ADVECTION
Compact advection schemes on unstructured grids
p 1413 N94-18564
Estimation of wake vortex advection and decay using meteorological sensors and aircraft data
[AD-A270763] p 1316 N94-19661

AERIAL EXPLOSIONS
Air blast measurements at 20 and 40 km distance from detonating 10 and 20 ton high explosive charges
[PB93-195949] p 1419 N94-19068

AEROACOUSTICS
Computational aero-acoustics as a branch of turbulence research p 1411 N94-18552
Research and training activities of the Joint Institute for Aeronautics and Acoustics
[NASA-CR-194742] p 1421 N94-19493

AEROBES
Microbial degradation of poly-b-esters: A mechanistic study, cellulose acetate biodegradability
[AD-A271368] p 1374 N94-19586

AERODYNAMIC CHARACTERISTICS
Comparison between swept and delta canards on a model of a combat aircraft
[AD-A269561] p 1317 N94-17826
Non-linear flight dynamics p 1319 N94-18240
Aerodynamic characteristics of a helicopter rotor airfoil as affected by simulated ballistic damage
[AD-A269206] p 1311 N94-18413
Wake structure and aerodynamic behavior of high lift aircraft configurations during unsteady maneuvers in ground effect p 1309 N94-18439

AERODYNAMIC COEFFICIENTS
Error propagation equations and tables for estimating the uncertainty in high-speed wind tunnel test results
[DE93-018685] p 1311 N94-18275
An experimental investigation of the optimum slat setting on a combat aircraft model p 1308 N94-18431

AERODYNAMIC CONFIGURATIONS
A study of the influence of a delta wing geometry on the induced drag at transonic speed (M=0.55) and high angles of attack
[FFA-TN-1992-14] p 1311 N94-17722
High-Lift System Aerodynamics
[AGARD-CP-515] p 1305 N94-18415
Navier-Stokes computations of turbulent flow around high-lift configurations p 1306 N94-18420
Computational Fluid Dynamics (CFD) research branch technical briefs
[AD-A269698] p 1417 N94-18739

Procedures and design data for the formulation of aircraft configurations
[AD-A270150] p 1318 N94-18779
Survey on the application of a 3D general purpose wind-tunnel research model
[LR-713] p 1323 N94-19372
Semi-span model testing in the National Transonic Facility
[NASA-CR-194479] p 1312 N94-19388

AERODYNAMIC DRAG
Aerodynamic characteristics of a helicopter rotor airfoil as affected by simulated ballistic damage
[AD-A269206] p 1311 N94-18413

AERODYNAMIC FORCES
A computational and experimental investigation of incompressible oscillatory airfoil flow and flutter problems
[AD-A268748] p 1311 N94-18402
ISAC: A tool for aeroservoelastic modeling and analysis
[NASA-TM-109031] p 1321 N94-19316

AERODYNAMIC HEATING
Parabolized Navier-Stokes computation of surface heat transfer characteristics for supersonic and hypersonic KE projectiles
[AD-A268858] p 1410 N94-18391

AERODYNAMIC INTERFERENCE
A study of the use of half-models in high-lift wind-tunnel testing p 1308 N94-18434

AERODYNAMIC LOADS
The role of NASTRAN in the preliminary design cycle p 1450 N94-17835
Defining the normal turbine inflow within a wind park environment
[DE93-010032] p 1489 N94-18046
The application of nondestructive techniques to the testing of a wind turbine blade
[DE93-016731] p 1447 N94-18128
Wake structure and aerodynamic behavior of high lift aircraft configurations during unsteady maneuvers in ground effect p 1309 N94-18439
Blade and hub loads of ballistically damaged helicopter rotors
[AD-A270663] p 1319 N94-19781

AERODYNAMIC STALLING
Interferometric investigations of compressible dynamic stall over a transiently pitching airfoil
[NASA-TM-109380] p 1312 N94-19119

AERODYNAMICS
Interferometer stations at the Air Force Aeroballistic Research Facility
[AD-A268776] p 1322 N94-18330
High-Lift System Aerodynamics
[AGARD-CP-515] p 1305 N94-18415
Turbulence modeling in aircraft icing p 1412 N94-18555
Data acquisition in aerodynamic research p 1431 N94-18644
Recent developments in fast response aerodynamic probe technology p 1431 N94-18645
Lift and pitching moment induced on jet STOVL aircraft by the ground vortex
[AD-A269816] p 1318 N94-18733
Aeronautical engineering: A continuing bibliography with indexes (supplement 297)
[NASA-SP-7037(297)] p 1310 N94-18937
The world's largest wind tunnel
[NASA-TM-109371] p 1322 N94-18963
Aeronautical engineering: A continuing bibliography with indexes (supplement 296)
[NASA-SP-7037(296)] p 1310 N94-19070

AEROELASTICITY
Semi-span model testing in the National Transonic Facility
[NASA-CR-194479] p 1312 N94-19388
Blade and hub loads of ballistically damaged helicopter rotors
[AD-A270663] p 1319 N94-19781

AEROGELS
The Aerocapacitor: A carbon aerogel based supercapacitor
[DE93-016537] p 1395 N94-17849
Aerogels for microelectronic applications: Fast, inexpensive, and light as air
[DE93-017170] p 1395 N94-17882

AERONAUTICAL ENGINEERING
Aeronautical engineering: A continuing bibliography with indexes (supplement 297)
[NASA-SP-7037(297)] p 1310 N94-18937
Aeronautical engineering: A continuing bibliography with indexes (supplement 296)
[NASA-SP-7037(296)] p 1310 N94-19070
A review of aeronautical fatigue investigations in Sweden during the period May 1991 to April 1993
[FFA-TN-1993-22] p 1457 N94-19358

AEROSERVOELASTICITY
ISAC: A tool for aeroservoelastic modeling and analysis
[NASA-TM-109031] p 1321 N94-19316

AEROSOLS
Application of fractal methods to estimate the aerosol-optical depth for atmospheric correction of high resolution satellite data
[DLR-FB-93-04] p 1480 N94-18088
Analysis of meteorological conditions during AGASP-4: 30 March - 23 April 1992
[PB93-190205] p 1489 N94-18126
A mobile remote sensing laboratory for water vapor, trace gas, aerosol, and wind speed measurements
[DE93-017158] p 1489 N94-18132
Dispersion effects on millimeter wavelength attenuation efficiencies for a variety of fibers
[AD-A268992] p 1386 N94-18454
Aerosol filtration with steel fiber filters
[DE93-016990] p 1380 N94-18710
Work plan for the Marine Aerosol Properties and the Thermal Imager Performance Trial (MAPTIP)
[AD-A270026] p 1483 N94-18712
Efficiency of fiber dispersion
[AD-A269740] p 1342 N94-18757
An investigation of warm-cloud microphysics using a multi-component cloud model: Interactive effects of the aerosol spectrum
[AD-A270273] p 1493 N94-18812
Effects of the Mount Pinatubo eruption on solar insolation: Four case studies
[DE93-018454] p 1475 N94-18817
The global atmospheric sulfur cycle: An evaluation of model predictions and observations
[CM-81] p 1479 N94-19379

AEROSPACE ENGINEERING
Fundamental research in nonlinear random vibration for aerospace applications
[AD-A268929] p 1454 N94-18487
Interdisciplinary training in life science (FY 1991 ASSERT)
[AD-A269220] p 1512 N94-18886
Research and design activities and the economic balance of MBB
[ETN-93-94909] p 1310 N94-19383

AEROSPACE ENVIRONMENTS
Design considerations for remotely operated welding in space: Task definition and visual weld monitoring experiment
[AD-A268752] p 1445 N94-18634
The rationale for fundamental research in space biology: Introduction and background p 1502 N94-19211
Opportunities and questions for the fundamental biological sciences in space p 1502 N94-19212
Space research with intact organisms: The role of Space Station Freedom p 1502 N94-19213
Space research on organs and tissues p 1503 N94-19214

AEROSPACE MEDICINE
US Army aviation epidemiology data register: Prevalence of refractive error among US aircrew members
[AD-A269550] p 1505 N94-18289
Revision and verification of a seven-point workload estimate scale
[AD-A269194] p 1511 N94-18412
Laboratory test and evaluation report of the essex model 60C-0037-2 molecular sieve oxygen generating system
[AD-A269967] p 1445 N94-18776
Aerospace medicine and biology: A continuing bibliography with indexes (supplement 382)
[NASA-SP-7011(382)] p 1507 N94-18936
Aerospace medicine and biology: A continuing bibliography with indexes (supplement 381)
[NASA-SP-7011(381)] p 1507 N94-19069

AEROSPACE SCIENCES
OSSA Information Systems Program
[NASA-TM-108774] p 1612 N94-17737
Strategic plan, 1991: A strategy for leadership in space through excellence in space science and applications
[NASA-TM-109256] p 1611 N94-19434

AEROSPACE SYSTEMS
Radio wave propagation in structured ionization for satellite and radar applications
[AD-A268457] p 1382 N94-17844

AEROSPACE VEHICLES
Preliminary structural design: Defining the design space
[AD-A268898] p 1317 N94-18227
Fundamental research in nonlinear random vibration for aerospace applications
[AD-A268929] p 1454 N94-18487

AEROTHERMOCHEMISTRY
Workshop on Computational Turbulence Modeling
[NASA-TM-109266] p 1410 N94-18545

AGGREGATES
Microstructure of the interfacial zone around aggregate particles in concrete
[PB93-195790] p 1380 N94-19322

AGING (BIOLOGY)
In vivo animal models of body composition in aging
[DE93-012527] p 1501 N94-17889
The rationale for fundamental research in space biology: Introduction and background p 1502 N94-19211

AGING (MATERIALS)
Reliability control for wrist watches and their casements p 1427 N94-18030
Workshop on multifactor aging mechanisms and models
[AD-A268668] p 1397 N94-18311
Ageing in Processed Polymers: Programme, summary, and abstracts discussion meeting
[AD-A268931] p 1370 N94-18448

AGING (METALLURGY)
Charpy impact toughness of martensitic steels irradiated in FFTF: Effect of heat treatment
[DE93-015960] p 1450 N94-17848

AGRICULTURE
Lunar base Controlled Ecological Life Support System (LCELSS): Preliminary conceptual design study
[NASA-CR-188479] p 1511 N94-18484

AIR BAG RESTRAINT DEVICES
Army Cockpit Delethalization Program (CDP)
[AD-A268990] p 1512 N94-18765
Numerical simulation of vehicle crashworthiness and occupant protection p 1459 N94-19471

AIR BREATHING ENGINES
Adaptations to micropep and rocket to allow performance evaluation of multiple grain and/or airbreathing motors
[AD-A268798] p 1337 N94-18202
Naval research reviews. Mixing enhancement for air-breathing propulsion. Non-axisymmetric jets increase mixing, volume 44 and volume 45
[AD-A268966] p 1521 N94-18543

AIR CONDITIONING EQUIPMENT
An emulator for testing HVAC-control and energy management systems
[VTT-TIED-1337] p 1444 N94-17974

AIR COOLING
A laboratory model of a cooled continental shelf
[AD-A270862] p 1500 N94-19792

AIR CURRENTS
The activities of equatorial anticyclones of the Western Pacific and the South China Sea and their effects on the tracks of typhoon movement
[AD-A269954] p 1492 N94-18675

AIR FILTERS
Aerosol filtration with steel fiber filters
[DE93-016990] p 1380 N94-18710

AIR FLOW
Indoor environment program
[DE93-018601] p 1513 N94-18935
Airflow research
[NASA-TM-109372] p 1312 N94-18964

AIR LAND INTERACTIONS
Biophysical characterization and surface radiation balance
[NASA-CR-194659] p 1470 N94-17762
A survey of current approaches to modelling of hydrological time-series with respect to climate variability and change
[WMO/TD-534] p 1463 N94-19435

AIR MASSES
Analysis of meteorological conditions during AGASP-4: 30 March - 23 April 1992
[PB93-190205] p 1489 N94-18126
The activities of equatorial anticyclones of the Western Pacific and the South China Sea and their effects on the tracks of typhoon movement
[AD-A269954] p 1492 N94-18675

AIR NAVIGATION
Flight demonstration of image fix-taking with SAR
[DE93-016499] p 1382 N94-17861
About the accuracy of an image-based navigation system during the runway approach
[DLR-MITT-93-01] p 1316 N94-18146

AIR POLLUTION
Malone refrigeration
[DE93-014468] p 1379 N94-17725
Visibility impairment assessment: Importance of using theoretically derived optical characterizations
[DE93-017147] p 1470 N94-17749
Air pollution effects field research facility. 3: UV-B exposure and monitoring system
[DE93-013098] p 1470 N94-17773
Carbon Dioxide Information Analysis Center: FY 1992 activities
[DE93-013845] p 1471 N94-17774

Title 1 implementation: Status report on nonattainment areas
[DE93-017677] p 1471 N94-17777
The carbon dioxide emissions game: Playing the net
[DE93-017670] p 1471 N94-17821
Screening analysis for chlorine-free alternative refrigerants to replace R-22 in air conditioning applications
[DE93-015920] p 1367 N94-17847
Energy efficiency and the environment: Innovative ways to improve air quality in the Los Angeles Basin
[DE93-016964] p 1473 N94-18050
Review of short-term, high-level exposure to metals: Antimony, barium, and cadmium
[AD-A268896] p 1505 N94-18392
On-line monitoring of incinerator emissions
[DE93-017406] p 1474 N94-18499
A comparison of wet and dry scrubbing systems for control of metals and dioxin/furan emissions from incinerators
[DE93-017446] p 1474 N94-18502
The urban perspectives of acid rain
[DE93-018881] p 1474 N94-18523
Evaluation of aftermarket LPG conversion kits in light-duty vehicle applications
[DE93-010035] p 1377 N94-18617
International Symposium on the Ecological Effects of Arctic Airborne Contaminants --- abstracts
[AD-A269955] p 1475 N94-18775
CDIAC catalog of numeric data and computer model packages
[DE93-017675] p 1475 N94-18832
Data collection plan for phase 2 Alternative Fuels Bus Data Collection Program
[DE93-010047] p 1378 N94-18913
Land-use related sources of CO2, CH4 and N2O: Current global emissions and projections for the period 1990-2100
[PB93-194819] p 1475 N94-18949
Inclusion of a three-dimensional washout coefficient in ADPIC
[DE93-018499] p 1476 N94-19038
Organic carbonyl compounds in Albuquerque, New Mexico, air: A preliminary study of the effects of oxygenated fuel use
[DE93-017748] p 1476 N94-19045
Spatiotemporal variability of non-urban ozone concentrations over the eastern United States and its potential replication by satellite data
[PB93-191328] p 1476 N94-19065
Advances in passive-remote and extractive Fourier transform infrared systems
[DE93-017402] p 1478 N94-19241
The Mexico City 1991 lidar measurements campaign
[DE93-019960] p 1478 N94-19272
Valuation of temporary and future greenhouse gas reductions
[DE93-018876] p 1478 N94-19319
Application of an atmospheric dispersion model to simulated pollutant releases in the Colorado Front range
[DE93-017118] p 1480 N94-19732

AIR QUALITY
Visibility impairment assessment: Importance of using theoretically derived optical characterizations
[DE93-017147] p 1470 N94-17749
Title 1 implementation: Status report on nonattainment areas
[DE93-017677] p 1471 N94-17777
Energy efficiency and the environment: Innovative ways to improve air quality in the Los Angeles Basin
[DE93-016964] p 1473 N94-18050
The urban perspectives of acid rain
[DE93-018881] p 1474 N94-18523
Indoor environment program
[DE93-018601] p 1513 N94-18935
Organic carbonyl compounds in Albuquerque, New Mexico, air: A preliminary study of the effects of oxygenated fuel use
[DE93-017748] p 1476 N94-19045
Advances in passive-remote and extractive Fourier transform infrared systems
[DE93-017402] p 1478 N94-19241
The Mexico City 1991 lidar measurements campaign
[DE93-019960] p 1478 N94-19272

AIR SAMPLING
Analysis of meteorological conditions during AGASP-4: 30 March - 23 April 1992
[PB93-190205] p 1489 N94-18126
The minimum detection limits of RDX and TNT deposited on various surfaces as determined by ion mobility spectroscopy
[DE93-018521] p 1378 N94-19042
Organic carbonyl compounds in Albuquerque, New Mexico, air: A preliminary study of the effects of oxygenated fuel use
[DE93-017748] p 1476 N94-19045
Novel mass spectrometric instrument for gaseous and particulate characterization and monitoring
[DE93-019992] p 1433 N94-19054

AIR TRAFFIC
Terminal area forecasts, FY 1993-2005
[AD-A269855] p 1316 N94-18336
Integrated Terminal Weather System (ITWS)
[AD-A269884] p 1492 N94-18684
Denver TMA assessment
[NASA-CR-4554] p 1315 N94-18844
Organized track system: Air ways above the ocean
p 1495 N94-19702

AIR TRAFFIC CONTROL
Feasibility of a wind-ellipse criterion in a vortex advisory system for Schiphol Airport
[NLR-TP-91384-U] p 1315 N94-17733
A rugged, low-cost advanced data acquisition system for field test projects
[DE93-010041] p 1615 N94-18334
Terminal area forecasts, FY 1993-2005
[AD-A269855] p 1316 N94-18336
VHF air/ground communications for air traffic control. Volume 1: A decision tree approach to system innovations
[AD-A268485] p 1316 N94-18384
VHF air/ground communications for air traffic control: A decision tree approach to system innovations, volume 2
[AD-A268632] p 1386 N94-18495
Denver TMA assessment
[NASA-CR-4554] p 1315 N94-18844
Aircraft accident report: Midair collision, Mitsubishi MU-2B-60, N74FB, and PIPER PA-32-301, N82419, Greenwood Municipal Airport, Greenwood, Indiana, 11 September 1992
[PB93-910406] p 1315 N94-19352
Estimation of wake vortex advection and decay using meteorological sensors and aircraft data
[AD-A270763] p 1316 N94-19661
Organized track system: Air ways above the ocean
p 1495 N94-19702

AIR TRAFFIC CONTROLLERS (PERSONNEL)
US Army aviation epidemiology data register: Prevalence of refractive error among US aircrew members
[AD-A269550] p 1505 N94-18289
Denver TMA assessment
[NASA-CR-4554] p 1315 N94-18844

AIR TRANSPORTATION
Transport policy options for reducing noise at airports; Hamburg airport taken as an example
[DLR-FB-92-40] p 1322 N94-18123
Airport activity statistics of certificated route air carriers, 1992
[AD-A269042] p 1315 N94-18490
A real-time spoken-language system for interactive problem-solving, combining linguistic and statistical technology for improved spoken language understanding
[AD-A270901] p 1392 N94-19749

AIR WATER INTERACTIONS
The performance of drag relations in the WAQUA storm surge model
[KNMI-TR-149] p 1496 N94-17923
Rapid oceanic cyclogenesis studies
[AD-A269258] p 1490 N94-18265
Airborne studies of ocean-particle-cloud interactions in the Arctic
[AD-A270752] p 1479 N94-19575

AIRBORNE EQUIPMENT
Ozone hole
[NASA-TM-109368] p 1476 N94-18960
Footprint size of a helicopter-borne electromagnetic induction sounding system versus antenna altitude
[AD-A270468] p 1463 N94-19672

AIRBORNE LASERS
Modifications of airborne oceanographic lidar for the long range P-3 missions
[NASA-CR-194682] p 1499 N94-18819

AIRBORNE RADAR
C-band PARC manual
[FEL-92-B159] p 1383 N94-18070
AN/APS-137 Forward Looking Airborne Radar (FLAR) evaluation Spring 1992 experiment
[AD-A268899] p 1384 N94-18228
Low-noise oscillators for airborne radar applications, revision 1
[AD-A269372] p 1403 N94-18471

AIRBORNE/SPACEBORNE COMPUTERS
Experience with custom processors in space flight applications p 1336 N94-18338
X-29: Research aircraft
[NASA-TM-109370] p 1318 N94-18962
VPU(tm) demonstration mission vicinity processor unit(tm) overview p 1325 N94-19171

AIRCRAFT ACCIDENT INVESTIGATION
Aircraft accident report: Midair collision, Mitsubishi MU-2B-60, N74FB, and PIPER PA-32-301, N82419, Greenwood Municipal Airport, Greenwood, Indiana, 11 September 1992
[PB93-910406] p 1315 N94-19352

AIRCRAFT ACCIDENTS
Integrated Terminal Weather System (ITWS)
[AD-A269884] p 1492 N94-18684
Vertical drop test of a Metro 3 aircraft
[AD-A270032] p 1318 N94-18789
Development and use of computational techniques in Army Aviation research and development programs for crash resistant helicopter technology
p 1459 N94-19469
Temperature of aircraft cargo flame exposure during accidents involving fuel spills
[DE93-019633] p 1381 N94-19539

AIRCRAFT APPROACH SPACING
Feasibility of a wind-ellipse criterion in a vortex advisory system for Schiphol Airport
[NLR-TP-91384-U] p 1315 N94-17733

AIRCRAFT COMMUNICATION
VHF air/ground communications for air traffic control: A decision tree approach to system innovations, volume 2
[AD-A268632] p 1386 N94-18495

AIRCRAFT COMPARTMENTS
Army Cockpit Delethalization Program (CDP)
[AD-A268990] p 1512 N94-18765

AIRCRAFT CONFIGURATIONS
Comparison between swept and delta canards on a model of a combat aircraft
[AD-A269561] p 1317 N94-17826
Wake structure and aerodynamic behavior of high lift aircraft configurations during unsteady maneuvers in ground effect p 1309 N94-18439
Procedures and design data for the formulation of aircraft configurations
[AD-A270150] p 1318 N94-18779

AIRCRAFT CONSTRUCTION MATERIALS
Metals 2000
[DE93-016761] p 1355 N94-17752
Advisory circular: Index of articles (materials, parts, processes, and appliances) certified under the technical standard order system
[AC-20-36S] p 1618 N94-19377
New aircraft materials and structures
[MBB-LME-202-S-PUB-502-A] p 1319 N94-19496

AIRCRAFT CONTROL
Research and training activities of the Joint Institute for Aeronautics and Acoustics
[NASA-CR-194742] p 1421 N94-19493

AIRCRAFT DESIGN
Regenerative fuel cells for High Altitude Long Endurance Solar Powered Aircraft
[DE93-016991] p 1465 N94-17853
High-Lift System Aerodynamics
[AGARD-CP-515] p 1305 N94-18415
Where is high-lift today? A review of past UK research programmes p 1305 N94-18416
A design procedure for slotted flaps
p 1305 N94-18418
Forty years of high-lift R/D: An aircraft manufacturer's experience p 1309 N94-18441
High-lift research: Application to the design of the ATR72 flap p 1309 N94-18442
The aero-mechanical design of a novel Fowler flap mechanism p 1309 N94-18443
Design, development, and flight evaluation of the Boeing YC-14 USB powered lift aircraft p 1310 N94-18444
High-lift design for large civil aircraft
p 1310 N94-18445
Choice and optimization of a high-lift system for an advanced amphibious aircraft p 1310 N94-18447
Procedures and design data for the formulation of aircraft configurations
[AD-A270150] p 1318 N94-18779
Survey on the application of a 3D general purpose wind-tunnel research model
[LR-713] p 1323 N94-19372
Research and design activities and the economic balance of MBB
[ETN-93-94909] p 1310 N94-19383
Development and use of computational techniques in Army Aviation research and development programs for crash resistant helicopter technology
p 1459 N94-19469
New aircraft materials and structures
[MBB-LME-202-S-PUB-502-A] p 1319 N94-19496
ADAS implementation of a panel method for the prediction of aerodynamic loads
[LR-723] p 1313 N94-19667

AIRCRAFT ENGINES
Two-dimensional boundary surfaces for axi-symmetric external transonic flows
[AD-A269678] p 1312 N94-18571
Overview of STOVL aircraft propulsion research offtakes and vertical lift systems
[NASA-TM-106387] p 1321 N94-19353
AIRCRAFT EQUIPMENT
Dynamic response analysis of composite structural members during missile launch
[AD-A270023] p 1332 N94-18760
Advisory circular: Index of articles (materials, parts, processes, and appliances) certified under the technical standard order system
[AC-20-36S] p 1618 N94-19377
AIRCRAFT FUELS
Temperature of aircraft cargo flame exposure during accidents involving fuel spills
[DE93-019633] p 1381 N94-19539
AIRCRAFT ICING
Turbulence modeling in aircraft icing
p 1412 N94-18555
AIRCRAFT INDUSTRY
Terminal area forecasts, FY 1993-2005
[AD-A269855] p 1316 N94-18336
Advisory circular: Index of articles (materials, parts, processes, and appliances) certified under the technical standard order system
[AC-20-36S] p 1618 N94-19377
AIRCRAFT INSTRUMENTS
Take-off performance monitoring system algorithm and display development
[NLR-TP-91395-U] p 1317 N94-17734
Research on man-machine productivity in aviation at Human Engineering Institute of Hangzhou University
[AD-A269952] p 1512 N94-18673
JPRS report: Central Eurasia. Aviation and cosmonautics, no. 12, December 1992
[JPRS-UAC-93-006] p 1632 N94-19148
Advisory circular: Index of articles (materials, parts, processes, and appliances) certified under the technical standard order system
[AC-20-36S] p 1618 N94-19377
AIRCRAFT MAINTENANCE
Mathematical modelling of bonded fibre-composite repairs to aircraft
[AD-A268732] p 1341 N94-18327
The J85 cost/benefit engine study
[AD-A269280] p 1320 N94-18333
A comparison of air force data systems
[AD-A269691] p 1616 N94-18575
Three dimensional ultrasonic imaging: An aging aircraft nondestructive inspection tool
[DE93-018088] p 1448 N94-19252
Results of a joint Navy/Air Force operational test to evaluate USAF Integrated Maintenance Information Systems (IMIS), Interactive Electronic Technical Manual (IETM) technology applied to the F/A-18 aircraft
[AD-A271322] p 1619 N94-19571
A comparison Air Force data systems --- Comments on IDA Paper P-2863
[AD-A270662] p 1619 N94-19780
AIRCRAFT MANEUVERS
VMC left turn curved approaches, test results --- (visual meteorological conditions)
[AD-A269476] p 1316 N94-18728
AIRCRAFT MODELS
A wind tunnel model control surface actuator interface
[AD-A268729] p 1322 N94-18324
A study of the use of half-models in high-lift wind-tunnel testing p 1308 N94-18434
High lift systems for transport aircraft with advanced airfoils p 1310 N94-18446
AIRCRAFT NOISE
Transport policy options for reducing noise at airports; Hamburg airport taken as an example
[DLR-FB-92-40] p 1322 N94-18123
Noise measurements on two types of airplanes used for spraying in agriculture
[LR-706] p 1319 N94-19796
AIRCRAFT PERFORMANCE
Take-off performance monitoring system algorithm and display development
[NLR-TP-91395-U] p 1317 N94-17734
High lift and the forward swept wing
p 1308 N94-18436
Design, development, and flight evaluation of the Boeing YC-14 USB powered lift aircraft p 1310 N94-18444
High-lift design for large civil aircraft
p 1310 N94-18445
An investigation of fighter aircraft agility
[NASA-CR-194608] p 1318 N94-19448
AIRCRAFT SAFETY
Army Cockpit Delethalization Program (CDP)
[AD-A268990] p 1512 N94-18765
Aircraft fire sentry. Volume 1: Summary
[AD-A270087] p 1315 N94-18822
Aircraft fire sentry. Volume 2: Appendices A, B, C and D
[AD-A270088] p 1315 N94-18823
AIRCRAFT STABILITY
An application of parameter estimation to the stability and control of the BQM-147 unmanned aerial vehicle
[AD-A268741] p 1321 N94-18401
Flight test techniques for aircraft parameter estimation in ground effect
[AD-A270058] p 1318 N94-18795
AIRCRAFT STRUCTURES
Metals 2000
[DE93-016761] p 1355 N94-17752
High resolution SQUID magnetometry for non-destructive evaluation
[AD-A268884] p 1447 N94-18225
Preliminary structural design: Defining the design space
[AD-A268898] p 1317 N94-18227
Mathematical modelling of bonded fibre-composite repairs to aircraft
[AD-A268732] p 1341 N94-18327
Nondestructive inspection of graphite-epoxy laminates for heat damage using DRIFT and LPF spectroscopies
[DE93-017228] p 1343 N94-18761
Design for cyclic loading endurance of composites
[NASA-TM-106407] p 1457 N94-19351
Impact analysis of composite aircraft structures
p 1458 N94-19468
Development and use of computational techniques in Army Aviation research and development programs for crash resistant helicopter technology
p 1459 N94-19469
AIRCRAFT SURVIVABILITY
Naval aviation: Consider all alternatives before proceeding with the F/A-18E/F
[AD-A269302] p 1305 N94-18279
AIRCRAFT TIRES
A finite strain ring dynamical model for pneumatic tires
[AD-A269286] p 1444 N94-18266
AIRCRAFT WAKES
Feasibility of a wind-ellipse criterion in a vortex advisory system for Schiphol Airport
[NLR-TP-91384-U] p 1315 N94-17733
Estimation of wake vortex advection and decay using meteorological sensors and aircraft data
[AD-A270763] p 1316 N94-19661
AIRFOIL OSCILLATIONS
A computational and experimental investigation of incompressible oscillatory airfoil flow and flutter problems
[AD-A268748] p 1311 N94-18402
AIRFOIL PROFILES
Calculation of maximum and high lift characteristics of multi element aerofoils p 1305 N94-18419
AIRFOILS
A computational and experimental investigation of incompressible oscillatory airfoil flow and flutter problems
[AD-A268748] p 1311 N94-18402
High-Lift System Aerodynamics
[AGARD-CP-515] p 1305 N94-18415
Experimental investigation of flow around a multielement airfoil p 1305 N94-18417
A design procedure for slotted flaps
p 1305 N94-18418
Calculation of maximum and high lift characteristics of multi element aerofoils p 1305 N94-18419
Efficient simulation of incompressible viscous flow over multi-element airfoils p 1306 N94-18421
Navier-Stokes calculations on multi-element airfoils using a chimera-based solver p 1306 N94-18422
Numerical solution of the Navier-Stokes equations for high-lift configurations on structured composite grids
p 1306 N94-18423
High Reynolds number configuration development of a high-lift airfoil p 1306 N94-18424
A viscous-inviscid solver for high-lift incompressible flows over multi-element airfoils at deep separation conditions p 1306 N94-18425
High-lift system analysis method using unstructured meshes p 1307 N94-18426
Prediction of the high-lift performance of multi-element aerofoils using an unstructured Navier-Stokes solver
p 1307 N94-18427
Numerical calculations of high lift flows using structured and unstructured methods p 1307 N94-18428
The GARTEUR high lift research programme
p 1307 N94-18430
Calculation of multielement airfoils and wings at high lift p 1309 N94-18438
Viscous-inviscid calculation of high-lift separated compressible flows over airfoils and wings
p 1309 N94-18440
High lift systems for transport aircraft with advanced airfoils p 1310 N94-18446
Choice and optimization of a high-lift system for an advanced amphibious aircraft p 1310 N94-18447
Turbulence modeling in aircraft icing
p 1412 N94-18555
AIRFRAMES
Vertical drop test of a Metro 3 aircraft
[AD-A270032] p 1318 N94-18789
Explicit solution techniques for impact with contact constraints p 1459 N94-19470
AIRLINE OPERATIONS
Airport activity statistics of certificated route air carriers, 1992
[AD-A269042] p 1315 N94-18490
AIRPORT TOWERS
A rugged, low-cost advanced data acquisition system for field test projects
[DE93-010041] p 1615 N94-18334
AIRPORTS
Transport policy options for reducing noise at airports; Hamburg airport taken as an example
[DLR-FB-92-40] p 1322 N94-18123
Terminal area forecasts, FY 1993-2005
[AD-A269855] p 1316 N94-18336
Airport activity statistics of certificated route air carriers, 1992
[AD-A269042] p 1315 N94-18490
ALBEDO
Cloud CCN feedback
[DE93-016878] p 1472 N94-17985
Energy efficiency and the environment: Innovative ways to improve air quality in the Los Angeles Basin
[DE93-016964] p 1473 N94-18050
An investigation of warm-cloud microphysics using a multi-component cloud model: Interactive effects of the aerosol spectrum
[AD-A270273] p 1493 N94-18812
ALCOHOLS
Synthesis of higher alcohols from carbon monoxide and hydrogen in a slurry reactor
[DE93-015086] p 1347 N94-18209
Kinetic studies of electrochemical generation of Ag(II) ion and catalytic oxidation of selected organics
[DE93-016601] p 1352 N94-19240
ALERTNESS
Using controlled daylight exposure and sleep timing in the prevention of shift lag during night operations
[AD-A269304] p 1504 N94-17824
ALGAE
Photobiotechnology: Application of photosynthesis to the production of renewable fuels and chemicals
[DE93-015522] p 1466 N94-18247
ALGEBRA
Infinite Grassmannian and moduli space of G-bundles
[DE93-624798] p 1545 N94-17683
Tensorial structure of a q-deformed sp(4,R) superalgebra
[DE93-624808] p 1545 N94-17685
Further on the current algebra of WZNW models at and away from criticality
[DE93-624809] p 1545 N94-17686
Paragrassmann analysis and quantum groups
[DE93-628593] p 1561 N94-18168
A teaching tool for linear programming
[AD-A270240] p 1523 N94-18905
A language of finite probabilistic processes and its interleaving semantics
[MEMO-INF-93-24] p 1558 N94-19354
ALGORITHMS
Parallel inverse iteration with reorthogonalization
[DE93-012867] p 1533 N94-17693
Planning under uncertainty solving large-scale stochastic linear programs
[DE93-013920] p 1516 N94-17701
Take-off performance monitoring system algorithm and display development
[NLR-TP-91395-U] p 1317 N94-17734
A modified direct preconditioner for indefinite symmetric Toeplitz systems
[DE93-015234] p 1516 N94-17800
Thermodynamics of computation and information distance
[DE93-012730] p 1517 N94-17812
Heuristics from nature for hard combinatorial optimization problems
[REPT-93-025] p 1547 N94-17961
Location of the absolute barycenter of a graph
[REPT-93-027] p 1547 N94-17962
A geometric algorithm for the Euclidean 1-center problem
[REPT-93-001] p 1519 N94-17975
Proceedings of the 4th European Congress on Chronometry
[ETN-93-94633] p 1424 N94-18006

The optimal numerical algorithm for processing of phase coded time signals for radio-clocks
p 1426 N94-18018
Some variation in the movement base of the ETA 251 series p 1428 N94-18035
Contribution to the analysis of tableaus based decision methods
[ETN-93-94355] p 1560 N94-18067
Software Toolkit for Analysis Research (STAR)
[DE93-017368] p 1519 N94-18086
A time-frequency smoothing algorithm for cyclic spectral analysis
[DE93-016634] p 1519 N94-18097
SAND contact in DYNA3D
[DE93-016451] p 1340 N94-18113
Exact cost flow problems in acyclic networks
[REPT-93-030] p 1520 N94-18138
Annealing algorithms for multiresource absolute location problems on graph
[REPT-93-028] p 1520 N94-18145
Numerical methods for molecular dynamics
[DE93-018321] p 1566 N94-18179
Optical associative processors and directed graphs
[AD-A268881] p 1615 N94-18224
Fast-training algorithm for hidden-layer forward-feed neural networks
[AD-A269253] p 1540 N94-18263
Automated ILA design for synchronous sequential circuits p 1397 N94-18340
Development of parallel architectures for sensor array processing. Volume 2: A parallel architecture for broad-band direction-of-arrival estimation
[AD-A270427] p 1534 N94-18508
ENO schemes on unstructured meshes
p 1412 N94-18561
Distributed memory parallel computers and computational fluid dynamics p 1413 N94-18568
New techniques for contrail forecasting
[AD-A269686] p 1490 N94-18573
Parallel and vector adaptations of the underwater finite element parabolic equation model
[AD-A269990] p 1563 N94-18678
Efficient transparent optimistic rollback recovery for distributed application programs
[AD-A268981] p 1522 N94-18696
Portable parallel ray tracing algorithms
[AD-A268984] p 1522 N94-18698
Active control of a multivariable system by way of polynomial neural networks: Computer simulation evaluations and laboratory experimental results
[AD-A270033] p 1541 N94-18790
Aspects of the calibration and processing of the CRRES fluxgate magnetometer data
[AD-A270127] p 1432 N94-18875
Statistical learning theory and algorithms
[AD-A270209] p 1523 N94-18901
Adaptive path planning: Algorithm and analysis
[DE93-008348] p 1523 N94-18926
A numerical study of hybrid optimization methods for the molecular conformation problems
[DE93-017898] p 1569 N94-18985
Using computerized tomography to determine ionospheric structures
[DE93-018903] p 1485 N94-19001
A least-squares computational tool kit
[DE93-018400] p 1557 N94-19011
A general-purpose contact detection algorithm for nonlinear structural analysis codes
[DE93-018507] p 1455 N94-19039
A particle method for history-dependent materials
[DE93-018696] p 1456 N94-19060
New insights in GMRES-like methods with variable preconditioners
[REPT-93-10] p 1524 N94-19084
Correction of longitudinal errors in accelerators for heavy-ion fusion
[DE93-018656] p 1575 N94-19106
Interior-point methodology for linear programming: Duality, sensitivity analysis and computational aspects
[REPT-93-28] p 1525 N94-19143
On the convergence of an unfeasible primal-dual interior-point method for convex programming
[REPT-93-34] p 1525 N94-19154
A polynomial primal-dual Dikin-type algorithm for linear programming
[REPT-93-36] p 1525 N94-19156
A multi-thread approach to coalescing small transfers generated by portable tool sets
[DE93-012128] p 1525 N94-19186
Experience in implementing a parallel file system
[DE93-012840] p 1536 N94-19188
Reducing extended transition systems
[MEMO-INF-93-09] p 1526 N94-19196
A parallel hashed oct-tree N-body algorithm
[DE93-012654] p 1526 N94-19205
Goal-driven LOTOS execution
[MEMO-INF-93-04] p 1527 N94-19227
Volume rendering of 3D scalar and vector fields at Lawrence Livermore National Laboratory
[DE93-018000] p 1528 N94-19276
PUMMA: Parallel Universal Matrix Multiplication Algorithms on distributed memory concurrent computers
[DE93-019163] p 1538 N94-19299
Robot navigation in unknown terrains: Introductory survey of non-heuristic algorithms
[DE93-019221] p 1316 N94-19300
A program for passively tracking a target using an array of sensors
[DE93-019554] p 1390 N94-19306
Bounds for expected loss in Bayesian decision theory with imprecise prior probabilities
[PB93-197507] p 1558 N94-19327
Using geometric techniques to improve dynamic programming algorithms for the economic lot-sizing problem and extensions
[PB93-197556] p 1528 N94-19330
Numerical analysis of proximal methods: Decomposition and parallelization
[ETN-93-95017] p 1552 N94-19362
Development of ISY data set, part 2
[NASDA-CNT-930006-PT-2] p 1463 N94-19384
Progress in edge detection
[RR-914-I] p 1529 N94-19396
Learning control of large-scale systems
[MATHS-REPT-A-186] p 1544 N94-19408
Notes on multi-step ahead prediction based on the principle of concatenation
[MATHS-REPT-A-189] p 1544 N94-19410
Robustness and efficiency of generalized predictive control algorithms with guaranteed stability
[MATHS-REPT-A-190] p 1530 N94-19412
The split-step algorithm for microwave propagation modeling above a conducting surface
[FEL-92-A430] p 1390 N94-19447
Computation of large numbers and VLSI: Application to GCD, to stretched GCD and at euclidian distance
[ETN-93-95009] p 1552 N94-19499
Heap construction in the parallel comparison tree model
[TR-409] p 1538 N94-19512
Process allocation on distributed memory parallel architectures
[ETN-93-95004] p 1538 N94-19514
Conception and analysis of numerical parallel algorithms: Realization on the Connection Machine
[ETN-93-95005] p 1531 N94-19517
A non-homogeneous, spatio-temporal, wavelet multiresolution analysis and its application to the analysis of motion
[AD-A270621] p 1538 N94-19534
Radiosity algorithms using higher order finite element methods
[DE93-018098] p 1531 N94-19548
Explorations of the practical issues of learning prediction-control tasks using temporal difference learning methods
[AD-A270836] p 1544 N94-19599
Systolic design with asynchronous controls for digital-signal processing
[AD-A270976] p 1392 N94-19680
Implementation of parallel algorithms
[AD-A271035] p 1539 N94-19682
Finding the strong components in a directed graph
[PB93-187342] p 1555 N94-19708
On the computation of versal family of matrices
[RR-892-M] p 1532 N94-19712
Algorithms and architectures for high speed signal processing
[AD-A271000] p 1392 N94-19736

ALIGNMENT
Aspects of the calibration and processing of the CRRES fluxgate magnetometer data
[AD-A270127] p 1432 N94-18875

ALKALI METALS
Structure, thermodynamics, and dynamical properties of supercooled liquids
[DE93-788387] p 1607 N94-18211

ALKALINE EARTH METALS
Polyurethane self-priming topcoats
[AD-D015870] p 1367 N94-17719

ALKENES
Conversion of ethane and of propane to higher olefin hydrocarbons
[DE93-015282] p 1347 N94-18194

ALL-WEATHER AIR NAVIGATION
Integrated Terminal Weather System (ITWS)
[AD-A269884] p 1492 N94-18684

ALLOCATIONS
Process allocation on distributed memory parallel architectures
[ETN-93-95004] p 1538 N94-19514

ALLOYING
Alloy development of FeAl aluminide alloys for structural use in corrosive environments
[DE93-015100] p 1355 N94-17757
Mechanical properties of excimer laser modified titanium surfaces
[DE93-012663] p 1358 N94-17875
The effect of composition on the mechanism of continuous recrystallization and superplastic response of aluminum-scandium alloys
[DE93-018594] p 1365 N94-19280
Reducing inadvertent alloying of metal/ceramic brazes
[DE93-009842] p 1373 N94-19308
Recent advances in high density tungsten composite processing
[AD-A270764] p 1344 N94-19576

ALLOYS
Consortium for materials development in space
[NASA-CR-194411] p 1379 N94-18840

ALPHA PARTICLES
Helium isotopic abundance variation in nature
[DE93-019050] p 1487 N94-19477

ALTERNATING CURRENT
Electrically controlled liquid-crystal heat valve
[AD-D015872] p 1443 N94-17705

ALTERNATING DIRECTION IMPLICIT METHODS
Navier-Stokes simulation of flow field around a blown-flap high-lift system p 1307 N94-18429
An investigation of low Marangoni number fluid flow in a cold corner
[AD-A271317] p 1422 N94-19569

ALUMINATES
Advanced civil engineering materials based on inorganic polymers
[AD-A270837] p 1374 N94-19600

ALUMINIDES
Alloy development of FeAl aluminide alloys for structural use in corrosive environments
[DE93-015100] p 1355 N94-17757
Environmental effects on intermetallic compounds: A guide to the literature
[AD-A269587] p 1359 N94-18306
Developing and understanding the high temperature behavior of niobium aluminides and niobium aluminide composites
[AD-A268874] p 1341 N94-18636
Fatigue resistant Ti3Al composites
[AD-A270305] p 1341 N94-18692
Development of ductile Fe3Al-based aluminides
[DE93-017865] p 1362 N94-18938
Tensile properties of as-cast iron-aluminide alloys
[DE93-017852] p 1363 N94-18975

ALUMINUM
Aluminum powder/water reaction ignited by electrical pulsed power
[AD-A269223] p 1376 N94-17840
Characterization of short pulse laser-produced plasmas at the Lawrence Livermore National Laboratory ultra short-pulse laser
[DE93-017191] p 1585 N94-18082

ALUMINUM ALLOYS
The effect of surface treatment and gaseous rust protection paper on the atmospheric corrosion stability of aluminium alloy
[DE93-623326] p 1355 N94-17679
Magnetic properties of single-crystalline UCu3Al2
[DE93-016607] p 1593 N94-17744
Atlas of formability: Ti-6Al-4V ELI
[AD-A268300] p 1357 N94-17803
Summary of work on coatings and claddings for fossil energy applications
[DE93-017005] p 1367 N94-17881
Process for applying high application-temperature coating to heat-sensitive aluminum alloys
[AD-D015823] p 1368 N94-17905
Phase separation and ordering process in Al-Li alloys studied by small-angle neutron scattering and neutron diffraction
[DE93-016750] p 1358 N94-17947
Effect of phase change in a debris cloud on a backwall structure
[DE93-017506] p 1358 N94-18100
The Hall-Petch relationship and mechanisms of fracture in B2 compounds
[DE93-018887] p 1359 N94-18182
A benchmark bending test of a thick specimen. Part 1: Experiments
[AD-A268730] p 1360 N94-18325
Development of the microstructure based stochastic life prediction models
[AD-A269880] p 1454 N94-18683
Fatigue resistant Ti3Al composites
[AD-A270305] p 1341 N94-18692
Development of the microstructure based stochastic life prediction model
[AD-A269742] p 1361 N94-18742

Development of ductile Fe3Al-based aluminides
[DE93-017865] p 1362 N94-18938

Metallurgical evaluation of SRAM 2/SRAM A program mer base plates
[DE93-018689] p 1364 N94-19100

Low-aluminum-content iron-aluminum alloys
[DE93-017862] p 1365 N94-19274

Commercialization effort in support of electroslag-casting technology
[DE93-017988] p 1366 N94-19733

ALUMINUM GALLIUM ARSENIDE LASERS

MOCVD-grown InGaAsP heterostructure diode lasers
[AD-A270848] p 1606 N94-19769

ALUMINUM GALLIUM ARSENIDES

DC and small-signal physical models for the AlGaAs/GaAs high electron mobility transistor
p 1401 N94-18370

Gallium arsenide-based ternary compounds and multi-band-gap solar cell research
[DE93-010049] p 1467 N94-18483

MOCVD-grown InGaAsP heterostructure diode lasers
[AD-A270848] p 1606 N94-19769

ALUMINUM GRAPHITE COMPOSITES

Strength optimization of C/Al metal matrix composites produced from prepregs
[DLR-FB-92-39] p 1340 N94-18122

ALUMINUM OXIDES

Metal/ceramic interfaces: Relationships between structure and chemistry
[AD-A268792] p 1369 N94-18188

Novel electrochemical materials prepared by sol-gel chemistry
[AD-A269060] p 1578 N94-18405

Pressureless densification of ceramic matrix composites
[AD-A269137] p 1371 N94-18691

Surface modification of sapphire for IR window application
[DE93-019168] p 1602 N94-19075

Ni-Al2O3 solid state binding: Elaboration, state of thermal constraints, mechanical behavior
[ECL-92-31] p 1366 N94-19436

ALUMINUM SILICATES

The direct synthesis of organic and organometallic-containing MICA-type aluminosilicates
[DE93-019001] p 1373 N94-19321

AMBIENCE

Analysis of data from Columbia Point Arena Ocean-Bottom Seismic Station (OBSS)
[AD-A271263] p 1500 N94-19727

A register of underwater acoustic test facilities in the US, Canada, and the United Kingdom
[AD-A270884] p 1500 N94-19785

AMIDES

Molecular composites from liquid crystalline polymers and liquid crystalline thermosets
[DE93-016608] p 1368 N94-18096

AMINO ACIDS

Modified aequorin shows increased bioluminescence activity
[AD-A268774] p 1347 N94-18185

AMMONIA

Condensed gases under winter conditions: A study for the rescue services
[FOA-C-40305-4.5] p 1473 N94-18139

Proton transfer dynamics and cluster ion fragmentation in phenol/ammonia cLusters
[AD-A269133] p 1348 N94-18256

Studies of clusters
[DE93-018961] p 1572 N94-19309

Adsorption analysis of ammonia in an aqueous solution
[DE93-019512] p 1353 N94-19552

Control of catalytic hydrotreating selectivity with ammonia
[DE93-041223] p 1354 N94-19660

AMMONIUM BROMIDES

Morphology of polymerized membranes on an amorphous substrate at molecular resolution by AFM
[AD-A268760] p 1370 N94-18403

AMORPHOUS MATERIALS

Vibrational and electronic properties of clusters and ultrathin films
[DE93-012291] p 1367 N94-17678

Morphology of polymerized membranes on an amorphous substrate at molecular resolution by AFM
[AD-A268760] p 1370 N94-18403

Performance of the Amorphous Materials Diffractometer GLAD at IPNS
[DE93-017746] p 1430 N94-18481

Research on stable, high-efficiency amorphous silicon multijunction modules
[DE93-010046] p 1467 N94-18518

Self-organized criticality and the Barkhausen effect in amorphous and polycrystalline metals
[AD-A269817] p 1361 N94-18735

In situ observation of radiation induced amorphization of crystals with apatite structure
[DE93-018450] p 1599 N94-18816

Elastic properties of amorphous thin films studied by Rayleigh waves
[DE93-018375] p 1372 N94-19202

AMORPHOUS SILICON

Research on stable, high-efficiency amorphous silicon multijunction modules
[DE93-010046] p 1467 N94-18518

Theoretical and experimental studies of quantum wells
[AD-A271180] p 1606 N94-19741

Amorphous silicon batch process cost analysis
[DE93-018203] p 1470 N94-19760

Tribological studies of silicon for magnetic recording applications (Invited)
[AD-A270878] p 1447 N94-19784

AMPHIBIOUS AIRCRAFT

Choice and optimization of a high-lift system for an advanced amphibious aircraft p 1310 N94-18447

AMPLIFICATION

Limitations on the fidelity of 100 fs pulses produced by chirped pulse amplification
[DE93-017167] p 1396 N94-17991

Monolithic low noise preamplifier for piezoelectric sensors
[AD-D015860] p 1563 N94-18734

Multi-terrawatt, 100 fsec laser system using flashlamp-pumped, dye-converted Ti:sapphire as an amplifier
[DE93-017190] p 1440 N94-18889

AMPLITUDE MODULATION

Evaluation of a liquid crystal spatial light modulator capable of amplitude- and phase-modulating modes
[AD-A269252] p 1577 N94-18262

Alternating-phase focusing with amplitude modulation
[DE93-018618] p 1574 N94-18273

VHF air/ground communications for air traffic control. Volume 1: A decision tree approach to system innovations
[AD-A268485] p 1316 N94-18384

ANALOG CIRCUITS

Quartz analog watch with perpetual calendar
p 1429 N94-18042

Development of analog watch with minute repeater
p 1429 N94-18043

APLAC: An object-oriented analog circuit simulator and design tool. 6.1 reference manual
[PB93-187193] p 1396 N94-18091

A tunable CMOS constant current source
p 1401 N94-18369

ANALOG DATA

SPROC: A multiple-processor DSP IC
p 1398 N94-18347

An analog retina model for detecting dim moving objects against a bright moving background
p 1399 N94-18350

Development of parallel architectures for sensor array processing. Volume 2: A parallel architecture for broad-band direction-of-arrival estimation
[AD-A270427] p 1534 N94-18508

The universal BitBus node
[DIGEL-1993-1] p 1515 N94-19799

ANALOG SIMULATION

An analog retina model for detecting dim moving objects against a bright moving background
p 1399 N94-18350

ANALOG TO DIGITAL CONVERTERS

A rugged, low-cost advanced data acquisition system for field test projects
[DE93-010041] p 1615 N94-18334

Design and simulation of a gallium-arsenide second order sigma-delta analog to digital converter
[AD-A269494] p 1404 N94-18701

Conversion of ADC pulse heights into MIP units: NUMASS test data, September 1991
[USIP-93-03] p 1432 N94-18846

A programmable systolic trigger processor for FERA-bus data
[USIP-92-04] p 1405 N94-19292

ANALOGIES

A review of the stages of work hardening
[DE93-016456] p 1359 N94-18114

Towards versatile and practical knowledge acquisition
[AD-A269596] p 1615 N94-18464

ANALYSIS (MATHEMATICS)

ASYS: a computer algebra package for analysis of nonlinear algebraic equations systems
[DE93-629819] p 1548 N94-18175

ANALYTIC FUNCTIONS

Functional analysis of subelliptic operators on lie groups
[PB93-194793] p 1547 N94-18077

ANALYTICAL CHEMISTRY

Research program activities of the ORNL Analytical Chemistry Division
[DE93-017938] p 1339 N94-19117

ANATASE

Dynamical behavior of octahedrite from the Henbury meteorite
[DE93-018834] p 1627 N94-19339

ANDROMEDA GALAXY

Investigation of the relative abundance of heavy versus light nuclei in primary cosmic rays using underground muon bundles
[DE93-017601] p 1630 N94-17818

ANEMOMETERS

Shape of wind gusts at a 130m tower at Wilhelmshaven (Germany)
[BER-BAND-B3] p 1494 N94-19503

ANGLE OF ATTACK

Close-coupled oscillating canard effects on post-stall lift enhancement
[AD-A268938] p 1321 N94-18541

Numerical prediction of transition of the F-16 wing at supersonic speeds
[NASA-CR-194407] p 1312 N94-19433

ANGLES (GEOMETRY)

Refining a triangulation of a planar straight-line graph to eliminate large angles
[DE93-016510] p 1528 N94-19344

ANGULAR DISTRIBUTION

Eta-nucleon interaction and nuclear production of eta mesons
[DE93-018469] p 1571 N94-19259

ANGULAR MOMENTUM

Tensorial structure of a q-deformed sp(4,R) superalgebra
[DE93-624808] p 1545 N94-17685

ANGULAR RESOLUTION

The solar optical telescope
[NASA-TM-109240] p 1621 N94-18850

ANIMALS

Assessing impacts of climate change on forests: The state of biological modeling
[DE93-015916] p 1471 N94-17790

Compilation of 1992 annual reports of the Navy ELF communications system ecological monitoring program, volume 1
[AD-A269569] p 1386 N94-18473

Compilation of 1992 annual reports of the navy ELF communications system ecological monitoring program, volume 2
[AD-A269726] p 1388 N94-18751

ANIONS

Ionic and molecular environments in heterogeneous electrocatalysis: Studies by radioactive labeling and LEED/AUGER spectroscopy
[AD-A268850] p 1567 N94-18766

Oligomer and mixed-metal compounds, potential multielectron transfer catalysts
[DE93-019592] p 1350 N94-19017

ANISOTROPY

Surface second harmonic generation studies of stepped Ag(111) electrode surfaces
[AD-A265205] p 1594 N94-17876

High energy resolution ARPES measurements of the normal and superconducting states of Bi2Sr2CaCu2O(8 + delta)
[DE93-018294] p 1599 N94-18804

Construction of a tension-torsion anisotropic brittle damage elastic model
[ECL-91-27] p 1457 N94-19375

Magnetic and crystallographic structures in UTX intermetallic compounds
[DE93-018291] p 1605 N94-19735

ANNEALING

Reorientation of misfit dislocations during annealing in InGaAs/GaAs(001) interfaces
[DE93-015046] p 1592 N94-17741

An annealing approach to multi-facility location problems in euclidean spaces
[REPT-93-022] p 1547 N94-17928

Annealing algorithms for multiresource absolute location problems on graph
[REPT-93-028] p 1520 N94-18145

Study of mechanical behavior and internal structure of ferritic nanocrystalline material
[DE93-019264] p 1596 N94-18184

Nitridation of GaAs(100) by laser-induced decomposition of HN3
[AD-A269147] p 1438 N94-18258

Fabrication and microstructural development of Ag-clad TlBa2Ca2Cu3O(x) tapes
[DE93-017407] p 1597 N94-18500

Morphology, deformation, and defect structures of TiCr2 in Ti-Cr alloys
[DE93-018332] p 1361 N94-18807

Binding of copper to nanocavity surfaces in silicon
[DE93-019073] p 1364 N94-19080

ANNIHILATION REACTIONS
Tensorial structure of a q-deformed sp(4,R) superalgebra
[DE93-624808] p 1545 N94-17685
On a possible algebra morphism of U(sub q)(osp1/2) onto the deformed oscillator algebra W(sub q)(N)
[DE93-629857] p 1548 N94-18176

ANNUAL VARIATIONS
SeaSoar CTD, fluorescence and scalar irradiance data from RRS Charles Darwin Cruises 58/59, NE Atlantic, Vivaldi 1991
[IOS-299-1992] p 1496 N94-18066
Cloudiest year study: An analysis of the 3DNEPH and RTNEPH databases
[AD-A269403] p 1490 N94-18281
Eastern Europe: A climatological study
[AD-A269200] p 1493 N94-18883
Seasonal variability of wind electric potential in the US
[DE93-018182] p 1493 N94-19051
Spatiotemporal variability of non-urban ozone concentrations over the eastern United States and its potential replication by satellite data
[PB93-191328] p 1476 N94-19065
The carbon isotope biogeochemistry of methane production in anoxic sediments. 1: Field observations
p 1477 N94-19234

ANODES
Compound-lens injector for a 19-MeV, 700-kA electron beam
[DE93-013752] p 1573 N94-17698
Environmentally assisted cracking of nickel anode substrates in Li/SOCl2 cells: An engineering approach
[DE93-015130] p 1405 N94-18928

ANOMALIES
Phenomenological explanation of elastic anomalies in superlattices
[DE93-017475] p 1594 N94-17871

ANTENNA ARRAYS
Power compensators for phased operation of antenna arrays on JET and D3-D
[DE93-013208] p 1581 N94-17694
Development of parallel architectures for sensor array processing, volume 1
[AD-A270426] p 1534 N94-18507
Development of parallel architectures for sensor array processing. Volume 2: A parallel architecture for broad-band direction-of-arrival estimation
[AD-A270427] p 1534 N94-18508
Design and fabrication of a Multichannel Adaptive Optical Processor (MADOP)
[AD-A270004] p 1579 N94-18668
Algorithms and architectures for high speed signal processing
[AD-A271000] p 1392 N94-19736

ANTENNA DESIGN
Arc detection and protection in high-power antenna systems
[DE93-013272] p 1382 N94-17695
Missile antenna pattern coordinate system and data formats
[AD-A269153] p 1385 N94-18260
A RFI measurement system for field sites
[AD-A269340] p 1385 N94-18301

ANTENNA RADIATION PATTERNS
Modeling a Yagi array antenna for VHF radar use
[AD-A268973] p 1387 N94-18525
Physical retrieval of precipitation water contents from Special Sensor Microwave/Imager (SSM/I) data. Part 2: Retrieval method and applications (report version)
p 1491 N94-18605

ANTHROPOMETRY
Analysis of seating and restraint limitations restricting total body weight for aircrew and passengers on US Army helicopters
[AD-A269117] p 1511 N94-18296
A multivariate anthropometric method for crew station design
[AD-A270652] p 1513 N94-19531

ANTICYCLONES
The activities of equatorial anticyclones of the Western Pacific and the South China Sea and their effects on the tracks of typhoon movement
[AD-A269954] p 1492 N94-18675

ANTIFERROMAGNETISM
Ising model on tangled chain. Part 2: Magnetization and susceptibility
[DE93-628794] p 1607 N94-18174
The low-temperature specific heat of CeCu2Ge2 at 0 and 9.5 kbar
[DE93-014914] p 1360 N94-18398

ANTIMISSILE DEFENSE
UVPI imaging from the LACE satellite: The Nihka rocket plume
[AD-A268456] p 1334 N94-18149
Super-resolution of multi-pixel and sub-pixel images for the SDI
[AD-A268537] p 1462 N94-18631
Legacy of the X Ray Laser Program
[DE93-019550] p 1442 N94-19554

ANTIMONY
Review of short-term, high-level exposure to metals: Antimony, barium, and cadmium
[AD-A268896] p 1505 N94-18392

ANTIOXIDANTS
The c-jun gene expression in human cells exposed to either ionizing radiation or hydrogen peroxide
[DE93-017436] p 1502 N94-18476

ANTIPROTONS
Proceedings of the 3rd Workshop on Balloon-Borne Experiments with Superconducting Magnet Spectrometers
[DE93-788362] p 1630 N94-18219
The PAPAGENO Partonic Monte-Carlo Program
[DE93-018524] p 1571 N94-19247

ANTIREFLECTION COATINGS
Simplified processing for 23 percent-efficient silicon concentrator solar cells
[DE93-015018] p 1464 N94-17787
Experimental examinations of semiconductor laser amplifiers for optical communication technology
[ETN-93-95050] p 1442 N94-19647

APEXES
Refining a triangulation of a planar straight-line graph to eliminate large angles
[DE93-016510] p 1528 N94-19344
Cycles containing all vertices of maximum degree
p 1554 N94-19688

APPLICATION SPECIFIC INTEGRATED CIRCUITS
Cellular logic array for computation of squares
p 1398 N94-18343
Verification of VLSI designs p 1400 N94-18363
High accuracy switched-current circuits using an improved dynamic mirror p 1401 N94-18368
Formal specification of a high speed CMOS correlator
p 1401 N94-18371
ARPA/CSTO rapid VLSI implementation
[AD-A269170] p 1403 N94-18695
Signal processing algorithms for heterogeneous architectures
[AD-A271248] p 1392 N94-19724

APPLICATIONS OF MATHEMATICS
Applications of an algebraic Monge property
[DE93-016869] p 1546 N94-17885

APPLICATIONS PROGRAMS (COMPUTERS)
Interactive Collaborative Environments (ICE) in the design to manufacturing process
[DE93-014994] p 1518 N94-17944
Adaptations to micropep and rocket to allow performance evaluation of multiple grain and/or airbreathing motors
[AD-A268798] p 1337 N94-18202
STREMR: Numerical model for depth-averaged incompressible flow
[AD-A269949] p 1417 N94-18672
Efficient transparent optimistic rollback recovery for distributed application programs
[AD-A268981] p 1522 N94-18696
Development of a finite element method program for the analysis of laminated composite plates using first-order shear deformation theory
[AD-A270318] p 1342 N94-18700
BACKSCATTER.FOR: A program to calculate the backscattering strength of an inhomogeneous seabed
[AD-A269235] p 1499 N94-18910
Visualization for applications in shock physics
[DE93-012849] p 1418 N94-18918
Feasibility study in linguistically motivated object-oriented conceptual design of information systems
[PB93-197754] p 1618 N94-19331
START user manual version 2.1
[LR-726] p 1335 N94-19614
The wave forecasting model NEDWAM
p 1495 N94-19701
Report of the Second CLICOM Experts Meeting
[WCDMP-19] p 1495 N94-19705
Improved HF data network simulator, volume 1
[AD-A270953] p 1393 N94-19752
SeaTrack: Ground station orbit prediction and planning software for sea-viewing satellites
[NASA-RP-1331] p 1532 N94-19761
On the automation of object-oriented requirements analysis
[AD-A270673] p 1532 N94-19782

APPROACH
About the accuracy of an image-based navigation system during the runway approach
[DLR-MITT-93-01] p 1316 N94-18146
VMC left turn curved approaches, test results — (visual meteorological conditions)
[AD-A269476] p 1316 N94-18728

APPROACH CONTROL
On the use of differential GPS for automatic approach and landing of space and aircraft
[DLR-MITT-93-05] p 1316 N94-17921

APPROPRIATIONS
Current information technology resource requirements of the federal government: Fiscal year 1994
p 1612 N94-17756
Report to Congress: Comprehensive Program Plan for Advanced Turbine Systems
[DE93-016718] p 1467 N94-18475
The 1994 NASA authorization, volume 2
[GPO-71-510] p 1620 N94-18842

APPROXIMATION
A one dimensional numerical model, with an application to the vertical distribution of dissolved oxygen in the ocean
[DE93-018481] p 1495 N94-17779
Multivariate wavelet representations and approximations
[AD-A269350] p 1546 N94-17825
Recent studies of short-range order in alloys: The Cowley theory revisited
[DE93-016416] p 1358 N94-18111
Full Boltzmann discrete spectral wave model, implementation and nondimensional tests
[AD-A269885] p 1498 N94-18685
Are bilinear quadrilaterals better than linear triangles?
[DE93-019223] p 1551 N94-19301
The complexity of the optimal spanning hypertree problem
[TR-471] p 1561 N94-19481

AQUEOUS SOLUTIONS
Densities and viscosities of ternary ammonia/water fluids
[DE93-015966] p 1351 N94-19118
Current-potential characteristics of electrochemical systems
[DE93-040303] p 1352 N94-19192
Adsorption analysis of ammonia in an aqueous solution
[DE93-019512] p 1353 N94-19552

AQUIFERS
Similarity solutions for gravity-dominated spreading of a lens of organic contaminant
[REPT-93-24] p 1420 N94-19139
Multigrid for a groundwater flow problem
[REPT-93-29] p 1420 N94-19144

ARC DISCHARGES
Low power arcjet system spacecraft impacts
[NASA-TM-106307] p 1336 N94-17856

ARC WELDING
Thermal insulation of wet shielded metal arc welds
[AD-A268697] p 1445 N94-18465
Effects of irradiation temperature on Charpy and tensile properties of high-copper, low upper-shelf, submerged-arc welds
[DE93-017858] p 1445 N94-19047
Overlay welding irradiated stainless steel
[DE93-018767] p 1446 N94-19334

ARCHITECTURE (COMPUTERS)
Employing knowledge resources in a new text planner architecture
[AD-A269669] p 1516 N94-17732
EXPECT: Intelligent support for knowledge base refinement
[AD-A269602] p 1612 N94-17745
RESQme studies for SDC regional computing centers
[DE93-015230] p 1514 N94-17799
Information technology resources assessment
[DE93-015276] p 1613 N94-17894
PARX: Architecture of an operating system for parallel machines
[ETN-93-94401] p 1533 N94-18068
Optical associative processors and directed graphs
[AD-A268881] p 1615 N94-18224
Synthesis techniques and analysis tool for on-chip fault-tolerance
[AD-A269148] p 1521 N94-18259
Performance of defect-tolerant set-associative cache memories p 1398 N94-18346
An improved distributed arithmetic architecture
p 1398 N94-18349
Low power signal processing research at Stanford
p 1393 N94-18351
A modified reconfigurable data path processor
p 1400 N94-18360
High-performance multiprocessor architecture for a 3-D lattice gas model p 1400 N94-18362
Asynchronous sequential circuit design using pass transistor iterative logic arrays p 1402 N94-18376
Improved self arbitrated VLSI asynchronous circuits
p 1402 N94-18378

A special purpose silicon compiler for designing supercomputing VLSI systems p 1402 N94-18379
A fast adaptive convex hull algorithm on two-dimensional processor arrays with a reconfigurable BUS system
p 1402 N94-18380
Development of parallel architectures for sensor array processing, volume 1
[AD-A270426] p 1534 N94-18507
Development of parallel architectures for sensor array processing. Volume 2: A parallel architecture for broad-band direction-of-arrival estimation
[AD-A270427] p 1534 N94-18508
Case studies of software development tools for parallel architectures
[AD-A269193] p 1535 N94-18866
ControlShell: A real-time software framework
[AD-A269172] p 1523 N94-18879
A parallel and pipelined architecture for estimation of direction of arrival using a bilinear transformation method, volume 3
[AD-A270137] p 1389 N94-18897
Visualization for applications in shock physics
[DE93-012849] p 1418 N94-18918
Motorola MC68040 high-speed design using Altera EPM5000 erasable programmable logic devices
[DE93-017635] p 1523 N94-19006
A programming paradigm for distributed-memory computers
[DE93-018336] p 1524 N94-19024
Coordination of software-development activities among sites that are geographically separated
[DE93-019201] p 1524 N94-19076
Advances in architectural concepts to support distributed systems design
[MEMO-INF-93-17] p 1527 N94-19261
FASTBUS simulation models in VHDL
[USIP-92-07] p 1515 N94-19295
A multi-level data-flow architecture for signal and data processing applications
[DE93-041272] p 1539 N94-19588
Service without servers
[AD-A270612] p 1515 N94-19591
CVL: A C vector library manual. Version 2
[AD-A270614] p 1531 N94-19592
The Cluster science data system: A distributed system to serve a wide international community
p 1330 N94-19638
Signal processing algorithms for heterogeneous architectures
[AD-A271248] p 1392 N94-19724
Algorithms and architectures for high speed signal processing
[AD-A271000] p 1392 N94-19736
Congestion/flow control and routing in data networks: A control-theoretic approach
[AD-A271121] p 1392 N94-19737
Improved HF data network simulator, volume 1
[AD-A270953] p 1393 N94-19752

ARCTIC OCEAN
Airborne studies of ocean-particle-cloud interactions in the Arctic
[AD-A270752] p 1479 N94-19575

ARCTIC REGIONS
Analysis of meteorological conditions during AGASP-4: 30 March - 23 April 1992
[PB93-190205] p 1489 N94-18126
Arctic ice studies
[AD-A268608] p 1497 N94-18277
Atlas of SSM/I satellite ice concentration interpolated to operational ice model domains of the Arctic for 1992
[AD-A270306] p 1499 N94-18727
International Symposium on the Ecological Effects of Arctic Airborne Contaminants --- abstracts
[AD-A269955] p 1475 N94-18775
Ozone hole
[NASA-TM-109368] p 1476 N94-18960
Method for extracting tidal and inertial motion from ARGOS ice buoys applied to the Barents Sea during CEAREX
[PB93-190213] p 1499 N94-19063
Airborne studies of ocean-particle-cloud interactions in the Arctic
[AD-A270752] p 1479 N94-19575

ARGON
Experimental study of interactions of highly charged ions with atoms at keV energies
[DE93-040222] p 1571 N94-19257

ARGOS SYSTEM
Method for extracting tidal and inertial motion from ARGOS ice buoys applied to the Barents Sea during CEAREX
[PB93-190213] p 1499 N94-19063

ARITHMETIC
An improved distributed arithmetic architecture
p 1398 N94-18349

ARITHMETIC AND LOGIC UNITS
VLSI for high-speed digital signal processing
[AD-A270406] p 1404 N94-18706

ARMOR
Shock-loading response of advanced materials
[DE93-018344] p 1455 N94-19033
The influence of the target strength model on computed perforation
[DE93-018659] p 1460 N94-19543

ARRAYS
Applications of an algebraic Monge property
[DE93-016869] p 1546 N94-17885

ARRESTERS
Analysis of high contact resistances associated with hermetic and lightning arrestor connectors
[DE93-014850] p 1395 N94-17763

ARTIFICIAL INTELLIGENCE
Weakened negative introspection in autoepistemic reasoning
[PB93-187375] p 1520 N94-18118
Dialog-Based Learning (DBL) for adaptive interface agents and programming-by-demonstrations systems
[AD-A269154] p 1540 N94-18261
Distributed reasoning and planning
[AD-A268682] p 1540 N94-18399
On masking effect
[AD-A269593] p 1541 N94-18462
Flexible integration of path-planning capabilities
[AD-A269594] p 1541 N94-18463
Survey of collision avoidance and ranging sensors for mobile robots, revision 1
[AD-A269846] p 1541 N94-18474
SERCAA cloud analysis integration: Design concepts and interaction with cloud forecast models
[AD-A269104] p 1492 N94-18637
Efficient domain-independent experimentation
[AD-A269530] p 1557 N94-18640
Automatically generating abstractions for planning
[AD-A269772] p 1541 N94-18759
Knowledge sources for an intelligent MCM analyzer
[AD-A269224] p 1542 N94-18887
The intelligent processing of materials
[AD-A269250] p 1362 N94-18923
Geometrical pattern learning
[DE93-017641] p 1542 N94-19007
JPRS report: Central Eurasia. Aviation and cosmonautics, no. 12, December 1992
[JPRS-UAC-93-006] p 1632 N94-19148
JPRS report: Central Eurasia. Aviation and cosmonautics, no. 10, October 1992
[JPRS-UAC-93-004] p 1632 N94-19149
JPRS report: Central Eurasia: Aviation and cosmonautics, no. 11, November 1992
[JPRS-UAC-93-005] p 1632 N94-19208
Computer-assisted instruction and natural language systems
[MEMO-INF-92-86] p 1527 N94-19225
New automatic deduction techniques in first order finite and infinite polyvalent logic
[ETN-93-95003] p 1528 N94-19359
Causal reasoning for model-based process supervisory control
[LAAS-93241] p 1544 N94-19360
PRACTICAL: Planning and resource allocation in C2-domains with time critical algorithms
[FEL-93-B029] p 1544 N94-19458
Automated qualitative modeling of dynamic physical systems
[AD-A270835] p 1422 N94-19598
Explorations of the practical issues of learning prediction-control tasks using temporal difference learning methods
[AD-A270836] p 1544 N94-19599
Equivalence and reduction of hidden Markov models
[AD-A270762] p 1560 N94-19768

ARTIFICIAL SATELLITES
CONTACT: An Air Force technical report on military satellite control technology
[AD-A269375] p 1334 N94-18408
Parallelization of the Air Force Space Command (AFSPACECOM) satellite motion models
[AD-A269327] p 1334 N94-18470
Constant-thrust orbit-raising transfer charts
[AD-A269088] p 1334 N94-18718
JPRS report: Science and technology. Central Eurasia: Space
[JPRS-USP-93-004] p 1323 N94-19146
Absolute positioning by collecting Global Positioning System (GPS) data along short baselines
[AD-A271324] p 1317 N94-19572

ASHES
Effects of the Mount Pinatubo eruption on solar insolation: Four case studies
[DE93-018454] p 1475 N94-18817

ASSAYING
Thermal neutron multiplicity measurements using the pyrochemical multiplicity counter at Lawrence Livermore National Laboratory
[DE93-018538] p 1571 N94-19278

ASSEMBLER ROUTINES
Embedded Computer Performance Measurement (ECPM). Advanced avionics subsystems and technology multiprocessor ECPM software documentation
[AD-A269921] p 1320 N94-18658

ASSEMBLING
Automatic soldering for watch circuit components
p 1428 N94-18037

ASSESSMENTS
Uncertainty versus interindividual variability
[DE93-018105] p 1559 N94-19549

ASSIMILATION
Preparation of data assimilation and model evaluation experiment data sets
[AD-A269996] p 1498 N94-18665

ASSOCIATIVE PROCESSING (COMPUTERS)
Optical associative processors and directed graphs
[AD-A268881] p 1615 N94-18224

ASTRO MISSIONS (STS)
ASTRO-1 to explore invisible universe
[NASA-TM-109360] p 1336 N94-18956

ASTROGRAPHY
The molecular environment of S106 IR
[MPE-PREPRINT-241] p 1622 N94-19417

ASTRONAUTS
Design considerations for remotely operated welding in space: Task definition and visual weld monitoring experiment
[AD-A268752] p 1445 N94-18634
Apollo 11: 20th anniversary
[NASA-TM-109364] p 1323 N94-18979
National Boy Scout Jamboree
[NASA-TM-109367] p 1610 N94-18982

ASTRONOMICAL CATALOGS
The Einstein Observatory catalog of IPC x ray sources. Volume 5E: Right ascension range 12h 00m to 15h 59m
[NASA-TM-108401-VOL-5E] p 1625 N94-18613
The Einstein Observatory catalog of IPC x ray sources. Volume 6E: Right ascension range 16h 00m to 19h 59m
[NASA-TM-108401-VOL-6E] p 1625 N94-18615
The Einstein Observatory catalog of IPC x ray sources. Volume 7E: Right ascension range 20h 00m to 23h 59m
[NASA-TM-108401-VOL-7E] p 1625 N94-18618
The Einstein Observatory catalog of IPC x ray sources. Volume 1E: Documentation
[NASA-TM-108401-VOL-1E] p 1626 N94-18619
The Einstein Observatory catalog of IPC x ray sources. Volume 2E: Right ascension range 00h 00m to 03h 59m
[NASA-TM-108401-VOL-2E] p 1626 N94-18620
The Einstein Observatory catalog of IPC x ray sources. Volume 3E: Right ascension range 04h 00m to 07h 59m
[NASA-TM-108401-VOL-3E] p 1626 N94-18621

ASTRONOMICAL INTERFEROMETRY
Image reconstruction from interferometer data
[AD-A268463] p 1578 N94-18383

ASTRONOMICAL MAPS
Working group for planetary system nomenclature
[NASA-CR-194406] p 1626 N94-18841

ASTRONOMICAL OBSERVATORIES
Space debris detection
[AD-A269254] p 1334 N94-18264
The Sudbury Neutrino Observatory and the solar neutrino problem
[DE93-018528] p 1629 N94-19260
The South African Astronomical Observatory
[SAAO-17] p 1623 N94-19657

ASTRONOMICAL SATELLITES
Particle induced background by Roentgen satellites
[MPE-242] p 1631 N94-19714

ASTRONOMICAL SPECTROSCOPY
The star identification, pointing and tracking system of UVSTAR, an attached payload instrument system for the Shuttle Hitchhiker-M platform p 1326 N94-19179

ASTRONOMY
The South African Astronomical Observatory
[SAAO-17] p 1623 N94-19657

ASTROPHYSICS
Institute of Geophysics and Planetary Physics, 1992
[DE93-019209] p 1627 N94-19077
The South African Astronomical Observatory
[SAAO-17] p 1623 N94-19657

ASYMMETRY
T violating neutron spin rotation asymmetry
[DE93-018470] p 1570 N94-19126

ASYMPTOTIC METHODS
Bayesian model choice: Asymptotics and exact calculations
[AD-A269067] p 1557 N94-18516
Asymptotic derivation of the modified time-dependent SP2 equations and numerical calculations
[DE93-016466] p 1551 N94-19342

ASYMPTOTIC PROPERTIES
Stability analysis through bifurcation theory, 1
p 1608 N94-18238
Stability analysis through bifurcation theory, 2
p 1608 N94-18239
Asymptotic derivation of the modified time-dependent SP2 equations and numerical calculations
[DE93-016466] p 1551 N94-19342

ASYMPTOTIC SERIES
Asymptotic behaviour of the solutions of Schroedinger equation with impulse effect in a Banach space
[DE93-629865] p 1548 N94-18195
Stability analysis through bifurcation theory, 1
p 1608 N94-18238
The asymptotic theory of the reflection and transmission of a pulsed electromagnetic beam field at a planar interface separating two dispersive media
[AD-A269033] p 1385 N94-18404

ASYNCHRONOUS MOTORS
Comparative examinations of several field oriented position control structures for asynchronous servomotors with a multitransputer system
[ETN-93-95051] p 1406 N94-19390

ATLANTIC OCEAN
CTD oxygen, tracer and nutrient data from RRS Charles Darwin Cruises 58/59 in the NE Atlantic as part of Vivaldi 1991
[IOS-296-1992] p 1496 N94-18065
Rapid oceanic cyclogenesis studies
[AD-A269258] p 1490 N94-18265
Wind products for use in coastal wave and surge models
[AD-A269753] p 1497 N94-18414
Organized track system: Air ways above the ocean
p 1495 N94-19702
Measurements of ocean surface and bottom backscattering strengths in the northwestern Atlantic Ocean
[AD-A270893] p 1500 N94-19786

ATMOSPHERIC ATTENUATION
Dispersion effects on millimeter wavelength attenuation efficiencies for a variety of fibers
[AD-A268992] p 1386 N94-18454

ATMOSPHERIC BOUNDARY LAYER
Boundary layer heat budgets from wind profiler/RASS data: A feasibility study
[DE93-013187] p 1489 N94-18052
An investigation of warm-cloud microphysics using a multi-component cloud model: Interactive effects of the aerosol spectrum
[AD-A270273] p 1493 N94-18812
Application of an atmospheric dispersion model to simulated pollutant releases in the Colorado Front range
[DE93-017118] p 1480 N94-19732

ATMOSPHERIC CHEMISTRY
Carbon Dioxide Information Analysis Center: FY 1992 activities
[DE93-013845] p 1471 N94-17774
Characterization of the Facility for Atmospheric Corrosion Testing (FACT) at Sandia
[DE93-018510] p 1474 N94-18521
Organic carbonyl compounds in Albuquerque, New Mexico, air: A preliminary study of the effects of oxygenated fuel use
[DE93-017748] p 1476 N94-19045
Kinetics programs for simulation of tropospheric photochemistry on the global scale
[DE93-019035] p 1476 N94-19104
Environmental Research Program
[DE93-019101] p 1477 N94-19105
Carbon Isotope Biogeochemistry of Methane from Anoxic Sediments
[NASA-CR-194620] p 1477 N94-19231
Analysis of satellite-derived ozone and water vapor measurements
[NASA-CR-193810] p 1486 N94-19237
The Mexico City 1991 lidar measurements campaign
[DE93-019960] p 1478 N94-19272
Crossed molecular beam studies of atmospheric chemical reaction dynamics
[DE93-019246] p 1478 N94-19303
The global atmospheric sulfur cycle: An evaluation of model predictions and observations
[CM-81] p 1479 N94-19379
Global three dimensional model of tropospheric trace gases chemistry and transport
[AERONAUTICA-ACTA-A-370-199]
p 1479 N94-19518
Airborne studies of ocean-particle-cloud interactions in the Arctic
[AD-A270752] p 1479 N94-19575

ATMOSPHERIC CIRCULATION
A review of wind field models for atmospheric transport
[DE93-016085] p 1488 N94-17895
Statistical intercomparison of global climate models: A common principal component approach with application to GCM data
[DE93-017951] p 1473 N94-18005
Effect of spatial resolution on the simulation of regional precipitation in China in a global climate model
[DE93-013433] p 1489 N94-18053
Rapid oceanic cyclogenesis studies
[AD-A269258] p 1490 N94-18265
Three-dimensional cloud visualization based on satellite imagery
[AD-A269318] p 1490 N94-18300
Internal instability of nonparallel flow on an equatorial beta-plane
[AD-A268927] p 1490 N94-18486
Work plan for the Marine Aerosol Properties and the Thermal Imager Performance Trial (MAPTIP)
[AD-A270026] p 1483 N94-18712
Eastern Europe: A climatological study
[AD-A269200] p 1493 N94-18883
Venus lower thermosphere studies
[NASA-CR-193546] p 1629 N94-19418
Application of an atmospheric dispersion model to simulated pollutant releases in the Colorado Front range
[DE93-017118] p 1480 N94-19732

ATMOSPHERIC COMPOSITION
A technique for measuring winds in the lower atmosphere using incoherent Doppler lidar
[DE93-017163] p 1488 N94-17758
Carbon Dioxide Information Analysis Center: FY 1992 activities
[DE93-013845] p 1471 N94-17774
Analysis of meteorological conditions during AGASP-4: 30 March - 23 April 1992
[PB93-190205] p 1489 N94-18126
A mobile remote sensing laboratory for water vapor, trace gas, aerosol, and wind speed measurements
[DE93-017158] p 1489 N94-18132
A review and evaluation of the ADAM 2.1 dispersion model
[AD-A269896] p 1474 N94-18688
CDIAC catalog of numeric data and computer model packages
[DE93-017675] p 1475 N94-18832
Using computerized tomography to determine ionospheric structures
[DE93-018903] p 1485 N94-19001
Spatiotemporal variability of non-urban ozone concentrations over the eastern United States and its potential replication by satellite data
[PB93-191328] p 1476 N94-19065
Valuation of temporary and future greenhouse gas reductions
[DE93-018876] p 1478 N94-19319
The global atmospheric sulfur cycle: An evaluation of model predictions and observations
[CM-81] p 1479 N94-19379
Helium isotopic abundance variation in nature
[DE93-019050] p 1487 N94-19477
Airborne studies of ocean-particle-cloud interactions in the Arctic
[AD-A270752] p 1479 N94-19575

ATMOSPHERIC CORRECTION
Application of fractal methods to estimate the aerosol-optical depth for atmospheric correction of high resolution satellite data
[DLR-FB-93-04] p 1480 N94-18088
The spatial variance of ionospherically-induced phase errors in SAR imagery
[DE93-015643] p 1385 N94-18232

ATMOSPHERIC DENSITY
Calibration of a high frequency monostatic acoustic echosounder
[AD-A268901] p 1481 N94-18229

ATMOSPHERIC EFFECTS
Upper atmospheric effects of the HF Active Auroral Research Program Ionospheric Research Instrument (HAARP IRI)
[AD-A268948] p 1481 N94-18451
Characterization of the Facility for Atmospheric Corrosion Testing (FACT) at Sandia
[DE93-018510] p 1474 N94-18521

ATMOSPHERIC GENERAL CIRCULATION MODELS
A technique for measuring winds in the lower atmosphere using incoherent Doppler lidar
[DE93-017163] p 1488 N94-17758
Toward a high performance distributed memory climate model
[DE93-019156] p 1494 N94-19298

ATMOSPHERIC HEAT BUDGET
Boundary layer heat budgets from wind profiler/RASS data: A feasibility study
[DE93-013187] p 1489 N94-18052

ATMOSPHERIC HEATING
The vertical distribution of heating in the tropical atmosphere
[AD-A270452] p 1490 N94-18514

ATMOSPHERIC IONIZATION
Photodissociation dynamics of cluster ions
[AD-A270296] p 1568 N94-18814

ATMOSPHERIC MODELS
Surface fluxes important to cloud development
[DE93-016633] p 1488 N94-17715
A review of wind field models for atmospheric transport
[DE93-016085] p 1488 N94-17895
The performance of drag relations in the WAQUA storm surge model
[KNMI-TR-149] p 1496 N94-17923
Energy efficiency and the environment: Innovative ways to improve air quality in the Los Angeles Basin
[DE93-016964] p 1473 N94-18050
On the construction of a regional atmospheric climate model
[KNMI-TR-147] p 1489 N94-18143
The land component of the global climate system with adequate spatial resolution
[DE93-018951] p 1474 N94-18183
RADARC HF ionospheric prediction program for OTH radar
[AD-A269557] p 1385 N94-18291
Wind products for use in coastal wave and surge models
[AD-A269753] p 1497 N94-18414
Microwave (SSM/I) Estimates of the Precipitation Rate to Improve Numerical Atmospheric Model Forecasts
[NASA-CR-193566] p 1491 N94-18602
SERCAA cloud analysis integration: Design concepts and interaction with cloud forecast models
[AD-A269104] p 1492 N94-18637
An investigation of methods for updating ionospheric scintillation models using topside in-situ plasma density measurements
[AD-A269872] p 1483 N94-18655
Preparation of data assimilation and model evaluation experiment data sets
[AD-A269996] p 1498 N94-18665
A review and evaluation of the ADAM 2.1 dispersion model
[AD-A269896] p 1474 N94-18688
Work plan for the Marine Aerosol Properties and the Thermal Imager Performance Trial (MAPTIP)
[AD-A270026] p 1483 N94-18712
An investigation of warm-cloud microphysics using a multi-component cloud model: Interactive effects of the aerosol spectrum
[AD-A270273] p 1493 N94-18812
Inclusion of a three-dimensional washout coefficient in ADPIC
[DE93-018499] p 1476 N94-19038
The global atmospheric sulfur cycle: An evaluation of model predictions and observations
[CM-81] p 1479 N94-19379
Global three dimensional model of tropospheric trace gases chemistry and transport
[AERONAUTICA-ACTA-A-370-199]
p 1479 N94-19518
The wave forecasting model NEDWAM
p 1495 N94-19701
Application of an atmospheric dispersion model to simulated pollutant releases in the Colorado Front range
[DE93-017118] p 1480 N94-19732

ATMOSPHERIC MOISTURE
Radiosonde data collected on the ERS-1 validation cruise RRS Charles Darwin Cruise 62A, Iceland Faeroes region
[IOS-297-1992] p 1461 N94-18137
Moist wind relationships p 1492 N94-18607

ATMOSPHERIC PHYSICS
International Centre for Theoretical Physics, Trieste Scientific activities in 1991
[DE93-624757] p 1606 N94-17792
On the construction of a regional atmospheric climate model
[KNMI-TR-147] p 1489 N94-18143
Analysis of satellite-derived ozone and water vapor measurements
[NASA-CR-193810] p 1486 N94-19237

ATMOSPHERIC PRESSURE
Spectral analysis of synoptic time scale disturbances over the tropical eastern Pacific during summer 1989, 1990 and 1991
[AD-A268821] p 1490 N94-18206
Rapid oceanic cyclogenesis studies
[AD-A269258] p 1490 N94-18265
Dispersion effects on millimeter wavelength attenuation efficiencies for a variety of fibers
[AD-A268992] p 1386 N94-18454

Research on Earth's rotation and the effect of atmospheric pressure on vertical deformation and sea level variability
[NASA-CR-194300] p 1484 N94-18838

ATMOSPHERIC SCATTERING

Dispersion effects on millimeter wavelength attenuation efficiencies for a variety of fibers
[AD-A268992] p 1386 N94-18454

A review and evaluation of the ADAM 2.1 dispersion model
[AD-A269896] p 1474 N94-18688

Morphology and characteristics of disturbed HF skywave channels
[AD-A269755] p 1388 N94-18722

Airborne studies of ocean-particle-cloud interactions in the Arctic
[AD-A270752] p 1479 N94-19575

ATMOSPHERIC SOUNDING

Verification of 3I retrievals vis-a-vis radiosonde observations
[KNMI-TR-150] p 1488 N94-17924

Calibration of a high frequency monostatic acoustic echosounder
[AD-A268901] p 1481 N94-18229

Three-dimensional cloud visualization based on satellite imagery
[AD-A269318] p 1490 N94-18300

Some potential errors in satellite wind estimates using the geostrophic approximation and the thermal wind
[AD-A269784] p 1491 N94-18599

Impact of shorter wavelengths on optical quality for laws
[NASA-CR-193873] p 1579 N94-18858

SPNDL: A concept for a small satellite Doppler lidar wind sounder p 1327 N94-19181

JPRS report: Science and technology. Central Eurasia: Earth Sciences
[JPRS-UES-93-004] p 1461 N94-19209

ATMOSPHERIC TEMPERATURE

Monitoring the response of the upper troposphere/lower stratosphere to a greenhouse gas scenario
[DE93-014509] p 1470 N94-17710

Carbon Dioxide Information Analysis Center: FY 1992 activities
[DE93-013845] p 1471 N94-17774

A mobile remote sensing laboratory for water vapor, trace gas, aerosol, and wind speed measurements
[DE93-017158] p 1489 N94-18132

Radiosonde data collected on the ERS-1 validation cruise RRS Charles Darwin Cruise 62A, Iceland Faeroes region
[IOS-297-1992] p 1461 N94-18137

Station climatic summaries: North America. Volume 1: The contiguous United States
[AD-A269567] p 1490 N94-18303

The vertical distribution of heating in the tropical atmosphere
[AD-A270452] p 1490 N94-18514

Some potential errors in satellite wind estimates using the geostrophic approximation and the thermal wind
[AD-A269784] p 1491 N94-18599

Station climatic summaries, North America. Volume 2: Alaska, Canada and Greenland
[AD-A269793] p 1493 N94-18732

ATMOSPHERIC TURBULENCE

Calibration of a high frequency monostatic acoustic echosounder
[AD-A268901] p 1481 N94-18229

A review and evaluation of the ADAM 2.1 dispersion model
[AD-A269896] p 1474 N94-18688

Estimation of wake vortex advection and decay using meteorological sensors and aircraft data
[AD-A270763] p 1316 N94-19661

ATMOSPHERICS

An investigation of warm-cloud microphysics using a multi-component cloud model: Interactive effects of the aerosol spectrum
[AD-A270273] p 1493 N94-18812

ATOM CONCENTRATION

A preliminary model for crack-tip hydrogen transport
[NPL-DMM(A)-84] p 1451 N94-17899

ATOMIC CLOCKS

Development of atomic standards at the Neuchatel Observatory p 1428 N94-18038

Military applications of high-accuracy frequency standards and clocks
[AD-A269303] p 1430 N94-18299

ATOMIC COLLISIONS

Electron stripping cross sections for light impurity ions in colliding with atomic hydrogens relevant to fusion research
[DE93-788476] p 1566 N94-18158

The quantum dynamics of electronically nonadiabatic chemical reactions
[NASA-CR-194309] p 1568 N94-18837

ATOMIC ENERGY LEVELS

Electron impact excitation of copper atoms
[DE93-017995] p 1363 N94-18939

Unimolecular photodissociation dynamics of ketene (CH2CO): The singlet/triplet branching ratio and experimental observation of the vibrational level thresholds of the transition-state
[DE93-019252] p 1352 N94-19304

ATOMIC EXCITATIONS

Comparison of the modeling solutions with the hydrogen discharge data
[DE93-015115] p 1565 N94-17797

Unitary (pi)(pi)N model of N* excitations in (pi)N and (gamma)N reactions
[DE93-017422] p 1568 N94-18826

Electron impact excitation of copper atoms
[DE93-017995] p 1363 N94-18939

Excited atomic bromine energy transfer and quenching mechanisms
[AD-A270672] p 1572 N94-19607

ATOMIC INTERACTIONS

Correlated charge-changing ion-atom collisions
[DE93-018717] p 1564 N94-17775

ATOMIC PHYSICS

Correlated charge-changing ion-atom collisions
[DE93-018717] p 1564 N94-17775

Diffusion in ordered alloys
[AD-A268232] p 1359 N94-18322

Summaries of FY 1993 research in the chemical sciences
[DE93-011855] p 1632 N94-18915

Atomic-scale friction measurements using friction force microscopy. Part 1: General principles and new measurement techniques
[AD-A270749] p 1446 N94-19678

Schroedinger's hope
[AD-A270988] p 1581 N94-19772

ATOMIC STRUCTURE

Correlated charge-changing ion-atom collisions
[DE93-018717] p 1564 N94-17775

Metal/ceramic interfaces: Relationships between structure and chemistry
[AD-A268792] p 1369 N94-18188

Characterization of diamond film nucleation and growth surface
[AD-A269400] p 1597 N94-18459

Scaling laws for diamond chemical vapor deposition. Diamond surface chemistry
[AD-A269874] p 1599 N94-18745

High energy resolution ARPES measurements of the normal and superconducting states of Bi2Sr2CaCu2O(8 + delta)
[DE93-018294] p 1599 N94-18804

Resonance Raman and photophysical studies of transition metal complexes in solution and entrapped in zeolites
[DE93-019892] p 1363 N94-19019

Surface phases and their influence on metal-oxide interfaces
[DE93-019931] p 1601 N94-19020

Relativistic configuration interaction calculation of the correlation energies of heliumlike ions
[DE93-018093] p 1571 N94-19201

Atomic resolution electron energy loss spectroscopy in the scanning transmission electron microscope
[DE93-015334] p 1352 N94-19239

Crossed molecular beam studies of atmospheric chemical reaction dynamics
[DE93-019246] p 1478 N94-19303

Excited atomic bromine energy transfer and quenching mechanisms
[AD-A270672] p 1572 N94-19607

ATOMIC WEIGHTS

Helium isotopic abundance variation in nature
[DE93-019050] p 1487 N94-19477

ATOMIZING

Combustion instability phenomena of importance to liquid propellant engines
[AD-A268800] p 1348 N94-18389

ATOMS

Harmonic generation at high intensities
[DE93-018632] p 1572 N94-19283

ATTENTION

Stimulus-driven capture and attentional set: Selective search for color and visual abrupt onsets
[IZF-1992-B-9] p 1509 N94-19419

Cognitive ability and whole-body rotation
[IZF-1993-B-4] p 1510 N94-19440

ATTENUATORS

Designs for optical components related to the Los Alamos free-electron laser
[DE93-016617] p 1436 N94-17865

ATTITUDE (INCLINATION)

Cooperative control of multiple space manipulators
[AD-A270291] p 1445 N94-18813

ATTITUDE CONTROL

Research and training activities of the Joint Institute for Aeronautics and Acoustics
[NASA-CR-194742] p 1421 N94-19493

ATTITUDE INDICATORS

Attitude sensor package p 1325 N94-19172

AUDIO EQUIPMENT

Design of a general purpose and autonomous transmitter and receiver system for underwater acoustic experiments at sea
[AD-A269268] p 1495 N94-17822

AUDIOMETRY

The effects of reverberant impulse noise (blast waves) on hearing: Parametric studies
[AD-A269242] p 1506 N94-18911

AUDITORY DEFECTS

The effects of reverberant impulse noise (blast waves) on hearing: Parametric studies
[AD-A269242] p 1506 N94-18911

AUDITORY PERCEPTION

Psychophysical analyses of perceptual representations
[AD-A268711] p 1508 N94-18313

Human-machine interfaces
[AD-A270730] p 1513 N94-19764

AUDITORY STIMULI

The effects of reverberant impulse noise (blast waves) on hearing: Parametric studies
[AD-A269242] p 1506 N94-18911

AUGER SPECTROSCOPY

Guidelines for the expression of uncertainties in surface chemical analysis by Auger Electron Spectroscopy (AES) and X ray Photoelectron Spectroscopy (XPS)
[NPL-DMM(A)-99] p 1346 N94-17900

Ionic and molecular environments in heterogeneous electrocatalysis: Studies by radioactive labeling and LEED/AUGER spectroscopy
[AD-A268850] p 1567 N94-18766

AURORAL ZONES

Global zones of particle precipitation as observed EXOS-C
[AD-A268758] p 1481 N94-18467

An investigation of methods for updating ionospheric scintillation models using topside in-situ plasma density measurements
[AD-A269672] p 1483 N94-18655

The effects of magnetic storm phases on f-layer irregularities from auroral to equatorial latitudes
[AD-A267388] p 1486 N94-19008

AURORAS

Upper atmospheric effects of the HF Active Auroral Research Program Ionospheric Research Instrument (HAARP IRI)
[AD-A268948] p 1481 N94-18451

Global zones of particle precipitation as observed EXOS-C
[AD-A268758] p 1481 N94-18467

AUSTENITE

Development and application of specially-focused ultrasonic transducers to location and sizing of defects in 75 mm- to 127 mm-thick austenitic stainless steel weld metals
[DE93-015975] p 1453 N94-18108

AUSTENITIC STAINLESS STEELS

Technique to eliminate helium induced weld cracking in stainless steels
[DE93-015982] p 1357 N94-17859

Summary of work on coatings and claddings for fossil energy applications
[DE93-017005] p 1367 N94-17881

Prediction of non-equilibrium solidification modes in austenitic stainless steel laser welds
[DE93-018457] p 1364 N94-19203

AUTOCORRELATION

Nontraditional windows in spectral analysis
[AD-A271336] p 1553 N94-19583

AUTOMATA THEORY

Multistack languages and grammars
[REPT-93-018] p 1518 N94-17926

The physics of cellular automata and coherence and chaos in classical many-body dynamical systems
[DE93-018021] p 1561 N94-18177

Robot navigation in unknown terrains: Introductory survey of non-heuristic algorithms
[DE93-019221] p 1316 N94-19300

Causal reasoning for model-based process supervisory control
[LAAS-93241] p 1544 N94-19360

Learning control of large-scale systems
[MATHS-REPT-A-186] p 1544 N94-19408

AUTOMATIC CONTROL

Autonomous neural network controllers for adaptive material handling
[AD-A268908] p 1540 N94-18331

Integrated Terminal Weather System (ITWS)
[AD-A269884] p 1492 N94-18684

A learning autopilot for automatically controlled robust regulation
[ETN-93-95075] p 1321 N94-19711
A stereoscopic vision system with applications to automated docking and tracking
[AD-A270754] p 1333 N94-19765

AUTOMATIC FREQUENCY CONTROL
Automatic tuning of an integral fuzzy controller
[REPT-93-006] p 1383 N94-17932

AUTOMATIC GAIN CONTROL
Automatic tuning of an integral fuzzy controller
[REPT-93-006] p 1383 N94-17932

AUTOMATIC LANDING CONTROL
On the use of differential GPS for automatic approach and landing of space and aircraft
[DLR-MITT-93-05] p 1316 N94-17921

AUTOMATIC PILOTS
A learning autopilot for automatically controlled robust regulation
[ETN-93-95075] p 1321 N94-19711

AUTOMATIC REPEAT REQUEST
Meteor burst communications improvement study
[AD-A270866] p 1393 N94-19793

AUTOMATIC TEST EQUIPMENT
Universal measurement device for electronic watches and small clocks p 1427 N94-18029

AUTOMOBILE FUELS
Evaluation of aftermarket LPG conversion kits in light-duty vehicle applications
[DE93-010035] p 1377 N94-18617
Data collection plan for phase 2 Alternative Fuels Bus Data Collection Program
[DE93-010047] p 1378 N94-18913

AUTOMOBILES
Lightweight materials for transportation: Program plan
[DE93-017381] p 1340 N94-18087
Directions for computational mechanics in automotive crashworthiness p 1459 N94-19472
Modeling of driver behavior: Information perception, rule and control strategies in experiments and simulations
[ETN-93-95053] p 1510 N94-19649

AUTOMORPHISMS
Paragrassmann analysis and quantum groups
[DE93-628593] p 1561 N94-18168

AUTONOMOUS NAVIGATION
Geometrical pattern learning
[DE93-017641] p 1542 N94-19007
A stereoscopic vision system with applications to automated docking and tracking
[AD-A270754] p 1333 N94-19765

AUTOREGRESSIVE PROCESSES
Advances in the identification of transfer function models using Prony analysis
[DE93-017980] p 1548 N94-18094
Spectral analysis on the canonical autoregressive decomposition
[AD-A270083] p 1549 N94-18798
Time dependent identification of nonlinear structures
[ECL-92-64] p 1457 N94-19403
Generalized multichannel signal detection
[AD-A271385] p 1391 N94-19587

AVALANCHE DIODES
The study of the phase structure of hadronic matter by searching for the deconfined quark-gluon phase transition using 2 TeV (bar-p)-p collisions, and by searching for critical phenomena in an exclusive study of multifragmentation using 1 GeV/nucleon heavy ion collisions
[DE93-018925] p 1570 N94-19103

AVIATION METEOROLOGY
Integrated Terminal Weather System (ITWS)
[AD-A269884] p 1492 N94-18684

AVIONICS
Preliminary design of a water cooled avionics cooling rack
[AD-A268826] p 1320 N94-18536
FAA airborne data link human factors research plan
[AD-A271006] p 1514 N94-19773

AXIAL FLOW
Relation between the fluctuating wall pressure and the turbulent structure of a boundary layer on a cylinder in axial flow
[AD-A270242] p 1418 N94-18906
Vane optimization for maximum efficiency using Design Of Experiments (DOX)
[AD-A270270] p 1320 N94-18907

AXIAL LOADS
Transient response of a viscous and anchored liquid bridge to an axial pulse
[LRT-WE-9-FB-7-1992] p 1379 N94-19492

AXIAL STRAIN
Experiments and analysis of lateral piezoresistance gauges
[DE93-017874] p 1433 N94-19111
Modeling and characterization of mechanoelectric conversion piezoelectric generators through dynamical or quasi static uniaxial stress
[ISAL-92-0097] p 1406 N94-19490

AXIAL STRESS
Assessment of an improved multiaxial strength theory based on creep-rupture data for Inconel 600
[DE93-015929] p 1356 N94-17791
New test method to determine modulus of elasticity of rocket grain material
[AD-A269758] p 1377 N94-18758

AXISYMMETRIC BODIES
The effect of fine surface riblets on the flow around an inclined axially symmetrical body
[MPIS-105/1993] p 1420 N94-19356

AXISYMMETRIC FLOW
Applications of the program UIFLOW-2D to the numerical simulation of axisymmetric flows
[AD-A268731] p 1410 N94-18326
Two-dimensional boundary surfaces for axi-symmetric external transonic flows
[AD-A269678] p 1312 N94-18571

AXONS
Coupled neural-dendritic processes: Cooperative stochastic effects and the analysis of spike trains
[AD-A270041] p 1506 N94-18793
Extrathalamic modulation of cortical function
[AD-A270869] p 1507 N94-19783

AZIMUTH
A comparison of single-station backazimuth estimates with regional event locations in the Central Appalachians
[AD-A269897] p 1483 N94-18690

AZOLES
Solderability perservative coatings: Electroless tin versus organic azoles
[DE93-017634] p 1370 N94-18477

B

B STARS
Detection of accreting gas toward HD 45677: A newly recognized, Herbig Be proto-planetary system
[NASA-CR-189312] p 1621 N94-19288

B-1 AIRCRAFT
Temperature of aircraft cargo flame exposure during accidents involving fuel spills
[DE93-019633] p 1381 N94-19539

B-52 AIRCRAFT
Temperature of aircraft cargo flame exposure during accidents involving fuel spills
[DE93-019633] p 1381 N94-19539

BACKGROUND NOISE
Chemical dynamics in time and energy space
[DE93-018595] p 1350 N94-19097
Inverse scattering of surface waves: A new look at surface consistency
[REPT-93-25] p 1486 N94-19140

BACKGROUND RADIATION
Particle induced background by Roentgen satellites
[MPE-242] p 1631 N94-19714

BACKSCATTERING
A technique for measuring winds in the lower atmosphere using incoherent Doppler lidar
[DE93-017163] p 1488 N94-17758
Design of a general purpose and autonomous transmitter and receiver system for underwater acoustic experiments at sea
[AD-A269268] p 1495 N94-17822
Analysis of HgI2 and PbI2 crystals and detectors by Particle-Induced X Ray Emission (PIXE) and Ion Backscattering Spectroscopy (IBS)
[DE93-017168] p 1594 N94-17896
Suppression of backscatter and stray reflection induced phase noise in Michelson interferometers
[AD-D015809] p 1382 N94-17902
Wideband electromagnetic scattering/analysis program: Far zone electromagnetic scattering from complex shapes using geometrical theory of diffraction
[AD-A268790] p 1384 N94-18187
Studies of enhanced radar backscatter
[AD-A269544] p 1385 N94-18288
Simulation of emittance dilution in electron storage ring from Compton backscattering
[DE93-017611] p 1386 N94-18503
Environmental characterization for target acquisition. Report 3: New concepts for evaluating low-grazing angle radar measurements
[AD-A269956] p 1388 N94-18777
BACKSCATTER.FOR: A program to calculate the backscattering strength of an inhomogeneous seabed
[AD-A269235] p 1499 N94-18910
Scientific studies in association with the Shuttle Solar Backscatter Ultraviolet (SSBUV) project
[NASA-CR-193404] p 1630 N94-19437
An ab initio Monte Carlo study of low energy positron and electron implantation in elemental metals and multilayers
[DE93-019847] p 1603 N94-19541
Comparative evaluation of Kirchhoff, perturbation, and full wave methods for rough surface scattering
[AD-A271198] p 1392 N94-19718
Theoretical and experimental research on coherent microwave backscatter from the ocean
[AD-A271276] p 1500 N94-19743
Measurements of ocean surface and bottom backscattering strengths in the northwestern Atlantic Ocean
[AD-A270893] p 1500 N94-19786

BACKWARD FACING STEPS
Numerical solutions for a flow with mixed convection in a vertical geometry
[DE93-011592] p 1419 N94-19058

BACKWARD WAVE TUBES
The gyrotron backward-wave-oscillator experiment — final progress report
[AD-A268982] p 1403 N94-18452

BACKWARD WAVES
The gyrotron backward-wave-oscillator experiment — final progress report
[AD-A268982] p 1403 N94-18452

BACTERIA
Improving the biodegradative capacity of subsurface bacteria
[DE93-013171] p 1501 N94-18051
Photosynthetic reaction centers as active molecular electronic components, phase 1
[AD-A271388] p 1503 N94-19757

BAGGAGE
Road march performance of special operations soldiers carrying various loads and load distributions
[AD-A269198] p 1512 N94-18882

BALLISTICS
Adaptations to micropep and rocket to allow performance evaluation of multiple grain and/or airbreathing motors
[AD-A268798] p 1337 N94-18202
Numerical simulation of fluid dynamics and combustion for ram accelerator projectile/obturator interaction
[AD-A269715] p 1320 N94-18748
Development and characterization of adiabatic shear prone tungsten heavy alloys
[AD-A270477] p 1366 N94-19673
Feasibility study for a measuring system velocity projectile
[FEL-91-A368] p 1434 N94-19797

BALLOON-BORNE INSTRUMENTS
Proceedings of the 3rd Workshop on Balloon-Borne Experiments with Superconducting Magnet Spectrometers
[DE93-788362] p 1630 N94-18219
Origins of solar activity. First year report, AASERT grant
[AD-A268848] p 1629 N94-18222
Widget: A data acquisition system for a balloon borne Si particle calorimeter
[DE93-624668] p 1630 N94-18762

BALLOONING MODES
Plasma properties research: Task 3
[DE93-017087] p 1583 N94-17854
AEOLUS-IT MHD simulation code based on a toroidally incompressible plasma model
[DE93-788461] p 1586 N94-18157

BALLOONS
Proceedings of the 3rd Workshop on Balloon-Borne Experiments with Superconducting Magnet Spectrometers
[DE93-788362] p 1630 N94-18219

BANACH SPACE
Functional analysis of subelliptic operators on lie groups
[PB93-194793] p 1547 N94-18077
Steepest descent method for set-valued locally accretive mappings
[DE93-628592] p 1548 N94-18106
Impulsive moving mirror model in a Schroedinger picture with impulse effect in a Banach space
[DE93-629864] p 1561 N94-18155
Asymptotic behaviour of the solutions of Schroedinger equation with impulse effect in a Banach space
[DE93-629865] p 1548 N94-18195
Impulsive moving mirror model and the stability of Schroedinger equation with impulse effect in a Banach space
[DE93-629866] p 1548 N94-18196
Impulsive moving mirror model and impulsive differential equations in Banach space
[DE93-629867] p 1549 N94-18197

Impulsive moving mirror model and the stability of linear homogeneous differential equations with impulse effect in a Banach space
[DE93-629906] p 1549 N94-18200
L(sub p)-regularity of subelliptic operators on Lie groups
[PB93-194785] p 1549 N94-18948

BAND STRUCTURE OF SOLIDS
High energy resolution ARPES measurements of the normal and superconducting states of Bi2Sr2CaCu2O(8 + delta)
[DE93-018294] p 1599 N94-18804
Optical frequency doubling at adsorbates of silver(110) surface
[ETN-93-94837] p 1603 N94-19355

BANDPASS FILTERS
Design of a general purpose and autonomous transmitter and receiver system for underwater acoustic experiments at sea
[AD-A269268] p 1495 N94-17822
Designs for optical components related to the Los Alamos free-electron laser
[DE93-016617] p 1436 N94-17865
Laser imaging radar system
[AD-A270436] p 1387 N94-18510
Quasi-optical transponder using FET's and patch antennas
[AD-A271339] p 1407 N94-19584

BANDWIDTH
Extending bandwidth of optical emitters using active matching technique
[AD-D015875] p 1394 N94-17707
Coherent transient systems evaluation
[AD-A268808] p 1576 N94-18204
Laser imaging radar system
[AD-A270436] p 1387 N94-18510
Modeling a Yagi array antenna for VHF radar use
[AD-A268973] p 1387 N94-18525

BARENTS SEA
Method for extracting tidal and inertial motion from ARGOS ice buoys applied to the Barents Sea during CEAREX
[PB93-190213] p 1499 N94-19063
Acoustic travel time perturbations due to an internal tide and internal wave field in the Barents Sea
[AD-A270879] p 1499 N94-19580

BARIUM
Review of short-term, high-level exposure to metals: Antimony, barium, and cadmium
[AD-A268896] p 1505 N94-18392

BARIUM COMPOUNDS
The electromechanical properties of tetragonal BaTiO3 and PbTiO3 single crystals
[DE93-019008] p 1603 N94-19550

BARIUM FLUORIDES
Precision machining and polishing of scintillating crystals for large calorimeters and hodoscopes
[DE93-018663] p 1381 N94-19544

BARIUM OXIDES
Fabrication and microstructural development of Ag-clad TlBa2Ca2Cu3O(x) tapes
[DE93-017407] p 1597 N94-18500

BARKHAUSEN EFFECT
Self-organized criticality and the Barkhausen effect in amorphous and polycrystalline metals
[AD-A269817] p 1361 N94-18735

BAROCLINITY
A laboratory model of a cooled continental shelf
[AD-A270862] p 1500 N94-19792

BASE FLOW
Multigrid methods for flow transition in three-dimensional boundary layers with surface roughness
[NASA-CR-4540] p 1417 N94-18843

BATHYMETERS
Overview of physical oceanographic measurements taken during the Mount Mitchell cruise to ROPME sea area
[DE93-018460] p 1497 N94-18494
Processing and analysis of SeaMARC 2 data: Fieberling guyot; raw phase experiment in Norwegian-Greenland Sea
[AD-A269930] p 1498 N94-18662
Modifications of airborne oceanographic lidar for the long range P-3 missions
[NASA-CR-194682] p 1499 N94-18819
Modeling of current features in Gulf Stream SAR imagery
[AD-A270734] p 1499 N94-19609

BATHYTHERMOGRAPHS
An atlas of bathy-thermograph temperature cross-sections for Coral and Tasman Sea transects from 1960 to 1987
[AD-A268775] p 1497 N94-18329

BAYES THEOREM
A Bayesian approach to contaminant plume delineation
[DE93-012909] p 1472 N94-17890
Examination of metrics and assumptions used in correlation filter design
[DE93-017636] p 1576 N94-18000
Bayesian model choice: Asymptotics and exact calculations
[AD-A269067] p 1557 N94-18516
Bayesian analysis of ARMA processes: Complete sampling based inference under full likelihoods
[AD-A269168] p 1557 N94-18694
A least-squares computational tool kit
[DE93-018400] p 1557 N94-19011
Bounds for expected loss in Bayesian decision theory with imprecise prior probabilities
[PB93-197507] p 1558 N94-19327

BAYS (STRUCTURAL UNITS)
Aircraft fire sentry. Volume 1: Summary
[AD-A270087] p 1315 N94-18822
Aircraft fire sentry. Volume 2: Appendices A, B, C and D
[AD-A270088] p 1315 N94-18823

BCS THEORY
Crossover from BCS to Bose superconductivity: A functional integral approach
[DE93-019503] p 1604 N94-19566

BEADS
Modeling of single-crystal laser-weld microstructures
[DE93-017853] p 1445 N94-18976

BEAM CURRENTS
Designs for a 10.6 micrometer electromagnetic wiggler Free-Electron Laser (FEL)
[AD-A269695] p 1439 N94-18576
Simulation of transient effects in the heavy ion fusion injectors
[DE93-018658] p 1575 N94-19107

BEAM INJECTION
Compound-lens injector for a 19-MeV, 700-kA electron beam
[DE93-013752] p 1573 N94-17698
FEL experiment with a focusing wiggler
[DE93-788586] p 1438 N94-18160
Heavy Ion Fusion Injector Program
[DE93-018706] p 1575 N94-18997
Simulation of transient effects in the heavy ion fusion injectors
[DE93-018658] p 1575 N94-19107

BEAM INTERACTIONS
Advanced methods for the computation of particle beam transport and the computation of electromagnetic fields and beam-cavity interactions
[DE93-018160] p 1573 N94-17807
Plasma klystron amplifier
[AD-D015819] p 1395 N94-17903
Advances and applications of ABCI
[DE93-016971] p 1383 N94-18055
Laser powered beam conditioner for free-electron lasers and synchrotrons
[DE93-017821] p 1441 N94-18974

BEAMFORMING
The Intense Slow Positron Source concept: A theoretical perspective on a proposed INEL Facility
[DE93-013675] p 1564 N94-17738

BEAMS (RADIATION)
Electro-optic beam steering using non-linear organic materials
[AD-A270809] p 1374 N94-19577

BEAMS (SUPPORTS)
Computational mechanics of composite materials
[PB93-195782] p 1343 N94-19281
Reanalysis of structure models
[ECL-93-07] p 1458 N94-19460
Development of engineering models for calculation of failure loads and defect states of steel concrete beams and plates
[ETN-93-95052] p 1460 N94-19648

BEARING (DIRECTION)
Directional regions in Geographic Information Systems (GIS)
[AD-A268536] p 1462 N94-18309

BEND TESTS
Surface modification of sapphire for IR window application
[DE93-019168] p 1602 N94-19075

BENDING
Benchmarking the QUAD4/TRIA3 element
p 1450 N94-17837
A benchmark bending test of a thick specimen. Part 1: Experiments
[AD-A268730] p 1360 N94-18325
Plastic mechanism analysis of T-joints in RHS subject to combined bending and concentrated force
[PB93-195774] p 1456 N94-19061

BENDING FATIGUE
Defining the normal turbine inflow within a wind park environment
[DE93-010032] p 1489 N94-18046

BENDING MOMENTS
Defining the normal turbine inflow within a wind park environment
[DE93-010032] p 1489 N94-18046
Numerical integration of structural elements in NIKE3D and DYNA3D
[DE93-016325] p 1452 N94-18049

BENZOIC ACID
Polyurethane self-priming topcoats
[AD-D015870] p 1367 N94-17719

BERYLLIUM
Beryllium processing technology review for applications in plasma-facing components
[DE93-018396] p 1363 N94-19028

BERYLLIUM ALLOYS
Developing and understanding the high temperature behavior of niobium aluminides and niobium aluminide composites
[AD-A268874] p 1341 N94-18636

BERYLLIUM FLUORIDES
Calculation of the LiF-CeF3-BeF2 and LiF-PuF3-BeF2 ternary phase diagrams
[DE93-017437] p 1360 N94-18501

BETA PARTICLES
Neutrino mass
[DE93-018467] p 1567 N94-18269
Inverse neutrinoless double (beta)-decay at the NLC?
[DE93-017397] p 1568 N94-18825

BETATRONS
Decoherence and recoherence of beam in phase space
[DE93-014885] p 1573 N94-17784

BIAS
Bias in planning and explanation-based learning
[AD-A269608] p 1610 N94-17746

BIBLIOGRAPHIES
Bibliography of scientific publications of the Naval Biodynamics Laboratory, 1980 - 1992
[AD-A268886] p 1505 N94-18226
Aeronautical engineering: A continuing bibliography with indexes (supplement 297)
[NASA-SP-7037(297)] p 1310 N94-18937
Energy Efficiency and Renewable Energy Program
[DE93-017936] p 1468 N94-18986
Aerospace medicine and biology: A continuing bibliography with indexes (supplement 381)
[NASA-SP-7011(381)] p 1507 N94-19069
Aeronautical engineering: A continuing bibliography with indexes (supplement 296)
[NASA-SP-7037(296)] p 1310 N94-19070
An annotated bibliography on parallel parsing: Updated version
[MEMO-INF-92-84] p 1537 N94-19223
Bibliography on silicides
[AD-A270516] p 1374 N94-19532
Mathematical communications, volume 27, numbers 1 and 2, 1992. List and abstracts of memoranda published in the period July - December 1991
[PB93-191997] p 1553 N94-19557
Learning about the Internet bibliography and beginner's guide
[AD-A268847] p 1532 N94-19707

BIHARMONIC EQUATIONS
Solution of the Poisson equation with application to radar imaging
[PB93-195865] p 1389 N94-18950

BIMETALS
Oligomer and mixed-metal compounds, potential multielectron transfer catalysts
[DE93-019592] p 1350 N94-19017
The applications of modified metals in the construction industry
[VTT-TIED-1329] p 1365 N94-19374

BINARY ALLOYS
Recent studies of short-range order in alloys: The Cowley theory revisited
[DE93-016416] p 1358 N94-18111
Diffusion in ordered alloys
[AD-A268232] p 1359 N94-18322
Deformation mechanisms in a Laves phase
[DE93-018331] p 1361 N94-18806
Morphology, deformation, and defect structures of TiCr2 in Ti-Cr alloys
[DE93-018332] p 1361 N94-18807
Intelligent materials systems and structures. Part 4: The influence of thermomechanical loading on the life of shape memory alloys
[PB93-195923] p 1363 N94-18952
Tensile properties of as-cast iron-aluminide alloys
[DE93-017852] p 1363 N94-18975

A free energy simulation method based study of interfacial segregation
[DE93-019462] p 1364 N94-19032

BINARY DATA
Optimal design of binary phase-only filters using genetic algorithms
[AD-A268737] p 1396 N94-18278
Canonical multi-valued input Reed-Muller trees and forms p 1401 N94-18375

BINARY MIXTURES
Structure, thermodynamics, and dynamical properties of supercooled liquids
[DE93-788387] p 1607 N94-18211

BINARY PHASE SHIFT KEYING
Meteor burst communications improvement study
[AD-A270866] p 1393 N94-19793

BINARY SYSTEMS (MATERIALS)
Effect of oxygen concentration and ordering on vanadium-oxygen alloy vibrational spectra
[DE93-627003] p 1355 N94-17692
The longitudinal free vibrations of a fixed-free two-phase elastic bar
[AD-A268768] p 1453 N94-18387
The temperature at the phase boundary during quasi-static motions of a two-phase thermoelastic bar
[AD-A268769] p 1596 N94-18388
Interfacial cracks in plates: A three-dimensional numerical investigation p 1456 N94-19116

BINDERS (MATERIALS)
Polyurethane self-priming topcoats
[AD-D015870] p 1367 N94-17719
Some problems in the rheological characterisation of composite rocket propellants
[AD-A268806] p 1376 N94-18203

BIOASTRONAUTICS
Characterization of fluid physics effects on cardiovascular response to microgravity (G-572)
p 1323 N94-19163

BIOCHEMISTRY
Fifteenth Symposium on Biotechnology for Fuels and Chemicals: Program and Abstracts
[DE93-010005] p 1376 N94-18045
Photosynthetic responses to the environment, volume 8
[AD-A269584] p 1502 N94-18305
A numerical study of hybrid optimization methods for the molecular conformation problems
[DE93-017896] p 1569 N94-18985

BIOCONVERSION
Fifteenth Symposium on Biotechnology for Fuels and Chemicals: Program and Abstracts
[DE93-010005] p 1376 N94-18045
Photobiotechnology: Application of photosynthesis to the production of renewable fuels and chemicals
[DE93-015522] p 1466 N94-18247
Factors that control the stable carbon isotopic composition of methane produced in an anoxic marine sediment p 1477 N94-19235

BIODEGRADABILITY
Microbial degradation of poly-b-esters: A mechanistic study, cellulose acetate biodegradability
[AD-A271368] p 1374 N94-19586

BIODEGRADATION
Improving the biodegradative capacity of subsurface bacteria
[DE93-013171] p 1501 N94-18051
Microbial degradation of poly-b-esters: A mechanistic study, cellulose acetate biodegradability
[AD-A271368] p 1374 N94-19586

BIODYNAMICS
Control of shoulder muscles during goal directed movements
[PB93-195139] p 1504 N94-18080
Bibliography of scientific publications of the Naval Biodynamics Laboratory, 1980 - 1992
[AD-A268886] p 1505 N94-18226
Army Cockpit Delethalization Program (CDP)
[AD-A268990] p 1512 N94-18765
Consortium for materials development in space
[NASA-CR-194411] p 1379 N94-18840

BIOENGINEERING
Program descriptions
[NSF-92-123] p 1531 N94-19619

BIOGEOCHEMISTRY
Carbon Isotope Biogeochemistry of Methane from Anoxic Sediments
[NASA-CR-194620] p 1477 N94-19231
The carbon isotope biogeochemistry of (epsilon)CO2 production in a methanogenic marine sediment
p 1477 N94-19233
The carbon isotope biogeochemistry of methane production in anoxic sediments. 1: Field observations
p 1477 N94-19234

BIOINSTRUMENTATION
Bienzyme sensors based on electrically wired peroxidase
[AD-A271364] p 1374 N94-19585

BIOLOGICAL EFFECTS
Cellular and molecular level responses after radiofrequency radiation exposure, alone or in combination with x rays or chemicals
[AD-A268189] p 1501 N94-17729
Air pollution effects field research facility. 3: UV-B exposure and monitoring system
[DE93-013098] p 1470 N94-17773
Assessing impacts of climate change on forests: The state of biological modeling
[DE93-015916] p 1471 N94-17790
Compilation of 1992 annual reports of the Navy ELF communications system ecological monitoring program, volume 1
[AD-A269569] p 1386 N94-18473
The c-jun gene expression in human cells exposed to either ionizing radiation or hydrogen peroxide
[DE93-017436] p 1502 N94-18476
Compilation of 1992 annual reports of the navy ELF communications system ecological monitoring program. Volume 3: Tabs G - I
[AD-A269727] p 1388 N94-18741
Compilation of 1992 annual reports of the navy ELF communications system ecological monitoring program, volume 2
[AD-A269726] p 1388 N94-18751
Aerospace medicine and biology: A continuing bibliography with indexes (supplement 382)
[NASA-SP-7011(382)] p 1507 N94-18936
Aerospace medicine and biology: A continuing bibliography with indexes (supplement 381)
[NASA-SP-7011(381)] p 1507 N94-19069
Opportunities and questions for the fundamental biological sciences in space p 1502 N94-19212
Space research with intact organisms: The role of Space Station Freedom p 1502 N94-19213
Effect of EMP fields on cell membrane potentials
[DE93-015819] p 1503 N94-19341

BIOLOGICAL EVOLUTION
Space Life Sciences Research: The Importance of Long-Term Space Experiments
[NASA-TM-4502] p 1502 N94-19210
Opportunities and questions for the fundamental biological sciences in space p 1502 N94-19212
Life: Origin and evolution on Earth--How can we escape? p 1503 N94-19217

BIOLOGICAL MODELS (MATHEMATICS)
Assessing impacts of climate change on forests: The state of biological modeling
[DE93-015916] p 1471 N94-17790
Control of shoulder muscles during goal directed movements
[PB93-195139] p 1504 N94-18080

BIOLOGY
The 1982 to 1992 decade of research on the vacuum ultraviolet ring at National Synchrotron Light Source
[DE93-019469] p 1603 N94-19564

BIOLUMINESCENCE
Modified aequorin shows increased bioluminescence activity
[AD-A268774] p 1347 N94-18185

BIOMASS
Report to Congress: Comprehensive Program Plan for Advanced Turbine Systems
[DE93-016718] p 1467 N94-18475

BIOMASS ENERGY PRODUCTION
Fifteenth Symposium on Biotechnology for Fuels and Chemicals: Program and Abstracts
[DE93-010005] p 1376 N94-18045

BIOPHYSICS
Biophysical characterization and surface radiation balance
[NASA-CR-194659] p 1470 N94-17762

BIOPOLYMERS
Matrix- and substrate-assisted laser desorption for fast DNA sequencing
[DE93-015332] p 1501 N94-18242

BIOPROCESSING
Fifteenth Symposium on Biotechnology for Fuels and Chemicals: Program and Abstracts
[DE93-010005] p 1376 N94-18045

BIOTECHNOLOGY
Fifteenth Symposium on Biotechnology for Fuels and Chemicals: Program and Abstracts
[DE93-010005] p 1376 N94-18045
Multimodal image correlation applied to computer aided pedicular screwing
[ETN-93-95018] p 1528 N94-19363
Photosynthetic reaction centers as active molecular electronic components, phase 1
[AD-A271388] p 1503 N94-19757

BIRD-AIRCRAFT COLLISIONS
Explicit solution techniques for impact with contact constraints p 1459 N94-19470

BIREFRINGENCE
RF phase stabilization for RF photocathode gun through electro-optical monitoring
[DE93-019059] p 1406 N94-19310

BISMUTH COMPOUNDS
Single source precursors for the OMCVD of 3/5 compound semiconductors
[AD-A271147] p 1606 N94-19739

BITS
The universal BitBus node
[DIGEL-1993-1] p 1515 N94-19799

BLACK BODY RADIATION
Imaging and blackbody emission spectra of hot particulates generated during laser ablation
[DE93-015818] p 1439 N94-18724

BLACK HOLES (ASTRONOMY)
Maximal hypersurfaces in asymptotically stationary spacetimes
[MPA-708] p 1621 N94-18141

BLAST LOADS
Instrumented experiments aboard the frigate WOLF. Wolf 2: Measurement results of the 5.5 kg TNT in the crew aft sleeping compartment
[PML-1992-12] p 1451 N94-17931
Scaling laws for diffraction loading by air blast
[PML-1991-54] p 1452 N94-17941
Air blast measurements at 20 and 40 km distance from detonating 10 and 20 ton high explosive charges
[PB93-195949] p 1419 N94-19068

BLOCKING
Structural stability of 1100 C heated Pd/k during absorption cycling in protium
[DE93-016270] p 1346 N94-18048

BLOOD
Evaluation of dried storage of platelets for transfusion: Physiologic integrity and hemostatic functionality
[AD-A270756] p 1507 N94-19593

BLOOD CIRCULATION
Metabolic changes and hemodynamic dysfunction following hypothermic shock
[AD-A269780] p 1506 N94-18598

BLOOD PLASMA
Transcutaneous Analyte Measuring Methods (TAMM)
[AD-A271387] p 1408 N94-19756

BLUFF BODIES
Spectral radiance measurements on a bluff body stabilized flame: Characterization of the IR signature
[PB93-195899] p 1347 N94-18081

BODIES OF REVOLUTION
Two-dimensional boundary surfaces for axi-symmetric external transonic flows
[AD-A269678] p 1312 N94-18571

BODY CENTERED CUBIC LATTICES
Recent studies of short-range order in alloys: The Cowley theory revisited
[DE93-016416] p 1358 N94-18111
Dislocation-drag contribution to high-rate plastic deformation in shock-loaded tantalum
[DE93-018286] p 1361 N94-18802

BODY COMPOSITION (BIOLOGY)
In vivo animal models of body composition in aging
[DE93-012527] p 1501 N94-17889

BODY KINEMATICS
Control of shoulder muscles during goal directed movements
[PB93-195139] p 1504 N94-18080

BODY SIZE (BIOLOGY)
A multivariate anthropometric method for crew station design
[AD-A270652] p 1513 N94-19531

BODY TEMPERATURE
Effects of a high-energy food supplement on cold-induced thermogenesis
[AD-A269301] p 1504 N94-17823
Metabolic changes and hemodynamic dysfunction following hypothermic shock
[AD-A269780] p 1506 N94-18598
Evaluation of physiological and psychological impairment of human performance in cold stressed subjects
[AD-A268637] p 1506 N94-18632

BODY WEIGHT
Analysis of seating and restraint limitations restricting total body weight for aircrew and passengers on US Army helicopters
[AD-A269117] p 1511 N94-18296

BODY-WING AND TAIL CONFIGURATIONS
WBNGRID, a program for generation of C-H and C-O topology grids around wing/body/nacelle configurations: User's guide
[FFA-TN-1992-09] p 1311 N94-17721

Navier-Stokes, dynamics and aeroelastic computations for vortical flows, buffet and flutter applications
[NASA-CR-194520] p 1313 N94-19621

BODY-WING CONFIGURATIONS
Numerical calculations of high lift flows using structured and unstructured methods p 1307 N94-18428

BOEING 720 AIRCRAFT
Composite impact dynamics research at NASA LaRC: A review p 1458 N94-19467

BOILERS
Summary of work on coatings and claddings for fossil energy applications
[DE93-017005] p 1367 N94-17881

BOILING
Temperature lowering in cryogenic chemical-synthesis techniques and system
[DE93-018348] p 1562 N94-18810
Bench-scale screening tests for a boiling sodium-potassium alloy solar receiver
[DE93-018512] p 1469 N94-19040

BOLOMETERS
Infrared detection with high-(Tc bolometers and response of Nb tunnel junctions to picosecond voltage pulses
[DE93-016963] p 1595 N94-17989

BOLTED JOINTS
Analysis of bolted and bonded composite
[AD-A267792] p 1453 N94-18382

BOLTZMANN TRANSPORT EQUATION
Criticality benchmark comparisons leading to cross-section upgrades
[DE93-017184] p 1556 N94-18073
IR materials producibility
[AD-A268849] p 1577 N94-18223
Full Boltzmann discrete spectral wave model, implementation and nondimensional tests
[AD-A269885] p 1498 N94-18685
Modelling ideal gas fluorides laser plasmas
[ETN-93-95073] p 1592 N94-19613

BOLTZMANN-VLASOV EQUATION
On neutral plasma oscillations
[DE93-040319] p 1590 N94-19194

BOMBER AIRCRAFT
Procedures and design data for the formulation of aircraft configurations
[AD-A270150] p 1318 N94-18779

BONDED JOINTS
Mathematical modelling of bonded fibre-composite repairs to aircraft
[AD-A268732] p 1341 N94-18327
Analysis of bolted and bonded composite
[AD-A267792] p 1453 N94-18382
High performance YBCO films
[AD-A269090] p 1599 N94-18719

BONDING
High- and low-temperature bonding techniques for microstructures
[DE93-017173] p 1595 N94-17992
Ising model on tangled chain. Part 2: Magnetization and susceptibility
[DE93-628794] p 1607 N94-18174
Strained ring energetic binders
[AD-A269056] p 1377 N94-18491

BONES
Space research on organs and tissues
p 1503 N94-19214

BOOMS (EQUIPMENT)
Packaging, deployment, and panel design concepts for a truss-stiffened 7-panel precision deployable reflector with feed boom
[NASA-TM-109000] p 1333 N94-17765

BORATES
Final report on subcontract B076260 --- borate synthesis
[DE93-019501] p 1604 N94-19565

BOREHOLES
Ground movements associated with gas hydrate production
[DE93-019887] p 1486 N94-19018

BORESIGHTS
Modeling a Yagi array antenna for VHF radar use
[AD-A268973] p 1387 N94-18525

BORIDES
Molecular and polymeric ceramic precursors
[DE93-040364] p 1372 N94-18891

BORN APPROXIMATION
Fast iterative solution of sparsely sampled seismic inverse problems
[REPT-93-16] p 1486 N94-19081

BORON
Molecular and polymeric ceramic precursors
[DE93-040364] p 1372 N94-18891

BORON CARBIDES
Molecular and polymeric ceramic precursors
[DE93-040364] p 1372 N94-18891

BORON COMPOUNDS
Molecular and polymeric ceramic precursors
[DE93-040364] p 1372 N94-18891

BORON NITRIDES
Molecular and polymeric ceramic precursors
[DE93-040364] p 1372 N94-18891

BOSONS
Experimental consequences of supersymmetry
[DE93-018270] p 1569 N94-18945
Thermodynamic q-distributions that aren't
[DE93-017385] p 1609 N94-19121

BOTANY
Photosynthetic responses to the environment, volume 8
[AD-A269584] p 1502 N94-18305

BOUNDARIES
Cut and paste based modeling with boundary features
[PB93-187250] p 1520 N94-18117
The temperature at the phase boundary during quasi-static motions of a two-phase thermoelastic bar
[AD-A268769] p 1596 N94-18388

BOUNDARY CONDITIONS
Calculation of maximum and high lift characteristics of multi element aerofoils p 1305 N94-18419
Solution of the Poisson equation with application to radar imaging
[PB93-195865] p 1389 N94-18950
Finite difference program for calculating hydride bed wall temperature profiles
[DE93-019272] p 1523 N94-19005
A priori estimates and existence of positive solutions of a superlinear polyharmonic equation
[REPT-93-12] p 1550 N94-19086
Decomposition invariance of generalized steady-state of a 1-D diffusion system
[REPT-93-26] p 1550 N94-19141
A physical model for one-dimension and time-dependent ionosphere. Part 1: Description of the model
[DE93-627958] p 1486 N94-19255
Improved approximations applied to the S(sub N) even-parity equation
[DE93-016467] p 1551 N94-19343
Numerical experiments on the Ginzburg-Landau equations
[DE93-019504] p 1604 N94-19567
Acoustic propagation modeling using MATLAB
[AD-A270905] p 1564 N94-19750

BOUNDARY LAYER CONTROL
Impulsive moving mirror model in a Schroedinger picture with impulse effect in a Banach space
[DE93-629864] p 1561 N94-18155

BOUNDARY LAYER EQUATIONS
Calculation of multielement airfoils and wings at high lift p 1309 N94-18438

BOUNDARY LAYER FLOW
Two-dimensional boundary surfaces for axi-symmetric external transonic flows
[AD-A269678] p 1312 N94-18571
Direct and large eddy simulation of turbulence: Summary of the state of the art 1993 p 1416 N94-18594
Relation between the fluctuating wall pressure and the turbulent structure of a boundary layer on a cylinder in axial flow
[AD-A270242] p 1418 N94-18906
Semi-span model testing in the National Transonic Facility
[NASA-CR-194479] p 1312 N94-19388

BOUNDARY LAYER SEPARATION
Several examples where turbulence models fail in inlet flow field analysis p 1412 N94-18556
Two-dimensional boundary surfaces for axi-symmetric external transonic flows
[AD-A269678] p 1312 N94-18571

BOUNDARY LAYER STABILITY
Two-equation models for high-Reynolds-number flow
p 1415 N94-18586
Two-equation models for low-Reynolds-number variants p 1415 N94-18587
The application of front tracking to the simulation of shock refractions and shock accelerated interface mixing
[DE93-018342] p 1419 N94-19025

BOUNDARY LAYER TRANSITION
An experimental investigation of attachment-line transition on the slat of a combat aircraft model
p 1308 N94-18432
Viscous phenomena affecting high-lift systems and suggestions for future CFD development
p 1308 N94-18433
Research on two equation models
p 1411 N94-18547
Multigrid methods for flow transition in three-dimensional boundary layers with surface roughness
[NASA-CR-4540] p 1417 N94-18843
Experimental investigation of turbulent Prandtl number and Reynolds analogy in transitional and post-transitional boundary layers
[AD-A270092] p 1418 N94-18867
The application of front tracking to the simulation of shock refractions and shock accelerated interface mixing
[DE93-018342] p 1419 N94-19025

BOUNDARY LAYERS
Relation between the fluctuating wall pressure and the turbulent structure of a boundary layer on a cylinder in axial flow
[AD-A270242] p 1418 N94-18906
Protocol for computation of surface boundary layer parameters used to determine soil moisture flux from meteorological data collected at LLNL, 1992-1993
[DE93-018906] p 1463 N94-19003
Velocity measurements in a boundary layer with a density gradient
[DE93-019627] p 1422 N94-19515
Surface species in tribology
[AD-A270970] p 1446 N94-19754

BOUNDARY VALUE PROBLEMS
The phase mixing of shear Alfven waves
[DE93-624920] p 1581 N94-17688
A free boundary eigenvaue problem
[IPP-6/310] p 1584 N94-17981
The longitudinal free vibrations of a fixed-free two-phase elastic bar
[AD-A268768] p 1453 N94-18387
The temperature at the phase boundary during quasi-static motions of a two-phase thermoelastic bar
[AD-A268769] p 1596 N94-18388
A method for finding the periodic solution of autonomous ordinary differential equations
[DE93-624725] p 1550 N94-19244
A method for solving the KDV equation and some numerical experiments
[DE93-624726] p 1550 N94-19246
Improved approximations applied to the S(sub N) even-parity equation
[DE93-016467] p 1551 N94-19343
On the numerical approximation of nonlinear hyperbolic problems: Application to the dynamics of compressible gas
[ETN-93-95020] p 1420 N94-19365
Transient skin effect in a massive cylinder by eccentric location of exciting conduction bands
[ETN-93-95048] p 1391 N94-19646
Numerical modelling of crystal growth
[AD-A271206] p 1605 N94-19719

BOUSSINESQ APPROXIMATION
Modeling and new equipment definition for the vibration isolation box equipment system
[NASA-CR-193185] p 1379 N94-17763
Numerical solutions for a flow with mixed convection in a vertical geometry
[DE93-011592] p 1419 N94-19058

BOX BEAMS
Plastic mechanism analysis of T-joints in RHS subject to combined bending and concentrated force
[PB93-195774] p 1456 N94-19061

BRAGG ANGLE
Apparatus and method for varying a Bragg wavelength of a Bragg grating formed in an optical fiber
[AD-D015876] p 1579 N94-18743

BRAGG CELLS
Magnetostatic waves-based integrated optic bragg cell modules with applications to RF signal processing
[AD-A269115] p 1577 N94-18295

BRAIN
The identification of the computational significance of key neurobiological characteristics found in a number of telencephalic brain regions
[AD-A269374] p 1505 N94-18407
Coupled neural-dendritic processes: Cooperative stochastic effects and the analysis of spike trains
[AD-A270041] p 1506 N94-18793
Strategies for enhancing catecholamine-mediated neurotransmission
[NASA-CR-193807] p 1506 N94-18862
The brain electrical activity in different G situations
[AERONAUTICA-ACTA-A-372-199]
p 1507 N94-19523

BRAIN DAMAGE
Cerebral ischemia and reperfusion injury: A brief review
[AD-A270480] p 1507 N94-19675

BRANCHING (MATHEMATICS)
A free boundary eigenvaue problem
[IPP-6/310] p 1584 N94-17981
Stability analysis through bifurcation theory, 1
p 1608 N94-18238
Stability analysis through bifurcation theory, 2
p 1608 N94-18239
Non-linear flight dynamics p 1319 N94-18240

Deterministic growth-dispersal models and branching random walk
[REPT-93-14] p 1550 N94-19088

BRAZING
Joining and Adhesion of Advanced Inorganic Materials Symposium
[AD-A269748] p 1342 N94-18720
Diamond brazed to a metal
[AD-D015877] p 1371 N94-18746

BREMSSTRAHLUNG
Absorption and x ray measurements from ultra-intense laser-plasma interactions
[DE93-016538] p 1585 N94-18115
Detection of a long-duration solar gamma-ray flare on Jun. 11, 1991 with EGRET on Compton-GRO
p 1623 N94-19463

BRIGHTNESS
Observations of comets with the IUE
[NASA-CR-193652] p 1624 N94-17843
Electro-optics display research, test, and evaluation laboratory program
[AD-A270947] p 1408 N94-19751

BRIGHTNESS TEMPERATURE
Physical retrieval of precipitation water contents from Special Sensor Microwave/Imager (SSM/I) data. Part 1: A cloud ensemble/radiative parameterization for sensor response (report version) p 1491 N94-18604
Physical retrieval of precipitation water contents from Special Sensor Microwave/Imager (SSM/I) data. Part 2: Retrieval method and applications (report version)
p 1491 N94-18605

BRILLOUIN EFFECT
Elastic properties of a polyimide film determined by Brillouin scattering and mechanical techniques
[DE93-017404] p 1368 N94-18098
Applications of nonlinear optic effects in new specialty fibers
[AD-A268890] p 1578 N94-18457
Phase conjugation and beam combination using stimulated brillouin scattering
[AD-A269899] p 1439 N94-18656

BRILLOUIN ZONES
Phase conjugation and beam combination using stimulated brillouin scattering
[AD-A269899] p 1439 N94-18656

BRITTLE MATERIALS
Construction of a tension-torsion anisotropic brittle damage elastic model
[ECL-91-27] p 1457 N94-19375

BRITTLENESS
A numerical analysis of crack growth in brittle microcracking composites
[DE93-011562] p 1343 N94-18914
Dynamical behavior of octahedrite from the Henbury meteorite
[DE93-018834] p 1627 N94-19339

BROADBAND
Wideband electromagnetic scattering/analysis program: Far zone electromagnetic scattering from complex shapes using geometrical theory of diffraction
[AD-A268790] p 1384 N94-18187
Intentionally Short Range Communications (ISRC)
[AD-A268788] p 1384 N94-18216
Development of parallel architectures for sensor array processing. Volume 2: A parallel architecture for broad-band direction-of-arrival estimation
[AD-A270427] p 1534 N94-18508
Parallel and vector adaptations of the underwater finite element parabolic equation model
[AD-A269990] p 1563 N94-18678
Morphology and characteristics of disturbed HF skywave channels
[AD-A269755] p 1388 N94-18722
Broadband IF matching for quasioptical mixers
[MPE-PREPRINT-240] p 1390 N94-19416
Experimental and theoretical investigation of broadband high-power windows for millimeter waves
[KFK-5157] p 1391 N94-19617
The wideband plasma wave investigation
p 1328 N94-19627

BROADBAND AMPLIFIERS
Extending bandwidth of optical emitters using active matching technique
[AD-D015875] p 1394 N94-17707
Experimental examinations of semiconductor laser amplifiers for optical communication technology
[ETN-93-95050] p 1442 N94-19647

BROKEN SYMMETRY
Neutrino masses in superstring derived standard-like models
[DE93-624802] p 1565 N94-17951
T violating neutron spin rotation asymmetry
[DE93-018470] p 1570 N94-19126
Investigations in gauge theories, topological solitons, and string theories
[DE93-015029] p 1609 N94-19250

BROMINE
Excited atomic bromine energy transfer and quenching mechanisms
[AD-A270672] p 1572 N94-19607

BROMINE ISOTOPES
The A((2)pi(sub u))-X((2)pi(sub g)) system of Br2(+) studied by velocity modulation spectroscopy
[USIP-93-04] p 1569 N94-18847

BRONZES
Photorefractive tungsten bronze crystals for optical computing
[AD-A268859] p 1596 N94-18320

BROWNIAN MOVEMENTS
The rank of the present excursion
[REPT-93-22] p 1558 N94-19137

BSCCO SUPERCONDUCTORS
Mechanical properties of fiber-reinforced YBa2Cu3O(x) and Bi2Sr2CaCu2O(x) bars
[DE93-017689] p 1454 N94-18479
Fabrication and characterization of high-T(sub c) tapes and coils made from Ag-clad Bi-2223 superconductors
[DE93-018615] p 1601 N94-18993
Preparation and characterisation of the compound Tl(0.65) Bi(0.35) Ca(0.8) Sr(1.7) Cu2 O(y) using oxalate coprecipitation and analytical CBED and an initial preparation of Bi2Ca(n-1) Sr2Cu(n) O(4+2n) for n=5
[DE93-625470] p 1602 N94-19277

BUBBLES
Technique to eliminate helium induced weld cracking in stainless steels
[DE93-015982] p 1357 N94-17859
Compatibility of refrigerants and lubricants with motor materials, volume 1
[DE93-040216] p 1350 N94-18895

BUFFER STORAGE
Congestion/flow control and routing in data networks: A control-theoretic approach
[AD-A271121] p 1392 N94-19737

BUFFETING
Comparison between swept and delta canards on a model of a combat aircraft
[AD-A269561] p 1317 N94-17826
Navier-Stokes, dynamics and aeroelastic computations for vortical flows, buffet and flutter applications
[NASA-CR-194520] p 1313 N94-19621

BUILDINGS
Indoor environment program
[DE93-018601] p 1513 N94-18935

BUNCHING
Synchrotron beam-loading stability with a higher RF harmonic
[DE93-014549] p 1573 N94-17726
Simulation of the ALS longitudinal multibunch feedback system
[DE93-019227] p 1575 N94-19152

BUOYANCY
Modelling force-field effects on turbulence
p 1414 N94-18581

BUOYS
Method for extracting tidal and inertial motion from ARGOS ice buoys applied to the Barents Sea during CEAREX
[PB93-190213] p 1499 N94-19063

BURNERS
Numerical simulation of turbulent mixing and combustion near the inlet of a burner
[DE93-017960] p 1350 N94-18987

BURNING RATE
Molecular structure of low temperature form of triaminoguanidinium nitrate (TAGN)
[AD-A270409] p 1377 N94-18708
LX-17 chemical kinetic material model for Chemical TOPAZ2D
[DE93-014363] p 1377 N94-18893

BURNS (INJURIES)
Conductive garments to prevent Radio-Frequency (RF) burns
[AD-D015832] p 1512 N94-18730

BUS CONDUCTORS
The universal BitBus node
[DIGEL-1993-1] p 1515 N94-19799

BUTT JOINTS
Initiation and growth of microcracks in high strength steel butt welds
[AD-A268751] p 1454 N94-18466

C

C (PROGRAMMING LANGUAGE)
Proposal for a numerical array library
[DE93-015017] p 1516 N94-17786
Automated ILA design for synchronous sequential circuits p 1397 N94-18340
Managing persistent objects: From the programming language to the system
[ETN-93-95021] p 1529 N94-19368
Cesar user library
[FFI-93/7021] p 1529 N94-19378

C BAND
C-band PARC manual
[FEL-92-B159] p 1383 N94-18070
Design and fabrication of a Multichannel Adaptive Optical Processor (MADOP)
[AD-A270004] p 1579 N94-18668

C-131 AIRCRAFT
Airborne studies of ocean-particle-cloud interactions in the Arctic
[AD-A270752] p 1479 N94-19575

C-135 AIRCRAFT
A finite strain ring dynamical model for pneumatic tires
[AD-A269286] p 1444 N94-18266

CADMIUM
Electron paramagnetic resonance of the ns(sup 1) centers in crystals
[DE93-628793] p 1595 N94-18173
Review of short-term, high-level exposure to metals: Antimony, barium, and cadmium
[AD-A268896] p 1505 N94-18392

CADMIUM ALLOYS
Gold-copper-zinc coatings as an alternative to gold-copper-cadmium p 1367 N94-18012

CADMIUM SULFIDES
Nanostructured materials: Mind over matter
[DE93-017690] p 1597 N94-18480

CADMIUM TELLURIDES
Polycrystalline thin-film cadmium telluride solar cells fabricated by electrodeposition
[DE93-018201] p 1468 N94-18944
New room temperature high resolution solid-state detector (CdZnTe) for hard x rays and gamma rays
p 1324 N94-19165

CALCIUM COMPOUNDS
Advanced civil engineering materials based on inorganic polymers
[AD-A270837] p 1374 N94-19600

CALCIUM OXIDES
Fabrication and microstructural development of Ag-clad TlBa2Ca2Cu3O(x) tapes
[DE93-017407] p 1597 N94-18500

CALCIUM PHOSPHATES
In situ observation of radiation induced amorphization of crystals with apatite structure
[DE93-018450] p 1599 N94-18816

CALCIUM SILICATES
Advanced civil engineering materials based on inorganic polymers
[AD-A270837] p 1374 N94-19600

CALCULUS
A simple calculus of finite probabilistic processes
[MEMO-INF-93-08] p 1558 N94-19195
Development of ISY data set, part 2
[NASDA-CNT-930006-PT-2] p 1463 N94-19384
Undergraduate course and curriculum development program and calculus and the bridge to calculus program: 1992 awards
[NSF-93-24] p 1610 N94-19446

CALENDARS
Quartz analog watch with perpetual calendar
p 1429 N94-18042

CALIBRATING
SeaSoar and CTD sections across the Iceland-Faeroes Front and Faeroe Shetland Channel, August 1990
[IOS-295-1992] p 1496 N94-18064
C-band PARC manual
[FEL-92-B159] p 1383 N94-18070
Calibration of a high frequency monostatic acoustic echosounder
[AD-A268901] p 1481 N94-18229
Space debris detection
[AD-A269254] p 1334 N94-18264
Performance of the Amorphous Materials Diffractometer GLAD at IPNS
[DE93-017746] p 1430 N94-18481
Ultraviolet plume instrument calibration and sensor assessment
[AD-A269687] p 1337 N94-18574
Aspects of the calibration and processing of the CRRES fluxgate magnetometer data
[AD-A270127] p 1432 N94-18875
Construction and evaluation of an environmental chamber for calibration of temperature and pressure sensors for laser interferometers emperature and pressure sensors for laser interferometers)
[PB93-197838] p 1322 N94-19332
Software quality in test and measurment equipment
[PB93-197846] p 1528 N94-19333
Energy loss measurement of cosmic ray muons
[KFK-5158] p 1631 N94-19504

CALIFORNIA
California Student Get Away Special Payload GAS-450
p 1324 N94-19164

CALORIMETERS
Widget: A data acquisition system for a balloon borne Si particle calorimeter
[DE93-624668] p 1630 N94-18762
A bit serial first level calorimeter trigger for an LHC detector
[USIP-92-08] p 1574 N94-18845
Precision machining and polishing of scintillating crystals for large calorimeters and hodoscopes
[DE93-018663] p 1381 N94-19544

CAMERA SHUTTERS
High spatial resolution, range gated, underwater imaging method and apparatus
[AD-D015882] p 1430 N94-18530

CAMERAS
Perspective and future possibilities
p 1431 N94-18651
Radiation induced darkening of the optical elements in the Startracker camera
[DE93-018907] p 1433 N94-19004

CANARD CONFIGURATIONS
Comparison between swept and delta canards on a model of a combat aircraft
[AD-A269561] p 1317 N94-17826
Close-coupled oscillating canard effects on post-stall lift enhancement
[AD-A268938] p 1321 N94-18541
Three dimensional network generation and Euler calculation for a wing fuselage canard configuration
[MBB-LME-211-S-PUB-511-A] p 1319 N94-19500

CANONICAL FORMS
Equivalence and reduction of hidden Markov models
[AD-A270762] p 1560 N94-19768

CANOPIES (VEGETATION)
Remote sensing of Earth terrain
[NASA-CR-194598] p 1464 N94-19681

CANTILEVER BEAMS
Fabrication process for cantilever beam micromechanical switches
[AD-A269716] p 1404 N94-18749

CAPACITANCE
Field emitter array RF amplifier development project, phase 1, option 1
[AD-A268687] p 1396 N94-18293

CAPACITORS
The Aerocapacitor: A carbon aerogel based supercapacitor
[DE93-016537] p 1395 N94-17849
Monolithic low noise preamplifier for piezoelectric sensors
[AD-D015860] p 1563 N94-18734
Spice modeling of a FET-switched induction accelerator cell
[DE93-018662] p 1575 N94-18996

CAPILLARY FLOW
Contribution to the study of a symmetric film flow (with or without tensio-active elements)
[ECL-93-13] p 1421 N94-19461

CARBIDES
Diamond brazed to a metal
[AD-D015877] p 1371 N94-18746

CARBON
Vibrational and electronic properties of clusters and ultrathin films
[DE93-012291] p 1367 N94-17678
The carbon dioxide emissions game: Playing the net
[DE93-017670] p 1471 N94-17821
The Aerocapacitor: A carbon aerogel based supercapacitor
[DE93-016537] p 1395 N94-17849
Electron stripping cross sections for light impurity ions in colliding with atomic hydrogens relevant to fusion research
[DE93-788476] p 1566 N94-18158
Anomalous dielectric properties of carbon-black filled elastomers
[AD-A269378] p 1370 N94-18280
Dense energetic compounds of C, H, N, and O atoms. 3: 5-(4-nitro-(1,2,5) oxadiazolyl)-5H-(1,2,3) triazolo (4,5-c)(1,2,5) oxadiazole
[AD-A268715] p 1338 N94-18314
Novel catalysts for methane activation
[DE93-040630] p 1349 N94-18532
Determination of nitrogen to carbon abundance ratios from transition layer emission lines
[NASA-CR-191921] p 1622 N94-19421
Testing of protective coatings in hydrogen
[DE93-040326] p 1375 N94-19651

CARBON COMPOUNDS
Temperature dependence of ultraviolet absorption cross-sections of alternative hydrochlorofluorocarbons
[AERONAUTICA-ACTA-A-369-199]
p 1353 N94-19459
Infrared cross sections and global warming potentials of 10 alternative hydrohalocarbons
[AERONAUTICA-ACTA-A-371-199]
p 1479 N94-19521

CARBON CYCLE
CDIAC catalog of numeric data and computer model packages
[DE93-017675] p 1475 N94-18832
A carbon isotope mass balance for an anoxic marine sediment: Isotopic signatures of diagenesis
p 1477 N94-19232

CARBON DIOXIDE
Monitoring the response of the upper troposphere/lower stratosphere to a greenhouse gas scenario
[DE93-014509] p 1470 N94-17710
Carbon Dioxide Information Analysis Center: FY 1992 activities
[DE93-013845] p 1471 N94-17774
Assessing impacts of climate change on forests: The state of biological modeling
[DE93-015916] p 1471 N94-17790
The carbon dioxide emissions game: Playing the net
[DE93-017670] p 1471 N94-17821
Cost effective energy strategies for the reduction of CO2 emissions in the United States: Country report for ETSAP Annex 4
[DE93-016842] p 1472 N94-17852
Setting the global thermostat with an exhaustible tradeable permit system
[DE93-012911] p 1472 N94-17891
Summary report for supercritical carbon dioxide extraction and carbonization of Resorcinol-Formaldehyde (RF) foams
[DE93-016924] p 1346 N94-17987
Metadata compiled and distributed by the Carbon Dioxide Information Analysis Center for global climate change and greenhouse gas-related data bases
[DE93-015338] p 1473 N94-18167
CDIAC catalog of numeric data and computer model packages
[DE93-017675] p 1475 N94-18832
Land-use related sources of CO2, CH4 and N2O: Current global emissions and projections for the period 1990-2100
[PB93-194819] p 1475 N94-18949
The CAESAR project: Experimental and modeling investigations of methane reforming in a catalytically enhanced solar absorption receiver on a parabolic dish
[DE93-040203] p 1469 N94-19109
Kinetic studies of electrochemical generation of Ag(II) ion and catalytic oxidation of selected organics
[DE93-016601] p 1352 N94-19240
Valuation of temporary and future greenhouse gas reductions
[DE93-018876] p 1478 N94-19319
Excited atomic bromine energy transfer and quenching mechanisms
[AD-A270672] p 1572 N94-19607

CARBON DIOXIDE CONCENTRATION
Carbon Dioxide Information Analysis Center: FY 1992 activities
[DE93-013845] p 1471 N94-17774
Valuation of temporary and future greenhouse gas reductions
[DE93-018876] p 1478 N94-19319

CARBON DIOXIDE LASERS
CO2 laser with modulated losses: Theoretical models and experiments in the chaotic regime
[DE93-624901] p 1435 N94-17771
Homoclinic crises in a model for the CO2 laser
[DE93-624900] p 1436 N94-17954
A superconducting short period undulator for a harmonic generation FEL experiment
[DE93-017581] p 1436 N94-17998

CARBON DIOXIDE REMOVAL
Valuation of temporary and future greenhouse gas reductions
[DE93-018876] p 1478 N94-19319

CARBON FIBER REINFORCED PLASTICS
New aircraft materials and structures
[MBB-LME-202-S-PUB-502-A] p 1319 N94-19496

CARBON ISOTOPES
The carbon isotope biogeochemistry of methane production in anoxic sediments. 1: Field observations
p 1477 N94-19234

CARBON LASERS
Dynamic behaviors of fragments ejected from the surface of carbon materials by laser ablation
[DE93-788620] p 1438 N94-18161

CARBON MONOXIDE
Title 1 implementation: Status report on nonattainment areas
[DE93-017677] p 1471 N94-17777
Synthesis of higher alcohols from carbon monoxide and hydrogen in a slurry reactor
[DE93-015086] p 1347 N94-18209
An ab initio study of the weakly bonded CO-Cl2 complex
[AD-A269000] p 1349 N94-18395
Temperature, kinetic energy, and rotational temperature dependences for the reactions of Ar(+)(2)P3/2 with O2 and CO
[AD-A268974] p 1567 N94-18526
Organic carbonyl compounds in Albuquerque, New Mexico, air: A preliminary study of the effects of oxygenated fuel use
[DE93-017748] p 1476 N94-19045

CARBON MONOXIDE LASERS
Electrically excited CO-lasers with gas dynamic cooling
[DLR-FB-93-08] p 1437 N94-18061

CARBON STEELS
Thermal insulation of wet shielded metal arc welds
[AD-A268697] p 1445 N94-18465

CARBON TETRACHLORIDE
Femtosecond Fourier-transform spectroscopy of low-frequency intermolecular motions in weakly interacting liquids
[DE93-017312] p 1566 N94-18085
Ultrasonic process for destruction of chlorinated organic compounds in aqueous solution
[DE93-015551] p 1348 N94-18249
Integrated test plan for the demonstration of a commercial Fourier Transform Infrared instrument
[DE93-018518] p 1433 N94-19041

CARBON 12
Carbon Isotope Biogeochemistry of Methane from Anoxic Sediments
[NASA-CR-194620] p 1477 N94-19231

CARBON 13
NMR studies of enriched species at interfaces
[AD-A264703] p 1367 N94-17878
Carbon Isotope Biogeochemistry of Methane from Anoxic Sediments
[NASA-CR-194620] p 1477 N94-19231
A carbon isotope mass balance for an anoxic marine sediment: Isotopic signatures of diagenesis
p 1477 N94-19232
The carbon isotope biogeochemistry of (epsilon)CO2 production in a methanogenic marine sediment
p 1477 N94-19233
Factors that control the stable carbon isotopic composition of methane produced in an anoxic marine sediment p 1477 N94-19235

CARBON-CARBON COMPOSITES
NSWCWODET participation in Space Shuttle mission STS-46
[AD-A268875] p 1332 N94-18321
Carbon/carbon composites coated with SiC by chemical vapor deposition
[AD-A269934] p 1341 N94-18544
Process relationship as influenced by carbonization rate
[AD-A269680] p 1341 N94-18572

CARBONATES
Molten carbonate fuel cell networks: Principles, analysis, and performance
[DE93-000281] p 1468 N94-18925

CARBONIZATION
Summary report for supercritical carbon dioxide extraction and carbonization of Resorcinol-Formaldehyde (RF) foams
[DE93-016924] p 1346 N94-17987
Process relationship as influenced by carbonization rate
[AD-A269680] p 1341 N94-18572

CARBONYL COMPOUNDS
Remote cure monitoring of polymeric resins by laser Raman spectroscopy
[DE93-016445] p 1369 N94-18112
Vibrational dynamics in photoinduced electron transfer
[DE93-040874] p 1567 N94-18533
Optical properties of redispersed iron fibers measured at 94 GHz
[AD-A269739] p 1342 N94-18756
Organic carbonyl compounds in Albuquerque, New Mexico, air: A preliminary study of the effects of oxygenated fuel use
[DE93-017748] p 1476 N94-19045
Ultraviolet absorption cross-sections of some carbonyl compounds and their temperature dependence
[AERONAUTICA-ACTA-A-368-199]
p 1353 N94-19456

CARDIAC OUTPUT
Characterization of fluid physics effects on cardiovascular response to microgravity (G-572)
p 1323 N94-19163

CARDIOVASCULAR SYSTEM
Characterization of fluid physics effects on cardiovascular response to microgravity (G-572)
p 1323 N94-19163

Space research on organs and tissues
p 1503 N94-19214

CARGO
Coordination of software-development activities among sites that are geographically separated
[DE93-019201] p 1524 N94-19076

CARGO AIRCRAFT
Aircraft fire sentry. Volume 1: Summary
[AD-A270087] p 1315 N94-18822
Aircraft fire sentry. Volume 2: Appendices A, B, C and D
[AD-A270088] p 1315 N94-18823

CARRIER DENSITY (SOLID STATE)
Ultra-shallow box-like profiles fabricated by pulsed UV-laser doping process
[DE93-017221] p 1437 N94-18083
Growth of structures for integrated optoelectronic devices
[AD-A269014] p 1598 N94-18527

CARRIER TRANSPORT (SOLID STATE)
Development of large-area monolithically integrated silicon-film photovoltaic modules
[DE93-010037] p 1464 N94-17731

CARTESIAN COORDINATES
Exponential characteristic spatial quadrature for discrete ordinates neutral particle transport in two-dimensional cartesian coordinates
[AD-A270458] p 1554 N94-19671

CASES (CONTAINERS)
Reliability control for wrist watches and their casements p 1427 N94-18030

CAST ALLOYS
Tensile properties of as-cast iron-aluminide alloys
[DE93-017852] p 1363 N94-18975

CASTING
The perspectives in application of hot casting technology for ceramic parts of timekeeping devices
p 1375 N94-18013
Modeling of the formation of microporosity in alloys
[DE93-017733] p 1364 N94-19044
Low-aluminum-content iron-aluminum alloys
[DE93-017862] p 1365 N94-19274
Manufacturing technology
[DE93-019580] p 1381 N94-19480
Commercialization effort in support of electroslag-casting technology
[DE93-017988] p 1366 N94-19733

CASTINGS
Modeling of the formation of microporosity in alloys
[DE93-017733] p 1364 N94-19044
Metallurgical evaluation of SRAM 2/SRAM A program mer base plates
[DE93-018689] p 1364 N94-19100

CATACLYSMIC VARIABLES
Eclipsing cataclysmic variables. Deep eclipses in H0928+501. YY Draconis, the whirling dervish. New x ray pulsar candidates from HEAO-1
[NASA-CR-194027] p 1621 N94-18855

CATALOGS (PUBLICATIONS)
Historical seismicity of Hainaut, Flanders and Artois
p 1482 N94-18623
Catalogue of simple perfect squared squares of orders 21 through 25
[PB93-191971] p 1550 N94-18991
Range safety transponder catalog
[AD-A270882] p 1323 N94-19581

CATALYSIS
Fundamental studies of the mechanism of catalytic reactions with catalysts effective in the gasification of carbon solids and the oxidative coupling of methane
[DE93-015262] p 1347 N94-18193

CATALYSTS
Catalytic hydrocarbon reactions over supported metals
[DE93-018168] p 1345 N94-17808
Fundamental studies of the mechanism of catalytic reactions with catalysts effective in the gasification of carbon solids and the oxidative coupling of methane
[DE93-015262] p 1347 N94-18193
Conversion of ethane and of propane to higher olefin hydrocarbons
[DE93-015282] p 1347 N94-18194
Novel catalysts for methane activation
[DE93-040630] p 1349 N94-18532
Oligomer and mixed-metal compounds, potential multielectron transfer catalysts
[DE93-019592] p 1350 N94-19017
Selective methane oxidation over promoted oxide catalysts
[DE93-040002] p 1351 N94-19132
Selective methane oxidation over promoted oxide catalysts
[DE93-040001] p 1351 N94-19150
Electrocatalysts for oxygen electrodes
[DE93-040446] p 1354 N94-19653
Control of catalytic hydrotreating selectivity with ammonia
[DE93-041223] p 1354 N94-19660

CATALYTIC ACTIVITY
Catalytic hydrocarbon reactions over supported metals
[DE93-018168] p 1345 N94-17808
Ionic and molecular environments in heterogeneous electrocatalysis: Studies by radioactive labeling and LEED/AUGER spectroscopy
[AD-A268850] p 1567 N94-18766
The CAESAR project: Experimental and modeling investigations of methane reforming in a catalytically enhanced solar absorption receiver on a parabolic dish
[DE93-040203] p 1469 N94-19109
Selective methane oxidation over promoted oxide catalysts
[DE93-040002] p 1351 N94-19132
Selective methane oxidation over promoted oxide catalysts
[DE93-040001] p 1351 N94-19150

CATECHOLAMINE
Metabolic changes and hemodynamic dysfunction following hypothermic shock
[AD-A269780] p 1506 N94-18598
Strategies for enhancing catecholamine-mediated neurotransmission
[NASA-CR-193807] p 1506 N94-18862

CATHODES
High-power microwave breakdown of dielectric interfaces
[AD-A268844] p 1397 N94-18318
Field emission cathode and vacuum microelectronic microwave amplifier development
[AD-A269526] p 1403 N94-18639
MHD integrated topping cycle project
[DE93-040520] p 1588 N94-18978

CATHODIC COATINGS
Oxygen reduction at a stabilized zirconia interface with Y(1-x)Ca(x)MnO3 or La(1-x)Sr(x)MnO3 cathode materials
[DE93-015681] p 1593 N94-17747
Novel electrochemical materials prepared by sol-gel chemistry
[AD-A269060] p 1578 N94-18405

CATIONS
Catalytic hydrocarbon reactions over supported metals
[DE93-018168] p 1345 N94-17808
Novel electrochemical materials prepared by sol-gel chemistry
[AD-A269060] p 1578 N94-18405

CAUCHY PROBLEM
Numerical methods for one-dimensional hyperbolic conservation laws
[PB93-194801] p 1547 N94-18078
Impulsive moving mirror model in a Schroedinger picture with impulse effect in a Banach space
[DE93-629864] p 1561 N94-18155

CAVITIES
Experimental investigation of flow around a multielement airfoil p 1305 N94-18417
Binding of copper to nanocavity surfaces in silicon
[DE93-019073] p 1364 N94-19080

CAVITY FLOW
Experimental investigation of flow around a multielement airfoil p 1305 N94-18417

CAVITY RESONATORS
Plasma klystron amplifier
[AD-D015819] p 1395 N94-17903
Homoclinic crises in a model for the CO2 laser
[DE93-624900] p 1436 N94-17954
Waveguide and resonator perturbation techniques for measuring chirality and non-reciprocity of biisotropic materials
[PB93-167243] p 1384 N94-18116
Designs for a 10.6 micrometer electromagnetic wiggler Free-Electron Laser (FEL)
[AD-A269695] p 1439 N94-18576

CEILINGS (METEOROLOGY)
Station climatic summaries: North America. Volume 1: The contiguous United States
[AD-A269567] p 1490 N94-18303
Station climatic summaries, North America. Volume 2: Alaska, Canada and Greenland
[AD-A269793] p 1493 N94-18732

CELL ANODES
Environmentally assisted cracking of nickel anode substrates in Li/SOCl2 cells: An engineering approach
[DE93-015130] p 1405 N94-18928

CELL MEMBRANES (BIOLOGY)
Effect of EMP fields on cell membrane potentials
[DE93-015819] p 1503 N94-19341

CELLS (BIOLOGY)
Cellular and molecular level responses after radiofrequency radistion exposure, alone or in combination with x rays or chemicals
[AD-A268189] p 1501 N94-17729
The c-jun gene expression in human cells exposed to either ionizing radiation or hydrogen peroxide
[DE93-017436] p 1502 N94-18476
The role of chemical inhibition of gap junctional intercellular communication in toxicology
[AD-A269251] p 1502 N94-18924
A scientific role for Space Station Freedom: Research at the cellular level p 1503 N94-19215

CELLULOSE
Microbial degradation of poly-b-esters: A mechanistic study, cellulose acetate biodegradability
[AD-A271368] p 1374 N94-19586

CEMENTS
Microstructure of the interfacial zone around aggregate particles in concrete
[PB93-195790] p 1380 N94-19322
Advanced civil engineering materials based on inorganic polymers
[AD-A270837] p 1374 N94-19600

CENTER OF GRAVITY
Location of the absolute barycenter of a graph
[REPT-93-027] p 1547 N94-17962

CENTER OF MASS
Moments of ambient Doppler spectra
[DE93-017948] p 1390 N94-19114

CENTRAL NERVOUS SYSTEM
Cerebral ischemia and reperfusion injury: A brief review
[AD-A270480] p 1507 N94-19675

CENTRAL PROCESSING UNITS
Performance of defect-tolerant set-associative cache memories p 1398 N94-18346
A modified reconfigurable data path processor
p 1400 N94-18360
Algorithms and architectures for high speed signal processing
[AD-A271000] p 1392 N94-19736

CENTRIFUGES
Centrifuge modeling of explosion-induced craters in unsaturated sand
[AD-A270194] p 1417 N94-18780

CENTRIFUGING
Pilot studies on object motion perception during linear self-motion after long duration centrifugation of human subjects
[IZF-1993-B-3] p 1510 N94-19439

CERAMIC COATINGS
Ni-Al2O3 solid state binding: Elaboration, state of thermal constraints, mechanical behavior
[ECL-92-31] p 1366 N94-19436

CERAMIC FIBERS
Finite element modeling of evaporation and condensation during sol-gel film and fiber formation
[DE93-017655] p 1345 N94-17820

CERAMIC MATRIX COMPOSITES
A comprehensive study of matrix fracture mechanisms in fiber-reinforced ceramic matrix composites
[AD-A268809] p 1340 N94-18205
Pressureless densification of ceramic matrix composites
[AD-A269137] p 1371 N94-18691
Bibliography on ceramic matrix composites and reinforcing whiskers, platelets, and fibers, 1970-1990
[AD-A270139] p 1371 N94-18750
Subcritical crack growth in continuous-fiber reinforced ceramic composites
[DE93-018784] p 1343 N94-19335
Manufacturing technology
[DE93-019580] p 1381 N94-19480

CERAMICS
Development of large-area monolithically integrated silicon-film photovoltaic modules
[DE93-010037] p 1464 N94-17731
The perspectives in application of hot casting technology for ceramic parts of timekeeping devices
p 1375 N94-18013
Studies of dynamic contact of ceramics and alloys for advanced heat engines
[DE93-016366] p 1368 N94-18110
A survey on technical problems in designing high-speed rotors with developing materials
[DE93-788519] p 1444 N94-18159
Ceramic films and interfaces: Chemical and mechanical properties
[DE93-018416] p 1369 N94-18163
Metal/ceramic interfaces: Relationships between structure and chemistry
[AD-A268792] p 1369 N94-18188
Office of Naval Research Publications/Patents /Presentations/Honors report, 1 October 1992 - 30 September 1993
[AD-A270037] p 1632 N94-18791
Experimental investigation of wave and fracture phenomena in impacted ceramics: Experiments on sapphire
[AD-A270040] p 1372 N94-18792

Molecular and polymeric ceramic precursors
[DE93-040364] p 1372 N94-18891
Quantification of volume flaw sizes in ceramics by image processing of 3D x ray tomographic data sets
[DE93-018573] p 1372 N94-18932
Survey of ceramic machining in Japan
[DE93-018277] p 1372 N94-18946
Shock-loading response of advanced materials
[DE93-018344] p 1455 N94-19033
Superconductivity and magnetism in niobium doped YBa2Cu3O7 related high-(Tc) ceramics
[DE93-018086] p 1601 N94-19049
Shock compression properties of silicon carbide
[DE93-019927] p 1373 N94-19271
Analytical and experimental evaluation of joining silicon nitride to metal and silicon carbide to metal for advanced heat engine applications
[DE93-018128] p 1446 N94-19291
Reducing inadvertent alloying of metal/ceramic brazes
[DE93-009842] p 1373 N94-19308
Impact strength and indentation hardness of high-strength ceramics
[DE93-018833] p 1373 N94-19338
Manufacturing technology
[DE93-019580] p 1381 N94-19480
Ceramic technology project data base
[DE93-019360] p 1374 N94-19561

CEREBRAL CORTEX
Localization of figure background segregation mechanisms in primate visual cortex
[PB93-187961] p 1508 N94-18121
Somatosensory responsiveness in behaving monkeys and human subjects
[AD-A268924] p 1501 N94-18231

CEREBRAL VASCULAR ACCIDENTS
Cerebral ischemia and reperfusion injury: A brief review
[AD-A270480] p 1507 N94-19675

CERENKOV RADIATION
Crystal optics of high energy gamma-beams
[DE93-630228] p 1577 N94-18217

CERIUM
The low-temperature specific heat of CeCu2Ge2 at 0 and 9.5 kbar
[DE93-014914] p 1360 N94-18398

CERIUM COMPOUNDS
Calculation of the LiF-CeF3-BeF2 and LiF-PuF3-BeF2 ternary phase diagrams
[DE93-017437] p 1360 N94-18501

CERTIFICATION
Advisory circular: Index of articles (materials, parts, processes, and appliances) certified under the technical standard order system
[AC-20-36S] p 1618 N94-19377

CHANNEL FLOW
On memory effects in turbulence
[DLR-FB-93-03] p 1409 N94-18124
Multigrid methods for flow transition in three-dimensional boundary layers with surface roughness
[NASA-CR-4540] p 1417 N94-18843
MHD integrated topping cycle project
[DE93-040520] p 1588 N94-18978
A simple description of flow instability with application to a packed bed
[DE93-017492] p 1420 N94-19345

CHANNELS (DATA TRANSMISSION)
FASTBUS simulation models in VHDL
[USIP-92-07] p 1515 N94-19295

CHAOS
CO2 laser with modulated losses: Theoretical models and experiments in the chaotic regime
[DE93-624901] p 1435 N94-17771
Modelling chaotic vibrations using NASTRAN
p 1449 N94-17830
Plasma properties research: Task 3
[DE93-017087] p 1583 N94-17854
The physics of cellular automata and coherence and chaos in classical many-body dynamical systems
[DE93-018021] p 1561 N94-18177
Non Linear Dynamics and Chaos
[AGARD-LS-191] p 1607 N94-18236
Bifurcation theory: Chaos and patterns
p 1607 N94-18237

CHARACTERIZATION
High resolution geological site characterization utilizing ground motion data
[AD-A268926] p 1481 N94-18485
Growth, characterization and device development in monocrystalline diamond films
[AD-A270074] p 1599 N94-18797
Role of pressure in the study of fullerenes
[DE93-018839] p 1602 N94-19340
Materials characterization of propellants using ultrasonics
[NASA-CR-193877] p 1378 N94-19494

CHARGE CARRIERS
Examination of charge carriers dynamics in silicon and silicon solar cells with photoinduced laser beam deflection
[ETN-93-95060] p 1470 N94-19654

CHARGE COUPLED DEVICES
High speed 512X512 camera system
[DE93-015871] p 1430 N94-18235
Space debris detection
[AD-A269254] p 1334 N94-18264
An RS-170 to 700 frame per second CCD camera
[DE93-018367] p 1432 N94-18828
The star identification, pointing and tracking system of UVSTAR, an attached payload instrument system for the Shuttle Hitchhiker-M platform p 1326 N94-19179
Center-of-Excellence: Microlaser microscope
[DE93-040688] p 1442 N94-19658
Particle induced background by Roentgen satellites
[MPE-242] p 1631 N94-19714

CHARGE DISTRIBUTION
Cooperative formation of inorganic-organic interfaces in the synthesis of silicate mesostructures
[AD-A271196] p 1375 N94-19742

CHARGE EXCHANGE
Ion mobility and transport barriers in the tokamak plasmas
[DE93-040320] p 1587 N94-18524

CHARGE FLOW DEVICES
A tunable CMOS constant current source
p 1401 N94-18369

CHARGE TRANSFER
Correlated charge-changing ion-atom collisions
[DE93-018717] p 1564 N94-17775
Studies of interactions between conducting polymer and organic vapors: Applications to chemical sensing
[DE93-015694] p 1369 N94-18233
Temperature, kinetic energy, and rotational temperature dependences for the reactions of Ar(+)(2)P3/2 with O2 and CO
[AD-A268974] p 1567 N94-18526
Molecular nonlinear optical susceptibilities in condensed phases
[AD-A270200] p 1568 N94-18784
Pressure induced metallization of the Mott insulator 6(sub 2)
[DE93-018296] p 1600 N94-18969
Metallization and charge-transfer gap closure of transition-metal iodides under pressure
[DE93-040301] p 1353 N94-19538

CHARGED PARTICLES
Advanced methods for the computation of particle beam transport and the computation of electromagnetic fields and beam-cavity interactions
[DE93-018160] p 1573 N94-17807
High rate resistive plate chambers: An inexpensive, fast, large area detector of energetic charged particles for accelerator and non-accelerator applications
[DE93-018664] p 1572 N94-19545

CHARM (PARTICLE PHYSICS)
Beauty without charm in B-meson decays
[PREPRINT-732] p 1565 N94-17972
Charmonium physics from (bar p)p interactions
[DE93-017809] p 1569 N94-18973
Research in high energy physics
[DE93-018031] p 1575 N94-19287

CHARPY IMPACT TEST
Charpy impact toughness of martensitic steels irradiated in FFTF: Effect of heat treatment
[DE93-015960] p 1450 N94-17848
Mechanism-dependent fractal character of fracture surfaces in high strength and toughness ASTM A723 steels
[AD-A268956] p 1360 N94-18542
Effects of irradiation temperature on Charpy and tensile properties of high-copper, low upper-shelf, submerged-arc welds
[DE93-017858] p 1445 N94-19047

CHARTS
Constant-thrust orbit-raising transfer charts
[AD-A269088] p 1334 N94-18718
Color test chart for facsimile
[AD-A269754] p 1387 N94-18721

CHECKOUT
MHD Integrated Topping Cycle Project
[DE93-040521] p 1589 N94-19055

CHEMICAL ANALYSIS
Practical reporting times for environmental samples
[DE93-013461] p 1472 N94-17910
Summaries of FY 1993 research in the chemical sciences
[DE93-011855] p 1632 N94-18915
Research program activities of the ORNL Analytical Chemistry Division
[DE93-017938] p 1339 N94-19117

CHEMICAL BONDS
Novel catalysts for methane activation
[DE93-040630] p 1349 N94-18532

CHEMICAL COMPOSITION
Effect of oxygen concentration and ordering on vanadium-oxygen alloy vibrational spectra
[DE93-627003] p 1355 N94-17692
Direct Monte Carlo simulation of the chemical equilibrium composition of detonation products
[DE93-014559] p 1376 N94-17751
Toward a characterization of the debris cloud created in a hypervelocity impact on a thin plate
[AD-A269190] p 1455 N94-18864
Carbon Isotope Biogeochemistry of Methane from Anoxic Sediments
[NASA-CR-194620] p 1477 N94-19231
A carbon isotope mass balance for an anoxic marine sediment: Isotopic signatures of diagenesis
p 1477 N94-19232

CHEMICAL EFFECTS
Ageing in Processed Polymers: Programme, summary, and abstracts discussion meeting
[AD-A268931] p 1370 N94-18448

CHEMICAL ENERGY
Summaries of FY 1993 research in the chemical sciences
[DE93-011855] p 1632 N94-18915

CHEMICAL ENGINEERING
Summaries of FY 1993 research in the chemical sciences
[DE93-011855] p 1632 N94-18915

CHEMICAL EQUILIBRIUM
Direct Monte Carlo simulation of the chemical equilibrium composition of detonation products
[DE93-014559] p 1376 N94-17751
Metal slurry droplet and spray combustion
[AD-A269648] p 1349 N94-18736
Numerical simulation of viscous flows in chemical nonequilibrium
[MBB-LME-211-S-PUB-506] p 1421 N94-19497

CHEMICAL EXPLOSIONS
Direct Monte Carlo simulation of the chemical equilibrium composition of detonation products
[DE93-014559] p 1376 N94-17751
Detonation reaction steps frozen by free expansion and analyzed by mass spectrometry
[DE93-012734] p 1376 N94-17813
Modeling shock initiation in Composition B
[DE93-016544] p 1376 N94-18095
LX-17 chemical kinetic material model for Chemical TOPAZ2D
[DE93-014363] p 1377 N94-18893
The use of post detonation analysis of stable isotope ratios to determine the type and production process of the explosive involved
[DE93-018497] p 1378 N94-19242

CHEMICAL PROPERTIES
Ceramic films and interfaces: Chemical and mechanical properties
[DE93-018416] p 1369 N94-18163
Advanced civil engineering materials based on inorganic polymers
[AD-A270837] p 1374 N94-19600

CHEMICAL REACTIONS
Detonation reaction steps frozen by free expansion and analyzed by mass spectrometry
[DE93-012734] p 1376 N94-17813
Evaluation of the nickel release by horological products p 1367 N94-18009
Femtosecond Fourier-transform spectroscopy of low-frequency intermolecular motions in weakly interacting liquids
[DE93-017312] p 1566 N94-18085
Metal/ceramic interfaces: Relationships between structure and chemistry
[AD-A268792] p 1369 N94-18188
Ageing in Processed Polymers: Programme, summary, and abstracts discussion meeting
[AD-A268931] p 1370 N94-18448
Chemical reactions in turbulent mixing flows
[AD-A269377] p 1410 N94-18472
Temperature, kinetic energy, and rotational temperature dependences for the reactions of Ar(+)(2)P3/2 with O2 and CO
[AD-A268974] p 1567 N94-18526
Computational techniques for high-speed flows with viscous and chemical effects p 1412 N94-18560
A review and evaluation of the ADAM 2.1 dispersion model
[AD-A269896] p 1474 N94-18688
Royal Society of Chemistry, Heterocyclic Chemistry Group, Lakeland Heterocyclic Symposium
[AD-A270374] p 1338 N94-18703
Wettability and reaction kinetics in metal matrix composites
[AD-A270377] p 1342 N94-18704

Metal slurry droplet and spray combustion
[AD-A269648] p 1349 N94-18736
Scaling laws for diamond chemical vapor deposition. 2: Atomic hydrogen transport
[AD-A269842] p 1371 N94-18740
Scaling laws for diamond chemical vapor deposition. Diamond surface chemistry
[AD-A269874] p 1599 N94-18745
Transport phenomena and interfacial kinetics in multiphase combustion systems
[AD-A270202] p 1349 N94-18785
Temperature lowering in cryogenic chemical-synthesis techniques and system
[DE93-018348] p 1562 N94-18810
The quantum dynamics of electronically nonadiabatic chemical reactions
[NASA-CR-194309] p 1568 N94-18837
The role of chemical inhibition of gap junctional intercellular communication in toxicology
[AD-A269251] p 1502 N94-18924
Molten carbonate fuel cell networks: Principles, analysis, and performance
[DE93-000281] p 1468 N94-18925
Some superhigh-frequency and magnetic properties of chemically precipitated films
[AD-A266195] p 1351 N94-19110
Penetrometer compatible, fiber-optic sensor for continuous monitoring of chlorinated hydrocarbons: Field test results
[DE93-017974] p 1352 N94-19266
Crossed molecular beam studies of atmospheric chemical reaction dynamics
[DE93-019246] p 1478 N94-19303
Experimental study of flame front interactions
[ECL-91-40] p 1353 N94-19376

CHEMICAL REACTORS
Synthesis of higher alcohols from carbon monoxide and hydrogen in a slurry reactor
[DE93-015086] p 1347 N94-18209
Novel catalysts for methane activation
[DE93-040630] p 1349 N94-18532
The CAESAR project: Experimental and modeling investigations of methane reforming in a catalytically enhanced solar absorption receiver on a parabolic dish
[DE93-040203] p 1469 N94-19109

CHEMICAL TESTS
The CAESAR project: Experimental and modeling investigations of methane reforming in a catalytically enhanced solar absorption receiver on a parabolic dish
[DE93-040203] p 1469 N94-19109

CHEMICAL VAPOR INFILTRATION
Carbon/carbon composites coated with SiC by chemical vapor deposition
[AD-A269934] p 1341 N94-18544
Subcritical crack growth in continuous-fiber reinforced ceramic composites
[DE93-018784] p 1343 N94-19335

CHEMICAL WARFARE
Evaluation of mass spectra for a verification database
[PML-1993-12] p 1619 N94-19453

CHEMISTRY
The 1982 to 1992 decade of research on the vacuum ultraviolet ring at National Synchrotron Light Source
[DE93-019469] p 1603 N94-19564

CHILD-LANGMUIR LAW
Simulation of transient effects in the heavy ion fusion injectors
[DE93-018658] p 1575 N94-19107

CHIPS (ELECTRONICS)
Synthesis techniques and analysis tool for on-chip fault-tolerance
[AD-A269148] p 1521 N94-18259
Experience with custom processors in space flight applications p 1336 N94-18338
VLSI architectures for geometrical mapping problems in high-definition image processing
p 1398 N94-18345
SPROC: A multiple-processor DSP IC
p 1398 N94-18347
Systolic array IC for genetic computation
p 1400 N94-18361
Verification of VLSI designs p 1400 N94-18363
RF vacuum microelectronics
[AD-A270003] p 1403 N94-18667
ARPA/CSTO rapid VLSI implementation
[AD-A269170] p 1403 N94-18695
VLSI for high-speed digital signal processing
[AD-A270406] p 1404 N94-18706
Scaling laws for diamond chemical vapor deposition. Diamond surface chemistry
[AD-A269874] p 1599 N94-18745
Knowledge sources for an intelligent MCM analyzer
[AD-A269224] p 1542 N94-18887
Radiation hardened microprocessor for small payloads
p 1327 N94-19184
An innovative neural manufacturing concept
[DE93-017212] p 1527 N94-19238

CHIPS (MEMORY DEVICES)
Ultra low power CMOS technology
p 1401 N94-18373

CHIRAL DYNAMICS
Investigations in gauge theories, topological solitons, and string theories
[DE93-015029] p 1609 N94-19250

CHIRP
Nontraditional windows in spectral analysis
[AD-A271336] p 1553 N94-19583

CHIRP SIGNALS
Limitations on the fidelity of 100 fs pulses produced by chirped pulse amplification
[DE93-017167] p 1396 N94-17991

CHLORINE
Screening analysis for chlorine-free alternative refrigerants to replace R-22 in air conditioning applications
[DE93-015920] p 1367 N94-17847
Condensed gases under winter conditions: A study for the rescue services
[FOA-C-40305-4.5] p 1473 N94-18139
An ab initio study of the weakly bonded CO-Cl2 complex
[AD-A269000] p 1349 N94-18395

CHLOROCARBONS
Ultrasonic process for destruction of chlorinated organic compounds in aqueous solution
[DE93-015551] p 1348 N94-18249

CHLOROFLUOROCARBONS
Removing CFC's from the atmosphere with lasers: A second look
[DE93-017516] p 1473 N94-18101

CHLOROPHYLLS
SeaSoar CTD, fluorescence and scalar irradiance data from RRS Charles Darwin Cruises 58/59, NE Atlantic, Vivaldi 1991
[IOS-299-1992] p 1496 N94-18066

CHLOROPRENE RESINS
Anomalous dielectric properties of carbon-black filled elastomers
[AD-A269378] p 1370 N94-18280

CHOLINE
Bienzyme sensors based on electrically wired peroxidase
[AD-A271364] p 1374 N94-19585

CHROMIUM
Defect behavior of polycrystalline solar cell silicon
[DE93-018490] p 1468 N94-19016
Tetravalent chromium (Cr(4+)) as laser-active ion for tunable solid-state lasers
[NASA-CR-194529] p 1441 N94-19369
Tetravalent chromium (Cr(4+)) as laser-active ion for tunable solid-state lasers
[NASA-CR-194528] p 1441 N94-19394

CHROMIUM ALLOYS
Atlas of formability: Ultimet
[AD-A268352] p 1355 N94-17767
Atlas of formability: HAYNES 556
[AD-A268354] p 1356 N94-17768
Atlas of formability: HAYNES 188
[AD-A268355] p 1356 N94-17769
Atlas of formability: Haynes 230
[AD-A268325] p 1356 N94-17788
Atlas of formability: ALLVAC 718
[AD-A268304] p 1357 N94-17804
Summary of work on coatings and claddings for fossil energy applications
[DE93-017005] p 1367 N94-17881
Bibliography on silicides
[AD-A270516] p 1374 N94-19532
Incology 908 database report: On process-structure-property relationship
[DE93-017616] p 1366 N94-19546

CHROMIUM STEELS
Modeling of the formation of microporosity in alloys
[DE93-017733] p 1364 N94-19044

CHROMOSOMES
Life: Origin and evolution on Earth--How can we escape? p 1503 N94-19217

CHRONOLOGY
Marshall Space Flight Center 1989 annual chronology of events
[NASA-TM-109381] p 1633 N94-19486

CHRONOMETERS
Evaluation of the nickel release by horological products p 1367 N94-18009
Marine chronometry in the Neuchatel mountains (Switzerland) p 1427 N94-18025
Multifunction chronograph movement using a modular structure multimotor p 1429 N94-18044

CIRCADIAN RHYTHMS
Intracellular physiology of the rat suprachiasmatic nucleus: Electrical properties, neurotransmission and effects of neuromodulators
[AD-A268829] p 1505 N94-18538

CIRCUIT PROTECTION
Impedence calculation with recursive folding
[ETN-93-95049] p 1406 N94-19387

CIRCUIT RELIABILITY
Asynchronous sequential circuit design using pass transistor iterative logic arrays p 1402 N94-18376
Pulse mode VLSI asynchronous circuits
p 1402 N94-18377
Improved self arbitrated VLSI asynchronous circuits
p 1402 N94-18378
Algorithms and architectures for high speed signal processing
[AD-A271000] p 1392 N94-19736

CIRCUITS
Precision digitally-controlled variable attenuation circuit
[AD-D015862] p 1394 N94-17703
A method for eliminating skew introduced by non-uniform buffer delay and wire lengths in clock distribution trees
[AD-A270649] p 1544 N94-19530

CIRCULAR CYLINDERS
Statistical description of the bistatic radar cross section distributions for a right circular cylinder
[AD-A270001] p 1387 N94-18666

CIRCULAR ORBITS
Constant-thrust orbit-raising transfer charts
[AD-A269088] p 1334 N94-18718

CIRCULAR POLARIZATION
Polarized optical emission due to decay or recombination of spin-polarized injected carriers
[AD-D015907] p 1408 N94-19763

CIRCUMFERENCES
Concerning the circumference of certain families of graphs p 1555 N94-19694

CIRRUS CLOUDS
Monitoring the response of the upper troposphere/lower stratosphere to a greenhouse gas scenario
[DE93-014509] p 1470 N94-17710
Suitability of infrared spectroscopy for remote sensing of tropospheric trace gases
[KFK-5183] p 1479 N94-19507

CITIES
Title 1 implementation: Status report on nonattainment areas
[DE93-017677] p 1471 N94-17777
The urban perspectives of acid rain
[DE93-018881] p 1474 N94-18523
Organic carbonyl compounds in Albuquerque, New Mexico, air: A preliminary study of the effects of oxygenated fuel use
[DE93-017748] p 1476 N94-19045
The Mexico City 1991 lidar measurements campaign
[DE93-019960] p 1478 N94-19272

CIVIL AVIATION
Airport activity statistics of certificated route air carriers, 1992
[AD-A269042] p 1315 N94-18490
VHF air/ground communications for air traffic control: A decision tree approach to system innovations, volume 2
[AD-A268632] p 1386 N94-18495

CLADDING
Summary of work on coatings and claddings for fossil energy applications
[DE93-017005] p 1367 N94-17881
Total hemispherical emittance of Niobium-1 percent zirconium fuel cladding for the SP-100 space reactor
[AD-A270456] p 1576 N94-19589

CLASSICAL MECHANICS
Space and time from quantum mechanics
[DE93-015263] p 1609 N94-18629

CLASSIFICATIONS
Application of Fourier-based features for classification of synthetic aperture radar imagery
[AD-A270450] p 1387 N94-18513
Building a joint-service classification research roadmap: Criterion-related issues
[AD-A269735] p 1512 N94-18754

CLAYS
The direct synthesis of organic and organometallic-containing MICA-type aluminosilicates
[DE93-019001] p 1373 N94-19321

CLEAN ENERGY
National Program Plan Fuel Cells in Transportation
[DE93-017557] p 1469 N94-19346

CLEAN ROOMS
Safety-routines and guidelines for work in the clean room at the Epitek-Laboratory, Kjeller (Norway)
[FFI-93/7012] p 1322 N94-17735

CLEANERS
A comparison of wet and dry scrubbing systems for control of metals and dioxin/furan emissions from incinerators
[DE93-017446] p 1474 N94-18502
CLEANING
A comparison of wet and dry scrubbing systems for control of metals and dioxin/furan emissions from incinerators
[DE93-017446] p 1474 N94-18502
New applications for high average power beams
[DE93-018845] p 1439 N94-18522
The application of jet spray and ion beam contamination removal techniques to samples from the LDEF spacecraft
[AD-A270973] p 1354 N94-19755
CLEARANCES
Computer/information security design approaches for Complex 21/Reconfiguration facilities
[DE93-018547] p 1535 N94-18930
CLEAVAGE
Fundamental concepts relating local atomic arrangements, deformation, and fracture of intermetallic alloys
[AD-A268745] p 1361 N94-18788
CLIMATE
Carbon Dioxide Information Analysis Center: FY 1992 activities
[DE93-013845] p 1471 N94-17774
Geography and meteorological studies in the Far East
[DE93-013563] p 1461 N94-17893
Mixture distributions in climatological research
[DE93-014125] p 1488 N94-17942
Effect of spatial resolution on the simulation of regional precipitation in China in a global climate model
[DE93-013433] p 1489 N94-18053
On the construction of a regional atmospheric climate model
[KNMI-TR-147] p 1489 N94-18143
SERCAA cloud analysis integration: Design concepts and interaction with cloud forecast models
[AD-A269104] p 1492 N94-18637
CDIAC catalog of numeric data and computer model packages
[DE93-017675] p 1475 N94-18832
Toward a high performance distributed memory climate model
[DE93-019156] p 1494 N94-19298
A survey of current approaches to modelling of hydrological time-series with respect to climate variability and change
[WMO/TD-534] p 1463 N94-19435
CLIMATE CHANGE
Monitoring the response of the upper troposphere/lower stratosphere to a greenhouse gas scenario
[DE93-014509] p 1470 N94-17710
Biophysical characterization and surface radiation balance
[NASA-CR-194659] p 1470 N94-17762
Carbon Dioxide Information Analysis Center: FY 1992 activities
[DE93-013845] p 1471 N94-17774
Assessing impacts of climate change on forests: The state of biological modeling
[DE93-015916] p 1471 N94-17790
The carbon dioxide emissions game: Playing the net
[DE93-017670] p 1471 N94-17821
Geography and meteorological studies in the Far East
[DE93-013563] p 1461 N94-17893
Statistical intercomparison of global climate models: A common principal component approach with application to GCM data
[DE93-017951] p 1473 N94-18005
Effect of spatial resolution on the simulation of regional precipitation in China in a global climate model
[DE93-013433] p 1489 N94-18053
Metadata compiled and distributed by the Carbon Dioxide Information Analysis Center for global climate change and greenhouse gas-related data bases
[DE93-015338] p 1473 N94-18167
International Symposium on the Ecological Effects of Arctic Airborne Contaminants — abstracts
[AD-A269955] p 1475 N94-18775
CDIAC catalog of numeric data and computer model packages
[DE93-017675] p 1475 N94-18832
Toward a high performance distributed memory climate model
[DE93-019156] p 1494 N94-19298
Report of the Experts Meeting on Reference Climatological Stations (RCS) and National Climate Data Catalogues (NCC)
[WMO-TD-535] p 1494 N94-19312
A survey of current approaches to modelling of hydrological time-series with respect to climate variability and change
[WMO/TD-534] p 1463 N94-19435
CLIMATOLOGY
The carbon dioxide emissions game: Playing the net
[DE93-017670] p 1471 N94-17821
Mixture distributions in climatological research
[DE93-014125] p 1488 N94-17942
Statistical intercomparison of global climate models: A common principal component approach with application to GCM data
[DE93-017951] p 1473 N94-18005
A mobile remote sensing laboratory for water vapor, trace gas, aerosol, and wind speed measurements
[DE93-017158] p 1489 N94-18132
Metadata compiled and distributed by the Carbon Dioxide Information Analysis Center for global climate change and greenhouse gas-related data bases
[DE93-015338] p 1473 N94-18167
The land component of the global climate system with adequate spatial resolution
[DE93-018951] p 1474 N94-18183
Rapid oceanic cyclogenesis studies
[AD-A269258] p 1490 N94-18265
Station climatic summaries: North America. Volume 1: The contiguous United States
[AD-A269567] p 1490 N94-18303
Station climatic summaries, North America. Volume 2: Alaska, Canada and Greenland
[AD-A269793] p 1493 N94-18732
Solar radiation in Saudi Arabia
[AD-A269970] p 1493 N94-18781
An investigation of warm-cloud microphysics using a multi-component cloud model: Interactive effects of the aerosol spectrum
[AD-A270273] p 1493 N94-18812
CDIAC catalog of numeric data and computer model packages
[DE93-017675] p 1475 N94-18832
Eastern Europe: A climatological study
[AD-A269200] p 1493 N94-18883
Toward a high performance distributed memory climate model
[DE93-019156] p 1494 N94-19298
HIRLAM p 1494 N94-19699
Report of the Second CLICOM Experts Meeting
[WCDMP-19] p 1495 N94-19705
CLIPS
Spectrum fatigue testing of T-shaped tension clips
[FFA-TN-1992-22] p 1452 N94-17970
CLOCKS
Proceedings of the 4th European Congress on Chronometry
[ETN-93-94633] p 1424 N94-18006
The clocks and the perception of time in the 18th century society p 1424 N94-18007
Electrostatic micrometers: Recent developments and perspectives of uses in clock and watch making
p 1425 N94-18014
Piezo-electric motor: Perspectives and miniaturization
p 1408 N94-18015
Development of ultrasonic motor and application to silent alarm analog quartz watch p 1425 N94-18016
The optimal numerical algorithm for processing of phase coded time signals for radio-clocks
p 1426 N94-18018
Simulation of a quartz-clockwork
p 1426 N94-18019
Control of torque in stepping motors of quartz watches and clocks p 1408 N94-18023
Restoration of an 18th century English clock
p 1427 N94-18026
The mystery of the perpetual motion clock of Geiser and Son p 1427 N94-18027
Gear train behavior analyzer using laser beam scanning for watch movement p 1427 N94-18028
Universal measurement device for electronic watches and small clocks p 1427 N94-18029
Reliability control for wrist watches and their casements p 1427 N94-18030
Mutrometre: Construction for fast water proof measurements under low pressure and air suppression
p 1427 N94-18031
Techniques for low consumption circuits
p 1428 N94-18032
Evaluation of the consumption of electronic clocks
p 1408 N94-18033
New current reduction system for watches with integrated current regulation motors
p 1428 N94-18034
Some variation in the movement base of the ETA 251 series p 1428 N94-18035
Tooth form design supporting system in module design p 1428 N94-18036
Automatic soldering for watch circuit components
p 1428 N94-18037
Swatch Pager p 1428 N94-18039
A study of the automatic generating system. 3: Improvement of the total system performance
p 1429 N94-18040
Development of a new concept diver's watch
p 1429 N94-18041
Quartz analog watch with perpetual calendar
p 1429 N94-18042
Development of analog watch with minute repeater
p 1429 N94-18043
Efficient simulation of DEDS by means of standard clock techniques: Queueing and integrated radio network examples
[AD-A269878] p 1432 N94-18681
Absolute positioning by collecting Global Positioning System (GPS) data along short baselines
[AD-A271324] p 1317 N94-19572
CLOSED ECOLOGICAL SYSTEMS
Lunar base Controlled Ecological Life Support System (LCELSS): Preliminary conceptual design study
[NASA-CR-188479] p 1511 N94-18484
CLOSURE LAW
On memory effects in turbulence
[DLR-FB-93-03] p 1409 N94-18124
Research activities at the Center for Modeling of Turbulence and Transition p 1410 N94-18546
An introduction to second moment closure
p 1414 N94-18580
A new form of second-moment closure
p 1414 N94-18582
An introduction to single-point closure methodology
p 1414 N94-18583
Second-moment closure: Present... and future?
p 1414 N94-18584
Inclusion of second-moment closures into finite-volume solvers p 1415 N94-18588
Numerical implementation and performance of Reynolds-stress closures in finite-volume computations of recirculating and strongly swirling flows
p 1415 N94-18589
Application of second-moment closure in complex flows p 1415 N94-18590
Modelling engineering flows with Reynolds stress turbulence closure p 1415 N94-18591
CLOUD COVER
Monitoring the response of the upper troposphere/lower stratosphere to a greenhouse gas scenario
[DE93-014509] p 1470 N94-17710
Cloudiest year study: An analysis of the 3DNEPH and RTNEPH databases
[AD-A269403] p 1490 N94-18281
Station climatic summaries: North America. Volume 1: The contiguous United States
[AD-A269567] p 1490 N94-18303
Station climatic summaries, North America. Volume 2: Alaska, Canada and Greenland
[AD-A269793] p 1493 N94-18732
An investigation of warm-cloud microphysics using a multi-component cloud model: Interactive effects of the aerosol spectrum
[AD-A270273] p 1493 N94-18812
CLOUD HEIGHT INDICATORS
Three-dimensional cloud visualization based on satellite imagery
[AD-A269318] p 1490 N94-18300
CLOUD PHYSICS
Cloud CCN feedback
[DE93-016878] p 1472 N94-17985
CLOUDS (METEOROLOGY)
Surface fluxes important to cloud development
[DE93-016633] p 1488 N94-17715
Physical retrieval of precipitation water contents from Special Sensor Microwave/Imager (SSM/I) data. Part 1: A cloud ensemble/radiative parameterization for sensor response (report version) p 1491 N94-18604
Initialization and assimilation of cloud and rainwater in a regional model p 1492 N94-18608
SERCAA cloud analysis integration: Design concepts and interaction with cloud forecast models
[AD-A269104] p 1492 N94-18637
An investigation of warm-cloud microphysics using a multi-component cloud model: Interactive effects of the aerosol spectrum
[AD-A270273] p 1493 N94-18812
Investigations of a coherent vector radar technique for the observation of the atmosphere near 10 GHz
[KFK-5068] p 1494 N94-19616
CLUSTER ANALYSIS
Constructing a reference event list for ARCESS
[AD-A269288] p 1481 N94-18297
CLUSTER MISSION
Cluster: Mission, Payload, and Supporting Activities
[ESA-SP-1159] p 1328 N94-19622

The Wave Experiment Consortium
p 1328 N94-19623
The spherical probe Electric Field and Wave Experiment for the Cluster mission p 1328 N94-19624
STAFF (Spatio-Temporal Analysis of Field Fluctuations) experiment for the Cluster mission p 1328 N94-19625
WHISPER: A sounder and high-frequency wave analyser experiment p 1328 N94-19626
The wideband plasma wave investigation
p 1328 N94-19627
Implementation of the digital wave-processing experiment p 1329 N94-19628
The Cluster magnetic field investigation: Scientific objectives and instrumentation p 1329 N94-19629
The Electron Drift Instrument for Cluster
p 1329 N94-19630
The Cluster Ion Spectroscopy experiment
p 1329 N94-19631
PEACE: A Plasma Electron and Current Experiment
p 1329 N94-19632
RAPID: The imaging energetic particle spectrometer on Cluster p 1329 N94-19633
Active spacecraft potential control: An ion emitter experiment for Cluster p 1330 N94-19634
The Cluster spacecraft p 1330 N94-19635
Cluster ground segment and mission operations
p 1330 N94-19636
The Cluster orbit and mission scenario
p 1330 N94-19637
The Cluster science data system: A distributed system to serve a wide international community
p 1330 N94-19638
The Cluster Joint Science Operations Centre
p 1331 N94-19639
Co-ordination of ground-based observations with Cluster p 1331 N94-19640
European network for the numerical simulation of space plasmas p 1331 N94-19641

CLUSTERS
Metal-nanocluster composites made by ion implantation: A novel third-order nonlinear material
[DE93-015908] p 1339 N94-17846
Proton transfer dynamics and cluster ion fragmentation in phenol/ammonia cLusters
[AD-A269133] p 1348 N94-18256
The Fourteenth Symposium on Molecular Beams
[AD-A268721] p 1568 N94-18787
Photodissociation dynamics of cluster ions
[AD-A270296] p 1568 N94-18814

CMOS
Update on parts SEE susceptibility from heavy ions
[AD-A268735] p 1596 N94-18316
Automated ILA design for synchronous sequential circuits p 1397 N94-18340
Single phase dynamic CMOS PLA using charge sharing technique p 1397 N94-18341
An SEU immune logic family p 1398 N94-18342
Training product unit neural networks with genetic algorithms p 1399 N94-18354
High accuracy switched-current circuits using an improved dynamic mirror p 1401 N94-18368
A tunable CMOS constant current source
p 1401 N94-18369
Formal specification of a high speed CMOS correlator
p 1401 N94-18371
Ultra low power CMOS technology
p 1401 N94-18373
VLSI for high-speed digital signal processing
[AD-A270406] p 1404 N94-18706
Silicon MCM substrates for integration of 3-5 photonic devices and CMOS IC's
[DE93-017894] p 1405 N94-19112
Radiation hardened microprocessor for small payloads
p 1327 N94-19184

COAL
Report to Congress: Comprehensive Program Plan for Advanced Turbine Systems
[DE93-016718] p 1467 N94-18475
EIA publications directory, 1992
[DE93-016833] p 1617 N94-18983
Supercritical thermodynamics of sulfur and nitrogen species
[DE93-041221] p 1610 N94-19670

COAL GASIFICATION
Fundamental studies of the mechanism of catalytic reactions with catalysts effective in the gasification of carbon solids and the oxidative coupling of methane
[DE93-015262] p 1347 N94-18193
Synthesis of higher alcohols from carbon monoxide and hydrogen in a slurry reactor
[DE93-015086] p 1347 N94-18209

COAL LIQUEFACTION
Supercritical thermodynamics of sulfur and nitrogen species
[DE93-041221] p 1610 N94-19670

COAL UTILIZATION
MHD Integrated Topping Cycle Project
[DE93-040521] p 1589 N94-19055

COANDA EFFECT
Design, development, and flight evaluation of the Boeing YC-14 USB powered lift aircraft p 1310 N94-18444
Efficiency of fiber dispersion
[AD-A269740] p 1342 N94-18757

COASTAL ECOLOGY
Ecological and environmental impacts of construction in the coastal zone
[AD-A269196] p 1475 N94-18881

COASTAL PLAINS
Applications of Quaternary stratigraphic, soil-geomorphic, and quantitative geomorphic analyses to the evaluation of tectonic activity and landscape evolution in the Upper Coastal Plain, South Carolina
[DE93-016269] p 1484 N94-18725

COASTAL WATER
DYNLET1 model formulation and user's guide
[AD-A269843] p 1498 N94-18723
Ecological and environmental impacts of construction in the coastal zone
[AD-A269196] p 1475 N94-18881

COASTS
Technologies for assessing the geologic and geomorphic history of coasts
[AD-A268780] p 1496 N94-18215
Coastal Ocean Modeling Workshop
[AD-A268955] p 1497 N94-18393
Wind products for use in coastal wave and surge models
[AD-A269753] p 1497 N94-18414
ADCIRC: An advanced three-dimensional circulation model for shelves, coasts, and estuaries. Report 3: Development of a tidal constituent database for the western North Atlantic and Gulf of Mexico
[AD-A268685] p 1497 N94-18455
Ecological and environmental impacts of construction in the coastal zone
[AD-A269196] p 1475 N94-18881
The WAQUA/CSM-16 model p 1494 N94-19700

COATING
Recirculation in forward roll coating
[VKI-TM-48] p 1409 N94-17901
Process for applying high application-temperature coating to heat-sensitive aluminum alloys
[AD-D015823] p 1368 N94-17905
Synchrotron/crystal sample preparation
[NASA-CR-193837] p 1603 N94-19513
Precision machining and polishing of scintillating crystals for large calorimeters and hodoscopes
[DE93-018663] p 1381 N94-19544

COATINGS
Pressureless densification of ceramic matrix composites
[AD-A269137] p 1371 N94-18691
Soft X Ray Projection Lithography. Organization of the 1993 photonics science optical meetings
[AD-A269159] p 1579 N94-18693
Optical properties of oxide coatings prepared by ion-assisted deposition
[AD-A270024] p 1599 N94-18711
Airflow research
[NASA-TM-109372] p 1312 N94-18964
Testing of protective coatings in hydrogen
[DE93-040326] p 1375 N94-19651

COAXIAL CABLES
A radial transmission line material measurement apparatus
[DE93-018508] p 1394 N94-17780

COBALT
Photoemission studies of Zn, Co, and Gd substituted YBa2Cu3O(7-delta)
[DE93-017403] p 1597 N94-18498
Vibrational dynamics in photoinduced electron transfer
[DE93-040874] p 1567 N94-18533

COBALT ALLOYS
Atlas of formability: HAYNES 556
[AD-A268354] p 1356 N94-17768

COCHLEA
The effects of reverberant impulse noise (blast waves) on hearing: Parametric studies
[AD-A269242] p 1506 N94-18911

COCKPITS
Research on man-machine productivity in aviation at Human Engineering Institute of Hangzhou University
[AD-A269952] p 1512 N94-18673
Army Cockpit Delethalization Program (CDP)
[AD-A268990] p 1512 N94-18765
A multivariate anthropometric method for crew station design
[AD-A270652] p 1513 N94-19531

CODE DIVISION MULTIPLEXING
VHF air/ground communications for air traffic control. Volume 1: A decision tree approach to system innovations
[AD-A268485] p 1316 N94-18384

CODERS
Template based low data rate speech encoder
[AD-A270900] p 1392 N94-19748

CODING
FY 1991 AASERT: Spatio-temporal making in human vision and its application to image coding
[AD-A268795] p 1505 N94-18190
Serial pattern complexity: Irregularity and hierarchy
[PB93-191914] p 1509 N94-19348
Communication in the presence of unknown interference
[AD-A271146] p 1392 N94-19738
Template based low data rate speech encoder
[AD-A270900] p 1392 N94-19748

COEFFICIENT OF FRICTION
Studies of dynamic contact of ceramics and alloys for advanced heat engines
[DE93-016366] p 1368 N94-18110
Tribological studies of silicon for magnetic recording applications (Invited)
[AD-A270878] p 1447 N94-19784

COFFIN-MANSON LAW
Microstructure and texture control of fatigue in hydrogen and marine environments
[AD-A271277] p 1344 N94-19744

COGENERATION
Report to Congress: Comprehensive Program Plan for Advanced Turbine Systems
[DE93-016718] p 1467 N94-18475

COGNITION
A method for cognitive task analysis
[IZF-1992-B5] p 1508 N94-17967
Distributed reasoning and planning
[AD-A268682] p 1540 N94-18399
System dynamics and computer modeling expertise. A conceptual structure research inquiry
[AD-A269860] p 1560 N94-18410
Comparing performance on implicit memory tests
[AD-A269900] p 1508 N94-18657
Putting knowledge to use: The acquisition and transfer of knowledge in situated problem solving environments
[AD-A269746] p 1509 N94-18744
Cognitive ability and whole-body rotation
[IZF-1993-B-4] p 1510 N94-19440

COGNITIVE PSYCHOLOGY
A method for cognitive task analysis
[IZF-1992-B5] p 1508 N94-17967
Cognitive limitations in coordination in hierarchical information processing structures
[AD-A268825] p 1616 N94-18535
Visual perception of features and objects
[AD-A269879] p 1508 N94-18682
Modeling of driver behavior: Information perception, rule and control strategies in experiments and simulations
[ETN-93-95053] p 1510 N94-19649

COHERENT ACOUSTIC RADIATION
Computational aero-acoustics as a branch of turbulence research p 1411 N94-18552

COHERENT RADAR
Investigations of a coherent vector radar technique for the observation of the atmosphere near 10 GHz
[KFK-5068] p 1494 N94-19616

COHERENT RADIATION
X-ray laser oscillator-amplifier experiments
[DE93-017165] p 1436 N94-17868
Proof of the feasibility of coherent and incoherent schemes for pumping a gamma ray laser
[AD-A269173] p 1440 N94-18880
Coherence and linewidth studies of a 4-nm high power FEL
[DE93-018533] p 1441 N94-19030

COHERENT SCATTERING
Theoretical and experimental research on coherent microwave backscatter from the ocean
[AD-A271276] p 1500 N94-19743

COLD ACCLIMATIZATION
Effects of a high-energy food supplement on cold-induced thermogenesis
[AD-A269301] p 1504 N94-17823

COLD CATHODES
Novel electron beam cathode
[AD-A270106] p 1404 N94-18872

COLD NEUTRONS
The use of chopper spectrometers for cold-to-epithermal neutron scattering at IPNS
[DE93-017798] p 1598 N94-18531

COLD PLASMAS
Wake field in electron-positron plasmas
[DE93-624929] p 1584 N94-17955

COLD TOLERANCE
Effects of a high-energy food supplement on cold-induced thermogenesis
[AD-A269301] p 1504 N94-17823
Evaluation of physiological and psychological impairment of human performance in cold stressed subjects
[AD-A268637] p 1506 N94-18632
COLLIMATION
Developmental testing of a prototype all-reflection Michelson interferometer
[AD-A269064] p 1430 N94-18406
COLLIMATORS
Advances and applications of ABCI
[DE93-016971] p 1383 N94-18055
Description of an infrared zoomcollimator
[FEL-93-A034] p 1580 N94-19424
COLLISION AVOIDANCE
Survey of collision avoidance and ranging sensors for mobile robots, revision 1
[AD-A269846] p 1541 N94-18474
Aircraft accident report: Midair collision, Mitsubishi MU-2B-60, N74FB, and PIPER PA-32-301, N82419, Greenwood Municipal Airport, Greenwood, Indiana, 11 September 1992
[PB93-910406] p 1315 N94-19352
COLLISIONAL PLASMAS
Transformation of energy and momentum due to Landau damping in space
[DE93-624921] p 1581 N94-17689
COLLISIONS
Low-energy continuum-electron emission at 0 degrees from O(q+) + He collisions
[DE93-018777] p 1570 N94-19108
IRAS high resolution studies and modeling of closely interacting galaxies. Galaxy collisions: Infrared observations and analysis of numerical models. UV spectroscopy of massive young stellar populations in interacting galaxies
[NASA-CR-194483] p 1627 N94-19218
COLLOIDS
Electrokinetic transport of heterogeneous particles in suspensions
[NASA-CR-194478] p 1353 N94-19367
COLOR
Accelerated tests on the tarnish resistance of gold alloys p 1367 N94-18008
Color palette considerations for digital map displays
[AD-A269991] p 1462 N94-18679
Color test chart for facsimile
[AD-A269754] p 1387 N94-18721
Electro-optics display research, test, and evaluation laboratory program
[AD-A270947] p 1408 N94-19751
COLOR CENTERS
Electron paramagnetic resonance of the ns(sup 1) centers in crystals
[DE93-628793] p 1595 N94-18173
COLOR PHOTOGRAPHY
The application of liquid crystal techniques to determine heat transfer rates p 1432 N94-18654
COLOR VISION
Overview of research in progress at the Center of Excellence
[NASA-CR-194329] p 1618 N94-19256
COLORIMETRY
Penetrometer compatible, fiber-optic sensor for continuous monitoring of chlorinated hydrocarbons: Field test results
[DE93-017974] p 1352 N94-19266
COLUMNS (PROCESS ENGINEERING)
Exchange front stability in packed-column chromatography
[DE93-017526] p 1346 N94-17997
COMBINATORIAL ANALYSIS
Applications of an algebraic Monge property
[DE93-016869] p 1546 N94-17885
Heuristics from nature for hard combinatorial optimization problems
[REPT-93-025] p 1547 N94-17961
On network representation of the solutions in combinatorial optimization
[RR-910-I] p 1552 N94-19392
A tight lower bound for on-line monotonic list labeling
[TR-478] p 1531 N94-19508
COMBUSTIBLE FLOW
Transport phenomena and interfacial kinetics in multiphase combustion systems
[AD-A270202] p 1349 N94-18785
COMBUSTION
Techniques for the estimation of Heats of Explosion (HEX) using thermochemical codes
[AD-A268584] p 1609 N94-18310
LX-17 chemical kinetic material model for Chemical TOPAZ2D
[DE93-014363] p 1377 N94-18893
Collaborative research on combustion diagnostics and modeling between Rolls-Royce, Inc. and the United States Air Force Wright Laboratory
[AD-A270660] p 1354 N94-19778
COMBUSTION CHAMBERS
Study of multi-phase flow characteristics in an MHD power train
[DE93-018570] p 1586 N94-18272
Chemical reactions in turbulent mixing flows
[AD-A269377] p 1410 N94-18472
Analysis of supersonic flows using k-epsilon model and the RPLUS code: Progress towards high speed combustor analysis p 1411 N94-18551
Metal slurry droplet and spray combustion
[AD-A269648] p 1349 N94-18736
MHD integrated topping cycle project
[DE93-040520] p 1588 N94-18978
MHD Integrated Topping Cycle Project
[DE93-040521] p 1589 N94-19055
Collaborative research on combustion diagnostics and modeling between Rolls-Royce, Inc. and the United States Air Force Wright Laboratory
[AD-A270660] p 1354 N94-19778
COMBUSTION CHEMISTRY
Research activity on particle spin systems and related problems
[AD-A269456] p 1562 N94-18286
Transport phenomena and interfacial kinetics in multiphase combustion systems
[AD-A270202] p 1349 N94-18785
Collaborative research on combustion diagnostics and modeling between Rolls-Royce, Inc. and the United States Air Force Wright Laboratory
[AD-A270660] p 1354 N94-19778
COMBUSTION PHYSICS
Research activity on particle spin systems and related problems
[AD-A269456] p 1562 N94-18286
Chemical reactions in turbulent mixing flows
[AD-A269377] p 1410 N94-18472
Mathematical problems in combustion
[AD-A270147] p 1349 N94-18776
Environmental Research Program
[DE93-019101] p 1477 N94-19105
Experimental study of flame front interactions
[ECL-91-40] p 1353 N94-19376
A Sandia Technology Bulletin: Testing technology, July 1993
[DE93-040197] p 1633 N94-19537
COMBUSTION PRODUCTS
Direct Monte Carlo simulation of the chemical equilibrium composition of detonation products
[DE93-014559] p 1376 N94-17751
The carbon dioxide emissions game: Playing the net
[DE93-017670] p 1471 N94-17821
Review of short-term, high-level exposure to metals: Antimony, barium, and cadmium
[AD-A268896] p 1505 N94-18392
On-line monitoring of incinerator emissions
[DE93-017406] p 1474 N94-18499
A comparison of wet and dry scrubbing systems for control of metals and dioxin/furan emissions from incinerators
[DE93-017446] p 1474 N94-18502
Evaluation of aftermarket LPG conversion kits in light-duty vehicle applications
[DE93-010035] p 1377 N94-18617
Transport phenomena and interfacial kinetics in multiphase combustion systems
[AD-A270202] p 1349 N94-18785
Indoor environment program
[DE93-018601] p 1513 N94-18935
Organic carbonyl compounds in Albuquerque, New Mexico, air: A preliminary study of the effects of oxygenated fuel use
[DE93-017748] p 1476 N94-19045
Environmental Research Program
[DE93-019101] p 1477 N94-19105
The use of post detonation analysis of stable isotope ratios to determine the type and production process of the explosive involved
[DE93-018497] p 1378 N94-19242
COMBUSTION STABILITY
Combustion instability phenomena of importance to liquid propellant engines
[AD-A268800] p 1348 N94-18389
Mathematical problems in combustion
[AD-A270147] p 1349 N94-18776
COMETS
Observations of comets with the IUE
[NASA-CR-193652] p 1624 N94-17843
COMMAND AND CONTROL
Cognitive limitations in coordination in hierarchical information processing structures
[AD-A268825] p 1616 N94-18535
An investigation of methods for updating ionospheric scintillation models using topside in-situ plasma density measurements
[AD-A269872] p 1483 N94-18655
Corporate Information Management (CIM) report on the simulation processes, version 2.0
[AD-A269119] p 1617 N94-18770
A user task analysis for command and control systems and its use in human-computer interaction research
[AD-A269877] p 1512 N94-18774
Computer-Aided Prototyping System (CAPS) within the software acquisition process. A case study
[AD-A268705] p 1522 N94-18786
Case studies of software development tools for parallel architectures
[AD-A269193] p 1535 N94-18866
Causal reasoning for model-based process supervisory control
[LAAS-93241] p 1544 N94-19360
PRACTICAL: Planning and resource allocation in C2-domains with time critical algorithms
[FEL-93-B029] p 1544 N94-19458
Systems engineering for Air Force C3I systems
[AD-A270482] p 1391 N94-19676
Automated processing of military messages according to ADatP-3
[FEL-92-A044] p 1393 N94-19798
COMMERCE
Implementation of electronic data interchange in the department of defense: Lessons learned from private industry
[AD-A269532] p 1534 N94-18768
COMMERCIAL AIRCRAFT
Airport activity statistics of certificated route air carriers, 1992
[AD-A269042] p 1315 N94-18490
COMMUNICATION
On asynchronous testing
[MEMO-INF-93-03] p 1543 N94-19226
COMMUNICATION EQUIPMENT
VHF air/ground communications for air traffic control: A decision tree approach to system innovations, volume 2
[AD-A268632] p 1386 N94-18495
Coordination of software-development activities among sites that are geographically separated
[DE93-019201] p 1524 N94-19076
COMMUNICATION NETWORKS
Intentionally Short Range Communications (ISRC)
[AD-A268788] p 1384 N94-18216
Specification and analysis of a high speed transport protocol
[AD-A268941] p 1386 N94-18449
Efficient simulation of DEDS by means of standard clock techniques: Queueing and integrated radio network examples
[AD-A269878] p 1432 N94-18681
Simulation models of UCN, FDDI-2 and DQDB
[MEMO-INF-93-10] p 1536 N94-19197
A highly concurrent medium access control strategy for high speed multiwavelength networks using transceivers with limited tunability
[MEMO-INF-93-07] p 1390 N94-19230
Tandem queues with deterministic service times
[PB93-197465] p 1543 N94-19324
Systolic design with asynchronous controls for digital-signal processing
[AD-A270976] p 1392 N94-19680
Improved HF data network simulator, volume 1
[AD-A270953] p 1393 N94-19752
Improved HF data network simulator, software user's manual, volume 2
[AD-A270954] p 1393 N94-19753
Control of integrated voice/data multi-hop radio networks via reduced-load approximations
[AD-A270661] p 1393 N94-19779
COMMUNICATION THEORY
Specifying and proving communication closedness in protocols
[MEMO-INF-93-23] p 1390 N94-19267
Communication in the presence of unknown interference
[AD-A271146] p 1392 N94-19738
COMMUTATION
Applications of an algebraic Monge property
[DE93-016869] p 1546 N94-17885
Deformed traces and covariant quantum algebras for quantum groups GL(sub qp)(2) and GL(sub qp)(1/1)
[DE93-629862] p 1561 N94-18153
Paragrassmann analysis and quantum groups
[DE93-628593] p 1561 N94-18168
On a possible algebra morphism of U(sub q)(osp1/2) onto the deformed oscillator algebra W(sub q)(N)
[DE93-629857] p 1548 N94-18176

COMPACTING
Equipment for investigation of cryogenic compaction of nanosize silicon nitride powders
[DE93-018740] p 1340 N94-18180
COMPARISON
Verification of 3I retrievals vis-a-vis radiosonde observations
[KNMI-TR-150] p 1488 N94-17924
COMPATIBILITY
Compatibility of refrigerants and lubricants with motor materials, volume 1
[DE93-040216] p 1350 N94-18895
Compatibility of refrigerants and lubricants with motor materials, volume 2
[DE93-040217] p 1350 N94-18896
Compatibility of refrigerants and lubricants with motor materials, volume 3
[DE93-040218] p 1352 N94-19191
COMPENSATORS
Power compensators for phased operation of antenna arrays on JET and D3-D
[DE93-013208] p 1581 N94-17694
Deadbeat control by measurement feedback: A two sided approach
[REPT-93-20] p 1542 N94-19091
COMPILERS
PostScript: A study in conformity
[NPL-DITC-214/93] p 1517 N94-17917
High performance Fortran: An overview
[DE93-017181] p 1519 N94-18072
Using semantic information for processing negation and disjunction in logic programs
[DE93-017412] p 1614 N94-18099
A special purpose silicon compiler for designing supercomputing VLSI systems p 1402 N94-18379
COMPLEX COMPOUNDS
An ab initio study of the weakly bonded CO-Cl2 complex
[AD-A269000] p 1349 N94-18395
Resonance Raman and photophysical studies of transition metal complexes in solution and entrapped in zeolites
[DE93-019892] p 1363 N94-19019
COMPLEX SYSTEMS
The 1992 annual report on scientific programs: A broad research program on the sciences of complexity
[DE93-018151] p 1561 N94-18178
Intelligent help facilities: Generating natural language descriptions with examples
[AD-A269555] p 1521 N94-18290
ControlShell: A real-time software framework
[AD-A269172] p 1523 N94-18879
COMPLEXITY
Shop problems with two machines and time lags
[REPT-93-020] p 1518 N94-17927
COMPONENT RELIABILITY
Synthesis techniques and analysis tool for on-chip fault-tolerance
[AD-A269146] p 1521 N94-18259
COMPOSITE MATERIALS
NMR studies of enriched species at interfaces
[AD-A264703] p 1367 N94-17878
The calculation methods of a cracked plastic composite laminate: A literature survey
[VTT-TIED-1362] p 1339 N94-17958
Lightweight materials for transportation: Program plan
[DE93-017381] p 1340 N94-18087
Analysis of bolted and bonded composite
[AD-A267792] p 1453 N94-18382
Composites: Materials of the future
[AD-A268945] p 1341 N94-18450
The 6th Japan-U.S. conference on composite materials
[AD-A268535] p 1341 N94-18630
Solid State Sciences Committee Forum
[AD-A270454] p 1342 N94-18715
High performance YBCO films
[AD-A269090] p 1599 N94-18719
Mechanical-property changes of structural composite materials after low-temperature proton irradiation: Implications for use in SSC magnet systems
[DE93-016735] p 1343 N94-18763
Shock-loading response of advanced materials
[DE93-018344] p 1455 N94-19033
Computational mechanics of composite materials
[PB93-195782] p 1343 N94-19281
Composite impact dynamics research at NASA LaRC: A review p 1458 N94-19467
Impact analysis of composite aircraft structures
p 1458 N94-19468
Thermal wave image processing for characterization of subsurface of flaws in materials
[DE93-019024] p 1344 N94-19551
Ceramic technology project data base
[DE93-019360] p 1374 N94-19561
Recent advances in high density tungsten composite processing
[AD-A270764] p 1344 N94-19576
COMPOSITE PROPELLANTS
Some problems in the rheological characterisation of composite rocket propellants
[AD-A268806] p 1376 N94-18203
COMPOSITE STRUCTURES
Computational strategies for composite structures
[PB93-195097] p 1452 N94-18079
SAND contact in DYNA3D
[DE93-016451] p 1340 N94-18113
Evaluation of the production-grade class 4 flextensional transducer shell
[AD-A268796] p 1340 N94-18201
Analysis of bolted and bonded composite
[AD-A267792] p 1453 N94-18382
Bibliography on ceramic matrix composites and reinforcing whiskers, platelets, and fibers, 1970-1990
[AD-A270139] p 1371 N94-18750
Dynamic response analysis of composite structural members during missile launch
[AD-A270023] p 1332 N94-18760
Mechanical-property changes of structural composite materials after low-temperature proton irradiation: Implications for use in SSC magnet systems
[DE93-016735] p 1343 N94-18763
Computational mechanics of composite materials
[PB93-195782] p 1343 N94-19281
Compression strength of composite primary structural components
[NASA-CR-194562] p 1457 N94-19350
Design for cyclic loading endurance of composites
[NASA-TM-106407] p 1457 N94-19351
Composite impact dynamics research at NASA LaRC: A review p 1458 N94-19467
COMPRESSIBILITY
Effect of internal heating during hot compression testing on the stress-strain behavior and hot working characteristics of alloy 304L
[DE93-012701] p 1362 N94-18917
Shock compression properties of silicon carbide
[DE93-019927] p 1373 N94-19271
Stability measurements of Rayleigh-Benard convection near the critical state using a spectral model
[MPIS-15/1992] p 1422 N94-19520
COMPRESSIBLE BOUNDARY LAYER
Numerical prediction of transition of the F-16 wing at supersonic speeds
[NASA-CR-194407] p 1312 N94-19433
COMPRESSIBLE FLOW
CFD investigations of the hypersonic double delta wing greta: Sanger project no. 3.2
[FFA-TN-1992-42] p 1311 N94-17919
Viscous-inviscid calculation of high-lift separated compressible flows over airfoils and wings
p 1309 N94-18440
A coupled implicit solution method for turbulent spray combustion in propulsion systems p 1411 N94-18549
High order non-oscillatory schemes for the compressible Euler equations p 1412 N94-18558
A multigrid acceleration technique for computing steady solutions to the equations of compressible flow
p 1412 N94-18559
Introduction to the Modeling of Turbulence
[VKI-LS-1993-02] p 1414 N94-18578
Turbulence modeling for compressible flows and implementation in Navier-Stokes solvers
p 1416 N94-18597
A finite element scheme for shock capturing
[AD-A270182] p 1417 N94-18755
On positivity preserving finite volume schemes for compressible Euler equations
[NASA-CR-191534] p 1551 N94-19317
On the numerical approximation of nonlinear hyperbolic problems: Application to the dynamics of compressible gas
[ETN-93-95020] p 1420 N94-19365
Numerical prediction of transition of the F-16 wing at supersonic speeds
[NASA-CR-194407] p 1312 N94-19433
Study and modeling of compressible flows of flapper nozzle type potentiometric systems
[ETN-93-95012] p 1421 N94-19495
A review of hot-wire technique in compressible flows
[LR-724] p 1423 N94-19668
COMPRESSIBLE FLUIDS
A finite element scheme for shock capturing
[AD-A270182] p 1417 N94-18755
COMPRESSION LOADS
Assessment of an improved multiaxial strength theory based on creep-rupture data for Inconel 600
[DE93-015929] p 1356 N94-17791
A methodology to model physical contact between structural components in NASTRAN
p 1450 N94-17836
Technique to eliminate helium induced weld cracking in stainless steels
[DE93-015982] p 1357 N94-17859
The effect of crystallographic orientation on the performance of single crystal tungsten subscale penetrators
[AD-A268988] p 1597 N94-18468
Mechanical response comparison of gun propellants evaluated under equivalent time-temperature conditions
[AD-A270479] p 1378 N94-19674
COMPRESSION TESTS
Atlas of formability: Ultimet
[AD-A268352] p 1355 N94-17767
Atlas of formability: HAYNES 556
[AD-A268354] p 1356 N94-17768
Atlas of formability: HAYNES 188
[AD-A268355] p 1356 N94-17769
Atlas of formability: NICKELVAC K-500
[AD-A268351] p 1356 N94-17772
Atlas of formability: Haynes 230
[AD-A268325] p 1356 N94-17788
Atlas of formability: INCONEL 718
[AD-A268350] p 1356 N94-17789
Atlas of formability: Hastelloy C-22
[AD-A268324] p 1356 N94-17796
Atlas of formability: Permalloy - 80 flow stress curves
[AD-A268263] p 1356 N94-17801
Atlas of formability: Nickelvac C-276
[AD-A268264] p 1357 N94-17802
Atlas of formability: Ti-6Al-4V ELI
[AD-A268300] p 1357 N94-17803
Atlas of formability: ALLVAC 718
[AD-A268304] p 1357 N94-17804
Atlas of formability: Waspaloy
[AD-A268323] p 1593 N94-17805
COMPRESSIVE STRENGTH
Compression strength of composite primary structural components
[NASA-CR-194562] p 1457 N94-19350
COMPRESSORS
The 7th International Cryocooler Conference
[AD-A268451] p 1379 N94-18147
COMPTON EFFECT
Simulation of emittance dilution in electron storage ring from Compton backscattering
[DE93-017611] p 1386 N94-18503
Single sided tomography of extremely large dense objects
[DE93-017993] p 1580 N94-19268
COMPUTATION
An efficient implementation of error-valued semantics on imperative machines
[DE93-014658] p 1516 N94-17740
Thermodynamics of computation and information distance
[DE93-012730] p 1517 N94-17812
Shop problems with two machines and time lags
[REPT-93-020] p 1518 N94-17927
Systolic array IC for genetic computation
p 1400 N94-18361
Optimal eigenvalue computation on distributed-memory MIMD multiprocessors
[DE93-018337] p 1535 N94-18808
Adaptive uniformization: Technical details
[MEMO-INF-93-22] p 1558 N94-19265
Adaptive uniformization
[MEMO-INF-92-88] p 1558 N94-19385
Fault-tolerance and complexity
[TR-450] p 1530 N94-19483
Computation of large numbers and VLSI: Application to GCD, to stretched GCD and at euclidian distance
[ETN-93-95009] p 1552 N94-19499
On the computation of versal family of matrices
[RR-892-M] p 1532 N94-19712
COMPUTATIONAL ASTROPHYSICS
Computational astrophysics: Pulsating stars
[DE93-018369] p 1627 N94-18857
A new approach to the study of the turbulence layer
[NASA-CR-194546] p 1487 N94-19397
COMPUTATIONAL FLUID DYNAMICS
A study of the influence of a delta wing geometry on the induced drag at transonic speed (M=0.55) and high angles of attack
[FFA-TN-1992-14] p 1311 N94-17722
Finite element modeling of evaporation and condensation during sol-gel film and fiber formation
[DE93-017655] p 1345 N94-17820
CFD investigations of the hypersonic double delta wing greta: Sanger project no. 3.2
[FFA-TN-1992-42] p 1311 N94-17919
Synthesis of the Workshop on Hypersonic Flows for Reentry Problems
[INRIA-RR-1721] p 1311 N94-17957

Investigation of a matrix-model for the artificial dissipation in a cell vertex finite volume scheme for solving the Navier-Stokes equations
[DLR-FB-92-33] p 1409 N94-18076
Interferometer stations at the Air Force Aeroballistic Research Facility
[AD-A268776] p 1322 N94-18330
High-performance multiprocessor architecture for a 3-D lattice gas model p 1400 N94-18362
Parabolized Navier-Stokes computation of surface heat transfer characteristics for supersonic and hypersonic KE projectiles
[AD-A268858] p 1410 N94-18391
High-Lift System Aerodynamics
[AGARD-CP-515] p 1305 N94-18415
Calculation of maximum and high lift characteristics of multi element aerofoils p 1305 N94-18419
Navier-Stokes computations of turbulent flow around high-lift configurations p 1306 N94-18420
Efficient simulation of incompressible viscous flow over multi-element airfoils p 1306 N94-18421
Navier-Stokes calculations on multi-element airfoils using a chimera-based solver p 1306 N94-18422
Numerical solution of the Navier-Stokes equations for high-lift configurations on structured composite grids
p 1306 N94-18423
A viscous-inviscid solver for high-lift incompressible flows over multi-element airfoils at deep separation conditions p 1306 N94-18425
High-lift system analysis method using unstructured meshes p 1307 N94-18426
Prediction of the high-lift performance of multi-element aerofoils using an unstructured Navier-Stokes solver
p 1307 N94-18427
Numerical calculations of high lift flows using structured and unstructured methods p 1307 N94-18428
Navier-Stokes simulation of flow field around a blown-flap high-lift system p 1307 N94-18429
Viscous phenomena affecting high-lift systems and suggestions for future CFD development
p 1308 N94-18433
A fast computing method for the flow over high-lift wings p 1308 N94-18437
Calculation of multielement airfoils and wings at high lift p 1309 N94-18438
Wake structure and aerodynamic behavior of high lift aircraft configurations during unsteady maneuvers in ground effect p 1309 N94-18439
Viscous-inviscid calculation of high-lift separated compressible flows over airfoils and wings
p 1309 N94-18440
High-lift research: Application to the design of the ATR72 flap p 1309 N94-18442
The aero-mechanical design of a novel Fowler flap mechanism p 1309 N94-18443
Workshop on Computational Turbulence Modeling
[NASA-TM-109266] p 1410 N94-18545
Research activities at the Center for Modeling of Turbulence and Transition p 1410 N94-18546
Assessment and development of second order turbulence models p 1411 N94-18548
A coupled implicit solution method for turbulent spray combustion in propulsion systems p 1411 N94-18549
Numerical investigation of complex, transitional, and chemically reacting flows p 1411 N94-18550
Analysis of supersonic flows using k-epsilon model and the RPLUS code: Progress towards high speed combustor analysis p 1411 N94-18551
A comparative study of turbulence models in predicting hypersonic inlet flows p 1314 N94-18553
An algebraic turbulence model for turbomachinery
p 1411 N94-18554
Several examples where turbulence models fail in inlet flow field analysis p 1412 N94-18556
Computational Fluid Dynamics
[VKI-LS-1993-04] p 1412 N94-18557
High order non-oscillatory schemes for the compressible Euler equations p 1412 N94-18558
Computational techniques for high-speed flows with viscous and chemical effects p 1412 N94-18560
Multidimensional wave decompositions for the Euler equations p 1413 N94-18562
Cell vertex methods for steady inviscid flow
p 1413 N94-18563
Compact advection schemes on unstructured grids
p 1413 N94-18564
Variational approaches to CFD: Applications to potential Euler and Navier-Stokes equations
p 1413 N94-18565
Introduction to spectral methods for hyperbolic system of conservation laws p 1413 N94-18567
Distributed memory parallel computers and computational fluid dynamics p 1413 N94-18568
Two-equation models for low-Reynolds-number variants p 1415 N94-18587
Inclusion of second-moment closures into finite-volume solvers p 1415 N94-18588
Direct and large eddy simulation of turbulence: Summary of the state of the art 1993 p 1416 N94-18594
Numerical simulation of turbulent convective flow over wavy terrain p 1416 N94-18596
Calculation of turbulent boundary layer wall pressure spectra
[AD-A269549] p 1416 N94-18642
UUGM code development
[AD-A269945] p 1416 N94-18671
STREMR: Numerical model for depth-averaged incompressible flow
[AD-A269949] p 1417 N94-18672
Computational Fluid Dynamics (CFD) research branch technical briefs
[AD-A269698] p 1417 N94-18739
Numerical simulation of fluid dynamics and combustion for ram accelerator projectile/obturator interaction
[AD-A269715] p 1320 N94-18748
Some parametric flow analyses of a particle bed fuel element
[DE93-018440] p 1337 N94-18830
Multigrid methods for flow transition in three-dimensional boundary layers with surface roughness
[NASA-CR-4540] p 1417 N94-18843
Numerical simulation of turbulent mixing and combustion near the inlet of a burner
[DE93-017960] p 1350 N94-18987
Implementation of the turn function method in KIVA-F90
[DE93-018394] p 1419 N94-19027
Numerical solutions for a flow with mixed convection in a vertical geometry
[DE93-011592] p 1419 N94-19058
Multigrid for a groundwater flow problem
[REPT-93-29] p 1420 N94-19144
Content based-grid node selection for vector field visualization
[REPT-93-35] p 1525 N94-19155
Pseudo-compressibility methods for the incompressible flow equations
[NASA-CR-191533] p 1551 N94-19315
On the numerical approximation of nonlinear hyperbolic problems: Application to the dynamics of compressible gas
[ETN-93-95020] p 1420 N94-19365
Theoretical study and modelling of homogeneous turbulence under rotation for implantation in a code for solving Navier-Stokes equations
[ECL-93-05] p 1420 N94-19381
Simulation of three dimensional unsteady viscous flows in turbomachines
[ECL-92-15] p 1420 N94-19398
Numerical simulations of turbulent buoyant flows by finite element method: Application to the study of strongly heated or cooled stratified flow
[ECL-92-28] p 1421 N94-19399
Numerical prediction of transition of the F-16 wing at supersonic speeds
[NASA-CR-194407] p 1312 N94-19433
Analysis of film cooling in rocket nozzles
[NASA-CR-194674] p 1338 N94-19438
Contribution to the study of a symmetric film flow (with or without tensio-active elements)
[ECL-93-13] p 1421 N94-19461
Numerical simulation of viscous flows in chemical nonequilibrium
[MBB-LME-211-S-PUB-506] p 1421 N94-19497
Three dimensional network generation and Euler calculation for a wing fuselage canard configuration
[MBB-LME-211-S-PUB-511-A] p 1319 N94-19500
Two-dimensional turbulent nonstationary superfluid counterflows: Numerical simulations, qualitative effects
[MPIS-23/1992] p 1422 N94-19510
MIMD massively parallel methods for engineering and science problems
[DE93-019409] p 1531 N94-19562
Navier-Stokes, dynamics and aeroelastic computations for vortical flows, buffet and flutter applications
[NASA-CR-194520] p 1313 N94-19621
Collaborative research on combustion diagnostics and modeling between Rolls-Royce, Inc. and the United States Air Force Wright Laboratory
[AD-A270660] p 1354 N94-19778

COMPUTATIONAL GEOMETRY
Using geometric techniques to improve dynamic programming algorithms for the economic lot-sizing problem and extensions
[PB93-197556] p 1528 N94-19330
Geometric contact for curves and surfaces
[RR-893-M] p 1556 N94-19731

COMPUTATIONAL GRIDS
Benchmarking the QUAD4/TRIA3 element
p 1450 N94-17837
Advances and applications of ABCI
[DE93-016971] p 1383 N94-18055
Calculation of maximum and high lift characteristics of multi element aerofoils p 1305 N94-18419
Navier-Stokes calculations on multi-element airfoils using a chimera-based solver p 1306 N94-18422
Numerical solution of the Navier-Stokes equations for high-lift configurations on structured composite grids
p 1306 N94-18423
High-lift system analysis method using unstructured meshes p 1307 N94-18426
Prediction of the high-lift performance of multi-element aerofoils using an unstructured Navier-Stokes solver
p 1307 N94-18427
Numerical calculations of high lift flows using structured and unstructured methods p 1307 N94-18428
Navier-Stokes simulation of flow field around a blown-flap high-lift system p 1307 N94-18429
Several examples where turbulence models fail in inlet flow field analysis p 1412 N94-18556
ENO schemes on unstructured meshes
p 1412 N94-18561
Multidimensional wave decompositions for the Euler equations p 1413 N94-18562
Cell vertex methods for steady inviscid flow
p 1413 N94-18563
Compact advection schemes on unstructured grids
p 1413 N94-18564
Variational approaches to CFD: Applications to potential Euler and Navier-Stokes equations
p 1413 N94-18565
UUGM code development
[AD-A269945] p 1416 N94-18671
3D composite grids using Bezier curves and surfaces in component adaptive methods
[AD-A269188] p 1549 N94-18863
A particle method for history-dependent materials
[DE93-018696] p 1456 N94-19060
Three dimensional network generation and Euler calculation for a wing fuselage canard configuration
[MBB-LME-211-S-PUB-511-A] p 1319 N94-19500

COMPUTER AIDED DESIGN
Verification of VALISYS cad based CMM software at LLNL
[DE93-013854] p 1517 N94-17911
Current development in selected stress and thermal analysis software interfaces with PRO-ENGINEER
[DE93-014935] p 1518 N94-17943
Interactive Collaborative Environments (ICE) in the design to manufacturing process
[DE93-014994] p 1518 N94-17944
The First International Conference on PCTE
[FEL-92-A134] p 1518 N94-17965
Tooth form design supporting system in module design p 1428 N94-18036
APLAC: An object-oriented analog circuit simulator and design tool. 6.1 reference manual
[PB93-187193] p 1396 N94-18091
Cut and paste based modeling with boundary features
[PB93-187250] p 1520 N94-18117
Introduction to Quantitative Feedback Theory (QFT) technique p 1545 N94-18241
A rational design change methodology based on experimental and analytical modal analysis
[DE93-018537] p 1521 N94-18271
Application of the A* algorithm to aircraft trajectory generation
[AD-A268728] p 1317 N94-18315
Distributed Computing Design System (DCDS)
[AD-A270435] p 1534 N94-18509
Naval research reviews. Mixing enhancement for air-breathing propulsion. Non-axisymmetric jets increase mixing, volume 44 and volume 45
[AD-A268966] p 1521 N94-18543
Computer-Aided Prototyping System (CAPS) within the software acquisition process. A case study
[AD-A268705] p 1522 N94-18786
Initial Graphics Exchange Specification (IGES)
[AD-A270049] p 1522 N94-18794
Thermo-hydraulic analysis of superconducting toroidal-field magnets for the Tokamak Physics Experiment
[DE93-018096] p 1590 N94-19269
ISAC: A tool for aeroservoelastic modeling and analysis
[NASA-TM-109031] p 1321 N94-19316
Numerical simulation of vehicle crashworthiness and occupant protection p 1459 N94-19471
ADAS implementation of a panel method for the prediction of aerodynamic loads
[LR-723] p 1313 N94-19667

COMPUTER AIDED MANUFACTURING
Verification of VALISYS cad based CMM software at LLNL
[DE93-013854] p 1517 N94-17911

Initial Graphics Exchange Specification (IGES)
[AD-A270049] p 1522 N94-18794
An innovative neural manufacturing concept
[DE93-017212] p 1527 N94-19238

COMPUTER AIDED TOMOGRAPHY
In vivo animal models of body composition in aging
[DE93-012527] p 1501 N94-17889
Development and application of local 3-D x ray CT reconstruction software for imaging critical regions in large ceramic turbine rotors
[DE93-015159] p 1369 N94-18166
Quantification of volume flaw sizes in ceramics by image processing of 3D x ray tomographic data sets
[DE93-018573] p 1372 N94-18932
Using computerized tomography to determine ionospheric structures
[DE93-018903] p 1485 N94-19001
Using computerized tomography to determine ionospheric structures
[DE93-018904] p 1485 N94-19002

COMPUTER ANIMATION
Shuttle-C, the future is now

Performance and scalability aspects of directory-based cache coherence in shared-memory multiprocessors
[DE93-016442] p 1536 N94-19115
Application of new technologies in the virtual library: Seminars in Turkey, Portugal, and Spain
[NASA-TM-109718] p 1611 N94-19131
Pegasus project description
[MEMO-INF-92-75] p 1536 N94-19159
Pegasus: Operating system support for distributed multimedia systems
[MEMO-INF-92-76] p 1536 N94-19160
Simulation models of UCN, FDDI-2 and DQDB
[MEMO-INF-93-10] p 1536 N94-19197
Wide-address spaces: Exploring the design space
[MEMO-INF-92-77] p 1537 N94-19219
Specification and verification of a dynamic leader election protocol in a broadcast network
[MEMO-INF-93-05] p 1558 N94-19228
A visualization environment for supercomputing-based applications in computational mechanics
[DE93-015024] p 1537 N94-19249
Models and building blocks for secure open systems
[FEL-92-B365] p 1619 N94-19457
Protocol service decomposition for high-performance networking
[AD-A270613] p 1538 N94-19533
Optoelectronic packaging: A review
[DE93-040059] p 1515 N94-19535
Learning about the Internet bibliography and beginner's guide
[AD-A268847] p 1532 N94-19707
Congestion/flow control and routing in data networks: A control-theoretic approach
[AD-A271121] p 1392 N94-19737
Improved HF data network simulator, volume 1
[AD-A270953] p 1393 N94-19752
Improved HF data network simulator, software user's manual, volume 2
[AD-A270954] p 1393 N94-19753
NPAC distributed-parallel system feasibility study
[AD-A270972] p 1539 N94-19790

COMPUTER PROGRAM INTEGRITY
Using semantic information for processing negation and disjunction in logic programs
[DE93-017412] p 1614 N94-18099
Optimal safety system design using fault tree analysis
[MATHS-REPT-A-187] p 1529 N94-19382
A research program in empirical computer science
[NASA-CR-194069] p 1530 N94-19429
Integrity checking in deductive databases: An exposition
[PB93-191724] p 1619 N94-19709
Computer security. Evolutions 1987 to 1992: Trends and perspectives
[RR-905-I] p 1532 N94-19713

COMPUTER PROGRAMMING
SX User's Manual for SX, version 2.0
[DE93-015971] p 1517 N94-17914
Shop problems with two machines and time lags
[REPT-93-020] p 1518 N94-17927
Numerical methods for molecular dynamics
[DE93-018321] p 1566 N94-18179
Dialog-Based Learning (DBL) for adaptive interface agents and programming-by-demonstrations systems
[AD-A269154] p 1540 N94-18261
Teaching a computer simulation course with Ada
[AD-A267901] p 1521 N94-18308
Specification and analysis of a high speed transport protocol
[AD-A268941] p 1386 N94-18449
The CMU masters in software engineering core curriculum
[AD-A268983] p 1521 N94-18453
Distributed Computing Design System (DCDS)
[AD-A270435] p 1534 N94-18509
A case study in software maintenance
[AD-A269923] p 1521 N94-18659
Efficient transparent optimistic rollback recovery for distributed application programs
[AD-A268981] p 1522 N94-18696
The development of a course sequence in real-time systems design
[AD-A269459] p 1522 N94-18726
Connection machine software conversion of a Navy oceans model
[AD-A269876] p 1535 N94-18772
ControlShell: A real-time software framework
[AD-A269172] p 1523 N94-18879
A programming paradigm for distributed-memory computers
[DE93-018336] p 1524 N94-19024
On the convergence of an unfeasible primal-dual interior-point method for convex programming
[REPT-93-34] p 1525 N94-19154
Reducing extended transition systems
[MEMO-INF-93-09] p 1526 N94-19196
How to apply the IEEE standards to software testing
[DE93-018514] p 1527 N94-19245
Vectorized presentation-level services for scientific distributed applications
[DE93-018091] p 1537 N94-19253
Action systems and action refinement in the development of parallel systems: An algebraic approach
[MEMO-INF-93-14] p 1538 N94-19296
Advanced software development workstation: Object-oriented methodologies and applications for flight planning and mission operations
[NASA-CR-193706] p 1513 N94-19349
Computing professionals: Changing needs for the 1990's
[B-030] p 1515 N94-19401
Transient dynamics capability at Sandia National Laboratories p 1460 N94-19476
Technical development of a theory of programs
[ETN-93-95058] p 1532 N94-19652
Implementation of parallel algorithms
[AD-A271035] p 1539 N94-19682
Software reuse: Major issues need to be resolved before benefits can be achieved. Report to the Chairman, Subcommittee on Defense, Committee on Appropriations, House of Representatives
[GAO/IMTEC-93-16] p 1532 N94-19716
Technology benefits model user manual, version 01.00.04
[AD-A270637] p 1620 N94-19777

COMPUTER PROGRAMS
The design of the MAD Design Program
[DE93-013343] p 1539 N94-17696
A one dimensional numerical model, with an application to the vertical distribution of dissolved oxygen in the ocean
[DE93-018481] p 1495 N94-17779

FEM/SINDA: Combining the strengths of NASTRAN, SINDA, I-DEAS, and PATRAN for thermal and structural analysis p 1449 N94-17831

Introductory user's guide to the ARL supercomputer facility at Aberdeen Proving Ground
[AD-A265204] p 1514 N94-17877

SX User's Manual for SX, version 2.0
[DE93-015971] p 1517 N94-17914

Strategies for testing form assessment software
[NPL-DITC-211/92] p 1518 N94-17930

Current development in selected stress and thermal analysis software interfaces with PRO-ENGINEER
[DE93-014935] p 1518 N94-17943

Format.m: A usage manual. Towards an efficient symbolic-numeric environment: Extending Mathematica's format rules
[MATHS-REPT-A-185] p 1547 N94-17969

An emulator for testing HVAC-control and energy management systems
[VTT-TIED-1337] p 1444 N94-17974

FAROW: A tool for fatigue and reliability of wind turbines
[DE93-017639] p 1465 N94-18001

An overview of the SAFSIM computer program
[DE93-017657] p 1519 N94-18002

FEEST: A method for tabulating equation of state and opacity tables
[DE93-017965] p 1347 N94-18092

Using semantic information for processing negation and disjunction in logic programs
[DE93-017412] p 1614 N94-18099

Navigation in hypermedia applications: Modelling and semantics
[REPT-93-034] p 1520 N94-18136

GREPOS: A GENESIS database repositioning program
[DE93-018517] p 1614 N94-18164

ASYS: a computer algebra package for analysis of nonlinear algebraic equations systems
[DE93-629819] p 1548 N94-18175

User's manual of Tokamak Simulation Code
[DE93-788388] p 1586 N94-18212

Study of multi-phase flow characteristics in an MHD power train
[DE93-018570] p 1586 N94-18272

Teaching a computer simulation course with Ada
[AD-A267901] p 1521 N94-18308

Applications of the program UIFLOW-2D to the numerical simulation of axisymmetric flows
[AD-A268731] p 1410 N94-18326

Automated ILA design for synchronous sequential circuits p 1397 N94-18340

Distributed reasoning and planning
[AD-A268682] p 1540 N94-18399

Software reliability: Estimation and prediction
[AD-A268895] p 1521 N94-18458

Parallelization of the Air Force Space Command (AFSPACECOM) satellite motion models
[AD-A269327] p 1334 N94-18470

The evolution of the PVM concurrent computing system
[DE93-017764] p 1534 N94-18482

A case study in software maintenance
[AD-A269923] p 1521 N94-18659

Implementation of a nonisothermal unified inelastic-strain theory into ADINA6.0 for a titanium alloy: User guide
[AD-A269927] p 1360 N94-18660

UUGM code development
[AD-A269945] p 1416 N94-18671

Directory of Energy Information Administration Models 1993
[DE93-016987] p 1616 N94-18707

DYNLET1 model formulation and user's guide
[AD-A269843] p 1498 N94-18723

Automatically generating abstractions for planning
[AD-A269772] p 1541 N94-18759

Connection machine software conversion of a Navy oceans model
[AD-A269876] p 1535 N94-18772

Computer-Aided Prototyping System (CAPS) within the software acquisition process. A case study
[AD-A268705] p 1522 N94-18786

NASA Electronic Library System (NELS) optimization
[NASA-CR-193688] p 1617 N94-18839

Knowledge sources for an intelligent MCM analyzer
[AD-A269224] p 1542 N94-18887

Automated assistance for detecting malicious code
[DE93-018106] p 1523 N94-18943

Software distribution using xnetlib
[DE93-018278] p 1523 N94-18989

Early experiences with the IBM SP-1
[DE93-018398] p 1535 N94-19010

Implementation of the turn function method in KIVA-F90
[DE93-018394] p 1419 N94-19027

Overview of WARP: A particle code for heavy ion fusion
[DE93-018637] p 1588 N94-19034

CAVEMAN: Configuration and version management
[DE93-018066] p 1524 N94-19048

GENSHELL: A genesis database 2D to 3D shell transformation program
[DE93-018694] p 1525 N94-19102

Computer codes for checking, plotting and processing of neutron cross-section covariance data and their application
[DE93-018459] p 1570 N94-19129

Modelling software for structure metrics
[MEMO-INF-93-13] p 1526 N94-19200

How to apply the IEEE standards to software testing
[DE93-018514] p 1527 N94-19245

A program for passively tracking a target using an array of sensors
[DE93-019554] p 1390 N94-19306

Software quality in test and measurment equipment
[PB93-197846] p 1528 N94-19333

The fire resistance of profiled thin steel sheet structures
[VTT-TIED-1320] p 1380 N94-19373

A research program in empirical computer science
[NASA-CR-194069] p 1530 N94-19429

A comparison between several computer codes for calculations on microwave propagation
[FEL-92-A435] p 1390 N94-19449

Transient dynamics capability at Sandia National Laboratories p 1460 N94-19476

OORA Automated Knowledge System (OAKS) code, appendix C
[AD-A270709] p 1531 N94-19573

Refinement of unit cell parameters by least-squares: Comments on an old technique and the development of a new computer program
[AD-A270610] p 1531 N94-19590

CVL: A C vector library manual. Version 2
[AD-A270614] p 1531 N94-19592

Automated qualitative modeling of dynamic physical systems
[AD-A270835] p 1422 N94-19598

Optical switch evaluation support
[AD-A270948] p 1581 N94-19601

Technical development of a theory of programs
[ETN-93-95058] p 1532 N94-19652

Acoustic propagation modeling using MATLAB
[AD-A270905] p 1564 N94-19750

Improved HF data network simulator, software user's manual, volume 2
[AD-A270954] p 1393 N94-19753

Marine-modified LOWTRAN: The contribution of sun glint
[AD-A269547] p 1500 N94-19762

Technology benefits model user manual, version 01.00.04
[AD-A270637] p 1620 N94-19777

A register of underwater acoustic test facilities in the US, Canada, and the United Kingdom
[AD-A270884] p 1500 N94-19785

The universal BitBus node
[DIGEL-1993-1] p 1515 N94-19799

COMPUTER STORAGE DEVICES

New dynamic FET logic and serial memory circuits for VLSI GaAs technology p 1397 N94-18339

An SEU immune logic family p 1398 N94-18342

Photo-induced and electrooptic properties of (Pb,La)(Zr,Ti)O3 films
[DE93-017496] p 1371 N94-18519

Networked MS windows 3.1 based classified document control system (CDOCS)
[DE93-017880] p 1617 N94-18984

Superconducting flux flow devices, digital circuits and memories
[DE93-019072] p 1405 N94-19079

COMPUTER SYSTEMS DESIGN

RESQme studies for SDC regional computing centers
[DE93-015230] p 1514 N94-17799

TANGO: A notation for describing advanced transaction models
[REPT-93-014] p 1613 N94-17936

Object-oriented extension of a relational DBMS
[ETN-93-94403] p 1519 N94-17978

A model and an execution mechanism for active data bases
[ETN-93-94404] p 1614 N94-17979

Better termination analysis for active databases
[REPT-93-026] p 1614 N94-18144

Synthesis techniques and analysis tool for on-chip fault-tolerance
[AD-A269148] p 1521 N94-18259

Systolic array IC for genetic computation
p 1400 N94-18361

High-performance multiprocessor architecture for a 3-D lattice gas model p 1400 N94-18362

A fast adaptive convex hull algorithm on two-dimensional processor arrays with a reconfigurable BUS system
p 1402 N94-18380

Distributed reasoning and planning
[AD-A268682] p 1540 N94-18399

Distributed Computing Design System (DCDS)
[AD-A270435] p 1534 N94-18509

A general theory of signal integration for fault-tolerant dynamic distributed sensor networks
[AD-A270316] p 1534 N94-18699

Task A: Yale Accelerator Users Group (YAUG)
[DE93-018417] p 1570 N94-19029

Coordination of software-development activities among sites that are geographically separated
[DE93-019201] p 1524 N94-19076

ACOS: A performance based approach to build a parallel complex object server
[MEMO-INF-93-11] p 1537 N94-19198

A visualization environment for supercomputing-based applications in computational mechanics
[DE93-015024] p 1537 N94-19249

Contribution to applications systems design MOSAIC method in the Aristote project
[ETN-93-95022] p 1529 N94-19370

Secure open systems: An investigation of current standardisation efforts for security in open systems
[FEL-92-B225] p 1618 N94-19450

Models and building blocks for secure open systems
[FEL-92-B365] p 1619 N94-19457

Problem of control in an integral vision system: Use of a multi-agent system
[ETN-93-95007] p 1530 N94-19488

Silicon compilation: From the circuit to the system
[ETN-93-95010] p 1406 N94-19501

Computer security. Evolutions 1987 to 1992: Trends and perspectives
[RR-905-I] p 1532 N94-19713

COMPUTER SYSTEMS PERFORMANCE

Strategies for testing form assessment software
[NPL-DITC-211/92] p 1518 N94-17930

Embedded Computer Performance Measurement (ECPM). Advanced avionics subsystems and technology multiprocessor ECPM software documentation
[AD-A269921] p 1320 N94-18658

Downsizing a database platform for increased performance and decreased costs
[DE93-018687] p 1618 N94-19099

On asynchronous testing
[MEMO-INF-93-03] p 1543 N94-19226

A unified performability evaluation framework for computer and communication systems
[MEMO-INF-93-21] p 1537 N94-19264

Robot navigation in unknown terrains: Introductory survey of non-heuristic algorithms
[DE93-019221] p 1316 N94-19300

Protocol service decomposition for high-performance networking
[AD-A270613] p 1538 N94-19533

COMPUTER SYSTEMS PROGRAMS

RESQme studies for SDC regional computing centers
[DE93-015230] p 1514 N94-17799

TANGO: A notation for describing advanced transaction models
[REPT-93-014] p 1613 N94-17936

Dialog-Based Learning (DBL) for adaptive interface agents and programming-by-demonstrations systems
[AD-A269154] p 1540 N94-18261

Intelligent help facilities: Generating natural language descriptions with examples
[AD-A269555] p 1521 N94-18290

Development of parallel architectures for sensor array processing, volume 1
[AD-A270426] p 1534 N94-18507

Downsizing a database platform for increased performance and decreased costs
[DE93-018687] p 1618 N94-19099

EXANA: A program for analysing extended energy loss fine structures, EXELFS spectra
[USIP-92-01] p 1525 N94-19145

How to apply the IEEE standards to software testing
[DE93-018514] p 1527 N94-19245

Conception and analysis of numerical parallel algorithms: Realization on the Connection Machine
[ETN-93-95005] p 1531 N94-19517

The universal BitBus node
[DIGEL-1993-1] p 1515 N94-19799

COMPUTER SYSTEMS SIMULATION

Simulation models of UCN, FDDI-2 and DQDB
[MEMO-INF-93-10] p 1536 N94-19197

ACOS: A performance based approach to build a parallel complex object server
[MEMO-INF-93-11] p 1537 N94-19198

Goal-driven LOTOS execution
[MEMO-INF-93-04] p 1527 N94-19227

COMPUTER TECHNIQUES
Analysis, representation and processing of the instrumental gesture: Application to keyboard instruments
[ETN-93-94402] p 1519 N94-17977
A case study in software maintenance
[AD-A269923] p 1521 N94-18659
Computer-Aided Prototyping System (CAPS) within the software acquisition process. A case study
[AD-A268705] p 1522 N94-18786
NASA Electronic Library System (NELS) optimization
[NASA-CR-193688] p 1617 N94-18839
Knowledge sources for an intelligent MCM analyzer
[AD-A269224] p 1542 N94-18887
Networked MS windows 3.1 based classified document control system (CDOCS)
[DE93-017880] p 1617 N94-18984
Multimodal image correlation applied to computer aided pedicular screwing
[ETN-93-95018] p 1528 N94-19363
A research program in empirical computer science
[NASA-CR-194069] p 1530 N94-19429
Improved HF data network simulator, software user's manual, volume 2
[AD-A270954] p 1393 N94-19753
Applications of neural networks in fault detection of rotating machinery
[AD-A270755] p 1448 N94-19766
COMPUTER VIRUSES
Automated assistance for detecting malicious code
[DE93-018106] p 1523 N94-18943
COMPUTER VISION
An object-oriented environment for computer vision and pattern recognition
[DE93-017098] p 1517 N94-17867
Problem of control in an integral vision system: Use of a multi-agent system
[ETN-93-95007] p 1530 N94-19488
COMPUTERIZED SIMULATION
Modeling and new equipment definition for the vibration isolation box equipment system
[NASA-CR-193185] p 1379 N94-17763
Carbon Dioxide Information Analysis Center: FY 1992 activities
[DE93-013845] p 1471 N94-17774
Three-dimensional simulation analysis of the first sections of a standing-wave free-electron laser two-beam accelerator
[DE93-016977] p 1436 N94-17869
An emulator for testing HVAC-control and energy management systems
[VTT-TIED-1337] p 1444 N94-17974
Analysis, representation and processing of the instrumental gesture: Application to keyboard instruments
[ETN-93-94402] p 1519 N94-17977
Simulation of a quartz-clockwork
p 1426 N94-18019
Simulation of quartz resonators p 1426 N94-18021
A study of the automatic generating system. 3: Improvement of the total system performance
p 1429 N94-18040
APLAC: An object-oriented analog circuit simulator and design tool. 6.1 reference manual
[PB93-187193] p 1396 N94-18091
On the construction of a regional atmospheric climate model
[KNMI-TR-147] p 1489 N94-18143
Computer simulation of macromolecular crystals and their defects
[DE93-015213] p 1596 N94-18192
Mechanical modeling of the growth of salt structures
[DE93-015342] p 1596 N94-18243
Fluid-structure-interaction analyses of reactor vessel using improved hybrid Legrangian Eulerian code ALICE-II
[DE93-015536] p 1409 N94-18248
Study of multi-phase flow characteristics in an MHD power train
[DE93-018570] p 1586 N94-18272
Hydrodynamic instability modeling for ICF
[DE93-018634] p 1587 N94-18274
Analysis of superconducting magnetic energy storage applications at a proposed wind farm site near Browning, Montana
[DE93-018793] p 1466 N94-18276
Teaching a computer simulation course with Ada
[AD-A267901] p 1521 N94-18308
Applications of the program UIFLOW-2D to the numerical simulation of axisymmetric flows
[AD-A268731] p 1410 N94-18326
Fuzzy control of magnetic bearings
p 1399 N94-18357
VHDL simulation with access to transistor models
p 1402 N94-18381
System dynamics and computer modeling expertise. A conceptual structure research inquiry
[AD-A269860] p 1560 N94-18410
Numerical simulation of turbulent convective flow over wavy terrain p 1416 N94-18596
Portable parallel ray tracing algorithms
[AD-A268984] p 1522 N94-18698
Directory of Energy Information Administration Models 1993
[DE93-016987] p 1616 N94-18707
Army Cockpit Delethalization Program (CDP)
[AD-A268990] p 1512 N94-18765
Corporate Information Management (CIM) report on the simulation processes, version 2.0
[AD-A269119] p 1617 N94-18770
Active control of a multivariable system by way of polynomial neural networks: Computer simulation evaluations and laboratory experimental results
[AD-A270033] p 1541 N94-18790
Three-dimensional shock wave physics simulations with MIMD PAGOSA on massively parallel computers
[DE93-011682] p 1455 N94-18829
CDIAC catalog of numeric data and computer model packages
[DE93-017675] p 1475 N94-18832
Toward a characterization of the debris cloud created in a hypervelocity impact on a thin plate
[AD-A269190] p 1455 N94-18864
HEMP 3D: A finite difference program for calculating elastic-plastic flow, appendix B
[AD-A269171] p 1418 N94-18878
Visualization for applications in shock physics
[DE93-012849] p 1418 N94-18918
The intelligent processing of materials
[AD-A269250] p 1362 N94-18923
The world's most powerful computer
[NASA-TM-109369] p 1514 N94-18961
Overview of WARP: A particle code for heavy ion fusion
[DE93-018637] p 1588 N94-19034
Kinetics programs for simulation of tropospheric photochemistry on the global scale
[DE93-019035] p 1476 N94-19104
Simulation of the ALS longitudinal multibunch feedback system
[DE93-019227] p 1575 N94-19152
A parallel hashed oct-tree N-body algorithm
[DE93-012654] p 1526 N94-19205
Smooth particle hydrodynamics: The SPHINX and SPHC codes
[DE93-014358] p 1457 N94-19207
A visualization environment for supercomputing-based applications in computational mechanics
[DE93-015024] p 1537 N94-19249
Molecular dynamics modeling of the mechanical behavior of metallic multilayers
[DE93-017972] p 1365 N94-19263
Volume rendering of 3D scalar and vector fields at Lawrence Livermore National Laboratory
[DE93-018000] p 1528 N94-19276
Sensitivity and uncertainty analysis of Markov reward models
[MEMO-INF-92-89] p 1559 N94-19386
Simulation of the impact of a plastic flyer on an aluminum block using the hydrocode AUTODYNE
[PML-1992-26] p 1458 N94-19444
Computational Methods for Crashworthiness
[NASA-CP-3223] p 1458 N94-19465
Development and use of computational techniques in Army Aviation research and development programs for crash resistant helicopter technology
p 1459 N94-19469
Explicit solution techniques for impact with contact constraints p 1459 N94-19470
Numerical simulation of vehicle crashworthiness and occupant protection p 1459 N94-19471
Efficiency and biofidelity of occupant simulations
p 1459 N94-19473
Current capabilities for simulating the extreme distortion of thin structures subjected to severe impacts
p 1459 N94-19474
Crashdynamics with DYNA3D: Capabilities and research directions p 1460 N94-19475
The influence of the target strength model on computed perforation
[DE93-018659] p 1460 N94-19543
Locally adaptive remeshing scheme for calculating fluid instabilities
[DE93-019577] p 1422 N94-19568
Automated qualitative modeling of dynamic physical systems
[AD-A270835] p 1422 N94-19598
START user manual version 2.1
[LR-726] p 1335 N94-19614
European network for the numerical simulation of space plasmas p 1331 N94-19641
Simulation of the behavior of micro-electronic capacitive pressure sensors
[LAAS-93190] p 1434 N94-19659
Systems engineering for Air Force C3I systems
[AD-A270482] p 1391 N94-19676
Improved HF data network simulator, volume 1
[AD-A270953] p 1393 N94-19752
Amorphous silicon batch process cost analysis
[DE93-018203] p 1470 N94-19760
The effects of initial conditions on the 3-D topology of temporally evolving wakes (ARI on 3-D bluff body wakes)
[AD-A271008] p 1423 N94-19774
NPAC distributed-parallel system feasibility study
[AD-A270972] p 1539 N94-19790
COMPUTERS
RESQme studies for SDC regional computing centers
[DE93-015230] p 1514 N94-17799
Technical development of a theory of programs
[ETN-93-95058] p 1532 N94-19652
CONCENTRATION (COMPOSITION)
Practical reporting times for environmental samples
[DE93-013461] p 1472 N94-17910
Scaling laws for diamond chemical vapor deposition. 2: Atomic hydrogen transport
[AD-A269842] p 1371 N94-18740
CONCENTRATORS
Simplified processing for 23 percent-efficient silicon concentrator solar cells
[DE93-015018] p 1464 N94-17787
Photovoltaic concentrator initiative: Concentrator cell development
[DE93-018505] p 1466 N94-18335
High-efficiency silicon concentrator cell commercialization
[DE93-018491] p 1467 N94-18409
Silicon concentrator solar cell research
[DE93-018489] p 1468 N94-19015
The CAESAR project: Experimental and modeling investigations of methane reforming in a catalytically enhanced solar absorption receiver on a parabolic dish
[DE93-040203] p 1469 N94-19109
CONCRETES
Computational mechanics of composite materials
[PB93-195782] p 1343 N94-19281
Microstructure of the interfacial zone around aggregate particles in concrete
[PB93-195790] p 1380 N94-19322
Development of engineering models for calculation of failure loads and defect states of steel concrete beams and plates
[ETN-93-95052] p 1460 N94-19648
CONCURRENT PROCESSING
SPROC: A multiple-processor DSP IC
p 1398 N94-18347
The evolution of the PVM concurrent computing system
[DE93-017764] p 1534 N94-18482
PUMMA: Parallel Universal Matrix Multiplication Algorithms on distributed memory concurrent computers
[DE93-019163] p 1538 N94-19299
CONDENSATES
Molecular nonlinear optical susceptibilities in condensed phases
[AD-A270200] p 1568 N94-18784
CONDENSATION
Finite element modeling of evaporation and condensation during sol-gel film and fiber formation
[DE93-017655] p 1345 N94-17820
CONDENSATION NUCLEI
Cloud CCN feedback
[DE93-016878] p 1472 N94-17985
Ship-produced cloud line of 13 July 1991
[DE93-016879] p 1472 N94-17986
Analysis of meteorological conditions during AGASP-4: 30 March - 23 April 1992
[PB93-190205] p 1489 N94-18126
CONDENSED MATTER PHYSICS
International Centre for Theoretical Physics, Trieste Scientific activities in 1991
[DE93-624757] p 1606 N94-17792
Gamma scattering in condensed matter with high intensity Moessbauer radiation
[DE93-019461] p 1601 N94-19031
CONDENSING
Condensed gases under winter conditions: A study for the rescue services
[FOA-C-40305-4.5] p 1473 N94-18139
Molecular nonlinear optical susceptibilities in condensed phases
[AD-A270200] p 1568 N94-18784
CONDUCTING POLYMERS
Studies of interactions between conducting polymer and organic vapors: Applications to chemical sensing
[DE93-015694] p 1369 N94-18233

Physical chemical studies of conducting polymers fundamental and applied
[AD-A270728] p 1374 N94-19574

CONDUCTION BANDS
Transient skin effect in a massive cylinder by eccentric location of exciting conduction bands
[ETN-93-95048] p 1391 N94-19646

CONDUCTIVE HEAT TRANSFER
Analysis of pultrusion processing for long fiber reinforced thermoplastic composite system
[NASA-CR-194504] p 1339 N94-17766
Transport in the self-organized relaxed state of ion temperature gradient instability
[DE93-016769] p 1584 N94-17983
Fin-efficiency calculation for condensation in the presence of noncondensable gases
[DE93-017684] p 1409 N94-18004
Time-resolved probing of electron thermal conduction in femtosecond-laser-pulse-produced plasmas
[DE93-016996] p 1585 N94-18129
Total hemispherical emittance of Niobium-1 percent zirconium fuel cladding for the SP-100 space reactor
[AD-A270456] p 1576 N94-19589

CONDUCTORS
Heat load analysis on the cable-in-conduit with central core conductor for the TF coil Rebut layer design
[DE93-013783] p 1395 N94-17872
Performance evaluations of demountable electrical connections
[DE93-017399] p 1396 N94-18135
The asymptotic theory of the reflection and transmission of a pulsed electromagnetic beam field at a planar interface separating two dispersive media
[AD-A269033] p 1385 N94-18404
Current-potential characteristics of electrochemical systems
[DE93-040303] p 1352 N94-19192

CONFERENCES
Geography and meteorological studies in the Far East
[DE93-013563] p 1461 N94-17893
The 7th International Cryocooler Conference
[AD-A268451] p 1379 N94-18147
Bibliography of scientific publications of the Naval Biodynamics Laboratory, 1980 - 1992
[AD-A268886] p 1505 N94-18226
Arctic ice studies
[AD-A268608] p 1497 N94-18277
Several fundamental issues in the mechanics of inelastic behavior
[AD-A269455] p 1453 N94-18285
S/EV 1992: Solar and Electric Vehicles. Volume 1: Proceedings
[DE93-015762] p 1445 N94-18307
The 1991 3rd NASA Symposium on VLSI Design
[NASA-CR-194589] p 1397 N94-18337
High-Lift System Aerodynamics
[AGARD-CP-515] p 1305 N94-18415
Report to Congress: Comprehensive Program Plan for Advanced Turbine Systems
[DE93-016718] p 1467 N94-18475
Workshop on Innovation in Materials Processing and Manufacture: Exploratory Concepts for Energy Applications
[DE93-017674] p 1467 N94-18478
Quantum Optoelectronics. Organization of the 1993 photonics science topical meetings. Technical digest series, volume 8
[AD-A269026] p 1578 N94-18488
The LET spectrum and its uncertainty during the CRRES mission
[AD-A269977] p 1630 N94-18676
Royal Society of Chemistry, Heterocyclic Chemistry Group, Lakeland Heterocyclic Symposium
[AD-A270374] p 1338 N94-18703
Proceedings of the 11th Space Surveillance Workshop
[AD-A269477] p 1462 N94-18729
Numerical and symbolic signal representation and processing
[AD-A270271] p 1389 N94-18811
The 1993 Shuttle Small Payloads Symposium
[NASA-CP-3233] p 1323 N94-19162
Updated contributions to the Twente Workshop of Hamiltonian Graph Theory
[PB93-195568] p 1553 N94-19605

CONFIGURATION INTERACTION
Configuration interaction in LTE spectra of heavy elements
[DE93-017166] p 1584 N94-17990
Relativistic configuration interaction calculation of the correlation energies of heliumlike ions
[DE93-018093] p 1571 N94-19201

CONFIGURATION MANAGEMENT
CAVEMAN: Configuration and version management
[DE93-018066] p 1524 N94-19048

CONFINEMENT
ITER EDA design confinement capability
[DE93-013729] p 1582 N94-17697
Analysis of the ITER H-mode confinement database
[DE93-016984] p 1585 N94-18056
Coupled MHD and transport analysis of improved confinement D3-D discharges
[DE93-016985] p 1585 N94-18057
Heavy Ion Fusion Injector Program
[DE93-018706] p 1575 N94-18997
Behavior of the particle transport coefficients near the density limit in MTX
[DE93-019108] p 1591 N94-19311
Theoretical studies of turbulence and anomalous transport in toroidal confinement devices
[DE93-040684] p 1592 N94-19656

CONFORMAL MAPPING
(1,1)-geodesic maps into Grassmann manifolds
[DE93-624799] p 1545 N94-17684
Groups on transformations in Finslerian spaces
[DE93-624765] p 1606 N94-17794
A zeta function approach to the semiclassical quantization of maps
[DE93-624774] p 1547 N94-17949
Steepest descent method for set-valued locally accretive mappings
[DE93-628592] p 1548 N94-18106
Unbounded components in parameter space of rational maps
[DE93-628621] p 1548 N94-18170
Finite beta plasma equilibrium in toroidally linked mirrors
[DE93-040318] p 1590 N94-19193

CONGESTION
Congestion/flow control and routing in data networks: A control-theoretic approach
[AD-A271121] p 1392 N94-19737

CONGRESSIONAL REPORTS
Report to Congress: Comprehensive Program Plan for Advanced Turbine Systems
[DE93-016718] p 1467 N94-18475
The 1994 NASA authorization, volume 2
[GPO-71-510] p 1620 N94-18842

CONICAL FLOW
Research and training activities of the Joint Institute for Aeronautics and Acoustics
[NASA-CR-194742] p 1421 N94-19493

CONJUGATE GRADIENT METHOD
Conception and analysis of numerical parallel algorithms: Realization on the Connection Machine
[ETN-93-95005] p 1531 N94-19517

CONNECTION MACHINE
Connection machine software conversion of a Navy oceans model
[AD-A269876] p 1535 N94-18772
Simulation of dynamic material response with the PAGOSA code
[DE93-018285] p 1460 N94-19603

CONSECUTIVE EVENTS
A forthcoming key press can be selected while earlier ones are executed
[IZF-1993-B-2] p 1509 N94-19422

CONSERVATION
Cost effective energy strategies for the reduction of CO2 emissions in the United States: Country report for ETSAP Annex 4
[DE93-016842] p 1472 N94-17852

CONSERVATION EQUATIONS
A preliminary model for crack-tip hydrogen transport
[NPL-DMM(A)-84] p 1451 N94-17899
A new approach to the study of the turbulence layer
[NASA-CR-194546] p 1487 N94-19397
Modeling of current features in Gulf Stream SAR imagery
[AD-A270734] p 1499 N94-19609

CONSERVATION LAWS
Numerical methods for one-dimensional hyperbolic conservation laws
[PB93-194801] p 1547 N94-18078
Introduction to spectral methods for hyperbolic system of conservation laws p 1413 N94-18567
A massively parallel adaptive finite element method with dynamic load balancing
[DE93-012844] p 1536 N94-19161

CONSISTENCY
Generalized regression trees: Function estimation via recursive partitioning and maximum likelihood
[AD-A271259] p 1560 N94-19726

CONSTITUTIVE EQUATIONS
Implementation of a nonisothermal unified inelastic-strain theory into ADINA6.0 for a titanium alloy: User guide
[AD-A269927] p 1360 N94-18660
A particle method for history-dependent materials
[DE93-018696] p 1456 N94-19080

CONSTRUCTION
Design considerations for remotely operated welding in space: Task definition and visual weld monitoring experiment
[AD-A268752] p 1445 N94-18634

CONSTRUCTION MATERIALS
Development of engineering models for calculation of failure loads and defect states of steel concrete beams and plates
[ETN-93-95052] p 1460 N94-19648

CONTACT DERMATITIS
Evaluation of the nickel release by horological products p 1367 N94-18009

CONTACT LENSES
US Army aviation epidemiology data register: Prevalence of refractive error among US aircrew members
[AD-A269550] p 1505 N94-18289

CONTACT LOADS
A methodology to model physical contact between structural components in NASTRAN
p 1450 N94-17836
A general-purpose contact detection algorithm for nonlinear structural analysis codes
[DE93-018507] p 1455 N94-19039
Surface species in tribology
[AD-A270970] p 1446 N94-19754

CONTACT RESISTANCE
Analysis of high contact resistances associated with hermetic and lightning arrestor connectors
[DE93-014850] p 1395 N94-17783

CONTACTORS
Plasma contactor development for Space Station
[NASA-TM-106425] p 1587 N94-18861

CONTAMINANTS
Title 1 implementation: Status report on nonattainment areas
[DE93-017677] p 1471 N94-17777
Improving the biodegradative capacity of subsurface bacteria
[DE93-013171] p 1501 N94-18051
The urban perspectives of acid rain
[DE93-018881] p 1474 N94-18523
International Symposium on the Ecological Effects of Arctic Airborne Contaminants — abstracts
[AD-A269955] p 1475 N94-18775
Indoor environment program
[DE93-018601] p 1513 N94-18935
Environmental Research Program
[DE93-019101] p 1477 N94-19105
Penetrometer compatible, fiber-optic sensor for continuous monitoring of chlorinated hydrocarbons: Field test results
[DE93-017974] p 1352 N94-19266
The Mexico City 1991 lidar measurements campaign
[DE93-019960] p 1478 N94-19272
Fiber optic Raman spectrograph for in situ environmental monitoring
[DE93-019466] p 1478 N94-19305

CONTAMINATION
A Bayesian approach to contaminant plume delineation
[DE93-012909] p 1472 N94-17890

CONTEXT FREE LANGUAGES
An annotated bibliography on parallel parsing: Updated version
[MEMO-INF-92-84] p 1537 N94-19223

CONTINENTAL SHELVES
ADCIRC: An advanced three-dimensional circulation model for shelves, coasts, and estuaries. Report 3: Development of a tidal constituent database for the western North Atlantic and Gulf of Mexico
[AD-A268685] p 1497 N94-18455
Three-dimensional high-resolution seismic profiling on the New Jersey outer continental shelf
[AD-A269835] p 1498 N94-18600
A laboratory model of a cooled continental shelf
[AD-A270862] p 1500 N94-19792

CONTINUOUS RADIATION
Forward scattering of a pulsed continuous wave signal through laminar and turbulent thermal plumes
[AD-A271210] p 1564 N94-19723

CONTINUOUS WAVE LASERS
Data fusion through simulated annealing of registered range and reflectance images
[DE93-015910] p 1612 N94-17858
Final construction and operation of a continuous far-infrared free-electron laser for scientific applications
[AD-A269248] p 1440 N94-18912
Novel nonlinear laser diagnostic techniques
[AD-A270968] p 1442 N94-19788

CONTINUOUS WAVE RADAR
Investigations of a coherent vector radar technique for the observation of the atmosphere near 10 GHz
[KFK-5068] p 1494 N94-19616

CONTINUUM MECHANICS

Ground movements associated with gas hydrate production [DE93-019887] p 1486 N94-19018

Application of differential sensitivity theory to continuum mechanics [DE93-012732] p 1609 N94-19187

CONTINUUM MODELING

Continuum modeling of materials that can undergo martensitic phase transitions [AD-A268767] p 1360 N94-18386

Modeling of the formation of microporosity in alloys [DE93-017733] p 1364 N94-19044

Crossover from BCS to Bose superconductivity: A functional integral approach [DE93-019503] p 1604 N94-19566

CONTINUUMS

Low-energy continuum-electron emission at 0 degrees from O(q+) + He collisions [DE93-018777] p 1570 N94-19108

CONTOURS

A laboratory model of a cooled continental shelf [AD-A270862] p 1500 N94-19792

CONTRACT MANAGEMENT

The machine reception: A business of experts [CRIF-MC-94] p 1611 N94-17980

CONTRACT NEGOTIATION

The machine reception: A business of experts [CRIF-MC-94] p 1611 N94-17980

CONTRAILS

New techniques for contrail forecasting [AD-A269686] p 1490 N94-18573

CONTROL EQUIPMENT

An emulator for testing HVAC-control and energy management systems [VTT-TIED-1337] p 1444 N94-17974

Universal measurement device for electronic watches and small clocks p 1427 N94-18029

Nonparaxial MHD stabilizers for an axisymmetric magnetic mirror [DE93-017996] p 1587 N94-18505

CONTROL SIMULATION

A one dimensional numerical model, with an application to the vertical distribution of dissolved oxygen in the ocean [DE93-018481] p 1495 N94-17779

CONTROL STABILITY

An application of parameter estimation to the stability and control of the BQM-147 unmanned aerial vehicle [AD-A268741] p 1321 N94-18401

The intelligent processing of materials [AD-A269250] p 1362 N94-18923

Robustness and efficiency of generalized predictive control algorithms with guaranteed stability [MATHS-REPT-A-190] p 1530 N94-19412

Stabilization of time-delay systems: An overview of the algebraic approach [PB93-191989] p 1553 N94-19556

CONTROL SURFACES

A wind tunnel model control surface actuator interface [AD-A268729] p 1322 N94-18324

CONTROL SYSTEMS DESIGN

Introduction to Quantitative Feedback Theory (QFT) technique p 1545 N94-18241

Parallel optimization algorithms and their implementation in VLSI design p 1401 N94-18374

Lunar base Controlled Ecological Life Support System (LCELSS): Preliminary conceptual design study [NASA-CR-188479] p 1511 N94-18484

Denver TMA assessment [NASA-CR-4554] p 1315 N94-18844

Control of nonlinear systems [AD-A270141] p 1542 N94-18898

Motorola MC68040 high-speed design using Altera EPM5000 erasable programmable logic devices [DE93-017635] p 1523 N94-19006

Optimizing wind turbine control system parameters [DE93-018861] p 1469 N94-19036

MART: An overview of the Mobile Autonomous Robot Twente project [MEMO-INF-93-12] p 1543 N94-19199

An innovative neural manufacturing concept [DE93-017212] p 1527 N94-19238

Analysis and design of robust decentralized controllers for nonlinear systems [DE93-019224] p 1543 N94-19302

Problem of control in an integral vision system: Use of a multi-agent system [ETN-93-95007] p 1530 N94-19488

Silicon compilation: From the circuit to the system [ETN-93-95010] p 1406 N94-19501

Use of shape memory alloys in the robust control of smart structures [AD-A270827] p 1366 N94-19594

CONTROL THEORY

On comparison and extensions of control methods for narrow-band disturbance rejection [REPT-93-015] p 1540 N94-17922

Generalization of optimal control theory: Linear and nonlinear structures [PB93-188621] p 1540 N94-18125

Stability analysis through bifurcation theory, 2 p 1608 N94-18239

Introduction to Quantitative Feedback Theory (QFT) technique p 1545 N94-18241

Parallel optimization algorithms and their implementation in VLSI design p 1401 N94-18374

The optimal projection equations for finite-dimensional fixed-order H2-optimal control of infinite-dimensional discrete-time systems [REPT-93-11] p 1542 N94-19085

Deadbeat control by measurement feedback: A two sided approach [REPT-93-20] p 1542 N94-19091

The digital linear quadratic control problem for Pritchard-Salamon systems [REPT-93-27] p 1542 N94-19142

Digital control of Pritchard-Salamon systems [REPT-93-33] p 1543 N94-19286

Discrete-time infinity control problem with measurement feedback [PB93-197523] p 1543 N94-19329

Learning control of large-scale systems [MATHS-REPT-A-186] p 1544 N94-19408

Notes on multi-step ahead prediction based on the principle of concatenation [MATHS-REPT-A-189] p 1544 N94-19410

Problem of control in an integral vision system: Use of a multi-agent system [ETN-93-95007] p 1530 N94-19488

Methods for description and control of dynamical systems and their application [MPIS-17/1992] p 1553 N94-19522

Stabilization of time-delay systems: An overview of the algebraic approach [PB93-191989] p 1553 N94-19556

Mathematical communications, volume 27, numbers 1 and 2, 1992. List and abstracts of memoranda published in the period July - December 1991 [PB93-191997] p 1553 N94-19557

CONTROLLABILITY

An investigation of fighter aircraft agility [NASA-CR-194608] p 1318 N94-19448

CONTROLLERS

Automatic tuning of an integral fuzzy controller [REPT-93-006] p 1383 N94-17932

Autonomous neural network controllers for adaptive material handling [AD-A268908] p 1540 N94-18331

Experience with custom processors in space flight applications p 1336 N94-18338

Simplified microprocessor design for VLSI control applications p 1400 N94-18359

Active control of a multivariable system by way of polynomial neural networks: Computer simulation evaluations and laboratory experimental results [AD-A270033] p 1541 N94-18790

Cooperative control of multiple space manipulators [AD-A270291] p 1445 N94-18813

An innovative neural manufacturing concept [DE93-017212] p 1527 N94-19238

Discrete-time infinity control problem with measurement feedback [PB93-197523] p 1543 N94-19329

Congestion/flow control and routing in data networks: A control-theoretic approach [AD-A271121] p 1392 N94-19737

The universal BitBus node [DIGEL-1993-1] p 1515 N94-19799

CONVECTION

Convection algorithms for magnetospheric particles [AD-A270103] p 1493 N94-18871

Modeling of the formation of microporosity in alloys [DE93-017733] p 1364 N94-19044

Numerical solutions for a flow with mixed convection in a vertical geometry [DE93-011592] p 1419 N94-19058

Proceedings: International Symposium on Thermal Engineering and Science for Cold Regions [AD-A270636] p 1487 N94-19529

CONVECTION CELLS

Physical retrieval of precipitation water contents from Special Sensor Microwave/Imager (SSM/I) data. Part 1: A cloud ensemble/radiative parameterization for sensor response (report version) p 1491 N94-18604

A laboratory model of a cooled continental shelf [AD-A270862] p 1500 N94-19792

CONVECTION-DIFFUSION EQUATION

Asymptotic derivation of the modified time-dependent SP2 equations and numerical calculations [DE93-016466] p 1551 N94-19342

CONVECTIVE FLOW

Numerical simulation of turbulent convective flow over wavy terrain p 1416 N94-18596

CONVECTIVE HEAT TRANSFER

Electrically controlled liquid-crystal heat valve [AD-D015872] p 1443 N94-17705

Turbulence modeling in aircraft icing p 1412 N94-18555

Heat transfer quantitative characterization: Passive and active methods p 1431 N94-18650

Geothermal activity near Clearlake, California [DE93-016627] p 1485 N94-18894

CONVERGENCE

Steepest descent method for set-valued locally accretive mappings [DE93-628592] p 1548 N94-18106

Variational approaches to CFD: Applications to potential Euler and Navier-Stokes equations p 1413 N94-18565

Introduction to spectral methods: Application to the Stokes problem p 1413 N94-18566

On the convergence of an unfeasible primal-dual interior-point method for convex programming [REPT-93-34] p 1525 N94-19154

The Fourier analysis technique and epsilon-pseudo-eigenvalues [DE93-018805] p 1551 N94-19337

Refining a triangulation of a planar straight-line graph to eliminate large angles [DE93-016510] p 1528 N94-19344

CONVERGENT-DIVERGENT NOZZLES

Supersonic jets from bevelled rectangular nozzles [NASA-TM-106403] p 1313 N94-19484

CONVEXITY

On the convergence of an unfeasible primal-dual interior-point method for convex programming [REPT-93-34] p 1525 N94-19154

Are bilinear quadrilaterals better than linear triangles? [DE93-019223] p 1551 N94-19301

COOLING

Screening analysis for chlorine-free alternative refrigerants to replace R-22 in air conditioning applications [DE93-015920] p 1367 N94-17847

Materials processing and manufacturing technologies for diamond substrates multichip modules [AD-A268989] p 1599 N94-18764

Advances in laser cooling [AD-A270152] p 1440 N94-18900

COOLING FINS

Heat load analysis on the cable-in-conduit with central core conductor for the TF coil Rebut layer design [DE93-013783] p 1395 N94-17872

COOLING SYSTEMS

Preliminary design of a water cooled avionics cooling rack [AD-A268826] p 1320 N94-18536

Advances in laser cooling [AD-A270152] p 1440 N94-18900

MHD integrated topping cycle project [DE93-040520] p 1588 N94-18978

MODIL cryocooler producibility demonstration project results [DE93-017981] p 1335 N94-19275

COORDINATE TRANSFORMATIONS

GENSHELL: A genesis database 2D to 3D shell transformation program [DE93-018694] p 1525 N94-19102

COORDINATION

Cognitive limitations in coordination in hierarchical information processing structures [AD-A268825] p 1616 N94-18535

The Cluster Joint Science Operations Centre p 1331 N94-19639

Co-ordination of ground-based observations with Cluster p 1331 N94-19640

COPOLYMERIZATION

Polymer films with enhanced dielectric properties [AD-A271148] p 1375 N94-19740

COPOLYMERS

Molecular and polymeric ceramic precursors [DE93-040364] p 1372 N94-18891

Structure and properties of polycarbonate alloys [ETN-93-95071] p 1375 N94-19611

COPPER

The copper-pumped dye laser system at Lawrence Livermore National Laboratory [DE93-014429] p 1435 N94-17723

Measurement and analysis of three 1.5-GPa shock-wave profiles in copper [DE93-016559] p 1451 N94-17864

X ray absorption spectroscopic studies of the active sites of nickel- and copper-containing metalloproteins
[DE93-017142] p 1347 N94-18059
Characterization of the Facility for Atmospheric Corrosion Testing (FACT) at Sandia
[DE93-018510] p 1474 N94-18521
Potential dependent structural changes of underpotentially deposited copper on an iodine treated platinum surface determined in situ by surface EXAFS and its polarization dependence
[AD-A269890] p 1360 N94-18687
Electron impact excitation of copper atoms
[DE93-017995] p 1363 N94-18939
Effects of irradiation temperature on Charpy and tensile properties of high-copper, low upper-shelf, submerged-arc welds
[DE93-017858] p 1445 N94-19047
Binding of copper to nanocavity surfaces in silicon
[DE93-019073] p 1364 N94-19080
Molecular dynamics modeling of the mechanical behavior of metallic multilayers
[DE93-017972] p 1365 N94-19263
Reducing inadvertent alloying of metal/ceramic brazes
[DE93-009842] p 1373 N94-19308

COPPER ALLOYS
Magnetic properties of single-crystalline UCu3Al2
[DE93-016607] p 1593 N94-17744
Atlas of formability: NICKELVAC K-500
[AD-A268351] p 1356 N94-17772
The low-temperature specific heat of CeCu2Ge2 at 0 and 9.5 kbar
[DE93-014914] p 1360 N94-18398

COPPER OXIDES
Phase separation and superconductivity in La2CuO(4 + delta): Effects of oxygen diffusion
[DE93-016610] p 1594 N94-17907
Fabrication and microstructural development of Ag-clad TlBa2Ca2Cu3O(x) tapes
[DE93-017407] p 1597 N94-18500
Specific heat of La(1.875-x)Nd(x)Sr(0.125)CuO4: Magnetic and structural transitions
[DE93-016978] p 1600 N94-18968

CORE STORAGE
Superconducting/semiconducting hybrids and advance memory concepts for superconducting electronics
[AD-A268679] p 1397 N94-18312

CORNER FLOW
An investigation of low Marangoni number fluid flow in a cold corner
[AD-A271317] p 1422 N94-19569

CORRELATION
Using computerized tomography to determine ionospheric structures
[DE93-018903] p 1485 N94-19001

CORRELATION COEFFICIENTS
Synchronisation of cold induced vasodilation at various locations of one hand
[IZF-1992-B3] p 1504 N94-17966
Polarimetric statistics of electromagnetic waves scattered by distributed targets
[PB93-195907] p 1389 N94-18951

CORRELATORS
Formal specification of a high speed CMOS correlator
p 1401 N94-18371

CORROSION
The effect of surface treatment and gaseous rust protection paper on the atmospheric corrosion stability of aluminium alloy
[DE93-623326] p 1355 N94-17679
Alloy development of FeAl aluminide alloys for structural use in corrosive environments
[DE93-015100] p 1355 N94-17757
Analysis of high contact resistances associated with hermetic and lightning arrestor connectors
[DE93-014850] p 1395 N94-17783
Environmental effects on intermetallic compounds: A guide to the literature
[AD-A269587] p 1359 N94-18306
Characterization of the Facility for Atmospheric Corrosion Testing (FACT) at Sandia
[DE93-018510] p 1474 N94-18521
JPRS report: Science and technology. Central Eurasia: Materials science
[JPRS-UMS-93-002] p 1339 N94-18833
Testing of protective coatings in hydrogen
[DE93-040326] p 1375 N94-19651
Microstructure and texture control of fatigue in hydrogen and marine environments
[AD-A271277] p 1344 N94-19744

CORROSION RESISTANCE
The effect of surface treatment and gaseous rust protection paper on the atmospheric corrosion stability of aluminium alloy
[DE93-623326] p 1355 N94-17679
Polyurethane self-priming topcoats
[AD-D015870] p 1367 N94-17719
Alloy development of FeAl aluminide alloys for structural use in corrosive environments
[DE93-015100] p 1355 N94-17757
Characterization of the Facility for Atmospheric Corrosion Testing (FACT) at Sandia
[DE93-018510] p 1474 N94-18521
The effects of radiolysis on the corrosion and stress corrosion behavior of 316 stainless steels
[DE93-019933] p 1363 N94-19021

CORROSION TESTS
Characterization of the Facility for Atmospheric Corrosion Testing (FACT) at Sandia
[DE93-018510] p 1474 N94-18521

CORTI ORGAN
Extrathalamic modulation of cortical function
[AD-A270869] p 1507 N94-19783

COSMIC DUST
Dust in the Small Magellanic Cloud
[NASA-CR-193344] p 1624 N94-17764

COSMIC RAY SHOWERS
Energy loss measurement of cosmic ray muons
[KFK-5158] p 1631 N94-19504
Measurement of the energy of horizontal cosmic ray muons
[KFK-5163] p 1631 N94-19505
Measurements of cosmic ray muons with multi-wire proportional chambers with a prototype setup for KASCADE
[KFK-5173] p 1631 N94-19506

COSMIC RAYS
Investigation of the relative abundance of heavy versus light nuclei in primary cosmic rays using underground muon bundles
[DE93-017601] p 1630 N94-17818
Proceedings of the 3rd Workshop on Balloon-Borne Experiments with Superconducting Magnet Spectrometers
[DE93-788362] p 1630 N94-18219
Research in particle physics
[DE93-040875] p 1567 N94-18534
Widget: A data acquisition system for a balloon borne Si particle calorimeter
[DE93-624668] p 1630 N94-18762
High rate resistive plate chambers: An inexpensive, fast, large area detector of energetic charged particles for accelerator and non-accelerator applications
[DE93-018664] p 1572 N94-19545

COSMOCHEMISTRY
Investigation of the relative abundance of heavy versus light nuclei in primary cosmic rays using underground muon bundles
[DE93-017601] p 1630 N94-17818

COST ANALYSIS
The carbon dioxide emissions game: Playing the net
[DE93-017670] p 1471 N94-17821
The value of windpower: An investigation using a qualified production cost model
[DE93-010043] p 1465 N94-17888
Feasibility survey of thermoelectric conversion technology using semiconductors
[DE93-520882] p 1595 N94-18105
The J85 cost/benefit engine study
[AD-A269280] p 1320 N94-18333
Report to Congress: Comprehensive Program Plan for Advanced Turbine Systems
[DE93-016718] p 1467 N94-18475
A comparison of air force data systems
[AD-A269691] p 1616 N94-18575
Human Transportation System (HTS) study: Executive summary
[NASA-TM-104780] p 1332 N94-18669
Space transfer concepts and analyses for exploration missions
[NASA-CR-193876] p 1332 N94-18820
Amorphous silicon batch process cost analysis
[DE93-018203] p 1470 N94-19760

COST EFFECTIVENESS
Cost effective energy strategies for the reduction of CO2 emissions in the United States: Country report for ETSAP Annex 4
[DE93-016842] p 1472 N94-17852
Setting the global thermostat with an exhaustible tradeable permit system
[DE93-012911] p 1472 N94-17891
Removing CFC's from the atmosphere with lasers: A second look
[DE93-017516] p 1473 N94-18101
A comparison of air force data systems
[AD-A269691] p 1616 N94-18575
Automated rendezvous and capture demonstration study
[NASA-CR-192587] p 1331 N94-19366

COST ESTIMATES
A comparison of air force data systems
[AD-A269691] p 1616 N94-18575
Technology benefits model user manual, version 01.00.04
[AD-A270637] p 1620 N94-19777

COST REDUCTION
ARPA/CSTO rapid VLSI implementation
[AD-A269170] p 1403 N94-18695
Integrated circuits: Resistless processing simplifies production and cuts costs
[DE93-018069] p 1405 N94-18941
Software reuse: Major issues need to be resolved before benefits can be achieved. Report to the Chairman, Subcommittee on Defense, Committee on Appropriations, House of Representatives
[GAO/IMTEC-93-16] p 1532 N94-19716
Technology benefits model user manual, version 01.00.04
[AD-A270637] p 1620 N94-19777

COSTS
Cost effective energy strategies for the reduction of CO2 emissions in the United States: Country report for ETSAP Annex 4
[DE93-016842] p 1472 N94-17852
Laboratory microfusion capability study
[DE93-014373] p 1583 N94-17912
MODIL cryocooler producibility demonstration project results
[DE93-017981] p 1335 N94-19275
Amorphous silicon batch process cost analysis
[DE93-018203] p 1470 N94-19760

COUETTE FLOW
Methods for description and control of dynamical systems and their application
[MPIS-17/1992] p 1553 N94-19522

COUNTER ROTATION
Two-dimensional turbulent nonstationary superfluid counterflows: Numerical simulations, qualitative effects
[MPIS-23/1992] p 1422 N94-19510

COUNTERFLOW
Two-dimensional turbulent nonstationary superfluid counterflows: Numerical simulations, qualitative effects
[MPIS-23/1992] p 1422 N94-19510

COUNTERMEASURES
Millimeter wave reflectivity measurement system
[AD-A270008] p 1387 N94-18601

COUNTING CIRCUITS
Thermal neutron multiplicity measurements using the pyrochemical multiplicity counter at Lawrence Livermore National Laboratory
[DE93-018538] p 1571 N94-19278

COUPLERS
Metal Film Surface Plasmon Resonance (MFSPR) fibre couplers
[AD-A268871] p 1579 N94-18635

COUPLINGS
Extraction of Z(prime) coupling data from Z(prime) (yields) jj at the LHC and SSC
[DE93-018576] p 1570 N94-19096

COVARIANCE
Data fusion through simulated annealing of registered range and reflectance images
[DE93-015910] p 1612 N94-17858
Computer codes for checking, plotting and processing of neutron cross-section covariance data and their application
[DE93-018459] p 1570 N94-19129
Tandem queues with deterministic service times
[PB93-197465] p 1543 N94-19324
Uncertainty versus interindividual variability
[DE93-018105] p 1559 N94-19549
Acoustic travel time perturbations due to an internal tide and internal wave field in the Barents Sea
[AD-A270879] p 1499 N94-19580

CRACK GEOMETRY
Development of the microstructure based stochastic life prediction models
[AD-A269880] p 1454 N94-18683

CRACK INITIATION
Inelastic deformation and damage at high temperature
[DE93-018155] p 1448 N94-17814
Initiation and growth of microcracks in high strength steel butt welds
[AD-A268751] p 1454 N94-18466
Development of the microstructure based stochastic life prediction models
[AD-A270453] p 1455 N94-18714
Fatigue crack initiation in riveted lap joints and in pressurized fuselages
[LR-725] p 1461 N94-19669

CRACK OPENING DISPLACEMENT
Fatigue resistant Ti3Al composites
[AD-A270305] p 1341 N94-18692

CRACK PROPAGATION
Interpretation of warm prestress-induced fracture toughness based on crack-tip constraint
[DE93-015967] p 1451 N94-17913

Experimental contribution to the contact between two bodies and the effect of roughness [ECL-91-41] p 1451 N94-17918

Spectrum fatigue testing of T-shaped tension clips [FFA-TN-1992-22] p 1452 N94-17970

Steep geometric grating for use in moire interferometry [AD-A268759] p 1453 N94-18328

Composites: Materials of the future [AD-A268945] p 1341 N94-18450

Initiation and growth of microcracks in high strength steel butt welds [AD-A268751] p 1454 N94-18466

Development of the microstructure based stochastic life prediction models [AD-A269880] p 1454 N94-18683

Fatigue resistant Ti3Al composites [AD-A270305] p 1341 N94-18692

Experimental investigation of wave and fracture phenomena in impacted ceramics: Experiments on sapphire [AD-A270040] p 1372 N94-18792

A numerical analysis of crack growth in brittle microcracking composites [DE93-011562] p 1343 N94-18914

The interpretation of optical caustics in the presence of dynamic non-uniform crack-tip motion histories: A study based on a higher order transient crack-tip expansion [SM91-12] p 1456 N94-19130

Subcritical crack growth in continuous-fiber reinforced ceramic composites [DE93-018784] p 1343 N94-19335

Microstructure and texture control of fatigue in hydrogen and marine environments [AD-A271277] p 1344 N94-19744

CRACK TIPS

A preliminary model for crack-tip hydrogen transport [NPL-DMM(A)-84] p 1451 N94-17899

Interpretation of warm prestress-induced fracture toughness based on crack-tip constraint [DE93-015967] p 1451 N94-17913

Interfacial cracks in plates: A three-dimensional numerical investigation p 1456 N94-19116

The interpretation of optical caustics in the presence of dynamic non-uniform crack-tip motion histories: A study based on a higher order transient crack-tip expansion [SM91-12] p 1456 N94-19130

CRACKING (FRACTURING)

Technique to eliminate helium induced weld cracking in stainless steels [DE93-015982] p 1357 N94-17859

Interpretation of warm prestress-induced fracture toughness based on crack-tip constraint [DE93-015967] p 1451 N94-17913

Fundamental concepts relating local atomic arrangements, deformation, and fracture of intermetallic alloys [AD-A268745] p 1361 N94-18788

Office of Naval Research Publications/Patents /Presentations/Honors report, 1 October 1992 - 30 September 1993 [AD-A270037] p 1632 N94-18791

JPRS report: Science and technology. Central Eurasia: Materials science [JPRS-UMS-93-002] p 1339 N94-18833

A numerical analysis of crack growth in brittle microcracking composites [DE93-011562] p 1343 N94-18914

Computational mechanics of composite materials [PB93-195782] p 1343 N94-19281

CRACKS

Inelastic deformation and damage at high temperature [DE93-018155] p 1448 N94-17814

Interpretation of warm prestress-induced fracture toughness based on crack-tip constraint [DE93-015967] p 1451 N94-17913

Development and application of specially-focused ultrasonic transducers to location and sizing of defects in 75 mm- to 127 mm-thick austenitic stainless steel weld metals [DE93-015975] p 1453 N94-18108

Development of the microstructure based stochastic life prediction models [AD-A269880] p 1454 N94-18683

Compatibility of refrigerants and lubricants with motor materials, volume 1 [DE93-040216] p 1350 N94-18895

Interfacial cracks in plates: A three-dimensional numerical investigation p 1456 N94-19116

Subcritical crack growth in continuous-fiber reinforced ceramic composites [DE93-018784] p 1343 N94-19335

CRASH LANDING

Vertical drop test of a Metro 3 aircraft [AD-A270032] p 1318 N94-18789

Composite impact dynamics research at NASA LaRC: A review p 1458 N94-19467

CRASHES

Development and use of computational techniques in Army Aviation research and development programs for crash resistant helicopter technology p 1459 N94-19469

Directions for computational mechanics in automotive crashworthiness p 1459 N94-19472

CRASHWORTHINESS

Analysis of seating and restraint limitations restricting total body weight for aircrew and passengers on US Army helicopters [AD-A269117] p 1511 N94-18296

Vertical drop test of a Metro 3 aircraft [AD-A270032] p 1318 N94-18789

Computational Methods for Crashworthiness [NASA-CP-3223] p 1458 N94-19465

Adaptive methods for nonlinear structural dynamics and crashworthiness analysis p 1458 N94-19466

Impact analysis of composite aircraft structures p 1458 N94-19468

Development and use of computational techniques in Army Aviation research and development programs for crash resistant helicopter technology p 1459 N94-19469

Numerical simulation of vehicle crashworthiness and occupant protection p 1459 N94-19471

Directions for computational mechanics in automotive crashworthiness p 1459 N94-19472

Crashdynamics with DYNA3D: Capabilities and research directions p 1460 N94-19475

CRATERING

Centrifuge modeling of explosion-induced craters in unsaturated sand [AD-A270194] p 1417 N94-18780

CRATERS

Centrifuge modeling of explosion-induced craters in unsaturated sand [AD-A270194] p 1417 N94-18780

CRAY COMPUTERS

Connection machine software conversion of a Navy oceans model [AD-A269876] p 1535 N94-18772

The world's most powerful computer [NASA-TM-109369] p 1514 N94-18961

CREEP PROPERTIES

Alloy development of FeAl aluminide alloys for structural use in corrosive environments [DE93-015100] p 1355 N94-17757

Assessment of an improved multiaxial strength theory based on creep-rupture data for Inconel 600 [DE93-015929] p 1356 N94-17791

Heterogeneous slip and rupture models of the San Andreas fault zone based upon three-dimensional earthquake tomography [DE93-015037] p 1480 N94-17898

Diffusion in ordered alloys [AD-A268232] p 1359 N94-18322

Composites: Materials of the future [AD-A268945] p 1341 N94-18450

Development of ductile Fe3Al-based aluminides [DE93-017865] p 1362 N94-18938

High dose effects in neutron irradiated face-centered cubic metals [DE93-017671] p 1364 N94-19043

The effect of composition on the mechanism of continuous recrystallization and superplastic response of aluminum-scandium alloys [DE93-018594] p 1365 N94-19280

Reducing inadvertent alloying of metal/ceramic brazes [DE93-009842] p 1373 N94-19308

Numerical analysis of pressure meter tests: Application of parameter identification of soils behavior [ECL-92-52] p 1487 N94-19380

Damage accumulation in advanced metal matrix composites under thermal cycling/creep loadings [AD-A271207] p 1344 N94-19720

CREEP RUPTURE STRENGTH

Assessment of an improved multiaxial strength theory based on creep-rupture data for Inconel 600 [DE93-015929] p 1356 N94-17791

CREEP STRENGTH

Fundamental concepts relating local atomic arrangements, deformation, and fracture of intermetallic alloys [AD-A268745] p 1361 N94-18788

Reducing inadvertent alloying of metal/ceramic brazes [DE93-009842] p 1373 N94-19308

Damage accumulation in advanced metal matrix composites under thermal cycling/creep loadings [AD-A271207] p 1344 N94-19720

CREEP TESTS

Damage accumulation in advanced metal matrix composites under thermal cycling/creep loadings [AD-A271207] p 1344 N94-19720

CREW WORKSTATIONS

Army Cockpit Delethalization Program (CDP) [AD-A268990] p 1512 N94-18765

A multivariate anthropometric method for crew station design [AD-A270652] p 1513 N94-19531

CRITERIA

Building a joint-service classification research roadmap: Criterion-related issues [AD-A269735] p 1512 N94-18754

CRITICAL FREQUENCIES

Thermodynamic q-distributions that aren't [DE93-017385] p 1609 N94-19121

CRITICAL TEMPERATURE

Densities and viscosities of ternary ammonia/water fluids [DE93-015966] p 1351 N94-19118

Stability measurements of Rayleigh-Benard convection near the critical state using a spectral model [MPIS-15/1992] p 1422 N94-19520

CROSS CORRELATION

Generalized multichannel signal detection [AD-A271385] p 1391 N94-19587

CROSS FLOW

Lift and pitching moment induced on jet STOVL aircraft hovering in ground effect [AD-A269700] p 1317 N94-18577

CROSSTALK

Data fusion through simulated annealing of registered range and reflectance images [DE93-015910] p 1612 N94-17858

Coherent transient systems evaluation [AD-A268808] p 1576 N94-18204

CRRES (SATELLITE)

CRRES experiments, data collection, analysis and publication [NASA-CR-192419] p 1482 N94-18610

The LET spectrum and its uncertainty during the CRRES mission [AD-A269977] p 1630 N94-18676

Solar flares and magnetospheric particles: Investigations based upon the ONR-602 and ONR-604 experiments [AD-A269495] p 1629 N94-18705

CRUSTAL FRACTURES

Analysis of regional deformation and strain accumulation data adjacent to the San Andreas fault [NASA-CR-194072] p 1487 N94-19428

CRYOGENIC COOLING

Electrically excited CO-lasers with gas dynamic cooling [DLR-FB-93-08] p 1437 N94-18061

MODIL cryocooler producibility demonstration project results [DE93-017981] p 1335 N94-19275

CRYOGENIC EQUIPMENT

Equipment for investigation of cryogenic compaction of nanosize silicon nitride powders [DE93-018740] p 1340 N94-18180

Superfluid Helium On-Orbit Transfer (SHOOT) flight demonstration p 1327 N94-19185

CRYOGENIC TEMPERATURE

Mechanical-property changes of structural composite materials after low-temperature proton irradiation: Implications for use in SSC magnet systems [DE93-016735] p 1343 N94-18763

CRYOGENICS

The 7th International Cryocooler Conference [AD-A268451] p 1379 N94-18147

Equipment for investigation of cryogenic compaction of nanosize silicon nitride powders [DE93-018740] p 1340 N94-18180

Temperature lowering in cryogenic chemical-synthesis techniques and system [DE93-018348] p 1562 N94-18810

Regenerator optimization for Stirling cycle refrigeration [DE93-018468] p 1380 N94-18818

Development of a cryogenic heat pipe [DE93-018448] p 1417 N94-18831

Thin film studies of the proximity Josephson effect [AD-A270129] p 1600 N94-18876

CRYOSTATS

The 7th International Cryocooler Conference [AD-A268451] p 1379 N94-18147

CRYPTOGRAPHY

Securing electronic mail: The risks and future of electronic mail [DE93-017187] p 1383 N94-17994

Geometrical pattern learning [DE93-017641] p 1542 N94-19007

CRYSTAL DEFECTS

Defects in GaAs bulk crystals and multi-layers caused by In diffusion [DE93-016968] p 1595 N94-18054

Electron paramagnetic resonance of the ns(sup 1) centers in crystals [DE93-628793] p 1595 N94-18173

Study of mechanical behavior and internal structure of ferritic nanocrystalline material
[DE93-019264] p 1596 N94-18184
Computer simulation of macromolecular crystals and their defects
[DE93-015213] p 1596 N94-18192
Growth of structures for integrated optoelectronic devices
[AD-A269014] p 1598 N94-18527
Deformation mechanisms in a Laves phase
[DE93-018331] p 1361 N94-18806
Defect behavior of polycrystalline solar cell silicon
[DE93-018490] p 1468 N94-19016
Studies of deep levels in high resistivity silicon detectors irradiated by high fluence fast neutrons using a thermally stimulated current spectrometer
[DE93-016133] p 1602 N94-19258

CRYSTAL DISLOCATIONS
Reorientation of misfit dislocations during annealing in InGaAs/GaAs(001) interfaces
[DE93-015046] p 1592 N94-17741
Selective electrochemical wafer thinning for silicon characterization
[DE93-015083] p 1592 N94-17742
IR materials producibility
[AD-A268849] p 1577 N94-18223

CRYSTAL GROWTH
Kinetic growth of random-like and ballistic-like deposition models
[DE93-624946] p 1595 N94-17956
Photorefractive tungsten bronze crystals for optical computing
[AD-A268859] p 1596 N94-18320
Gallium arsenide-based ternary compounds and multi-band-gap solar cell research
[DE93-010049] p 1467 N94-18483
Scaling laws for diamond chemical vapor deposition. 2: Atomic hydrogen transport
[AD-A269842] p 1371 N94-18740
Materials processing and manufacturing technologies for diamond substrates multichip modules
[AD-A268989] p 1599 N94-18764
MUZO flight experience with the programmable multizone furnace p 1324 N94-19167
Numerical modelling of crystal growth
[AD-A271206] p 1605 N94-19719

CRYSTAL LATTICES
Magnetic properties of single-crystalline UCu3Al2
[DE93-016607] p 1593 N94-17744
Lattice damage in ion-implanted compound semiconductors and its effect on electrical activation
[DE93-015907] p 1593 N94-17845
Defects in GaAs bulk crystals and multi-layers caused by In diffusion
[DE93-016968] p 1595 N94-18054
Kinetic aspects of lattice mismatch in molecular beam epitaxial growth on planar and patterned substrates
[AD-A270424] p 1597 N94-18506
Magnetic and crystallographic structures in UTX intermetallic compounds
[DE93-018291] p 1605 N94-19735

CRYSTAL OPTICS
Crystal optics of high energy gamma-beams
[DE93-630228] p 1577 N94-18217

CRYSTAL OSCILLATORS
Military applications of high-accuracy frequency standards and clocks
[AD-A269303] p 1430 N94-18299
Low-noise oscillators for airborne radar applications, revision 1
[AD-A269372] p 1403 N94-18471

CRYSTAL STRUCTURE
Phenomenological explanation of elastic anomalies in superlattices
[DE93-017475] p 1594 N94-17871
Phase separation and ordering process in Al-Li alloys studied by small-angle neutron scattering and neutron diffraction
[DE93-016750] p 1358 N94-17947
Study of mechanical behavior and internal structure of ferritic nanocrystalline material
[DE93-019264] p 1596 N94-18184
Mesoepitaxy: A universal route to oriented materials
[AD-A270437] p 1598 N94-18511
Molecular structure of low temperature form of triaminoguanidinium nitrate (TAGN)
[AD-A270409] p 1377 N94-18708
Experimental investigation of wave and fracture phenomena in impacted ceramics: Experiments on sapphire
[AD-A270040] p 1372 N94-18792
In situ observation of radiation induced amorphization of crystals with apatite structure
[DE93-018450] p 1599 N94-18816
Specific heat of La(1.875-x)Nd(x)Sr(0.125)CuO4: Magnetic and structural transitions
[DE93-016978] p 1600 N94-18968
The d(exp 3)delta-a(exp 3)delta and b(exp 3)phi-a(exp 3)delta systems of ZrS, Part 2: Appendix, list of wavenumbers
[USIP-92-05] p 1602 N94-19293
Physico chemical and mechanic approach of lubricating properties of graphite + additive powders
[ECL-93-02] p 1373 N94-19405
Precision machining and polishing of scintillating crystals for large calorimeters and hodoscopes
[DE93-018663] p 1381 N94-19544
Final report on subcontract B076260 — borate synthesis
[DE93-019501] p 1604 N94-19565
Refinement of unit cell parameters by least-squares: Comments on an old technique and the development of a new computer program
[AD-A270610] p 1531 N94-19590

CRYSTAL SURFACES
Surface phases and their influence on metal-oxide interfaces
[DE93-019931] p 1601 N94-19020

CRYSTALLINITY
Molecular composites from liquid crystalline polymers and liquid crystalline thermosets
[DE93-016608] p 1368 N94-18096

CRYSTALLIZATION
Elastic properties of amorphous thin films studied by Rayleigh waves
[DE93-018375] p 1372 N94-19202

CRYSTALLOGRAPHY
Omega phase formation in shock-loaded zirconium
[DE93-018343] p 1595 N94-18162
The effect of crystallographic orientation on the performance of single crystal tungsten subscale penetrators
[AD-A268988] p 1597 N94-18468
Implementation of parallel algorithms
[AD-A271035] p 1539 N94-19682

CRYSTALS
Polaron tunneling in high-temperature superconductors
[DE93-016880] p 1593 N94-17754
Analysis of HgI2 and PbI2 crystals and detectors by Particle-Induced X Ray Emission (PIXE) and Ion Backscattering Spectroscopy (IBS)
[DE93-017168] p 1594 N94-17896
Electron paramagnetic resonance of the ns(sup 1) centers in crystals
[DE93-628793] p 1595 N94-18173
Computer simulation of macromolecular crystals and their defects
[DE93-015213] p 1596 N94-18192
Spatial light modulators and applications: Summaries of papers presented at the Spatial Light Modulators and Applications Topical Meeting
[AD-A269452] p 1577 N94-18283
The efficiency of continuous output of some titanium-doped gem-crystal lasers has exceeded 1 W
[AD-A269953] p 1439 N94-18674
In situ observation of radiation induced amorphization of crystals with apatite structure
[DE93-018450] p 1599 N94-18816
Longitudinal beam dynamics with RF noise
[DE93-018649] p 1574 N94-18994
Surface modification of sapphire for IR window application
[DE93-019168] p 1602 N94-19075
Synchrotron/crystal sample preparation
[NASA-CR-193837] p 1603 N94-19513
Precision machining and polishing of scintillating crystals for large calorimeters and hodoscopes
[DE93-018663] p 1381 N94-19544
Refinement of unit cell parameters by least-squares: Comments on an old technique and the development of a new computer program
[AD-A270610] p 1531 N94-19590

CUES
Stochastic models of attention and search
[AD-A268622] p 1508 N94-18292

CUMULUS CLOUDS
Moist wind relationships p 1492 N94-18607

CURING
Remote cure monitoring of polymeric resins by laser Raman spectroscopy
[DE93-016445] p 1369 N94-18112

CURRENT ALGEBRA
Further on the current algebra of WZNW models at and away from criticality
[DE93-624809] p 1545 N94-17686

CURRENT DENSITY
Field emitter array RF amplifier development project, phase 1, option 1
[AD-A268687] p 1396 N94-18293
Optical properties of oxide coatings prepared by ion-assisted deposition
[AD-A270024] p 1599 N94-18711
Superconductivity and magnetism in niobium doped YBa2Cu3O7 related high-(Tc) ceramics
[DE93-018086] p 1601 N94-19049
Lower hybrid counter current drive for edge current density modification in D3-D
[DE93-019157] p 1589 N94-19073
Fabrication, properties, and microstructures of high (Tc) tapes and coils made from Ag-clad Bi-2223 superconductor
[DE93-017405] p 1602 N94-19122
The microstructural mechanism of electromigration failure in narrow interconnects of Al alloys
[DE93-018598] p 1365 N94-19262

CURRENT DISTRIBUTION
Response of transmission line systems to pulse excitation by radiation and injection methods
[DE93-015112] p 1384 N94-18210
Contribution to the study of the additional losses in coil elements used in static converters
[ECL-92-60] p 1406 N94-19297

CURRENT REGULATORS
New current reduction system for watches with integrated current regulation motors
p 1428 N94-18034

CURRENT SHEETS
The phase mixing of shear Alfven waves
[DE93-624920] p 1581 N94-17688

CURVATURE
Understanding curved detonation waves
[DE93-014581] p 1408 N94-17728
Groups on transformations in Finslerian spaces
[DE93-624765] p 1606 N94-17794

CURVE FITTING
Strategies for testing form assessment software
[NPL-DITC-211/92] p 1518 N94-17930

CURVES (GEOMETRY)
Enumerative geometry of Del Pezzo Surfaces
[DE93-624768] p 1546 N94-17816
Geometric contact for curves and surfaces
[RR-893-M] p 1556 N94-19731

CYCLES
Updated Contributions to the Twente Workshop on Hamiltonian Graph Theory
[MEMO-1076] p 1554 N94-19683
Ore-type conditions for cycles through specified vertices p 1555 N94-19695
Hamilton cycles in path-tough graphs
p 1555 N94-19696

CYCLIC ACCELERATORS
Advanced methods for the computation of particle beam transport and the computation of electromagnetic fields and beam-cavity interactions
[DE93-018160] p 1573 N94-17807

CYCLIC LOADS
Factors which affect fatigue strength of fasteners
[DE93-017272] p 1453 N94-18084
Design for cyclic loading endurance of composites
[NASA-TM-106407] p 1457 N94-19351

CYCLOGENESIS
Rapid oceanic cyclogenesis studies
[AD-A269258] p 1490 N94-18265

CYCLONES
Rapid oceanic cyclogenesis studies
[AD-A269258] p 1490 N94-18265

CYCLOTRON RESONANCE
Experiments on nonlinear absorption of ECH waves in MTX and a comparison with theory
[DE93-019158] p 1589 N94-19074
Electron cyclotron resonance heating in the microwave tokamak experiment
[DE93-018083] p 1590 N94-19289

CYCLOTRON RESONANCE DEVICES
The gyrotron backward-wave-oscillator experiment — final progress report
[AD-A268982] p 1403 N94-18452
Designs for a 10.6 micrometer electromagnetic wiggler Free-Electron Laser (FEL)
[AD-A269695] p 1439 N94-18576
Experimental and theoretical investigation of broadband high-power windows for millimeter waves
[KFK-5157] p 1391 N94-19617

CYLINDRICAL BODIES
Recirculation in forward roll coating
[VKI-TM-48] p 1409 N94-17901
Relation between the fluctuating wall pressure and the turbulent structure of a boundary layer on a cylinder in axial flow
[AD-A270242] p 1418 N94-18906
Finite difference program for calculating hydride bed wall temperature profiles
[DE93-019272] p 1523 N94-19005

Current-potential characteristics of electrochemical systems
[DE93-040303] p 1352 N94-19192

Axial response of differently excited anchored viscous liquid bridges in zero-gravity
[LRT-WE-9-FB-1-1992] p 1379 N94-19489

Theoretical examination of the flow around a cylinder with a low dimensional Galerkin process
[MPIS-25/1992] p 1422 N94-19525

Transient skin effect in a massive cylinder by eccentric location of exciting conduction bands
[ETN-93-95048] p 1391 N94-19646

CYLINDRICAL PLASMAS

Transport in the self-organized relaxed state of ion temperature gradient instability
[DE93-016769] p 1584 N94-17983

CYLINDRICAL SHELLS

Compression strength of composite primary structural components
[NASA-CR-194582] p 1457 N94-19350

CYLINDRICAL WAVES

Plasma production by helicon waves
[DE93-788396] p 1586 N94-18213

CYTOLOGY

A scientific role for Space Station Freedom: Research at the cellular level p 1503 N94-19215

D

D REGION

RADARC HF ionospheric prediction program for OTH radar
[AD-A269557] p 1385 N94-18291

Analysis of satellite-derived ozone and water vapor measurements
[NASA-CR-193810] p 1486 N94-19237

DAMAGE

Inelastic deformation and damage at high temperature
[DE93-018155] p 1448 N94-17814

Defining the normal turbine inflow within a wind park environment
[DE93-010032] p 1489 N94-18046

The application of nondestructive techniques to the testing of a wind turbine blade
[DE93-016731] p 1447 N94-18128

Aerodynamic characteristics of a helicopter rotor airfoil as affected by simulated ballistic damage
[AD-A269206] p 1311 N94-18413

Development of the microstructure based stochastic life prediction model
[AD-A269742] p 1361 N94-18742

A constitutive theory for rigid polyurethane foam
[DE93-011596] p 1372 N94-19059

Construction of a tension-torsion anisotropic brittle damage elastic model
[ECL-91-27] p 1457 N94-19375

Synchrotron/crystal sample preparation
[NASA-CR-193837] p 1603 N94-19513

DAMAGE ASSESSMENT

Fatigue technology assessment and strategies for fatigue avoidance in marine structures. Appendices
[AD-A269053] p 1455 N94-18716

Nondestructive inspection of graphite-epoxy laminates for heat damage using DRIFT and LPF spectroscopies
[DE93-017228] p 1343 N94-18761

DAMPING

The phase mixing of shear Alfven waves
[DE93-624920] p 1581 N94-17688

Simulation of the ALS longitudinal multibunch feedback system
[DE93-019227] p 1575 N94-19152

Damping in ferrous shape memory alloys
[AD-A271009] p 1366 N94-19775

DARKENING

Radiation induced darkening of the optical elements in the Startracker camera
[DE93-018907] p 1433 N94-19004

DATA ACQUISITION

CTD and XBT data collected on ERS-1 validation cruise RRS Charles Darwin Cruise 62A, Iceland-Faeroes region
[IOS-294-1992] p 1461 N94-18063

CTD oxygen, tracer and nutrient data from RRS Charles Darwin Cruises 58/59 in the NE Atlantic as part of Vivaldi 1991
[IOS-296-1992] p 1496 N94-18065

Metadata compiled and distributed by the Carbon Dioxide Information Analysis Center for global climate change and greenhouse gas-related data bases
[DE93-015338] p 1473 N94-18167

Technologies for assessing the geologic and geomorphic history of coasts
[AD-A268780] p 1496 N94-18215

Proceedings of the 3rd Workshop on Balloon-Borne Experiments with Superconducting Magnet Spectrometers
[DE93-788362] p 1630 N94-18219

Missile antenna pattern coordinate system and data formats
[AD-A269153] p 1385 N94-18260

A rugged, low-cost advanced data acquisition system for field test projects
[DE93-010041] p 1615 N94-18334

Airport activity statistics of certificated route air carriers, 1992
[AD-A269042] p 1315 N94-18490

CRRES experiments, data collection, analysis and publication
[NASA-CR-192419] p 1482 N94-18610

Measurement Techniques
[VKI-LS-1993-05] p 1430 N94-18643

Data acquisition in aerodynamic research
p 1431 N94-18644

Preparation of data assimilation and model evaluation experiment data sets
[AD-A269996] p 1498 N94-18665

Atlas of SSM/I satellite ice concentration interpolated to operational ice model domains of the Arctic for 1992
[AD-A270306] p 1499 N94-18727

Widget: A data acquisition system for a balloon borne Si particle calorimeter
[DE93-624668] p 1630 N94-18762

Implementation of electronic data interchange in the department of defense: Lessons learned from private industry
[AD-A269532] p 1534 N94-18768

Effects of the Mount Pinatubo eruption on solar insolation: Four case studies
[DE93-018454] p 1475 N94-18817

SSC detector muon sub-system beam tests
[DE93-018415] p 1569 N94-19013

Image blur
[DE93-017944] p 1580 N94-19113

Pantex Plant Meteorological Monitoring Program
[DE93-018495] p 1493 N94-19127

A programmable systolic trigger processor for FERA-bus data
[USIP-92-04] p 1405 N94-19292

FASTBUS simulation models in VHDL
[USIP-92-07] p 1515 N94-19295

Shape of wind gusts at a 130m tower at Wilhelmshaven (Germany)
[BER-BAND-B3] p 1494 N94-19503

A comparison of polygraphic and actigraphic monitoring of sleep using a 5-channel programmable-sensitivity actigraph
[AD-A270731] p 1507 N94-19608

Data-Machine Independence (DMI)
[DE93-018008] p 1539 N94-19734

SeaTrack: Ground station orbit prediction and planning software for sea-viewing satellites
[NASA-RP-1331] p 1532 N94-19761

DATA BASE MANAGEMENT SYSTEMS

OSSA Information Systems Program
[NASA-TM-108774] p 1612 N94-17737

Restricting query relaxation through user constraints
[DE93-017413] p 1612 N94-17870

Information technology resources assessment
[DE93-015276] p 1613 N94-17894

SX User's Manual for SX, version 2.0
[DE93-015971] p 1517 N94-17914

Object-oriented extension of a relational DBMS
[ETN-93-94403] p 1519 N94-17978

A model and an execution mechanism for active data bases
[ETN-93-94404] p 1614 N94-17979

Software Toolkit for Analysis Research (STAR)
[DE93-017368] p 1519 N94-18086

EDMS: Engineering data management system. User's reference
[PB93-187391] p 1614 N94-18119

FEDIX on-line information service: Design, develop, test, and implement an on-line research and education information service
[DE93-018818] p 1614 N94-18181

NASA Electronic Library System (NELS) optimization
[NASA-CR-193688] p 1617 N94-18839

Inventory management plan for a research and development local area network
[DE93-018381] p 1617 N94-19026

An ORACLE CASE history: Experiences with ORACLE CASE tools
[DE93-010827] p 1617 N94-19057

Coordination of software-development activities among sites that are geographically separated
[DE93-019201] p 1524 N94-19076

Downsizing a database platform for increased performance and decreased costs
[DE93-018687] p 1618 N94-19099

Metallurgical evaluation of SRAM 2/SRAM A programmer base plates
[DE93-018689] p 1364 N94-19100

Sandia equation of state data base: Seslan file
[DE93-018693] p 1618 N94-19101

GENSHELL: A genesis database 2D to 3D shell transformation program
[DE93-018694] p 1525 N94-19102

Pantex Plant Meteorological Monitoring Program
[DE93-018495] p 1493 N94-19127

Managing persistent objects: From the programming language to the system
[ETN-93-95021] p 1529 N94-19368

Contribution to applications systems design MOSAIC method in the Aristote project
[ETN-93-95022] p 1529 N94-19370

PRACTICAL: Planning and resource allocation in C2-domains with time critical algorithms
[FEL-93-B029] p 1544 N94-19458

Integrity checking in deductive databases: An exposition
[PB93-191724] p 1619 N94-19709

Semantic models for distributed data base management. Part 2: Development of an integral meta-model for data modeling and data base modeling
[REPT-93-08-PT-2] p 1620 N94-19795

DATA BASES

Restricting query relaxation through user constraints
[DE93-017413] p 1612 N94-17870

SX User's Manual for SX, version 2.0
[DE93-015971] p 1517 N94-17914

Analysis of the ITER H-mode confinement database
[DE93-016984] p 1585 N94-18056

Better termination analysis for active databases
[REPT-93-026] p 1614 N94-18144

GREPOS: A GENESIS database repositioning program
[DE93-018517] p 1614 N94-18164

Metadata compiled and distributed by the Carbon Dioxide Information Analysis Center for global climate change and greenhouse gas-related data bases
[DE93-015338] p 1473 N94-18167

The organizational preparation of existing relational databases for the integration of expert systems
[AD-A268823] p 1614 N94-18191

Arctic ice studies
[AD-A268608] p 1497 N94-18277

Cloudiest year study: An analysis of the 3DNEPH and RTNEPH databases
[AD-A269403] p 1490 N94-18281

Handbook for users
[AD-A268726] p 1615 N94-18323

ADCIRC: An advanced three-dimensional circulation model for shelves, coasts, and estuaries. Report 3: Development of a tidal constituent database for the western North Atlantic and Gulf of Mexico
[AD-A268685] p 1497 N94-18455

Retrieving and integrating data from multiple information sources
[AD-A269588] p 1615 N94-18461

The evolution of the PVM concurrent computing system
[DE93-017764] p 1534 N94-18482

Lunar base Controlled Ecological Life Support System (LCELSS): Preliminary conceptual design study
[NASA-CR-188479] p 1511 N94-18484

Learning database abstractions for query reformulation
[AD-A269531] p 1616 N94-18641

The Navy tessellated spheroid map projection system: A comprehensive definition
[AD-A269989] p 1462 N94-18677

An ORACLE CASE history: Experiences with ORACLE CASE tools
[DE93-010827] p 1617 N94-19057

Axiomatization, declarative semantics and operational semantics of passive and active updates in logic databases
[PB93-195956] p 1618 N94-19067

Coordination of software-development activities among sites that are geographically separated
[DE93-019201] p 1524 N94-19076

Sandia equation of state data base: Seslan file
[DE93-018693] p 1618 N94-19101

GENSHELL: A genesis database 2D to 3D shell transformation program
[DE93-018694] p 1525 N94-19102

Pantex Plant Meteorological Monitoring Program
[DE93-018495] p 1493 N94-19127

ACOS: A performance based approach to build a parallel complex object server
[MEMO-INF-93-11] p 1537 N94-19198

DataTypeLog: A deductive object oriented query language
[MEMO-INF-92-79] p 1526 N94-19221

The TM typing rules
[MEMO-INF-92-80] p 1526 N94-19222
The TM manual version 1.3 working document
[MEMO-INF-93-06] p 1527 N94-19229
Action systems and action refinement in the development of parallel systems: An algebraic approach
[MEMO-INF-93-14] p 1538 N94-19296
A survey of current approaches to modelling of hydrological time-series with respect to climate variability and change
[WMO/TD-534] p 1463 N94-19435
Evaluation of mass spectra for a verification database
[PML-1993-12] p 1619 N94-19453
Fault-tolerance and complexity
[TR-450] p 1530 N94-19483
Incology 908 database report: On process-structure-property relationship
[DE93-017616] p 1366 N94-19546
Ceramic technology project data base
[DE93-019360] p 1374 N94-19561
Absolute positioning by collecting Global Positioning System (GPS) data along short baselines
[AD-A271324] p 1317 N94-19572
Integrity checking in deductive databases: An exposition
[PB93-191724] p 1619 N94-19709
Template based low data rate speech encoder
[AD-A270900] p 1392 N94-19748
A comparison Air Force data systems --- Comments on IDA Paper P-2863
[AD-A270662] p 1619 N94-19780
Semantic models for distributed data base management. Part 2: Development of an integral meta-model for data modeling and data base modeling
[REPT-93-08-PT-2] p 1620 N94-19795

DATA COMPRESSION
An analytical approach to error localization by using information derived from error signature
[REPT-93-023] p 1518 N94-17960
The Navy tessellated spheroid map projection system: A comprehensive definition
[AD-A269989] p 1462 N94-18677
Color palette considerations for digital map displays
[AD-A269991] p 1462 N94-18679
Implementation of parallel algorithms
[AD-A271035] p 1539 N94-19682

DATA CONVERSION ROUTINES
Connection machine software conversion of a Navy oceans model
[AD-A269876] p 1535 N94-18772
Vectorized presentation-level services for scientific distributed applications
[DE93-018091] p 1537 N94-19253

DATA CORRELATION
A Bayesian approach to contaminant plume delineation
[DE93-012909] p 1472 N94-17890

DATA FLOW ANALYSIS
Modelling software for structure metrics
[MEMO-INF-93-13] p 1526 N94-19200
Systolic design with asynchronous controls for digital-signal processing
[AD-A270976] p 1392 N94-19680

DATA INTEGRATION
Data fusion through simulated annealing of registered range and reflectance images
[DE93-015910] p 1612 N94-17858
Retrieving and integrating data from multiple information sources
[AD-A269588] p 1615 N94-18461

DATA LINKS
Intentionally Short Range Communications (ISRC)
[AD-A268788] p 1384 N94-18216
FAA airborne data link human factors research plan
[AD-A271006] p 1514 N94-19773
Control of integrated voice/data multi-hop radio networks via reduced-load approximations
[AD-A270661] p 1393 N94-19779

DATA MANAGEMENT
OSSA Information Systems Program
[NASA-TM-108774] p 1612 N94-17737
EDMS: Engineering data management system. User's reference
[PB93-187391] p 1614 N94-18119
Metadata compiled and distributed by the Carbon Dioxide Information Analysis Center for global climate change and greenhouse gas-related data bases
[DE93-015338] p 1473 N94-18167
User's manual of Tokamak Simulation Code
[DE93-788388] p 1586 N94-18212
Retrieving and integrating data from multiple information sources
[AD-A269588] p 1615 N94-18461
CRRES experiments, data collection, analysis and publication
[NASA-CR-192419] p 1482 N94-18610
CDIAC catalog of numeric data and computer model packages
[DE93-017675] p 1475 N94-18832
Inventory management plan for a research and development local area network
[DE93-018381] p 1617 N94-19026
An ORACLE CASE history: Experiences with ORACLE CASE tools
[DE93-010827] p 1617 N94-19057
Report of the Second CLICOM Experts Meeting
[WCDMP-19] p 1495 N94-19705
Integrity checking in deductive databases: An exposition
[PB93-191724] p 1619 N94-19709
A comparison Air Force data systems --- Comments on IDA Paper P-2863
[AD-A270662] p 1619 N94-19780
Semantic models for distributed data base management. Part 2: Development of an integral meta-model for data modeling and data base modeling
[REPT-93-08-PT-2] p 1620 N94-19795

DATA PROCESSING
Proposal for a numerical array library
[DE93-015017] p 1516 N94-17786
RESQme studies for SDC regional computing centers
[DE93-015230] p 1514 N94-17799
Verification of 3I retrievals vis-a-vis radiosonde observations
[KNMI-TR-150] p 1488 N94-17924
A model and an execution mechanism for active data bases
[ETN-93-94404] p 1614 N94-17979
CTD and XBT data collected on ERS-1 validation cruise RRS Charles Darwin Cruise 62A, Iceland-Faeroes region
[IOS-294-1992] p 1461 N94-18063
SeaSoar and CTD sections across the Iceland-Faeroes Front and Faeroe Shetland Channel, August 1990
[IOS-295-1992] p 1496 N94-18064
CTD oxygen, tracer and nutrient data from RRS Charles Darwin Cruises 58/59 in the NE Atlantic as part of Vivaldi 1991
[IOS-296-1992] p 1496 N94-18065
Software Toolkit for Analysis Research (STAR)
[DE93-017368] p 1519 N94-18086
The Earth radiation budget experiment: Overview of data-processing and error sources
[KNMI-TR-146] p 1481 N94-18142
Performance of the Amorphous Materials Diffractometer GLAD at IPNS
[DE93-017746] p 1430 N94-18481
Overview of physical oceanographic measurements taken during the Mount Mitchell cruise to ROPME sea area
[DE93-018460] p 1497 N94-18494
Cognitive limitations in coordination in hierarchical information processing structures
[AD-A268825] p 1616 N94-18535
SERCAA cloud analysis integration: Design concepts and interaction with cloud forecast models
[AD-A269104] p 1492 N94-18637
Preparation of data assimilation and model evaluation experiment data sets
[AD-A269996] p 1498 N94-18685
Initial Graphics Exchange Specification (IGES)
[AD-A270049] p 1522 N94-18794
A bit serial first level calorimeter trigger for an LHC detector
[USIP-92-08] p 1574 N94-18845
An ORACLE CASE history: Experiences with ORACLE CASE tools
[DE93-010827] p 1617 N94-19057
Pantex Plant Meteorological Monitoring Program
[DE93-018495] p 1493 N94-19127
Volume rendering of 3D scalar and vector fields at Lawrence Livermore National Laboratory
[DE93-018000] p 1528 N94-19276
A program for passively tracking a target using an array of sensors
[DE93-019554] p 1390 N94-19306
New automatic deduction techniques in first order finite and infinite polyvalent logic
[ETN-93-95003] p 1528 N94-19359
Conception and analysis of numerical parallel algorithms: Realization on the Connection Machine
[ETN-93-95005] p 1531 N94-19517
The Cluster magnetic field investigation: Scientific objectives and instrumentation p 1329 N94-19629

DATA PROCESSING EQUIPMENT
VPU(tm) demonstration mission vicinity processor unit(tm) overview p 1325 N94-19171
Implementation of the digital wave-processing experiment p 1329 N94-19628

DATA REDUCTION
A noniterative improvement of Guyan reduction
p 1449 N94-17833
Automatic A-set selection for dynamics analysis
p 1450 N94-17839
Software Toolkit for Analysis Research (STAR)
[DE93-017368] p 1519 N94-18086
Performance of the Amorphous Materials Diffractometer GLAD at IPNS
[DE93-017746] p 1430 N94-18481
CRRES experiments, data collection, analysis and publication
[NASA-CR-192419] p 1482 N94-18610
A least-squares computational tool kit
[DE93-018400] p 1557 N94-19011
Development of ISY data set, part 2
[NASDA-CNT-930006-PT-2] p 1463 N94-19384
Shape of wind gusts at a 130m tower at Wilhelmshaven (Germany)
[BER-BAND-B3] p 1494 N94-19503

DATA RETRIEVAL
Software Toolkit for Analysis Research (STAR)
[DE93-017368] p 1519 N94-18086
Retrieving and integrating data from multiple information sources
[AD-A269588] p 1615 N94-18461
Learning database abstractions for query reformulation
[AD-A269531] p 1616 N94-18641
Software distribution using xnetlib
[DE93-018278] p 1523 N94-18989

DATA STORAGE
Coherent transient systems evaluation
[AD-A268808] p 1576 N94-18204
CRRES experiments, data collection, analysis and publication
[NASA-CR-192419] p 1482 N94-18610
Data-Machine Independence (DMI)
[DE93-018008] p 1539 N94-19734

DATA STRUCTURES
Object-oriented extension of a relational DBMS
[ETN-93-94403] p 1519 N94-17978
High performance Fortran: An overview
[DE93-017181] p 1519 N94-18072
Initial Graphics Exchange Specification (IGES)
[AD-A270049] p 1522 N94-18794
Abstracting inter-object communications using composition filters
[MEMO-INF-92-78] p 1526 N94-19220
Data-Machine Independence (DMI)
[DE93-018008] p 1539 N94-19734

DATA SYSTEMS
Directional regions in Geographic Information Systems (GIS)
[AD-A268536] p 1462 N94-18309
The J85 cost/benefit engine study
[AD-A269280] p 1320 N94-18333
A comparison of air force data systems
[AD-A269691] p 1616 N94-18575
Tracking with time-delayed data in multisensor systems
[AD-A271334] p 1391 N94-19582
Cluster: Mission, Payload, and Supporting Activities
[ESA-SP-1159] p 1328 N94-19622
The Cluster science data system: A distributed system to serve a wide international community
p 1330 N94-19638
A comparison Air Force data systems --- Comments on IDA Paper P-2863
[AD-A270662] p 1619 N94-19780

DATA TRANSFER (COMPUTERS)
Embedded Computer Performance Measurement (ECPM). Advanced avionics subsystems and technology multiprocessor ECPM software documentation
[AD-A269921] p 1320 N94-18658
Implementation of electronic data interchange in the department of defense: Lessons learned from private industry
[AD-A269532] p 1534 N94-18768
Vectorized presentation-level services for scientific distributed applications
[DE93-018091] p 1537 N94-19253
Protocol service decomposition for high-performance networking
[AD-A270613] p 1538 N94-19533
The Cluster science data system: A distributed system to serve a wide international community
p 1330 N94-19638

DATA TRANSMISSION
Data fusion through simulated annealing of registered range and reflectance images
[DE93-015910] p 1612 N94-17858
Securing electronic mail: The risks and future of electronic mail
[DE93-017187] p 1383 N94-17994
A rugged, low-cost advanced data acquisition system for field test projects
[DE93-010041] p 1615 N94-18334

Implementation of electronic data interchange in the department of defense: Lessons learned from private industry
[AD-A269532] p 1534 N94-18768
Message passing in PUMA
[DE93-012841] p 1537 N94-19206
Optoelectronic packaging: A review
[DE93-040059] p 1515 N94-19535
Experimental examinations of semiconductor laser amplifiers for optical communication technology
[ETN-93-95050] p 1442 N94-19647

DEBONDING (MATERIALS)
Fatigue resistant Ti3Al composites
[AD-A270305] p 1341 N94-18692

DEBRIS
Effect of phase change in a debris cloud on a backwall structure
[DE93-017506] p 1358 N94-18100
Toward a characterization of the debris cloud created in a hypervelocity impact on a thin plate
[AD-A269190] p 1455 N94-18864

DEBYE-HUCKEL THEORY
On the Debye-Huckel's theory
[DE93-624789] p 1561 N94-17681

DECISION MAKING
The machine reception: A business of experts
[CRIF-MC-94] p 1611 N94-17980
Contribution to the analysis of tableaus based decision methods
[ETN-93-94355] p 1560 N94-18067
Cognitive limitations in coordination in hierarchical information processing structures
[AD-A268825] p 1616 N94-18535
Scale sensitivity in the multiplicative AHP and SMART
[REPT-93-37] p 1611 N94-19157
Context-related scaling of human judgement in the multiplicative AHP, SMART and ELECTRE
[REPT-93-38] p 1611 N94-19158
Overview of research in progress at the Center of Excellence
[NASA-CR-194329] p 1618 N94-19256
Integrated measurement of crew resource management and technical flying skills
[AD-A270512] p 1510 N94-19677

DECISION THEORY
VHF air/ground communications for air traffic control. Volume 1: A decision tree approach to system innovations
[AD-A268485] p 1316 N94-18384
VHF air/ground communications for air traffic control: A decision tree approach to system innovations, volume 2
[AD-A268632] p 1386 N94-18495
Cognitive limitations in coordination in hierarchical information processing structures
[AD-A268825] p 1616 N94-18535
Scale sensitivity in the multiplicative AHP and SMART
[REPT-93-37] p 1611 N94-19157
Context-related scaling of human judgement in the multiplicative AHP, SMART and ELECTRE
[REPT-93-38] p 1611 N94-19158
Finding optimal policies for Markov decision chains: A unifying framework for mean-variance-tradeoffs
[PB93-191930] p 1559 N94-19555
Generalized regression trees: Function estimation via recursive partitioning and maximum likelihood
[AD-A271259] p 1560 N94-19726

DECISIONS
Scale sensitivity in the multiplicative AHP and SMART
[REPT-93-37] p 1611 N94-19157

DECODERS
Single phase dynamic CMOS PLA using charge sharing technique p 1397 N94-18341
An extended Reed Solomon decoder design
p 1398 N94-18348
Canonical multi-valued input Reed-Muller trees and forms p 1401 N94-18375
Multichannel error correction code decoder
[NASA-TM-106331] p 1333 N94-19313

DECODING
Communication in the presence of unknown interference
[AD-A271146] p 1392 N94-19738

DECOMPOSITION
Ultrasonic process for destruction of chlorinated organic compounds in aqueous solution
[DE93-015551] p 1348 N94-18249
Nitridation of GaAs(100) by laser-induced decomposition of HN3
[AD-A269147] p 1436 N94-18258
Spectral analysis on the canonical autoregressive decomposition
[AD-A270083] p 1549 N94-18798
Single source precursors for the OMCVD of 3/5 compound semiconductors
[AD-A271147] p 1606 N94-19739

DECONTAMINATION
The application of jet spray and ion beam contamination removal techniques to samples from the LDEF spacecraft
[AD-A270973] p 1354 N94-19755

DECOUPLING
Nonlinear disturbance decoupling and linearization: A partial interpretation of integral feedback
[PB93-197515] p 1543 N94-19328

DEEP DRAWING
Formulation and identification of the anisotropic laws for thin sheets drawing
[ECL-92-55] p 1365 N94-19400

DEEP WATER
Coastal Ocean Modeling Workshop
[AD-A268955] p 1497 N94-18393

DEFECTS
Development and application of specially-focused ultrasonic transducers to location and sizing of defects in 75 mm- to 127 mm-thick austenitic stainless steel weld metals
[DE93-015975] p 1453 N94-18108
High resolution SQUID magnetometry for non-destructive evaluation
[AD-A268884] p 1447 N94-18225
Performance of defect-tolerant set-associative cache memories p 1398 N94-18346
Scaling laws for diamond chemical vapor deposition. Diamond surface chemistry
[AD-A269874] p 1599 N94-18745
Morphology, deformation, and defect structures of TiCr2 in Ti-Cr alloys
[DE93-018332] p 1361 N94-18807
Effects of shock loading on a solid-solution strengthened superalloy
[DE93-018345] p 1362 N94-18809
Quantification of volume flaw sizes in ceramics by image processing of 3D x ray tomographic data sets
[DE93-018573] p 1372 N94-18932
Thermal stresses in the microchannel heatsink cooled by liquid nitrogen
[DE93-018660] p 1418 N94-18995
Thermal wave image processing for characterization of subsurface of flaws in materials
[DE93-019024] p 1344 N94-19551

DEFENSE PROGRAM
An evolutionary approach to space launch commercialization
[AD-A269861] p 1331 N94-18411
Department of Defense Gateway Information System (DGIS) users' guide
[AD-A270140] p 1617 N94-18752
Coordination of software-development activities among sites that are geographically separated
[DE93-019201] p 1524 N94-19076
Utilization of Shuttle small payload accommodations in the DOD Space Test Program p 1326 N94-19180

DEFORMATION
Atlas of formability: HAYNES 556
[AD-A268354] p 1356 N94-17768
Atlas of formability: NICKELVAC K-500
[AD-A268351] p 1356 N94-17772
Inelastic deformation and damage at high temperature
[DE93-018155] p 1448 N94-17814
Deformed traces and covariant quantum algebras for quantum groups GL(sub qp)(2) and GL(sub qp)(1/1)
[DE93-629862] p 1561 N94-18153
On a possible algebra morphism of U(sub q)(osp1/2) onto the deformed oscillator algebra W(sub q)(N)
[DE93-629857] p 1548 N94-18176
Composites: Materials of the future
[AD-A268945] p 1341 N94-18450
The effect of crystallographic orientation on the performance of single crystal tungsten subscale penetrators
[AD-A268988] p 1597 N94-18468
Development of a finite element method program for the analysis of laminated composite plates using first-order shear deformation theory
[AD-A270318] p 1342 N94-18700
Deformation mechanisms in a Laves phase
[DE93-018331] p 1361 N94-18806
Morphology, deformation, and defect structures of TiCr2 in Ti-Cr alloys
[DE93-018332] p 1361 N94-18807
Effects of shock loading on a solid-solution strengthened superalloy
[DE93-018345] p 1362 N94-18809
A general-purpose contact detection algorithm for nonlinear structural analysis codes
[DE93-018507] p 1455 N94-19039
Application of differential sensitivity theory to continuum mechanics
[DE93-012732] p 1609 N94-19187
Analysis of regional deformation and strain accumulation data adjacent to the San Andreas fault
[NASA-CR-194072] p 1487 N94-19428
The interpretation of crustal dynamics data in terms of plate motions and regional deformation near plate boundaries
[NASA-CR-194302] p 1487 N94-19432
Simulation of dynamic material response with the PAGOSA code
[DE93-018285] p 1460 N94-19603

DEGRADATION
Structural stability of 1100 C heated Pd/k during absorption cycling in protium
[DE93-016270] p 1346 N94-18048
Environmental degradation of Alloy 600 and welded filler metal EN82 in an elevated temperature aqueous environment
[DE93-018049] p 1363 N94-18940
Microbial degradation of poly-b-esters: A mechanistic study, cellulose acetate biodegradability
[AD-A271368] p 1374 N94-19586

DEGREES OF FREEDOM
Some remarks on integrable Hamiltonian systems with two degrees of freedom
[DE93-624766] p 1546 N94-17815
Automatic A-set selection for dynamics analysis
p 1450 N94-17839
Six degree of freedom fine motion positioning stage based on magnetic levitation
[DE93-017651] p 1446 N94-19547

DEHYDROGENATION
Conversion of ethane and of propane to higher olefin hydrocarbons
[DE93-015282] p 1347 N94-18194

DELAMINATING
Computational strategies for composite structures
[PB93-195097] p 1452 N94-18079
Composites: Materials of the future
[AD-A268945] p 1341 N94-18450
Compression strength of composite primary structural components
[NASA-CR-194562] p 1457 N94-19350
Delamination in composite materials as observed using an optical fiber strain gage
[AD-A270803] p 1344 N94-19662

DELAY
Tandem queues with deterministic service times
[PB93-197465] p 1543 N94-19324

DELAY LINES
Variable wide band fiber optic delay line
[AD-D015848] p 1576 N94-17716
A method for eliminating skew introduced by non-uniform buffer delay and wire lengths in clock distribution trees
[AD-A270649] p 1544 N94-19530

DELTA WINGS
A study of the influence of a delta wing geometry on the induced drag at transonic speed (M=0.55) and high angles of attack
[FFA-TN-1992-14] p 1311 N94-17722
Comparison between swept and delta canards on a model of a combat aircraft
[AD-A269561] p 1317 N94-17826
CFD investigations of the hypersonic double delta wing greta: Sanger project no. 3.2
[FFA-TN-1992-42] p 1311 N94-17919
Three dimensional network generation and Euler calculation for a wing fuselage canard configuration
[MBB-LME-211-S-PUB-511-A] p 1319 N94-19500

DEMODULATION
Application of wavelet transform techniques to spread spectrum demodulation and jamming
[AD-A267389] p 1389 N94-19009

DENSE PLASMAS
Using the Tritium Plasma Experiment to evaluate ITER PFC safety
[DE93-016614] p 1582 N94-17713
Plasma klystron amplifier
[AD-D015819] p 1395 N94-17903
Optical design for photonics. Organization of the 1993 Photonics Science Topical Meetings. Technical digest series, volume 9
[AD-A269027] p 1578 N94-18396

DENSIFICATION
Pressureless densification of ceramic matrix composites
[AD-A269137] p 1371 N94-18691

DENSITY
Velocity measurements in a boundary layer with a density gradient
[DE93-019627] p 1422 N94-19515

DENSITY (MASS/VOLUME)
Densities and viscosities of ternary ammonia/water fluids
[DE93-015966] p 1351 N94-19118

DENSITY DISTRIBUTION
A comparative study of turbulence models in predicting hypersonic inlet flows p 1314 N94-18553
Phase-space description of plasma waves: Linear and nonlinear theory
[IRF-SR-211] p 1587 N94-18860
DENSITY MEASUREMENT
An investigation of methods for updating ionospheric scintillation models using topside in-situ plasma density measurements
[AD-A269872] p 1483 N94-18655
Behavior of the particle transport coefficients near the density limit in MTX
[DE93-019108] p 1591 N94-19311
DEOXYRIBONUCLEIC ACID
Cellular and molecular level responses after radiofrequency radiation exposure, alone or in combination with x rays or chemicals
[AD-A268189] p 1501 N94-17729
Matrix- and substrate-assisted laser desorption for fast DNA sequencing
[DE93-015332] p 1501 N94-18242
DEPLETION
Screening analysis for chlorine-free alternative refrigerants to replace R-22 in air conditioning applications
[DE93-015920] p 1367 N94-17847
DEPOSITION
Kinetic growth of random-like and ballistic-like deposition models
[DE93-624946] p 1595 N94-17956
Nanostructured materials: Mind over matter
[DE93-017690] p 1597 N94-18480
The urban perspectives of acid rain
[DE93-018881] p 1474 N94-18523
Optical properties of oxide coatings prepared by ion-assisted deposition
[AD-A270024] p 1599 N94-18711
Materials processing and manufacturing technologies for diamond substrates multichip modules
[AD-A268989] p 1599 N94-18764
DEPOSITS
Analysis of deposit precursors in jet fuels using Fourier transform infrared spectroscopy
[AD-A269035] p 1377 N94-18489
DEPTH MEASUREMENT
Processing and analysis of SeaMARC 2 data: Fieberling guyot; raw phase experiment in Norwegian-Greenland Sea
[AD-A269930] p 1498 N94-18662
DESIGN ANALYSIS
Design optimization studies using COSMIC NASTRAN
p 1450 N94-17834
Development of a new concept diver's watch
p 1429 N94-18041
Preliminary structural design: Defining the design space
[AD-A268898] p 1317 N94-18227
A rational design change methodology based on experimental and analytical modal analysis
[DE93-018537] p 1521 N94-18271
Verification of VLSI designs p 1400 N94-18363
A new variable testability measure
p 1400 N94-18364
Controlling state explosion during automatic verification of delay-insensitive and delay-constrained VLSI systems using the POM verifier p 1400 N94-18365
Formal verification of an MMU and MMU cache
p 1400 N94-18366
Formal hardware verification of digital circuits
p 1401 N94-18367
Improved self arbitrated VLSI asynchronous circuits
p 1402 N94-18378
Optical design for photonics. Organization of the 1993 Photonics Science Topical Meetings. Technical digest series, volume 9
[AD-A269027] p 1578 N94-18396
The CMU masters in software engineering core curriculum
[AD-A268983] p 1521 N94-18453
Procedures and design data for the formulation of aircraft configurations
[AD-A270150] p 1318 N94-18779
Review Committee report on the conceptual design of the tokamak physics experiment
[DE93-018408] p 1588 N94-19012
Novel mass spectrometric instrument for gaseous and particulate characterization and monitoring
[DE93-019992] p 1433 N94-19054
An ORACLE CASE history: Experiences with ORACLE CASE tools
[DE93-010827] p 1617 N94-19057
Gear sound levels with various tooth contact ratios and forms
[NASA-TM-106432] p 1446 N94-19318
Optimal safety system design using fault tree analysis
[MATHS-REPT-A-187] p 1529 N94-19382
Silicon compilation: From the circuit to the system
[ETN-93-95010] p 1406 N94-19501
Shell designs
[AD-A270656] p 1460 N94-19606
ADAS implementation of a panel method for the prediction of aerodynamic loads
[LR-723] p 1313 N94-19667
DESORPTION
Matrix- and substrate-assisted laser desorption for fast DNA sequencing
[DE93-015332] p 1501 N94-18242
Nitridation of GaAs(100) by laser-induced decomposition of HN3
[AD-A269147] p 1438 N94-18258
DESTRUCTIVE TESTS
Laser induced damage testing: Equipment and techniques
[DE93-017143] p 1437 N94-18060
DETACHMENT
Embrittlement of surface mount solder joints by hot solder-dipped, gold-plated leads
[DE93-017659] p 1358 N94-18003
DETECTION
Space debris detection
[AD-A269254] p 1334 N94-18264
Detection of single molecules in microspheres
[DE93-017776] p 1567 N94-18493
Aircraft fire sentry. Volume 1: Summary
[AD-A270087] p 1315 N94-18822
Aircraft fire sentry. Volume 2: Appendices A, B, C and D
[AD-A270088] p 1315 N94-18823
A general-purpose contact detection algorithm for nonlinear structural analysis codes
[DE93-018507] p 1455 N94-19039
The minimum detection limits of RDX and TNT deposited on various surfaces as determined by ion mobility spectroscopy
[DE93-018521] p 1378 N94-19042
DETERIORATION
Study on radiation-induced deterioration of grease at high temperature, 3
[DE93-788368] p 1369 N94-18220
DETONATION
Direct Monte Carlo simulation of the chemical equilibrium composition of detonation products
[DE93-014559] p 1376 N94-17751
Detonation reaction steps frozen by free expansion and analyzed by mass spectrometry
[DE93-012734] p 1376 N94-17813
Modeling shock initiation in Composition B
[DE93-016544] p 1376 N94-18095
The use of post detonation analysis of stable isotope ratios to determine the type and production process of the explosive involved
[DE93-018497] p 1378 N94-19242
Round robin experiments on the Explosive Components Water Gap Test (ECWGT)
[PML-1992-69] p 1378 N94-19445
DETONATION WAVES
Understanding curved detonation waves
[DE93-014581] p 1408 N94-17728
DEUTERIUM
NMR studies of enriched species at interfaces
[AD-A264703] p 1367 N94-17878
The rise of accuracy for the multichannel scattering problem solving
[DE93-630145] p 1608 N94-18253
DEW POINT
Station climatic summaries: North America. Volume 1: The contiguous United States
[AD-A269567] p 1490 N94-18303
Station climatic summaries, North America. Volume 2: Alaska, Canada and Greenland
[AD-A269793] p 1493 N94-18732
DIAMETERS
The influence of the target strength model on computed perforation
[DE93-018659] p 1460 N94-19543
DIAMOND FILMS
Characterization of diamond film nucleation and growth surface
[AD-A269400] p 1597 N94-18459
Scaling laws for diamond chemical vapor deposition. 2: Atomic hydrogen transport
[AD-A269842] p 1371 N94-18740
Scaling laws for diamond chemical vapor deposition. Diamond surface chemistry
[AD-A269874] p 1599 N94-18745
Growth, characterization and device development in monocrystalline diamond films
[AD-A270074] p 1599 N94-18797
Pressure and temperature effects on the kinetics and quality of diamond films
[AD-A270876] p 1606 N94-19771
DIAMONDS
Characterization of diamond film nucleation and growth surface
[AD-A269400] p 1597 N94-18459
Scaling laws for diamond chemical vapor deposition. Diamond surface chemistry
[AD-A269874] p 1599 N94-18745
Diamond brazed to a metal
[AD-D015877] p 1371 N94-18746
Materials processing and manufacturing technologies for diamond substrates multichip modules
[AD-A268989] p 1599 N94-18764
Growth, characterization and device development in monocrystalline diamond films
[AD-A270074] p 1599 N94-18797
Picoindentation hardness measurements using atomic force microscopy
[AD-A270877] p 1604 N94-19579
Atomic-scale friction and microfriction of graphite and diamond using friction force microscopy
[AD-A270952] p 1605 N94-19679
DIELECTRIC PERMEABILITY
Crystal optics of high energy gamma-beams
[DE93-630228] p 1577 N94-18217
DIELECTRIC PROPERTIES
Design and test of a low jitter metal to metal contact solid dielectric switch
[DE93-016957] p 1394 N94-17755
The Aerocapacitor: A carbon aerogel based supercapacitor
[DE93-016537] p 1395 N94-17849
Aerogels for microelectronic applications: Fast, inexpensive, and light as air
[DE93-017170] p 1395 N94-17882
Anomalous dielectric properties of carbon-black filled elastomers
[AD-A269378] p 1370 N94-18280
Polymer films with enhanced dielectric properties
[AD-A271148] p 1375 N94-19740
DIELECTRICS
Design and test of a low jitter metal to metal contact solid dielectric switch
[DE93-016957] p 1394 N94-17755
Aerogels for microelectronic applications: Fast, inexpensive, and light as air
[DE93-017170] p 1395 N94-17882
Anomalous dielectric properties of carbon-black filled elastomers
[AD-A269378] p 1370 N94-18280
RF vacuum microelectronics
[AD-A269454] p 1396 N94-18284
High-power microwave breakdown of dielectric interfaces
[AD-A268844] p 1397 N94-18318
The asymptotic theory of the reflection and transmission of a pulsed electromagnetic beam field at a planar interface separating two dispersive media
[AD-A269033] p 1385 N94-18404
Single-transverse-mode, narrow-bandwidth pulsed tunable dye laser with hollow circular intracavity dielectric waveguide
[AD-A270022] p 1439 N94-18614
Numerical modelling of fringing fields and their use for complex permittivity measurements at high frequencies
[AD-A270198] p 1388 N94-18782
Experimental and theoretical investigation of broadband high-power windows for millimeter waves
[KFK-5157] p 1391 N94-19617
DIFFERENCE EQUATIONS
Difference equations for generalized Meixner polynomials
[REPT-93-17] p 1550 N94-19082
DIFFERENTIAL CALCULUS
On paragrassmann differential calculus
[DE93-628594] p 1548 N94-18169
DIFFERENTIAL EQUATIONS
Impulsive moving mirror model and impulsive differential equations in Banach space
[DE93-629867] p 1549 N94-18197
A method for finding the periodic solution of autonomous ordinary differential equations
[DE93-624725] p 1550 N94-19244
Methods for description and control of dynamical systems and their application
[MPIS-17/1992] p 1553 N94-19522
DIFFRACTION
Spin-integrated and spin-dependent photoelectron diffraction
[DE93-016546] p 1565 N94-17850
Wideband electromagnetic scattering/analysis program: Far zone electromagnetic scattering from complex shapes using geometrical theory of diffraction
[AD-A268790] p 1384 N94-18187

DIFFRACTOMETERS
Performance of the Amorphous Materials Diffractometer GLAD at IPNS
[DE93-017746] p 1430 N94-18481
DIFFUSION
Using the Tritium Plasma Experiment to evaluate ITER PFC safety
[DE93-016614] p 1582 N94-17713
Diffusion in ordered alloys
[AD-A268232] p 1359 N94-18322
Longitudinal beam dynamics with RF noise
[DE93-018649] p 1574 N94-18994
DIFFUSION COEFFICIENT
Diffusion in ordered alloys
[AD-A268232] p 1359 N94-18322
Behavior of the particle transport coefficients near the density limit in MTX
[DE93-019108] p 1591 N94-19311
DIFFUSION FLAMES
Studies on high pressure and unsteady flame phenomena: Revision
[AD-A269138] p 1348 N94-18257
Transport phenomena and interfacial kinetics in multiphase combustion systems
[AD-A270202] p 1349 N94-18785
DIFFUSION LENGTH
Development of large-area monolithically integrated silicon-film photovoltaic modules
[DE93-010037] p 1464 N94-17731
Defect behavior of polycrystalline solar cell silicon
[DE93-018490] p 1468 N94-19016
DIFFUSION THEORY
Ratio of specimen thickness to detection area for reliable hydrogen permeation measurement
[NPL-DMM(A)-103] p 1451 N94-17929
DIFFUSION WELDING
Joining and Adhesion of Advanced Inorganic Materials Symposium
[AD-A269748] p 1342 N94-18720
DIFFUSIVITY
Diffusion in ordered alloys
[AD-A268232] p 1359 N94-18322
Behavior of the particle transport coefficients near the density limit in MTX
[DE93-019108] p 1591 N94-19311
DIGITAL DATA
Measuring machines for digitalizing and measuring complex surfaces, models and matrices
[CRIF-MC-97] p 1444 N94-17963
The Navy tessellated spheroid map projection system: A comprehensive definition
[AD-A269989] p 1462 N94-18677
Color palette considerations for digital map displays
[AD-A269991] p 1462 N94-18679
The universal BitBus node
[DIGEL-1993-1] p 1515 N94-19799
DIGITAL ELECTRONICS
Magnetostrictive actuators for human sensory feedback
[AD-A269266] p 1511 N94-17841
Superconducting/semiconducting hybrids and advance memory concepts for superconducting electronics
[AD-A268679] p 1397 N94-18312
On timing faults in digital logic circuits
[AD-A268714] p 1402 N94-18400
Superconducting flux flow devices, digital circuits and memories
[DE93-019072] p 1405 N94-19079
Development of a quartz digital accelerometer for environmental sensing and navigation applications
[DE93-018503] p 1433 N94-19243
DIGITAL FILTERS
Examination of metrics and assumptions used in correlation filter design
[DE93-017636] p 1576 N94-18000
An improved distributed arithmetic architecture
p 1398 N94-18349
Programmable linear phase digital filters
[AD-A270413] p 1404 N94-18709
Simulation of the ALS longitudinal multibunch feedback system
[DE93-019227] p 1575 N94-19152
DIGITAL SIMULATION
Numerical modelling of crystal growth
[AD-A271206] p 1605 N94-19719
DIGITAL SYSTEMS
Precision digitally-controlled variable attenuation circuit
[AD-D015862] p 1394 N94-17703
Information technology resources assessment
[DE93-015276] p 1613 N94-17894
Advanced optical fiber communication systems
[AD-A269120] p 1577 N94-18254
Automated ILA design for synchronous sequential circuits p 1397 N94-18340
Single phase dynamic CMOS PLA using charge sharing technique p 1397 N94-18341
An SEU immune logic family p 1398 N94-18342
Fault tolerant sequential circuits using sequence invariant state machines p 1398 N94-18344
VHF air/ground communications for air traffic control: A decision tree approach to system innovations, volume 2
[AD-A268632] p 1386 N94-18495
Color palette considerations for digital map displays
[AD-A269991] p 1462 N94-18679
DIGITAL TECHNIQUES
VHF air/ground communications for air traffic control: A decision tree approach to system innovations, volume 2
[AD-A268632] p 1386 N94-18495
VLSI for high-speed digital signal processing
[AD-A270406] p 1404 N94-18706
Digital control of Pritchard-Salamon systems
[REPT-93-33] p 1543 N94-19286
Implementation of the digital wave-processing experiment p 1329 N94-19628
DIGITAL TRANSDUCERS
Data acquisition in aerodynamic research
p 1431 N94-18644
DIHEDRAL ANGLE
Wideband electromagnetic scattering/analysis program: Far zone electromagnetic scattering from complex shapes using geometrical theory of diffraction
[AD-A268790] p 1384 N94-18187
DILUTION
Simulation of emittance dilution in electron storage ring from Compton backscattering
[DE93-017611] p 1386 N94-18503
DIMENSIONAL ANALYSIS
Multidimensional geometric quantization and U(1)-covering
[DE93-624770] p 1546 N94-17795
DIMENSIONAL MEASUREMENT
Simulation of quartz resonators p 1426 N94-18021
Survey of collision avoidance and ranging sensors for mobile robots, revision 1
[AD-A269846] p 1541 N94-18474
Overview of physical oceanographic measurements taken during the Mount Mitchell cruise to ROPME sea area
[DE93-018460] p 1497 N94-18494
DIODES
Development of a cryogenic heat pipe
[DE93-018448] p 1417 N94-18831
MOCVD-grown InGaAsP heterostructure diode lasers
[AD-A270848] p 1606 N94-19769
DIPPING
Embrittlement of surface mount solder joints by hot solder-dipped, gold-plated leads
[DE93-017659] p 1358 N94-18003
DIRAC EQUATION
Further on the current algebra of WZNW models at and away from criticality
[DE93-624809] p 1545 N94-17686
DIRECT CURRENT
DC and small-signal physical models for the AlGaAs/GaAs high electron mobility transistor
p 1401 N94-18370
DIRICHLET PROBLEM
Impulsive moving mirror model and impulsive differential equations in Banach space
[DE93-629867] p 1549 N94-18197
Finite beta plasma equilibrium in toroidally linked mirrors
[DE93-040318] p 1590 N94-19193
DISCHARGERS
Active spacecraft potential control: An ion emitter experiment for Cluster p 1330 N94-19634
DISCOVERY (ORBITER)
Return to space
[NASA-TM-109356] p 1332 N94-18955
DISCRIMINANT ANALYSIS (STATISTICS)
Application of the network discriminant function to learning
[AD-A268793] p 1540 N94-18189
DISCRIMINATION
Context-related scaling of human judgement in the multiplicative AHP, SMART and ELECTRE
[REPT-93-38] p 1611 N94-19158
DISPLACEMENT
Friction drive position transducer
[AD-D015851] p 1424 N94-17717
A benchmark bending test of a thick specimen. Part 1: Experiments
[AD-A268730] p 1360 N94-18325
Six degree of freedom fine motion positioning stage based on magnetic levitation
[DE93-017651] p 1446 N94-19547
DISPLACEMENT MEASUREMENT
Constraints on crustal structure from long period pressure and displacement measurements on the deep seafloor
[AD-A269931] p 1498 N94-18663
Fatigue resistant Ti3Al composites
[AD-A270305] p 1341 N94-18692
DISPLAY DEVICES
Polaron tunneling in high-temperature superconductors
[DE93-016880] p 1593 N94-17754
Research on man-machine productivity in aviation at Human Engineering Institute of Hangzhou University
[AD-A269952] p 1512 N94-18673
Overview of research in progress at the Center of Excellence
[NASA-CR-194329] p 1618 N94-19256
Results of a joint Navy/Air Force operational test to evaluate USAF Integrated Maintenance Information Systems (IMIS), Interactive Electronic Technical Manual (IETM) technology applied to the F/A-18 aircraft
[AD-A271322] p 1619 N94-19571
Electro-optics display research, test, and evaluation laboratory program
[AD-A270947] p 1408 N94-19751
DISSIPATION
Investigation of a matrix-model for the artificial dissipation in a cell vertex finite volume scheme for solving the Navier-Stokes equations
[DLR-FB-92-33] p 1409 N94-18076
DISSOLVED GASES
A one dimensional numerical model, with an application to the vertical distribution of dissolved oxygen in the ocean
[DE93-018481] p 1495 N94-17779
DISTRIBUTED PARAMETER SYSTEMS
A structured approach for modeling, analyzing and simulating real-time control systems
[REPT-93-044] p 1539 N94-17916
ControlShell: A real-time software framework
[AD-A269172] p 1523 N94-18879
Decomposition invariance of generalized steady-state of a 1-D diffusion system
[REPT-93-26] p 1550 N94-19141
DISTRIBUTED PROCESSING
Information technology resources assessment
[DE93-015276] p 1613 N94-17894
PARX, kernel of a system for massively parallel computers: Control of communication between processes
[ETN-93-94353] p 1533 N94-17976
An evolving infrastructure for scientific computing and the integration of new graphics technology
[DE93-017164] p 1520 N94-18133
The evolution of the PVM concurrent computing system
[DE93-017764] p 1534 N94-18482
Distributed Computing Design System (DCDS)
[AD-A270435] p 1534 N94-18509
Distributed memory parallel computers and computational fluid dynamics p 1413 N94-18568
Efficient transparent optimistic rollback recovery for distributed application programs
[AD-A268981] p 1522 N94-18696
A general theory of signal integration for fault-tolerant dynamic distributed sensor networks
[AD-A270316] p 1534 N94-18699
Computer-Aided Prototyping System (CAPS) within the software acquisition process. A case study
[AD-A268705] p 1522 N94-18786
Optimal eigenvalue computation on distributed-memory MIMD multiprocessors
[DE93-018337] p 1535 N94-18808
The intelligent processing of materials
[AD-A269250] p 1362 N94-18923
A programming paradigm for distributed-memory computers
[DE93-018336] p 1524 N94-19024
Pegasus project description
[MEMO-INF-92-75] p 1536 N94-19159
Pegasus: Operating system support for distributed multimedia systems
[MEMO-INF-92-76] p 1536 N94-19160
Experience in implementing a parallel file system
[DE93-012840] p 1536 N94-19188
ACOS: A performance based approach to build a parallel complex object server
[MEMO-INF-93-11] p 1537 N94-19198
Specification and verification of a dynamic leader election protocol in a broadcast network
[MEMO-INF-93-05] p 1558 N94-19228
Vectorized presentation-level services for scientific distributed applications
[DE93-018091] p 1537 N94-19253

Advances in architectural concepts to support distributed systems design
[MEMO-INF-93-17] p 1527 N94-19261
Toward a high performance distributed memory climate model
[DE93-019156] p 1494 N94-19298
PUMMA: Parallel Universal Matrix Multiplication Algorithms on distributed memory concurrent computers
[DE93-019163] p 1538 N94-19299
Process allocation on distributed memory parallel architectures
[ETN-93-95004] p 1538 N94-19514
The Cluster science data system: A distributed system to serve a wide international community
p 1330 N94-19638
Data-Machine Independence (DMI)
[DE93-018008] p 1539 N94-19734
NPAC distributed-parallel system feasibility study
[AD-A270972] p 1539 N94-19790
Semantic models for distributed data base management. Part 2: Development of an integral meta-model for data modeling and data base modeling
[REPT-93-08-PT-2] p 1620 N94-19795

DISTRIBUTION FUNCTIONS
On polynomials orthogonal with respect to an inner product involving differences (the general case)
[REPT-93-32] p 1551 N94-19285
Bahadur-Kiefer theorem beyond the largest observation
[PB93-197473] p 1558 N94-19325
Production and test of pseudo random elements
[ETN-93-95070] p 1559 N94-19610

DIVERTERS
Radiative divertor modeling studies
[DE93-018092] p 1590 N94-19290

DIVING (UNDERWATER)
Development of a new concept diver's watch
p 1429 N94-18041

DMSP SATELLITES
An investigation of methods for updating ionospheric scintillation models using topside in-situ plasma density measurements
[AD-A269872] p 1483 N94-18655
Atlas of SSM/I satellite ice concentration interpolated to operational ice model domains of the Arctic for 1992
[AD-A270306] p 1499 N94-18727

DOCUMENT STORAGE
EDMS: Engineering data management system. User's reference
[PB93-187391] p 1614 N94-18119
Networked MS windows 3.1 based classified document control system (CDOCS)
[DE93-017880] p 1617 N94-18984

DOCUMENTS
Document control and conduct of operations
[DE93-016555] p 1613 N94-17880
Bibliography of scientific publications of the Naval Biodynamics Laboratory, 1980 - 1992
[AD-A268886] p 1505 N94-18226
CRRES experiments, data collection, analysis and publication
[NASA-CR-192419] p 1482 N94-18610

DOPED CRYSTALS
Selective electrochemical wafer thinning for silicon characterization
[DE93-015083] p 1592 N94-17742
Photoemission studies of Zn, Co, and Gd substituted YBa2Cu3O(7-delta)
[DE93-017403] p 1597 N94-18498
Defect behavior of polycrystalline solar cell silicon
[DE93-018490] p 1468 N94-19016
Superconductivity and magnetism in niobium doped YBa2Cu3O7 related high-(Tc) ceramics
[DE93-018086] p 1601 N94-19049
Role of pressure in the study of fullerenes
[DE93-018839] p 1602 N94-19340
Final report on subcontract B076260 — borate synthesis
[DE93-019501] p 1604 N94-19565
Physical chemical studies of conducting polymers fundamental and applied
[AD-A270728] p 1374 N94-19574

DOPPLER EFFECT
Advances in laser cooling
[AD-A270152] p 1440 N94-18900
Moments of ambient Doppler spectra
[DE93-017948] p 1390 N94-19114

DOPPLER RADAR
The accuracy of monostatic and bistatic radar imaging by range-Doppler-processing with and without motion compensation
[DLR-FB-93-07] p 1384 N94-18071
Impact of shorter wavelengths on optical quality for laws
[NASA-CR-193873] p 1579 N94-18858
SPNDL: A concept for a small satellite Doppler lidar wind sounder p 1327 N94-19181

DOSAGE
Efficiency of fiber dispersion
[AD-A269740] p 1342 N94-18757
In situ observation of radiation induced amorphization of crystals with apatite structure
[DE93-018450] p 1599 N94-18816
Neutron-induced collision cascade mixing in Nb/V superlattices
[DE93-018575] p 1600 N94-18933

DOSIMETERS
Efficiency of fiber dispersion
[AD-A269740] p 1342 N94-18757

DOWNRANGE
An empirical evaluation of five circular error probable estimation techniques and a method for improving them
[AD-A266528] p 1556 N94-18397

DRAG
The performance of drag relations in the WAQUA storm surge model
[KNMI-TR-149] p 1496 N94-17923
High Reynolds number configuration development of a high-lift airfoil p 1306 N94-18424

DRIFT RATE
Time domain calculations of the second-order drift force on a floating two-dimensional object in current and waves
[REPT-93-13] p 1419 N94-19087

DROP TESTS
Vertical drop test of a Metro 3 aircraft
[AD-A270032] p 1318 N94-18789

DROP TOWERS
Free fall liquid column dynamics in a droptower
[LRT-WE-9-FB-6-1992] p 1379 N94-19491

DROPS (LIQUIDS)
Ship-produced cloud line of 13 July 1991
[DE93-016879] p 1472 N94-17986
Detection of single molecules in microspheres
[DE93-017776] p 1567 N94-18493
A coupled implicit solution method for turbulent spray combustion in propulsion systems p 1411 N94-18549
Metal slurry droplet and spray combustion
[AD-A269648] p 1349 N94-18736
Feasibility study: Monodisperse polymer particles containing laser-excitable dyes
[NASA-CR-194280] p 1373 N94-19402

DRYING
A comparison of wet and dry scrubbing systems for control of metals and dioxin/furan emissions from incinerators
[DE93-017446] p 1474 N94-18502
Evaluation of dried storage of platelets for transfusion: Physiologic integrity and hemostatic functionality
[AD-A270756] p 1507 N94-19593

DUALITY THEOREM
The theory of linear programming: Skew symmetric self-dual problems and the central path
[REPT-93-15] p 1524 N94-19089
Interior-point methodology for linear programming: Duality, sensitivity analysis and computational aspects
[REPT-93-28] p 1525 N94-19143
On the convergence of an unfeasible primal-dual interior-point method for convex programming
[REPT-93-34] p 1525 N94-19154
A polynomial primal-dual Dikin-type algorithm for linear programming
[REPT-93-36] p 1525 N94-19156

DUCTILITY
Several fundamental issues in the mechanics of inelastic behavior
[AD-A269455] p 1453 N94-18285
Fatigue resistant Ti3Al composites
[AD-A270305] p 1341 N94-18692
Development of ductile Fe3Al-based aluminides
[DE93-017865] p 1362 N94-18938
Tensile properties of as-cast iron-aluminide alloys
[DE93-017852] p 1363 N94-18975
Low-aluminum-content iron-aluminum alloys
[DE93-017862] p 1365 N94-19274
Dynamical behavior of octahedrite from the Henbury meteorite
[DE93-018834] p 1627 N94-19339

DUMMIES
Vertical drop test of a Metro 3 aircraft
[AD-A270032] p 1318 N94-18789

DUPLEXERS
Meteor burst communications improvement study
[AD-A270866] p 1393 N94-19793

DWARF STARS
Stellar coronae at the end of the main sequence: A Rosat survey of the late M dwarfs
[NASA-CR-194700] p 1628 N94-19794

DYE LASERS
The copper-pumped dye laser system at Lawrence Livermore National Laboratory
[DE93-014429] p 1435 N94-17723
Laser materials processing applications at Lawrence Livermore National Laboratory
[DE93-017976] p 1437 N94-18093
Single-transverse-mode, narrow-bandwidth pulsed tunable dye laser with hollow circular intracavity dielectric waveguide
[AD-A270022] p 1439 N94-18614
Multi-terrawatt, 100 fsec laser system using flashlamp-pumped, dye-converted Ti:sapphire as an amplifier
[DE93-017190] p 1440 N94-18889
Feasibility study: Monodisperse polymer particles containing laser-excitable dyes
[NASA-CR-194280] p 1373 N94-19402

DYES
Polarized thin films from dye-substituted polymers containing hydrophobically terminated stilbazolium radicals
[AD-D015873] p 1367 N94-17706
Detection of single molecules in microspheres
[DE93-017776] p 1567 N94-18493
Vibrational dynamics in photoinduced electron transfer
[DE93-040874] p 1567 N94-18533

DYNAMIC CHARACTERISTICS
Packaging, deployment, and panel design concepts for a truss-stiffened 7-panel precision deployable reflector with feed boom
[NASA-TM-109000] p 1333 N94-17765
The mystery of the perpetual motion clock of Geiser and Son p 1427 N94-18027
Universal measurement device for electronic watches and small clocks p 1427 N94-18029
Dynamic response analysis of composite structural members during missile launch
[AD-A270023] p 1332 N94-18760
A new approach to the study of the turbulence layer
[NASA-CR-194546] p 1487 N94-19397
Reanalysis of structure models
[ECL-93-07] p 1458 N94-19460
Study and modeling of compressible flows of flapper nozzle type potentiometric systems
[ETN-93-95012] p 1421 N94-19495
Measuring methods for evaluation of dynamic tyre properties
[ETN-93-95054] p 1381 N94-19650

DYNAMIC CONTROL
Autonomous neural network controllers for adaptive material handling
[AD-A268908] p 1540 N94-18331
Problem of control in an integral vision system: Use of a multi-agent system
[ETN-93-95007] p 1530 N94-19488

DYNAMIC LOADS
Predicted structural response of the lightweight-interceptor technology demonstration vehicle
[DE93-014676] p 1333 N94-17782
Shock-loading response of advanced materials
[DE93-018344] p 1455 N94-19033
The interpretation of optical caustics in the presence of dynamic non-uniform crack-tip motion histories: A study based on a higher order transient crack-tip expansion
[SM91-12] p 1456 N94-19130
Shock compression properties of silicon carbide
[DE93-019927] p 1373 N94-19271
Impact strength and indentation hardness of high-strength ceramics
[DE93-018833] p 1373 N94-19338
Simulation of dynamic material response with the PAGOSA code
[DE93-018285] p 1460 N94-19603

DYNAMIC MODELS
Joint stiffness estimation based on force sensor measurements in industrial manipulators
[REPT-92-053] p 1443 N94-17937
Efficient dynamic modeling of manipulators containing closed kinematic loops
[REPT-92-083] p 1444 N94-17940
A finite strain ring dynamical model for pneumatic tires
[AD-A269286] p 1444 N94-18266

DYNAMIC PRESSURE
Interferometric investigations of compressible dynamic stall over a transiently pitching airfoil
[NASA-TM-109380] p 1312 N94-19119

DYNAMIC PROGRAMMING
Using geometric techniques to improve dynamic programming algorithms for the economic lot-sizing problem and extensions
[PB93-197556] p 1528 N94-19330
Phasing strategies of the Hermes type space shuttle: Its optimization considering the thrust failures
[LAAS-93242] p 1544 N94-19361

Process allocation on distributed memory parallel architectures
[ETN-93-95004] p 1538 N94-19514
DYNAMIC RANGE
Advanced optical fiber communication systems
[AD-A269120] p 1577 N94-18254
Earth Penetration Radar Imaging System (EPRIS)
[DE93-019890] p 1391 N94-19542
DYNAMIC RESPONSE
Predicted structural response of the lightweight-interceptor technology demonstration vehicle
[DE93-014676] p 1333 N94-17782
The role of NASTRAN in the preliminary design cycle
p 1450 N94-17835
FAROW: A tool for fatigue and reliability of wind turbines
[DE93-017639] p 1465 N94-18001
Generalization of optimal control theory: Linear and nonlinear structures
[PB93-188621] p 1540 N94-18125
Dynamic response analysis of composite structural members during missile launch
[AD-A270023] p 1332 N94-18760
Effects of shock loading on a solid-solution strengthened superalloy
[DE93-018345] p 1362 N94-18809
Dynamic characterization of a lightweight, highly maneuverable spacecraft using modal and finite element analyses
[DE93-018095] p 1335 N94-18942
Shock-loading response of advanced materials
[DE93-018344] p 1455 N94-19033
Free fall liquid column dynamics in a droptower
[LRT-WE-9-FB-6-1992] p 1379 N94-19491
Simulation of dynamic material response with the PAGOSA code
[DE93-018285] p 1460 N94-19603
Blade and hub loads of ballistically damaged helicopter rotors
[AD-A270663] p 1319 N94-19781
DYNAMIC STABILITY
Synchrotron beam-loading stability with a higher RF harmonic
[DE93-014549] p 1573 N94-17726
The Twenty-First NASTRAN (R) Users' Colloquium
[NASA-CP-3203] p 1449 N94-17827
Error propagation equations and tables for estimating the uncertainty in high-speed wind tunnel test results
[DE93-018685] p 1311 N94-18275
DYNAMIC STRUCTURAL ANALYSIS
Improved omit set displacement recoveries in dynamic analysis p 1449 N94-17829
Modelling chaotic vibrations using NASTRAN
p 1449 N94-17830
Generalized seismic analysis p 1449 N94-17832
A noniterative improvement of Guyan reduction
p 1449 N94-17833
A methodology to model physical contact between structural components in NASTRAN
p 1450 N94-17836
Eigenvalue routines in NASTRAN: A comparison with the Block Lanczos method p 1450 N94-17838
Automatic A-set selection for dynamics analysis
p 1450 N94-17839
Dynamic response analysis of composite structural members during missile launch
[AD-A270023] p 1332 N94-18760
A general-purpose contact detection algorithm for nonlinear structural analysis codes
[DE93-018507] p 1455 N94-19039
Reanalysis of structure models
[ECL-93-07] p 1458 N94-19460
Computational Methods for Crashworthiness
[NASA-CP-3223] p 1458 N94-19465
Adaptive methods for nonlinear structural dynamics and crashworthiness analysis p 1458 N94-19466
Composite impact dynamics research at NASA LaRC: A review p 1458 N94-19467
Impact analysis of composite aircraft structures
p 1458 N94-19468
Explicit solution techniques for impact with contact constraints p 1459 N94-19470
Directions for computational mechanics in automotive crashworthiness p 1459 N94-19472
Crashdynamics with DYNA3D: Capabilities and research directions p 1460 N94-19475
Transient dynamics capability at Sandia National Laboratories p 1460 N94-19476
DYNAMIC TESTS
Dynamical behavior of tantalum
[DE93-017877] p 1362 N94-18919
DYNAMICAL SYSTEMS
The Twenty-First NASTRAN (R) Users' Colloquium
[NASA-CP-3203] p 1449 N94-17827
Modelling chaotic vibrations using NASTRAN
p 1449 N94-17830
Plasma properties research: Task 3
[DE93-017087] p 1583 N94-17854
An extension of Wolovich's definition of equivalence of linear systems
[MATHS-REPT-A-183] p 1547 N94-18069
The physics of cellular automata and coherence and chaos in classical many-body dynamical systems
[DE93-018021] p 1561 N94-18177
The 1992 annual report on scientific programs: A broad research program on the sciences of complexity
[DE93-018151] p 1561 N94-18178
Stability analysis through bifurcation theory, 1
p 1608 N94-18238
System dynamics and computer modeling expertise. A conceptual structure research inquiry
[AD-A269860] p 1560 N94-18410
Methods for description and control of dynamical systems and their application
[MPIS-17/1992] p 1553 N94-19522
Automated qualitative modeling of dynamic physical systems
[AD-A270835] p 1422 N94-19598
DYNAMOMETERS
Fluid dynamometer having fluid characteristic power absorption adjustment capability
[AD-D015820] p 1424 N94-17904

E

E GLASS
Mechanical properties and impact damage resistance of composites fabricated by low cost, vacuum assisted, resin transfer molding
[AD-A270361] p 1342 N94-18702
E REGION
RADARC HF ionospheric prediction program for OTH radar
[AD-A269557] p 1385 N94-18291
EARTH ATMOSPHERE
Surface fluxes important to cloud development
[DE93-016633] p 1488 N94-17715
Mixture distributions in climatological research
[DE93-014125] p 1488 N94-17942
Internal instability of nonparallel flow on an equatorial beta-plane
[AD-A268927] p 1490 N94-18486
EARTH CORE
Contributions from geomagnetic inverse theory to the study of hydromagnetic conditions near the core-mantle boundary
[NASA-CR-194303] p 1484 N94-18853
EARTH CRUST
Current (1985-1988) seismic activity in Belgium: Comparison with historical and instrumental seismic data
p 1482 N94-18624
Constraints on crustal structure from long period pressure and displacement measurements on the deep seafloor
[AD-A269931] p 1498 N94-18663
The use of velocity spectra for stacking receiver functions with application to IRIS/IDA stations OBNINSK (OBN) and ARTI (ARU), Russia
[AD-A269087] p 1483 N94-18717
Research on Earth's rotation and the effect of atmospheric pressure on vertical deformation and sea level variability
[NASA-CR-194300] p 1484 N94-18838
Shock propagation in crustal rock
[AD-A270148] p 1485 N94-18899
Analysis of regional deformation and strain accumulation data adjacent to the San Andreas fault
[NASA-CR-194072] p 1487 N94-19428
The interpretation of crustal dynamics data in terms of plate motions and regional deformation near plate boundaries
[NASA-CR-194302] p 1487 N94-19432
EARTH GRAVITATION
What can gravimetry contribute to recent and current tectonics in Belgium? p 1482 N94-18626
Research on Earth's rotation and the effect of atmospheric pressure on vertical deformation and sea level variability
[NASA-CR-194300] p 1484 N94-18838
Gravity and the geoid in the Nepal Himalaya
[NASA-CR-194166] p 1463 N94-19430
EARTH IONOSPHERE
Problems related to stimulated electromagnetic emissions, strong turbulence and ionospheric modification
[IRF-SR-212] p 1480 N94-17720
An investigation of methods for updating ionospheric scintillation models using topside in-situ plasma density measurements
[AD-A269872] p 1483 N94-18655
Using computerized tomography to determine ionospheric structures
[DE93-018903] p 1485 N94-19001
A physical model for one-dimension and time-dependent ionosphere. Part 1: Description of the model
[DE93-627958] p 1486 N94-19255
EARTH MAGNETOSPHERE
Solar flares and magnetospheric particles: Investigations based upon the ONR-602 and ONR-604 experiments
[AD-A269495] p 1629 N94-18705
ISTP Global Geospace Science. Energy transfer in geospace
[NASA-TM-109239] p 1620 N94-18851
Convection algorithms for magnetospheric particles
[AD-A270103] p 1493 N94-18871
The Wave Experiment Consortium
p 1328 N94-19623
The wideband plasma wave investigation
p 1328 N94-19627
EARTH MANTLE
The use of velocity spectra for stacking receiver functions with application to IRIS/IDA stations OBNINSK (OBN) and ARTI (ARU), Russia
[AD-A269087] p 1483 N94-18717
Contributions from geomagnetic inverse theory to the study of hydromagnetic conditions near the core-mantle boundary
[NASA-CR-194303] p 1484 N94-18853
EARTH MOVEMENTS
High resolution geological site characterization utilizing ground motion data
[AD-A268926] p 1481 N94-18485
Macroseismic study of the Dour (Belgium) earthquakes of 22 March 1987 and of Gulpen (Belgium) 17 October 1988 p 1482 N94-18625
Instrumentation developed at the Royal Observatory of Belgium for measuring slow displacements of the Earth
p 1483 N94-18628
Ground movements associated with gas hydrate production
[DE93-019887] p 1486 N94-19018
EARTH ORBITAL ENVIRONMENTS
NSWCWODET participation in Space Shuttle mission STS-46
[AD-A268875] p 1332 N94-18321
Solar flares and magnetospheric particles: Investigations based upon the ONR-602 and ONR-604 experiments
[AD-A269495] p 1629 N94-18705
LDEF update
[NASA-TM-109352] p 1334 N94-18921
Static Computer Memory Integrity Testing (SCMIT): An experiment flown on STS-40 as part of GAS payload G-616 p 1325 N94-19169
Materials flight experiment carrier capability and future flight experiments on Hitchhiker-M carrier program
p 1326 N94-19175
Limited Duration of Candidate Materials Exposure Experiment (LDCE): A Complex Autonomous Payload (CAP) using a Get Away Special (GAS) canister
p 1326 N94-19176
EARTH RADIATION BUDGET
Biophysical characterization and surface radiation balance
[NASA-CR-194659] p 1470 N94-17762
EARTH RADIATION BUDGET EXPERIMENT
The Earth radiation budget experiment: Overview of data-processing and error sources
[KNMI-TR-146] p 1481 N94-18142
EARTH RESOURCES
The ecological and environmental impacts of manmade marshes
[AD-A269213] p 1475 N94-18885
EARTH ROTATION
Research on Earth's rotation and the effect of atmospheric pressure on vertical deformation and sea level variability
[NASA-CR-194300] p 1484 N94-18838
EARTH SCIENCES
JPRS report: Science and technology. Central Eurasia: Earth Sciences
[JPRS-UES-93-004] p 1461 N94-19209
EARTH SURFACE
The land component of the global climate system with adequate spatial resolution
[DE93-018951] p 1474 N94-18183
EARTH TIDES
Instrumentation developed at the Royal Observatory of Belgium for measuring slow displacements of the Earth
p 1483 N94-18628
DYNLET1 model formulation and user's guide
[AD-A269843] p 1498 N94-18723
Acoustic travel time perturbations due to an internal tide and internal wave field in the Barents Sea
[AD-A270879] p 1499 N94-19580

EARTHQUAKE RESISTANT STRUCTURES
Generalization of optimal control theory: Linear and nonlinear structures
[PB93-188621] p 1540 N94-18125
EARTHQUAKES
Heterogeneous slip and rupture models of the San Andreas fault zone based upon three-dimensional earthquake tomography
[DE93-015037] p 1480 N94-17898
Belgian Royal Observatory Communications, Series A, No. 104, Geophysics Series No. 175
[COMMUNICATIONS-SER-A-104] p 1482 N94-18622
Historical seismicity of Hainaut, Flanders and Artois p 1482 N94-18623
Current (1985-1988) seismic activity in Belgium: Comparison with historical and instrumental seismic data p 1482 N94-18624
Macroseismic study of the Dour (Belgium) earthquakes of 22 March 1987 and of Gulpen (Belgium) 17 October 1988 p 1482 N94-18625
Analysis of regional bodywave phases from earthquakes in western China, part 2
[AD-A270125] p 1485 N94-18873
ECHOCARDIOGRAPHY
Characterization of fluid physics effects on cardiovascular response to microgravity (G-572) p 1323 N94-19163
ECOLOGY
Compilation of 1992 annual reports of the Navy ELF communications system ecological monitoring program, volume 1
[AD-A269569] p 1386 N94-18473
Compilation of 1992 annual reports of the navy ELF communications system ecological monitoring program. Volume 3: Tabs G - I
[AD-A269727] p 1388 N94-18741
International Symposium on the Ecological Effects of Arctic Airborne Contaminants — abstracts
[AD-A269955] p 1475 N94-18775
Environmental Research Program
[DE93-019101] p 1477 N94-19105
ECONOMIC ANALYSIS
The carbon dioxide emissions game: Playing the net
[DE93-017670] p 1471 N94-17821
Setting the global thermostat with an exhaustible tradeable permit system
[DE93-012911] p 1472 N94-17891
Parametric analysis of the ARIES-3D-He-3 tokamak reactor
[DE93-018293] p 1587 N94-18803
Using geometric techniques to improve dynamic programming algorithms for the economic lot-sizing problem and extensions
[PB93-197556] p 1528 N94-19330
ECONOMIC FACTORS
Fifteenth Symposium on Biotechnology for Fuels and Chemicals: Program and Abstracts
[DE93-010005] p 1376 N94-18045
ECONOMIC IMPACT
Mathematical sciences, technology, and economic competitiveness
[LC-91-60253] p 1514 N94-19478
ECOSYSTEMS
Development and evaluation of alternative radioanalytical methods, including mass spectrometry for marine materials
[DE93-625117] p 1345 N94-17691
Environmental Research Program
[DE93-019101] p 1477 N94-19105
EDDY CURRENTS
High resolution SQUID magnetometry for non-destructive evaluation
[AD-A268884] p 1447 N94-18225
EDDY VISCOSITY
Research activities at the Center for Modeling of Turbulence and Transition p 1410 N94-18546
Two-equation models for low-Reynolds-number variants p 1415 N94-18587
Direct and large eddy simulation of turbulence: Summary of the state of the art 1993 p 1416 N94-18594
Large-eddy simulation of turbulent diffusion in stably stratified shear flow p 1416 N94-18595
EDGE DETECTION
Progress in edge detection
[RR-914-I] p 1529 N94-19396
EDUCATION
Magnetic Fusion Energy Technology Fellowship: Report on survey of institutional coordinators
[DE93-014646] p 1583 N94-17739
Safeguarding our energy future
[DE93-016001] p 1466 N94-18109
Origins of solar activity. First year report, AASERT grant
[AD-A268848] p 1629 N94-18222
Teaching a computer simulation course with Ada
[AD-A267901] p 1521 N94-18308
The CMU masters in software engineering core curriculum
[AD-A268983] p 1521 N94-18453
The development of a course sequence in real-time systems design
[AD-A269459] p 1522 N94-18726
Interdisciplinary training in life science (FY 1991 ASSERT)
[AD-A269220] p 1512 N94-18886
A teaching tool for linear programming
[AD-A270240] p 1523 N94-18905
California Student Get Away Special Payload GAS-450 p 1324 N94-19164
The GAMCIT gamma ray burst detector p 1324 N94-19168
Undergraduate origins of recent science and engineering doctorate recipients
[NSF-92-332] p 1610 N94-19389
Undergraduate course and curriculum development program and calculus and the bridge to calculus program: 1992 awards
[NSF-93-24] p 1610 N94-19446
Mathematical sciences, technology, and economic competitiveness
[LC-91-60253] p 1514 N94-19478
A foundation for the 21st Century: A progressive framework for the National Science Foundation. Report of the National Science Board Commission on the future of the National Science Foundation
[NSB-92-196] p 1611 N94-19618
Guide to programs, fiscal year 1993
[NSF-92-78] p 1633 N94-19620
EFFERENT NERVOUS SYSTEMS
Coupled neural-dendritic processes: Cooperative stochastic effects and the analysis of spike trains
[AD-A270041] p 1506 N94-18793
EFFICIENCY
Efficiency of fiber dispersion
[AD-A269740] p 1342 N94-18757
EFFLUENTS
Advances in passive-remote and extractive Fourier transform infrared systems
[DE93-017402] p 1478 N94-19241
EIGENVALUES
Parallel inverse iteration with reorthogonalization
[DE93-012867] p 1533 N94-17693
Finite-dimensional singletons of the quantum anti de Sitter algebra
[DE93-624771] p 1546 N94-17810
Improved omit set displacement recoveries in dynamic analysis p 1449 N94-17829
Eigenvalue routines in NASTRAN: A comparison with the Block Lanczos method p 1450 N94-17838
Automatic A-set selection for dynamics analysis p 1450 N94-17839
A free boundary eigenvaue problem
[IPP-6/310] p 1584 N94-17981
Optimal eigenvalue computation on distributed-memory MIMD multiprocessors
[DE93-018337] p 1535 N94-18808
The Fourier analysis technique and epsilon-pseudo-eigenvalues
[DE93-018805] p 1551 N94-19337
EIGENVECTORS
Parallel inverse iteration with reorthogonalization
[DE93-012867] p 1533 N94-17693
Eigenvalue routines in NASTRAN: A comparison with the Block Lanczos method p 1450 N94-17838
EINSTEIN EQUATIONS
About symmetry of the gravitational action
[DE93-629955] p 1608 N94-18252
EJECTA
Imaging and blackbody emission spectra of hot particulates generated during laser ablation
[DE93-015818] p 1439 N94-18724
ELASTIC BARS
The longitudinal free vibrations of a fixed-free two-phase elastic bar
[AD-A268768] p 1453 N94-18387
ELASTIC BENDING
Blade and hub loads of ballistically damaged helicopter rotors
[AD-A270663] p 1319 N94-19781
ELASTIC DEFORMATION
Elastic properties of a polyimide film determined by Brillouin scattering and mechanical techniques
[DE93-017404] p 1368 N94-18098
New test method to determine modulus of elasticity of rocket grain material
[AD-A269758] p 1377 N94-18758
Effect of internal heating during hot compression testing on the stress-strain behavior and hot working characteristics of alloy 304L
[DE93-012701] p 1362 N94-18917
ELASTIC PROPERTIES
Implementation of mixed formulation elements in PC/NASTRAN p 1449 N94-17828
Improved omit set displacement recoveries in dynamic analysis p 1449 N94-17829
Phenomenological explanation of elastic anomalies in superlattices
[DE93-017475] p 1594 N94-17871
Elastic properties of a polyimide film determined by Brillouin scattering and mechanical techniques
[DE93-017404] p 1368 N94-18098
Strength optimization of C/Al metal matrix composites produced from prepregs
[DLR-FB-92-39] p 1340 N94-18122
Several fundamental issues in the mechanics of inelastic behavior
[AD-A269455] p 1453 N94-18285
Continuum modeling of materials that can undergo martensitic phase transitions
[AD-A268767] p 1360 N94-18386
The longitudinal free vibrations of a fixed-free two-phase elastic bar
[AD-A268768] p 1453 N94-18387
Constraints on crustal structure from long period pressure and displacement measurements on the deep seafloor
[AD-A269931] p 1498 N94-18663
JPRS report: Science and technology. Central Eurasia: Materials science
[JPRS-UMS-93-002] p 1339 N94-18833
HEMP 3D: A finite difference program for calculating elastic-plastic flow, appendix B
[AD-A269171] p 1418 N94-18878
A constitutive theory for rigid polyurethane foam
[DE93-011596] p 1372 N94-19059
A particle method for history-dependent materials
[DE93-018696] p 1456 N94-19060
Molecular dynamics modeling of the mechanical behavior of metallic multilayers
[DE93-017972] p 1365 N94-19263
Contribution to the identification of nonlinear behavior laws in material mechanics
[ECL-92-36] p 1458 N94-19411
ELASTIC SCATTERING
The rise of accuracy for the multichannel scattering problem solving
[DE93-630145] p 1608 N94-18253
Unitary (pi)(pi)N model of N* excitations in (pi)N and (gamma)N reactions
[DE93-017422] p 1568 N94-18826
Gamma scattering in condensed matter with high intensity Moessbauer radiation
[DE93-019461] p 1601 N94-19031
ELASTIC WAVES
Experimental investigation of wave and fracture phenomena in impacted ceramics: Experiments on sapphire
[AD-A270040] p 1372 N94-18792
Liquid sound speeds at pressure from the optical analyzer technique
[DE93-018362] p 1563 N94-19151
Seismic studies of the geologic structure and physical properties of the seabed
[AD-A270895] p 1500 N94-19747
ELASTODYNAMICS
Wave propagation near explosive sources
[AD-A270102] p 1418 N94-18870
Inverse scattering of surface waves: A new look at surface consistency
[REPT-93-25] p 1486 N94-19140
ELASTOMERS
Anomalous dielectric properties of carbon-black filled elastomers
[AD-A269378] p 1370 N94-18280
Strained ring energetic binders
[AD-A269056] p 1377 N94-18491
Polymer technology publication. Series no. 14, 1993
[PB93-195984] p 1372 N94-19052
ELASTOPLASTICITY
Measurement and analysis of three 1.5-GPa shock-wave profiles in copper
[DE93-016559] p 1451 N94-17864
ELECTRIC ARCS
Arc detection and protection in high-power antenna systems
[DE93-013272] p 1382 N94-17695
Impedence calculation with recursive folding
[ETN-93-95049] p 1406 N94-19387
ELECTRIC AUTOMOBILES
Mechanically refuelable zinc/air electric vehicle cells
[DE93-016446] p 1394 N94-17770
ELECTRIC BATTERIES
Mixed polymer electrolyte and mixed polymer electrolyte battery
[AD-D015856] p 1394 N94-17718

Evaluation of the consumption of electronic clocks
p 1408 N94-18033
Studies on gel electrolyte based on nitrile-butadiene copolymers
[AD-A269450] p 1370 N94-18282
Environmentally assisted cracking of nickel anode substrates in Li/SOCl2 cells: An engineering approach
[DE93-015130] p 1405 N94-18928
Current-potential characteristics of electrochemical systems
[DE93-040303] p 1352 N94-19192
Rationale for the power standard
[ESA-PSS-02-10-VOL-2-ISSUE-] p 1338 N94-19516

ELECTRIC CHOPPERS
The use of chopper spectrometers for cold-to-epithermal neutron scattering at IPNS
[DE93-017798] p 1598 N94-18531

ELECTRIC CONNECTORS
Analysis of high contact resistances associated with hermetic and lightning arrestor connectors
[DE93-014850] p 1395 N94-17783
Performance evaluations of demountable electrical connections
[DE93-017399] p 1396 N94-18135

ELECTRIC CONTACTS
Design and test of a low jitter metal to metal contact solid dielectric switch
[DE93-016957] p 1394 N94-17755
Analysis of high contact resistances associated with hermetic and lightning arrestor connectors
[DE93-014850] p 1395 N94-17783

ELECTRIC CURRENT
Compound-lens injector for a 19-MeV, 700-kA electron beam
[DE93-013752] p 1573 N94-17698
Application of piezoelectric stress gauges to the measurement of fast-rise-time multimegampere electric currents
[DE93-017625] p 1429 N94-18102
Toroidal solenoids in the electromagnetic field and Aharonov-Casher effect
[DE93-629861] p 1566 N94-18152
Response of transmission line systems to pulse excitation by radiation and injection methods
[DE93-015112] p 1384 N94-18210
A tunable CMOS constant current source
p 1401 N94-18369
Oligomer and mixed-metal compounds, potential multielectron transfer catalysts
[DE93-019592] p 1350 N94-19017

ELECTRIC DISCHARGES
Comparison of the modeling solutions with the hydrogen discharge data
[DE93-015115] p 1565 N94-17797
Coupled MHD and transport analysis of improved confinement D3-D discharges
[DE93-016985] p 1585 N94-18057
Broadband RF spectrum from electrostatic discharges on spacecraft
[AD-A269543] p 1385 N94-18287
Improved optical pseudospark switch
[AD-D015821] p 1580 N94-18947
Modelling ideal gas fluorides laser plasmas
[ETN-93-95073] p 1592 N94-19613

ELECTRIC FIELDS
Electrically controlled liquid-crystal heat valve
[AD-D015872] p 1443 N94-17705
Variable time-step integration for intense field effects
[DE93-013296] p 1382 N94-17909
Crystal optics of high energy gamma-beams
[DE93-630228] p 1577 N94-18217
Relaxation of polar orientational order in nonlinear optical polymers by second harmonic generation
[AD-A269059] p 1370 N94-18515
Numerical modelling of fringing fields and their use for complex permittivity measurements at high frequencies
[AD-A270198] p 1388 N94-18782
Office of Naval Research Publications/Patents /Presentations/Honors report, 1 October 1992 - 30 September 1993
[AD-A270037] p 1632 N94-18791
Convection algorithms for magnetospheric particles
[AD-A270103] p 1493 N94-18871
Three dimensional multipole decomposition of fields
[DE93-018530] p 1389 N94-19053
Correction of longitudinal errors in accelerators for heavy-ion fusion
[DE93-018656] p 1575 N94-19106
Current-potential characteristics of electrochemical systems
[DE93-040303] p 1352 N94-19192
The spherical probe Electric Field and Wave Experiment for the Cluster mission p 1328 N94-19624
The Electron Drift Instrument for Cluster
p 1329 N94-19630

ELECTRIC FILTERS
Effects of harmonics on EMI/RFI filters operating under nonlinear loading conditions
[AD-A269559] p 1388 N94-18769

ELECTRIC GENERATORS
Report to Congress: Comprehensive Program Plan for Advanced Turbine Systems
[DE93-016718] p 1467 N94-18475

ELECTRIC IGNITION
Aluminum powder/water reaction ignited by electrical pulsed power
[AD-A269223] p 1376 N94-17840

ELECTRIC MOTOR VEHICLES
SUNRAYCE 1993: Working safely with lead-acid batteries and photovoltaic power systems
[DE93-016553] p 1464 N94-17712
The ANL electric vehicle battery R&D program for DOE-EHP
[DE93-017414] p 1394 N94-17750
Mechanically refuelable zinc/air electric vehicle cells
[DE93-016446] p 1394 N94-17770
S/EV 1992: Solar and Electric Vehicles. Volume 1: Proceedings
[DE93-015762] p 1445 N94-18307
Conceptual design of a sodium sulfur cell for US electric van batteries
[DE93-018683] p 1405 N94-19035

ELECTRIC MOTORS
Compatibility of refrigerants and lubricants with motor materials, volume 1
[DE93-040216] p 1350 N94-18895
Compatibility of refrigerants and lubricants with motor materials, volume 2
[DE93-040217] p 1350 N94-18896
Compatibility of refrigerants and lubricants with motor materials, volume 3
[DE93-040218] p 1352 N94-19191
Design of power electronics for TVC EMA systems
[NASA-CR-193839] p 1407 N94-19642

ELECTRIC POTENTIAL
A tunable CMOS constant current source
p 1401 N94-18369
Office of Naval Research Publications/Patents /Presentations/Honors report, 1 October 1992 - 30 September 1993
[AD-A270037] p 1632 N94-18791
Plasma contactor development for Space Station
[NASA-TM-106425] p 1587 N94-18861
Correction of longitudinal errors in accelerators for heavy-ion fusion
[DE93-018656] p 1575 N94-19106
Simulation of transient effects in the heavy ion fusion injectors
[DE93-018658] p 1575 N94-19107

ELECTRIC POWER
EIA publications directory, 1992
[DE93-016833] p 1617 N94-18983

ELECTRIC POWER PLANTS
Learning control of large-scale systems
[MATHS-REPT-A-186] p 1544 N94-19408

ELECTRIC POWER SUPPLIES
Design of power electronics for TVC EMA systems
[NASA-CR-193839] p 1407 N94-19642

ELECTRIC POWER TRANSMISSION
Effects of harmonics on EMI/RFI filters operating under nonlinear loading conditions
[AD-A269559] p 1388 N94-18769

ELECTRIC PROPULSION
The ANL electric vehicle battery R&D program for DOE-EHP
[DE93-017414] p 1394 N94-17750
Low power arcjet system spacecraft impacts
[NASA-TM-106307] p 1336 N94-17856
S/EV 1992: Solar and Electric Vehicles. Volume 1: Proceedings
[DE93-015762] p 1445 N94-18307
Constant-thrust orbit-raising transfer charts
[AD-A269088] p 1334 N94-18718

ELECTRIC STIMULI
The brain electrical activity in different G situations
[AERONAUTICA-ACTA-A-372-199]
p 1507 N94-19523

ELECTRIC SWITCHES
Design and test of a low jitter metal to metal contact solid dielectric switch
[DE93-016957] p 1394 N94-17755
Plasma-puff initiation of high Coulomb transfer switches
[NASA-CR-193186] p 1591 N94-19441

ELECTRICAL ENGINEERING
Program descriptions
[NSF-92-123] p 1531 N94-19619

ELECTRICAL FAULTS
High-power microwave breakdown of dielectric interfaces
[AD-A268844] p 1397 N94-18318
On timing faults in digital logic circuits
[AD-A268714] p 1402 N94-18400
Heavy Ion Fusion Injector Program
[DE93-018706] p 1575 N94-18997
Impedence calculation with recursive folding
[ETN-93-95049] p 1406 N94-19387
Results of a joint Navy/Air Force operational test to evaluate USAF Integrated Maintenance Information Systems (IMIS), Interactive Electronic Technical Manual (IETM) technology applied to the F/A-18 aircraft
[AD-A271322] p 1619 N94-19571

ELECTRICAL IMPEDANCE
A radial transmission line material measurement apparatus
[DE93-018508] p 1394 N94-17780
Optically controlled active impedance element and filters employing the same
[AD-D015863] p 1396 N94-18062
Numerical modelling of fringing fields and their use for complex permittivity measurements at high frequencies
[AD-A270198] p 1388 N94-18782

ELECTRICAL INSULATION
Workshop on multifactor aging mechanisms and models
[AD-A268668] p 1397 N94-18311
Compatibility of refrigerants and lubricants with motor materials, volume 1
[DE93-040216] p 1350 N94-18895

ELECTRICAL MEASUREMENT
Electric measurement of Lavet motors
p 1408 N94-18022
Control of torque in stepping motors of quartz watches and clocks p 1408 N94-18023
Numerical modelling of fringing fields and their use for complex permittivity measurements at high frequencies
[AD-A270198] p 1388 N94-18782
Bienzyme sensors based on electrically wired peroxidase
[AD-A271364] p 1374 N94-19585

ELECTRICAL PROPERTIES
Vibrational and electronic properties of clusters and ultrathin films
[DE93-012291] p 1367 N94-17678
Lattice damage in ion-implanted compound semiconductors and its effect on electrical activation
[DE93-015907] p 1593 N94-17845
Ultra-shallow box-like profiles fabricated by pulsed UV-laser doping process
[DE93-017221] p 1437 N94-18083
Performance evaluations of demountable electrical connections
[DE93-017399] p 1396 N94-18135
Photorefractive tungsten bronze crystals for optical computing
[AD-A268859] p 1596 N94-18320
Intracellular physiology of the rat suprachiasmatic nucleus: Electrical properties, neurotransmission and effects of neuromodulators
[AD-A268829] p 1505 N94-18538
Conceptual design of a sodium sulfur cell for US electric van batteries
[DE93-018683] p 1405 N94-19035
Isolation mechanisms in III-V devices
[AD-A271197] p 1605 N94-19717

ELECTRICAL RESISTANCE
Electron mobility in high resistivity silicon
[REPT-93-007] p 1565 N94-17933
Deep ion implantation into manganin to modify its pressure and electrothermocharacteristics
[DE93-630229] p 1359 N94-18218
Theoretical and experimental studies of quantum wells
[AD-A271180] p 1606 N94-19741

ELECTRICAL RESISTIVITY
The Aerocapacitor: A carbon aerogel based supercapacitor
[DE93-016537] p 1395 N94-17849
Excimer laser induced permanent electrical conductivity and nanostructures in polymers
[DE93-015965] p 1368 N94-17946
AEOLUS-IT MHD simulation code based on a toroidally incompressible plasma model
[DE93-788461] p 1586 N94-18157
Resonant absorption of Alfven waves near a neutral point
[DE93-628761] p 1586 N94-18172
High pressure metallization of Mott Insulators: Magnetic, structural and electronic properties
[DE93-018295] p 1404 N94-18805
Pressure induced metallization of the Mott Insulator 6(sub 2)
[DE93-018296] p 1600 N94-18969
Studies of deep levels in high resistivity silicon detectors irradiated by high fluence fast neutrons using a thermally stimulated current spectrometer
[DE93-016133] p 1602 N94-19258

Metallization and charge-transfer gap closure of transition-metal iodides under pressure
[DE93-040301] p 1353 N94-19538
Electro-optic beam steering using non-linear organic materials
[AD-A270809] p 1374 N94-19577

ELECTRO-OPTICAL EFFECT
Photo-induced and electrooptic properties of (Pb,La)(Zr,Ti)O3 films
[DE93-017496] p 1371 N94-18519
Operational parameters of an opto-electronic neural network employing fixed planar holographic interconnects
[DE93-018795] p 1433 N94-19000
RF phase stabilization for RF photocathode gun through electro-optical monitoring
[DE93-019059] p 1406 N94-19310

ELECTRO-OPTICS
Quantum optoelectronics technical digest, 1993. Voolume 8: Postconference edition
[AD-A268209] p 1576 N94-17887
Evaluation of materials proposed for the construction of the Plasma Electrode Pockels Cell (PEPC) on beamlet
[DE93-016952] p 1584 N94-17988
Calibration of a high frequency monostatic acoustic echosounder
[AD-A268901] p 1481 N94-18229
Integrated photonics research volume 10. Conference edition
[AD-A269298] p 1577 N94-18298
Optical computing. Organization of the 1993 Photonics Science Topical Meetings. Technical digest series, volume 7
[AD-A269025] p 1578 N94-18332
Quantum Optoelectronics. Organization of the 1993 photonics science topical meetings. Technical digest series, volume 8
[AD-A269026] p 1578 N94-18488
Advanced Solid-State Lasers/Compact Blue-Green Lasers. 1993 technical digest series. Volume 2: Organization of the 1993 photonics science topical meetings
[AD-A269058] p 1438 N94-18492
Photo-induced and electrooptic properties of (Pb,La)(Zr,Ti)O3 films
[DE93-017496] p 1371 N94-18519
Photonics in Switching: Organization of the 1993 photonics science topical meetings. Technical digest
[AD-A269024] p 1578 N94-18528
Optical and transport properties of metallic and semiconductor nanostructures
[AD-A270009] p 1598 N94-18609
Integration of ferroelectric/semiconductor thin films for SLM and photorefractive applications
[AD-A268645] p 1598 N94-18633
Integrated Photonics Research: Post-deadline papers
[AD-A269232] p 1609 N94-18908
Ultrafast Electronics and Optoelectronics: Summaries of papers. Technical digest conference edition
[AD-A269233] p 1405 N94-18909
The star identification, pointing and tracking system of UVSTAR, an attached payload instrument system for the Shuttle Hitchhiker-M platform p 1326 N94-19179
Optoelectronic packaging: A review
[DE93-040059] p 1515 N94-19535
Electro-optic beam steering using non-linear organic materials
[AD-A270809] p 1374 N94-19577
Ionized-cluster beam/partially ionized beam deposition of electro-optical and nonlinear optical organic materials and device development
[AD-A270832] p 1604 N94-19596
The deposition of electro-optic films on semiconductors
[AD-A270823] p 1605 N94-19664
Electro-optics display research, test, and evaluation laboratory program
[AD-A270947] p 1408 N94-19751

ELECTROCATALYSTS
Ionic and molecular environments in heterogeneous electrocatalysis: Studies by radioactive labeling and LEED/AUGER spectroscopy
[AD-A268850] p 1567 N94-18766
Electrocatalysts for oxygen electrodes
[DE93-040446] p 1354 N94-19653

ELECTROCHEMICAL CORROSION
Workshop on multifactor aging mechanisms and models
[AD-A268668] p 1397 N94-18311

ELECTROCHEMICAL OXIDATION
Kinetic studies of electrochemical generation of Ag(II) ion and catalytic oxidation of selected organics
[DE93-016601] p 1352 N94-19240

ELECTROCHEMISTRY
Applications of scanning tunneling microscopy to electrochemistry
[AD-A269129] p 1348 N94-18255
Novel electrochemical materials prepared by sol-gel chemistry
[AD-A269060] p 1578 N94-18405
Ionic and molecular environments in heterogeneous electrocatalysis: Studies by radioactive labeling and LEED/AUGER spectroscopy
[AD-A268850] p 1567 N94-18766
The effects of radiolysis on the corrosion and stress corrosion behavior of 316 stainless steels
[DE93-019933] p 1363 N94-19021
Energy Conversion and Storage Program
[DE93-018602] p 1469 N94-19098
Current-potential characteristics of electrochemical systems
[DE93-040303] p 1352 N94-19192

ELECTRODEPOSITION
Potential dependent structural changes of underpotentially deposited copper on an iodine treated platinum surface determined in situ by surface EXAFS and its polarization dependence
[AD-A269890] p 1360 N94-18687
Polycrystalline thin-film cadmium telluride solar cells fabricated by electrodeposition
[DE93-018201] p 1468 N94-18944
Use of shape memory alloys in the robust control of smart structures
[AD-A270827] p 1366 N94-19594

ELECTRODES
The Aerocapacitor: A carbon aerogel based supercapacitor
[DE93-016537] p 1395 N94-17849
Surface second harmonic generation studies of stepped Ag(111) electrode surfaces
[AD-A265205] p 1594 N94-17876
Field emitter array RF amplifier development project, phase 1, option 1
[AD-A268687] p 1396 N94-18293
Ionic and molecular environments in heterogeneous electrocatalysis: Studies by radioactive labeling and LEED/AUGER spectroscopy
[AD-A268850] p 1567 N94-18766
Current-potential characteristics of electrochemical systems
[DE93-040303] p 1352 N94-19192
Bienzyme sensors based on electrically wired peroxidase
[AD-A271364] p 1374 N94-19585
Electrocatalysts for oxygen electrodes
[DE93-040446] p 1354 N94-19653
Photosynthetic reaction centers as active molecular electronic components, phase 1
[AD-A271388] p 1503 N94-19757

ELECTROKINETICS
Electrokinetic transport of heterogeneous particles in suspensions
[NASA-CR-194478] p 1353 N94-19367

ELECTROLESS DEPOSITION
Solderability perservative coatings: Electroless tin versus organic azoles
[DE93-017634] p 1370 N94-18477
Current-potential characteristics of electrochemical systems
[DE93-040303] p 1352 N94-19192

ELECTROLYTES
Mechanically refuelable zinc/air electric vehicle cells
[DE93-016446] p 1394 N94-17770
Surface second harmonic generation studies of stepped Ag(111) electrode surfaces
[AD-A265205] p 1594 N94-17876
Studies on gel electrolyte based on nitrile-butadiene copolymers
[AD-A269450] p 1370 N94-18282

ELECTROLYTIC CELLS
Oxygen reduction at a stabilized zirconia interface with Y(1-x)Ca(x)MnO3 or La(1-x)Sr(x)MnO3 cathode materials
[DE93-015681] p 1593 N94-17747
Fuel cell systems program plan, fiscal year 1993
[DE93-017828] p 1466 N94-18103

ELECTROMAGNETIC ABSORPTION
Absorption and x ray measurements from ultra-intense laser-plasma interactions
[DE93-016538] p 1585 N94-18115
Optical and transport properties of metallic and semiconductor nanostructures
[AD-A270009] p 1598 N94-18609

ELECTROMAGNETIC COMPATIBILITY
Electromagnetic environmental effects compendium
[AD-A270441] p 1387 N94-18512
Laboratory test and evaluation report of the essex model 60C-0037-2 molecular sieve oxygen generating system
[AD-A269967] p 1445 N94-18778

ELECTROMAGNETIC FIELDS
Advanced methods for the computation of particle beam transport and the computation of electromagnetic fields and beam-cavity interactions
[DE93-018160] p 1573 N94-17807
Toroidal solenoids in the electromagnetic field and Aharonov-Casher effect
[DE93-629861] p 1566 N94-18152
The asymptotic theory of the reflection and transmission of a pulsed electromagnetic beam field at a planar interface separating two dispersive media
[AD-A269033] p 1385 N94-18404
Theory of electromagnetic waves propagating in nonlinear anisotropic optical materials
[AD-A269305] p 1386 N94-18469
Compilation of 1992 annual reports of the Navy ELF communications system ecological monitoring program, volume 1
[AD-A269569] p 1386 N94-18473
Electromagnetic environmental effects compendium
[AD-A270441] p 1387 N94-18512
Compilation of 1992 annual reports of the navy ELF communications system ecological monitoring program. Volume 3: Tabs G - I
[AD-A269727] p 1388 N94-18741
Compilation of 1992 annual reports of the navy ELF communications system ecological monitoring program, volume 2
[AD-A269726] p 1388 N94-18751

ELECTROMAGNETIC INTERACTIONS
Gauge coupling unification in superstring derived standard-like models
[DE93-624801] p 1607 N94-17950
Gauge unification of fundamental forces: The story of success
[DE93-624813] p 1383 N94-17952
Extraction of Z(prime) coupling data from Z(prime) (yields) jj at the LHC and SSC
[DE93-018576] p 1570 N94-19096

ELECTROMAGNETIC INTERFERENCE
Low power arcjet system spacecraft impacts
[NASA-TM-106307] p 1336 N94-17856
Broadband RF spectrum from electrostatic discharges on spacecraft
[AD-A269543] p 1385 N94-18287
Electromagnetic environmental effects compendium
[AD-A270441] p 1387 N94-18512
Effects of harmonics on EMI/RFI filters operating under nonlinear loading conditions
[AD-A269559] p 1388 N94-18769
Laboratory test and evaluation report of the essex model 60C-0037-2 molecular sieve oxygen generating system
[AD-A269967] p 1445 N94-18778

ELECTROMAGNETIC MEASUREMENT
Survey of collision avoidance and ranging sensors for mobile robots, revision 1
[AD-A269846] p 1541 N94-18474
STAFF (Spatio-Temporal Analysis of Field Fluctuations) experiment for the Cluster mission p 1328 N94-19625

ELECTROMAGNETIC PROPERTIES
Waveguide and resonator perturbation techniques for measuring chirality and non-reciprocity of biisotropic materials
[PB93-187243] p 1384 N94-18116
Electromagnetic environmental effects compendium
[AD-A270441] p 1387 N94-18512

ELECTROMAGNETIC PULSES
PVDF measurement of soft x ray induced shock and filter debris impulse
[DE93-017633] p 1382 N94-17806
Wake field in electron-positron plasmas
[DE93-624929] p 1584 N94-17955
Limitations on the fidelity of 100 fs pulses produced by chirped pulse amplification
[DE93-017167] p 1396 N94-17991
Response of transmission line systems to pulse excitation by radiation and injection methods
[DE93-015112] p 1384 N94-18210
The asymptotic theory of the reflection and transmission of a pulsed electromagnetic beam field at a planar interface separating two dispersive media
[AD-A269033] p 1385 N94-18404
Self-organized criticality and the Barkhausen effect in amorphous and polycrystalline metals
[AD-A269617] p 1361 N94-18735
Effect of EMP fields on cell membrane potentials
[DE93-015819] p 1503 N94-19341

ELECTROMAGNETIC RADIATION
Microwave scattering from TAE modes
[DE93-018170] p 1583 N94-17809
Wake field in electron-positron plasmas
[DE93-624929] p 1584 N94-17955
Crystal optics of high energy gamma-beams
[DE93-630228] p 1577 N94-18217

Theory of electromagnetic waves propagating in nonlinear anisotropic optical materials
[AD-A269305] p 1386 N94-18469
Electromagnetic environmental effects compendium
[AD-A270441] p 1387 N94-18512
Polarimetric statistics of electromagnetic waves scattered by distributed targets
[PB93-195907] p 1389 N94-18951
STAFF (Spatio-Temporal Analysis of Field Fluctuations) experiment for the Cluster mission p 1328 N94-19625

ELECTROMAGNETIC SCATTERING
Wideband electromagnetic scattering/analysis program: Far zone electromagnetic scattering from complex shapes using geometrical theory of diffraction
[AD-A268790] p 1384 N94-18187
Dispersion effects on millimeter wavelength attenuation efficiencies for a variety of fibers
[AD-A268992] p 1386 N94-18454
Solution of the Poisson equation with application to radar imaging
[PB93-195865] p 1389 N94-18950
Polarimetric statistics of electromagnetic waves scattered by distributed targets
[PB93-195907] p 1389 N94-18951
Comparative evaluation of Kirchhoff, perturbation, and full wave methods for rough surface scattering
[AD-A271198] p 1392 N94-19718

ELECTROMAGNETIC SHIELDING
Electromagnetic environmental effects compendium
[AD-A270441] p 1387 N94-18512

ELECTROMAGNETIC WAVE TRANSMISSION
Problems related to stimulated electromagnetic emissions, strong turbulence and ionospheric modification
[IRF-SR-212] p 1480 N94-17720
Optical design for photonics. Organization of the 1993 Photonics Science Topical Meetings. Technical digest series, volume 9
[AD-A269027] p 1578 N94-18396
The asymptotic theory of the reflection and transmission of a pulsed electromagnetic beam field at a planar interface separating two dispersive media
[AD-A269033] p 1385 N94-18404
Theory of electromagnetic waves propagating in nonlinear anisotropic optical materials
[AD-A269305] p 1386 N94-18469
Millimeter wave reflectivity measurement system
[AD-A270008] p 1387 N94-18601
Comparative evaluation of Kirchhoff, perturbation, and full wave methods for rough surface scattering
[AD-A271198] p 1392 N94-19718

ELECTROMAGNETISM
General geometry PIC for MIMD computers
[AD-A269085] p 1534 N94-18767
Engineering research, development and technology thrust area report, FY92
[DE93-016334] p 1632 N94-18856

ELECTROMECHANICAL DEVICES
Atomic-scale friction measurements using friction force microscopy. Part 1: General principles and new measurement techniques
[AD-A270749] p 1446 N94-19678
Microtribology of magnetic media
[AD-A271209] p 1407 N94-19722

ELECTROMECHANICS
Pulsed power supply for Nova Upgrade
[DE93-019626] p 1441 N94-19307
The electromechanical properties of tetragonal BaTiO3 and PbTiO3 single crystals
[DE93-019008] p 1603 N94-19550

ELECTROMIGRATION
The microstructural mechanism of electromigration failure in narrow interconnects of Al alloys
[DE93-018598] p 1365 N94-19282

ELECTROMYOGRAPHY
Control of shoulder muscles during goal directed movements
[PB93-195139] p 1504 N94-18080

ELECTRON ACCELERATORS
Three-dimensional simulation analysis of the first sections of a standing-wave free-electron laser two-beam accelerator
[DE93-016977] p 1436 N94-17869

ELECTRON BEAMS
Compound-lens injector for a 19-MeV, 700-kA electron beam
[DE93-013752] p 1573 N94-17698
Measuring emittance using beam position monitors
[DE93-014470] p 1434 N94-17709
Decoherence and recoherence of beam in phase space
[DE93-014885] p 1573 N94-17784
Three-dimensional simulation analysis of the first sections of a standing-wave free-electron laser two-beam accelerator
[DE93-016977] p 1436 N94-17869
Plasma klystron amplifier
[AD-D015819] p 1395 N94-17903
FEL experiment with a focusing wiggler
[DE93-768586] p 1438 N94-18160
Simulation of emittance dilution in electron storage ring from Compton backscattering
[DE93-017611] p 1386 N94-18503
Designs for a 10.6 micrometer electromagnetic wiggler Free-Electron Laser (FEL)
[AD-A269695] p 1439 N94-18576
A tunable compact high power far-infrared grating free-electron laser
[AD-A269875] p 1440 N94-18771
Novel electron beam cathode
[AD-A270106] p 1404 N94-18872
Foil support structure for large electron guns
[DE93-018478] p 1322 N94-18890
Laser powered beam conditioner for free-electron lasers and synchrotrons
[DE93-017821] p 1441 N94-18974
Coherence and linewidth studies of a 4-nm high power FEL
[DE93-018533] p 1441 N94-19030
The Electron Drift Instrument for Cluster
p 1329 N94-19630
Compact free electron lasers for medical applications
[AD-A271272] p 1442 N94-19729

ELECTRON BUNCHING
Study of coupled-bunch collective effects in the ALS
[DE93-019236] p 1575 N94-19558

ELECTRON CAPTURE
Electron paramagnetic resonance of the ns(sup 1) centers in crystals
[DE93-628793] p 1595 N94-18173
Search for resonant electron transfer and double excitation in Kr(sup 34+) + H2 collisions
[DE93-018776] p 1569 N94-18999

ELECTRON CYCLOTRON HEATING
Experiments on nonlinear absorption of ECH waves in MTX and a comparison with theory
[DE93-019158] p 1589 N94-19074
Electron cyclotron resonance heating in the microwave tokamak experiment
[DE93-018083] p 1590 N94-19289

ELECTRON DENSITY (CONCENTRATION)
Using computerized tomography to determine ionospheric structures
[DE93-018904] p 1485 N94-19002
The effects of magnetic storm phases on f-layer irregularities from auroral to equatorial latitudes
[AD-A267388] p 1486 N94-19008
A physical model for one-dimension and time-dependent ionosphere. Part 1: Description of the model
[DE93-627958] p 1486 N94-19255

ELECTRON DIFFRACTION
Optical frequency doubling at adsorbates of silver(110) surface
[ETN-93-94837] p 1603 N94-19355

ELECTRON EMISSION
RF vacuum microelectronics
[AD-A269454] p 1396 N94-18284
Novel electron beam cathode
[AD-A270106] p 1404 N94-18872
Low-energy continuum-electron emission at 0 degrees from O(q+) + He collisions
[DE93-018777] p 1570 N94-19108
Experimental study of interactions of highly charged ions with atoms at keV energies
[DE93-040222] p 1571 N94-19257

ELECTRON ENERGY
Nonlinear Thomson scattering of intense laser pulse from beams and plasmas
[AD-A269556] p 1438 N94-18460
Simulation of emittance dilution in electron storage ring from Compton backscattering
[DE93-017611] p 1386 N94-18503
Designs for a 10.6 micrometer electromagnetic wiggler Free-Electron Laser (FEL)
[AD-A269695] p 1439 N94-18576
Atomic resolution electron energy loss spectroscopy in the scanning transmission electron microscope
[DE93-015334] p 1352 N94-19239
ICRF direct electron heating experiments in TFTR
[DE93-017657] p 1590 N94-19273
Radiative divertor modeling studies
[DE93-018092] p 1590 N94-19290

ELECTRON GUNS
The Intense Slow Positron Source concept: A theoretical perspective on a proposed INEL Facility
[DE93-013675] p 1564 N94-17738
Foil support structure for large electron guns
[DE93-018478] p 1322 N94-18890
RF phase stabilization for RF photocathode gun through electro-optical monitoring
[DE93-019059] p 1406 N94-19310

ELECTRON IMPACT
Electron impact excitation of copper atoms
[DE93-017995] p 1363 N94-18939
Electron impact polarization and correlation properties of the inert gases
[DE93-018358] p 1570 N94-19125

ELECTRON MICROSCOPES
Tunneling microscopy of semiconductors
[AD-A270232] p 1600 N94-18904
Atomic resolution electron energy loss spectroscopy in the scanning transmission electron microscope
[DE93-015334] p 1352 N94-19239

ELECTRON MICROSCOPY
Construction of a scanning tunneling microscope in liquid media: Studies of the preparation of the graphite surface and the chemical cleaning of indium phosphide
[ECL-92-25] p 1353 N94-19406
A Sandia Technology Bulletin: Testing technology, July 1993
[DE93-040197] p 1633 N94-19537

ELECTRON MOBILITY
Electron mobility in high resistivity silicon
[REPT-93-007] p 1565 N94-17933
IR materials producibility
[AD-A268849] p 1577 N94-18223
Suppressed electron-phonon scattering in superlattices
[AD-A270834] p 1604 N94-19597
Isolation mechanisms in III-V devices
[AD-A271197] p 1605 N94-19717

ELECTRON ORBITALS
Relativistic configuration interaction calculation of the correlation energies of heliumlike ions
[DE93-018093] p 1571 N94-19201

ELECTRON PARAMAGNETIC RESONANCE
Electron paramagnetic resonance of the ns(sup 1) centers in crystals
[DE93-628793] p 1595 N94-18173

ELECTRON PHONON INTERACTIONS
Solid-state dynamics in novel semiconductor nanostructures
[AD-A271249] p 1605 N94-19725

ELECTRON PLASMA
Transformation of energy and momentum due to Landau damping in space
[DE93-624921] p 1581 N94-17689
Optical design for photonics. Organization of the 1993 Photonics Science Topical Meetings. Technical digest series, volume 9
[AD-A269027] p 1578 N94-18396

ELECTRON PROBES
Atomic resolution electron energy loss spectroscopy in the scanning transmission electron microscope
[DE93-015334] p 1352 N94-19239
PEACE: A Plasma Electron and Current Experiment
p 1329 N94-19632

ELECTRON RECOMBINATION
Examination of charge carriers dynamics in silicon and silicon solar cells with photoinduced laser beam deflection
[ETN-93-95060] p 1470 N94-19654

ELECTRON SCATTERING
Compound-lens injector for a 19-MeV, 700-kA electron beam
[DE93-013752] p 1573 N94-17698
Spin-integrated and spin-dependent photoelectron diffraction
[DE93-016546] p 1565 N94-17850
Low-energy continuum-electron emission at 0 degrees from O(q+) + He collisions
[DE93-018777] p 1570 N94-19108
Single sided tomography of extremely large dense objects
[DE93-017993] p 1580 N94-19268
An ab initio Monte Carlo study of low energy positron and electron implantation in elemental metals and multilayers
[DE93-019847] p 1603 N94-19541
Suppressed electron-phonon scattering in superlattices
[AD-A270834] p 1604 N94-19597

ELECTRON SPECTROSCOPY
Guidelines for the expression of uncertainties in surface chemical analysis by Auger Electron Spectroscopy (AES) and X ray Photoelectron Spectroscopy (XPS)
[NPL-DMM(A)-99] p 1346 N94-17900

ELECTRON SPIN
Electron paramagnetic resonance of the ns(sup 1) centers in crystals
[DE93-628793] p 1595 N94-18173

ELECTRON STATES
Characterization of diamond film nucleation and growth surface
[AD-A269400] p 1597 N94-18459

Molecular nonlinear optical susceptibilities in condensed phases
[AD-A270200] p 1568 N94-18784

Electron impact polarization and correlation properties of the inert gases
[DE93-018358] p 1570 N94-19125

Theoretical and experimental studies of quantum wells
[AD-A271180] p 1606 N94-19741

ELECTRON TRANSFER

Pulse radiolytic studies of electron transfer processes and applications to solar photochemistry
[DE93-018715] p 1464 N94-17781

Vibrational dynamics in photoinduced electron transfer
[DE93-040874] p 1567 N94-18533

Search for resonant electron transfer and double excitation in Kr(sup 34+) + H2 collisions
[DE93-018776] p 1569 N94-18999

Oligomer and mixed-metal compounds, potential multielectron transfer catalysts
[DE93-019592] p 1350 N94-19017

Low-energy continuum-electron emission at 0 degrees from O(q+) + He collisions
[DE93-018777] p 1570 N94-19108

LLE Review
[DE93-017618] p 1602 N94-19123

Kinetic studies of electrochemical generation of Ag(II) ion and catalytic oxidation of selected organics
[DE93-016601] p 1352 N94-19240

Experimental study of interactions of highly charged ions with atoms at keV energies
[DE93-040222] p 1571 N94-19257

ICRF direct electron heating experiments in TFTR
[DE93-017857] p 1590 N94-19273

The direct synthesis of organic and organometallic-containing MICA-type aluminosilicates
[DE93-019001] p 1373 N94-19321

ELECTRON TRANSITIONS

Hydrolysis reaction and positronium decay in silica gels
[AD-A270028] p 1371 N94-18713

ELECTRON TUNNELING

Synthesis and study of high-T(sub c) superconducting electronic materials
[AD-A268851] p 1402 N94-18390

Tunneling microscopy of semiconductors
[AD-A270232] p 1600 N94-18904

Construction of a scanning tunneling microscope in liquid media: Studies of the preparation of the graphite surface and the chemical cleaning of indium phosphide
[ECL-92-25] p 1353 N94-19406

ELECTRON-POSITRON PAIRS

Measurement of the energy of horizontal cosmic ray muons
[KFK-5163] p 1631 N94-19505

ELECTRON-POSITRON PLASMAS

Wake field in electron-positron plasmas
[DE93-624929] p 1584 N94-17955

ELECTRONIC COUNTERMEASURES

Electromagnetic environmental effects compendium
[AD-A270441] p 1387 N94-18512

ELECTRONIC EQUIPMENT

A radial transmission line material measurement apparatus
[DE93-018508] p 1394 N94-17780

Microstructurally based thermomechanical fatigue lifetime model of solder joints for electronic applications
[DE93-016508] p 1452 N94-17995

Synthesis techniques and analysis tool for on-chip fault-tolerance
[AD-A269148] p 1521 N94-18259

ELECTRONIC EQUIPMENT TESTS

VLSI for high-speed digital signal processing
[AD-A270406] p 1404 N94-18706

Attitude sensor package p 1325 N94-19172

ELECTRONIC MAIL

Securing electronic mail: The risks and future of electronic mail
[DE93-017187] p 1383 N94-17994

ELECTRONIC PACKAGING

Low power signal processing research at Stanford
p 1393 N94-18351

Silicon MCM substrates for integration of 3-5 photonic devices and CMOS IC's
[DE93-017894] p 1405 N94-19112

Optoelectronic packaging: A review
[DE93-040059] p 1515 N94-19535

ELECTRONIC TRANSDUCERS

Data acquisition in aerodynamic research
p 1431 N94-18644

ELECTRONIC WARFARE

Military applications of high-accuracy frequency standards and clocks
[AD-A269303] p 1430 N94-18299

ELECTRONICS

Results of a joint Navy/Air Force operational test to evaluate USAF Integrated Maintenance Information Systems (IMIS), Interactive Electronic Technical Manual (IETM) technology applied to the F/A-18 aircraft
[AD-A271322] p 1619 N94-19571

ELECTRONS

Compound-lens injector for a 19-MeV, 700-kA electron beam
[DE93-013752] p 1573 N94-17698

Correlated charge-changing ion-atom collisions
[DE93-018717] p 1564 N94-17775

Spin-integrated and spin-dependent photoelectron diffraction
[DE93-016546] p 1565 N94-17850

Observations of MeV electrons and scattered light from intense, subpicosecond laser-plasma interactions
[DE93-017153] p 1435 N94-17855

Variable time-step integration for intense field effects
[DE93-013296] p 1382 N94-17909

Global zones of particle precipitation as observed EXOS-C
[AD-A268758] p 1481 N94-18467

Harmonic generation at high intensities
[DE93-018632] p 1572 N94-19283

An ab initio Monte Carlo study of low energy positron and electron implantation in elemental metals and multilayers
[DE93-019847] p 1603 N94-19541

Suppressed electron-phonon scattering in superlattices
[AD-A270834] p 1604 N94-19597

PEACE: A Plasma Electron and Current Experiment
p 1329 N94-19632

ELECTROPHORESIS

Electrokinetic transport of heterogeneous particles in suspensions
[NASA-CR-194478] p 1353 N94-19367

ELECTROPHYSIOLOGY

Intracellular physiology of the rat suprachiasmatic nucleus: Electrical properties, neurotransmission and effects of neuromodulators
[AD-A268829] p 1505 N94-18538

ELECTROSLAG REFINING

Commercialization effort in support of electroslag-casting technology
[DE93-017988] p 1366 N94-19733

ELECTROSTATIC PROBES

The spherical probe Electric Field and Wave Experiment for the Cluster mission p 1328 N94-19624

ELECTROSTATICS

Electrostatic micrometers: Recent developments and perspectives of uses in clock and watch making
p 1425 N94-18014

Nonlinear Thomson scattering of intense laser pulse from beams and plasmas
[AD-A269556] p 1438 N94-18460

Designs for a 10.6 micrometer electromagnetic wiggler Free-Electron Laser (FEL)
[AD-A269695] p 1439 N94-18576

Heavy Ion Fusion Injector Program
[DE93-018706] p 1575 N94-18997

Three dimensional multipole decomposition of fields
[DE93-018530] p 1389 N94-19053

ELECTROSTRICTION

Office of Naval Research Publications/Patents /Presentations/Honors report, 1 October 1992 - 30 September 1993
[AD-A270037] p 1632 N94-18791

ELEMENTARY EXCITATIONS

Synthesis and study of high-T(sub c) superconducting electronic materials
[AD-A268851] p 1402 N94-18390

Molecular nonlinear optical susceptibilities in condensed phases
[AD-A270200] p 1568 N94-18784

ELEMENTARY PARTICLE INTERACTIONS

The PAPAGENO Partonic Monte-Carlo Program
[DE93-018524] p 1571 N94-19247

ELEVATION

Gravity and the geoid in the Nepal Himalaya
[NASA-CR-194166] p 1463 N94-19430

ELLIPSOMETRY

In-situ growth monitoring of molecular beam epitaxy processes
[AD-A269287] p 1598 N94-18616

ELLIPTIC DIFFERENTIAL EQUATIONS

Functional analysis of subelliptic operators on lie groups
[PB93-194793] p 1547 N94-18077

L(sub p)-regularity of subelliptic operators on Lie groups
[PB93-194785] p 1549 N94-18948

A priori estimates and existence of positive solutions of a superlinear polyharmonic equation
[REPT-93-12] p 1550 N94-19086

Existence of a maximal solution for quasimonotone elliptic systems
[REPT-93-30] p 1550 N94-19153

A comparison of iterative methods for a model coupled system of elliptic equations
[DE93-040482] p 1553 N94-19655

ELLIPTIC FUNCTIONS

Feasibility of a wind-ellipse criterion in a vortex advisory system for Schiphol Airport
[NLR-TP-91384-U] p 1315 N94-17733

Programmable linear phase digital filters
[AD-A270413] p 1404 N94-18709

A priori estimates and existence of positive solutions of a superlinear polyharmonic equation
[REPT-93-12] p 1550 N94-19086

ELLIPTICAL ORBITS

Schroedinger's hope
[AD-A270988] p 1581 N94-19772

EMBEDDED COMPUTER SYSTEMS

Embedded Computer Performance Measurement (ECPM). Advanced avionics subsystems and technology multiprocessor ECPM software documentation
[AD-A269921] p 1320 N94-18658

A research program in empirical computer science
[NASA-CR-194069] p 1530 N94-19429

EMBRITTLEMENT

Embrittlement of surface mount solder joints by hot solder-dipped, gold-plated leads
[DE93-017659] p 1358 N94-18003

Effects of irradiation temperature on embrittlement of nuclear pressure vessel steels
[DE93-015428] p 1359 N94-18245

Low-aluminum-content iron-aluminum alloys
[DE93-017862] p 1365 N94-19274

EMISSION

Land-use related sources of CO2, CH4 and N2O: Current global emissions and projections for the period 1990-2100
[PB93-194819] p 1475 N94-18949

EMISSION SPECTRA

Analysis of neon soft x ray spectra from short-pulse laser-produced plasmas
[DE93-014420] p 1582 N94-17708

Rapid analysis of mixed waste samples via the optical emission from laser initiated microplasmas
[DE93-014563] p 1582 N94-17727

Observations of comets with the IUE
[NASA-CR-193652] p 1624 N94-17843

Spectral radiance measurements on a bluff body stabilized flame: Characterization of the IR signature
[PB93-195899] p 1347 N94-18081

Imaging and blackbody emission spectra of hot particulates generated during laser ablation
[DE93-015818] p 1439 N94-18724

Determination of nitrogen to carbon abundance ratios from transition layer emission lines
[NASA-CR-191921] p 1622 N94-19421

Spectrophotometry of emission-line stars in the magellanic clouds
[NASA-CR-194082] p 1628 N94-19425

Ultraviolet observations of clusters of Wolf-Rayet stars in the SBm3 galaxy NGC 4214 and Ultraviolet and optical observations of LINER's
[NASA-CR-194307] p 1622 N94-19431

Spectrally and temporally resolved laser emission from vertical cavity surface emitting lasers
[DE93-019410] p 1442 N94-19563

EMISSIVITY

Development of a multi-point two-color pyrometer for tube and wall temperature and emissivity measurement at the CFFF
[DE93-014716] p 1429 N94-18207

EMITTANCE

Measuring emittance using beam position monitors
[DE93-014470] p 1434 N94-17709

Simulation of emittance dilution in electron storage ring from Compton backscattering
[DE93-017611] p 1386 N94-18503

Longitudinal beam dynamics with RF noise
[DE93-018649] p 1574 N94-18994

Induction accelerator development for heavy ion fusion
[DE93-019228] p 1591 N94-19479

Transverse beam combiner for ILSE
[DE93-019239] p 1591 N94-19559

Total hemispherical emittance of Niobium-1 percent zirconium fuel cladding for the SP-100 space reactor
[AD-A270456] p 1576 N94-19589

EMITTERS

Quantum optoelectronics technical digest, 1993. Voolume 8: Postconference edition
[AD-A268209] p 1576 N94-17887

RF vacuum microelectronics
[AD-A269454] p 1396 N94-18284

Field emitter array RF amplifier development project, phase 1, option 1
[AD-A268687] p 1396 N94-18293
EMPLOYMENT
Computing professionals: Changing needs for the 1990's
[B-030] p 1515 N94-19401
ENCAPSULATING
Polymerizable lipids in the development of controlled release carriers
[AD-D015789] p 1368 N94-17982
ENDOCRINOLOGY
Space research on organs and tissues
p 1503 N94-19214
ENERGETIC PARTICLES
Dense energetic compounds of C, H, N, and O atoms. 3: 5-(4-nitro-(1,2,5) oxadiazolyl)-5H-(1,2,3) triazolo (4,5-c)(1,2,5) oxadiazole
[AD-A268715] p 1338 N94-18314
The LET spectrum and its uncertainty during the CRRES mission
[AD-A269977] p 1630 N94-18676
Solar flares and magnetospheric particles: Investigations based upon the ONR-602 and ONR-604 experiments
[AD-A269495] p 1629 N94-18705
Advanced fusion diagnostics
[DE93-040085] p 1589 N94-19133
High rate resistive plate chambers: An inexpensive, fast, large area detector of energetic charged particles for accelerator and non-accelerator applications
[DE93-018664] p 1572 N94-19545
RAPID: The imaging energetic particle spectrometer on Cluster p 1329 N94-19633
ENERGY CONSERVATION
Safeguarding our energy future
[DE93-016001] p 1466 N94-18109
Energy Efficiency and Renewable Energy Program
[DE93-017936] p 1468 N94-18986
ENERGY CONSUMPTION
Techniques for low consumption circuits
p 1428 N94-18032
Evaluation of the consumption of electronic clocks
p 1408 N94-18033
Seasonal variability of wind electric potential in the US
[DE93-018182] p 1493 N94-19051
ENERGY CONVERSION
Energy Conversion and Storage Program
[DE93-018602] p 1469 N94-19098
ENERGY CONVERSION EFFICIENCY
Simplified processing for 23 percent-efficient silicon concentrator solar cells
[DE93-015018] p 1464 N94-17787
Performance mapping of the STM4-120 kinematic Stirling engine using a statistical design of experiments method
[DE93-015132] p 1464 N94-17798
Fin-efficiency calculation for condensation in the presence of noncondensable gases
[DE93-017684] p 1409 N94-18004
Feasibility survey of thermoelectric conversion technology using semiconductors
[DE93-520882] p 1595 N94-18105
First on-sun test of NaK pool-boiler solar receiver
[DE93-015003] p 1466 N94-18208
Tunable synchronously pumped intracavity two-stage optical frequency upconversion
[AD-A269105] p 1438 N94-18250
Silicon concentrator solar cell research
[DE93-018489] p 1468 N94-19015
Defect behavior of polycrystalline solar cell silicon
[DE93-018490] p 1468 N94-19016
ENERGY DISSIPATION
Evaluation of the consumption of electronic clocks
p 1408 N94-18033
Conductive garments to prevent Radio-Frequency (RF) burns
[AD-D015832] p 1512 N94-18730
Conversion of ADC pulse heights into MIP units: NUMASS test data, September 1991
[USIP-93-03] p 1432 N94-18848
EXANA: A program for analysing extended energy loss fine structures, EXELFS spectra
[USIP-92-01] p 1525 N94-19145
Atomic resolution electron energy loss spectroscopy in the scanning transmission electron microscope
[DE93-015334] p 1352 N94-19239
Contribution to the study of the additional losses in coil elements used in static converters
[ECL-92-60] p 1406 N94-19297
Energy loss measurement of cosmic ray muons
[KFK-5158] p 1631 N94-19504
ENERGY DISTRIBUTION
Chemical dynamics in time and energy space
[DE93-018595] p 1350 N94-19097
ENERGY GAPS (SOLID STATE)
Fundamental properties and device applications of Ge(x)Si(1-x)/Si superlattices (supplemental)
[AD-A269212] p 1600 N94-18884
Studies of deep levels in high resistivity silicon detectors irradiated by high fluence fast neutrons using a thermally stimulated current spectrometer
[DE93-016133] p 1602 N94-19258
ENERGY LEVELS
Proof of the feasibility of coherent and incoherent schemes for pumping a gamma ray laser
[AD-A269173] p 1440 N94-18880
Studies of deep levels in high resistivity silicon detectors irradiated by high fluence fast neutrons using a thermally stimulated current spectrometer
[DE93-016133] p 1602 N94-19258
Unimolecular photodissociation dynamics of ketene (CH2CO): The singlet/triplet branching ratio and experimental observation of the vibrational level thresholds of the transition-state
[DE93-019252] p 1352 N94-19304
ENERGY METHODS
A free energy simulation method based study of interfacial segregation
[DE93-019462] p 1364 N94-19032
ENERGY POLICY
Visibility impairment assessment: Importance of using theoretically derived optical characterizations
[DE93-017147] p 1470 N94-17749
Cost effective energy strategies for the reduction of CO2 emissions in the United States: Country report for ETSAP Annex 4
[DE93-016842] p 1472 N94-17852
Safeguarding our energy future
[DE93-016001] p 1466 N94-18109
Trends in Information Management at Department of Energy Headquarters
[DE93-017197] p 1615 N94-18496
National Program Plan Fuel Cells in Transportation
[DE93-017557] p 1469 N94-19346
ENERGY REQUIREMENTS
Regenerative fuel cells for High Altitude Long Endurance Solar Powered Aircraft
[DE93-016991] p 1465 N94-17853
Techniques for low consumption circuits
p 1428 N94-18032
Ultra low power CMOS technology
p 1401 N94-18373
ENERGY SPECTRA
On the difference caused by CP violation in the energy spectra of pions in K(sup (+-))(yields)(pi)(+-)(pi)(+-)(pi)-+ decays
[DE93-624828] p 1564 N94-17687
Investigation of the relative abundance of heavy versus light nuclei in primary cosmic rays using underground muon bundles
[DE93-017601] p 1630 N94-17818
EXANA: A program for analysing extended energy loss fine structures, EXELFS spectra
[USIP-92-01] p 1525 N94-19145
Measurement of the energy of horizontal cosmic ray muons
[KFK-5163] p 1631 N94-19505
ENERGY STORAGE
Regenerative fuel cells for High Altitude Long Endurance Solar Powered Aircraft
[DE93-016991] p 1465 N94-17853
Energy Conversion and Storage Program
[DE93-018602] p 1469 N94-19098
Pulsed power supply for Nova Upgrade
[DE93-019626] p 1441 N94-19307
ENERGY TECHNOLOGY
Cost effective energy strategies for the reduction of CO2 emissions in the United States: Country report for ETSAP Annex 4
[DE93-016842] p 1472 N94-17852
Fuel cell systems program plan, fiscal year 1993
[DE93-017828] p 1466 N94-18103
Safeguarding our energy future
[DE93-016001] p 1466 N94-18109
An evolving infrastructure for scientific computing and the integration of new graphics technology
[DE93-017164] p 1520 N94-18133
Workshop on Innovation in Materials Processing and Manufacture: Exploratory Concepts for Energy Applications
[DE93-017674] p 1467 N94-18478
Trends in Information Management at Department of Energy Headquarters
[DE93-017197] p 1615 N94-18496
EIA publications directory, 1992
[DE93-016833] p 1617 N94-18983
Energy Efficiency and Renewable Energy Program
[DE93-017936] p 1468 N94-18986
Energy Conversion and Storage Program
[DE93-018602] p 1469 N94-19098
ENERGY TRANSFER
Thermodynamic theory of exergy analysis
[PB93-187847] p 1607 N94-18120
Experimental and theoretical investigation of surface chemistry induced by direct and indirect electronic excitation
[AD-A268846] p 1348 N94-18221
Proton transfer dynamics and cluster ion fragmentation in phenol/ammonia cLusters
[AD-A269133] p 1348 N94-18256
Temperature, kinetic energy, and rotational temperature dependences for the reactions of Ar(+)(2)P3/2 with O2 and CO
[AD-A268974] p 1567 N94-18526
The use of chopper spectrometers for cold-to-epithermal neutron scattering at IPNS
[DE93-017798] p 1598 N94-18531
Full Boltzmann discrete spectral wave model, implementation and nondimensional tests
[AD-A269885] p 1498 N94-18685
ISTP Global Geospace Science. Energy transfer in geospace
[NASA-TM-109239] p 1620 N94-18851
Shock propagation in crustal rock
[AD-A270148] p 1485 N94-18899
Advanced fusion diagnostics
[DE93-040085] p 1589 N94-19133
Excited atomic bromine energy transfer and quenching mechanisms
[AD-A270672] p 1572 N94-19607
Theoretical studies of turbulence and anomalous transport in toroidal confinement devices
[DE93-040684] p 1592 N94-19656
ENGINE DESIGN
Overview of STOVL aircraft propulsion research offtakes and vertical lift systems
[NASA-TM-106387] p 1321 N94-19353
ENGINE PARTS
Studies of dynamic contact of ceramics and alloys for advanced heat engines
[DE93-016366] p 1368 N94-18110
ENGINE TESTS
Technology test bed
[NASA-TM-109354] p 1322 N94-18953
ENGINEERING
Mathematical sciences, technology, and economic competitiveness
[LC-91-60253] p 1514 N94-19478
A foundation for the 21st Century: A progressive framework for the National Science Foundation. Report of the National Science Board Commission on the future of the National Science Foundation
[NSB-92-196] p 1611 N94-19618
Guide to programs, fiscal year 1993
[NSF-92-78] p 1633 N94-19620
ENGINEERING MANAGEMENT
EDMS: Engineering data management system. User's reference
[PB93-187391] p 1614 N94-18119
ENGINEERS
Magnetic Fusion Energy Technology Fellowship: Report on survey of institutional coordinators
[DE93-014646] p 1583 N94-17739
ENTHALPY
Techniques for the estimation of Heats of Explosion (HEX) using thermochemical codes
[AD-A268584] p 1609 N94-18310
ENTRAPMENT
Resonance Raman and photophysical studies of transition metal complexes in solution and entrapped in zeolites
[DE93-019892] p 1363 N94-19019
ENTROPY
Thermodynamics of computation and information distance
[DE93-012730] p 1517 N94-17812
Evolution of r-process elements in the hot supernova bubble
[DE93-017169] p 1624 N94-17897
FEEST: A method for tabulating equation of state and opacity tables
[DE93-017965] p 1347 N94-18092
Structure, thermodynamics, and dynamical properties of supercooled liquids
[DE93-788387] p 1607 N94-18211
Regenerator optimization for Stirling cycle refrigeration
[DE93-018468] p 1380 N94-18818
ENVIRONMENT EFFECTS
Air pollution effects field research facility. 3: UV-B exposure and monitoring system
[DE93-013098] p 1470 N94-17773
Single STAGE Rocket Technology (SSRT) DC-X test program environmental assessment
[AD-A265940] p 1337 N94-17879

Overview of physical oceanographic measurements taken during the Mount Mitchell cruise to ROPME sea area
[DE93-018460] p 1497 N94-18494
Electromagnetic environmental effects compendium
[AD-A270441] p 1387 N94-18512
Compilation of 1992 annual reports of the navy ELF communications system ecological monitoring program. Volume 3: Tabs G - I
[AD-A269727] p 1388 N94-18741
Effects of the Mount Pinatubo eruption on solar insolation: Four case studies
[DE93-018454] p 1475 N94-18817
Penetrating radiation environment and effects study
[AD-A270126] p 1485 N94-18874
Ecological and environmental impacts of construction in the coastal zone
[AD-A269196] p 1475 N94-18881
The ecological and environmental impacts of manmade marshes
[AD-A269213] p 1475 N94-18885
Environmental Research Program
[DE93-019101] p 1477 N94-19105
National Program Plan Fuel Cells in Transportation
[DE93-017557] p 1469 N94-19346
Calamity weather: Environmental calamities and meteorology p 1495 N94-19703

ENVIRONMENT MANAGEMENT
Setting the global thermostat with an exhaustible tradeable permit system
[DE93-012911] p 1472 N94-17891
Environmental restoration and waste management five-year plan, fiscal years 1994-1998. Volume 3: Public concerns
[DOE/S-00097P-VOL-3] p 1475 N94-18835

ENVIRONMENT MODELS
Land-use related sources of CO2, CH4 and N2O: Current global emissions and projections for the period 1990-2100
[PB93-194819] p 1475 N94-18949

ENVIRONMENT POLLUTION
Improving the biodegradative capacity of subsurface bacteria
[DE93-013171] p 1501 N94-18051

ENVIRONMENT PROTECTION
Development and evaluation of alternative radioanalytical methods, including mass spectrometry for marine materials
[DE93-625117] p 1345 N94-17691
Title 1 implementation: Status report on nonattainment areas
[DE93-017677] p 1471 N94-17777
The carbon dioxide emissions game: Playing the net
[DE93-017670] p 1471 N94-17821
A comparison of wet and dry scrubbing systems for control of metals and dioxin/furan emissions from incinerators
[DE93-017446] p 1474 N94-18502
New applications for high average power beams
[DE93-018845] p 1439 N94-18522
Advances in passive-remote and extractive Fourier transform infrared systems
[DE93-017402] p 1478 N94-19241

ENVIRONMENTAL CHEMISTRY
Energy efficiency and the environment: Innovative ways to improve air quality in the Los Angeles Basin
[DE93-016964] p 1473 N94-18050
Program descriptions
[NSF-92-123] p 1531 N94-19619

ENVIRONMENTAL CONTROL
An emulator for testing HVAC-control and energy management systems
[VTT-TIED-1337] p 1444 N94-17974
Lunar base Controlled Ecological Life Support System (LCELSS): Preliminary conceptual design study
[NASA-CR-188479] p 1511 N94-18484
Environmental control and life support
[ESA-PSS-03-40-ISSUE-1] p 1513 N94-19442

ENVIRONMENTAL ENGINEERING
Program descriptions
[NSF-92-123] p 1531 N94-19619

ENVIRONMENTAL MONITORING
Air pollution effects field research facility. 3: UV-B exposure and monitoring system
[DE93-013098] p 1470 N94-17773
Screening analysis for chlorine-free alternative refrigerants to replace R-22 in air conditioning applications
[DE93-015920] p 1367 N94-17847
Pantex Plant Meteorological Monitoring Program
[DE93-018495] p 1493 N94-19127
Penetrometer compatible, fiber-optic sensor for continuous monitoring of chlorinated hydrocarbons: Field test results
[DE93-017974] p 1352 N94-19266
Fiber optic Raman spectrograph for in situ environmental monitoring
[DE93-019466] p 1478 N94-19305
Report of the Experts Meeting on Reference Climatological Stations (RCS) and National Climate Data Catalogues (NCC)
[WMO-TD-535] p 1494 N94-19312

ENVIRONMENTAL QUALITY
Environmental restoration and waste management five-year plan, fiscal years 1994-1998. Volume 3: Public concerns
[DOE/S-00097P-VOL-3] p 1475 N94-18835

ENVIRONMENTAL SURVEYS
Compilation of 1992 annual reports of the navy ELF communications system ecological monitoring program, volume 2
[AD-A269726] p 1388 N94-18751
Development and characterization of adiabatic shear prone tungsten heavy alloys
[AD-A270477] p 1366 N94-19673

ENVIRONMENTAL TESTS
NSWCWODET participation in Space Shuttle mission STS-46
[AD-A268875] p 1332 N94-18321
Analysis of bolted and bonded composite
[AD-A267792] p 1453 N94-18382
Laboratory test and evaluation report of the essex model 60C-0037-2 molecular sieve oxygen generating system
[AD-A269967] p 1445 N94-18778
LDEF update
[NASA-TM-109352] p 1334 N94-18921
Materials flight experiment carrier capability and future flight experiments on Hitchhiker-M carrier program
p 1326 N94-19175
Limited Duration of Candidate Materials Exposure Experiment (LDCE): A Complex Autonomous Payload (CAP) using a Get Away Special (GAS) canister
p 1326 N94-19176

ENZYME ACTIVITY
Improving the biodegradative capacity of subsurface bacteria
[DE93-013171] p 1501 N94-18051
Microbial degradation of poly-b-esters: A mechanistic study, cellulose acetate biodegradability
[AD-A271368] p 1374 N94-19586

ENZYMES
Polymerizable lipids in the development of controlled release carriers
[AD-D015789] p 1368 N94-17982
The c-jun gene expression in human cells exposed to either ionizing radiation or hydrogen peroxide
[DE93-017436] p 1502 N94-18476
Bienzyme sensors based on electrically wired peroxidase
[AD-A271364] p 1374 N94-19585
Microbial degradation of poly-b-esters: A mechanistic study, cellulose acetate biodegradability
[AD-A271368] p 1374 N94-19586

EPHEMERIDES
Absolute positioning by collecting Global Positioning System (GPS) data along short baselines
[AD-A271324] p 1317 N94-19572

EPIDEMIOLOGY
US Army aviation epidemiology data register: Prevalence of refractive error among US aircrew members
[AD-A269550] p 1505 N94-18289

EPIDERMIS
Evaluation of the nickel release by horological products p 1367 N94-18009

EPITAXY
Gallium arsenide-based ternary compounds and multi-band-gap solar cell research
[DE93-010049] p 1467 N94-18483
Growth of structures for integrated optoelectronic devices
[AD-A269014] p 1598 N94-18527
Integration of ferroelectric/semiconductor thin films for SLM and photorefractive applications
[AD-A268645] p 1598 N94-18633
Joint services electronics program
[AD-A269383] p 1403 N94-18638
Growth of epitaxial semiconductor alloys and superlattices with continuously variable composition by pulsed-laser ablation
[DE93-018726] p 1601 N94-18998

EPOXY COMPOUNDS
Remote cure monitoring of polymeric resins by laser Raman spectroscopy
[DE93-016445] p 1369 N94-18112

EPOXY MATRIX COMPOSITES
Evaluation of the production-grade class 4 flextensional transducer shell
[AD-A268796] p 1340 N94-18201
Mechanical properties and impact damage resistance of composites fabricated by low cost, vacuum assisted, resin transfer molding
[AD-A270361] p 1342 N94-18702

EPOXY RESINS
Remote cure monitoring of polymeric resins by laser Raman spectroscopy
[DE93-016445] p 1369 N94-18112
Mechanical properties and impact damage resistance of composites fabricated by low cost, vacuum assisted, resin transfer molding
[AD-A270361] p 1342 N94-18702
Bienzyme sensors based on electrically wired peroxidase
[AD-A271364] p 1374 N94-19585

EQUATIONS OF MOTION
Effects of transverse coupling on transverse beam size, simulation and measurements
[DE93-017804] p 1574 N94-18972
ISAC: A tool for aeroservoelastic modeling and analysis
[NASA-TM-109031] p 1321 N94-19316

EQUATIONS OF STATE
Direct Monte Carlo simulation of the chemical equilibrium composition of detonation products
[DE93-014559] p 1376 N94-17751
A new multiphase equation of state for iron
[DE93-017629] p 1357 N94-17819
FEEST: A method for tabulating equation of state and opacity tables
[DE93-017965] p 1347 N94-18092
Heavy-ion collisions and the nuclear equation of state
[DE93-019263] p 1566 N94-18104
Toward a characterization of the debris cloud created in a hypervelocity impact on a thin plate
[AD-A269190] p 1455 N94-18864
Sandia equation of state data base: Seslan file
[DE93-018693] p 1618 N94-19101

EQUATORIAL REGIONS
Internal instability of nonparallel flow on an equatorial beta-plane
[AD-A268927] p 1490 N94-18486
The activities of equatorial anticyclones of the Western Pacific and the South China Sea and their effects on the tracks of typhoon movement
[AD-A269954] p 1492 N94-18675
The effects of magnetic storm phases on f-layer irregularities from auroral to equatorial latitudes
[AD-A267388] p 1486 N94-19008

EQUATORS
Internal instability of nonparallel flow on an equatorial beta-plane
[AD-A268927] p 1490 N94-18486

EQUIVALENCE
An extension of Wolovich's definition of equivalence of linear systems
[MATHS-REPT-A-183] p 1547 N94-18069
Equivalence and reduction of hidden Markov models
[AD-A270762] p 1560 N94-19768

EQUIVALENT CIRCUITS
Synchrotron beam-loading stability with a higher RF harmonic
[DE93-014549] p 1573 N94-17726

EROSION
Using the Tritium Plasma Experiment to evaluate ITER PFC safety
[DE93-016614] p 1582 N94-17713
Thermal analysis of coatings and substrate materials during a disruption in fusion reactors
[DE93-017688] p 1588 N94-18971

ERROR ANALYSIS
The Earth radiation budget experiment: Overview of data-processing and error sources
[KNMI-TR-146] p 1481 N94-18142
Error propagation equations and tables for estimating the uncertainty in high-speed wind tunnel test results
[DE93-018685] p 1311 N94-18275
An empirical evaluation of five circular error probable estimation techniques and a method for improving them
[AD-A266528] p 1556 N94-18397
A comparison of single-station backazimuth estimates with regional event locations in the Central Appalachians
[AD-A269897] p 1483 N94-18690
Validation of a-posteriori error estimators by numerical approach
[AD-A269493] p 1549 N94-18697
A finite element scheme for shock capturing
[AD-A270182] p 1417 N94-18755
Correction of longitudinal errors in accelerators for heavy-ion fusion
[DE93-018656] p 1575 N94-19106
A parallel hashed oct-tree N-body algorithm
[DE93-012654] p 1526 N94-19205
Sensitivity and uncertainty analysis of Markov reward models
[MEMO-INF-92-89] p 1559 N94-19386

Refinement of unit cell parameters by least-squares: Comments on an old technique and the development of a new computer program
[AD-A270610] p 1531 N94-19590

ERROR CORRECTING CODES
Multichannel error correction code decoder
[NASA-TM-106331] p 1333 N94-19313

ERROR DETECTION CODES
An efficient implementation of error-valued semantics on imperative machines
[DE93-014658] p 1516 N94-17740

ERRORS
An efficient implementation of error-valued semantics on imperative machines
[DE93-014658] p 1516 N94-17740
Verification of 3I retrievals vis-a-vis radiosonde observations
[KNMI-TR-150] p 1488 N94-17924
An analytical approach to error localization by using information derived from error signature
[REPT-93-023] p 1518 N94-17960
The Earth radiation budget experiment: Overview of data-processing and error sources
[KNMI-TR-146] p 1481 N94-18142
Technology, design, simulation, and evaluation for SEP-hardened circuits p 1399 N94-18352
Analytic approximations of an integral in remote sensing
[AD-A270085] p 1463 N94-18800
Statistical learning theory and algorithms
[AD-A270209] p 1523 N94-18901

ESSENTIALLY NON-OSCILLATORY SCHEMES
Computational Fluid Dynamics
[VKI-LS-1993-04] p 1412 N94-18557
High order non-oscillatory schemes for the compressible Euler equations p 1412 N94-18558
ENO schemes on unstructured meshes
p 1412 N94-18561

ESTIMATING
Joint stiffness estimation based on force sensor measurements in industrial manipulators
[REPT-92-053] p 1443 N94-17937
Flight test techniques for aircraft parameter estimation in ground effect
[AD-A270058] p 1318 N94-18795
Spectral analysis on the canonical autoregressive decomposition
[AD-A270083] p 1549 N94-18798
Estimating the oceanic sound speed environmental for long-range acoustic propagation
[AD-A270231] p 1499 N94-18903

ESTUARIES
ADCIRC: An advanced three-dimensional circulation model for shelves, coasts, and estuaries. Report 3: Development of a tidal constituent database for the western North Atlantic and Gulf of Mexico
[AD-A268685] p 1497 N94-18455
Ecological and environmental impacts of construction in the coastal zone
[AD-A269196] p 1475 N94-18881

ETA-MESONS
Eta-nucleon interaction and nuclear production of eta mesons
[DE93-018469] p 1571 N94-19259

ETCHING
High- and low-temperature bonding techniques for microstructures
[DE93-017173] p 1595 N94-17992
Photovoltaic concentrator initiative: Concentrator cell development
[DE93-018505] p 1466 N94-18335

ETHANE
Conversion of ethane and of propane to higher olefin hydrocarbons
[DE93-015282] p 1347 N94-18194

EUCLIDEAN GEOMETRY
An annealing approach to multi-facility location problems in euclidean spaces
[REPT-93-022] p 1547 N94-17928
A geometric algorithm for the Euclidean 1-center problem
[REPT-93-001] p 1519 N94-17975

EULER EQUATIONS OF MOTION
High-lift system analysis method using unstructured meshes p 1307 N94-18426
High order non-oscillatory schemes for the compressible Euler equations p 1412 N94-18558
A multigrid acceleration technique for computing steady solutions to the equations of compressible flow
p 1412 N94-18559
ENO schemes on unstructured meshes
p 1412 N94-18561
Multidimensional wave decompositions for the Euler equations p 1413 N94-18562
Variational approaches to CFD: Applications to potential Euler and Navier-Stokes equations
p 1413 N94-18565
UUGM code development
[AD-A269945] p 1416 N94-18671
On positivity preserving finite volume schemes for compressible Euler equations
[NASA-CR-191534] p 1551 N94-19317
Three dimensional network generation and Euler calculation for a wing fuselage canard configuration
[MBB-LME-211-S-PUB-511-A] p 1319 N94-19500

EULER-LAGRANGE EQUATION
Fluid-structure-interaction analyses of reactor vessel using improved hybrid Lagrangian Eulerian code ALICE-II
[DE93-015536] p 1409 N94-18248

EURECA (ESA)
Superfluid Helium On-Orbit Transfer (SHOOT) flight demonstration p 1327 N94-19185

EUROPE
Eastern Europe: A climatological study
[AD-A269200] p 1493 N94-18883

EUROPEAN AIRBUS
High-lift design for large civil aircraft
p 1310 N94-18445

EUROPEAN SPACE AGENCY
Report on the activities of Space Science Department, 1990 - mid 1992
[ESA-SP-1161] p 1633 N94-19404
Rationale for the power standard
[ESA-PSS-02-10-VOL-2-ISSUE-] p 1338 N94-19516

EUTECTIC COMPOSITES
Field emission cathode and vacuum microelectronic microwave amplifier development
[AD-A269526] p 1403 N94-18639

EUTECTICS
Wetting behavior of alternative solder alloys
[DE93-016730] p 1359 N94-18127

EVALUATION
The stability and utility of the ESPRIT project, MUSiC, performance-based indicators of usability and tools: An evaluation of the usability of the NPL iSDX telephone system
[NPL-DITC-213/92] p 1613 N94-17925

EVAPORATION
Finite element modeling of evaporation and condensation during sol-gel film and fiber formation
[DE93-017655] p 1345 N94-17820
Temperature lowering in cryogenic chemical-synthesis techniques and system
[DE93-018348] p 1562 N94-18810

EVAPORATORS
Performance mapping of the STM4-120 kinematic Stirling engine using a statistical design of experiments method
[DE93-015132] p 1464 N94-17798

EXCIMER LASERS
Mechanical properties of excimer laser modified titanium surfaces
[DE93-012663] p 1358 N94-17875
Excimer laser induced permanent electrical conductivity and nanostructures in polymers
[DE93-015965] p 1368 N94-17946
Interaction of intense lasers and relativistic electron beams with solids, gases and plasmas
[AD-A269655] p 1439 N94-18737

EXCITATION
Observations of MeV electrons and scattered light from intense, subpicosecond laser-plasma interactions
[DE93-017153] p 1435 N94-17855
Response of transmission line systems to pulse excitation by radiation and injection methods
[DE93-015112] p 1384 N94-18210
Metal Film Surface Plasmon Resonance (MFSPR) fibre couplers
[AD-A268871] p 1579 N94-18635
Search for resonant electron transfer and double excitation in Kr(sup 34+) + H2 collisions
[DE93-018776] p 1569 N94-18999
Electron impact polarization and correlation properties of the inert gases
[DE93-018358] p 1570 N94-19125

EXCITONS
Polaron tunneling in high-temperature superconductors
[DE93-016880] p 1593 N94-17754
Quantum optoelectronics technical digest, 1993. Voolume 8: Postconference edition
[AD-A268209] p 1576 N94-17887
Molecular nonlinear optical susceptibilities in condensed phases
[AD-A270200] p 1568 N94-18784

EXCRETION
Nuclear Medicine Program
[DE93-013896] p 1504 N94-17699

EXERCISE PHYSIOLOGY
Road march performance of special operations soldiers carrying various loads and load distributions
[AD-A269198] p 1512 N94-18882

EXHAUST EMISSION
Visibility impairment assessment: Importance of using theoretically derived optical characterizations
[DE93-017147] p 1470 N94-17749
Title 1 implementation: Status report on nonattainment areas
[DE93-017677] p 1471 N94-17777
Data collection plan for phase 2 Alternative Fuels Bus Data Collection Program
[DE93-010047] p 1378 N94-18913

EXHAUST GASES
Title 1 implementation: Status report on nonattainment areas
[DE93-017677] p 1471 N94-17777
Low power arcjet system spacecraft impacts
[NASA-TM-106307] p 1336 N94-17856
Review of short-term, high-level exposure to metals: Antimony, barium, and cadmium
[AD-A268896] p 1505 N94-18392
Ultraviolet plume instrument calibration and sensor assessment
[AD-A269687] p 1337 N94-18574
Data collection plan for phase 2 Alternative Fuels Bus Data Collection Program
[DE93-010047] p 1378 N94-18913

EXOBIOLOGY
Aerospace medicine and biology: A continuing bibliography with indexes (supplement 382)
[NASA-SP-7011(382)] p 1507 N94-18936
Aerospace medicine and biology: A continuing bibliography with indexes (supplement 381)
[NASA-SP-7011(381)] p 1507 N94-19069
Space Life Sciences Research: The Importance of Long-Term Space Experiments
[NASA-TM-4502] p 1502 N94-19210
The rationale for fundamental research in space biology: Introduction and background p 1502 N94-19211
Opportunities and questions for the fundamental biological sciences in space p 1502 N94-19212

EXOS-C SATELLITE
Global zones of particle precipitation as observed EXOS-C
[AD-A268758] p 1481 N94-18467

EXPEDITIONS
Ozone hole
[NASA-TM-109368] p 1476 N94-18960

EXPERIMENT DESIGN
Performance mapping of the STM4-120 kinematic Stirling engine using a statistical design of experiments method
[DE93-015132] p 1464 N94-17798
Characterization of the Facility for Atmospheric Corrosion Testing (FACT) at Sandia
[DE93-018510] p 1474 N94-18521
Vane optimization for maximum efficiency using Design Of Experiments (DOX)
[AD-A270270] p 1320 N94-18907
The first flight of the QUESTS GAS payload G-521
p 1325 N94-19170
Shell designs
[AD-A270656] p 1460 N94-19606

EXPERIMENTATION
Efficient domain-independent experimentation
[AD-A269530] p 1557 N94-18640

EXPERT SYSTEMS
The organizational preparation of existing relational databases for the integration of expert systems
[AD-A268823] p 1614 N94-18191
System dynamics and computer modeling expertise. A conceptual structure research inquiry
[AD-A269860] p 1560 N94-18410
Automatic documentation generation: The interaction of text and examples
[AD-A269670] p 1616 N94-18570
Optimizing wind turbine control system parameters
[DE93-018861] p 1469 N94-19036
JPRS report: Central Eurasia. Aviation and cosmonautics, no. 1, January 1993
[JPRS-UAC-93-007] p 1632 N94-19147
An innovative neural manufacturing concept
[DE93-017212] p 1527 N94-19238

EXPLOSIONS
Instrumented experiments aboard the frigate WOLF. Wolf 2: Measurement results of the 5.5 kg TNT in the crew aft sleeping compartment
[PML-1992-12] p 1451 N94-17931
Scaling laws for diffraction loading by air blast
[PML-1991-54] p 1452 N94-17941
A probability method of fracture mechanics analysis for HFIR vessel
[DE93-015510] p 1453 N94-18246

Analysis of regional bodywave phases from earthquakes in western China, part 2
[AD-A270125] p 1485 N94-18873
Air blast measurements at 20 and 40 km distance from detonating 10 and 20 ton high explosive charges
[PB93-195949] p 1419 N94-19068
Round robin experiments on the Explosive Components Water Gap Test (ECWGT)
[PML-1992-69] p 1378 N94-19445

EXPLOSIVES
Modeling shock initiation in Composition B
[DE93-016544] p 1376 N94-18095
The use of post detonation analysis of stable isotope ratios to determine the type and production process of the explosive involved
[DE93-018497] p 1378 N94-19242
Round robin experiments on the Explosive Components Water Gap Test (ECWGT)
[PML-1992-69] p 1378 N94-19445

EXPONENTIAL FUNCTIONS
Exponential characteristic spatial quadrature for discrete ordinates neutral particle transport in two-dimensional cartesian coordinates
[AD-A270458] p 1554 N94-19671

EXPOSURE
Air pollution effects field research facility. 3: UV-B exposure and monitoring system
[DE93-013098] p 1470 N94-17773
Effects of a high-energy food supplement on cold-induced thermogenesis
[AD-A269301] p 1504 N94-17823
Using controlled daylight exposure and sleep timing in the prevention of shift lag during night operations
[AD-A269304] p 1504 N94-17824
A study of the effects of high power pulsed 2450 MHz microwaves, ELF modulated microwaves, and ELF fields on human lymphocytes and selected cell lines
[AD-A269070] p 1505 N94-18294
NSWCWODET participation in Space Shuttle mission STS-46
[AD-A268875] p 1332 N94-18321
Review of short-term, high-level exposure to metals: Antimony, barium, and cadmium
[AD-A268896] p 1505 N94-18392

EXTERNAL TANKS
Robotics
[NASA-TM-109351] p 1332 N94-18920

EXTERNALLY BLOWN FLAPS
Design and test of a low jitter metal to metal contact solid dielectric switch
[DE93-016957] p 1394 N94-17755
Navier-Stokes simulation of flow field around a blown-flap high-lift system p 1307 N94-18429

EXTINCTION
Optical properties of redispersed iron fibers measured at 94 GHz
[AD-A269739] p 1342 N94-18756

EXTRAPOLATION
Radiosity algorithms using higher order finite element methods
[DE93-018098] p 1531 N94-19548

EXTRATERRESTRIAL RADIATION
Update on parts SEE susceptibility from heavy ions
[AD-A268735] p 1596 N94-18316

EXTREME ULTRAVIOLET RADIATION
UVSTAR: An imaging spectrograph with telescope for the Shuttle Hitchhiker-M platform p 1326 N94-19178

EXTREMELY LOW FREQUENCIES
A study of the effects of high power pulsed 2450 MHz microwaves, ELF modulated microwaves, and ELF fields on human lymphocytes and selected cell lines
[AD-A269070] p 1505 N94-18294
Compilation of 1992 annual reports of the Navy ELF communications system ecological monitoring program, volume 1
[AD-A269569] p 1386 N94-18473
Compilation of 1992 annual reports of the navy ELF communications system ecological monitoring program. Volume 3: Tabs G - I
[AD-A269727] p 1388 N94-18741
Compilation of 1992 annual reports of the navy ELF communications system ecological monitoring program, volume 2
[AD-A269726] p 1388 N94-18751

EXTREMELY LOW RADIO FREQUENCIES
Compilation of 1992 annual reports of the Navy ELF communications system ecological monitoring program, volume 1
[AD-A269569] p 1386 N94-18473
Compilation of 1992 annual reports of the navy ELF communications system ecological monitoring program. Volume 3: Tabs G - I
[AD-A269727] p 1388 N94-18741
Compilation of 1992 annual reports of the navy ELF communications system ecological monitoring program, volume 2
[AD-A269726] p 1388 N94-18751

EXTRUDING
Summary of work on coatings and claddings for fossil energy applications
[DE93-017005] p 1367 N94-17881
Ageing in Processed Polymers: Programme, summary, and abstracts discussion meeting
[AD-A268931] p 1370 N94-18448

EYE MOVEMENTS
FY 1991 AASERT: Spatio-temporal making in human vision and its application to image coding
[AD-A268795] p 1505 N94-18190
Stochastic models of attention and search
[AD-A268622] p 1508 N94-18292

F

F REGION
RADARC HF ionospheric prediction program for OTH radar
[AD-A269557] p 1385 N94-18291
The effects of magnetic storm phases on f-layer irregularities from auroral to equatorial latitudes
[AD-A267388] p 1486 N94-19008
A physical model for one-dimension and time-dependent ionosphere. Part 1: Description of the model
[DE93-627958] p 1486 N94-19255

F-16 AIRCRAFT
Numerical prediction of transition of the F-16 wing at supersonic speeds
[NASA-CR-194407] p 1312 N94-19433

F-18 AIRCRAFT
Results of a joint Navy/Air Force operational test to evaluate USAF Integrated Maintenance Information Systems (IMIS), Interactive Electronic Technical Manual (IETM) technology applied to the F/A-18 aircraft
[AD-A271322] p 1619 N94-19571

FABRICATION
Ultra-shallow box-like profiles fabricated by pulsed UV-laser doping process
[DE93-017221] p 1437 N94-18083
Photovoltaic concentrator initiative: Concentrator cell development
[DE93-018505] p 1466 N94-18335
High-efficiency silicon concentrator cell commercialization
[DE93-018491] p 1467 N94-18409
Fabrication and microstructural development of Ag-clad TlBa2Ca2Cu3O(x) tapes
[DE93-017407] p 1597 N94-18500
Design and fabrication of a Multichannel Adaptive Optical Processor (MADOP)
[AD-A270004] p 1579 N94-18668
ARPA/CSTO rapid VLSI implementation
[AD-A269170] p 1403 N94-18695
VLSI for high-speed digital signal processing
[AD-A270406] p 1404 N94-18706
Fabrication process for cantilever beam micromechanical switches
[AD-A269716] p 1404 N94-18749
Integrated circuits: Resistless processing simplifies production and cuts costs
[DE93-018069] p 1405 N94-18941
Polycrystalline thin-film cadmium telluride solar cells fabricated by electrodeposition
[DE93-018201] p 1468 N94-18944
Fabrication and characterization of high-T(sub c) tapes and coils made from Ag-clad Bi-2223 superconductors
[DE93-018615] p 1601 N94-18993
MODIL cryocooler producibility demonstration project results
[DE93-017981] p 1335 N94-19275
Manufacturing technology
[DE93-019580] p 1381 N94-19480

FABRY-PEROT INTERFEROMETERS
A technique for measuring winds in the lower atmosphere using incoherent Doppler lidar
[DE93-017163] p 1488 N94-17758

FACE CENTERED CUBIC LATTICES
High dose effects in neutron irradiated face-centered cubic metals
[DE93-017671] p 1364 N94-19043
Role of pressure in the study of fullerenes
[DE93-018839] p 1602 N94-19340

FACSIMILE COMMUNICATION
Color test chart for facsimile
[AD-A269754] p 1387 N94-18721

FACTOR ANALYSIS
Shell designs
[AD-A270656] p 1460 N94-19606

FAILURE
Factors which affect fatigue strength of fasteners
[DE93-017272] p 1453 N94-18084
The application of nondestructive techniques to the testing of a wind turbine blade
[DE93-016731] p 1447 N94-18128
Analytical and experimental evaluation of joining silicon nitride to metal and silicon carbide to metal for advanced heat engine applications
[DE93-018128] p 1446 N94-19291

FAILURE ANALYSIS
Inelastic deformation and damage at high temperature
[DE93-018155] p 1448 N94-17814
Mechanical response comparison of gun propellants evaluated under equivalent time-temperature conditions
[AD-A270479] p 1378 N94-19674

FAILURE MODES
Fundamental research in nonlinear random vibration for aerospace applications
[AD-A268929] p 1454 N94-18487
The microstructural mechanism of electromigration failure in narrow interconnects of Al alloys
[DE93-018598] p 1365 N94-19282
Analytical and experimental evaluation of joining silicon nitride to metal and silicon carbide to metal for advanced heat engine applications
[DE93-018128] p 1446 N94-19291

FALLOUT
Inclusion of a three-dimensional washout coefficient in ADPIC
[DE93-018499] p 1476 N94-19038

FAR FIELDS
Wideband electromagnetic scattering/analysis program: Far zone electromagnetic scattering from complex shapes using geometrical theory of diffraction
[AD-A268790] p 1384 N94-18187
Computational aero-acoustics as a branch of turbulence research p 1411 N94-18552

FAR INFRARED RADIATION
A tunable compact high power far-infrared grating free-electron laser
[AD-A269875] p 1440 N94-18771
Final construction and operation of a continuous far-infrared free-electron laser for scientific applications
[AD-A269248] p 1440 N94-18912

FAR ULTRAVIOLET RADIATION
Chemical dynamics in time and energy space
[DE93-018595] p 1350 N94-19097
The 1982 to 1992 decade of research on the vacuum ultraviolet ring at National Synchrotron Light Source
[DE93-019469] p 1603 N94-19564

FARADAY EFFECT
An ultraviolet faraday rotator glass
[AD-D015879] p 1371 N94-18529

FAST FOURIER TRANSFORMATIONS
Introduction to wavelets
[AD-A268465] p 1389 N94-18801
Nontraditional windows in spectral analysis
[AD-A271336] p 1553 N94-19583
Investigations of a coherent vector radar technique for the observation of the atmosphere near 10 GHz
[KFK-5068] p 1494 N94-19616

FAST NEUTRONS
Effects of irradiation temperature on Charpy and tensile properties of high-copper, low upper-shelf, submerged-arc welds
[DE93-017858] p 1445 N94-19047
Studies of deep levels in high resistivity silicon detectors irradiated by high fluence fast neutrons using a thermally stimulated current spectrometer
[DE93-016133] p 1602 N94-19258

FASTENERS
Factors which affect fatigue strength of fasteners
[DE93-017272] p 1453 N94-18084

FASTING
Effects of a high-energy food supplement on cold-induced thermogenesis
[AD-A269301] p 1504 N94-17823

FATIGUE (MATERIALS)
Mathematical modelling of bonded fibre-composite repairs to aircraft
[AD-A268732] p 1341 N94-18327
Composites: Materials of the future
[AD-A268945] p 1341 N94-18450
The 6th Japan-U.S. conference on composite materials
[AD-A268535] p 1341 N94-18630
Fatigue technology assessment and strategies for fatigue avoidance in marine structures. Appendices
[AD-A269053] p 1455 N94-18716
JPRS report: Science and technology. Central Eurasia: Materials science
[JPRS-UMS-93-002] p 1339 N94-18833
Optimizing wind turbine control system parameters
[DE93-018861] p 1469 N94-19036

Fatigue crack initiation in riveted lap joints and in pressurized fuselages
[LR-725] p 1461 N94-19669
Microstructure and texture control of fatigue in hydrogen and marine environments
[AD-A271277] p 1344 N94-19744

FATIGUE LIFE
Spectrum fatigue testing of T-shaped tension clips
[FFA-TN-1992-22] p 1452 N94-17970
Microstructurally based thermomechanical fatigue lifetime model of solder joints for electronic applications
[DE93-016508] p 1452 N94-17995
FAROW: A tool for fatigue and reliability of wind turbines
[DE93-017639] p 1465 N94-18001
Development of the microstructure based stochastic life prediction models
[AD-A269880] p 1454 N94-18683
Development of the microstructure based stochastic life prediction models
[AD-A270453] p 1455 N94-18714
Development of the microstructure based stochastic life prediction model
[AD-A269742] p 1361 N94-18742
Design for cyclic loading endurance of composites
[NASA-TM-106407] p 1457 N94-19351
A review of aeronautical fatigue investigations in Sweden during the period May 1991 to April 1993
[FFA-TN-1993-22] p 1457 N94-19358
Microstructure and texture control of fatigue in hydrogen and marine environments
[AD-A271277] p 1344 N94-19744

FATIGUE TESTS
Inelastic deformation and damage at high temperature
[DE93-018155] p 1448 N94-17814
Spectrum fatigue testing of T-shaped tension clips
[FFA-TN-1992-22] p 1452 N94-17970
Factors which affect fatigue strength of fasteners
[DE93-017272] p 1453 N94-18084
Mechanism-dependent fractal character of fracture surfaces in high strength and toughness ASTM A723 steels
[AD-A268956] p 1360 N94-18542
New test method to determine modulus of elasticity of rocket grain material
[AD-A269758] p 1377 N94-18758
A review of aeronautical fatigue investigations in Sweden during the period May 1991 to April 1993
[FFA-TN-1993-22] p 1457 N94-19358
Fatigue crack initiation in riveted lap joints and in pressurized fuselages
[LR-725] p 1461 N94-19669

FATTY ACIDS
Nuclear Medicine Program
[DE93-013896] p 1504 N94-17699

FAULT DETECTION
An analytical approach to error localization by using information derived from error signature
[REPT-93-023] p 1518 N94-17960
Measurement selection for parametric IC fault diagnosis p 1399 N94-18356
Pulse mode VLSI asynchronous circuits
p 1402 N94-18377
On-line test methods of microprocessor based systems
[ETN-93-95008] p 1530 N94-19498
Applications of neural networks in fault detection of rotating machinery
[AD-A270755] p 1448 N94-19766

FAULT TOLERANCE
An efficient implementation of error-valued semantics on imperative machines
[DE93-014658] p 1516 N94-17740
Synthesis techniques and analysis tool for on-chip fault-tolerance
[AD-A269148] p 1521 N94-18259
Fault tolerant sequential circuits using sequence invariant state machines p 1398 N94-18344
Efficient transparent optimistic rollback recovery for distributed application programs
[AD-A268981] p 1522 N94-18696
A general theory of signal integration for fault-tolerant dynamic distributed sensor networks
[AD-A270316] p 1534 N94-18699
Radiation hardened microprocessor for small payloads
p 1327 N94-19184
A research program in empirical computer science
[NASA-CR-194069] p 1530 N94-19429
Fault-tolerance and complexity
[TR-450] p 1530 N94-19483
Computer security. Evolutions 1987 to 1992: Trends and perspectives
[RR-905-I] p 1532 N94-19713
Algorithms and architectures for high speed signal processing
[AD-A271000] p 1392 N94-19736

FAULT TREES
Optimal safety system design using fault tree analysis
[MATHS-REPT-A-187] p 1529 N94-19382

FEASIBILITY
Regenerative fuel cells for High Altitude Long Endurance Solar Powered Aircraft
[DE93-016991] p 1465 N94-17853
A survey on technical problems in designing high-speed rotors with developing materials
[DE93-788519] p 1444 N94-18159

FEASIBILITY ANALYSIS
Safety approaches for high power modular laser operation
[DE93-017213] p 1435 N94-17759
Development of alternatives to lead-bearing solders
[DE93-016509] p 1357 N94-17862
Space debris detection
[AD-A269254] p 1334 N94-18264
Proof of the feasibility of coherent and incoherent schemes for pumping a gamma ray laser
[AD-A269173] p 1440 N94-18880
NPAC distributed-parallel system feasibility study
[AD-A270972] p 1539 N94-19790
Feasibility study for a measuring system velocity projectile
[FEL-91-A368] p 1434 N94-19797

FEDERAL BUDGETS
Current information technology resource requirements of the federal government: Fiscal year 1994
p 1612 N94-17756
The 1994 NASA authorization, volume 2
[GPO-71-510] p 1620 N94-18842
A foundation for the 21st Century: A progressive framework for the National Science Foundation. Report of the National Science Board Commission on the future of the National Science Foundation
[NSB-92-196] p 1611 N94-19618

FEEDBACK
Deadbeat control by measurement feedback: A two sided approach
[REPT-93-20] p 1542 N94-19091
Analysis and design of robust decentralized controllers for nonlinear systems
[DE93-019224] p 1543 N94-19302
Discrete-time infinity control problem with measurement feedback
[PB93-197523] p 1543 N94-19329
Stabilization of time-delay systems: An overview of the algebraic approach
[PB93-191989] p 1553 N94-19556

FEEDBACK CONTROL
KINETIC: A system code for analyzing Nuclear thermal propulsion rocket engine transients
[DE93-016825] p 1337 N94-17884
Efficient dynamic modeling of manipulators containing closed kinematic loops
[REPT-92-083] p 1444 N94-17940
Introduction to Quantitative Feedback Theory (QFT) technique p 1545 N94-18241
Deadbeat control by measurement feedback: A two sided approach
[REPT-93-20] p 1542 N94-19091
The fixed, finite-order L(sup 2)-optimal control of infinite-dimensional time-varying discrete-time systems
[REPT-93-23] p 1542 N94-19138
The digital linear quadratic control problem for Pritchard-Salamon systems
[REPT-93-27] p 1542 N94-19142
Laser guide star measurements at Lawrence Livermore National Laboratory
[DE93-018081] p 1441 N94-19251
Discrete-time infinity control problem with measurement feedback
[PB93-197523] p 1543 N94-19329
Congestion/flow control and routing in data networks: A control-theoretic approach
[AD-A271121] p 1392 N94-19737

FEEDFORWARD CONTROL
Explorations of the practical issues of learning prediction-control tasks using temporal difference learning methods
[AD-A270836] p 1544 N94-19599

FERMI LIQUIDS
Lectures of Fermi liquid theory
[DE93-016630] p 1592 N94-17714

FERMI SURFACES
High energy resolution ARPES measurements of the normal and superconducting states of Bi2Sr2CaCu2O(8 + delta)
[DE93-018294] p 1599 N94-18804

FERMI-DIRAC STATISTICS
IR materials producibility
[AD-A268849] p 1577 N94-18223

FERMIONS
Cabibbo mixing in superstring derived standard-like models
[DE93-624814] p 1607 N94-17953
Four-fermion interactions
[DE93-629905] p 1566 N94-18199
Crossover from BCS to Bose superconductivity: A functional integral approach
[DE93-019503] p 1604 N94-19566

FERRIMAGNETIC MATERIALS
Comparison of ferrite materials for pulse applications
[DE93-017224] p 1574 N94-18497

FERRIMAGNETISM
Comparison of ferrite materials for pulse applications
[DE93-017224] p 1574 N94-18497

FERRIMAGNETS
Comparison of ferrite materials for pulse applications
[DE93-017224] p 1574 N94-18497

FERRITES
Comparison of ferrite materials for pulse applications
[DE93-017224] p 1574 N94-18497

FERRITIC STAINLESS STEELS
Helium-induced weld degradation of HT-9 steel
[DE93-015981] p 1358 N94-17915
Study of mechanical behavior and internal structure of ferritic nanocrystalline material
[DE93-019264] p 1596 N94-18184

FERROELECTRICITY
Spatial light modulators and applications: Summaries of papers presented at the Spatial Light Modulators and Applications Topical Meeting
[AD-A269452] p 1577 N94-18283
Integration of ferroelectric/semiconductor thin films for SLM and photorefractive applications
[AD-A268645] p 1598 N94-18633
Office of Naval Research Publications/Patents /Presentations/Honors report, 1 October 1992 - 30 September 1993
[AD-A270037] p 1632 N94-18791

FERROMAGNETIC MATERIALS
Corroboration of magnetic forces in US Maglev design
[DE93-014918] p 1443 N94-17785
Self-organized criticality and the Barkhausen effect in amorphous and polycrystalline metals
[AD-A269817] p 1361 N94-18735
Polarized optical emission due to decay or recombination of spin-polarized injected carriers
[AD-D015907] p 1408 N94-19763

FERROMAGNETIC RESONANCE
Some superhigh-frequency and magnetic properties of chemically precipitated films
[AD-A266195] p 1351 N94-19110
Nonlinear dynamics and instabilities in ferromagnetic resonance experiments: Examinations of spheres from yttrium iron garnet in coincidence area of the first Suhl instabilities
[ETN-93-95072] p 1604 N94-19612

FERROMAGNETISM
Ising model on tangled chain. Part 2: Magnetization and susceptibility
[DE93-628794] p 1607 N94-18174

FERROUS METALS
Damping in ferrous shape memory alloys
[AD-A271009] p 1366 N94-19775

FIBER COMPOSITES
The calculation methods of a cracked plastic composite laminate: A literature survey
[VTT-TIED-1362] p 1339 N94-17958
Strength optimization of C/Al metal matrix composites produced from prepregs
[DLR-FB-92-39] p 1340 N94-18122
A comprehensive study of matrix fracture mechanisms in fiber-reinforced ceramic matrix composites
[AD-A268809] p 1340 N94-18205
Mathematical modelling of bonded fibre-composite repairs to aircraft
[AD-A268732] p 1341 N94-18327
Mechanical properties of fiber-reinforced YBa2Cu3O(x) and Bi2Sr2CaCu2O(x) bars
[DE93-017689] p 1454 N94-18479
Bibliography on ceramic matrix composites and reinforcing whiskers, platelets, and fibers, 1970-1990
[AD-A270139] p 1371 N94-18750
Delamination in composite materials as observed using an optical fiber strain gage
[AD-A270803] p 1344 N94-19662
Residual strength predictions for fibre metal laminates: The R-curves approach
[LR-717] p 1344 N94-19666

FIBER OPTICS
Variable wide band fiber optic delay line
[AD-D015848] p 1576 N94-17716
Suppression of backscatter and stray reflection induced phase noise in Michelson interferometers
[AD-D015809] p 1382 N94-17902

Advanced optical fiber communication systems
[AD-A269120] p 1577 N94-18254
Applications of nonlinear optic effects in new specialty fibers
[AD-A268890] p 1578 N94-18457
Competitive dynamics and self-organization in photorefractive systems
[AD-A269663] p 1430 N94-18569
Investigation of a fiber optic frequency shifter and optical isolator
[AD-A269820] p 1579 N94-18738
Apparatus and method for varying a Bragg wavelength of a Bragg grating formed in an optical fiber
[AD-D015876] p 1579 N94-18743
Improved optical pseudospark switch
[AD-D015821] p 1580 N94-18947
Evaluation of fiber optic performance in the ACRR
[DE93-018515] p 1580 N94-18970
Penetrometer compatible, fiber-optic sensor for continuous monitoring of chlorinated hydrocarbons: Field test results
[DE93-017974] p 1352 N94-19266
Fiber optic Raman spectrograph for in situ environmental monitoring
[DE93-019466] p 1478 N94-19305
Optoelectronic packaging: A review
[DE93-040059] p 1515 N94-19535

FIBER STRENGTH
Strength optimization of C/Al metal matrix composites produced from prepregs
[DLR-FB-92-39] p 1340 N94-18122

FIBERS
Dispersion effects on millimeter wavelength attenuation efficiencies for a variety of fibers
[AD-A268992] p 1386 N94-18454
Optical properties of redispersed iron fibers measured at 94 GHz
[AD-A269739] p 1342 N94-18756

FIELD COILS
Limits on m = 2, n = 1 error field induced locked mode instability in TPX with typical sources of poloidal field coil error field and a proto type correction coil, C-coil
[DE93-014408] p 1582 N94-17702

FIELD EFFECT TRANSISTORS
Optically controlled active impedance element and filters employing the same
[AD-D015863] p 1396 N94-18062
New dynamic FET logic and serial memory circuits for VLSI GaAs technology p 1397 N94-18339
DC and small-signal physical models for the AlGaAs/GaAs high electron mobility transistor
p 1401 N94-18370
Kinetic aspects of lattice mismatch in molecular beam epitaxial growth on planar and patterned substrates
[AD-A270424] p 1597 N94-18506
Joint services electronics program
[AD-A269383] p 1403 N94-18638
Spice modeling of a FET-switched induction accelerator cell
[DE93-018662] p 1575 N94-18996
Quasi-optical transponder using FET's and patch antennas
[AD-A271339] p 1407 N94-19584
Design of power electronics for TVC EMA systems
[NASA-CR-193839] p 1407 N94-19642
Nanofabrication by focused ion beam
[AD-A271290] p 1345 N94-19746

FIELD EMISSION
Field emission cathode and vacuum microelectronic microwave amplifier development
[AD-A269526] p 1403 N94-18639

FIELD OF VIEW
Directional regions in Geographic Information Systems (GIS)
[AD-A268536] p 1462 N94-18309
SeaTrack: Ground station orbit prediction and planning software for sea-viewing satellites
[NASA-RP-1331] p 1532 N94-19761

FIELD THEORY (PHYSICS)
On a conformal perfect fluid in the classical vacuum
[DE93-624797] p 1480 N94-17682
Infinite Grassmannian and moduli space of G-bundles
[DE93-624798] p 1545 N94-17683
Renormalizations in supersymmetric and nonsupersymmetric non-abelian Chern-Simons field theories with matter
[DE93-626646] p 1593 N94-17748
A general solution of the BV-master equation and BRST field theories
[DE93-626622] p 1561 N94-18171
Impulsive moving mirror model and impulsive differential equations in Banach space
[DE93-629867] p 1549 N94-18197
Four-fermion interactions
[DE93-629905] p 1566 N94-18199
Impulsive moving mirror model and the stability of linear homogeneous differential equations with impulse effect in a Banach space
[DE93-629906] p 1549 N94-18200
Phase structure of (phi(4))(sub 3) field theory at finite temperature
[DE93-629907] p 1608 N94-18267
Modelling force-field effects on turbulence
p 1414 N94-18581
Numerical modelling of fringing fields and their use for complex permittivity measurements at high frequencies
[AD-A270198] p 1388 N94-18782

FIGHTER AIRCRAFT
Metals 2000
[DE93-016761] p 1355 N94-17752
Comparison between swept and delta canards on a model of a combat aircraft
[AD-A269561] p 1317 N94-17826
An experimental investigation of the optimum slat setting on a combat aircraft model p 1308 N94-18431
An experimental investigation of attachment-line transition on the slat of a combat aircraft model
p 1308 N94-18432
Close-coupled oscillating canard effects on post-stall lift enhancement
[AD-A268938] p 1321 N94-18541
A comparison of air force data systems
[AD-A269691] p 1616 N94-18575
Procedures and design data for the formulation of aircraft configurations
[AD-A270150] p 1318 N94-18779
JPRS report: Central Eurasia. Aviation and cosmonautics, no. 10, October 1992
[JPRS-UAC-93-004] p 1632 N94-19149
Research and design activities and the economic balance of MBB
[ETN-93-94909] p 1310 N94-19383
An investigation of fighter aircraft agility
[NASA-CR-194608] p 1318 N94-19448

FILE MAINTENANCE (COMPUTERS)
CAVEMAN: Configuration and version management
[DE93-018066] p 1524 N94-19048
Integrity checking in deductive databases: An exposition
[PB93-191724] p 1619 N94-19709

FILLERS
Environmental degradation of Alloy 600 and welded filler metal EN82 in an elevated temperature aqueous environment
[DE93-018049] p 1363 N94-18940

FILM CONDENSATION
Film condensation in a shock wave
[MPIS-22/1992] p 1422 N94-19509

FILM COOLING
Analysis of film cooling in rocket nozzles
[NASA-CR-194674] p 1338 N94-19438

FILM THICKNESS
Film condensation in a shock wave
[MPIS-22/1992] p 1422 N94-19509

FILTRATION
Aerosol filtration with steel fiber filters
[DE93-016990] p 1380 N94-18710

FINANCIAL MANAGEMENT
Technology benefits model user manual, version 01.00.04
[AD-A270637] p 1620 N94-19777

FINE STRUCTURE
Dynamic behaviors of fragments ejected from the surface of carbon materials by laser ablation
[DE93-788620] p 1438 N94-18161
Potential dependent structural changes of underpotentially deposited copper on an iodine treated platinum surface determined in situ by surface EXAFS and its polarization dependence
[AD-A269890] p 1360 N94-18687
EXANA: A program for analysing extended energy loss fine structures, EXELFS spectra
[USIP-92-01] p 1525 N94-19145
The effects of initial conditions on the 3-D topology of temporally evolving wakes (ARI on 3-D bluff body wakes)
[AD-A271008] p 1423 N94-19774

FINITE DIFFERENCE THEORY
A one dimensional numerical model, with an application to the vertical distribution of dissolved oxygen in the ocean
[DE93-018481] p 1495 N94-17779
FEM/SINDA: Combining the strengths of NASTRAN, SINDA, I-DEAS, and PATRAN for thermal and structural analysis p 1449 N94-17831
Comments on computational underwater acoustics
[DE93-013789] p 1562 N94-17873
The rise of accuracy for the multichannel scattering problem solving
[DE93-630145] p 1608 N94-18253
The longitudinal free vibrations of a fixed-free two-phase elastic bar
[AD-A268768] p 1453 N94-18387
An algebraic turbulence model for turbomachinery
p 1411 N94-18554
DYNLET1 model formulation and user's guide
[AD-A269843] p 1498 N94-18723
HEMP 3D: A finite difference program for calculating elastic-plastic flow, appendix B
[AD-A269171] p 1418 N94-18878
Finite difference program for calculating hydride bed wall temperature profiles
[DE93-019272] p 1523 N94-19005
Comments on computational underwater acoustics
[DE93-019880] p 1563 N94-19270
Pseudo-compressibility methods for the incompressible flow equations
[NASA-CR-191533] p 1551 N94-19315
Improved approximations applied to the S(sub N) even-parity equation
[DE93-016467] p 1551 N94-19343
Numerical simulation of viscous flows in chemical nonequilibrium
[MBB-LME-211-S-PUB-506] p 1421 N94-19497

FINITE ELEMENT METHOD
Atlas of formability: HAYNES 556
[AD-A268354] p 1356 N94-17768
Atlas of formability: HAYNES 188
[AD-A268355] p 1356 N94-17769
Atlas of formability: Permalloy - 80 flow stress curves
[AD-A268263] p 1356 N94-17801
Atlas of formability: Nickelvac C-276
[AD-A268264] p 1357 N94-17802
Atlas of formability: ALLVAC 718
[AD-A268304] p 1357 N94-17804
Finite element modeling of evaporation and condensation during sol-gel film and fiber formation
[DE93-017655] p 1345 N94-17820
The Twenty-First NASTRAN (R) Users' Colloquium
[NASA-CP-3203] p 1449 N94-17827
FEM/SINDA: Combining the strengths of NASTRAN, SINDA, I-DEAS, and PATRAN for thermal and structural analysis p 1449 N94-17831
The role of NASTRAN in the preliminary design cycle
p 1450 N94-17835
Eigenvalue routines in NASTRAN: A comparison with the Block Lanczos method p 1450 N94-17838
Comments on computational underwater acoustics
[DE93-013789] p 1562 N94-17873
The respectiveness of response in a bar under static and transient loads
[VTT-TIED-1377] p 1452 N94-17959
Computational strategies for composite structures
[PB93-195097] p 1452 N94-18079
SAND contact in DYNA3D
[DE93-016451] p 1340 N94-18113
Preliminary structural design: Defining the design space
[AD-A268898] p 1317 N94-18227
A finite strain ring dynamical model for pneumatic tires
[AD-A269286] p 1444 N94-18266
Computational Fluid Dynamics
[VKI-LS-1993-04] p 1412 N94-18557
Implementation of a nonisothermal unified inelastic-strain theory into ADINA6.0 for a titanium alloy: User guide
[AD-A269927] p 1360 N94-18660
Parallel and vector adaptations of the underwater finite element parabolic equation model
[AD-A269990] p 1563 N94-18678
Pressureless densification of ceramic matrix composites
[AD-A269137] p 1371 N94-18691
Validation of a-posteriori error estimators by numerical approach
[AD-A269493] p 1549 N94-18697
Development of a finite element method program for the analysis of laminated composite plates using first-order shear deformation theory
[AD-A270318] p 1342 N94-18700
A finite element scheme for shock capturing
[AD-A270182] p 1417 N94-18755
Knowledge sources for an intelligent MCM analyzer
[AD-A269224] p 1542 N94-18887
A numerical analysis of crack growth in brittle microcracking composites
[DE93-011562] p 1343 N94-18914
Dynamic characterization of a lightweight, highly maneuverable spacecraft using modal and finite element analyses
[DE93-018095] p 1335 N94-18942
A general-purpose contact detection algorithm for nonlinear structural analysis codes
[DE93-018507] p 1455 N94-19039
A constitutive theory for rigid polyurethane foam
[DE93-011596] p 1372 N94-19059

A massively parallel adaptive finite element method with dynamic load balancing [DE93-012844] p 1536 N94-19161
Comments on computational underwater acoustics [DE93-019880] p 1563 N94-19270
Computational mechanics of composite materials [PB93-195782] p 1343 N94-19281
Are bilinear quadrilaterals better than linear triangles? [DE93-019223] p 1551 N94-19301
Refining a triangulation of a planar straight-line graph to eliminate large angles [DE93-016510] p 1528 N94-19344
Numerical simulations of turbulent buoyant flows by finite element method: Application to the study of strongly heated or cooled stratified flow [ECL-92-28] p 1421 N94-19399
On the numerical analysis of nonlinear Galerkin methods: Spectral approximation and finite elements [ETN-93-94900] p 1552 N94-19407
Directions for computational mechanics in automotive crashworthiness p 1459 N94-19472
Current capabilities for simulating the extreme distortion of thin structures subjected to severe impacts p 1459 N94-19474
Crashdynamics with DYNA3D: Capabilities and research directions p 1460 N94-19475
Transient dynamics capability at Sandia National Laboratories p 1460 N94-19476
Radiosity algorithms using higher order finite element methods [DE93-018098] p 1531 N94-19548
ADAS implementation of a panel method for the prediction of aerodynamic loads [LR-723] p 1313 N94-19667
Implementation of parallel algorithms [AD-A271035] p 1539 N94-19682

FINITE VOLUME METHOD
Investigation of a matrix-model for the artificial dissipation in a cell vertex finite volume scheme for solving the Navier-Stokes equations [DLR-FB-92-33] p 1409 N94-18076
Navier-Stokes computations of turbulent flow around high-lift configurations p 1306 N94-18420
Prediction of the high-lift performance of multi-element aerofoils using an unstructured Navier-Stokes solver p 1307 N94-18427
Numerical calculations of high lift flows using structured and unstructured methods p 1307 N94-18428
Numerical investigation of complex, transitional, and chemically reacting flows p 1411 N94-18550
Computational Fluid Dynamics [VKI-LS-1993-04] p 1412 N94-18557
ENO schemes on unstructured meshes p 1412 N94-18561
Compact advection schemes on unstructured grids p 1413 N94-18564
Inclusion of second-moment closures into finite-volume solvers p 1415 N94-18588
Numerical implementation and performance of Reynolds-stress closures in finite-volume computations of recirculating and strongly swirling flows p 1415 N94-18589
STREMR: Numerical model for depth-averaged incompressible flow [AD-A269949] p 1417 N94-18672
Multigrid for a groundwater flow problem [REPT-93-29] p 1420 N94-19144
On positivity preserving finite volume schemes for compressible Euler equations [NASA-CR-191534] p 1551 N94-19317
On the numerical approximation of nonlinear hyperbolic problems: Application to the dynamics of compressible gas [ETN-93-95020] p 1420 N94-19365
Three dimensional network generation and Euler calculation for a wing fuselage canard configuration [MBB-LME-211-S-PUB-511-A] p 1319 N94-19500

FINNED BODIES
Parabolized Navier-Stokes computation of surface heat transfer characteristics for supersonic and hypersonic KE projectiles [AD-A268858] p 1410 N94-18391

FINS
Fin-efficiency calculation for condensation in the presence of noncondensable gases [DE93-017684] p 1409 N94-18004
Correlation of incoming boundary layer pitot pressure fluctuations with the unsteadiness of fin-induced shock wave turbulent boundary layer interactions [AD-A270059] p 1417 N94-18796

FIRE PREVENTION
The fire resistance of profiled thin steel sheet structures [VTT-TIED-1320] p 1380 N94-19373

FIREBEE 2 TARGET DRONE AIRCRAFT
An application of parameter estimation to the stability and control of the BQM-147 unmanned aerial vehicle [AD-A268741] p 1321 N94-18401

FIRES
Aircraft fire sentry. Volume 1: Summary [AD-A270087] p 1315 N94-18822
Aircraft fire sentry. Volume 2: Appendices A, B, C and D [AD-A270088] p 1315 N94-18823
Temperature of aircraft cargo flame exposure during accidents involving fuel spills [DE93-019633] p 1381 N94-19539

FISSION
Heavy ion nuclear physics research [DE93-018862] p 1565 N94-17776
LAHET calculations for accelerator neutron production [DE93-016518] p 1570 N94-19120

FLAME PROPAGATION
Transport phenomena and interfacial kinetics in multiphase combustion systems [AD-A270202] p 1349 N94-18785
Experimental study of flame front interactions [ECL-91-40] p 1353 N94-19376

FLAME SPECTROSCOPY
Spectral radiance measurements on a bluff body stabilized flame: Characterization of the IR signature [PB93-195899] p 1347 N94-18081

FLAME TEMPERATURE
Temperature of aircraft cargo flame exposure during accidents involving fuel spills [DE93-019633] p 1381 N94-19539

FLAMES
Spectral radiance measurements on a bluff body stabilized flame: Characterization of the IR signature [PB93-195899] p 1347 N94-18081
Temperature of aircraft cargo flame exposure during accidents involving fuel spills [DE93-019633] p 1381 N94-19539

FLAMMABILITY
The fire resistance of profiled thin steel sheet structures [VTT-TIED-1320] p 1380 N94-19373

FLASHOVER
Plasma-puff initiation of high Coulomb transfer switches [NASA-CR-193186] p 1591 N94-19441

FLAT SURFACES
Surface second harmonic generation studies of stepped Ag(111) electrode surfaces [AD-A265205] p 1594 N94-17876
Electro-optics display research, test, and evaluation laboratory program [AD-A270947] p 1408 N94-19751

FLEET BALLISTIC MISSILES
A Sandia Technology Bulletin: Testing technology, July 1993 [DE93-040197] p 1633 N94-19537

FLIGHT CHARACTERISTICS
An investigation of fighter aircraft agility [NASA-CR-194608] p 1318 N94-19448

FLIGHT CLOTHING
Analysis of seating and restraint limitations restricting total body weight for aircrew and passengers on US Army helicopters [AD-A269117] p 1511 N94-18296

FLIGHT CONDITIONS
Integrated Terminal Weather System (ITWS) [AD-A269884] p 1492 N94-18684

FLIGHT CONTROL
Non-linear flight dynamics p 1319 N94-18240
Introduction to Quantitative Feedback Theory (QFT) technique p 1545 N94-18241
A wind tunnel model control surface actuator interface [AD-A268729] p 1322 N94-18324
High lift and the forward swept wing p 1308 N94-18436
Flight test techniques for aircraft parameter estimation in ground effect [AD-A270058] p 1318 N94-18795
X-29: Research aircraft [NASA-TM-109370] p 1318 N94-18962

FLIGHT CREWS
Aircrew life support, AFSC 122X0(1T1X1) [AD-A268998] p 1511 N94-18394
Revision and verification of a seven-point workload estimate scale [AD-A269194] p 1511 N94-18412
A multivariate anthropometric method for crew station design [AD-A270652] p 1513 N94-19531

FLIGHT HAZARDS
Estimation of wake vortex advection and decay using meteorological sensors and aircraft data [AD-A270763] p 1316 N94-19661

FLIGHT OPERATIONS
Terminal area forecasts, FY 1993-2005 [AD-A269855] p 1316 N94-18336

FLIGHT PATHS
About the accuracy of an image-based navigation system during the runway approach [DLR-MITT-93-01] p 1316 N94-18146
Application of the A* algorithm to aircraft trajectory generation [AD-A268728] p 1317 N94-18315
VMC left turn curved approaches, test results — (visual meteorological conditions) [AD-A269476] p 1316 N94-18728
Estimation of wake vortex advection and decay using meteorological sensors and aircraft data [AD-A270763] p 1316 N94-19661

FLIGHT SAFETY
Analysis of seating and restraint limitations restricting total body weight for aircrew and passengers on US Army helicopters [AD-A269117] p 1511 N94-18296

FLIGHT SIMULATION
Modeling and new equipment definition for the vibration isolation box equipment system [NASA-CR-193185] p 1379 N94-17763

FLIGHT TESTS
Flight demonstration of image fix-taking with SAR [DE93-016499] p 1382 N94-17861
About the accuracy of an image-based navigation system during the runway approach [DLR-MITT-93-01] p 1316 N94-18146
An application of parameter estimation to the stability and control of the BQM-147 unmanned aerial vehicle [AD-A268741] p 1321 N94-18401
Revision and verification of a seven-point workload estimate scale [AD-A269194] p 1511 N94-18412
In-flight pressure distributions and skin-friction measurements on a subsonic transport high-lift wing section p 1308 N94-18435
Design, development, and flight evaluation of the Boeing YC-14 USB powered lift aircraft p 1310 N94-18444
VMC left turn curved approaches, test results — (visual meteorological conditions) [AD-A269476] p 1316 N94-18728
Flight test techniques for aircraft parameter estimation in ground effect [AD-A270058] p 1318 N94-18795
Attitude sensor package p 1325 N94-19172
Utilization of Shuttle small payload accommodations in the DOD Space Test Program p 1326 N94-19180
Superfluid Helium On-Orbit Transfer (SHOOT) flight demonstration p 1327 N94-19185

FLIGHT TRAINING
Integrated measurement of crew resource management and technical flying skills [AD-A270512] p 1510 N94-19677

FLIP-FLOPS
Evaluation of laser diode based optical switches for optical processors [AD-A270949] p 1581 N94-19602

FLIR DETECTORS
AN/APS-137 Forward Looking Airborne Radar (FLAR) evaluation Spring 1992 experiment [AD-A268899] p 1384 N94-18228

FLOW CHARACTERISTICS
Atlas of formability: NICKELVAC K-500 [AD-A268351] p 1356 N94-17772
Atlas of formability: Haynes 230 [AD-A268325] p 1356 N94-17788
Study of multi-phase flow characteristics in an MHD power train [DE93-018570] p 1586 N94-18272
Experimental investigation of flow around a multielement airfoil p 1305 N94-18417
In-flight pressure distributions and skin-friction measurements on a subsonic transport high-lift wing section p 1308 N94-18435
A fast computing method for the flow over high-lift wings p 1308 N94-18437
Turbulence modelling challenges posed by complex flows p 1415 N94-18592

FLOW CHARTS
A one dimensional numerical model, with an application to the vertical distribution of dissolved oxygen in the ocean [DE93-018481] p 1495 N94-17779
Modelling software for structure metrics [MEMO-INF-93-13] p 1526 N94-19200

FLOW DISTRIBUTION
WBNGRID, a program for generation of C-H and C-O topology grids around wing/body/nacelle configurations: User's guide [FFA-TN-1992-09] p 1311 N94-17721

Analysis of pultrusion processing for long fiber reinforced thermoplastic composite system [NASA-CR-194504] p 1339 N94-17766

CFD investigations of the hypersonic double delta wing greta: Sanger project no. 3.2 [FFA-TN-1992-42] p 1311 N94-17919

Exchange front stability in packed-column chromatography [DE93-017526] p 1346 N94-17997

Advanced in macrostatistical hydrodynamics [DE93-018479] p 1410 N94-18270

Efficient simulation of incompressible viscous flow over multi-element airfoils p 1306 N94-18421

Navier-Stokes simulation of flow field around a blown-flap high-lift system p 1307 N94-18429

Preliminary design of a water cooled avionics cooling rack [AD-A268826] p 1320 N94-18536

Analysis of supersonic flows using k-epsilon model and the RPLUS code: Progress towards high speed combustor analysis p 1411 N94-18551

Computational Fluid Dynamics (CFD) research branch technical briefs [AD-A269698] p 1417 N94-18739

Some parametric flow analyses of a particle bed fuel element [DE93-018440] p 1337 N94-18830

Experimental investigation of turbulent Prandtl number and Reynolds analogy in transitional and post-transitional boundary layers [AD-A270092] p 1418 N94-18867

Numerical simulation of turbulent mixing and combustion near the inlet of a burner [DE93-017960] p 1350 N94-18987

Time domain calculations of the second-order drift force on a floating two-dimensional object in current and waves [REPT-93-13] p 1419 N94-19087

Interferometric investigations of compressible dynamic stall over a transiently pitching airfoil [NASA-TM-109380] p 1312 N94-19119

Survey on the application of a 3D general purpose wind-tunnel research model [LR-713] p 1323 N94-19372

Semi-span model testing in the National Transonic Facility [NASA-CR-194479] p 1312 N94-19388

Numerical simulation of viscous flows in chemical nonequilibrium [MBB-LME-211-S-PUB-506] p 1421 N94-19497

Mathematical modeling of the free surface hydrodynamic and of transport in suspensions of non cohesive sediments: Aid to the interpretation of spatial images [ETN-93-95011] p 1421 N94-19502

Theoretical examination of the flow around a cylinder with a low dimensional Galerkin process [MPIS-25/1992] p 1422 N94-19525

The effects of initial conditions on the 3-D topology of temporally evolving wakes (ARI on 3-D bluff body wakes) [AD-A271008] p 1423 N94-19774

FLOW EQUATIONS

Research activities at the Center for Modeling of Turbulence and Transition p 1410 N94-18546

An introduction to second moment closure p 1414 N94-18580

Modelling force-field effects on turbulence p 1414 N94-18581

A new form of second-moment closure p 1414 N94-18582

Second-moment closure: Present... and future? p 1414 N94-18584

Contribution to the modelling of near-wall turbulence p 1414 N94-18585

Inclusion of second-moment closures into finite-volume solvers p 1415 N94-18588

Application of second-moment closure in complex flows p 1415 N94-18590

Turbulence modelling challenges posed by complex flows p 1415 N94-18592

Examples of turbulence model applications p 1415 N94-18593

Direct and large eddy simulation of turbulence: Summary of the state of the art 1993 p 1416 N94-18594

Large-eddy simulation of turbulent diffusion in stably stratified shear flow p 1416 N94-18595

Viscosity in the edge of tokamak plasmas [DE93-018039] p 1588 N94-18988

Pseudo-compressibility methods for the incompressible flow equations [NASA-CR-191533] p 1551 N94-19315

FLOW MEASUREMENT

In-flight pressure distributions and skin-friction measurements on a subsonic transport high-lift wing section p 1308 N94-18435

A review of hot-wire technique in compressible flows [LR-724] p 1423 N94-19668

FLOW RESISTANCE

A simple description of flow instability with application to a packed bed [DE93-017492] p 1420 N94-19345

FLOW STABILITY

A simple description of flow instability with application to a packed bed [DE93-017492] p 1420 N94-19345

Stability measurements of Rayleigh-Benard convection near the critical state using a spectral model [MPIS-15/1992] p 1422 N94-19520

Theoretical examination of the flow around a cylinder with a low dimensional Galerkin process [MPIS-25/1992] p 1422 N94-19525

Locally adaptive remeshing scheme for calculating fluid instabilities [DE93-019577] p 1422 N94-19568

FLOW VELOCITY

Exchange front stability in packed-column chromatography [DE93-017526] p 1346 N94-17997

Time domain calculations of the second-order drift force on a floating two-dimensional object in current and waves [REPT-93-13] p 1419 N94-19087

FLOW VISUALIZATION

Scaling laws for diffraction loading by air blast [PML-1991-54] p 1452 N94-17941

Interferometer stations at the Air Force Aeroballistic Research Facility [AD-A268776] p 1322 N94-18330

A computational and experimental investigation of incompressible oscillatory airfoil flow and flutter problems [AD-A268748] p 1311 N94-18402

Computational techniques for high-speed flows with viscous and chemical effects p 1412 N94-18560

Flow volumes for interactive vector field visualization [DE93-017102] p 1418 N94-18888

Airflow research [NASA-TM-109372] p 1312 N94-18964

Experimental study of flame front interactions [ECL-91-40] p 1353 N94-19376

Visualization of turbulent flow with particles [REPT-93-31] p 1423 N94-19645

FLUE GASES

Environmental Research Program [DE93-019101] p 1477 N94-19105

FLUENCE

Studies of deep levels in high resistivity silicon detectors irradiated by high fluence fast neutrons using a thermally stimulated current spectrometer [DE93-016133] p 1602 N94-19258

FLUID DYNAMICS

Atlas of formability: Haynes 230 [AD-A268325] p 1356 N94-17788

Numerical simulation of fluid dynamics and combustion for ram accelerator projectile/obturator interaction [AD-A269715] p 1320 N94-18748

Mathematical problems in combustion [AD-A270147] p 1349 N94-18776

Flow volumes for interactive vector field visualization [DE93-017102] p 1418 N94-18888

Characterization of fluid physics effects on cardiovascular response to microgravity (G-572) p 1323 N94-19163

A new approach to the study of the turbulence layer [NASA-CR-194546] p 1487 N94-19397

Visualization of turbulent flow with particles [REPT-93-31] p 1423 N94-19645

FLUID FILLED SHELLS

Fluid-structure-interaction analyses of reactor vessel using improved hybrid Lagrangian Eulerian code ALICE-II [DE93-015536] p 1409 N94-18248

FLUID FILMS

Contribution to the study of a symmetric film flow (with or without tensio-active elements) [ECL-93-13] p 1421 N94-19461

FLUID FLOW

Advanced in macrostatistical hydrodynamics [DE93-018479] p 1410 N94-18270

Data acquisition in aerodynamic research p 1431 N94-18644

Recent developments in fast response aerodynamic probe technology p 1431 N94-18645

Static pressure measurements for near isentropic flows using laser induced iodine fluorescence p 1431 N94-18646

Application of infrared thermography in fluid mechanics p 1431 N94-18649

DYNLET1 model formulation and user's guide [AD-A269843] p 1498 N94-18723

Efficiency of fiber dispersion [AD-A269740] p 1342 N94-18757

Flow volumes for interactive vector field visualization [DE93-017102] p 1418 N94-18888

Modeling of the formation of microporosity in alloys [DE93-017733] p 1364 N94-19044

An investigation of low Marangoni number fluid flow in a cold corner [AD-A271317] p 1422 N94-19569

FLUID JETS

Combustion instability phenomena of importance to liquid propellant engines [AD-A268800] p 1348 N94-18389

FLUID MANAGEMENT

Superfluid Helium On-Orbit Transfer (SHOOT) flight demonstration p 1327 N94-19185

FLUID MECHANICS

An overview of the SAFSIM computer program [DE93-017657] p 1519 N94-18002

Measurement Techniques [VKI-LS-1993-05] p 1430 N94-18643

Application of infrared thermography in fluid mechanics p 1431 N94-18649

Some parametric flow analyses of a particle bed fuel element [DE93-018440] p 1337 N94-18830

Group-invariant solutions of hydrodynamics and radiation hydrodynamics [DE93-018373] p 1423 N94-19604

FLUID POWER

Fluid dynamometer having fluid characteristic power absorption adjustment capability [AD-D015820] p 1424 N94-17904

FLUIDS

Stress pulse phenomena [DE93-019064] p 1456 N94-19078

FLUORESCENCE

SeaSoar CTD, fluorescence and scalar irradiance data from RRS Charles Darwin Cruises 58/59, NE Atlantic, Vivaldi 1991 [IOS-299-1992] p 1496 N94-18066

Detection of single molecules in microspheres [DE93-017776] p 1567 N94-18493

Final report on subcontract B076260 — borate synthesis [DE93-019501] p 1604 N94-19565

FLUORIDES

Calculation of the LiF-CeF3-BeF2 and LiF-PuF3-BeF2 ternary phase diagrams [DE93-017437] p 1360 N94-18501

An ultraviolet faraday rotator glass [AD-D015879] p 1371 N94-18529

FLUOROPOLYMERS

Polymer films with enhanced dielectric properties [AD-A271148] p 1375 N94-19740

FLUTTER

A computational and experimental investigation of incompressible oscillatory airfoil flow and flutter problems [AD-A268748] p 1311 N94-18402

Navier-Stokes, dynamics and aeroelastic computations for vortical flows, buffet and flutter applications [NASA-CR-194520] p 1313 N94-19621

FLUTTER ANALYSIS

A computational and experimental investigation of incompressible oscillatory airfoil flow and flutter problems [AD-A268748] p 1311 N94-18402

FLYING PERSONNEL

US Army aviation epidemiology data register: Prevalence of refractive error among US aircrew members [AD-A269550] p 1505 N94-18289

FOAMS

The Aerocapacitor: A carbon aerogel based supercapacitor [DE93-016537] p 1395 N94-17849

Summary report for supercritical carbon dioxide extraction and carbonization of Resorcinol-Formaldehyde (RF) foams [DE93-016924] p 1346 N94-17987

Shock-loading response of advanced materials [DE93-018344] p 1455 N94-19033

FOCUSING

Conical geometry for sagittal focusing as applied to x rays from synchrotrons [DE93-017238] p 1593 N94-17760

Alternating-phase focusing with amplitude modulation [DE93-018618] p 1574 N94-18273

FOG

Station climatic summaries: North America. Volume 1: The contiguous United States [AD-A269567] p 1490 N94-18303

FOKKER AIRCRAFT

Forty years of high-lift R/D: An aircraft manufacturer's experience p 1309 N94-18441

FOKKER-PLANCK EQUATION
Halo formation in mismatched, space-charge-dominated beams
[DE93-018581] p 1574 N94-18934

FOLDING STRUCTURES
Activities of the Center for Space Construction
[NASA-CR-193717] p 1335 N94-19371

FOOD INTAKE
Effects of a high-energy food supplement on cold-induced thermogenesis
[AD-A269301] p 1504 N94-17823

FOOD PROCESSING
FT-NIR spectroscopy in quantitative and qualitative measurements of cereal products
[VTT-TIED-1331] p 1346 N94-17973
Lunar base Controlled Ecological Life Support System (LCELSS): Preliminary conceptual design study
[NASA-CR-188479] p 1511 N94-18484

FOOD PRODUCTION (IN SPACE)
Lunar base Controlled Ecological Life Support System (LCELSS): Preliminary conceptual design study
[NASA-CR-188479] p 1511 N94-18484

FOOTPRINTS
Footprint size of a helicopter-borne electromagnetic induction sounding system versus antenna altitude
[AD-A270468] p 1463 N94-19672

FORCE DISTRIBUTION
Error propagation equations and tables for estimating the uncertainty in high-speed wind tunnel test results
[DE93-018685] p 1311 N94-18275

FORCED CONVECTION
Metal slurry droplet and spray combustion
[AD-A269648] p 1349 N94-18736

FORCED VIBRATION
Transformation of energy and momentum due to Landau damping in space
[DE93-624921] p 1581 N94-17689
Axial response of differently excited anchored viscous liquid bridges in zero-gravity
[LRT-WE-9-FB-1-1992] p 1379 N94-19489

FORECASTING
Terminal area forecasts, FY 1993-2005
[AD-A269855] p 1316 N94-18336
New techniques for contrail forecasting
[AD-A269686] p 1490 N94-18573
Directory of Energy Information Administration Models 1993
[DE93-016987] p 1616 N94-18707

FORESTS
Assessing impacts of climate change on forests: The state of biological modeling
[DE93-015916] p 1471 N94-17790

FORM FACTORS
Radiosity algorithms using higher order finite element methods
[DE93-018098] p 1531 N94-19548

FORMALDEHYDE
Summary report for supercritical carbon dioxide extraction and carbonization of Resorcinol-Formaldehyde (RF) foams
[DE93-016924] p 1346 N94-17987
Nonlinear optical properties of molecules
[AD-A270199] p 1567 N94-18783

FORMALISM
Multistack languages and grammars
[REPT-93-018] p 1518 N94-17926
Formal hardware verification of digital circuits
p 1401 N94-18367
Axiomatization, declarative semantics and operational semantics of passive and active updates in logic databases
[PB93-195956] p 1618 N94-19067

FORMAT
Vectorized presentation-level services for scientific distributed applications
[DE93-018091] p 1537 N94-19253

FORSTERITE
Tetravalent chromium (Cr(4+)) as laser-active ion for tunable solid-state lasers
[NASA-CR-194529] p 1441 N94-19369
Tetravalent chromium (Cr(4+)) as laser-active ion for tunable solid-state lasers
[NASA-CR-194528] p 1441 N94-19394

FORTRAN
High performance Fortran: An overview
[DE93-017181] p 1519 N94-18072

FORWARD SCATTERING
Statistical description of the bistatic radar cross section distributions for a right circular cylinder
[AD-A270001] p 1387 N94-18666
Forward scattering of a pulsed continuous wave signal through laminar and turbulent thermal plumes
[AD-A271210] p 1564 N94-19723

FOSSIL FUELS
Fifteenth Symposium on Biotechnology for Fuels and Chemicals: Program and Abstracts
[DE93-010005] p 1376 N94-18045
Directory of Energy Information Administration Models 1993
[DE93-016987] p 1616 N94-18707

FOUR-WAVE MIXING
Advanced optical fiber communication systems
[AD-A269120] p 1577 N94-18254
Novel nonlinear laser diagnostic techniques
[AD-A270968] p 1442 N94-19788

FOURIER ANALYSIS
Application of Fourier-based features for classification of synthetic aperture radar imagery
[AD-A270450] p 1387 N94-18513
The Fourier analysis technique and epsilon-pseudo-eigenvalues
[DE93-018805] p 1551 N94-19337

FOURIER TRANSFORMATION
An improved distributed arithmetic architecture
p 1398 N94-18349
Analysis of deposit precursors in jet fuels using Fourier transform infrared spectroscopy
[AD-A269035] p 1377 N94-18489
Application of wavelet transform techniques to spread spectrum demodulation and jamming
[AD-A267389] p 1389 N94-19009
Integrated test plan for the demonstration of a commercial Fourier Transform Infrared instrument
[DE93-018518] p 1433 N94-19041
Advances in passive-remote and extractive Fourier transform infrared systems
[DE93-017402] p 1478 N94-19241
Nontraditional windows in spectral analysis
[AD-A271336] p 1553 N94-19583

FOVEA
FY 1991 AASERT: Spatio-temporal making in human vision and its application to image coding
[AD-A268795] p 1505 N94-18190

FRACTALS
Application of fractal methods to estimate the aerosol-optical depth for atmospheric correction of high resolution satellite data
[DLR-FB-93-04] p 1480 N94-18088
JSEP fellowship: Fractal noise processes
[AD-A268841] p 1557 N94-18540
Mechanism-dependent fractal character of fracture surfaces in high strength and toughness ASTM A723 steels
[AD-A268956] p 1360 N94-18542

FRACTIONATION
Factors that control the stable carbon isotopic composition of methane produced in an anoxic marine sediment p 1477 N94-19235

FRACTURE MECHANICS
Inelastic deformation and damage at high temperature
[DE93-018155] p 1448 N94-17814
The calculation methods of a cracked plastic composite laminate: A literature survey
[VTT-TIED-1362] p 1339 N94-17958
Development and application of specially-focused ultrasonic transducers to location and sizing of defects in 75 mm- to 127 mm-thick austenitic stainless steel weld metals
[DE93-015975] p 1453 N94-18108
The Hall-Petch relationship and mechanisms of fracture in B2 compounds
[DE93-018887] p 1359 N94-18182
A comprehensive study of matrix fracture mechanisms in fiber-reinforced ceramic matrix composites
[AD-A268809] p 1340 N94-18205
A probability method of fracture mechanics analysis for HFIR vessel
[DE93-015510] p 1453 N94-18246
Steep geometric grating for use in moire interferometry
[AD-A268759] p 1453 N94-18328
Fundamental research in nonlinear random vibration for aerospace applications
[AD-A268929] p 1454 N94-18487
Fundamental concepts relating local atomic arrangements, deformation, and fracture of intermetallic alloys
[AD-A268745] p 1361 N94-18788
A numerical analysis of crack growth in brittle microcracking composites
[DE93-011562] p 1343 N94-18914
Stress pulse phenomena
[DE93-019064] p 1456 N94-19078
Interfacial cracks in plates: A three-dimensional numerical investigation p 1456 N94-19116
Computational mechanics of composite materials
[PB93-195782] p 1343 N94-19281
Micromechanics of interfaces in metal matrix composites
[AD-A271012] p 1345 N94-19776

FRACTURE STRENGTH
Interpretation of warm prestress-induced fracture toughness based on crack-tip constraint
[DE93-015967] p 1451 N94-17913
Mechanism-dependent fractal character of fracture surfaces in high strength and toughness ASTM A723 steels
[AD-A268956] p 1360 N94-18542
Fatigue technology assessment and strategies for fatigue avoidance in marine structures. Appendices
[AD-A269053] p 1455 N94-18716
Nondestructive inspection of graphite-epoxy laminates for heat damage using DRIFT and LPF spectroscopies
[DE93-017228] p 1343 N94-18761
Thermal stresses in the microchannel heatsink cooled by liquid nitrogen
[DE93-018660] p 1418 N94-18995
Micromechanics of interfaces in metal matrix composites
[AD-A271012] p 1345 N94-19776

FRACTURES (MATERIALS)
The application of nondestructive techniques to the testing of a wind turbine blade
[DE93-016731] p 1447 N94-18128
The 6th Japan-U.S. conference on composite materials
[AD-A268535] p 1341 N94-18630
Simulation of dynamic material response with the PAGOSA code
[DE93-018285] p 1460 N94-19603

FRACTURING
Computational strategies for composite structures
[PB93-195097] p 1452 N94-18079
The Hall-Petch relationship and mechanisms of fracture in B2 compounds
[DE93-018887] p 1359 N94-18182
A comprehensive study of matrix fracture mechanisms in fiber-reinforced ceramic matrix composites
[AD-A268809] p 1340 N94-18205
Experimental investigation of wave and fracture phenomena in impacted ceramics: Experiments on sapphire
[AD-A270040] p 1372 N94-18792
Interfacial cracks in plates: A three-dimensional numerical investigation p 1456 N94-19116
Analytical and experimental evaluation of joining silicon nitride to metal and silicon carbide to metal for advanced heat engine applications
[DE93-018128] p 1446 N94-19291
Simulation of dynamic material response with the PAGOSA code
[DE93-018285] p 1460 N94-19603

FRAGMENTATION
Proton transfer dynamics and cluster ion fragmentation in phenol/ammonia cLusters
[AD-A269133] p 1348 N94-18256

FRAGMENTS
Dynamic behaviors of fragments ejected from the surface of carbon materials by laser ablation
[DE93-788620] p 1438 N94-18161

FREE CONVECTION
A new approach to the study of the turbulence layer
[NASA-CR-194546] p 1487 N94-19397

FREE ELECTRON LASERS
Measuring emittance using beam position monitors
[DE93-014470] p 1434 N94-17709
Experiments in sideband suppression on the Los Alamos National Laboratory Free-Electron Laser
[DE93-014466] p 1435 N94-17724
Designs for optical components related to the Los Alamos free-electron laser
[DE93-016617] p 1436 N94-17865
Three-dimensional simulation analysis of the first sections of a standing-wave free-electron laser two-beam accelerator
[DE93-016977] p 1436 N94-17869
A superconducting short period undulator for a harmonic generation FEL experiment
[DE93-017581] p 1436 N94-17998
Design of a tunable 4-MW free electron maser for heating fusion plasmas
[DE93-017172] p 1437 N94-18134
FEL experiment with a focusing wiggler
[DE93-788586] p 1438 N94-18160
Simulation of emittance dilution in electron storage ring from Compton backscattering
[DE93-017611] p 1386 N94-18503
Magnetic field measurements of a superconducting undulator for a Harmonic Generation FEL experiment at the NSLS
[DE93-017621] p 1438 N94-18504
New applications for high average power beams
[DE93-018845] p 1439 N94-18522

Designs for a 10.6 micrometer electromagnetic wiggler Free-Electron Laser (FEL)
[AD-A269695] p 1439 N94-18576
Interaction of intense lasers and relativistic electron beams with solids, gases and plasmas
[AD-A269655] p 1439 N94-18737
A tunable compact high power far-infrared grating free-electron laser
[AD-A269875] p 1440 N94-18771
Final construction and operation of a continuous far-infrared free-electron laser for scientific applications
[AD-A269248] p 1440 N94-18912
Laser powered beam conditioner for free-electron lasers and synchrotrons
[DE93-017821] p 1441 N94-18974
Coherence and linewidth studies of a 4-nm high power FEL
[DE93-018533] p 1441 N94-19030
Experiments on nonlinear absorption of ECH waves in MTX and a comparison with theory
[DE93-019158] p 1589 N94-19074
Electron cyclotron resonance heating in the microwave tokamak experiment
[DE93-018083] p 1590 N94-19289
Compact free electron lasers for medical applications
[AD-A271272] p 1442 N94-19729
A study of the amplification of laser and VLF waves using a simple pendulum model
[AD-A270857] p 1442 N94-19770

FREE ELECTRONS
Upper atmospheric effects of the HF Active Auroral Research Program Ionospheric Research Instrument (HAARP IRI)
[AD-A268948] p 1481 N94-18451

FREE ENERGY
FEEST: A method for tabulating equation of state and opacity tables
[DE93-017965] p 1347 N94-18092
A free energy simulation method based study of interfacial segregation
[DE93-019462] p 1364 N94-19032
On neutral plasma oscillations
[DE93-040319] p 1590 N94-19194

FREE FALL
Free fall liquid column dynamics in a droptower
[LRT-WE-9-FB-6-1992] p 1379 N94-19491

FREE FLOW
Experimental investigation of turbulent Prandtl number and Reynolds analogy in transitional and post-transitional boundary layers
[AD-A270092] p 1418 N94-18867

FREE JETS
Static pressure measurements for near isentropic flows using laser induced iodine fluorescence
p 1431 N94-18646

FREE RADICALS
Photodissociation studies of polyatomic free radicals
[AD-A270084] p 1350 N94-18799

FREE VIBRATION
Transformation of energy and momentum due to Landau damping in space
[DE93-624921] p 1581 N94-17689
The longitudinal free vibrations of a fixed-free two-phase elastic bar
[AD-A268768] p 1453 N94-18387
Free fall liquid column dynamics in a droptower
[LRT-WE-9-FB-6-1992] p 1379 N94-19491

FREEZE DRYING
Evaluation of dried storage of platelets for transfusion: Physiologic integrity and hemostatic functionality
[AD-A270756] p 1507 N94-19593

FREEZING
Shrinkage void formation and its effect on freeze and thaw processes of lithium and lithium-fluoride for space applications
[DE93-019303] p 1338 N94-19128

FREON
Velocity measurements in a boundary layer with a density gradient
[DE93-019627] p 1422 N94-19515

FREQUENCIES
FY 1991 AASERT: Spatio-temporal making in human vision and its application to image coding
[AD-A268795] p 1505 N94-18190

FREQUENCY ANALYZERS
A RFI measurement system for field sites
[AD-A269340] p 1385 N94-18301

FREQUENCY CONTROL
Experiments in sideband suppression on the Los Alamos National Laboratory Free-Electron Laser
[DE93-014466] p 1435 N94-17724
Synchrotron beam-loading stability with a higher RF harmonic
[DE93-014549] p 1573 N94-17726
Military applications of high-accuracy frequency standards and clocks
[AD-A269303] p 1430 N94-18299
The gyrotron backward-wave-oscillator experiment — final progress report
[AD-A268982] p 1403 N94-18452

FREQUENCY CONVERTERS
Tunable synchronously pumped intracavity two-stage optical frequency upconversion
[AD-A269105] p 1438 N94-18250
Investigation of a fiber optic frequency shifter and optical isolator
[AD-A269820] p 1579 N94-18738
Contribution to the study of the additional losses in coil elements used in static converters
[ECL-92-60] p 1406 N94-19297

FREQUENCY DIVISION MULTIPLE ACCESS
Application of wavelet transform techniques to spread spectrum demodulation and jamming
[AD-A267389] p 1389 N94-19009

FREQUENCY DIVISION MULTIPLEXING
VHF air/ground communications for air traffic control. Volume 1: A decision tree approach to system innovations
[AD-A268485] p 1316 N94-18384

FREQUENCY HOPPING
Efficient simulation of DEDS by means of standard clock techniques: Queueing and integrated radio network examples
[AD-A269878] p 1432 N94-18681
Application of wavelet transform techniques to spread spectrum demodulation and jamming
[AD-A267389] p 1389 N94-19009

FREQUENCY MODULATION
A superconducting short period undulator for a harmonic generation FEL experiment
[DE93-017581] p 1436 N94-17998
Magnetostatic waves-based integrated optic bragg cell modules with applications to RF signal processing
[AD-A269115] p 1577 N94-18295
Resolution in radar mapping
[AD-A269730] p 1462 N94-18753

FREQUENCY RANGES
A RFI measurement system for field sites
[AD-A269340] p 1385 N94-18301
An application of parameter estimation to the stability and control of the BQM-147 unmanned aerial vehicle
[AD-A268741] p 1321 N94-18401
Broadband IF matching for quasioptical mixers
[MPE-PREPRINT-240] p 1390 N94-19416
Meteor burst communications improvement study
[AD-A270866] p 1393 N94-19793

FREQUENCY RESPONSE
Simulation of the ALS longitudinal multibunch feedback system
[DE93-019227] p 1575 N94-19152

FREQUENCY SHIFT
Magnetostatic waves-based integrated optic bragg cell modules with applications to RF signal processing
[AD-A269115] p 1577 N94-18295
Investigation of a fiber optic frequency shifter and optical isolator
[AD-A269820] p 1579 N94-18738

FREQUENCY SHIFT KEYING
Nontraditional windows in spectral analysis
[AD-A271336] p 1553 N94-19583

FREQUENCY STANDARDS
Development of atomic standards at the Neuchatel Observatory p 1428 N94-18038
Military applications of high-accuracy frequency standards and clocks
[AD-A269303] p 1430 N94-18299
Optical frequency division using an optical parametric oscillator
[AD-A270847] p 1581 N94-19578

FRESNEL LENSES
Photovoltaic concentrator initiative: Concentrator cell development
[DE93-018505] p 1466 N94-18335

FRICTION
Studies of dynamic contact of ceramics and alloys for advanced heat engines
[DE93-016366] p 1368 N94-18110
Atomic-scale friction measurements using friction force microscopy. Part 1: General principles and new measurement techniques
[AD-A270749] p 1446 N94-19678
Microtribology of magnetic media
[AD-A271209] p 1407 N94-19722
Examinations of the friction behavior in nonstationary flow processes in pipes
[MITT-7] p 1423 N94-19730
Surface species in tribology
[AD-A270970] p 1446 N94-19754
Atomic-scale friction measurements using friction force microscopy. Part 2: Application to magnetic media
[AD-A270759] p 1447 N94-19767

FRICTION DRAG
The effect of fine surface riblets on the flow around an inclined axially symmetrical body
[MPIS-105/1993] p 1420 N94-19356

FRICTION FACTOR
Heterogeneous slip and rupture models of the San Andreas fault zone based upon three-dimensional earthquake tomography
[DE93-015037] p 1480 N94-17898

FRICTION MEASUREMENT
Atomic-scale friction measurements using friction force microscopy. Part 1: General principles and new measurement techniques
[AD-A270749] p 1446 N94-19678
Atomic-scale friction measurements using friction force microscopy. Part 2: Application to magnetic media
[AD-A270759] p 1447 N94-19767

FUEL CELL POWER PLANTS
Molten carbonate fuel cell networks: Principles, analysis, and performance
[DE93-000281] p 1468 N94-18925

FUEL CELLS
Oxygen reduction at a stabilized zirconia interface with Y(1-x)Ca(x)MnO3 or La(1-x)Sr(x)MnO3 cathode materials
[DE93-015681] p 1593 N94-17747
Fuel cell systems program plan, fiscal year 1993
[DE93-017828] p 1466 N94-18103
Molten carbonate fuel cell networks: Principles, analysis, and performance
[DE93-000281] p 1468 N94-18925
National Program Plan Fuel Cells in Transportation
[DE93-017557] p 1469 N94-19346

FUEL COMBUSTION
Organic carbonyl compounds in Albuquerque, New Mexico, air: A preliminary study of the effects of oxygenated fuel use
[DE93-017748] p 1476 N94-19045

FUEL CONSUMPTION
Evaluation of aftermarket LPG conversion kits in light-duty vehicle applications
[DE93-010035] p 1377 N94-18617
Constant-thrust orbit-raising transfer charts
[AD-A269088] p 1334 N94-18718

FUEL FLOW
Some parametric flow analyses of a particle bed fuel element
[DE93-018440] p 1337 N94-18830

FUEL PRODUCTION
Photobiotechnology: Application of photosynthesis to the production of renewable fuels and chemicals
[DE93-015522] p 1466 N94-18247

FUEL SPRAYS
A coupled implicit solution method for turbulent spray combustion in propulsion systems p 1411 N94-18549

FUEL SYSTEMS
Evaluation of aftermarket LPG conversion kits in light-duty vehicle applications
[DE93-010035] p 1377 N94-18617

FUELS
Energy Efficiency and Renewable Energy Program
[DE93-017936] p 1468 N94-18986
A Sandia Technology Bulletin: Testing technology, July 1993
[DE93-040197] p 1633 N94-19537
A study of the effect of hydrocarbon structure on the induction of male rat nephropathy and metabolic structure
[AD-A270969] p 1504 N94-19789

FULL SCALE TESTS
The GARTEUR high lift research programme
p 1307 N94-18430

FULLERENES
Vibrational and electronic properties of clusters and ultrathin films
[DE93-012291] p 1367 N94-17678
Novel catalysts for methane activation
[DE93-040630] p 1349 N94-18532
Role of pressure in the study of fullerenes
[DE93-018839] p 1602 N94-19340
Effects of pressure on the orientational ordering and phase transitions in solid C(60) and C(70)
[DE93-018858] p 1603 N94-19347

FUNCTIONAL DESIGN SPECIFICATIONS
TDRS press release
[NASA-TM-109373] p 1335 N94-18965
Conceptual design of a sodium sulfur cell for US electric van batteries
[DE93-018683] p 1405 N94-19035
On the automation of object-oriented requirements analysis
[AD-A270673] p 1532 N94-19782

FUNCTIONS (MATHEMATICS)
Bits and relative order from residues, space efficiently
[TR-464] p 1530 N94-19482
FURANS
A comparison of wet and dry scrubbing systems for control of metals and dioxin/furan emissions from incinerators
[DE93-017446] p 1474 N94-18502
FURNACES
MUZO flight experience with the programmable multizone furnace p 1324 N94-19167
FUSELAGES
Metals 2000
[DE93-016761] p 1355 N94-17752
Vertical drop test of a Metro 3 aircraft
[AD-A270032] p 1318 N94-18789
Fatigue crack initiation in riveted lap joints and in pressurized fuselages
[LR-725] p 1461 N94-19669
FUSION REACTORS
Arc detection and protection in high-power antenna systems
[DE93-013272] p 1382 N94-17695
ITER EDA design confinement capability
[DE93-013729] p 1582 N94-17697
Laboratory microfusion capability study
[DE93-014373] p 1583 N94-17912
Report of the 1991 Workshop on Particle-Material Interactions for Fusion Research
[DE93-788393] p 1573 N94-18156
A survey on technical problems in designing high-speed rotors with developing materials
[DE93-788519] p 1444 N94-18159
Parametric analysis of the ARIES-3D-He-3 tokamak reactor
[DE93-018293] p 1587 N94-18803
Thermal analysis of coatings and substrate materials during a disruption in fusion reactors
[DE93-017688] p 1588 N94-18971
Review Committee report on the conceptual design of the tokamak physics experiment
[DE93-018408] p 1588 N94-19012
Beryllium processing technology review for applications in plasma-facing components
[DE93-018396] p 1363 N94-19028
Thermo-hydraulic analysis of superconducting toroidal-field magnets for the Tokamak Physics Experiment
[DE93-018096] p 1590 N94-19269
FUSION WELDING
Microstructural analysis of solid-state resistance welds
[DE93-017295] p 1443 N94-17761
FUZZY SETS
Fuzzy almost linear spaces
[DE93-624772] p 1545 N94-17680
Fuzzy hypergraphs and fuzzy intersection graphs
[AD-A270303] p 1549 N94-18815
FUZZY SYSTEMS
Fuzzy almost linear spaces
[DE93-624772] p 1545 N94-17680
Automatic tuning of an integral fuzzy controller
[REPT-93-006] p 1383 N94-17932
Fuzzy control of magnetic bearings
p 1399 N94-18357
Optimizing wind turbine control system parameters
[DE93-018861] p 1469 N94-19036

G

GADOLINIUM
Photoemission studies of Zn, Co, and Gd substituted YBa2Cu3O(7-delta)
[DE93-017403] p 1597 N94-18498
GALACTIC COSMIC RAYS
The LET spectrum and its uncertainty during the CRRES mission
[AD-A269977] p 1630 N94-18676
GALACTIC EVOLUTION
Space and time as outcome of decoherence in an expanding universe
[DE93-016199] p 1624 N94-18047
The universe at moderate redshift
[NASA-CR-193771] p 1627 N94-19093
GALACTIC NUCLEI
The 0.15 seconds near-infrared imaging of the central parsec of the galaxy
[MPE-PREPRINT-239] p 1621 N94-19415
GALAXIES
Pulse-timing studies of x ray pulsars
[NASA-CR-193778] p 1621 N94-18611
GALERKIN METHOD
A massively parallel adaptive finite element method with dynamic load balancing
[DE93-012844] p 1536 N94-19161
On the numerical analysis of nonlinear Galerkin methods: Spectral approximation and finite elements
[ETN-93-94900] p 1552 N94-19407
Stability measurements of Rayleigh-Benard convection near the critical state using a spectral model
[MPIS-15/1992] p 1422 N94-19520
Theoretical examination of the flow around a cylinder with a low dimensional Galerkin process
[MPIS-25/1992] p 1422 N94-19525
GALILEO PROJECT
Magellan, Galileo, and Ulysses
[NASA-TM-109362] p 1628 N94-18958
GALILEO SPACECRAFT
Magellan, Galileo, and Ulysses
[NASA-TM-109362] p 1628 N94-18958
GALLIUM ARSENIDES
Reorientation of misfit dislocations during annealing in InGaAs/GaAs(001) interfaces
[DE93-015046] p 1592 N94-17741
Defects in GaAs bulk crystals and multi-layers caused by In diffusion
[DE93-016968] p 1595 N94-18054
Nitridation of GaAs(100) by laser-induced decomposition of HN3
[AD-A269147] p 1438 N94-18258
New dynamic FET logic and serial memory circuits for VLSI GaAs technology p 1397 N94-18339
Gallium arsenide-based ternary compounds and multi-band-gap solar cell research
[DE93-010049] p 1467 N94-18483
Kinetic aspects of lattice mismatch in molecular beam epitaxial growth on planar and patterned substrates
[AD-A270424] p 1597 N94-18506
Growth of structures for integrated optoelectronic devices
[AD-A269014] p 1598 N94-18527
Design and simulation of a gallium-arsenide second order sigma-delta analog to digital converter
[AD-A269494] p 1404 N94-18701
High efficiency low cost monolithic module for SARSAT distress beacons
[NASA-CR-194234] p 1315 N94-18852
Study of GaAs substrates by ambient temperature photoluminescence imagery
[ECL-92-61] p 1603 N94-19357
Quasi-optical transponder using FET's and patch antennas
[AD-A271339] p 1407 N94-19584
Isolation mechanisms in III-V devices
[AD-A271197] p 1605 N94-19717
Single source precursors for the OMCVD of 3/5 compound semiconductors
[AD-A271147] p 1606 N94-19739
GALLIUM PHOSPHIDES
Gallium arsenide-based ternary compounds and multi-band-gap solar cell research
[DE93-010049] p 1467 N94-18483
GAME THEORY
Mathematical communications, volume 27, numbers 1 and 2, 1992. List and abstracts of memoranda published in the period July - December 1991
[PB93-191997] p 1553 N94-19557
GAMMA RAY ASTRONOMY
Telescope for x ray and gamma ray studies in astrophysics p 1324 N94-19166
GAMMA RAY BURSTS
The GAMCIT gamma ray burst detector
p 1324 N94-19168
GAMMA RAY LASERS
Proof of the feasibility of coherent and incoherent schemes for pumping a gamma ray laser
[AD-A269173] p 1440 N94-18880
GAMMA RAY OBSERVATORY
EGRET Mission and Data Analysis
[MPE-PREPRINT-223] p 1622 N94-19462
EGRET observations of 3 C 273
p 1623 N94-19464
GAMMA RAY SPECTROMETERS
Detection of a long-duration solar gamma-ray flare on Jun. 11, 1991 with EGRET on Compton-GRO
p 1623 N94-19463
GAMMA RAY TELESCOPES
Telescope for x ray and gamma ray studies in astrophysics p 1324 N94-19166
GAMMA RAYS
Crystal optics of high energy gamma-beams
[DE93-630228] p 1577 N94-18217
Evaluation of fiber optic performance in the ACRR
[DE93-018515] p 1580 N94-18970
Gamma scattering in condensed matter with high intensity Moessbauer radiation
[DE93-019461] p 1601 N94-19031
New room temperature high resolution solid-state detector (CdZnTe) for hard x rays and gamma rays
p 1324 N94-19165
The GAMCIT gamma ray burst detector
p 1324 N94-19168
GARMENTS
Conductive garments to prevent Radio-Frequency (RF) burns
[AD-D015832] p 1512 N94-18730
GAS ANALYSIS
Solid-state, resistive hydrogen sensors for safety monitoring
[DE93-017769] p 1424 N94-17778
A mobile remote sensing laboratory for water vapor, trace gas, aerosol, and wind speed measurements
[DE93-017158] p 1489 N94-18132
Global three dimensional model of tropospheric trace gases chemistry and transport
[AERONAUTICA-ACTA-A-370-199]
p 1479 N94-19518
GAS CHROMATOGRAPHY
Exchange front stability in packed-column chromatography
[DE93-017526] p 1346 N94-17997
GAS DETECTORS
Synoptic ocean prediction experiment. EN216 CTD section data report
[AD-A268903] p 1497 N94-18230
GAS DISSOCIATION
Experimental study of interactions of highly charged ions with atoms at keV energies
[DE93-040222] p 1571 N94-19257
GAS DYNAMICS
Wave structure induced by fluid dynamic limits in the Broadwell model
[AD-A268512] p 1410 N94-18385
Two-dimensional boundary surfaces for axi-symmetric external transonic flows
[AD-A269678] p 1312 N94-18571
UUGM code development
[AD-A269945] p 1416 N94-18671
On positivity preserving finite volume schemes for compressible Euler equations
[NASA-CR-191534] p 1551 N94-19317
GAS EVOLUTION
Modeling of the formation of microporosity in alloys
[DE93-017733] p 1364 N94-19044
GAS FLOW
Wave structure induced by fluid dynamic limits in the Broadwell model
[AD-A268512] p 1410 N94-18385
Regenerator optimization for Stirling cycle refrigeration
[DE93-018468] p 1380 N94-18818
A simple description of flow instability with application to a packed bed
[DE93-017492] p 1420 N94-19345
Collaborative research on combustion diagnostics and modeling between Rolls-Royce, Inc. and the United States Air Force Wright Laboratory
[AD-A270660] p 1354 N94-19778
GAS GIANT PLANETS
Planetary plasma waves
[NASA-CR-194295] p 1629 N94-19094
GAS JETS
Analysis of neon soft x ray spectra from short-pulse laser-produced plasmas
[DE93-014420] p 1582 N94-17708
Computational aero-acoustics as a branch of turbulence research p 1411 N94-18552
GAS LASERS
Proof of the feasibility of coherent and incoherent schemes for pumping a gamma ray laser
[AD-A269173] p 1440 N94-18880
Foil support structure for large electron guns
[DE93-018478] p 1322 N94-18890
GAS TEMPERATURE
Considerations for the use of the modified line reversal technique for gas temperature measurement
[DE93-015752] p 1576 N94-17857
Temperature lowering in cryogenic chemical-synthesis techniques and system
[DE93-018348] p 1562 N94-18810
GAS TRANSPORT
A preliminary model for crack-tip hydrogen transport
[NPL-DMM(A)-84] p 1451 N94-17899
Ratio of specimen thickness to detection area for reliable hydrogen permeation measurement
[NPL-DMM(A)-103] p 1451 N94-17929
GAS TUNGSTEN ARC WELDING
Technique to eliminate helium induced weld cracking in stainless steels
[DE93-015982] p 1357 N94-17859
Helium-induced weld degradation of HT-9 steel
[DE93-015981] p 1358 N94-17915
GAS TURBINE ENGINES
SAND contact in DYNA3D
[DE93-016451] p 1340 N94-18113

GAS TURBINES
Report to Congress: Comprehensive Program Plan for Advanced Turbine Systems [DE93-016718] p 1467 N94-18475
Vane optimization for maximum efficiency using Design Of Experiments (DOX) [AD-A270270] p 1320 N94-18907
Collaborative research on combustion diagnostics and modeling between Rolls-Royce, Inc. and the United States Air Force Wright Laboratory [AD-A270660] p 1354 N94-19778

GAS VISCOSITY
A simple description of flow instability with application to a packed bed [DE93-017492] p 1420 N94-19345

GAS-GAS INTERACTIONS
Experimental study of flame front interactions [ECL-91-40] p 1353 N94-19376

GAS-LIQUID INTERACTIONS
Condensed gases under winter conditions: A study for the rescue services [FOA-C-40305-4.5] p 1473 N94-18139

GAS-SOLID INTERACTIONS
Scaling laws for diamond chemical vapor deposition. Diamond surface chemistry [AD-A269874] p 1599 N94-18745

GASDYNAMIC LASERS
Electrically excited CO-lasers with gas dynamic cooling [DLR-FB-93-08] p 1437 N94-18061

GASEOUS DIFFUSION
Faulted structure of the bottom simulating reflector on the Blake Ridge, western North Atlantic [AD-A271289] p 1500 N94-19745

GASES
Suitability of infrared spectroscopy for remote sensing of tropospheric trace gases [KFK-5183] p 1479 N94-19507

GATES (CIRCUITS)
Single phase dynamic CMOS PLA using charge sharing technique p 1397 N94-18341
An SEU immune logic family p 1398 N94-18342
A tunable CMOS constant current source p 1401 N94-18369
Canonical multi-valued input Reed-Muller trees and forms p 1401 N94-18375
Evaluation of laser diode based optical switches for optical processors [AD-A270949] p 1581 N94-19602

GAUGE INVARIANCE
Avoiding degenerate coframes in an affine gauge approach to quantum gravity [DE93-013146] p 1607 N94-17892
Gauge coupling unification in superstring derived standard-like models [DE93-624801] p 1607 N94-17950
Gauge unification of fundamental forces: The story of success [DE93-624813] p 1383 N94-17952
A general solution of the BV-master equation and BRST field theories [DE93-628622] p 1561 N94-18171

GAUGE THEORY
Renormalizations in supersymmetric and nonsupersymmetric non-abelian Chern-Simons field theories with matter [DE93-626646] p 1593 N94-17748
Gauge coupling unification in superstring derived standard-like models [DE93-624801] p 1607 N94-17950
Gauge unification of fundamental forces: The story of success [DE93-624813] p 1383 N94-17952
Cabibbo mixing in superstring derived standard-like models [DE93-624814] p 1607 N94-17953
A general solution of the BV-master equation and BRST field theories [DE93-628622] p 1561 N94-18171
A multi-thread approach to coalescing small transfers generated by portable tool sets [DE93-012128] p 1525 N94-19186
Investigations in gauge theories, topological solitons, and string theories [DE93-015029] p 1609 N94-19250

GEAR TEETH
Tooth form design supporting system in module design p 1428 N94-18036
Gear sound levels with various tooth contact ratios and forms [NASA-TM-106432] p 1446 N94-19318

GEARS
Gear train behavior analyzer using laser beam scanning for watch movement p 1427 N94-18028
Gear sound levels with various tooth contact ratios and forms [NASA-TM-106432] p 1446 N94-19318

GELS
Studies on gel electrolyte based on nitrile-butadiene copolymers [AD-A269450] p 1370 N94-18282

GENE EXPRESSION
The c-jun gene expression in human cells exposed to either ionizing radiation or hydrogen peroxide [DE93-017436] p 1502 N94-18476
Life: Origin and evolution on Earth--How can we escape? p 1503 N94-19217

GENERAL AVIATION AIRCRAFT
Terminal area forecasts, FY 1993-2005 [AD-A269855] p 1316 N94-18336

GENES
Life: Origin and evolution on Earth--How can we escape? p 1503 N94-19217

GENETIC ALGORITHMS
Optimal design of binary phase-only filters using genetic algorithms [AD-A268737] p 1396 N94-18278
Training product unit neural networks with genetic algorithms p 1399 N94-18354

GENETIC CODE
The rationale for fundamental research in space biology: Introduction and background p 1502 N94-19211

GENETICS
Systolic array IC for genetic computation p 1400 N94-18361
Life: Origin and evolution on Earth--How can we escape? p 1503 N94-19217

GEODESIC LINES
(1,1)-geodesic maps into Grassmann manifolds [DE93-624799] p 1545 N94-17684
Unbounded components in parameter space of rational maps [DE93-628621] p 1548 N94-18170

GEODESY
(1,1)-geodesic maps into Grassmann manifolds [DE93-624799] p 1545 N94-17684
Belgian Royal Observatory Communications, Series A, No. 104, Geophysics Series No. 175 [COMMUNICATIONS-SER-A-104] p 1482 N94-18622
What can gravimetry contribute to recent and current tectonics in Belgium? p 1482 N94-18626
Current positioning possibilities by spatial techniques and the Royal Oservatory of Belgium program p 1483 N94-18627
Instrumentation developed at the Royal Observatory of Belgium for measuring slow displacements of the Earth p 1483 N94-18628
Research on Earth's rotation and the effect of atmospheric pressure on vertical deformation and sea level variability [NASA-CR-194300] p 1484 N94-18838
Gravity and the geoid in the Nepal Himalaya [NASA-CR-194166] p 1463 N94-19430
The interpretation of crustal dynamics data in terms of plate motions and regional deformation near plate boundaries [NASA-CR-194302] p 1487 N94-19432

GEODETIC SATELLITES
What can gravimetry contribute to recent and current tectonics in Belgium? p 1482 N94-18626

GEODETIC SURVEYS
Gravity and the geoid in the Nepal Himalaya [NASA-CR-194166] p 1463 N94-19430

GEODYNAMICS
Heterogeneous slip and rupture models of the San Andreas fault zone based upon three-dimensional earthquake tomography [DE93-015037] p 1480 N94-17898
Research on Earth's rotation and the effect of atmospheric pressure on vertical deformation and sea level variability [NASA-CR-194300] p 1484 N94-18838
Analysis of regional deformation and strain accumulation data adjacent to the San Andreas fault [NASA-CR-194072] p 1487 N94-19428
The interpretation of crustal dynamics data in terms of plate motions and regional deformation near plate boundaries [NASA-CR-194302] p 1487 N94-19432

GEOGRAPHIC INFORMATION SYSTEMS
Energy efficiency and the environment: Innovative ways to improve air quality in the Los Angeles Basin [DE93-016964] p 1473 N94-18050
Application of ARC/INFO to regional scale hydrogeologic modeling [DE93-015673] p 1461 N94-18107
Directional regions in Geographic Information Systems (GIS) [AD-A268536] p 1462 N94-18309
Working visit to the University of L'Aquila, Italy [FEL-93-B020] p 1618 N94-19452

GEOGRAPHY
Directional regions in Geographic Information Systems (GIS) [AD-A268536] p 1462 N94-18309
Eastern Europe: A climatological study [AD-A269200] p 1493 N94-18883

GEOIDS
What can gravimetry contribute to recent and current tectonics in Belgium? p 1482 N94-18626
Research on Earth's rotation and the effect of atmospheric pressure on vertical deformation and sea level variability [NASA-CR-194300] p 1484 N94-18838

GEOLOGICAL FAULTS
Historical seismicity of Hainaut, Flanders and Artois p 1482 N94-18623
Current (1985-1988) seismic activity in Belgium: Comparison with historical and instrumental seismic data p 1482 N94-18624
Macroseismic study of the Dour (Belgium) earthquakes of 22 March 1987 and of Gulpen (Belgium) 17 October 1988 p 1482 N94-18625
The interpretation of crustal dynamics data in terms of plate motions and regional deformation near plate boundaries [NASA-CR-194302] p 1487 N94-19432
Faulted structure of the bottom simulating reflector on the Blake Ridge, western North Atlantic [AD-A271289] p 1500 N94-19745

GEOLOGY
Technologies for assessing the geologic and geomorphic history of coasts [AD-A268780] p 1496 N94-18215
High resolution geological site characterization utilizing ground motion data [AD-A268926] p 1481 N94-18485
JPRS report: Science and technology. Central Eurasia: Earth Sciences [JPRS-UES-93-004] p 1461 N94-19209

GEOMAGNETIC LATITUDE
The effects of magnetic storm phases on f-layer irregularities from auroral to equatorial latitudes [AD-A267388] p 1486 N94-19008

GEOMAGNETISM
Global zones of particle precipitation as observed EXOS-C [AD-A268758] p 1481 N94-18467
ISTP Global Geospace Science. Energy transfer in geospace [NASA-TM-109239] p 1620 N94-18851
Contributions from geomagnetic inverse theory to the study of hydromagnetic conditions near the core-mantle boundary [NASA-CR-194303] p 1484 N94-18853
Activities of the Indian Institute of Geomagnetism p 1484 N94-18854

GEOMETRICAL OPTICS
The interpretation of optical caustics in the presence of dynamic non-uniform crack-tip motion histories: A study based on a higher order transient crack-tip expansion [SM91-12] p 1456 N94-19130

GEOMETRICAL THEORY OF DIFFRACTION
Wideband electromagnetic scattering/analysis program: Far zone electromagnetic scattering from complex shapes using geometrical theory of diffraction [AD-A268790] p 1384 N94-18187

GEOMORPHOLOGY
Technologies for assessing the geologic and geomorphic history of coasts [AD-A268780] p 1496 N94-18215
Mechanical modeling of the growth of salt structures [DE93-015342] p 1596 N94-18243
Macroseismic study of the Dour (Belgium) earthquakes of 22 March 1987 and of Gulpen (Belgium) 17 October 1988 p 1482 N94-18625
Applications of Quaternary stratigraphic, soil-geomorphic, and quantitative geomorphic analyses to the evaluation of tectonic activity and landscape evolution in the Upper Coastal Plain, South Carolina [DE93-016269] p 1484 N94-18725

GEOPHYSICS
Rapid geophysical surveyor [DE93-016637] p 1461 N94-17851
Geography and meteorological studies in the Far East [DE93-013563] p 1461 N94-17893
Belgian Royal Observatory Communications, Series A, No. 104, Geophysics Series No. 175 [COMMUNICATIONS-SER-A-104] p 1482 N94-18622
Current positioning possibilities by spatial techniques and the Royal Oservatory of Belgium program p 1483 N94-18627
Instrumentation developed at the Royal Observatory of Belgium for measuring slow displacements of the Earth p 1483 N94-18628

Center of Excellence in Theoretical Geoplasma Research
[AD-A270210] p 1588 N94-18902
Using computerized tomography to determine ionospheric structures
[DE93-018903] p 1485 N94-19001
Institute of Geophysics and Planetary Physics, 1992
[DE93-019209] p 1627 N94-19077

GEOSTROPHIC WIND
Some potential errors in satellite wind estimates using the geostrophic approximation and the thermal wind
[AD-A269784] p 1491 N94-18599
Moist wind relationships p 1492 N94-18607

GEOSYNCHRONOUS ORBITS
Broadband RF spectrum from electrostatic discharges on spacecraft
[AD-A269543] p 1385 N94-18287
JPRS report: Science and technology. Central Eurasia: Space
[JPRS-USP-93-004] p 1323 N94-19146

GEOTECHNICAL ENGINEERING
Centrifuge modeling of explosion-induced craters in unsaturated sand
[AD-A270194] p 1417 N94-18780
Research activities, Faculty of Civil Engineering, Delft University of Technology, 1990 - 1991
[PB93-195022] p 1380 N94-19254

GEOTEMPERATURE
Geothermal activity near Clearlake, California
[DE93-016627] p 1485 N94-18894

GERMAN SPACE PROGRAM
Research and design activities and the economic balance of MBB
[ETN-93-94909] p 1310 N94-19383

GERMANIUM
MUZO flight experience with the programmable multizone furnace p 1324 N94-19167

GERMANIUM ALLOYS
The low-temperature specific heat of CeCu2Ge2 at 0 and 9.5 kbar
[DE93-014914] p 1360 N94-18398
Fundamental properties and device applications of Ge(x)Si(1-x)/Si superlattices (supplemental)
[AD-A269212] p 1600 N94-18884

GET AWAY SPECIALS (STS)
The 1993 Shuttle Small Payloads Symposium
[NASA-CP-3233] p 1323 N94-19162
California Student Get Away Special Payload GAS-450 p 1324 N94-19164
MUZO flight experience with the programmable multizone furnace p 1324 N94-19167
The GAMCIT gamma ray burst detector p 1324 N94-19168
Static Computer Memory Integrity Testing (SCMIT): An experiment flown on STS-40 as part of GAS payload G-616 p 1325 N94-19169
The first flight of the QUESTS GAS payload G-521 p 1325 N94-19170
Attitude sensor package p 1325 N94-19172
Space Applications Industrial Laser System (SAILS) p 1325 N94-19173
A high resolution ultraviolet Shuttle glow spectrograph p 1325 N94-19174
Materials flight experiment carrier capability and future flight experiments on Hitchhiker-M carrier program p 1326 N94-19175
Limited Duration of Candidate Materials Exposure Experiment (LDCE): A Complex Autonomous Payload (CAP) using a Get Away Special (GAS) canister p 1326 N94-19176
Kennedy Space Center processing of Shuttle small payloads p 1326 N94-19177
Utilization of Shuttle small payload accommodations in the DOD Space Test Program p 1326 N94-19180
Your GAS experiment and the media or why does that other can get all of the publicity? p 1327 N94-19182
Superfluid Helium On-Orbit Transfer (SHOOT) flight demonstration p 1327 N94-19185

GIANT STARS
Determination of nitrogen to carbon abundance ratios from transition layer emission lines
[NASA-CR-191921] p 1622 N94-19421

GIMBALS
Analysis and design of robust decentralized controllers for nonlinear systems
[DE93-019224] p 1543 N94-19302

GINGA SATELLITE
Pulse-timing studies of x ray pulsars
[NASA-CR-193776] p 1621 N94-18611

GLACIERS
Research on Earth's rotation and the effect of atmospheric pressure on vertical deformation and sea level variability
[NASA-CR-194300] p 1484 N94-18838

GLASS
Performance of the Amorphous Materials Diffractometer GLAD at IPNS
[DE93-017746] p 1430 N94-18481
An ultraviolet faraday rotator glass
[AD-D015879] p 1371 N94-18529
High performance YBCO films
[AD-A269090] p 1599 N94-18719
Radiation induced darkening of the optical elements in the Startracker camera
[DE93-018907] p 1433 N94-19004

GLASS LASERS
Pulsed power supply for Nova Upgrade
[DE93-019626] p 1441 N94-19307

GLASS TRANSITION TEMPERATURE
Nondestructive inspection of graphite-epoxy laminates for heat damage using DRIFT and LPF spectroscopies
[DE93-017228] p 1343 N94-18761

GLINT
Marine-modified LOWTRAN: The contribution of sun glint
[AD-A269547] p 1500 N94-19762

GLOBAL AIR POLLUTION
Setting the global thermostat with an exhaustible tradeable permit system
[DE93-012911] p 1472 N94-17891

GLOBAL POSITIONING SYSTEM
Flight demonstration of image fix-taking with SAR
[DE93-018499] p 1382 N94-17861
On the use of differential GPS for automatic approach and landing of space and aircraft
[DLR-MITT-93-05] p 1316 N94-17921
Missile antenna pattern coordinate system and data formats
[AD-A269153] p 1385 N94-18260
Current positioning possibilities by spatial techniques and the Royal Oservatory of Belgium program p 1483 N94-18627
Absolute positioning by collecting Global Positioning System (GPS) data along short baselines
[AD-A271324] p 1317 N94-19572

GLOBAL WARMING
Biophysical characterization and surface radiation balance
[NASA-CR-194659] p 1470 N94-17762
Setting the global thermostat with an exhaustible tradeable permit system
[DE93-012911] p 1472 N94-17891
Cloud CCN feedback
[DE93-016878] p 1472 N94-17985
Infrared cross sections and global warming potentials of 10 alternative hydrohalocarbons
[AERONAUTICA-ACTA-A-371-199] p 1479 N94-19521

GLYCERIDES
Nuclear Medicine Program
[DE93-013896] p 1504 N94-17699

GOGGLES
Human integration evaluation of three helmet systems
[AD-A271320] p 1513 N94-19570

GOLD ALLOYS
Accelerated tests on the tarnish resistance of gold alloys p 1367 N94-18008
Gold-copper-zinc coatings as an alternative to gold-copper-cadmium p 1367 N94-18012

GOLD COATINGS
Superhardness effect in Au/Ni multilayers
[DE93-016444] p 1357 N94-17860
Embrittlement of surface mount solder joints by hot solder-dipped, gold-plated leads
[DE93-017659] p 1358 N94-18003

GOODNESS OF FIT
EDF tests for normality in linear models after a Box-Cox transformation
[AD-A269068] p 1557 N94-18517

GOVERNMENT PROCUREMENT
Naval aviation: Consider all alternatives before proceeding with the F/A-18E/F
[AD-A269302] p 1305 N94-18279

GOVERNMENT/INDUSTRY RELATIONS
White House technology reinvestment project: Briefing and transcripts
[PB93-169829] p 1611 N94-18090

GOVERNMENTS
Trends in Information Management at Department of Energy Headquarters
[DE93-017197] p 1615 N94-18496

GRADIENTS
Velocity measurements in a boundary layer with a density gradient
[DE93-019627] p 1422 N94-19515

GRAIN BOUNDARIES
The Hall-Petch relationship and mechanisms of fracture in B2 compounds
[DE93-018887] p 1359 N94-18182
Synthesis and study of high-T(sub c) superconducting electronic materials
[AD-A268851] p 1402 N94-18390
A free energy simulation method based study of interfacial segregation
[DE93-019462] p 1364 N94-19032
The effect of composition on the mechanism of continuous recrystallization and superplastic response of aluminum-scandium alloys
[DE93-018594] p 1365 N94-19280
The microstructural mechanism of electromigration failure in narrow interconnects of Al alloys
[DE93-018598] p 1365 N94-19282

GRAIN SIZE
Modeling microstructural evolution and the mechanical response of superplastic materials
[DE93-014417] p 1355 N94-17711
Tensile properties of as-cast iron-aluminide alloys
[DE93-017852] p 1363 N94-18975

GRAINS
Tunneling spectroscopy of ultrasmall clusters and grains
[AD-A268840] p 1598 N94-18539

GRAINS (FOOD)
FT-NIR spectroscopy in quantitative and qualitative measurements of cereal products
[VTT-TIED-1331] p 1346 N94-17973

GRAMMARS
Multistack languages and grammars
[REPT-93-018] p 1518 N94-17926
Attribute evaluation during generalized parsing
[MEMO-INF-92-85] p 1526 N94-19224
Stochastic grammars: Theory and applications
[MEMO-INF-93-19] p 1528 N94-19262

GRAND UNIFIED THEORY
Neutrino masses in superstring derived standard-like models
[DE93-624802] p 1565 N94-17951
Gauge unification of fundamental forces: The story of success
[DE93-624813] p 1383 N94-17952

GRAPH THEORY
An annealing approach to multi-facility location problems in euclidean spaces
[REPT-93-022] p 1547 N94-17928
Exact cost flow problems in acyclic networks
[REPT-93-030] p 1520 N94-18138
Fuzzy hypergraphs and fuzzy intersection graphs
[AD-A270303] p 1549 N94-18815
Refining a triangulation of a planar straight-line graph to eliminate large angles
[DE93-016510] p 1528 N94-19344
A perfection-preserving operation
[RR-911-I] p 1552 N94-19393
Neighbourhood-perfect line graphs
[RR-915-I] p 1552 N94-19395
The complexity of the optimal spanning hypertree problem
[TR-471] p 1561 N94-19481
Mathematical communications, volume 27, numbers 1 and 2, 1992. List and abstracts of memoranda published in the period July - December 1991
[PB93-191997] p 1553 N94-19557
Updated contributions to the Twente Workshop of Hamiltonian Graph Theory
[PB93-195568] p 1553 N94-19605
Updated Contributions to the Twente Workshop on Hamiltonian Graph Theory
[MEMO-1076] p 1554 N94-19683
On Hamilton-connectedness of Cayley graphs p 1554 N94-19684
On Hamiltonian properties of 2-tough graphs p 1554 N94-19685
Toughness and the cycle structure of graphs p 1554 N94-19686
The Hopping Lemma p 1554 N94-19687
Cycles containing all vertices of maximum degree p 1554 N94-19688
Long paths and cycles in tough graphs p 1554 N94-19689
The complete closure of a graph p 1555 N94-19690
Twenty odd statements in Twente p 1555 N94-19691
Generalized closures of graphs p 1555 N94-19692
Two problems related to results of Chvatal-Erdoes p 1555 N94-19693
Concerning the circumference of certain families of graphs p 1555 N94-19694
Ore-type conditions for cycles through specified vertices p 1555 N94-19695
Hamilton cycles in path-tough graphs p 1555 N94-19696
Cubic graphs containing k vertex-disjoint subgraphs of given cyclomatic number p 1555 N94-19697

Finding the strong components in a directed graph [PB93-187342] p 1555 N94-19708

GRAPHICAL USER INTERFACE

EDMS: Engineering data management system. User's reference [PB93-187391] p 1614 N94-18119

Three-dimensional cloud visualization based on satellite imagery [AD-A269318] p 1490 N94-18300

Why are human-computer interfaces difficult to design and implement? [AD-A268843] p 1514 N94-18317

Software distribution using xnetlib [DE93-018278] p 1523 N94-18989

How to apply the IEEE standards to software testing [DE93-018514] p 1527 N94-19245

GRAPHITE

Physico chemical and mechanic approach of lubricating properties of graphite + additive powders [ECL-93-02] p 1373 N94-19405

GRAPHITE-EPOXY COMPOSITES

Nondestructive inspection of graphite-epoxy laminates for heat damage using DRIFT and LPF spectroscopies [DE93-017228] p 1343 N94-18761

Characterization of vapor plume species and deposition residues resulting from pulsed laser ablation of a graphite/epoxy composite [AD-A270101] p 1343 N94-18869

A comparative evaluation of in-plane shear test methods for laminated graphite-epoxy composites [NASA-CR-193808] p 1456 N94-19095

GRAPHS (CHARTS)

Location of the absolute barycenter of a graph [REPT-93-027] p 1547 N94-17962

Exact cost flow problems in acyclic networks [REPT-93-030] p 1520 N94-18138

Annealing algorithms for multiresource absolute location problems on graph [REPT-93-028] p 1520 N94-18145

Color palette considerations for digital map displays [AD-A269991] p 1462 N94-18679

Fuzzy hypergraphs and fuzzy intersection graphs [AD-A270303] p 1549 N94-18815

A perfection-preserving operation [RR-911-I] p 1552 N94-19393

Neighbourhood-perfect line graphs [RR-915-I] p 1552 N94-19395

Updated Contributions to the Twente Workshop on Hamiltonian Graph Theory [MEMO-1076] p 1554 N94-19683

On Hamilton-connectedness of Cayley graphs p 1554 N94-19684

Long paths and cycles in tough graphs p 1554 N94-19689

Generalized closures of graphs p 1555 N94-19692

GRATINGS (SPECTRA)

Developmental testing of a prototype all-reflection Michelson interferometer [AD-A269064] p 1430 N94-18406

Apparatus and method for varying a Bragg wavelength of a Bragg grating formed in an optical fiber [AD-D015876] p 1579 N94-18743

A tunable compact high power far-infrared grating free-electron laser [AD-A269875] p 1440 N94-18771

GRAVIMETERS

What can gravimetry contribute to recent and current tectonics in Belgium? p 1482 N94-18626

Instrumentation developed at the Royal Observatory of Belgium for measuring slow displacements of the Earth p 1483 N94-18628

GRAVITATION

Avoiding degenerate coframes in an affine gauge approach to quantum gravity [DE93-013146] p 1607 N94-17892

Space and time as outcome of decoherence in an expanding universe [DE93-016199] p 1624 N94-18047

Extensions of 2D gravity [DE93-018525] p 1485 N94-18929

GRAVITATIONAL COLLAPSE

Weak neutral currents and collapse initiated supernova [DE93-018652] p 1627 N94-19284

GRAVITATIONAL EFFECTS

Opportunities and questions for the fundamental biological sciences in space p 1502 N94-19212

Space research with intact organisms: The role of Space Station Freedom p 1502 N94-19213

Space research on organs and tissues p 1503 N94-19214

A scientific role for Space Station Freedom: Research at the cellular level p 1503 N94-19215

Microgravity research in plant biological systems: Realizing the potential of molecular biology p 1503 N94-19216

Life: Origin and evolution on Earth--How can we escape? p 1503 N94-19217

Gravity and the geoid in the Nepal Himalaya [NASA-CR-194166] p 1463 N94-19430

GRAVITATIONAL FIELDS

On a conformal perfect fluid in the classical vacuum [DE93-624797] p 1480 N94-17682

About symmetry of the gravitational action [DE93-629955] p 1608 N94-18252

The application of front tracking to the simulation of shock refractions and shock accelerated interface mixing [DE93-018342] p 1419 N94-19025

JPRS report: Science and technology. Central Eurasia: Space [JPRS-USP-93-004] p 1323 N94-19146

GRAVITATIONAL PHYSIOLOGY

Characterization of fluid physics effects on cardiovascular response to microgravity (G-572) p 1323 N94-19163

Space research on organs and tissues p 1503 N94-19214

A scientific role for Space Station Freedom: Research at the cellular level p 1503 N94-19215

GRAVITY WAVES

Internal instability of nonparallel flow on an equatorial beta-plane [AD-A268927] p 1490 N94-18486

Constraints on crustal structure from long period pressure and displacement measurements on the deep seafloor [AD-A269931] p 1498 N94-18663

On the use of semi-Lagrangian methods for accurate predictions of gravity waves [DM-61] p 1562 N94-18859

GRAY SCALE

Progress in edge detection [RR-914-I] p 1529 N94-19396

GRAZING INCIDENCE

Single-transverse-mode, narrow-bandwidth pulsed tunable dye laser with hollow circular intracavity dielectric waveguide [AD-A270022] p 1439 N94-18614

GREASES

Study on radiation-induced deterioration of grease at high temperature, 3 [DE93-788368] p 1369 N94-18220

GREEN'S FUNCTIONS

Path integrals on warped product manifolds [DE93-629859] p 1561 N94-18151

Three dimensional multipole decomposition of fields [DE93-018530] p 1389 N94-19053

An investigation of low Marangoni number fluid flow in a cold corner [AD-A271317] p 1422 N94-19569

Acoustic propagation modeling using MATLAB [AD-A270905] p 1564 N94-19750

GREENHOUSE EFFECT

Monitoring the response of the upper troposphere/lower stratosphere to a greenhouse gas scenario [DE93-014509] p 1470 N94-17710

Assessing impacts of climate change on forests: The state of biological modeling [DE93-015916] p 1471 N94-17790

The carbon dioxide emissions game: Playing the net [DE93-017670] p 1471 N94-17821

Geography and meteorological studies in the Far East [DE93-013563] p 1461 N94-17893

Land-use related sources of CO2, CH4 and N2O: Current global emissions and projections for the period 1990-2100 [PB93-194819] p 1475 N94-18949

Kinetics programs for simulation of tropospheric photochemistry on the global scale [DE93-019035] p 1476 N94-19104

Valuation of temporary and future greenhouse gas reductions [DE93-018876] p 1478 N94-19319

GRID GENERATION (MATHEMATICS)

WBNGRID, a program for generation of C-H and C-O topology grids around wing/body/nacelle configurations: User's guide [FFA-TN-1992-09] p 1311 N94-17721

Finite element modeling of evaporation and condensation during sol-gel film and fiber formation [DE93-017655] p 1345 N94-17820

Advances and applications of ABCI [DE93-016971] p 1383 N94-18055

GREPOS: A GENESIS database repositioning program [DE93-018517] p 1614 N94-18164

Calculation of maximum and high lift characteristics of multi element aerofoils p 1305 N94-18419

Navier-Stokes calculations on multi-element airfoils using a chimera-based solver p 1306 N94-18422

High-lift system analysis method using unstructured meshes p 1307 N94-18426

UUGM code development [AD-A269945] p 1416 N94-18671

Computational Fluid Dynamics (CFD) research branch technical briefs [AD-A269698] p 1417 N94-18739

Multigrid methods for flow transition in three-dimensional boundary layers with surface roughness [NASA-CR-4540] p 1417 N94-18843

3D composite grids using Bezier curves and surfaces in component adaptive methods [AD-A269188] p 1549 N94-18863

A particle method for history-dependent materials [DE93-018696] p 1456 N94-19060

GENSHELL: A genesis database 2D to 3D shell transformation program [DE93-018694] p 1525 N94-19102

Content based-grid node selection for vector field visualization [REPT-93-35] p 1525 N94-19155

Are bilinear quadrilaterals better than linear triangles? [DE93-019223] p 1551 N94-19301

Adaptive methods for nonlinear structural dynamics and crashworthiness analysis p 1458 N94-19466

Transient dynamics capability at Sandia National Laboratories p 1460 N94-19476

Three dimensional network generation and Euler calculation for a wing fuselage canard configuration [MBB-LME-211-S-PUB-511-A] p 1319 N94-19500

Locally adaptive remeshing scheme for calculating fluid instabilities [DE93-019577] p 1422 N94-19568

GRINDING (MATERIAL REMOVAL)

Synchrotron/crystal sample preparation [NASA-CR-193837] p 1603 N94-19513

GROSS NATIONAL PRODUCT

The 1992 annual report on scientific programs: A broad research program on the sciences of complexity [DE93-018151] p 1561 N94-18178

GROUND BASED CONTROL

JPRS report: Central Eurasia. Aviation and cosmonautics, no. 10, October 1992 [JPRS-UAC-93-004] p 1632 N94-19149

GROUND EFFECT (AERODYNAMICS)

Wake structure and aerodynamic behavior of high lift aircraft configurations during unsteady maneuvers in ground effect p 1309 N94-18439

Lift and pitching moment induced on jet STOVL aircraft hovering in ground effect [AD-A269700] p 1317 N94-18577

Lift and pitching moment induced on jet STOVL aircraft by the ground vortex [AD-A269816] p 1318 N94-18733

Flight test techniques for aircraft parameter estimation in ground effect [AD-A270058] p 1318 N94-18795

GROUND EFFECT (COMMUNICATIONS)

RADARC HF ionospheric prediction program for OTH radar [AD-A269557] p 1385 N94-18291

GROUND STATE

Crossed molecular beam studies of atmospheric chemical reaction dynamics [DE93-019246] p 1478 N94-19303

GROUND STATIONS

The use of velocity spectra for stacking receiver functions with application to IRIS/IDA stations OBNINSK (OBN) and ARTI (ARU), Russia [AD-A269087] p 1483 N94-18717

ASTRO-1 to explore invisible universe [NASA-TM-109360] p 1336 N94-18956

SeaTrack: Ground station orbit prediction and planning software for sea-viewing satellites [NASA-RP-1331] p 1532 N94-19761

GROUND SUPPORT EQUIPMENT

Kennedy Space Center processing of Shuttle small payloads p 1326 N94-19177

Cluster: Mission, Payload, and Supporting Activities [ESA-SP-1159] p 1328 N94-19622

The Cluster spacecraft p 1330 N94-19635

Cluster ground segment and mission operations p 1330 N94-19636

GROUND TRACKS

Application of the A* algorithm to aircraft trajectory generation [AD-A268728] p 1317 N94-18315

GROUND TRUTH

CTD and XBT data collected on ERS-1 validation cruise RRS Charles Darwin Cruise 62A, Iceland-Faeroes region [IOS-294-1992] p 1461 N94-18063

GROUND WATER

A Bayesian approach to contaminant plume delineation [DE93-012909] p 1472 N94-17890

Application of ARC/INFO to regional scale hydrogeologic modeling
[DE93-015673] p 1461 N94-18107
Multigrid for a groundwater flow problem
[REPT-93-29] p 1420 N94-19144
Penetrometer compatible, fiber-optic sensor for continuous monitoring of chlorinated hydrocarbons: Field test results
[DE93-017974] p 1352 N94-19266

GROUND WIND
Wind products for use in coastal wave and surge models
[AD-A269753] p 1497 N94-18414
Application of an atmospheric dispersion model to simulated pollutant releases in the Colorado Front range
[DE93-017118] p 1480 N94-19732

GROUP DYNAMICS
Putting knowledge to use: The acquisition and transfer of knowledge in situated problem solving environments
[AD-A269746] p 1509 N94-18744

GROUP THEORY
Infinite Grassmannian and moduli space of G-bundles
[DE93-624798] p 1545 N94-17683
Deformed traces and covariant quantum algebras for quantum groups GL(sub qp)(2) and GL(sub qp)(1/1)
[DE93-629862] p 1561 N94-18153
Group-invariant solutions of hydrodynamics and radiation hydrodynamics
[DE93-018373] p 1423 N94-19604

GROUP VELOCITY
Surface wave group velocity tomography of East Asia, part 1
[AD-A270100] p 1484 N94-18868

GUIDANCE (MOTION)
Overview of research in progress at the Center of Excellence
[NASA-CR-194329] p 1618 N94-19256

GULF STREAM
Synoptic ocean prediction experiment. EN216 CTD section data report
[AD-A268903] p 1497 N94-18230
Preparation of data assimilation and model evaluation experiment data sets
[AD-A269996] p 1498 N94-18665
Modeling of current features in Gulf Stream SAR imagery
[AD-A270734] p 1499 N94-19609

GUN PROPELLANTS
Mechanical response comparison of gun propellants evaluated under equivalent time-temperature conditions
[AD-A270479] p 1378 N94-19674

GUSTS
Shape of wind gusts at a 130m tower at Wilhelmshaven (Germany)
[BER-BAND-B3] p 1494 N94-19503

GYROMAGNETISM
The anomalous magnetic moment of the muon
[DE93-018932] p 1572 N94-19320

H

H II REGIONS
The molecular environment of S106 IR
[MPE-PREPRINT-241] p 1622 N94-19417
ROSAT and IRAS observations
[MPE-PREPRINT-231] p 1623 N94-19526
IRAS galaxies observed in the ROSAT survey: Starbursts or central activity p 1623 N94-19528

H LINES
Unified NLTE model atmospheres including spherical extension and stellar winds, 4: Improved line transfer and wind contamination of H, He profiles
[MPA-905] p 1624 N94-17736

H-INFINITY CONTROL
Discrete-time infinity control problem with measurement feedback
[PB93-197523] p 1543 N94-19329
A learning autopilot for automatically controlled robust regulation
[ETN-93-95075] p 1321 N94-19711

HABITATS
Assessing impacts of climate change on forests: The state of biological modeling
[DE93-015916] p 1471 N94-17790

HADRONS
On the difference caused by CP violation in the energy spectra of pions in K(sup (+-))(yields)(pi)(+-)(pi)(+-)(pi)-+ decays
[DE93-624828] p 1564 N94-17687
Energy loss measurement of cosmic ray muons
[KFK-5158] p 1631 N94-19504
Measurements of cosmic ray muons with multi-wire proportional chambers with a prototype setup for KASCADE
[KFK-5173] p 1631 N94-19506

HALL EFFECT
IR materials producibility
[AD-A268849] p 1577 N94-18223
Growth of structures for integrated optoelectronic devices
[AD-A269014] p 1598 N94-18527

HALOS
Halo formation in mismatched, space-charge-dominated beams
[DE93-018581] p 1574 N94-18934

HAMILTONIAN FUNCTIONS
Exact solution of the generalized time-dependent Jaynes-Cummings Hamiltonian
[DE93-624773] p 1546 N94-17811
Some remarks on integrable Hamiltonian systems with two degrees of freedom
[DE93-624766] p 1546 N94-17815
Vortex methods and statistics
[DE93-016974] p 1556 N94-17886
Variable time-step integration for intense field effects
[DE93-013296] p 1382 N94-17909
A zeta function approach to the semiclassical quantization of maps
[DE93-624774] p 1547 N94-17949
Path integrals on warped product manifolds
[DE93-629859] p 1561 N94-18151
Impulsive moving mirror model in a Schroedinger picture with impulse effect in a Banach space
[DE93-629864] p 1561 N94-18155
Phase structure of (phi(4))(sub 3) field theory at finite temperature
[DE93-629907] p 1608 N94-18267
Contact 3-manifolds, integrable Hamiltonian systems and exotic symplectic structures in R(sup 4)
[DE93-624767] p 1551 N94-19248
Updated contributions to the Twente Workshop of Hamiltonian Graph Theory
[PB93-195568] p 1553 N94-19605

HAND (ANATOMY)
Synchronisation of cold induced vasodilation at various locations of one hand
[IZF-1992-B3] p 1504 N94-17966

HARBORS
The ecological and environmental impacts of manmade marshes
[AD-A269213] p 1475 N94-18885

HARDNESS
Mechanical properties of excimer laser modified titanium surfaces
[DE93-012663] p 1358 N94-17875
Impact strength and indentation hardness of high-strength ceramics
[DE93-018833] p 1373 N94-19338
Picoindentation hardness measurements using atomic force microscopy
[AD-A270877] p 1604 N94-19579

HARDNESS TESTS
Picoindentation hardness measurements using atomic force microscopy
[AD-A270877] p 1604 N94-19579

HARDWARE
A programmable systolic trigger processor for FERA-bus data
[USIP-92-04] p 1405 N94-19292
FASTBUS simulation models in VHDL
[USIP-92-07] p 1515 N94-19295
The universal BitBus node
[DIGEL-1993-1] p 1515 N94-19799

HARMONIC ANALYSIS
Method for extracting tidal and inertial motion from ARGOS ice buoys applied to the Barents Sea during CEAREX
[PB93-190213] p 1499 N94-19063

HARMONIC EXCITATION
Dynamics of short-pulse excitation, ionization and harmonic conversion
[DE93-017220] p 1436 N94-17996
Low frequency acoustics of laminated composite axisymmetric structures
[DRA-TM(USGR)-93302] p 1344 N94-19391
Axial response of differently excited anchored viscous liquid bridges in zero-gravity
[LRT-WE-9-FB-1-1992] p 1379 N94-19489

HARMONIC FUNCTIONS
A priori estimates and existence of positive solutions of a superlinear polyharmonic equation
[REPT-93-12] p 1550 N94-19086

HARMONIC GENERATIONS
Observations of MeV electrons and scattered light from intense, subpicosecond laser-plasma interactions
[DE93-017153] p 1435 N94-17855
Surface second harmonic generation studies of stepped Ag(111) electrode surfaces
[AD-A265205] p 1594 N94-17876
A superconducting short period undulator for a harmonic generation FEL experiment
[DE93-017581] p 1436 N94-17998
Magnetic field measurements of a superconducting undulator for a Harmonic Generation FEL experiment at the NSLS
[DE93-017621] p 1438 N94-18504
Relaxation of polar orientational order in nonlinear optical polymers by second harmonic generation
[AD-A269059] p 1370 N94-18515
Harmonic generation at high intensities
[DE93-018632] p 1572 N94-19283
Optical frequency doubling at adsorbates of silver(110) surface
[ETN-93-94837] p 1603 N94-19355

HARMONIC OSCILLATION
Synchrotron beam-loading stability with a higher RF harmonic
[DE93-014549] p 1573 N94-17726
A computational and experimental investigation of incompressible oscillatory airfoil flow and flutter problems
[AD-A268748] p 1311 N94-18402

HARMONIC OSCILLATORS
On paragrassmann differential calculus
[DE93-628594] p 1548 N94-18169
Thermodynamic q-distributions that aren't
[DE93-017385] p 1609 N94-19121

HARMONICS
Optical design for photonics. Organization of the 1993 Photonics Science Topical Meetings. Technical digest series, volume 9
[AD-A269027] p 1578 N94-18396
Theory of electromagnetic waves propagating in nonlinear anisotropic optical materials
[AD-A269305] p 1386 N94-18469
Effects of harmonics on EMI/RFI filters operating under nonlinear loading conditions
[AD-A269559] p 1388 N94-18769

HARNESSES
Army Cockpit Delethalization Program (CDP)
[AD-A268990] p 1512 N94-18765

HASTELLOY (TRADEMARK)
Atlas of formability: Hastelloy C-22
[AD-A268324] p 1356 N94-17796

HAZARDS
SUNRAYCE 1993: Working safely with lead-acid batteries and photovoltaic power systems
[DE93-016553] p 1464 N94-17712
Calamity weather: Environmental calamities and meteorology p 1495 N94-19703

HAZE
Analysis of meteorological conditions during AGASP-4: 30 March - 23 April 1992
[PB93-190205] p 1489 N94-18126

HEALTH
Review of short-term, high-level exposure to metals: Antimony, barium, and cadmium
[AD-A268896] p 1505 N94-18392
The urban perspectives of acid rain
[DE93-018881] p 1474 N94-18523

HEAO 2
The Einstein Observatory catalog of IPC x ray sources. Volume 4E: Right ascension range 08h 00m to 11h 59m
[NASA-TM-108401-VOL-4E] p 1625 N94-18612
The Einstein Observatory catalog of IPC x ray sources. Volume 5E: Right ascension range 12h 00m to 15h 59m
[NASA-TM-108401-VOL-5E] p 1625 N94-18613
The Einstein Observatory catalog of IPC x ray sources. Volume 6E: Right ascension range 16h 00m to 19h 59m
[NASA-TM-108401-VOL-6E] p 1625 N94-18615
The Einstein Observatory catalog of IPC x ray sources. Volume 7E: Right ascension range 20h 00m to 23h 59m
[NASA-TM-108401-VOL-7E] p 1625 N94-18618
The Einstein Observatory catalog of IPC x ray sources. Volume 1E: Documentation
[NASA-TM-108401-VOL-1E] p 1626 N94-18619
The Einstein Observatory catalog of IPC x ray sources. Volume 2E: Right ascension range 00h 00m to 03h 59m
[NASA-TM-108401-VOL-2E] p 1626 N94-18620
The Einstein Observatory catalog of IPC x ray sources. Volume 3E: Right ascension range 04h 00m to 07h 59m
[NASA-TM-108401-VOL-3E] p 1626 N94-18621

HEARING
The effects of reverberant impulse noise (blast waves) on hearing: Parametric studies
[AD-A269242] p 1506 N94-18911

HEART FUNCTION
Characterization of fluid physics effects on cardiovascular response to microgravity (G-572)
p 1323 N94-19163

HEART RATE
Metabolic changes and hemodynamic dysfunction following hypothermic shock
[AD-A269780] p 1506 N94-18598

Evaluation of physiological and psychological impairment of human performance in cold stressed subjects
[AD-A268637] p 1506 N94-18632

Characterization of fluid physics effects on cardiovascular response to microgravity (G-572)
p 1323 N94-19163

HEAT AFFECTED ZONE

Technique to eliminate helium induced weld cracking in stainless steels
[DE93-015982] p 1357 N94-17859

Thermal insulation of wet shielded metal arc welds
[AD-A268697] p 1445 N94-18465

Cutting and drilling studies using high power visible lasers
[DE93-019149] p 1441 N94-19294

HEAT BALANCE

Effects of a high-energy food supplement on cold-induced thermogenesis
[AD-A269301] p 1504 N94-17823

Thermodynamic theory of exergy analysis
[PB93-187847] p 1607 N94-18120

HEAT ENGINES

Studies of dynamic contact of ceramics and alloys for advanced heat engines
[DE93-016366] p 1368 N94-18110

Analytical and experimental evaluation of joining silicon nitride to metal and silicon carbide to metal for advanced heat engine applications
[DE93-018128] p 1446 N94-19291

Ceramic technology project data base
[DE93-019360] p 1374 N94-19561

HEAT EXCHANGERS

Malone refrigeration
[DE93-014468] p 1379 N94-17725

Fin-efficiency calculation for condensation in the presence of noncondensable gases
[DE93-017684] p 1409 N94-18004

The 7th International Cryocooler Conference
[AD-A268451] p 1379 N94-18147

HEAT FLUX

Surface fluxes important to cloud development
[DE93-016633] p 1488 N94-17715

Filamentation, current profiles and transport in a tokamak
[DE93-016768] p 1584 N94-17948

Transport in the self-organized relaxed state of ion temperature gradient instability
[DE93-016769] p 1584 N94-17983

Boundary layer heat budgets from wind profiler/RASS data: A feasibility study
[DE93-013187] p 1489 N94-18052

The vertical distribution of heating in the tropical atmosphere
[AD-A270452] p 1490 N94-18514

Liquid crystal heat transfer measurements
p 1432 N94-18653

Scaling laws for diamond chemical vapor deposition. 2: Atomic hydrogen transport
[AD-A269842] p 1371 N94-18740

Radiative divertor modeling studies
[DE93-018092] p 1590 N94-19290

Examinations of converging cylindrically symmetric second sound propagation in He2
[MPIS-9/1992] p 1564 N94-19715

HEAT OF FORMATION

A free energy simulation method based study of interfacial segregation
[DE93-019462] p 1364 N94-19032

HEAT OF FUSION

Melt spinning study
[NASA-CR-193823] p 1380 N94-19423

HEAT PIPES

Performance mapping of the STM4-120 kinematic Stirling engine using a statistical design of experiments method
[DE93-015132] p 1464 N94-17798

Development of a cryogenic heat pipe
[DE93-018448] p 1417 N94-18831

HEAT PUMPS

Thermodynamic theory of exergy analysis
[PB93-187847] p 1607 N94-18120

Adsorption analysis of ammonia in an aqueous solution
[DE93-019512] p 1353 N94-19552

HEAT RESISTANT ALLOYS

Metals 2000
[DE93-016761] p 1355 N94-17752

Atlas of formability: HAYNES 556
[AD-A268354] p 1356 N94-17768

Atlas of formability: HAYNES 188
[AD-A268355] p 1356 N94-17769

Atlas of formability: INCONEL 718
[AD-A268350] p 1356 N94-17789

Environmental effects on intermetallic compounds: A guide to the literature
[AD-A269587] p 1359 N94-18306

Developing and understanding the high temperature behavior of niobium aluminides and niobium aluminide composites
[AD-A268874] p 1341 N94-18636

Effects of shock loading on a solid-solution strengthened superalloy
[DE93-018345] p 1362 N94-18809

Analytical and experimental evaluation of joining silicon nitride to metal and silicon carbide to metal for advanced heat engine applications
[DE93-018128] p 1446 N94-19291

Incology 908 database report: On process-structure-property relationship
[DE93-017616] p 1366 N94-19546

HEAT SINKS

Diamond brazed to a metal
[AD-D015877] p 1371 N94-18746

Development of a cryogenic heat pipe
[DE93-018448] p 1417 N94-18831

Thermal stresses in the microchannel heatsink cooled by liquid nitrogen
[DE93-018660] p 1418 N94-18995

HEAT SOURCES

Ultrasonic technique for inspection of GPHS capsule girth weld integrity
[DE93-040072] p 1448 N94-19189

HEAT STORAGE

Regenerator optimization for Stirling cycle refrigeration
[DE93-018468] p 1380 N94-18818

HEAT TRANSFER

Heat load analysis on the cable-in-conduit with central core conductor for the TF coil Rebut layer design
[DE93-013783] p 1395 N94-17872

KINETIC: A system code for analyzing Nuclear thermal propulsion rocket engine transients
[DE93-016825] p 1337 N94-17884

Thermodynamic theory of exergy analysis
[PB93-187847] p 1607 N94-18120

Workshop on Computational Turbulence Modeling
[NASA-TM-109266] p 1410 N94-18545

Forecast model applications of retrieved three dimensional liquid water fields p 1492 N94-18606

Liquid crystal heat transfer measurements
p 1432 N94-18653

The application of liquid crystal techniques to determine heat transfer rates p 1432 N94-18654

Regenerator optimization for Stirling cycle refrigeration
[DE93-018468] p 1380 N94-18818

Potassium-Rankine power conversion subsystem modeling for nuclear electric propulsion
[NASA-CR-191134] p 1468 N94-18821

Some parametric flow analyses of a particle bed fuel element
[DE93-018440] p 1337 N94-18830

The quantum dynamics of electronically nonadiabatic chemical reactions
[NASA-CR-194309] p 1568 N94-18837

Effect of internal heating during hot compression testing on the stress-strain behavior and hot working characteristics of alloy 304L
[DE93-012701] p 1362 N94-18917

Evaluation of fiber optic performance in the ACRR
[DE93-018515] p 1580 N94-18970

Modeling of the formation of microporosity in alloys
[DE93-017733] p 1364 N94-19044

Numerical solutions for a flow with mixed convection in a vertical geometry
[DE93-011592] p 1419 N94-19058

Two-dimensional turbulent nonstationary superfluid counterflows: Numerical simulations, qualitative effects
[MPIS-23/1992] p 1422 N94-19510

Proceedings: International Symposium on Thermal Engineering and Science for Cold Regions
[AD-A270636] p 1487 N94-19529

Adsorption analysis of ammonia in an aqueous solution
[DE93-019512] p 1353 N94-19552

HEAT TRANSFER COEFFICIENTS

Parabolized Navier-Stokes computation of surface heat transfer characteristics for supersonic and hypersonic KE projectiles
[AD-A268858] p 1410 N94-18391

Heat transfer quantitative characterization: Passive and active methods p 1431 N94-18650

HEAT TRANSMISSION

On higher dimensional Ermakov systems: Canonical reductions
[MATHS-REPT-A-182] p 1548 N94-18140

Thermal insulation of wet shielded metal arc welds
[AD-A268697] p 1445 N94-18465

Some parametric flow analyses of a particle bed fuel element
[DE93-018440] p 1337 N94-18830

Geothermal activity near Clearlake, California
[DE93-016627] p 1485 N94-18894

Radiative divertor modeling studies
[DE93-018092] p 1590 N94-19290

HEAT TREATMENT

Charpy impact toughness of martensitic steels irradiated in FFTF: Effect of heat treatment
[DE93-015960] p 1450 N94-17848

Structural stability of 1100 C heated Pd/k during absorption cycling in protium
[DE93-016270] p 1346 N94-18048

Study of mechanical behavior and internal structure of ferritic nanocrystalline material
[DE93-019264] p 1596 N94-18184

Fabrication and microstructural development of Ag-clad TlBa2Ca2Cu3O(x) tapes
[DE93-017407] p 1597 N94-18500

Process relationship as influenced by carbonization rate
[AD-A269680] p 1341 N94-18572

Beryllium processing technology review for applications in plasma-facing components
[DE93-018396] p 1363 N94-19028

Fabrication, properties, and microstructures of high (Tc) tapes and coils made from Ag-clad Bi-2223 superconductor
[DE93-017405] p 1602 N94-19122

HEATING

Process for applying high application-temperature coating to heat-sensitive aluminum alloys
[AD-D015823] p 1368 N94-17905

Thermophysical properties
[DE93-040219] p 1351 N94-19134

HEATING EQUIPMENT

An emulator for testing HVAC-control and energy management systems
[VTT-TIED-1337] p 1444 N94-17974

Energy Efficiency and Renewable Energy Program
[DE93-017936] p 1468 N94-18986

Tehachapi solar thermal system
[DE93-018443] p 1468 N94-19014

HEAVY ELEMENTS

Development and characterization of adiabatic shear prone tungsten heavy alloys
[AD-A270477] p 1366 N94-19673

HEAVY IONS

Correlated charge-changing ion-atom collisions
[DE93-018717] p 1564 N94-17775

Heavy ion nuclear physics research
[DE93-018862] p 1565 N94-17776

Meson production in relativistic heavy-ion collisions at AGS energies
[DE93-016871] p 1565 N94-17984

Heavy-ion collisions and the nuclear equation of state
[DE93-019263] p 1566 N94-18104

Update on parts SEE susceptibility from heavy ions
[AD-A268735] p 1596 N94-18316

Heavy Ion Fusion Injector Program
[DE93-018706] p 1575 N94-18997

Task A: Yale Accelerator Users Group (YAUG)
[DE93-018417] p 1570 N94-19029

Overview of WARP: A particle code for heavy ion fusion
[DE93-018637] p 1588 N94-19034

The study of the phase structure of hadronic matter by searching for the deconfined quark-gluon phase transition using 2 TeV (bar-p)-p collisions, and by searching for critical phenomena in an exclusive study of multifragmentation using 1 GeV/nucleon heavy ion collisions
[DE93-018925] p 1570 N94-19103

Correction of longitudinal errors in accelerators for heavy-ion fusion
[DE93-018656] p 1575 N94-19106

Simulation of transient effects in the heavy ion fusion injectors
[DE93-018658] p 1575 N94-19107

Induction accelerator development for heavy ion fusion
[DE93-019228] p 1591 N94-19479

Transverse beam combiner for ILSE
[DE93-019239] p 1591 N94-19559

The ILSE Experimental Program
[DE93-019247] p 1576 N94-19560

HEAVY LIFT LAUNCH VEHICLES

Shuttle-C, the future is now
[NASA-TM-109355] p 1332 N94-18954

HEAVY NUCLEI

Investigation of the relative abundance of heavy versus light nuclei in primary cosmic rays using underground muon bundles
[DE93-017601] p 1630 N94-17818

Evolution of r-process elements in the hot supernova bubble
[DE93-017169] p 1624 N94-17897

HELICAL ANTENNAS
Plasma production by helicon waves
[DE93-788396] p 1586 N94-18213
HELICOPTER CONTROL
VMC left turn curved approaches, test results — (visual meteorological conditions)
[AD-A269476] p 1316 N94-18728
The dynamic stability of the helicopter
[LR-772] p 1321 N94-19615
HELIOSPHERE
Radial evolution of the solar wind turbulence with application to charged particle transport
[NASA-CR-194081] p 1629 N94-19427
HELIOSTATS
Testing and evaluation of large-area heliostats for solar thermal applications
[DE93-018509] p 1467 N94-18520
HELIPORTS
VMC left turn curved approaches, test results — (visual meteorological conditions)
[AD-A269476] p 1316 N94-18728
HELIUM
Technique to eliminate helium induced weld cracking in stainless steels
[DE93-015982] p 1357 N94-17859
Helium-induced weld degradation of HT-9 steel
[DE93-015981] p 1358 N94-17915
Dependence of helium transport on plasma current and ELM frequency in H-mode discharges in D3-D
[DE93-016986] p 1585 N94-18058
Low-energy continuum-electron emission at 0 degrees from O(q+) + He collisions
[DE93-018777] p 1570 N94-19108
Relativistic configuration interaction calculation of the correlation energies of heliumlike ions
[DE93-018093] p 1571 N94-19201
Overlay welding irradiated stainless steel
[DE93-018767] p 1446 N94-19334
Design verification and acceptance tests of the ASST-A helium refrigeration system
[DE93-019746] p 1381 N94-19540
HELIUM ISOTOPES
Parametric analysis of the ARIES-3D-He-3 tokamak reactor
[DE93-018293] p 1587 N94-18803
Future energy source — Mining Helium-3 on the moon
[NASA-TM-109363] p 1628 N94-18959
Helium isotopic abundance variation in nature
[DE93-019050] p 1487 N94-19477
HELMET MOUNTED DISPLAYS
Human integration evaluation of three helmet systems
[AD-A271320] p 1513 N94-19570
HELMETS
Human integration evaluation of three helmet systems
[AD-A271320] p 1513 N94-19570
HELMHOLTZ EQUATIONS
A new multiphase equation of state for iron
[DE93-017629] p 1357 N94-17819
HEMODYNAMIC RESPONSES
Metabolic changes and hemodynamic dysfunction following hypothermic shock
[AD-A269780] p 1506 N94-18598
HEPTANES
Film condensation in a shock wave
[MPIS-22/1992] p 1422 N94-19509
HERMES MANNED SPACEPLANE
Phasing strategies of the Hermes type space shuttle: Its optimization considering the thrust failures
[LAAS-93242] p 1544 N94-19361
HERMETIC SEALS
Analysis of high contact resistances associated with hermetic and lightning arrestor connectors
[DE93-014850] p 1395 N94-17783
HETEROCYCLIC COMPOUNDS
Royal Society of Chemistry, Heterocyclic Chemistry Group, Lakeland Heterocyclic Symposium
[AD-A270374] p 1338 N94-18703
HETEROJUNCTIONS
Reorientation of misfit dislocations during annealing in InGaAs/GaAs(001) interfaces
[DE93-015046] p 1592 N94-17741
Fundamental properties and device applications of Ge(x)Si(1-x)/Si superlattices (supplemental)
[AD-A269212] p 1600 N94-18884
HEURISTIC METHODS
Restricting query relaxation through user constraints
[DE93-017413] p 1612 N94-17870
Heuristics from nature for hard combinatorial optimization problems
[REPT-93-025] p 1547 N94-17961
Efficient domain-independent experimentation
[AD-A269530] p 1557 N94-18640
HIERARCHIES
Defense Technical Information Center thesaurus
[AD-A268855] p 1615 N94-18319
Scale sensitivity in the multiplicative AHP and SMART
[REPT-93-37] p 1611 N94-19157
Context-related scaling of human judgement in the multiplicative AHP, SMART and ELECTRE
[REPT-93-38] p 1611 N94-19158
Serial pattern complexity: Irregularity and hierarchy
[PB93-191914] p 1509 N94-19348
HIGH ALTITUDE
Regenerative fuel cells for High Altitude Long Endurance Solar Powered Aircraft
[DE93-016991] p 1465 N94-17853
HIGH DEFINITION TELEVISION
VLSI architectures for geometrical mapping problems in high-definition image processing
p 1398 N94-18345
HIGH ELECTRON MOBILITY TRANSISTORS
DC and small-signal physical models for the AlGaAs/GaAs high electron mobility transistor
p 1401 N94-18370
HIGH ENERGY INTERACTIONS
Activities report of the Rutherford Appleton Laboratory
[ETN-93-94555] p 1631 N94-17968
Research in particle physics
[DE93-040875] p 1567 N94-18534
Institute for Nuclear Theory
[DE93-017369] p 1568 N94-18824
Related investigations on the physics of high energy emission from active galactic nuclei
[NASA-CR-193615] p 1630 N94-18836
Experimental research in high energy physics
[DE93-011912] p 1574 N94-18916
Investigation of physical structures and interactions at high energy
[DE93-014444] p 1574 N94-18927
High energy physics at Tufts University
[DE93-018299] p 1575 N94-19023
Task A: Yale Accelerator Users Group (YAUG)
[DE93-018417] p 1570 N94-19029
High energy physics program. Task A: Experiment and theory. Task B: Numerical simulation
[DE93-018140] p 1575 N94-19050
LAHET calculations for accelerator neutron production
[DE93-016518] p 1570 N94-19120
Research in high energy physics
[DE93-018031] p 1575 N94-19287
High rate resistive plate chambers: An inexpensive, fast, large area detector of energetic charged particles for accelerator and non-accelerator applications
[DE93-018664] p 1572 N94-19545
HIGH FLUX BEAM REACTORS
Neutron-induced collision cascade mixing in Nb/V superlattices
[DE93-018575] p 1600 N94-18933
HIGH FLUX ISOTOPE REACTORS
A probability method of fracture mechanics analysis for HFIR vessel
[DE93-015510] p 1453 N94-18246
HIGH FREQUENCIES
Calibration of a high frequency monostatic acoustic echosounder
[AD-A268901] p 1481 N94-18229
Upper atmospheric effects of the HF Active Auroral Research Program Ionospheric Research Instrument (HAARP IRI)
[AD-A268948] p 1481 N94-18451
Morphology and characteristics of disturbed HF skywave channels
[AD-A269755] p 1388 N94-18722
Numerical modelling of fringing fields and their use for complex permittivity measurements at high frequencies
[AD-A270198] p 1388 N94-18782
Improved HF data network simulator, volume 1
[AD-A270953] p 1393 N94-19752
Improved HF data network simulator, software user's manual, volume 2
[AD-A270954] p 1393 N94-19753
HIGH LEVEL LANGUAGES
EXPECT: Intelligent support for knowledge base refinement
[AD-A269602] p 1612 N94-17745
HIGH PASS FILTERS
Monolithic low noise preamplifier for piezoelectric sensors
[AD-D015860] p 1563 N94-18734
HIGH POWER LASERS
New applications for high average power beams
[DE93-018845] p 1439 N94-18522
Interaction of intense lasers and relativistic electron beams with solids, gases and plasmas
[AD-A269655] p 1439 N94-18737
LLE Review
[DE93-017618] p 1602 N94-19123
Cutting and drilling studies using high power visible lasers
[DE93-019149] p 1441 N94-19294
MOCVD-grown InGaAsP heterostructure diode lasers
[AD-A270848] p 1606 N94-19769
HIGH PRESSURE
Studies on high pressure and unsteady flame phenomena: Revision
[AD-A269138] p 1348 N94-18257
High pressure metallization of Mott Insulators: Magnetic, structural and electronic properties
[DE93-018295] p 1404 N94-18805
Dynamical behavior of tantalum
[DE93-017877] p 1362 N94-18919
Institute of Geophysics and Planetary Physics, 1992
[DE93-019209] p 1627 N94-19077
HIGH RESOLUTION
CTD oxygen, tracer and nutrient data from RRS Charles Darwin Cruises 58/59 in the NE Atlantic as part of Vivaldi 1991
[IOS-296-1992] p 1496 N94-18065
High resolution geological site characterization utilizing ground motion data
[AD-A268926] p 1481 N94-18485
Development of parallel architectures for sensor array processing, volume 1
[AD-A270426] p 1534 N94-18507
High spatial resolution, range gated, underwater imaging method and apparatus
[AD-D015882] p 1430 N94-18530
Three-dimensional high-resolution seismic profiling on the New Jersey outer continental shelf
[AD-A269835] p 1498 N94-18600
Color test chart for facsimile
[AD-A269754] p 1387 N94-18721
Photodetector array having high pixel density
[AD-D015859] p 1432 N94-18731
New room temperature high resolution solid-state detector (CdZnTe) for hard x rays and gamma rays
p 1324 N94-19165
A high resolution ultraviolet Shuttle glow spectrograph
p 1325 N94-19174
High resolution transmission electron microscopy of mesoporous MCM-41 type materials
[AD-A271271] p 1354 N94-19728
HIGH REYNOLDS NUMBER
High Reynolds number configuration development of a high-lift airfoil p 1306 N94-18424
Two-equation models for high-Reynolds-number flow
p 1415 N94-18586
HIGH SPEED CAMERAS
High speed 512X512 camera system
[DE93-015871] p 1430 N94-18235
An RS-170 to 700 frame per second CCD camera
[DE93-018367] p 1432 N94-18828
HIGH SPEED PHOTOGRAPHY
An RS-170 to 700 frame per second CCD camera
[DE93-018367] p 1432 N94-18828
HIGH STRENGTH ALLOYS
Atlas of formability: HAYNES 556
[AD-A268354] p 1356 N94-17768
Atlas of formability: HAYNES 188
[AD-A268355] p 1356 N94-17769
Atlas of formability: NICKELVAC K-500
[AD-A268351] p 1356 N94-17772
HIGH STRENGTH STEELS
Summary of work on coatings and claddings for fossil energy applications
[DE93-017005] p 1367 N94-17881
Factors which affect fatigue strength of fasteners
[DE93-017272] p 1453 N94-18084
Initiation and growth of microcracks in high strength steel butt welds
[AD-A268751] p 1454 N94-18466
Mechanism-dependent fractal character of fracture surfaces in high strength and toughness ASTM A723 steels
[AD-A268956] p 1360 N94-18542
JPRS report: Science and technology. Central Eurasia: Materials science
[JPRS-UMS-93-002] p 1339 N94-18833
Microstructure and texture control of fatigue in hydrogen and marine environments
[AD-A271277] p 1344 N94-19744
HIGH TEMPERATURE
Atlas of formability: Ultimet
[AD-A268352] p 1355 N94-17767
Atlas of formability: HAYNES 556
[AD-A268354] p 1356 N94-17768
Atlas of formability: HAYNES 188
[AD-A268355] p 1356 N94-17769
Atlas of formability: NICKELVAC K-500
[AD-A268351] p 1356 N94-17772
Atlas of formability: Haynes 230
[AD-A268325] p 1356 N94-17788
Atlas of formability: INCONEL 718
[AD-A268350] p 1356 N94-17789
Atlas of formability: Hastelloy C-22
[AD-A268324] p 1356 N94-17796

Atlas of formability: Permalloy - 80 flow stress curves
[AD-A268263] p 1356 N94-17801
Atlas of formability: Nickelvac C-276
[AD-A268264] p 1357 N94-17802
Atlas of formability: Ti-6Al-4V ELI
[AD-A268300] p 1357 N94-17803
Atlas of formability: ALLVAC 718
[AD-A268304] p 1357 N94-17804
Atlas of formability: Waspaloy
[AD-A268323] p 1593 N94-17805
Study on radiation-induced deterioration of grease at high temperature, 3
[DE93-788368] p 1369 N94-18220
Environmental effects on intermetallic compounds: A guide to the literature
[AD-A269587] p 1359 N94-18306
High temperature strain measurement with a resistance strain gage
[NASA-CR-194441] p 1434 N94-19314
High temperature co-axial winding transformers
[NASA-CR-194580] p 1407 N94-19643

HIGH TEMPERATURE ENVIRONMENTS
Environmental degradation of Alloy 600 and welded filler metal EN82 in an elevated temperature aqueous environment
[DE93-018049] p 1363 N94-18940

HIGH TEMPERATURE PLASMAS
Active neutral particle diagnostics for high temperature plasma
[DE93-788457] p 1586 N94-18214

HIGH TEMPERATURE SUPERCONDUCTORS
Polaron tunneling in high-temperature superconductors
[DE93-016880] p 1593 N94-17754
Phase separation and superconductivity in La2CuO(4 + delta): Effects of oxygen diffusion
[DE93-016610] p 1594 N94-17907
Performance evaluations of demountable electrical connections
[DE93-017399] p 1396 N94-18135
Synthesis and study of high-T(sub c) superconducting electronic materials
[AD-A268851] p 1402 N94-18390
Fabrication and microstructural development of Ag-clad TlBa2Ca2Cu3O(x) tapes
[DE93-017407] p 1597 N94-18500
The use of chopper spectrometers for cold-to-epithermal neutron scattering at IPNS
[DE93-017798] p 1598 N94-18531
X ray studies of microstructures in semiconductor and superconducting materials
[DE93-040690] p 1601 N94-19056
Institute of Geophysics and Planetary Physics, 1992
[DE93-019209] p 1627 N94-19077
Superconducting flux flow devices, digital circuits and memories
[DE93-019072] p 1405 N94-19079
Fabrication, properties, and microstructures of high (Tc) tapes and coils made from Ag-clad Bi-2223 superconductor
[DE93-017405] p 1602 N94-19122
LLE Review
[DE93-017618] p 1602 N94-19123
Role of pressure in the study of fullerenes
[DE93-018839] p 1602 N94-19340
Crossover from BCS to Bose superconductivity: A functional integral approach
[DE93-019503] p 1604 N94-19566

HILBERT SPACE
On relation between Berry phase and one-dimensional models with long-range 1/r(sup 2)-interaction
[DE93-624967] p 1592 N94-17690
Space and time as outcome of decoherence in an expanding universe
[DE93-016199] p 1624 N94-18047
The fixed, finite-order L(sup 2)-optimal control of infinite-dimensional time-varying discrete-time systems
[REPT-93-23] p 1542 N94-19138
The digital linear quadratic control problem for Pritchard-Salamon systems
[REPT-93-27] p 1542 N94-19142

HINGES
Plastic mechanism analysis of T-joints in RHS subject to combined bending and concentrated force
[PB93-195774] p 1456 N94-19061

HIPPOCAMPUS
Extrathalamic modulation of cortical function
[AD-A270869] p 1507 N94-19783

HISTOLOGY
The effects of reverberant impulse noise (blast waves) on hearing: Parametric studies
[AD-A269242] p 1506 N94-18911

HISTORIES
Historical seismicity of Hainaut, Flanders and Artois
p 1482 N94-18623
X-29: Research aircraft
[NASA-TM-109370] p 1318 N94-18962
Apollo 11: 20th anniversary
[NASA-TM-109364] p 1323 N94-18979
Langley's 50th year
[NASA-TM-109365] p 1632 N94-18980
Essential shift: Scientific revolution in the 20th century
[AD-A270810] p 1610 N94-19663

HODOSCOPES
Precision machining and polishing of scintillating crystals for large calorimeters and hodoscopes
[DE93-018663] p 1381 N94-19544

HOLDERS
A radial transmission line material measurement apparatus
[DE93-018508] p 1394 N94-17780

HOLE GEOMETRY (MECHANICS)
High resolution transmission electron microscopy of mesoporous MCM-41 type materials
[AD-A271271] p 1354 N94-19728

HOLES (ELECTRON DEFICIENCIES)
Photo-induced and electrooptic properties of (Pb,La)(Zr,Ti)O3 films
[DE93-017496] p 1371 N94-18519
Molecular nonlinear optical susceptibilities in condensed phases
[AD-A270200] p 1568 N94-18784

HOLLOW CATHODES
Plasma contactor development for Space Station
[NASA-TM-106425] p 1587 N94-18861

HOLOGRAPHY
Optical computing. Organization of the 1993 Photonics Science Topical Meetings. Technical digest series, volume 7
[AD-A269025] p 1578 N94-18332
Competitive dynamics and self-organization in photorefractive systems
[AD-A269663] p 1430 N94-18569
Operational parameters of an opto-electronic neural network employing fixed planar holographic interconnects
[DE93-018795] p 1433 N94-19000
The performance and survivability of dichromated poly (vinyl alcohol) holograms for space based photonic applications
[AD-A270974] p 1434 N94-19791

HOMOGENEOUS TURBULENCE
Theoretical study and modelling of homogeneous turbulence under rotation for implantation in a code for solving Navier-Stokes equations
[ECL-93-05] p 1420 N94-19381

HOMOMORPHISMS
Thermal wave image processing for characterization of subsurface of flaws in materials
[DE93-019024] p 1344 N94-19551

HOMOPOLAR GENERATORS
Pulsed power supply for Nova Upgrade
[DE93-019626] p 1441 N94-19307

HONEYCOMB STRUCTURES
SAND contact in DYNA3D
[DE93-016451] p 1340 N94-18113
Aerodynamic characteristics of a helicopter rotor airfoil as affected by simulated ballistic damage
[AD-A269206] p 1311 N94-18413

HOT ISOSTATIC PRESSING
The intelligent processing of materials
[AD-A269250] p 1362 N94-18923

HOT STARS
Spectrophotometry of emission-line stars in the magellanic clouds
[NASA-CR-194082] p 1628 N94-19425

HOT WORKING
Effect of internal heating during hot compression testing on the stress-strain behavior and hot working characteristics of alloy 304L
[DE93-012701] p 1362 N94-18917

HOT-WIRE ANEMOMETERS
A review of hot-wire technique in compressible flows
[LR-724] p 1423 N94-19668

HOVERING
Lift and pitching moment induced on jet STOVL aircraft hovering in ground effect
[AD-A269700] p 1317 N94-18577

HOVERING STABILITY
The dynamic stability of the helicopter
[LR-772] p 1321 N94-19615

HTPB PROPELLANTS
Strained ring energetic binders
[AD-A269056] p 1377 N94-18491

HUBBLE SPACE TELESCOPE
Hubble Space Telescope
[NASA-TM-109359] p 1621 N94-19072

HUBS
Blade and hub loads of ballistically damaged helicopter rotors
[AD-A270663] p 1319 N94-19781

HUGONIOT EQUATION OF STATE
Impact strength and indentation hardness of high-strength ceramics
[DE93-018833] p 1373 N94-19338

HUMAN BEINGS
Somatosensory responsiveness in behaving monkeys and human subjects
[AD-A268924] p 1501 N94-18231
A comparison of polygraphic and actigraphic monitoring of sleep using a 5-channel programmable-sensitivity actigraph
[AD-A270731] p 1507 N94-19608

HUMAN BODY
A multivariate anthropometric method for crew station design
[AD-A270652] p 1513 N94-19531

HUMAN FACTORS ENGINEERING
The stability and utility of the ESPRIT project, MUSiC, performance-based indicators of usability and tools: An evaluation of the usability of the NPL iSDX telephone system
[NPL-DITC-213/92] p 1613 N94-17925
Analysis of seating and restraint limitations restricting total body weight for aircrew and passengers on US Army helicopters
[AD-A269117] p 1511 N94-18296
Why are human-computer interfaces difficult to design and implement?
[AD-A268843] p 1514 N94-18317
Revision and verification of a seven-point workload estimate scale
[AD-A269194] p 1511 N94-18412
Towards versatile and practical knowledge acquisition
[AD-A269596] p 1615 N94-18464
Human Transportation System (HTS) study: Executive summary
[NASA-TM-104780] p 1332 N94-18669
Human Transportation System (HTS) study, volume 1
[NASA-TM-104779] p 1332 N94-18670
Research on man-machine productivity in aviation at Human Engineering Institute of Hangzhou University
[AD-A269952] p 1512 N94-18673
Generating object descriptions: Intergrating examples with text
[AD-A269992] p 1522 N94-18680
Army Cockpit Delethalization Program (CDP)
[AD-A268990] p 1512 N94-18765
A user task analysis for command and control systems and its use in human-computer interaction research
[AD-A269877] p 1512 N94-18774
Interdisciplinary training in life science (FY 1991 ASSERT)
[AD-A269220] p 1512 N94-18886
The FAA Technical Center Human Factors Laboratory information guide
[AD-A269343] p 1513 N94-18992
A multivariate anthropometric method for crew station design
[AD-A270652] p 1513 N94-19531
Human integration evaluation of three helmet systems
[AD-A271320] p 1513 N94-19570
Integrated measurement of crew resource management and technical flying skills
[AD-A270512] p 1510 N94-19677
FAA airborne data link human factors research plan
[AD-A271006] p 1514 N94-19773

HUMAN FACTORS LABORATORIES
The FAA Technical Center Human Factors Laboratory information guide
[AD-A269343] p 1513 N94-18992

HUMAN PERFORMANCE
The clocks and the perception of time in the 18th century society p 1424 N94-18007
Human reliability analysis application guide
[DE93-015361] p 1511 N94-18244
Stochastic models of attention and search
[AD-A268622] p 1508 N94-18292
Cognitive limitations in coordination in hierarchical information processing structures
[AD-A268825] p 1616 N94-18535
Evaluation of physiological and psychological impairment of human performance in cold stressed subjects
[AD-A268637] p 1506 N94-18632
Road march performance of special operations soldiers carrying various loads and load distributions
[AD-A269198] p 1512 N94-18882
The FAA Technical Center Human Factors Laboratory information guide
[AD-A269343] p 1513 N94-18992
Effects of practice in selecting and executing keypressing sequences
[IZF-1992-B-10] p 1509 N94-19420
A forthcoming key press can be selected while earlier ones are executed
[IZF-1993-B-2] p 1509 N94-19422

Pilot studies on object motion perception during linear self-motion after long duration centrifugation of human subjects
[IZF-1993-B-3] p 1510 N94-19439
Effects of location cuing on redundant target processing
[IZF-1993-B-1] p 1510 N94-19443
The brain electrical activity in different G situations
[AERONAUTICA-ACTA-A-372-199] p 1507 N94-19523

HUMIDITY
Radiosonde data collected on the ERS-1 validation cruise RRS Charles Darwin Cruise 62A, Iceland Faeroes region
[IOS-297-1992] p 1461 N94-18137
Station climatic summaries: North America. Volume 1: The contiguous United States
[AD-A269567] p 1490 N94-18303
Station climatic summaries, North America. Volume 2: Alaska, Canada and Greenland
[AD-A269793] p 1493 N94-18732

HYDRATES
Ground movements associated with gas hydrate production
[DE93-019887] p 1486 N94-19018
Faulted structure of the bottom simulating reflector on the Blake Ridge, western North Atlantic
[AD-A271289] p 1500 N94-19745

HYDRAULIC SHOCK
A finite element scheme for shock capturing
[AD-A270182] p 1417 N94-18755

HYDRAULICS
KINETIC: A system code for analyzing Nuclear thermal propulsion rocket engine transients
[DE93-016825] p 1337 N94-17884

HYDROCARBON COMBUSTION
Numerical simulation of fluid dynamics and combustion for ram accelerator projectile/obturator interaction
[AD-A269715] p 1320 N94-18748

HYDROCARBONS
Catalytic hydrocarbon reactions over supported metals
[DE93-018168] p 1345 N94-17808
Strained ring energetic binders
[AD-A269056] p 1377 N94-18491
Novel catalysts for methane activation
[DE93-040630] p 1349 N94-18532
A study of the effect of hydrocarbon structure on the induction of male rat nephropathy and metabolic structure
[AD-A270969] p 1504 N94-19789

HYDROCRACKING
Control of catalytic hydrotreating selectivity with ammonia
[DE93-041223] p 1354 N94-19660

HYDRODYNAMIC EQUATIONS
Group-invariant solutions of hydrodynamics and radiation hydrodynamics
[DE93-018373] p 1423 N94-19604

HYDRODYNAMICS
Vortex methods and statistics
[DE93-016974] p 1556 N94-17886
Impact modeling with smooth particle hydrodynamics
[DE93-016561] p 1451 N94-17906
Modeling shock initiation in Composition B
[DE93-016544] p 1376 N94-18095
Advanced in macrostatistical hydrodynamics
[DE93-018479] p 1410 N94-18270
Hydrodynamic instability modeling for ICF
[DE93-018634] p 1587 N94-18274
Wind products for use in coastal wave and surge models
[AD-A269753] p 1497 N94-18414
ADCIRC: An advanced three-dimensional circulation model for shelves, coasts, and estuaries. Report 3: Development of a tidal constituent database for the western North Atlantic and Gulf of Mexico
[AD-A268685] p 1497 N94-18455
DYNLET1 model formulation and user's guide
[AD-A269843] p 1498 N94-18723
Langley's 50th year
[NASA-TM-109365] p 1632 N94-18980
Sandia equation of state data base: Seslan file
[DE93-018693] p 1618 N94-19101
Smooth particle hydrodynamics: The SPHINX and SPHC codes
[DE93-014358] p 1457 N94-19207
Mathematical modeling of the free surface hydrodynamic and of transport in suspensions of non cohesive sediments: Aid to the interpretation of spatial images
[ETN-93-95011] p 1421 N94-19502
Locally adaptive remeshing scheme for calculating fluid instabilities
[DE93-019577] p 1422 N94-19568
Group-invariant solutions of hydrodynamics and radiation hydrodynamics
[DE93-018373] p 1423 N94-19604

HYDROGEN
Solid-state, resistive hydrogen sensors for safety monitoring
[DE93-017769] p 1424 N94-17778
Comparison of the modeling solutions with the hydrogen discharge data
[DE93-015115] p 1565 N94-17797
A preliminary model for crack-tip hydrogen transport
[NPL-DMM(A)-84] p 1451 N94-17899
Electron stripping cross sections for light impurity ions in colliding with atomic hydrogens relevant to fusion research
[DE93-788476] p 1566 N94-18158
Synthesis of higher alcohols from carbon monoxide and hydrogen in a slurry reactor
[DE93-015086] p 1347 N94-18209
Dense energetic compounds of C, H, N, and O atoms. 3: 5-(4-nitro-(1,2,5) oxadiazolyl)-5H-(1,2,3) triazolo (4,5-c)(1,2,5) oxadiazole
[AD-A268715] p 1338 N94-18314
Scaling laws for diamond chemical vapor deposition. 2: Atomic hydrogen transport
[AD-A269842] p 1371 N94-18740
Calculation of molecular excitation rates
[NASA-CR-193782] p 1571 N94-19236
Testing of protective coatings in hydrogen
[DE93-040326] p 1375 N94-19651

HYDROGEN ATOMS
Ratio of specimen thickness to detection area for reliable hydrogen permeation measurement
[NPL-DMM(A)-103] p 1451 N94-17929
A hydrogen atom in the curved space. Expansion over free solutions on the three-dimensional sphere
[DE93-629868] p 1549 N94-18198

HYDROGEN EMBRITTLEMENT
Environmental effects on intermetallic compounds: A guide to the literature
[AD-A269587] p 1359 N94-18306
Overlay welding irradiated stainless steel
[DE93-018767] p 1446 N94-19334

HYDROGEN IONS
Comparison of the modeling solutions with the hydrogen discharge data
[DE93-015115] p 1565 N94-17797

HYDROGEN ISOTOPES
Exchange front stability in packed-column chromatography
[DE93-017526] p 1346 N94-17997

HYDROGEN PEROXIDE
The c-jun gene expression in human cells exposed to either ionizing radiation or hydrogen peroxide
[DE93-017436] p 1502 N94-18476
Bienzyme sensors based on electrically wired peroxidase
[AD-A271364] p 1374 N94-19585

HYDROGEN PRODUCTION
Photobiotechnology: Application of photosynthesis to the production of renewable fuels and chemicals
[DE93-015522] p 1466 N94-18247

HYDROGENATION
Studies on gel electrolyte based on nitrile-butadiene copolymers
[AD-A269450] p 1370 N94-18282
Novel catalysts for methane activation
[DE93-040630] p 1349 N94-18532
Control of catalytic hydrotreating selectivity with ammonia
[DE93-041223] p 1354 N94-19660

HYDROLOGY
Application of ARC/INFO to regional scale hydrogeologic modeling
[DE93-015673] p 1461 N94-18107
A survey of current approaches to modelling of hydrological time-series with respect to climate variability and change
[WMO/TD-534] p 1463 N94-19435

HYDROLOGY MODELS
Application of ARC/INFO to regional scale hydrogeologic modeling
[DE93-015673] p 1461 N94-18107

HYDROLYSIS
Hydrolysis reaction and positronium decay in silica gels
[AD-A270028] p 1371 N94-18713

HYDROMECHANICS
Research activities, Faculty of Civil Engineering, Delft University of Technology, 1990 - 1991
[PB93-195022] p 1380 N94-19254

HYDROPHONES
Design of a general purpose and autonomous transmitter and receiver system for underwater acoustic experiments at sea
[AD-A269268] p 1495 N94-17822

HYDROSTATIC PRESSURE
Continuum modeling of materials that can undergo martensitic phase transitions
[AD-A268767] p 1360 N94-18386
Transducers and method for making same
[AD-D015949] p 1408 N94-19759

HYDROSTATICS
Stability measurements of Rayleigh-Benard convection near the critical state using a spectral model
[MPIS-15/1992] p 1422 N94-19520

HYDROTHERMAL STRESS ANALYSIS
Design for cyclic loading endurance of composites
[NASA-TM-106407] p 1457 N94-19351

HYDROTHERMAL SYSTEMS
Geothermal activity near Clearlake, California
[DE93-016627] p 1485 N94-18894

HYPERBOLIC DIFFERENTIAL EQUATIONS
Numerical methods for one-dimensional hyperbolic conservation laws
[PB93-194801] p 1547 N94-18078
High order non-oscillatory schemes for the compressible Euler equations p 1412 N94-18558
On the numerical approximation of nonlinear hyperbolic problems: Application to the dynamics of compressible gas
[ETN-93-95020] p 1420 N94-19365

HYPERBOLIC FUNCTIONS
About structurally stable generating mechanism for invariant hyperbolic sets
[DE93-629858] p 1561 N94-18150
Introduction to spectral methods for hyperbolic system of conservation laws p 1413 N94-18567

HYPERCUBE MULTIPROCESSORS
Optimal eigenvalue computation on distributed-memory MIMD multiprocessors
[DE93-018337] p 1535 N94-18808
A massively parallel adaptive finite element method with dynamic load balancing
[DE93-012844] p 1536 N94-19161
Experience in implementing a parallel file system
[DE93-012840] p 1536 N94-19188

HYPERPLANES
Maximal hypersurfaces in asymptotically stationary spacetimes
[MPA-708] p 1621 N94-18141

HYPERSONIC AIRCRAFT
Metals 2000
[DE93-016761] p 1355 N94-17752

HYPERSONIC FLOW
CFD investigations of the hypersonic double delta wing greta: Sanger project no. 3.2
[FFA-TN-1992-42] p 1311 N94-17919
Synthesis of the Workshop on Hypersonic Flows for Reentry Problems
[INRIA-RR-1721] p 1311 N94-17957
Parabolized Navier-Stokes computation of surface heat transfer characteristics for supersonic and hypersonic KE projectiles
[AD-A268858] p 1410 N94-18391
Computational Fluid Dynamics (CFD) research branch technical briefs
[AD-A269698] p 1417 N94-18739
Numerical simulation of viscous flows in chemical nonequilibrium
[MBB-LME-211-S-PUB-506] p 1421 N94-19497

HYPERSONIC HEAT TRANSFER
Parabolized Navier-Stokes computation of surface heat transfer characteristics for supersonic and hypersonic KE projectiles
[AD-A268858] p 1410 N94-18391

HYPERSONIC INLETS
A comparative study of turbulence models in predicting hypersonic inlet flows p 1314 N94-18553

HYPERSONIC REENTRY
Synthesis of the Workshop on Hypersonic Flows for Reentry Problems
[INRIA-RR-1721] p 1311 N94-17957

HYPERSONIC WIND TUNNELS
Error propagation equations and tables for estimating the uncertainty in high-speed wind tunnel test results
[DE93-018685] p 1311 N94-18275

HYPERSONICS
Parabolized Navier-Stokes computation of surface heat transfer characteristics for supersonic and hypersonic KE projectiles
[AD-A268858] p 1410 N94-18391

HYPERSPACES
Maximal hypersurfaces in asymptotically stationary spacetimes
[MPA-708] p 1621 N94-18141

HYPERTHERMIA
Cellular and molecular level responses after radiofrequency radiation exposure, alone or in combination with x rays or chemicals
[AD-A268189] p 1501 N94-17729

HYPERVELOCITY GUNS
Numerical simulation of fluid dynamics and combustion for ram accelerator projectile/obturator interaction
[AD-A269715] p 1320 N94-18748

HYPERVELOCITY IMPACT
Impact modeling with smooth particle hydrodynamics
[DE93-016561] p 1451 N94-17906
Effect of phase change in a debris cloud on a backwall structure
[DE93-017506] p 1358 N94-18100
Toward a characterization of the debris cloud created in a hypervelocity impact on a thin plate
[AD-A269190] p 1455 N94-18864
Smooth particle hydrodynamics: The SPHINX and SPHC codes
[DE93-014358] p 1457 N94-19207

HYPERVELOCITY PROJECTILES
Parabolized Navier-Stokes computation of surface heat transfer characteristics for supersonic and hypersonic KE projectiles
[AD-A268858] p 1410 N94-18391
Numerical simulation of fluid dynamics and combustion for ram accelerator projectile/obturator interaction
[AD-A269715] p 1320 N94-18748
Toward a characterization of the debris cloud created in a hypervelocity impact on a thin plate
[AD-A269190] p 1455 N94-18864
Shock compression properties of silicon carbide
[DE93-019927] p 1373 N94-19271

HYPOTHALAMUS
Intracellular physiology of the rat suprachiasmatic nucleus: Electrical properties, neurotransmission and effects of neuromodulators
[AD-A268829] p 1505 N94-18538

HYPOTHERMIA
Metabolic changes and hemodynamic dysfunction following hypothermic shock
[AD-A269780] p 1506 N94-18598

HYPOTHESES
Somatosensory responsiveness in behaving monkeys and human subjects
[AD-A268924] p 1501 N94-18231
The role of chemical inhibition of gap junctional intercellular communication in toxicology
[AD-A269251] p 1502 N94-18924
A refinement for nonmonotonic logic
[REPT-93-21] p 1542 N94-19092

HYSTERESIS
Shock propagation in crustal rock
[AD-A270148] p 1485 N94-18899

I

IBM COMPUTERS
Early experiences with the IBM SP-1
[DE93-018398] p 1535 N94-19010

ICE
Condensed gases under winter conditions: A study for the rescue services
[FOA-C-40305-4.5] p 1473 N94-18139
Arctic ice studies
[AD-A268608] p 1497 N94-18277
Search for lunar water ice in cometary impact craters
[AD-A270130] p 1627 N94-18877

ICE CLOUDS
Airborne studies of ocean-particle-cloud interactions in the Arctic
[AD-A270752] p 1479 N94-19575

ICE FORMATION
Atlas of SSM/I satellite ice concentration interpolated to operational ice model domains of the Arctic for 1992
[AD-A270306] p 1499 N94-18727
Proceedings: International Symposium on Thermal Engineering and Science for Cold Regions
[AD-A270636] p 1487 N94-19529
Airborne studies of ocean-particle-cloud interactions in the Arctic
[AD-A270752] p 1479 N94-19575

ICE MAPPING
Modifications of airborne oceanographic lidar for the long range P-3 missions
[NASA-CR-194682] p 1499 N94-18819

ICE REPORTING
Atlas of SSM/I satellite ice concentration interpolated to operational ice model domains of the Arctic for 1992
[AD-A270306] p 1499 N94-18727
Footprint size of a helicopter-borne electromagnetic induction sounding system versus antenna altitude
[AD-A270468] p 1463 N94-19672

IDEAL FLUIDS
On a conformal perfect fluid in the classical vacuum
[DE93-624797] p 1480 N94-17682

IFF SYSTEMS (IDENTIFICATION)
Military applications of high-accuracy frequency standards and clocks
[AD-A269303] p 1430 N94-18299

ILLUMINATING
Research on man-machine productivity in aviation at Human Engineering Institute of Hangzhou University
[AD-A269952] p 1512 N94-18673

IMAGE ANALYSIS
A non-homogeneous, spatio-temporal, wavelet multiresolution analysis and its application to the analysis of motion
[AD-A270621] p 1538 N94-19534

IMAGE CLASSIFICATION
Application of Fourier-based features for classification of synthetic aperture radar imagery
[AD-A270450] p 1387 N94-18513

IMAGE FILTERS
Applications of motion estimation in image processing
[FEL-92-B356] p 1580 N94-19455

IMAGE MOTION COMPENSATION
The accuracy of monostatic and bistatic radar imaging by range-Doppler-processing with and without motion compensation
[DLR-FB-93-07] p 1384 N94-18071

IMAGE PROCESSING
Data fusion through simulated annealing of registered range and reflectance images
[DE93-015910] p 1612 N94-17858
An object-oriented environment for computer vision and pattern recognition
[DE93-017098] p 1517 N94-17867
Application of fractal methods to estimate the aerosol-optical depth for atmospheric correction of high resolution satellite data
[DLR-FB-93-04] p 1480 N94-18088
Texture splats for 3D vector and scalar field visualization
[DE93-017104] p 1520 N94-18130
Development and application of local 3-D x ray CT reconstruction software for imaging critical regions in large ceramic turbine rotors
[DE93-015159] p 1369 N94-18166
The spatial variance of ionospherically-induced phase errors in SAR imagery
[DE93-015643] p 1385 N94-18232
Evaluation of a liquid crystal spatial light modulator capable of amplitude- and phase-modulating modes
[AD-A269252] p 1577 N94-18262
Space debris detection
[AD-A269254] p 1334 N94-18264
VLSI architectures for geometrical mapping problems in high-definition image processing
p 1398 N94-18345
An analog retina model for detecting dim moving objects against a bright moving background
p 1399 N94-18350
Image reconstruction from interferometer data
[AD-A268463] p 1578 N94-18383
Application of Fourier-based features for classification of synthetic aperture radar imagery
[AD-A270450] p 1387 N94-18513
Portable parallel ray tracing algorithms
[AD-A268984] p 1522 N94-18698
Introduction to wavelets
[AD-A268465] p 1389 N94-18801
Quantification of volume flaw sizes in ceramics by image processing of 3D x ray tomographic data sets
[DE93-018573] p 1372 N94-18932
Three dimensional ultrasonic imaging: An aging aircraft nondestructive inspection tool
[DE93-018088] p 1448 N94-19252
Overview of research in progress at the Center of Excellence
[NASA-CR-194329] p 1618 N94-19256
Cesar user library
[FFI-93/7021] p 1529 N94-19378
Development of ISY data set, part 2
[NASDA-CNT-930006-PT-2] p 1463 N94-19384
Applications of motion estimation in image processing
[FEL-92-B356] p 1580 N94-19455
A non-homogeneous, spatio-temporal, wavelet multiresolution analysis and its application to the analysis of motion
[AD-A270621] p 1538 N94-19534
Earth Penetration Radar Imaging System (EPRIS)
[DE93-019890] p 1391 N94-19542
Thermal wave image processing for characterization of subsurface of flaws in materials
[DE93-019024] p 1344 N94-19551
Signal processing algorithms for heterogeneous architectures
[AD-A271248] p 1392 N94-19724

IMAGE RECONSTRUCTION
Development and application of local 3-D x ray CT reconstruction software for imaging critical regions in large ceramic turbine rotors
[DE93-015159] p 1369 N94-18166
Image reconstruction from interferometer data
[AD-A268463] p 1578 N94-18383
Super-resolution of multi-pixel and sub-pixel images for the SDI
[AD-A268537] p 1462 N94-18631
Overview of research in progress at the Center of Excellence
[NASA-CR-194329] p 1618 N94-19256

IMAGE RESOLUTION
Super-resolution of multi-pixel and sub-pixel images for the SDI
[AD-A268537] p 1462 N94-18631
Color test chart for facsimile
[AD-A269754] p 1387 N94-18721
Overview of research in progress at the Center of Excellence
[NASA-CR-194329] p 1618 N94-19256

IMAGING RADAR
Laser imaging radar system
[AD-A270436] p 1387 N94-18510
Solution of the Poisson equation with application to radar imaging
[PB93-195865] p 1389 N94-18950

IMAGING SPECTROMETERS
UVSTAR: An imaging spectrograph with telescope for the Shuttle Hitchhiker-M platform p 1326 N94-19178
RAPID: The imaging energetic particle spectrometer on Cluster p 1329 N94-19633

IMAGING TECHNIQUES
Development of short pulse soft x ray lasers
[DE93-017150] p 1437 N94-18131
UVPI imaging from the LACE satellite: The Nihka rocket plume
[AD-A268456] p 1334 N94-18149
Development and application of local 3-D x ray CT reconstruction software for imaging critical regions in large ceramic turbine rotors
[DE93-015159] p 1369 N94-18166
Tomographic mathematical ideas applied to radar detection
[AD-A268789] p 1384 N94-18186
Image reconstruction from interferometer data
[AD-A268463] p 1578 N94-18383
Application of Fourier-based features for classification of synthetic aperture radar imagery
[AD-A270450] p 1387 N94-18513
High spatial resolution, range gated, underwater imaging method and apparatus
[AD-D015882] p 1430 N94-18530
Super-resolution of multi-pixel and sub-pixel images for the SDI
[AD-A268537] p 1462 N94-18631
Soft X Ray Projection Lithography. Organization of the 1993 photonics science optical meetings
[AD-A269159] p 1579 N94-18693
Imaging and blackbody emission spectra of hot particulates generated during laser ablation
[DE93-015818] p 1439 N94-18724
Nondestructive inspection of graphite-epoxy laminates for heat damage using DRIFT and LPF spectroscopies
[DE93-017228] p 1343 N94-18761
Engineering research, development and technology thrust area report, FY92
[DE93-016334] p 1632 N94-18856
Visualization for applications in shock physics
[DE93-012849] p 1418 N94-18918
UVSTAR: An imaging spectrograph with telescope for the Shuttle Hitchhiker-M platform p 1326 N94-19178
Study of GaAs substrates by ambient temperature photoluminescence imagery
[ECL-92-61] p 1603 N94-19357
Multimodal image correlation applied to computer aided pedicular screwing
[ETN-93-95018] p 1528 N94-19363
Description of an infrared zoomcollimator
[FEL-93-A034] p 1580 N94-19424
Applications of motion estimation in image processing
[FEL-92-B356] p 1580 N94-19455
A Sandia Technology Bulletin: Testing technology, July 1993
[DE93-040197] p 1633 N94-19537
Earth Penetration Radar Imaging System (EPRIS)
[DE93-019890] p 1391 N94-19542
Center-of-Excellence: Microlaser microscope
[DE93-040688] p 1442 N94-19658
UVPI imaging from the LACE satellite: The Strypi rocket plume
[AD-A270967] p 1335 N94-19787

IMMUNE SYSTEMS
A scientific role for Space Station Freedom: Research at the cellular level p 1503 N94-19215

IMPACT

Three-dimensional shock wave physics simulations with MIMD PAGOSA on massively parallel computers
[DE93-011682] p 1455 N94-18829

IMPACT ACCELERATION

Efficiency and biofidelity of occupant simulations
p 1459 N94-19473

IMPACT DAMAGE

Lattice damage in ion-implanted compound semiconductors and its effect on electrical activation
[DE93-015907] p 1593 N94-17845

Mechanical properties and impact damage resistance of composites fabricated by low cost, vacuum assisted, resin transfer molding
[AD-A270361] p 1342 N94-18702

Experimental investigation of wave and fracture phenomena in impacted ceramics: Experiments on sapphire
[AD-A270040] p 1372 N94-18792

Numerical simulation of vehicle crashworthiness and occupant protection p 1459 N94-19471

Blade and hub loads of ballistically damaged helicopter rotors
[AD-A270663] p 1319 N94-19781

IMPACT LOADS

Measurement and analysis of three 1.5-GPa shock-wave profiles in copper
[DE93-016559] p 1451 N94-17864

Vertical drop test of a Metro 3 aircraft
[AD-A270032] p 1318 N94-18789

Experimental investigation of wave and fracture phenomena in impacted ceramics: Experiments on sapphire
[AD-A270040] p 1372 N94-18792

Toward a characterization of the debris cloud created in a hypervelocity impact on a thin plate
[AD-A269190] p 1455 N94-18864

Computational mechanics of composite materials
[PB93-195782] p 1343 N94-19281

Simulation of the impact of a plastic flyer on an aluminum block using the hydrocode AUTODYNE
[PML-1992-26] p 1458 N94-19444

Impact analysis of composite aircraft structures
p 1458 N94-19468

Explicit solution techniques for impact with contact constraints p 1459 N94-19470

Current capabilities for simulating the extreme distortion of thin structures subjected to severe impacts
p 1459 N94-19474

IMPACT PREDICTION

Impact response of composite laminates: A guide to closed form solutions
[FFA-TN-1992-33] p 1339 N94-17971

Missile antenna pattern coordinate system and data formats
[AD-A269153] p 1385 N94-18260

IMPACT RESISTANCE

Mechanical properties and impact damage resistance of composites fabricated by low cost, vacuum assisted, resin transfer molding
[AD-A270361] p 1342 N94-18702

IMPACT STRENGTH

Effect of phase change in a debris cloud on a backwall structure
[DE93-017506] p 1358 N94-18100

Impact strength and indentation hardness of high-strength ceramics
[DE93-018833] p 1373 N94-19338

The influence of the target strength model on computed perforation
[DE93-018659] p 1460 N94-19543

IMPACT TESTS

Measurement and analysis of three 1.5-GPa shock-wave profiles in copper
[DE93-016559] p 1451 N94-17864

Impact modeling with smooth particle hydrodynamics
[DE93-016561] p 1451 N94-17906

Vertical drop test of a Metro 3 aircraft
[AD-A270032] p 1318 N94-18789

Dynamical behavior of tantalum
[DE93-017877] p 1362 N94-18919

Composite impact dynamics research at NASA LaRC: A review p 1458 N94-19467

The influence of the target strength model on computed perforation
[DE93-018659] p 1460 N94-19543

IMPEDANCE

Impedence calculation with recursive folding
[ETN-93-95049] p 1406 N94-19387

IMPEDANCE MEASUREMENT

A radial transmission line material measurement apparatus
[DE93-018508] p 1394 N94-17780

IMPINGEMENT

Lift and pitching moment induced on jet STOVL aircraft hovering in ground effect
[AD-A269700] p 1317 N94-18577

IMPLOSIONS

Hydrodynamic instability modeling for ICF
[DE93-018634] p 1587 N94-18274

IMPREGNATING

Process relationship as influenced by carbonization rate
[AD-A269680] p 1341 N94-18572

IMPULSES

Asymptotic behaviour of the solutions of Schroedinger equation with impulse effect in a Banach space
[DE93-629865] p 1548 N94-18195

Impulsive moving mirror model and the stability of Schroedinger equation with impulse effect in a Banach space
[DE93-629866] p 1548 N94-18196

Impulsive moving mirror model and the stability of linear homogeneous differential equations with impulse effect in a Banach space
[DE93-629906] p 1549 N94-18200

IMPURITIES

Electron stripping cross sections for light impurity ions in colliding with atomic hydrogens relevant to fusion research
[DE93-788476] p 1566 N94-18158

Defect behavior of polycrystalline solar cell silicon
[DE93-018490] p 1468 N94-19016

X ray studies of microstructures in semiconductor and superconducting materials
[DE93-040690] p 1601 N94-19056

IN SITU MEASUREMENT

CTD and XBT data collected on ERS-1 validation cruise RRS Charles Darwin Cruise 62A, Iceland-Faeroes region
[IOS-234-1992] p 1461 N94-18063

In-situ growth monitoring of molecular beam epitaxy processes
[AD-A269287] p 1598 N94-18616

IN-FLIGHT MONITORING

In-flight pressure distributions and skin-friction measurements on a subsonic transport high-lift wing section p 1308 N94-18435

INCINERATORS

On-line monitoring of incinerator emissions
[DE93-017406] p 1474 N94-18499

A comparison of wet and dry scrubbing systems for control of metals and dioxin/furan emissions from incinerators
[DE93-017446] p 1474 N94-18502

INCLUSIONS

Pressureless densification of ceramic matrix composites
[AD-A269137] p 1371 N94-18691

Office of Naval Research Publications/Patents /Presentations/Honors report, 1 October 1992 - 30 September 1993
[AD-A270037] p 1632 N94-18791

INCOMPRESSIBILITY

AEOLUS-IT MHD simulation code based on a toroidally incompressible plasma model
[DE93-788461] p 1586 N94-18157

INCOMPRESSIBLE FLOW

A computational and experimental investigation of incompressible oscillatory airfoil flow and flutter problems
[AD-A268748] p 1311 N94-18402

Efficient simulation of incompressible viscous flow over multi-element airfoils p 1306 N94-18421

A viscous-inviscid solver for high-lift incompressible flows over multi-element airfoils at deep separation conditions p 1306 N94-18425

STREMR: Numerical model for depth-averaged incompressible flow
[AD-A269949] p 1417 N94-18672

Numerical solutions for a flow with mixed convection in a vertical geometry
[DE93-011592] p 1419 N94-19058

Pseudo-compressibility methods for the incompressible flow equations
[NASA-CR-191533] p 1551 N94-19315

Numerical investigation of the incompressible flow around a wing with a fixed spoiler
[ISL-R-109/91] p 1313 N94-19524

Theoretical examination of the flow around a cylinder with a low dimensional Galerkin process
[MPIS-25/1992] p 1422 N94-19525

INCONEL (TRADEMARK)

Atlas of formability: INCONEL 718
[AD-A268350] p 1356 N94-17789

Assessment of an improved multiaxial strength theory based on creep-rupture data for Inconel 600
[DE93-015929] p 1356 N94-17791

Summary of work on coatings and claddings for fossil energy applications
[DE93-017005] p 1367 N94-17881

Environmental degradation of Alloy 600 and welded filler metal EN82 in an elevated temperature aqueous environment
[DE93-018049] p 1363 N94-18940

INDENTATION

Superhardness effect in Au/Ni multilayers
[DE93-016444] p 1357 N94-17860

Impact strength and indentation hardness of high-strength ceramics
[DE93-018833] p 1373 N94-19338

Picoindentation hardness measurements using atomic force microscopy
[AD-A270877] p 1604 N94-19579

INDEPENDENT VARIABLES

Flight test techniques for aircraft parameter estimation in ground effect
[AD-A270058] p 1318 N94-18795

INDEXES (DOCUMENTATION)

Summaries of FY 1993 research in the chemical sciences
[DE93-011855] p 1632 N94-18915

Aeronautical engineering: A continuing bibliography with indexes (supplement 297)
[NASA-SP-7037(297)] p 1310 N94-18937

EIA publications directory, 1992
[DE93-016833] p 1617 N94-18983

Aeronautical engineering: A continuing bibliography with indexes (supplement 296)
[NASA-SP-7037(296)] p 1310 N94-19070

INDIAN SPACE PROGRAM

Activities of the Indian Institute of Geomagnetism
p 1484 N94-18854

INDIUM

Defects in GaAs bulk crystals and multi-layers caused by In diffusion
[DE93-016968] p 1595 N94-18054

INDIUM ARSENIDES

Reorientation of misfit dislocations during annealing in InGaAs/GaAs(001) interfaces
[DE93-015046] p 1592 N94-17741

Defects in GaAs bulk crystals and multi-layers caused by In diffusion
[DE93-016968] p 1595 N94-18054

INDIUM PHOSPHIDES

Construction of a scanning tunneling microscope in liquid media: Studies of the preparation of the graphite surface and the chemical cleaning of indium phosphide
[ECL-92-25] p 1353 N94-19406

INDOOR AIR POLLUTION

Indoor environment program
[DE93-018601] p 1513 N94-18935

INDUCED DRAG

A study of the influence of a delta wing geometry on the induced drag at transonic speed (M=0.55) and high angles of attack
[FFA-TN-1992-14] p 1311 N94-17722

INDUCTANCE

High temperature co-axial winding transformers
[NASA-CR-194580] p 1407 N94-19643

INDUCTION (MATHEMATICS)

A refinement for nonmonotonic logic
[REPT-93-21] p 1542 N94-19092

INDUSTRIAL AREAS

The Mexico City 1991 lidar measurements campaign
[DE93-019960] p 1478 N94-19272

INDUSTRIAL WASTES

Kinetic studies of electrochemical generation of Ag(II) ion and catalytic oxidation of selected organics
[DE93-016601] p 1352 N94-19240

INDUSTRIES

Implementation of electronic data interchange in the department of defense: Lessons learned from private industry
[AD-A269532] p 1534 N94-18768

Manufacturing technology
[DE93-019580] p 1381 N94-19480

Program descriptions
[NSF-92-123] p 1531 N94-19619

INELASTIC SCATTERING

Polaron tunneling in high-temperature superconductors
[DE93-016880] p 1593 N94-17754

The rise of accuracy for the multichannel scattering problem solving
[DE93-630145] p 1608 N94-18253

Investigation of physical structures and interactions at high energy
[DE93-014444] p 1574 N94-18927

Solid-state dynamics in novel semiconductor nanostructures
[AD-A271249] p 1605 N94-19725

INEQUALITIES
L(sub p)-regularity of subelliptic operators on Lie groups
[PB93-194785] p 1549 N94-18948
INERTIAL CONFINEMENT FUSION
Laboratory microfusion capability study
[DE93-014373] p 1583 N94-17912
Overview of WARP: A particle code for heavy ion fusion
[DE93-018637] p 1588 N94-19034
INERTIAL NAVIGATION
On the use of differential GPS for automatic approach and landing of space and aircraft
[DLR-MITT-93-05] p 1316 N94-17921
INFLUENCE COEFFICIENT
FNAS/summer faculty fellowship research continuation program. Task 6: Integrated model development for liquid fueled rocket propulsion systems. Task 9: Aspects of model-based rocket engine condition monitoring and control
[NASA-CR-194574] p 1338 N94-19706
INFORMATION
Intentionally Short Range Communications (ISRC)
[AD-A268788] p 1384 N94-18216
Competitive dynamics and self-organization in photorefractive systems
[AD-A269663] p 1430 N94-18569
INFORMATION DISSEMINATION
Metadata compiled and distributed by the Carbon Dioxide Information Analysis Center for global climate change and greenhouse gas-related data bases
[DE93-015338] p 1473 N94-18167
FEDIX on-line information service: Design, develop, test, and implement an on-line research and education information service
[DE93-018818] p 1614 N94-18181
Bibliography of scientific publications of the Naval Biodynamics Laboratory, 1980 - 1992
[AD-A268886] p 1505 N94-18226
Handbook for users
[AD-A268726] p 1615 N94-18323
INFORMATION MANAGEMENT
OSSA Information Systems Program
[NASA-TM-108774] p 1612 N94-17737
Current information technology resource requirements of the federal government: Fiscal year 1994
p 1612 N94-17756
Carbon Dioxide Information Analysis Center: FY 1992 activities
[DE93-013845] p 1471 N94-17774
Information technology resources assessment
[DE93-015276] p 1613 N94-17894
The organizational preparation of existing relational databases for the integration of expert systems
[AD-A268823] p 1614 N94-18191
Trends in Information Management at Department of Energy Headquarters
[DE93-017197] p 1615 N94-18496
Emerging technologies planning guide, 1993 edition — information systems technology
[DE93-017196] p 1616 N94-18689
Application of new technologies in the virtual library: Seminars in Turkey, Portugal, and Spain
[NASA-TM-109718] p 1611 N94-19131
Secure open systems: An investigation
[FEL-91-B293] p 1619 N94-19454
Models and building blocks for secure open systems
[FEL-92-B365] p 1619 N94-19457
Learning about the Internet bibliography and beginner's guide
[AD-A268847] p 1532 N94-19707
INFORMATION PROCESSING (BIOLOGY)
The identification of the computational significance of key neurobiological characteristics found in a number of telencephalic brain regions
[AD-A269374] p 1505 N94-18407
Effects of practice in selecting and executing keypressing sequences
[IZF-1992-B-10] p 1509 N94-19420
Cognitive ability and whole-body rotation
[IZF-1993-B-4] p 1510 N94-19440
Effects of location cuing on redundant target processing
[IZF-1993-B-1] p 1510 N94-19443
Modeling of driver behavior: Information perception, rule and control strategies in experiments and simulations
[ETN-93-95053] p 1510 N94-19649
Extrathalamic modulation of cortical function
[AD-A270869] p 1507 N94-19783
INFORMATION RETRIEVAL
Restricting query relaxation through user constraints
[DE93-017413] p 1612 N94-17870
Defense Technical Information Center thesaurus
[AD-A268855] p 1615 N94-18319
Handbook for users
[AD-A268726] p 1615 N94-18323
Retrieving and integrating data from multiple information sources
[AD-A269588] p 1615 N94-18461
On masking effect
[AD-A269593] p 1541 N94-18462
Learning database abstractions for query reformulation
[AD-A269531] p 1616 N94-18641
Department of Defense Gateway Information System (DGIS) users' guide
[AD-A270140] p 1617 N94-18752
Networked MS windows 3.1 based classified document control system (CDOCS)
[DE93-017880] p 1617 N94-18984
Application of new technologies in the virtual library: Seminars in Turkey, Portugal, and Spain
[NASA-TM-109718] p 1611 N94-19131
Working visit to the University of L'Aquila, Italy
[FEL-93-B020] p 1618 N94-19452
INFORMATION SYSTEMS
OSSA Information Systems Program
[NASA-TM-108774] p 1612 N94-17737
Current information technology resource requirements of the federal government: Fiscal year 1994
p 1612 N94-17756
Carbon Dioxide Information Analysis Center: FY 1992 activities
[DE93-013845] p 1471 N94-17774
Information technology resources assessment
[DE93-015276] p 1613 N94-17894
An environment for requirement reuse
[REPT-92-082] p 1613 N94-17939
Navigation in hypermedia applications: Modelling and semantics
[REPT-93-034] p 1520 N94-18136
Metadata compiled and distributed by the Carbon Dioxide Information Analysis Center for global climate change and greenhouse gas-related data bases
[DE93-015338] p 1473 N94-18167
FEDIX on-line information service: Design, develop, test, and implement an on-line research and education information service
[DE93-018818] p 1614 N94-18181
The organizational preparation of existing relational databases for the integration of expert systems
[AD-A268823] p 1614 N94-18191
Handbook for users
[AD-A268726] p 1615 N94-18323
Retrieving and integrating data from multiple information sources
[AD-A269588] p 1615 N94-18461
Trends in Information Management at Department of Energy Headquarters
[DE93-017197] p 1615 N94-18496
Automatic documentation generation: The interaction of text and examples
[AD-A269670] p 1616 N94-18570
A comparison of air force data systems
[AD-A269691] p 1616 N94-18575
Generating object descriptions: Intergrating examples with text
[AD-A269992] p 1522 N94-18680
Integrated Terminal Weather System (ITWS)
[AD-A269884] p 1492 N94-18684
Emerging technologies planning guide, 1993 edition — information systems technology
[DE93-017196] p 1616 N94-18689
A general theory of signal integration for fault-tolerant dynamic distributed sensor networks
[AD-A270316] p 1534 N94-18699
Department of Defense Gateway Information System (DGIS) users' guide
[AD-A270140] p 1617 N94-18752
Computer/information security design approaches for Complex 21/Reconfiguration facilities
[DE93-018547] p 1535 N94-18930
Networked MS windows 3.1 based classified document control system (CDOCS)
[DE93-017880] p 1617 N94-18984
Software distribution using xnetlib
[DE93-018278] p 1523 N94-18989
Application of new technologies in the virtual library: Seminars in Turkey, Portugal, and Spain
[NASA-TM-109718] p 1611 N94-19131
Feasibility study in linguistically motivated object-oriented conceptual design of information systems
[PB93-197754] p 1618 N94-19331
Secure open systems: An investigation of current standardisation efforts for security in open systems
[FEL-92-B225] p 1618 N94-19450
Models and building blocks for secure open systems
[FEL-92-B365] p 1619 N94-19457
Results of a joint Navy/Air Force operational test to evaluate USAF Integrated Maintenance Information Systems (IMIS), Interactive Electronic Technical Manual (IETM) technology applied to the F/A-18 aircraft
[AD-A271322] p 1619 N94-19571
Systems engineering for Air Force C3I systems
[AD-A270482] p 1391 N94-19676
Software reuse: Major issues need to be resolved before benefits can be achieved. Report to the Chairman, Subcommittee on Defense, Committee on Appropriations, House of Representatives
[GAO/IMTEC-93-16] p 1532 N94-19716
A real-time spoken-language system for interactive problem-solving, combining linguistic and statistical technology for improved spoken language understanding
[AD-A270901] p 1392 N94-19749
Automated processing of military messages according to ADatP-3
[FEL-92-A044] p 1393 N94-19798
INFORMATION THEORY
Thermodynamics of computation and information distance
[DE93-012730] p 1517 N94-17812
Efficient domain-independent experimentation
[AD-A269530] p 1557 N94-18640
INFORMATION TRANSFER
Interactive Collaborative Environments (ICE) in the design to manufacturing process
[DE93-014994] p 1518 N94-17944
NASA aeronautics: Protecting sensitive technology. Report to Congressional requesters
[GAO/NSIAD-93-201] p 1617 N94-18848
INFRARED ABSORPTION
Vibrational dynamics in photoinduced electron transfer
[DE93-040874] p 1567 N94-18533
Infrared cross sections and global warming potentials of 10 alternative hydrohalocarbons
[AERONAUTICA-ACTA-A-371-199]
p 1479 N94-19521
INFRARED ASTRONOMY
Related investigations on the physics of high energy emission from active galactic nuclei
[NASA-CR-193615] p 1630 N94-18836
IRAS high resolution studies and modeling of closely interacting galaxies. Galaxy collisions: Infrared observations and analysis of numerical models. UV spectroscopy of massive young stellar populations in interacting galaxies
[NASA-CR-194483] p 1627 N94-19218
The 0.15 seconds near-infrared imaging of the central parsec of the galaxy
[MPE-PREPRINT-239] p 1621 N94-19415
INFRARED ASTRONOMY SATELLITE
ROSAT and IRAS observations
[MPE-PREPRINT-231] p 1623 N94-19526
INFRARED DETECTORS
Infrared detection with high-(Tc bolometers and response of Nb tunnel junctions to picosecond voltage pulses
[DE93-016963] p 1595 N94-17989
Perspective and future possibilities
p 1431 N94-18651
Description of an infrared zoomcollimator
[FEL-93-A034] p 1580 N94-19424
INFRARED IMAGERY
Measurement Techniques
[VKI-LS-1993-05] p 1430 N94-18643
Fundamentals of infrared thermography
p 1431 N94-18648
Application of infrared thermography in fluid mechanics p 1431 N94-18649
Perspective and future possibilities
p 1431 N94-18651
Infrared thermography p 1432 N94-18652
Thermal wave image processing for characterization of subsurface of flaws in materials
[DE93-019024] p 1344 N94-19551
Electro-optics display research, test, and evaluation laboratory program
[AD-A270947] p 1408 N94-19751
INFRARED INSTRUMENTS
Integrated test plan for the demonstration of a commercial Fourier Transform Infrared instrument
[DE93-018518] p 1433 N94-19041
Advances in passive-remote and extractive Fourier transform infrared systems
[DE93-017402] p 1478 N94-19241
INFRARED LASERS
Removing CFC's from the atmosphere with lasers: A second look
[DE93-017516] p 1473 N94-18101
A tunable compact high power far-infrared grating free-electron laser
[AD-A269875] p 1440 N94-18771

INFRARED RADIATION
IR materials producibility
[AD-A268849] p 1577 N94-18223
Vibrational dynamics in photoinduced electron transfer
[DE93-040874] p 1567 N94-18533
Surface modification of sapphire for IR window application
[DE93-019168] p 1602 N94-19075
INFRARED RADIOMETERS
Infrared thermography p 1432 N94-18652
INFRARED SCANNERS
Fundamentals of infrared thermography
p 1431 N94-18648
INFRARED SIGNATURES
Spectral radiance measurements on a bluff body stabilized flame: Characterization of the IR signature
[PB93-195899] p 1347 N94-18081
INFRARED SOURCES (ASTRONOMY)
ROSAT X ray observation of the 30 Dor giant HII region p 1623 N94-19527
INFRARED SPECTRA
Metallization and charge-transfer gap closure of transition-metal iodides under pressure
[DE93-040301] p 1353 N94-19538
The application of jet spray and ion beam contamination removal techniques to samples from the LDEF spacecraft
[AD-A270973] p 1354 N94-19755
INFRARED SPECTROMETERS
FT-NIR spectroscopy in quantitative and qualitative measurements of cereal products
[VTT-TIED-1331] p 1346 N94-17973
Spectral radiance measurements on a bluff body stabilized flame: Characterization of the IR signature
[PB93-195899] p 1347 N94-18081
On-line monitoring of incinerator emissions
[DE93-017406] p 1474 N94-18499
Integrated test plan for the demonstration of a commercial Fourier Transform Infrared instrument
[DE93-018518] p 1433 N94-19041
Transcutaneous Analyte Measuring Methods (TAMM)
[AD-A271387] p 1408 N94-19756
INFRARED SPECTROSCOPY
FT-NIR spectroscopy in quantitative and qualitative measurements of cereal products
[VTT-TIED-1331] p 1346 N94-17973
Analysis of deposit precursors in jet fuels using Fourier transform infrared spectroscopy
[AD-A269035] p 1377 N94-18489
Advances in passive-remote and extractive Fourier transform infrared systems
[DE93-017402] p 1478 N94-19241
Suitability of infrared spectroscopy for remote sensing of tropospheric trace gases
[KFK-5183] p 1479 N94-19507
INFRARED WINDOWS
Surface modification of sapphire for IR window application
[DE93-019168] p 1602 N94-19075
INGOTS
Commercialization effort in support of electroslag-casting technology
[DE93-017988] p 1366 N94-19733
INHIBITORS
The c-jun gene expression in human cells exposed to either ionizing radiation or hydrogen peroxide
[DE93-017436] p 1502 N94-18476
INJECTION MOLDING
Ageing in Processed Polymers: Programme, summary, and abstracts discussion meeting
[AD-A268931] p 1370 N94-18448
INJECTORS
Compound-lens injector for a 19-MeV, 700-kA electron beam
[DE93-013752] p 1573 N94-17698
Combustion instability phenomena of importance to liquid propellant engines
[AD-A268800] p 1348 N94-18389
Heavy Ion Fusion Injector Program
[DE93-018706] p 1575 N94-18997
INLET FLOW
Defining the normal turbine inflow within a wind park environment
[DE93-010032] p 1489 N94-18046
Workshop on Computational Turbulence Modeling
[NASA-TM-109266] p 1410 N94-18545
A comparative study of turbulence models in predicting hypersonic inlet flows p 1314 N94-18553
Several examples where turbulence models fail in inlet flow field analysis p 1412 N94-18556
MHD integrated topping cycle project
[DE93-040520] p 1588 N94-18978
INLET TEMPERATURE
Potassium-Rankine power conversion subsystem modeling for nuclear electric propulsion
[NASA-CR-191134] p 1468 N94-18821
INORGANIC CHEMISTRY
Molecular and polymeric ceramic precursors
[DE93-040364] p 1372 N94-18891
Research program activities of the ORNL Analytical Chemistry Division
[DE93-017938] p 1339 N94-19117
INORGANIC COMPOUNDS
Advanced civil engineering materials based on inorganic polymers
[AD-A270837] p 1374 N94-19600
INPUT/OUTPUT ROUTINES
Control of nonlinear systems
[AD-A270141] p 1542 N94-18898
Protocol service decomposition for high-performance networking
[AD-A270613] p 1538 N94-19533
INSOLATION
Effects of the Mount Pinatubo eruption on solar insolation: Four case studies
[DE93-018454] p 1475 N94-18817
INSPECTION
Aircrew life support, AFSC 122X0(1T1X1)
[AD-A268998] p 1511 N94-18394
Three dimensional ultrasonic imaging: An aging aircraft nondestructive inspection tool
[DE93-018088] p 1448 N94-19252
INSTALLING
Evaluation of aftermarket LPG conversion kits in light-duty vehicle applications
[DE93-010035] p 1377 N94-18617
INSTRUCTORS
Undergraduate course and curriculum development program and calculus and the bridge to calculus program: 1992 awards
[NSF-93-24] p 1610 N94-19446
INSTRUMENT COMPENSATION
Aspects of the calibration and processing of the CRRES fluxgate magnetometer data
[AD-A270127] p 1432 N94-18875
Construction and evaluation of an environmental chamber for calibration of temperature and pressure sensors for laser interferometers emperature and pressure sensors for laser interferometers)
[PB93-197838] p 1322 N94-19332
Software quality in test and measurment equipment
[PB93-197846] p 1528 N94-19333
INSTRUMENT ERRORS
Some potential errors in satellite wind estimates using the geostrophic approximation and the thermal wind
[AD-A269784] p 1491 N94-18599
High temperature strain measurement with a resistance strain gage
[NASA-CR-194441] p 1434 N94-19314
INSTRUMENT LANDING SYSTEMS
JPRS report: Central Eurasia. Aviation and cosmonautics, no. 12, December 1992
[JPRS-UAC-93-006] p 1632 N94-19148
INSULATORS
Experimental and theoretical investigation of surface chemistry induced by direct and indirect electronic excitation
[AD-A268846] p 1348 N94-18221
High pressure metallization of Mott Insulators: Magnetic, structural and electronic properties
[DE93-018295] p 1404 N94-18805
Pressure induced metallization of the Mott Insulator 6(sub 2)
[DE93-018296] p 1600 N94-18969
INTEGRAL EQUATIONS
Structure, thermodynamics, and dynamical properties of supercooled liquids
[DE93-788387] p 1607 N94-18211
Crossover from BCS to Bose superconductivity: A functional integral approach
[DE93-019503] p 1604 N94-19566
INTEGRAL TRANSFORMATIONS
Path integrals on warped product manifolds
[DE93-629859] p 1561 N94-18151
INTEGRATED CIRCUITS
Aerogels for microelectronic applications: Fast, inexpensive, and light as air
[DE93-017170] p 1395 N94-17882
Techniques for low consumption circuits
p 1428 N94-18032
Evaluation of the consumption of electronic clocks
p 1408 N94-18033
Automatic soldering for watch circuit components
p 1428 N94-18037
SPROC: A multiple-processor DSP IC
p 1398 N94-18347
Technology, design, simulation, and evaluation for SEP-hardened circuits p 1399 N94-18352
Systolic array IC for genetic computation
p 1400 N94-18361
A new variable testability measure
p 1400 N94-18364
Controlling state explosion during automatic verification of delay-insensitive and delay-constrained VLSI systems using the POM verifier p 1400 N94-18365
Formal verification of an MMU and MMU cache
p 1400 N94-18366
Formal hardware verification of digital circuits
p 1401 N94-18367
High accuracy switched-current circuits using an improved dynamic mirror p 1401 N94-18368
VHDL simulation with access to transistor models
p 1402 N94-18381
The LET spectrum and its uncertainty during the CRRES mission
[AD-A269977] p 1630 N94-18676
Monolithic low noise preamplifier for piezoelectric sensors
[AD-D015860] p 1563 N94-18734
Fabrication process for cantilever beam micromechanical switches
[AD-A269716] p 1404 N94-18749
High efficiency low cost monolithic module for SARSAT distress beacons
[NASA-CR-194234] p 1315 N94-18852
Integrated circuits: Resistless processing simplifies production and cuts costs
[DE93-018069] p 1405 N94-18941
Thermal stresses in the microchannel heatsink cooled by liquid nitrogen
[DE93-018660] p 1418 N94-18995
Silicon MCM substrates for integration of 3-5 photonic devices and CMOS IC's
[DE93-017894] p 1405 N94-19112
A Sandia Technology Bulletin: Testing technology, July 1993
[DE93-040197] p 1633 N94-19537
Tribological studies of silicon for magnetic recording applications (Invited)
[AD-A270878] p 1447 N94-19784
INTELLIGIBILITY
A real-time spoken-language system for interactive problem-solving, combining linguistic and statistical technology for improved spoken language understanding
[AD-A270901] p 1392 N94-19749
INTERACTING GALAXIES
IRAS high resolution studies and modeling of closely interacting galaxies. Galaxy collisions: Infrared observations and analysis of numerical models. UV spectroscopy of massive young stellar populations in interacting galaxies
[NASA-CR-194483] p 1627 N94-19218
INTERACTIVE CONTROL
A user task analysis for command and control systems and its use in human-computer interaction research
[AD-A269877] p 1512 N94-18774
Interactive Production Line (IPL) p 1495 N94-19704
INTERATOMIC FORCES
Atomic-scale friction and microfriction of graphite and diamond using friction force microscopy
[AD-A270952] p 1605 N94-19679
INTERCEPTION
Predicted structural response of the lightweight-interceptor technology demonstration vehicle
[DE93-014676] p 1333 N94-17782
Intentionally Short Range Communications (ISRC)
[AD-A268788] p 1384 N94-18216
INTERCONTINENTAL BALLISTIC MISSILES
An empirical evaluation of five circular error probable estimation techniques and a method for improving them
[AD-A266528] p 1556 N94-18397
INTERFACE STABILITY
The 6th Japan-U.S. conference on composite materials
[AD-A268535] p 1341 N94-18630
The application of front tracking to the simulation of shock refractions and shock accelerated interface mixing
[DE93-018342] p 1419 N94-19025
INTERFACES
Reorientation of misfit dislocations during annealing in InGaAs/GaAs(001) interfaces
[DE93-015046] p 1592 N94-17741
Microstructure of the interfacial zone around aggregate particles in concrete
[PB93-195790] p 1380 N94-19322
INTERFACIAL TENSION
Finite element modeling of evaporation and condensation during sol-gel film and fiber formation
[DE93-017655] p 1345 N94-17820
Contribution to the study of a symmetric film flow (with or without tensio-active elements)
[ECL-93-13] p 1421 N94-19461
Axial response of differently excited anchored viscous liquid bridges in zero-gravity
[LRT-WE-9-FB-1-1992] p 1379 N94-19489

Transient response of a viscous and anchored liquid bridge to an axial pulse
[LRT-WE-9-FB-7-1992] p 1379 N94-19492

An investigation of low Marangoni number fluid flow in a cold corner
[AD-A271317] p 1422 N94-19569

INTERFEROMETERS

Portable, solid state, fiber optic coupled Doppler interferometer system for detonation and shock diagnostics
[DE93-013917] p 1423 N94-17700

Monitoring the response of the upper troposphere/lower stratosphere to a greenhouse gas scenario
[DE93-014509] p 1470 N94-17710

Interferometer stations at the Air Force Aeroballistic Research Facility
[AD-A268776] p 1322 N94-18330

Image reconstruction from interferometer data
[AD-A268463] p 1578 N94-18383

Behavior of the particle transport coefficients near the density limit in MTX
[DE93-019108] p 1591 N94-19311

INTERFEROMETRY

Development and test of readout electronics for optical quadrature signals
[DLR-MITT-92-11] p 1395 N94-17920

Interferometer stations at the Air Force Aeroballistic Research Facility
[AD-A268776] p 1322 N94-18330

Interferometric investigations of compressible dynamic stall over a transiently pitching airfoil
[NASA-TM-109380] p 1312 N94-19119

Shock compression properties of silicon carbide
[DE93-019927] p 1373 N94-19271

Film condensation in a shock wave
[MPIS-22/1992] p 1422 N94-19509

INTERGALACTIC MEDIA

The universe at moderate redshift
[NASA-CR-193771] p 1627 N94-19093

INTERGRANULAR CORROSION

Environmentally assisted cracking of nickel anode substrates in Li/SOCl2 cells: An engineering approach
[DE93-015130] p 1405 N94-18928

INTERLAYERS

Molecular dynamics modeling of the mechanical behavior of metallic multilayers
[DE93-017972] p 1365 N94-19263

INTERMEDIATE FREQUENCIES

A radial transmission line material measurement apparatus
[DE93-018508] p 1394 N94-17780

Broadband IF matching for quasioptical mixers
[MPE-PREPRINT-240] p 1390 N94-19416

INTERMETALLICS

Magnetic properties of single-crystalline UCu3Al2
[DE93-016607] p 1593 N94-17744

Summary of work on coatings and claddings for fossil energy applications
[DE93-017005] p 1367 N94-17881

The Hall-Petch relationship and mechanisms of fracture in B2 compounds
[DE93-018887] p 1359 N94-18182

Environmental effects on intermetallic compounds: A guide to the literature
[AD-A269587] p 1359 N94-18306

Solderability perservative coatings: Electroless tin versus organic azoles
[DE93-017634] p 1370 N94-18477

Developing and understanding the high temperature behavior of niobium aluminides and niobium aluminide composites
[AD-A268874] p 1341 N94-18636

Fundamental concepts relating local atomic arrangements, deformation, and fracture of intermetallic alloys
[AD-A268745] p 1361 N94-18788

Morphology, deformation, and defect structures of TiCr2 in Ti-Cr alloys
[DE93-018332] p 1361 N94-18807

Development of ductile Fe3Al-based aluminides
[DE93-017865] p 1362 N94-18938

Tensile properties of as-cast iron-aluminide alloys
[DE93-017852] p 1363 N94-18975

Shock-loading response of advanced materials
[DE93-018344] p 1455 N94-19033

Magnetic and crystallographic structures in UTX intermetallic compounds
[DE93-018291] p 1605 N94-19735

INTERMITTENCY

Singularities and symmetries of nonlinear ordinary and partial differential equations
[DE93-040083] p 1550 N94-19190

INTERMOLECULAR FORCES

Femtosecond Fourier-transform spectroscopy of low-frequency intermolecular motions in weakly interacting liquids
[DE93-017312] p 1566 N94-18085

Calculation of molecular excitation rates
[NASA-CR-193782] p 1571 N94-19236

INTERNAL COMBUSTION ENGINES

Evaluation of aftermarket LPG conversion kits in light-duty vehicle applications
[DE93-010035] p 1377 N94-18617

INTERNAL ENERGY

Techniques for the estimation of Heats of Explosion (HEX) using thermochemical codes
[AD-A268584] p 1609 N94-18310

Chemical dynamics in time and energy space
[DE93-018595] p 1350 N94-19097

INTERNAL PRESSURE

Compatibility of refrigerants and lubricants with motor materials, volume 1
[DE93-040216] p 1350 N94-18895

INTERNAL WAVES

Acoustic travel time perturbations due to an internal tide and internal wave field in the Barents Sea
[AD-A270879] p 1499 N94-19580

INTERPLANETARY DUST

Structuration processes in protoplanetary accretion disks
[MPE-243] p 1628 N94-19519

INTERPLANETARY MAGNETIC FIELDS

Radial evolution of the solar wind turbulence with application to charged particle transport
[NASA-CR-194081] p 1629 N94-19427

INTERPOLATION

Preparation of data assimilation and model evaluation experiment data sets
[AD-A269996] p 1498 N94-18665

Solar radiation in Saudi Arabia
[AD-A269970] p 1493 N94-18781

Smooth particle hydrodynamics: The SPHINX and SPHC codes
[DE93-014358] p 1457 N94-19207

Radiosity algorithms using higher order finite element methods
[DE93-018098] p 1531 N94-19548

INTERPROCESSOR COMMUNICATION

A fast adaptive convex hull algorithm on two-dimensional processor arrays with a reconfigurable BUS system
p 1402 N94-18380

The p4 Linda: A portable implementation of Linda
[DE93-017752] p 1535 N94-19046

A multi-thread approach to coalescing small transfers generated by portable tool sets
[DE93-012128] p 1525 N94-19186

Message passing in PUMA
[DE93-012841] p 1537 N94-19206

Wide-address spaces: Exploring the design space
[MEMO-INF-92-77] p 1537 N94-19219

Specification and verification of a dynamic leader election protocol in a broadcast network
[MEMO-INF-93-05] p 1558 N94-19228

Specifying and proving communication closedness in protocols
[MEMO-INF-93-23] p 1390 N94-19267

Action systems and action refinement in the development of parallel systems: An algebraic approach
[MEMO-INF-93-14] p 1538 N94-19296

Congestion/flow control and routing in data networks: A control-theoretic approach
[AD-A271121] p 1392 N94-19737

INTERSECTIONS

Fuzzy hypergraphs and fuzzy intersection graphs
[AD-A270303] p 1549 N94-18815

INTERSTELLAR EXTINCTION

Dust in the Small Magellanic Cloud
[NASA-CR-193344] p 1624 N94-17764

INTERSTELLAR MATTER

Calculation of molecular excitation rates
[NASA-CR-193782] p 1571 N94-19236

INTERSTITIALS

Selective electrochemical wafer thinning for silicon characterization
[DE93-015083] p 1592 N94-17742

INVARIANCE

On a conformal perfect fluid in the classical vacuum
[DE93-624797] p 1480 N94-17682

About structurally stable generating mechanism for invariant hyperbolic sets
[DE93-629858] p 1561 N94-18150

Deformed traces and covariant quantum algebras for quantum groups GL(sub qp)(2) and GL(sub qp)(1/1)
[DE93-629862] p 1561 N94-18153

Four-fermion interactions
[DE93-629905] p 1566 N94-18199

Fault tolerant sequential circuits using sequence invariant state machines p 1398 N94-18344

T violating neutron spin rotation asymmetry
[DE93-018470] p 1570 N94-19126

Decomposition invariance of generalized steady-state of a 1-D diffusion system
[REPT-93-26] p 1550 N94-19141

Group-invariant solutions of hydrodynamics and radiation hydrodynamics
[DE93-018373] p 1423 N94-19604

INVENTIONS

The mystery of the perpetual motion clock of Geiser and Son p 1427 N94-18027

INVENTORY MANAGEMENT

Inventory management plan for a research and development local area network
[DE93-018381] p 1617 N94-19026

INVERSE SCATTERING

Fast iterative solution of sparsely sampled seismic inverse problems
[REPT-93-16] p 1486 N94-19081

Inverse scattering of surface waves: A new look at surface consistency
[REPT-93-25] p 1486 N94-19140

An iterative inverse scattering method for the removal of scattered surface waves
[REPT-93-18] p 1488 N94-19644

INVERTERS

Design of power electronics for TVC EMA systems
[NASA-CR-193839] p 1407 N94-19642

INVISCID FLOW

The aero-mechanical design of a novel Fowler flap mechanism p 1309 N94-18443

Internal instability of nonparallel flow on an equatorial beta-plane
[AD-A268927] p 1490 N94-18486

Cell vertex methods for steady inviscid flow
p 1413 N94-18563

Two-dimensional boundary surfaces for axi-symmetric external transonic flows
[AD-A269678] p 1312 N94-18571

Stress pulse phenomena
[DE93-019064] p 1456 N94-19078

Pseudo-compressibility methods for the incompressible flow equations
[NASA-CR-191533] p 1551 N94-19315

IODIDES

Analysis of HgI2 and PbI2 crystals and detectors by Particle-Induced X Ray Emission (PIXE) and Ion Backscattering Spectroscopy (IBS)
[DE93-017168] p 1594 N94-17896

Metallization and charge-transfer gap closure of transition-metal iodides under pressure
[DE93-040301] p 1353 N94-19538

IODINE

Potential dependent structural changes of underpotentially deposited copper on an iodine treated platinum surface determined in situ by surface EXAFS and its polarization dependence
[AD-A269890] p 1360 N94-18687

ION ACCELERATORS

Alternating-phase focusing with amplitude modulation
[DE93-018618] p 1574 N94-18273

Spice modeling of a FET-switched induction accelerator cell
[DE93-018662] p 1575 N94-18996

Correction of longitudinal errors in accelerators for heavy-ion fusion
[DE93-018656] p 1575 N94-19106

Simulation of transient effects in the heavy ion fusion injectors
[DE93-018658] p 1575 N94-19107

Induction accelerator development for heavy ion fusion
[DE93-019228] p 1591 N94-19479

The ILSE Experimental Program
[DE93-019247] p 1576 N94-19560

ION BEAMS

Active neutral particle diagnostics for high temperature plasma
[DE93-788457] p 1586 N94-18214

Deep ion implantation into manganin to modify its pressure and electrothermocharacteristics
[DE93-630229] p 1359 N94-18218

New applications for high average power beams
[DE93-018845] p 1439 N94-18522

Optical properties of oxide coatings prepared by ion-assisted deposition
[AD-A270024] p 1599 N94-18711

Spice modeling of a FET-switched induction accelerator cell
[DE93-018662] p 1575 N94-18996

Overview of WARP: A particle code for heavy ion fusion
[DE93-018637] p 1588 N94-19034

Simulation of transient effects in the heavy ion fusion injectors
[DE93-018658] p 1575 N94-19107

Studies of clusters [DE93-018961] p 1572 N94-19309

Induction accelerator development for heavy ion fusion [DE93-019228] p 1591 N94-19479

Ionized-cluster beam/partially ionized beam deposition of electro-optical and nonlinear optical organic materials and device development [AD-A270832] p 1604 N94-19596

Active spacecraft potential control: An ion emitter experiment for Cluster p 1330 N94-19634

The deposition of electro-optic films on semiconductors [AD-A270823] p 1605 N94-19664

Nanofabrication by focused ion beam [AD-A271290] p 1345 N94-19746

The application of jet spray and ion beam contamination removal techniques to samples from the LDEF spacecraft [AD-A270973] p 1354 N94-19755

ION CONCENTRATION

Comparison of the modeling solutions with the hydrogen discharge data [DE93-015115] p 1565 N94-17797

ION CURRENTS

Studies on gel electrolyte based on nitrile-butadiene copolymers [AD-A269450] p 1370 N94-18282

Optical properties of oxide coatings prepared by ion-assisted deposition [AD-A270024] p 1599 N94-18711

ION CYCLOTRON RADIATION

New applications for high average power beams [DE93-018845] p 1439 N94-18522

Advanced fusion diagnostics [DE93-040085] p 1589 N94-19133

ION DISTRIBUTION

The Cluster Ion Spectroscopy experiment p 1329 N94-19631

ION EXCHANGING

Kinetic studies of electrochemical generation of Ag(II) ion and catalytic oxidation of selected organics [DE93-016601] p 1352 N94-19240

ION IMPLANTATION

Interdisciplinary research on wear of materials [AD-A268190] p 1443 N94-17730

Lattice damage in ion-implanted compound semiconductors and its effect on electrical activation [DE93-015907] p 1593 N94-17845

Metal-nanocluster composites made by ion implantation: A novel third-order nonlinear material [DE93-015908] p 1339 N94-17846

Deep ion implantation into manganin to modify its pressure and electrothermocharacteristics [DE93-630229] p 1359 N94-18218

Surface modification of sapphire for IR window application [DE93-019168] p 1602 N94-19075

Binding of copper to nanocavity surfaces in silicon [DE93-019073] p 1364 N94-19080

Nanofabrication by focused ion beam [AD-A271290] p 1345 N94-19746

ION MOTION

Ion mobility and transport barriers in the tokamak plasmas [DE93-040320] p 1587 N94-18524

Nanofabrication by focused ion beam [AD-A271290] p 1345 N94-19746

ION SCATTERING

Analysis of HgI2 and PbI2 crystals and detectors by Particle-Induced X Ray Emission (PIXE) and Ion Backscattering Spectroscopy (IBS) [DE93-017168] p 1594 N94-17896

ION SOURCES

Simulation of transient effects in the heavy ion fusion injectors [DE93-018658] p 1575 N94-19107

Studies of clusters [DE93-018961] p 1572 N94-19309

ION TEMPERATURE

Transport in the self-organized relaxed state of ion temperature gradient instability [DE93-016769] p 1584 N94-17983

Active neutral particle diagnostics for high temperature plasma [DE93-788457] p 1586 N94-18214

IONIC COLLISIONS

Meson production in relativistic heavy-ion collisions at AGS energies [DE93-016871] p 1565 N94-17984

Heavy-ion collisions and the nuclear equation of state [DE93-019263] p 1566 N94-18104

Task A: Yale Accelerator Users Group (YAUG) [DE93-018417] p 1570 N94-19029

The study of the phase structure of hadronic matter by searching for the deconfined quark-gluon phase transition using 2 TeV (bar-p)-p collisions, and by searching for critical phenomena in an exclusive study of multifragmentation using 1 GeV/nucleon heavy ion collisions [DE93-018925] p 1570 N94-19103

Advanced fusion diagnostics [DE93-040085] p 1589 N94-19133

Studies of clusters [DE93-018961] p 1572 N94-19309

IONIC DIFFUSION

Gamma scattering in condensed matter with high intensity Moessbauer radiation [DE93-019461] p 1601 N94-19031

Microstructure of the interfacial zone around aggregate particles in concrete [PB93-195790] p 1380 N94-19322

IONIC MOBILITY

Ion mobility and transport barriers in the tokamak plasmas [DE93-040320] p 1587 N94-18524

IONIC REACTIONS

The Fourteenth Symposium on Molecular Beams [AD-A268721] p 1568 N94-18787

IONIZATION

Correlated charge-changing ion-atom collisions [DE93-018717] p 1564 N94-17775

Investigation of the relative abundance of heavy versus light nuclei in primary cosmic rays using underground muon bundles [DE93-017601] p 1630 N94-17818

Radio wave propagation in structured ionization for satellite and radar applications [AD-A268457] p 1382 N94-17844

Dynamics of short-pulse excitation, ionization and harmonic conversion [DE93-017220] p 1436 N94-17996

Electron stripping cross sections for light impurity ions in colliding with atomic hydrogens relevant to fusion research [DE93-788476] p 1566 N94-18158

Penetrating radiation environment and effects study [AD-A270126] p 1485 N94-18874

Experimental study of interactions of highly charged ions with atoms at keV energies [DE93-040222] p 1571 N94-19257

IONIZATION CHAMBERS

Energy loss measurement of cosmic ray muons [KFK-5158] p 1631 N94-19504

Measurement of the energy of horizontal cosmic ray muons [KFK-5163] p 1631 N94-19505

Measurements of cosmic ray muons with multi-wire proportional chambers with a prototype setup for KASCADE [KFK-5173] p 1631 N94-19506

IONIZATION CROSS SECTIONS

Electron stripping cross sections for light impurity ions in colliding with atomic hydrogens relevant to fusion research [DE93-788476] p 1566 N94-18158

IONIZATION POTENTIALS

Conversion of ADC pulse heights into MIP units: NUMASS test data, September 1991 [USIP-93-03] p 1432 N94-18846

Active spacecraft potential control: An ion emitter experiment for Cluster p 1330 N94-19634

IONIZING RADIATION

Cellular and molecular level responses after radiofrequency radiation exposure, alone or in combination with x rays or chemicals [AD-A268189] p 1501 N94-17729

The c-jun gene expression in human cells exposed to either ionizing radiation or hydrogen peroxide [DE93-017436] p 1502 N94-18476

The performance and survivability of dichromated poly (vinyl alcohol) holograms for space based photonic applications [AD-A270974] p 1434 N94-19791

IONOSPHERIC DISTURBANCES

The spatial variance of ionospherically-induced phase errors in SAR imagery [DE93-015643] p 1385 N94-18232

Studies of enhanced radar backscatter [AD-A269544] p 1385 N94-18288

RADARC HF ionospheric prediction program for OTH radar [AD-A269557] p 1385 N94-18291

Morphology and characteristics of disturbed HF skywave channels [AD-A269755] p 1388 N94-18722

Center of Excellence in Theoretical Geoplasma Research [AD-A270210] p 1588 N94-18902

IONOSPHERIC ELECTRON DENSITY

Using computerized tomography to determine ionospheric structures [DE93-018903] p 1485 N94-19001

Using computerized tomography to determine ionospheric structures [DE93-018904] p 1485 N94-19002

IONOSPHERIC PROPAGATION

RADARC HF ionospheric prediction program for OTH radar [AD-A269557] p 1385 N94-18291

Morphology and characteristics of disturbed HF skywave channels [AD-A269755] p 1388 N94-18722

Using computerized tomography to determine ionospheric structures [DE93-018904] p 1485 N94-19002

Improved HF data network simulator, volume 1 [AD-A270953] p 1393 N94-19752

Improved HF data network simulator, software user's manual, volume 2 [AD-A270954] p 1393 N94-19753

IONOSPHERIC SOUNDING

Using computerized tomography to determine ionospheric structures [DE93-018904] p 1485 N94-19002

IONS

Correlated charge-changing ion-atom collisions [DE93-018717] p 1564 N94-17775

Proton transfer dynamics and cluster ion fragmentation in phenol/ammonia cLusters [AD-A269133] p 1348 N94-18256

Photodissociation dynamics of cluster ions [AD-A270296] p 1568 N94-18814

Relativistic configuration interaction calculation of the correlation energies of heliumlike ions [DE93-018093] p 1571 N94-19201

IRON

A new multiphase equation of state for iron [DE93-017629] p 1357 N94-17819

Optical properties of redispersed iron fibers measured at 94 GHz [AD-A269739] p 1342 N94-18756

IRON ALLOYS

Summary of work on coatings and claddings for fossil energy applications [DE93-017005] p 1367 N94-17881

Development of ductile Fe3Al-based aluminides [DE93-017865] p 1362 N94-18938

Tensile properties of as-cast iron-aluminide alloys [DE93-017852] p 1363 N94-18975

Low-aluminum-content iron-aluminum alloys [DE93-017862] p 1365 N94-19274

Bibliography on silicides [AD-A270516] p 1374 N94-19532

Incology 908 database report: On process-structure-property relationship [DE93-017616] p 1366 N94-19546

Commercialization effort in support of electroslag-casting technology [DE93-017988] p 1366 N94-19733

IRON METEORITES

Dynamical behavior of octahedrite from the Henbury meteorite [DE93-018834] p 1627 N94-19339

IRRADIANCE

Considerations for the use of the modified line reversal technique for gas temperature measurement [DE93-015752] p 1576 N94-17857

SeaSoar CTD, fluorescence and scalar irradiance data from RRS Charles Darwin Cruises 58/59, NE Atlantic, Vivaldi 1991 [IOS-299-1992] p 1496 N94-18066

Solar radiation in Saudi Arabia [AD-A269970] p 1493 N94-18781

Scientific studies in association with the Shuttle Solar Backscatter Ultraviolet (SSBUV) project [NASA-CR-193404] p 1630 N94-19437

IRRADIATION

PVDF measurement of soft x ray induced shock and filter debris impulse [DE93-017633] p 1382 N94-17806

Characteristics and pulsed radiation response of non-ideal quartz shock stress gauges [DE93-017628] p 1424 N94-17999

Time-resolved probing of electron thermal conduction in femtosecond-laser-pulse-produced plasmas [DE93-016996] p 1585 N94-18129

Deep ion implantation into manganin to modify its pressure and electrothermocharacteristics [DE93-630229] p 1359 N94-18218

Ultrasonic process for destruction of chlorinated organic compounds in aqueous solution [DE93-015551] p 1348 N94-18249

Neutron-induced collision cascade mixing in Nb/V superlattices
[DE93-018575] p 1600 N94-18933
Effects of irradiation temperature on Charpy and tensile properties of high-copper, low upper-shelf, submerged-arc welds
[DE93-017858] p 1445 N94-19047
Studies of deep levels in high resistivity silicon detectors irradiated by high fluence fast neutrons using a thermally stimulated current spectrometer
[DE93-016133] p 1602 N94-19258
Overlay welding irradiated stainless steel
[DE93-018767] p 1446 N94-19334

IRREVERSIBLE PROCESSES
Non Linear Dynamics and Chaos
[AGARD-LS-191] p 1607 N94-18236

ISCHEMIA
Cerebral ischemia and reperfusion injury: A brief review
[AD-A270480] p 1507 N94-19675

ISENTROPIC PROCESSES
Static pressure measurements for near isentropic flows using laser induced iodine fluorescence
p 1431 N94-18646

ISING MODEL
Ising model on tangled chain. Part 2: Magnetization and susceptibility
[DE93-628794] p 1607 N94-18174

ISOLATION
Isolation mechanisms in III-V devices
[AD-A271197] p 1605 N94-19717

ISOLATORS
Investigation of a fiber optic frequency shifter and optical isolator
[AD-A269820] p 1579 N94-18738

ISOMERS
An ab initio study of the weakly bonded CO-Cl2 complex
[AD-A269000] p 1349 N94-18395

ISOMORPHISM
A reduction of the globalization and U(1)-covering
[DE93-624769] p 1546 N94-17817

ISOTHERMAL FLOW
Contribution to the study of a symmetric film flow (with or without tensio-active elements)
[ECL-93-13] p 1421 N94-19461

ISOTHERMS
Geothermal activity near Clearlake, California
[DE93-016627] p 1485 N94-18894

ISOTOPE EFFECT
A carbon isotope mass balance for an anoxic marine sediment: Isotopic signatures of diagenesis
p 1477 N94-19232

ISOTOPE SEPARATION
The copper-pumped dye laser system at Lawrence Livermore National Laboratory
[DE93-014429] p 1435 N94-17723
Safety approaches for high power modular laser operation
[DE93-017213] p 1435 N94-17759
Exchange front stability in packed-column chromatography
[DE93-017526] p 1346 N94-17997

ISOTOPES
The use of post detonation analysis of stable isotope ratios to determine the type and production process of the explosive involved
[DE93-018497] p 1378 N94-19242

ISOTOPIC SPIN
Eta-nucleon interaction and nuclear production of eta mesons
[DE93-018469] p 1571 N94-19259

ISOTROPIC MEDIA
Waveguide and resonator perturbation techniques for measuring chirality and non-reciprocity of biisotropic materials
[PB93-187243] p 1384 N94-18116
Acoustic propagation modeling using MATLAB
[AD-A270905] p 1564 N94-19750

ISOTROPY
Formulation and identification of the anisotropic laws for thin sheets drawing
[ECL-92-55] p 1365 N94-19400

ITERATION
A least-squares computational tool kit
[DE93-018400] p 1557 N94-19011
Interior-point methodology for linear programming: Duality, sensitivity analysis and computational aspects
[REPT-93-28] p 1525 N94-19143
An iterative inverse scattering method for the removal of scattered surface waves
[REPT-93-18] p 1488 N94-19644

ITERATIVE SOLUTION
Parallel inverse iteration with reorthogonalization
[DE93-012867] p 1533 N94-17693
An annealing approach to multi-facility location problems in euclidean spaces
[REPT-93-022] p 1547 N94-17928
Introduction to spectral methods: Application to the Stokes problem p 1413 N94-18566
Optimal eigenvalue computation on distributed-memory MIMD multiprocessors
[DE93-018337] p 1535 N94-18808
Solution of the Poisson equation with application to radar imaging
[PB93-195865] p 1389 N94-18950
Fast iterative solution of sparsely sampled seismic inverse problems
[REPT-93-16] p 1486 N94-19081
New insights in GMRES-like methods with variable preconditioners
[REPT-93-10] p 1524 N94-19084
Multigrid for a groundwater flow problem
[REPT-93-29] p 1420 N94-19144
The Fourier analysis technique and epsilon-pseudo-eigenvalues
[DE93-018805] p 1551 N94-19337
A comparison of iterative methods for a model coupled system of elliptic equations
[DE93-040482] p 1553 N94-19655

J

J-85 ENGINE
The J85 cost/benefit engine study
[AD-A269280] p 1320 N94-18333

JAMMERS
Design and fabrication of a Multichannel Adaptive Optical Processor (MADOP)
[AD-A270004] p 1579 N94-18668

JAMMING
Design and fabrication of a Multichannel Adaptive Optical Processor (MADOP)
[AD-A270004] p 1579 N94-18668
Communication in the presence of unknown interference
[AD-A271146] p 1392 N94-19738

JAPAN
Survey of ceramic machining in Japan
[DE93-018277] p 1372 N94-18946

JET AIRCRAFT
Naval aviation: Consider all alternatives before proceeding with the F/A-18E/F
[AD-A269302] p 1305 N94-18279
Close-coupled oscillating canard effects on post-stall lift enhancement
[AD-A268938] p 1321 N94-18541
Lift and pitching moment induced on jet STOVL aircraft hovering in ground effect
[AD-A269700] p 1317 N94-18577
Lift and pitching moment induced on jet STOVL aircraft by the ground vortex
[AD-A269816] p 1318 N94-18733

JET AIRCRAFT NOISE
Supersonic jets from bevelled rectangular nozzles
[NASA-TM-106403] p 1313 N94-19484

JET BLAST EFFECTS
Lift and pitching moment induced on jet STOVL aircraft by the ground vortex
[AD-A269816] p 1318 N94-18733

JET ENGINE FUELS
Analysis of deposit precursors in jet fuels using Fourier transform infrared spectroscopy
[AD-A269035] p 1377 N94-18489

JET FLOW
Applications of the program UIFLOW-2D to the numerical simulation of axisymmetric flows
[AD-A268731] p 1410 N94-18326

JET IMPINGEMENT
Combustion instability phenomena of importance to liquid propellant engines
[AD-A268800] p 1348 N94-18389

JET MIXING FLOW
Supersonic jets from bevelled rectangular nozzles
[NASA-TM-106403] p 1313 N94-19484

JET PROPULSION
Overview of STOVL aircraft propulsion research offtakes and vertical lift systems
[NASA-TM-106387] p 1321 N94-19353

JET PUMPS
Efficiency of fiber dispersion
[AD-A269740] p 1342 N94-18757

JET STREAMS (METEOROLOGY)
Organized track system: Air ways above the ocean
p 1495 N94-19702

JOINTS (JUNCTIONS)
Joint stiffness estimation based on force sensor measurements in industrial manipulators
[REPT-92-053] p 1443 N94-17937
Plastic mechanism analysis of T-joints in RHS subject to combined bending and concentrated force
[PB93-195774] p 1456 N94-19061

JOSEPHSON JUNCTIONS
On relation between Berry phase and one-dimensional models with long-range 1/r(sup 2)-interaction
[DE93-624967] p 1592 N94-17690
Thin film studies of the proximity Josephson effect
[AD-A270129] p 1600 N94-18876

JUDGMENTS
Scale sensitivity in the multiplicative AHP and SMART
[REPT-93-37] p 1611 N94-19157
Context-related scaling of human judgement in the multiplicative AHP, SMART and ELECTRE
[REPT-93-38] p 1611 N94-19158

JUNCTION DIODES
Theoretical and experimental studies of quantum wells
[AD-A271180] p 1606 N94-19741

JUNCTION TRANSISTORS
Embrittlement of surface mount solder joints by hot solder-dipped, gold-plated leads
[DE93-017659] p 1358 N94-18003

K

K STARS
The 0.15 seconds near-infrared imaging of the central parsec of the galaxy
[MPE-PREPRINT-239] p 1621 N94-19415

K-EPSILON TURBULENCE MODEL
Research on two equation models
p 1411 N94-18547
Analysis of supersonic flows using k-epsilon model and the RPLUS code: Progress towards high speed combustor analysis p 1411 N94-18551
Two-equation models for high-Reynolds-number flow
p 1415 N94-18586
Two-equation models for low-Reynolds-number variants p 1415 N94-18587
Examples of turbulence model applications
p 1415 N94-18593
STREMR: Numerical model for depth-averaged incompressible flow
[AD-A269949] p 1417 N94-18672
Examinations of the friction behavior in nonstationary flow processes in pipes
[MITT-7] p 1423 N94-19730

KALMAN FILTERS
Flight demonstration of image fix-taking with SAR
[DE93-016499] p 1382 N94-17861
Tracking with time-delayed data in multisensor systems
[AD-A271334] p 1391 N94-19582

KAMACITE
Dynamical behavior of octahedrite from the Henbury meteorite
[DE93-018834] p 1627 N94-19339

KAON PRODUCTION
Meson production in relativistic heavy-ion collisions at AGS energies
[DE93-016871] p 1565 N94-17984

KAONS
On the difference caused by CP violation in the energy spectra of pions in K(sup (+-))(yields)(pi)(+-)(pi)(+-)(pi)-+ decays
[DE93-624828] p 1564 N94-17687

KERNEL FUNCTIONS
Smooth particle hydrodynamics: The SPHINX and SPHC codes
[DE93-014358] p 1457 N94-19207

KETENES
Unimolecular photodissociation dynamics of ketene (CH2CO): The singlet/triplet branching ratio and experimental observation of the vibrational level thresholds of the transition-state
[DE93-019252] p 1352 N94-19304

KEVLAR (TRADEMARK)
Thermal wave image processing for characterization of subsurface of flaws in materials
[DE93-019024] p 1344 N94-19551

KINEMATICS
Performance mapping of the STM4-120 kinematic Stirling engine using a statistical design of experiments method
[DE93-015132] p 1464 N94-17798
Efficient dynamic modeling of manipulators containing closed kinematic loops
[REPT-92-083] p 1444 N94-17940
Neutrino mass
[DE93-018467] p 1567 N94-18269
Direct kinematics solution architectures for industrial robot manipulators: Bit-serial versus parallel
p 1399 N94-18358

KINETIC ENERGY
Transformation of energy and momentum due to Landau damping in space
[DE93-624921] p 1581 N94-17689
Understanding curved detonation waves
[DE93-014581] p 1408 N94-17728
Temperature, kinetic energy, and rotational temperature dependences for the reactions of Ar(+)(2)P3/2 with O2 and CO
[AD-A268974] p 1567 N94-18526
Chemical dynamics in time and energy space
[DE93-018595] p 1350 N94-19097
KLYSTRONS
Plasma klystron amplifier
[AD-D015819] p 1395 N94-17903
KNOWLEDGE BASED SYSTEMS
Employing knowledge resources in a new text planner architecture
[AD-A269669] p 1518 N94-17732
EXPECT: Intelligent support for knowledge base refinement
[AD-A269602] p 1612 N94-17745
Bias in planning and explanation-based learning
[AD-A269608] p 1610 N94-17746
Distributed reasoning and planning
[AD-A268682] p 1540 N94-18399
Towards versatile and practical knowledge acquisition
[AD-A269596] p 1615 N94-18464
Putting knowledge to use: The acquisition and transfer of knowledge in situated problem solving environments
[AD-A269746] p 1509 N94-18744
On the automation of object-oriented requirements analysis
[AD-A270673] p 1532 N94-19782
KNOWLEDGE BASES (ARTIFICIAL INTELLIGENCE)
Retrieving and integrating data from multiple information sources
[AD-A269588] p 1615 N94-18461
PRACTICAL: Planning and resource allocation in C2-domains with time critical algorithms
[FEL-93-B029] p 1544 N94-19458
KNOWLEDGE REPRESENTATION
A method for cognitive task analysis
[IZF-1992-B5] p 1508 N94-17967
Towards versatile and practical knowledge acquisition
[AD-A269596] p 1615 N94-18464
Statistical probabilities for planning
[TR-474] p 1559 N94-19511
KOLMOGOROV THEORY
Thermodynamics of computation and information distance
[DE93-012730] p 1517 N94-17812
KONDO EFFECT
Realistic theories of heavy electron and other strongly correlated materials
[DE93-010350] p 1571 N94-19204
KORTEWEG-DEVRIES EQUATION
A method for solving the KDV equation and some numerical experiments
[DE93-624726] p 1550 N94-19246
KRYPTON FLUORIDE LASERS
Foil support structure for large electron guns
[DE93-018478] p 1322 N94-18890
Modelling ideal gas fluorides laser plasmas
[ETN-93-95073] p 1592 N94-19613
KURTOSIS
Moments of ambient Doppler spectra
[DE93-017948] p 1390 N94-19114

L

LABORATORIES
Computer/information security design approaches for Complex 21/Reconfiguration facilities
[DE93-018547] p 1535 N94-18930
A Sandia Technology Bulletin: Testing technology, July 1993
[DE93-040197] p 1633 N94-19537
Design verification and acceptance tests of the ASST-A helium refrigeration system
[DE93-019746] p 1381 N94-19540
LAGRANGE MULTIPLIERS
Efficient dynamic modeling of manipulators containing closed kinematic loops
[REPT-92-083] p 1444 N94-17940
LAGRANGIAN FUNCTION
Multidimensional geometric quantization and U(1)-covering
[DE93-624770] p 1546 N94-17795
Vortex methods and statistics
[DE93-016974] p 1556 N94-17886
Impact modeling with smooth particle hydrodynamics
[DE93-016561] p 1451 N94-17906
Phase structure of (phi(4))(sub 3) field theory at finite temperature
[DE93-629907] p 1608 N94-18267
Cooperative control of multiple space manipulators
[AD-A270291] p 1445 N94-18813
LAMB WAVES
Ultrasonic technique for inspection of GPHS capsule girth weld integrity
[DE93-040072] p 1448 N94-19189
LAMINAR BOUNDARY LAYER
Studies on high pressure and unsteady flame phenomena: Revision
[AD-A269138] p 1348 N94-18257
LAMINAR FLOW
Studies on high pressure and unsteady flame phenomena: Revision
[AD-A269138] p 1348 N94-18257
Transport phenomena and interfacial kinetics in multiphase combustion systems
[AD-A270202] p 1349 N94-18785
Airflow research
[NASA-TM-109372] p 1312 N94-18964
Numerical solutions for a flow with mixed convection in a vertical geometry
[DE93-011592] p 1419 N94-19058
Numerical prediction of transition of the F-16 wing at supersonic speeds
[NASA-CR-194407] p 1312 N94-19433
Forward scattering of a pulsed continuous wave signal through laminar and turbulent thermal plumes
[AD-A271210] p 1564 N94-19723
LAMINAR WAKES
Theoretical examination of the flow around a cylinder with a low dimensional Galerkin process
[MPIS-25/1992] p 1422 N94-19525
LAMINATES
The calculation methods of a cracked plastic composite laminate: A literature survey
[VTT-TIED-1362] p 1339 N94-17958
Impact response of composite laminates: A guide to closed form solutions
[FFA-TN-1992-33] p 1339 N94-17971
Process for preparing thermoplastic composites
[AD-D015864] p 1339 N94-18074
Development of a finite element method program for the analysis of laminated composite plates using first-order shear deformation theory
[AD-A270318] p 1342 N94-18700
Mechanical properties and impact damage resistance of composites fabricated by low cost, vacuum assisted, resin transfer molding
[AD-A270361] p 1342 N94-18702
Nondestructive inspection of graphite-epoxy laminates for heat damage using DRIFT and LPF spectroscopies
[DE93-017228] p 1343 N94-18761
Mechanical-property changes of structural composite materials after low-temperature proton irradiation: Implications for use in SSC magnet systems
[DE93-016735] p 1343 N94-18763
Shock-loading response of advanced materials
[DE93-018344] p 1455 N94-19033
A comparative evaluation of in-plane shear test methods for laminated graphite-epoxy composites
[NASA-CR-193808] p 1456 N94-19095
Low frequency acoustics of laminated composite axisymmetric structures
[DRA-TM(USGR)-93302] p 1344 N94-19391
Delamination in composite materials as observed using an optical fiber strain gage
[AD-A270803] p 1344 N94-19662
Residual strength predictions for fibre metal laminates: The R-curves approach
[LR-717] p 1344 N94-19666
LAND USE
Land-use related sources of CO2, CH4 and N2O: Current global emissions and projections for the period 1990-2100
[PB93-194819] p 1475 N94-18949
LANDAU DAMPING
Transformation of energy and momentum due to Landau damping in space
[DE93-624921] p 1581 N94-17689
LANDAU-GINZBURG EQUATIONS
Numerical experiments on the Ginzburg-Landau equations
[DE93-019504] p 1604 N94-19567
LANGEVIN FORMULA
Vortex methods and statistics
[DE93-016974] p 1556 N94-17886
LANGUAGE PROGRAMMING
FASTBUS simulation models in VHDL
[USIP-92-07] p 1515 N94-19295
LANGUAGES
A simple calculus of finite probabilistic processes
[MEMO-INF-93-08] p 1558 N94-19195
LANTHANUM COMPOUNDS
Photo-induced and electrooptic properties of (Pb,La)(Zr,Ti)O3 films
[DE93-017496] p 1371 N94-18519
An ultraviolet faraday rotator glass
[AD-D015879] p 1371 N94-18529
LANTHANUM OXIDES
Phase separation and superconductivity in La2CuO(4 + delta): Effects of oxygen diffusion
[DE93-016610] p 1594 N94-17907
Specific heat of La(1.875-x)Nd(x)Sr(0.125)CuO4: Magnetic and structural transitions
[DE93-016978] p 1600 N94-18968
LAP JOINTS
Fatigue crack initiation in riveted lap joints and in pressurized fuselages
[LR-725] p 1461 N94-19669
LAPLACE EQUATION
A hydrogen atom in the curved space. Expansion over free solutions on the three-dimensional sphere
[DE93-629868] p 1549 N94-18198
ISAC: A tool for aeroservoelastic modeling and analysis
[NASA-TM-109031] p 1321 N94-19316
LARGE SCALE INTEGRATION
Development of analog watch with minute repeater
p 1429 N94-18043
Radiation hardened microprocessor for small payloads
p 1327 N94-19184
LARGE SPACE STRUCTURES
Design considerations for remotely operated welding in space: Task definition and visual weld monitoring experiment
[AD-A268752] p 1445 N94-18634
LARMOR RADIUS
Profile stabilization of tilt mode in a field reversed configuration
[DE93-016770] p 1583 N94-17753
Generalized energy principle for flute perturbations in axisymmetric mirror machines
[DE93-019399] p 1589 N94-19037
LASER ABLATION
Mechanical properties of excimer laser modified titanium surfaces
[DE93-012663] p 1358 N94-17875
Excimer laser induced permanent electrical conductivity and nanostructures in polymers
[DE93-015965] p 1368 N94-17946
Production of dense vapor targets for laser-plasma interaction studies with intense, ultra-short pulses
[DE93-017175] p 1584 N94-17993
Dynamic behaviors of fragments ejected from the surface of carbon materials by laser ablation
[DE93-768620] p 1438 N94-18161
Imaging and blackbody emission spectra of hot particulates generated during laser ablation
[DE93-015818] p 1439 N94-18724
Characterization of vapor plume species and deposition residues resulting from pulsed laser ablation of a graphite/epoxy composite
[AD-A270101] p 1343 N94-18869
Advances in laser cooling
[AD-A270152] p 1440 N94-18900
Growth of epitaxial semiconductor alloys and superlattices with continuously variable composition by pulsed-laser ablation
[DE93-018726] p 1601 N94-18998
LASER APPLICATIONS
Polarized thin films from dye-substituted polymers containing hydrophobically terminated stilbazolium radicals
[AD-D015873] p 1367 N94-17706
CO2 laser with modulated losses: Theoretical models and experiments in the chaotic regime
[DE93-624901] p 1435 N94-17771
Gear train behavior analyzer using laser beam scanning for watch movement p 1427 N94-18028
Matrix- and substrate-assisted laser desorption for fast DNA sequencing
[DE93-015332] p 1501 N94-18242
Nitridation of GaAs(100) by laser-induced decomposition of HN3
[AD-A269147] p 1438 N94-18258
Hydrodynamic instability modeling for ICF
[DE93-018634] p 1587 N94-18274
New applications for high average power beams
[DE93-018845] p 1439 N94-18522
Nondestructive inspection of graphite-epoxy laminates for heat damage using DRIFT and LPF spectroscopies
[DE93-017228] p 1343 N94-18761
The Fourteenth Symposium on Molecular Beams
[AD-A268721] p 1568 N94-18787
Impact of shorter wavelengths on optical quality for laws
[NASA-CR-193873] p 1579 N94-18858

Advances in laser cooling
[AD-A270152] p 1440 N94-18900
Space Applications Industrial Laser System (SAILS)
p 1325 N94-19173
SPNDL: A concept for a small satellite Doppler lidar wind sounder p 1327 N94-19181
Laser guide star measurements at Lawrence Livermore National Laboratory
[DE93-018081] p 1441 N94-19251
Manufacturing technology
[DE93-019580] p 1381 N94-19480
A Sandia Technology Bulletin: Testing technology, July 1993
[DE93-040197] p 1633 N94-19537
MOCVD-grown InGaAsP heterostructure diode lasers
[AD-A270848] p 1606 N94-19769
A study of the amplification of laser and VLF waves using a simple pendulum model
[AD-A270857] p 1442 N94-19770
Novel nonlinear laser diagnostic techniques
[AD-A270968] p 1442 N94-19788

LASER BEAMS
X-ray laser oscillator-amplifier experiments
[DE93-017165] p 1436 N94-17868
Mechanical properties of excimer laser modified titanium surfaces
[DE93-012663] p 1358 N94-17875
Laser induced damage testing: Equipment and techniques
[DE93-017143] p 1437 N94-18060
Calibration of a high frequency monostatic acoustic echosounder
[AD-A268901] p 1481 N94-18229
Phase conjugation and beam combination using stimulated brillouin scattering
[AD-A269899] p 1439 N94-18656
The efficiency of continuous output of some titanium-doped gem-crystal lasers has exceeded 1 W
[AD-A269953] p 1439 N94-18674
Laser powered beam conditioner for free-electron lasers and synchrotrons
[DE93-017821] p 1441 N94-18974
Harmonic generation at high intensities
[DE93-018632] p 1572 N94-19283
RF phase stabilization for RF photocathode gun through electro-optical monitoring
[DE93-019059] p 1406 N94-19310
First and second order Stokes generation by SRS in methane: Influence of rep-rate, beam quality and astigmatism
[FEL-92-A125] p 1441 N94-19426
Manufacturing technology
[DE93-019580] p 1381 N94-19480
Spectrally and temporally resolved laser emission from vertical cavity surface emitting lasers
[DE93-019410] p 1442 N94-19563
Novel nonlinear laser diagnostic techniques
[AD-A270968] p 1442 N94-19788

LASER CAVITIES
Homoclinic crises in a model for the CO2 laser
[DE93-624900] p 1436 N94-17954
Tunable synchronously pumped intracavity two-stage optical frequency upconversion
[AD-A269105] p 1438 N94-18250
Tunable ytterbium-doped solid state laser
[AD-D015878] p 1440 N94-18747
Tetravalent chromium (Cr(4+)) as laser-active ion for tunable solid-state lasers
[NASA-CR-194529] p 1441 N94-19369
Spectrally and temporally resolved laser emission from vertical cavity surface emitting lasers
[DE93-019410] p 1442 N94-19563
MOCVD-grown InGaAsP heterostructure diode lasers
[AD-A270848] p 1606 N94-19769

LASER CUTTING
Laser materials processing applications at Lawrence Livermore National Laboratory
[DE93-017976] p 1437 N94-18093
Space Applications Industrial Laser System (SAILS)
p 1325 N94-19173
Cutting and drilling studies using high power visible lasers
[DE93-019149] p 1441 N94-19294

LASER DAMAGE
Laser induced damage testing: Equipment and techniques
[DE93-017143] p 1437 N94-18060
Proof of the feasibility of coherent and incoherent schemes for pumping a gamma ray laser
[AD-A269173] p 1440 N94-18880

LASER DRILLING
Laser materials processing applications at Lawrence Livermore National Laboratory
[DE93-017976] p 1437 N94-18093
Cutting and drilling studies using high power visible lasers
[DE93-019149] p 1441 N94-19294

LASER FUSION
LLE Review
[DE93-017618] p 1602 N94-19123

LASER GUIDANCE
Laser guide star measurements at Lawrence Livermore National Laboratory
[DE93-018081] p 1441 N94-19251

LASER HEATING
Characterization of short pulse laser-produced plasmas at the Lawrence Livermore National Laboratory ultra short-pulse laser
[DE93-017191] p 1585 N94-18082
Growth of epitaxial semiconductor alloys and superlattices with continuously variable composition by pulsed-laser ablation
[DE93-018726] p 1601 N94-18998

LASER INDUCED FLUORESCENCE
Static pressure measurements for near isentropic flows using laser induced iodine fluorescence
p 1431 N94-18646
Modifications of airborne oceanographic lidar for the long range P-3 missions
[NASA-CR-194682] p 1499 N94-18819
Feasibility study: Monodisperse polymer particles containing laser-excitable dyes
[NASA-CR-194280] p 1373 N94-19402

LASER INTERFEROMETRY
Portable, solid state, fiber optic coupled Doppler interferometer system for detonation and shock diagnostics
[DE93-013917] p 1423 N94-17700
Construction and evaluation of an environmental chamber for calibration of temperature and pressure sensors for laser interferometers emperature and pressure sensors for laser interferometers)
[PB93-197838] p 1322 N94-19332

LASER MATERIALS
Laser materials processing applications at Lawrence Livermore National Laboratory
[DE93-017976] p 1437 N94-18093
Space Applications Industrial Laser System (SAILS)
p 1325 N94-19173
Tetravalent chromium (Cr(4+)) as laser-active ion for tunable solid-state lasers
[NASA-CR-194529] p 1441 N94-19369
Final report on subcontract B076260 — borate synthesis
[DE93-019501] p 1604 N94-19565

LASER MICROSCOPY
Center-of-Excellence: Microlaser microscope
[DE93-040688] p 1442 N94-19658

LASER MODE LOCKING
Tetravalent chromium (Cr(4+)) as laser-active ion for tunable solid-state lasers
[NASA-CR-194528] p 1441 N94-19394

LASER OUTPUTS
The copper-pumped dye laser system at Lawrence Livermore National Laboratory
[DE93-014429] p 1435 N94-17723
Experiments in sideband suppression on the Los Alamos National Laboratory Free-Electron Laser
[DE93-014466] p 1435 N94-17724
Observations of MeV electrons and scattered light from intense, subpicosecond laser-plasma interactions
[DE93-017153] p 1435 N94-17855
X-ray laser oscillator-amplifier experiments
[DE93-017165] p 1436 N94-17868
Excimer laser induced permanent electrical conductivity and nanostructures in polymers
[DE93-015965] p 1368 N94-17946
Dynamics of short-pulse excitation, ionization and harmonic conversion
[DE93-017220] p 1436 N94-17996
Removing CFC's from the atmosphere with lasers: A second look
[DE93-017516] p 1473 N94-18101
Absorption and x ray measurements from ultra-intense laser-plasma interactions
[DE93-016538] p 1585 N94-18115
High spatial resolution, range gated, underwater imaging method and apparatus
[AD-D015882] p 1430 N94-18530
Phase conjugation and beam combination using stimulated brillouin scattering
[AD-A269899] p 1439 N94-18656
The efficiency of continuous output of some titanium-doped gem-crystal lasers has exceeded 1 W
[AD-A269953] p 1439 N94-18674
Multi-terrawatt, 100 fsec laser system using flashlamp-pumped, dye-converted Ti:sapphire as an amplifier
[DE93-017190] p 1440 N94-18889
Final construction and operation of a continuous far-infrared free-electron laser for scientific applications
[AD-A269248] p 1440 N94-18912
LLE Review
[DE93-017618] p 1602 N94-19123
Harmonic generation at high intensities
[DE93-018632] p 1572 N94-19283
Spectrally and temporally resolved laser emission from vertical cavity surface emitting lasers
[DE93-019410] p 1442 N94-19563

LASER PLASMA INTERACTIONS
Observations of MeV electrons and scattered light from intense, subpicosecond laser-plasma interactions
[DE93-017153] p 1435 N94-17855
Production of dense vapor targets for laser-plasma interaction studies with intense, ultra-short pulses
[DE93-017175] p 1584 N94-17993
Characterization of short pulse laser-produced plasmas at the Lawrence Livermore National Laboratory ultra short-pulse laser
[DE93-017191] p 1585 N94-18082
Absorption and x ray measurements from ultra-intense laser-plasma interactions
[DE93-016538] p 1585 N94-18115
Time-resolved probing of electron thermal conduction in femtosecond-laser-pulse-produced plasmas
[DE93-016996] p 1585 N94-18129
Nonlinear Thomson scattering of intense laser pulse from beams and plasmas
[AD-A269556] p 1438 N94-18460
Interaction of intense lasers and relativistic electron beams with solids, gases and plasmas
[AD-A269655] p 1439 N94-18737

LASER PLASMAS
Analysis of neon soft x ray spectra from short-pulse laser-produced plasmas
[DE93-014420] p 1582 N94-17708
Rapid analysis of mixed waste samples via the optical emission from laser initiated microplasmas
[DE93-014563] p 1582 N94-17727
Development of short pulse soft x ray lasers
[DE93-017150] p 1437 N94-18131
Enhanced acceleration in a self-modulated-laser wakefield accelerator
[AD-A268452] p 1586 N94-18148
Dynamic behaviors of fragments ejected from the surface of carbon materials by laser ablation
[DE93-788620] p 1438 N94-18161
Nonlinear Thomson scattering of intense laser pulse from beams and plasmas
[AD-A269556] p 1438 N94-18460
Interaction of intense lasers and relativistic electron beams with solids, gases and plasmas
[AD-A269655] p 1439 N94-18737
Development of robust multilayer optics for use in high-peak power radiation environments
[DE93-018557] p 1580 N94-18931
Modelling ideal gas fluorides laser plasmas
[ETN-93-95073] p 1592 N94-19613

LASER PUMPING
The copper-pumped dye laser system at Lawrence Livermore National Laboratory
[DE93-014429] p 1435 N94-17723
Tunable synchronously pumped intracavity two-stage optical frequency upconversion
[AD-A269105] p 1438 N94-18250
Proof of the feasibility of coherent and incoherent schemes for pumping a gamma ray laser
[AD-A269173] p 1440 N94-18880
Multi-terrawatt, 100 fsec laser system using flashlamp-pumped, dye-converted Ti:sapphire as an amplifier
[DE93-017190] p 1440 N94-18889
Tetravalent chromium (Cr(4+)) as laser-active ion for tunable solid-state lasers
[NASA-CR-194528] p 1441 N94-19394

LASER RANGE FINDERS
Laser imaging radar system
[AD-A270436] p 1387 N94-18510

LASER SPECTROSCOPY
Rapid analysis of mixed waste samples via the optical emission from laser initiated microplasmas
[DE93-014563] p 1582 N94-17727
Remote cure monitoring of polymeric resins by laser Raman spectroscopy
[DE93-016445] p 1369 N94-18112
Matrix- and substrate-assisted laser desorption for fast DNA sequencing
[DE93-015332] p 1501 N94-18242
Modifications of airborne oceanographic lidar for the long range P-3 missions
[NASA-CR-194682] p 1499 N94-18819
The A((2)pi(sub u))-X((2)pi(sub g)) system of Br2(+) studied by velocity modulation spectroscopy
[USIP-93-04] p 1569 N94-18847

LASER STABILITY
Homoclinic crises in a model for the CO2 laser
[DE93-624900] p 1436 N94-17954
LASER TARGET INTERACTIONS
Process and quality on-line control in laser welding
p 1426 N94-18020
Interaction of intense lasers and relativistic electron beams with solids, gases and plasmas
[AD-A269655] p 1439 N94-18737
LLE Review
[DE93-017616] p 1602 N94-19123
LASER TARGETS
Observations of MeV electrons and scattered light from intense, subpicosecond laser-plasma interactions
[DE93-017153] p 1435 N94-17855
Production of dense vapor targets for laser-plasma interaction studies with intense, ultra-short pulses
[DE93-017175] p 1584 N94-17993
Absorption and x ray measurements from ultra-intense laser-plasma interactions
[DE93-016538] p 1585 N94-18115
Hydrodynamic instability modeling for ICF
[DE93-018634] p 1587 N94-18274
Growth of epitaxial semiconductor alloys and superlattices with continuously variable composition by pulsed-laser ablation
[DE93-018726] p 1601 N94-18998
LASER WEAPONS
Legacy of the X Ray Laser Program
[DE93-019550] p 1442 N94-19554
LASER WELDING
Process and quality on-line control in laser welding
p 1426 N94-18020
Modeling of single-crystal laser-weld microstructures
[DE93-017853] p 1445 N94-18976
Space Applications Industrial Laser System (SAILS)
p 1325 N94-19173
Prediction of non-equilibrium solidification modes in austenitic stainless steel laser welds
[DE93-018457] p 1364 N94-19203
LASERS
The efficiency of continuous output of some titanium-doped gem-crystal lasers has exceeded 1 W
[AD-A269953] p 1439 N94-18674
Advances in laser cooling
[AD-A270152] p 1440 N94-18900
LATERAL STABILITY
An application of parameter estimation to the stability and control of the BQM-147 unmanned aerial vehicle
[AD-A268741] p 1321 N94-18401
The dynamic stability of the helicopter
[LR-772] p 1321 N94-19615
LATTICE PARAMETERS
Molecular structure of low temperature form of triaminoguanidinium nitrate (TAGN)
[AD-A270409] p 1377 N94-18708
A free energy simulation method based study of interfacial segregation
[DE93-019462] p 1364 N94-19032
Preparation and characterisation of the compound Tl(0.65) Bi(0.35) Ca(0.8) Sr(1.7) Cu2 O(y) using oxalate coprecipitation and analytical CBED and an initial preparation of Bi2Ca(n-1) Sr2Cu(n) O(4+2n) for n=5
[DE93-625470] p 1602 N94-19277
LATTICE VIBRATIONS
Effect of oxygen concentration and ordering on vanadium-oxygen alloy vibrational spectra
[DE93-627003] p 1355 N94-17692
LAY-UP
Process relationship as influenced by carbonization rate
[AD-A269680] p 1341 N94-18572
LEAD (METAL)
Development of alternatives to lead-bearing solders
[DE93-016509] p 1357 N94-17862
LEAD ACID BATTERIES
SUNRAYCE 1993: Working safely with lead-acid batteries and photovoltaic power systems
[DE93-016553] p 1464 N94-17712
LEAD ALLOYS
Development of alternatives to lead-bearing solders
[DE93-016509] p 1357 N94-17862
LEAD COMPOUNDS
The electromechanical properties of tetragonal BaTiO3 and PbTiO3 single crystals
[DE93-019008] p 1603 N94-19550
LEAD ZIRCONATE TITANATES
Photo-induced and electrooptic properties of (Pb,La)(Zr,Ti)O3 films
[DE93-017496] p 1371 N94-18519
LEADING EDGE FLAPS
High-lift design for large civil aircraft
p 1310 N94-18445
LEADING EDGE SLATS
Where is high-lift today? A review of past UK research programmes p 1305 N94-18416
Experimental investigation of flow around a multielement airfoil p 1305 N94-18417
Numerical solution of the Navier-Stokes equations for high-lift configurations on structured composite grids
p 1306 N94-18423
High Reynolds number configuration development of a high-lift airfoil p 1306 N94-18424
A viscous-inviscid solver for high-lift incompressible flows over multi-element airfoils at deep separation conditions p 1306 N94-18425
Navier-Stokes simulation of flow field around a blown-flap high-lift system p 1307 N94-18429
An experimental investigation of the optimum slat setting on a combat aircraft model p 1308 N94-18431
An experimental investigation of attachment-line transition on the slat of a combat aircraft model
p 1308 N94-18432
Viscous phenomena affecting high-lift systems and suggestions for future CFD development
p 1308 N94-18433
Forty years of high-lift R/D: An aircraft manufacturer's experience p 1309 N94-18441
High-lift design for large civil aircraft
p 1310 N94-18445
High lift systems for transport aircraft with advanced airfoils p 1310 N94-18446
LEADING EDGES
A study of the influence of a delta wing geometry on the induced drag at transonic speed (M=0.55) and high angles of attack
[FFA-TN-1992-14] p 1311 N94-17722
Calculation of maximum and high lift characteristics of multi element aerofoils p 1305 N94-18419
LEAKAGE
Mutrometre: Construction for fast water proof measurements under low pressure and air suppression
p 1427 N94-18031
LEARNING
Generating object descriptions: Intergrating examples with text
[AD-A269992] p 1522 N94-18680
Putting knowledge to use: The acquisition and transfer of knowledge in situated problem solving environments
[AD-A269746] p 1509 N94-18744
A refinement for nonmonotonic logic
[REPT-93-21] p 1542 N94-19092
Computer-assisted instruction and natural language systems
[MEMO-INF-92-86] p 1527 N94-19225
LEARNING THEORY
Efficient domain-independent experimentation
[AD-A269530] p 1557 N94-18640
Statistical learning theory and algorithms
[AD-A270209] p 1523 N94-18901
First results with utile distinction memory for reinforcement learning
[TR-446] p 1610 N94-19485
LEAST SQUARES METHOD
Strategies for testing form assessment software
[NPL-DITC-211/92] p 1518 N94-17930
A least-squares computational tool kit
[DE93-018400] p 1557 N94-19011
A method for finding the periodic solution of autonomous ordinary differential equations
[DE93-624725] p 1550 N94-19244
Refinement of unit cell parameters by least-squares: Comments on an old technique and the development of a new computer program
[AD-A270610] p 1531 N94-19590
LEAVES
Photosynthetic responses to the environment, volume 8
[AD-A269584] p 1502 N94-18305
LENGTH
On the Michelson-Morley experiment
[DE93-629908] p 1608 N94-18268
The influence of the target strength model on computed perforation
[DE93-018659] p 1460 N94-19543
LENNARD-JONES POTENTIAL
Phenomenological explanation of elastic anomalies in superlattices
[DE93-017475] p 1594 N94-17871
A numerical study of hybrid optimization methods for the molecular conformation problems
[DE93-017898] p 1569 N94-18985
LENSES
Compound-lens injector for a 19-MeV, 700-kA electron beam
[DE93-013752] p 1573 N94-17698
Radiation induced darkening of the optical elements in the Startracker camera
[DE93-018907] p 1433 N94-19004
LENTICULAR BODIES
Similarity solutions for gravity-dominated spreading of a lens of organic contaminant
[REPT-93-24] p 1420 N94-19139
LEPTONS
Gauge unification of fundamental forces: The story of success
[DE93-624813] p 1383 N94-17952
LEVITATION
Six degree of freedom fine motion positioning stage based on magnetic levitation
[DE93-017651] p 1446 N94-19547
LIAPUNOV FUNCTIONS
Fast-training algorithm for hidden-layer forward-feed neural networks
[AD-A269253] p 1540 N94-18263
The optimal projection equations for finite-dimensional fixed-order H2-optimal control of infinite-dimensional discrete-time systems
[REPT-93-11] p 1542 N94-19085
The fixed, finite-order L(sup 2)-optimal control of infinite-dimensional time-varying discrete-time systems
[REPT-93-23] p 1542 N94-19138
LIBRARIES
Application of new technologies in the virtual library: Seminars in Turkey, Portugal, and Spain
[NASA-TM-109718] p 1611 N94-19131
Cesar user library
[FFI-93/7021] p 1529 N94-19378
CVL: A C vector library manual. Version 2
[AD-A270614] p 1531 N94-19592
LIBRATION
Molecular structure of low temperature form of triaminoguanidinium nitrate (TAGN)
[AD-A270409] p 1377 N94-18708
LICENSING
Setting the global thermostat with an exhaustible tradeable permit system
[DE93-012911] p 1472 N94-17891
LIE GROUPS
Further on the current algebra of WZNW models at and away from criticality
[DE93-624809] p 1545 N94-17686
Multidimensional geometric quantization and U(1)-covering
[DE93-624770] p 1546 N94-17795
Finite-dimensional singletons of the quantum anti de Sitter algebra
[DE93-624771] p 1546 N94-17810
A reduction of the globalization and U(1)-covering
[DE93-624769] p 1546 N94-17817
Functional analysis of subelliptic operators on lie groups
[PB93-194793] p 1547 N94-18077
Paragrassmann analysis and quantum groups
[DE93-628593] p 1561 N94-18168
On paragrassmann differential calculus
[DE93-628594] p 1548 N94-18169
On a possible algebra morphism of U(sub q)(osp1/2) onto the deformed oscillator algebra W(sub q)(N)
[DE93-629857] p 1548 N94-18176
About symmetry of the gravitational action
[DE93-629955] p 1608 N94-18252
Extensions of 2D gravity
[DE93-018525] p 1485 N94-18929
L(sub p)-regularity of subelliptic operators on Lie groups
[PB93-194785] p 1549 N94-18948
Group-invariant solutions of hydrodynamics and radiation hydrodynamics
[DE93-018373] p 1423 N94-19604
Production and test of pseudo random elements
[ETN-93-95070] p 1559 N94-19610
LIFE RAFTS
AN/APS-137 Forward Looking Airborne Radar (FLAR) evaluation Spring 1992 experiment
[AD-A268899] p 1384 N94-18228
LIFE SCIENCES
Interdisciplinary training in life science (FY 1991 ASSERT)
[AD-A269220] p 1512 N94-18886
Aerospace medicine and biology: A continuing bibliography with indexes (supplement 382)
[NASA-SP-7011(382)] p 1507 N94-18936
Aerospace medicine and biology: A continuing bibliography with indexes (supplement 381)
[NASA-SP-7011(381)] p 1507 N94-19069
Guide to programs, fiscal year 1993
[NSF-92-78] p 1633 N94-19620
LIFE SUPPORT SYSTEMS
Analysis of seating and restraint limitations restricting total body weight for aircrew and passengers on US Army helicopters
[AD-A269117] p 1511 N94-18296
Aircrew life support, AFSC 122X0(1T1X1)
[AD-A268998] p 1511 N94-18394

Aerospace medicine and biology: A continuing bibliography with indexes (supplement 382)
[NASA-SP-7011(382)] p 1507 N94-18936

Aerospace medicine and biology: A continuing bibliography with indexes (supplement 381)
[NASA-SP-7011(381)] p 1507 N94-19069

Environmental control and life support
[ESA-PSS-03-40-ISSUE-1] p 1513 N94-19442

LIFT

High-Lift System Aerodynamics
[AGARD-CP-515] p 1305 N94-18415

Calculation of maximum and high lift characteristics of multi element aerofoils p 1305 N94-18419

Navier-Stokes computations of turbulent flow around high-lift configurations p 1306 N94-18420

Efficient simulation of incompressible viscous flow over multi-element airfoils p 1306 N94-18421

High Reynolds number configuration development of a high-lift airfoil p 1306 N94-18424

Numerical calculations of high lift flows using structured and unstructured methods p 1307 N94-18428

Navier-Stokes simulation of flow field around a blown-flap high-lift system p 1307 N94-18429

An experimental investigation of the optimum slat setting on a combat aircraft model p 1308 N94-18431

Viscous phenomena affecting high-lift systems and suggestions for future CFD development
p 1308 N94-18433

A study of the use of half-models in high-lift wind-tunnel testing p 1308 N94-18434

High lift and the forward swept wing
p 1308 N94-18436

Wake structure and aerodynamic behavior of high lift aircraft configurations during unsteady maneuvers in ground effect p 1309 N94-18439

Viscous-inviscid calculation of high-lift separated compressible flows over airfoils and wings
p 1309 N94-18440

Forty years of high-lift R/D: An aircraft manufacturer's experience p 1309 N94-18441

High-lift research: Application to the design of the ATR72 flap p 1309 N94-18442

High-lift design for large civil aircraft
p 1310 N94-18445

High lift systems for transport aircraft with advanced airfoils p 1310 N94-18446

Lift and pitching moment induced on jet STOVL aircraft by the ground vortex
[AD-A269816] p 1318 N94-18733

LIFT DEVICES

Lift enhancement device
[AD-D015868] p 1317 N94-17704

High-Lift System Aerodynamics
[AGARD-CP-515] p 1305 N94-18415

Where is high-lift today? A review of past UK research programmes p 1305 N94-18416

A design procedure for slotted flaps
p 1305 N94-18418

Navier-Stokes computations of turbulent flow around high-lift configurations p 1306 N94-18420

Navier-Stokes calculations on multi-element airfoils using a chimera-based solver p 1306 N94-18422

Numerical solution of the Navier-Stokes equations for high-lift configurations on structured composite grids
p 1306 N94-18423

High Reynolds number configuration development of a high-lift airfoil p 1306 N94-18424

A viscous-inviscid solver for high-lift incompressible flows over multi-element airfoils at deep separation conditions p 1306 N94-18425

High-lift system analysis method using unstructured meshes p 1307 N94-18426

Prediction of the high-lift performance of multi-element aerofoils using an unstructured Navier-Stokes solver
p 1307 N94-18427

Numerical calculations of high lift flows using structured and unstructured methods p 1307 N94-18428

Navier-Stokes simulation of flow field around a blown-flap high-lift system p 1307 N94-18429

The GARTEUR high lift research programme
p 1307 N94-18430

An experimental investigation of the optimum slat setting on a combat aircraft model p 1308 N94-18431

An experimental investigation of attachment-line transition on the slat of a combat aircraft model
p 1308 N94-18432

Viscous phenomena affecting high-lift systems and suggestions for future CFD development
p 1308 N94-18433

In-flight pressure distributions and skin-friction measurements on a subsonic transport high-lift wing section p 1308 N94-18435

High lift and the forward swept wing
p 1308 N94-18436

A fast computing method for the flow over high-lift wings p 1308 N94-18437

Calculation of multielement airfoils and wings at high lift p 1309 N94-18438

Wake structure and aerodynamic behavior of high lift aircraft configurations during unsteady maneuvers in ground effect p 1309 N94-18439

Forty years of high-lift R/D: An aircraft manufacturer's experience p 1309 N94-18441

High-lift research: Application to the design of the ATR72 flap p 1309 N94-18442

The aero-mechanical design of a novel Fowler flap mechanism p 1309 N94-18443

High-lift design for large civil aircraft
p 1310 N94-18445

High lift systems for transport aircraft with advanced airfoils p 1310 N94-18446

Choice and optimization of a high-lift system for an advanced amphibious aircraft p 1310 N94-18447

LIGANDS

Oligomer and mixed-metal compounds, potential multielectron transfer catalysts
[DE93-019592] p 1350 N94-19017

LIGHT (VISIBLE RADIATION)

Using controlled daylight exposure and sleep timing in the prevention of shift lag during night operations
[AD-A269304] p 1504 N94-17824

Rosat and optical observations of two X-ray transients: MX 0836-42 and GS 0834-430
[MPE-PREPRINT-237] p 1622 N94-19451

LIGHT AMPLIFIERS

X-ray laser oscillator-amplifier experiments
[DE93-017165] p 1436 N94-17868

Integrated photonics research volume 10. Conference edition
[AD-A269298] p 1577 N94-18298

Applications of nonlinear optic effects in new specialty fibers
[AD-A268890] p 1578 N94-18457

Quantum Optoelectronics. Organization of the 1993 photonics science topical meetings. Technical digest series, volume 8
[AD-A269026] p 1578 N94-18488

Advanced Solid-State Lasers/Compact Blue-Green Lasers. 1993 technical digest series. Volume 2: Organization of the 1993 photonics science topical meetings
[AD-A269058] p 1438 N94-18492

Photonics in Switching: Organization of the 1993 photonics science topical meetings. Technical digest
[AD-A269024] p 1578 N94-18528

Integrated Photonics Research: Post-deadline papers
[AD-A269232] p 1609 N94-18908

Pulsed power supply for Nova Upgrade
[DE93-019626] p 1441 N94-19307

A study of the amplification of laser and VLF waves using a simple pendulum model
[AD-A270857] p 1442 N94-19770

LIGHT BEAMS

High spatial resolution, range gated, underwater imaging method and apparatus
[AD-D015882] p 1430 N94-18530

Direct solar pumping of semiconductor lasers: A feasibility study
[NASA-CR-193760] p 1440 N94-18834

LIGHT CURVE

Computational astrophysics: Pulsating stars
[DE93-018369] p 1627 N94-18857

Detection of a long-duration solar gamma-ray flare on Jun. 11, 1991 with EGRET on Compton-GRO
p 1623 N94-19463

LIGHT EMISSION

Extending bandwidth of optical emitters using active matching technique
[AD-D015875] p 1394 N94-17707

Rapid analysis of mixed waste samples via the optical emission from laser initiated microplasmas
[DE93-014563] p 1582 N94-17727

Compact free electron lasers for medical applications
[AD-A271272] p 1442 N94-19729

Polarized optical emission due to decay or recombination of spin-polarized injected carriers
[AD-D015907] p 1408 N94-19763

LIGHT EMITTING DIODES

Extending bandwidth of optical emitters using active matching technique
[AD-D015875] p 1394 N94-17707

Polarized optical emission due to decay or recombination of spin-polarized injected carriers
[AD-D015907] p 1408 N94-19763

LIGHT IONS

Electron stripping cross sections for light impurity ions in colliding with atomic hydrogens relevant to fusion research
[DE93-788476] p 1566 N94-18158

LIGHT MODULATION

CO2 laser with modulated losses: Theoretical models and experiments in the chaotic regime
[DE93-624901] p 1435 N94-17771

Evaluation of a liquid crystal spatial light modulator capable of amplitude- and phase-modulating modes
[AD-A269252] p 1577 N94-18262

Spatial light modulators and applications: Summaries of papers presented at the Spatial Light Modulators and Applications Topical Meeting
[AD-A269452] p 1577 N94-18283

Kinetic aspects of lattice mismatch in molecular beam epitaxial growth on planar and patterned substrates
[AD-A270424] p 1597 N94-18506

Photonics in Switching: Organization of the 1993 photonics science topical meetings. Technical digest
[AD-A269024] p 1578 N94-18528

Integration of ferroelectric/semiconductor thin films for SLM and photorefractive applications
[AD-A268645] p 1598 N94-18633

Photodetector array having high pixel density
[AD-D015859] p 1432 N94-18731

Direct solar pumping of semiconductor lasers: A feasibility study
[NASA-CR-193760] p 1440 N94-18834

LIGHT SCATTERING

Elastic properties of a polyimide film determined by Brillouin scattering and mechanical techniques
[DE93-017404] p 1368 N94-18098

High spatial resolution, range gated, underwater imaging method and apparatus
[AD-D015882] p 1430 N94-18530

Millimeter wave reflectivity measurement system
[AD-A270008] p 1387 N94-18601

Effects of the Mount Pinatubo eruption on solar insolation: Four case studies
[DE93-018454] p 1475 N94-18817

LIGHT SOURCES

Developmental testing of a prototype all-reflection Michelson interferometer
[AD-A269064] p 1430 N94-18406

Magnetic field measurements of a superconducting undulator for a Harmonic Generation FEL experiment at the NSLS
[DE93-017621] p 1438 N94-18504

Simulation of the ALS longitudinal multibunch feedback system
[DE93-019227] p 1575 N94-19152

Study of coupled-bunch collective effects in the ALS
[DE93-019236] p 1575 N94-19558

The 1982 to 1992 decade of research on the vacuum ultraviolet ring at National Synchrotron Light Source
[DE93-019469] p 1603 N94-19564

LIGHT TRANSMISSION

An ultraviolet faraday rotator glass
[AD-D015879] p 1371 N94-18529

LIGHTNING

Analysis of high contact resistances associated with hermetic and lightning arrestor connectors
[DE93-014850] p 1395 N94-17783

Studies of enhanced radar backscatter
[AD-A269544] p 1385 N94-18288

LIKELIHOOD RATIO

Generalized multichannel signal detection
[AD-A271385] p 1391 N94-19587

LINE CURRENT

Response of transmission line systems to pulse excitation by radiation and injection methods
[DE93-015112] p 1384 N94-18210

LINE SPECTRA

Unified NLTE model atmospheres including spherical extension and stellar winds, 4: Improved line transfer and wind contamination of H, He profiles
[MPA-905] p 1624 N94-17736

Detection of accreting gas toward HD 45677: A newly recognized, Herbig Be proto-planetary system
[NASA-CR-189312] p 1621 N94-19288

Suitability of infrared spectroscopy for remote sensing of tropospheric trace gases
[KFK-5183] p 1479 N94-19507

LINEAR ACCELERATORS

Advanced methods for the computation of particle beam transport and the computation of electromagnetic fields and beam-cavity interactions
[DE93-018160] p 1573 N94-17807

Alternating-phase focusing with amplitude modulation
[DE93-018618] p 1574 N94-18273

Experimental research in high energy physics
[DE93-011912] p 1574 N94-18916

Spice modeling of a FET-switched induction accelerator cell
[DE93-018662] p 1575 N94-18996

Induction accelerator development for heavy ion fusion
[DE93-019228] p 1591 N94-19479

Transverse beam combiner for ILSE
[DE93-019239] p 1591 N94-19559
The ILSE Experimental Program
[DE93-019247] p 1576 N94-19560

LINEAR ENERGY TRANSFER (LET)
The LET spectrum and its uncertainty during the CRRES mission
[AD-A269977] p 1630 N94-18676

LINEAR EQUATIONS
EDF tests for normality in linear models after a Box-Cox transformation
[AD-A269068] p 1557 N94-18517
Implementation of the turn function method in KIVA-F90
[DE93-018394] p 1419 N94-19027

LINEAR PREDICTION
Linear parameter identification methods for ARMA models with periodic coefficients
[REPT-92-070] p 1556 N94-17938

LINEAR PROGRAMMING
Planning under uncertainty solving large-scale stochastic linear programs
[DE93-013920] p 1516 N94-17701
A model and an execution mechanism for active data bases
[ETN-93-94404] p 1614 N94-17979
A teaching tool for linear programming
[AD-A270240] p 1523 N94-18905
The theory of linear programming: Skew symmetric self-dual problems and the central path
[REPT-93-15] p 1524 N94-19089
Interior-point methodology for linear programming: Duality, sensitivity analysis and computational aspects
[REPT-93-28] p 1525 N94-19143
A polynomial primal-dual Dikin-type algorithm for linear programming
[REPT-93-36] p 1525 N94-19156

LINEAR QUADRATIC GAUSSIAN CONTROL
On comparison and extensions of control methods for narrow-band disturbance rejection
[REPT-93-015] p 1540 N94-17922

LINEAR QUADRATIC REGULATOR
The digital linear quadratic control problem for Pritchard-Salamon systems
[REPT-93-27] p 1542 N94-19142
Digital control of Pritchard-Salamon systems
[REPT-93-33] p 1543 N94-19286

LINEAR SYSTEMS
A modified direct preconditioner for indefinite symmetric Toeplitz systems
[DE93-015234] p 1516 N94-17800
A noniterative improvement of Guyan reduction
p 1449 N94-17833
An extension of Wolovich's definition of equivalence of linear systems
[MATHS-REPT-A-183] p 1547 N94-18069
Advances in the identification of transfer function models using Prony analysis
[DE93-017980] p 1548 N94-18094
Generalization of optimal control theory: Linear and nonlinear structures
[PB93-188621] p 1540 N94-18125
An ab initio study of the weakly bonded CO-Cl2 complex
[AD-A269000] p 1349 N94-18395
A multigrid acceleration technique for computing steady solutions to the equations of compressible flow
p 1412 N94-18559
New insights in GMRES-like methods with variable preconditioners
[REPT-93-10] p 1524 N94-19084
Deadbeat control by measurement feedback: A two sided approach
[REPT-93-20] p 1542 N94-19091
Stabilization of time-delay systems: An overview of the algebraic approach
[PB93-191989] p 1553 N94-19556

LINEAR TRANSFORMATIONS
Enumerative geometry of Del Pezzo Surfaces
[DE93-624768] p 1546 N94-17816
A parallel and pipelined architecture for estimation of direction of arrival using a bilinear transformation method, volume 3
[AD-A270137] p 1389 N94-18897

LINEARIZATION
Continuum modeling of materials that can undergo martensitic phase transitions
[AD-A268767] p 1360 N94-18386
Nonlinear disturbance decoupling and linearization: A partial interpretation of integral feedback
[PB93-197515] p 1543 N94-19328

LINGUISTICS
A real-time spoken-language system for interactive problem-solving, combining linguistic and statistical technology for improved spoken language understanding
[AD-A270901] p 1392 N94-19749

LININGS
Studies of dynamic contact of ceramics and alloys for advanced heat engines
[DE93-016366] p 1368 N94-18110

LIPIDS
Polymerizable lipids in the development of controlled release carriers
[AD-D015789] p 1368 N94-17982
Morphology of polymerized membranes on an amorphous substrate at molecular resolution by AFM
[AD-A268760] p 1370 N94-18403

LIQUEFIED GASES
Structure, thermodynamics, and dynamical properties of supercooled liquids
[DE93-788387] p 1607 N94-18211
Evaluation of aftermarket LPG conversion kits in light-duty vehicle applications
[DE93-010035] p 1377 N94-18617

LIQUID BRIDGES
Axial response of differently excited anchored viscous liquid bridges in zero-gravity
[LRT-WE-9-FB-1-1992] p 1379 N94-19489
Free fall liquid column dynamics in a droptower
[LRT-WE-9-FB-6-1992] p 1379 N94-19491
Transient response of a viscous and anchored liquid bridge to an axial pulse
[LRT-WE-9-FB-7-1992] p 1379 N94-19492

LIQUID COOLING
Preliminary design of a water cooled avionics cooling rack
[AD-A268826] p 1320 N94-18536
A laboratory model of a cooled continental shelf
[AD-A270862] p 1500 N94-19792

LIQUID CRYSTALS
Electrically controlled liquid-crystal heat valve
[AD-D015872] p 1443 N94-17705
Molecular composites from liquid crystalline polymers and liquid crystalline thermosets
[DE93-016608] p 1368 N94-18096
Evaluation of a liquid crystal spatial light modulator capable of amplitude- and phase-modulating modes
[AD-A269252] p 1577 N94-18262
Spatial light modulators and applications: Summaries of papers presented at the Spatial Light Modulators and Applications Topical Meeting
[AD-A269452] p 1577 N94-18283
Measurement Techniques
[VKI-LS-1993-05] p 1430 N94-18643
Liquid crystal heat transfer measurements
p 1432 N94-18653
The application of liquid crystal techniques to determine heat transfer rates p 1432 N94-18654
Polymer technology publication. Series no. 14, 1993
[PB93-195964] p 1372 N94-19052

LIQUID FLOW
Contribution to the study of a symmetric film flow (with or without tensio-active elements)
[ECL-93-13] p 1421 N94-19461

LIQUID HELIUM
Superfluid Helium On-Orbit Transfer (SHOOT) flight demonstration p 1327 N94-19185
Two-dimensional turbulent nonstationary superfluid counterflows: Numerical simulations, qualitative effects
[MPIS-23/1992] p 1422 N94-19510

LIQUID HELIUM 2
Examinations of converging cylindrically symmetric second sound propagation in He2
[MPIS-9/1992] p 1564 N94-19715

LIQUID INJECTION
Combustion instability phenomena of importance to liquid propellant engines
[AD-A268800] p 1348 N94-18389

LIQUID LASERS
Proof of the feasibility of coherent and incoherent schemes for pumping a gamma ray laser
[AD-A269173] p 1440 N94-18880

LIQUID METALS
First on-sun test of NaK pool-boiler solar receiver
[DE93-015003] p 1466 N94-18208
Structure, thermodynamics, and dynamical properties of supercooled liquids
[DE93-788387] p 1607 N94-18211
Metal slurry droplet and spray combustion
[AD-A269648] p 1349 N94-18736
Bench-scale screening tests for a boiling sodium-potassium alloy solar receiver
[DE93-018512] p 1469 N94-19040

LIQUID NITROGEN
Temperature lowering in cryogenic chemical-synthesis techniques and system
[DE93-018348] p 1562 N94-18810
Thermal stresses in the microchannel heatsink cooled by liquid nitrogen
[DE93-018660] p 1418 N94-18995

LIQUID PHASE SINTERING
Recent advances in high density tungsten composite processing
[AD-A270764] p 1344 N94-19576

LIQUID PHASES
A new multiphase equation of state for iron
[DE93-017629] p 1357 N94-17819
Molecular nonlinear optical susceptibilities in condensed phases
[AD-A270200] p 1568 N94-18784

LIQUID PROPELLANT ROCKET ENGINES
Combustion instability phenomena of importance to liquid propellant engines
[AD-A268800] p 1348 N94-18389

LIQUID-GAS MIXTURES
Measurement of viscosity, density, and gas solubility of refrigerant blends in selected synthetic lubricants
[DE93-040221] p 1350 N94-18977
Film condensation in a shock wave
[MPIS-22/1992] p 1422 N94-19509

LIQUID-LIQUID INTERFACES
The application of front tracking to the simulation of shock refractions and shock accelerated interface mixing
[DE93-018342] p 1419 N94-19025
Multigrid for a groundwater flow problem
[REPT-93-29] p 1420 N94-19144

LIQUID-SOLID INTERFACES
Axial response of differently excited anchored viscous liquid bridges in zero-gravity
[LRT-WE-9-FB-1-1992] p 1379 N94-19489

LIQUIDS
Structure, thermodynamics, and dynamical properties of supercooled liquids
[DE93-788387] p 1607 N94-18211
Performance of the Amorphous Materials Diffractometer GLAD at IPNS
[DE93-017746] p 1430 N94-18481

LISP (PROGRAMMING LANGUAGE)
OORA Automated Knowledge System (OAKS) code, appendix C
[AD-A270709] p 1531 N94-19573

LITHIUM
Shrinkage void formation and its effect on freeze and thaw processes of lithium and lithium-fluoride for space applications
[DE93-019303] p 1338 N94-19128

LITHIUM ALLOYS
Phase separation and ordering process in Al-Li alloys studied by small-angle neutron scattering and neutron diffraction
[DE93-016750] p 1358 N94-17947

LITHIUM FLUORIDES
Calculation of the LiF-CeF3-BeF2 and LiF-PuF3-BeF2 ternary phase diagrams
[DE93-017437] p 1360 N94-18501
Shrinkage void formation and its effect on freeze and thaw processes of lithium and lithium-fluoride for space applications
[DE93-019303] p 1338 N94-19128

LITHIUM NIOBATES
IR materials producibility
[AD-A268849] p 1577 N94-18223
Investigation of a fiber optic frequency shifter and optical isolator
[AD-A269820] p 1579 N94-18738

LITHIUM SULFUR BATTERIES
The ANL electric vehicle battery R&D program for DOE-EHP
[DE93-017414] p 1394 N94-17750

LITHOGRAPHY
Quantum Optoelectronics. Organization of the 1993 photonics science topical meetings. Technical digest series, volume 8
[AD-A269026] p 1578 N94-18488
Advanced Solid-State Lasers/Compact Blue-Green Lasers. 1993 technical digest series. Volume 2: Organization of the 1993 photonics science topical meetings
[AD-A269058] p 1438 N94-18492
RF vacuum microelectronics
[AD-A270003] p 1403 N94-18667
Soft X Ray Projection Lithography. Organization of the 1993 photonics science optical meetings
[AD-A269159] p 1579 N94-18693
Operational parameters of an opto-electronic neural network employing fixed planar holographic interconnects
[DE93-018795] p 1433 N94-19000
The 1982 to 1992 decade of research on the vacuum ultraviolet ring at National Synchrotron Light Source
[DE93-019469] p 1603 N94-19564
Nanofabrication by focused ion beam
[AD-A271290] p 1345 N94-19746

LIVER
Space research on organs and tissues p 1503 N94-19214

LOAD DISTRIBUTION (FORCES)
The role of NASTRAN in the preliminary design cycle p 1450 N94-17835
Road march performance of special operations soldiers carrying various loads and load distributions [AD-A269198] p 1512 N94-18882

LOADING OPERATIONS
Fatigue technology assessment and strategies for fatigue avoidance in marine structures. Appendices [AD-A269053] p 1455 N94-18716
ASTRO-1 to explore invisible universe [NASA-TM-109360] p 1336 N94-18956

LOADS (FORCES)
Heat load analysis on the cable-in-conduit with central core conductor for the TF coil Rebut layer design [DE93-013783] p 1395 N94-17872
The respectiveness of response in a bar under static and transient loads [VTT-TIED-1377] p 1452 N94-17959
Road march performance of special operations soldiers carrying various loads and load distributions [AD-A269198] p 1512 N94-18882
Plastic mechanism analysis of T-joints in RHS subject to combined bending and concentrated force [PB93-195774] p 1456 N94-19061

LOCAL AREA NETWORKS
Advanced optical fiber communication systems [AD-A269120] p 1577 N94-18254
Inventory management plan for a research and development local area network [DE93-018381] p 1617 N94-19026
A highly concurrent medium access control strategy for high speed multiwavelength networks using transceivers with limited tunability [MEMO-INF-93-07] p 1390 N94-19230

LOCAL THERMODYNAMIC EQUILIBRIUM
Configuration interaction in LTE spectra of heavy elements [DE93-017166] p 1584 N94-17990

LOGIC
Useful lambda notation [PB93-191856] p 1524 N94-19066
Axiomatization, declarative semantics and operational semantics of passive and active updates in logic databases [PB93-195956] p 1618 N94-19067

LOGIC CIRCUITS
New dynamic FET logic and serial memory circuits for VLSI GaAs technology p 1397 N94-18339
Automated ILA design for synchronous sequential circuits p 1397 N94-18340
Single phase dynamic CMOS PLA using charge sharing technique p 1397 N94-18341
An SEU immune logic family p 1398 N94-18342
Cellular logic array for computation of squares p 1398 N94-18343
Fault tolerant sequential circuits using sequence invariant state machines p 1398 N94-18344
Formal specification of a high speed CMOS correlator p 1401 N94-18371
Ultra low power CMOS technology p 1401 N94-18373
Canonical multi-valued input Reed-Muller trees and forms p 1401 N94-18375
Asynchronous sequential circuit design using pass transistor iterative logic arrays p 1402 N94-18376
Pulse mode VLSI asynchronous circuits p 1402 N94-18377
Improved self arbitrated VLSI asynchronous circuits p 1402 N94-18378
A special purpose silicon compiler for designing supercomputing VLSI systems p 1402 N94-18379
On timing faults in digital logic circuits [AD-A268714] p 1402 N94-18400
Naval research reviews. Mixing enhancement for air-breathing propulsion. Non-axisymmetric jets increase mixing, volume 44 and volume 45 [AD-A268966] p 1521 N94-18543
An RS-170 to 700 frame per second CCD camera [DE93-018367] p 1432 N94-18828
Motorola MC68040 high-speed design using Altera EPM5000 erasable programmable logic devices [DE93-017635] p 1523 N94-19006
Superconducting flux flow devices, digital circuits and memories [DE93-019072] p 1405 N94-19079
Evaluation of laser diode based optical switches for optical processors [AD-A270949] p 1581 N94-19602

LOGIC DESIGN
Weakened negative introspection in autoepistemic reasoning [PB93-187375] p 1520 N94-18118
A verification logic representation of indeterministic signal states p 1401 N94-18372
Ultra low power CMOS technology p 1401 N94-18373
Canonical multi-valued input Reed-Muller trees and forms p 1401 N94-18375
Asynchronous sequential circuit design using pass transistor iterative logic arrays p 1402 N94-18376
Pulse mode VLSI asynchronous circuits p 1402 N94-18377
Improved self arbitrated VLSI asynchronous circuits p 1402 N94-18378
A special purpose silicon compiler for designing supercomputing VLSI systems p 1402 N94-18379
VHDL simulation with access to transistor models p 1402 N94-18381
Naval research reviews. Mixing enhancement for air-breathing propulsion. Non-axisymmetric jets increase mixing, volume 44 and volume 45 [AD-A268966] p 1521 N94-18543

LOGIC PROGRAMMING
Weakened negative introspection in autoepistemic reasoning [PB93-187375] p 1520 N94-18118
A verification logic representation of indeterministic signal states p 1401 N94-18372
Ultra low power CMOS technology p 1401 N94-18373
Asynchronous rendezvous in the presence of backtracking [PB93-197739] p 1524 N94-19062
Axiomatization, declarative semantics and operational semantics of passive and active updates in logic databases [PB93-195956] p 1618 N94-19067
Integrity checking in deductive databases: An exposition [PB93-191724] p 1619 N94-19709

LOGICAL ELEMENTS
New automatic deduction techniques in first order finite and infinite polyvalent logic [ETN-93-95003] p 1528 N94-19359

LOGISTICS
A comparison of air force data systems [AD-A269691] p 1616 N94-18575

LONG DURATION EXPOSURE FACILITY
LDEF update [NASA-TM-109352] p 1334 N94-18921
The application of jet spray and ion beam contamination removal techniques to samples from the LDEF spacecraft [AD-A270973] p 1354 N94-19755

LONG RANGE WEATHER FORECASTING
JPRS report: Science and technology. Central Eurasia: Earth Sciences [JPRS-UES-93-004] p 1461 N94-19209

LONGITUDINAL STABILITY
The dynamic stability of the helicopter [LR-772] p 1321 N94-19615

LONGITUDINAL WAVES
Correction of longitudinal errors in accelerators for heavy-ion fusion [DE93-018656] p 1575 N94-19106
The electromechanical properties of tetragonal BaTiO3 and PbTiO3 single crystals [DE93-019008] p 1603 N94-19550

LOOP ANTENNAS
Arc detection and protection in high-power antenna systems [DE93-013272] p 1382 N94-17695

LORENTZ CONTRACTION
On the Michelson-Morley experiment [DE93-629908] p 1608 N94-18268

LORENTZ TRANSFORMATIONS
On the Michelson-Morley experiment [DE93-629908] p 1608 N94-18268

LOSSES
Regenerator optimization for Stirling cycle refrigeration [DE93-018468] p 1380 N94-18818
Bounds for expected loss in Bayesian decision theory with imprecise prior probabilities [PB93-197507] p 1558 N94-19327

LOVE WAVES
High resolution geological site characterization utilizing ground motion data [AD-A268926] p 1481 N94-18485
Surface wave group velocity tomography of East Asia, part 1 [AD-A270100] p 1484 N94-18868

LOW ASPECT RATIO WINGS
An experimental investigation of the optimum slat setting on a combat aircraft model p 1308 N94-18431

LOW COST
Laser materials processing applications at Lawrence Livermore National Laboratory [DE93-017976] p 1437 N94-18093
A rugged, low-cost advanced data acquisition system for field test projects [DE93-010041] p 1615 N94-18334
Optoelectronic packaging: A review [DE93-040059] p 1515 N94-19535
High rate resistive plate chambers: An inexpensive, fast, large area detector of energetic charged particles for accelerator and non-accelerator applications [DE93-018664] p 1572 N94-19545

LOW FREQUENCIES
Low frequency acoustics of laminated composite axisymmetric structures [DRA-TM(USGR)-93302] p 1344 N94-19391
Measurements of ocean surface and bottom backscattering strengths in the northwestern Atlantic Ocean [AD-A270893] p 1500 N94-19786

LOW GRAVITY MANUFACTURING
The first flight of the QUESTS GAS payload G-521 p 1325 N94-19170

LOW NOISE
High resolution SQUID magnetometry for non-destructive evaluation [AD-A268884] p 1447 N94-18225
Low-noise oscillators for airborne radar applications, revision 1 [AD-A269372] p 1403 N94-18471
Monolithic low noise preamplifier for piezoelectric sensors [AD-D015860] p 1563 N94-18734

LOW REYNOLDS NUMBER
Two-equation models for low-Reynolds-number variants p 1415 N94-18587
Theoretical examination of the flow around a cylinder with a low dimensional Galerkin process [MPIS-25/1992] p 1422 N94-19525

LOW TEMPERATURE
Molecular structure of low temperature form of triaminoguanidinium nitrate (TAGN) [AD-A270409] p 1377 N94-18708
Ground movements associated with gas hydrate production [DE93-019887] p 1486 N94-19018
Isolation mechanisms in III-V devices [AD-A271197] p 1605 N94-19717

LOW TEMPERATURE ENVIRONMENTS
Search for lunar water ice in cometary impact craters [AD-A270130] p 1627 N94-18877
Proceedings: International Symposium on Thermal Engineering and Science for Cold Regions [AD-A270636] p 1487 N94-19529

LOW TEMPERATURE PHYSICS
Realistic theories of heavy electron and other strongly correlated materials [DE93-010350] p 1571 N94-19204

LUBRICANTS
Compatibility of refrigerants and lubricants with motor materials, volume 1 [DE93-040216] p 1350 N94-18895
Compatibility of refrigerants and lubricants with motor materials, volume 2 [DE93-040217] p 1350 N94-18896
Measurement of viscosity, density, and gas solubility of refrigerant blends in selected synthetic lubricants [DE93-040221] p 1350 N94-18977
Accelerated screening methods for determining chemical and thermal stability of refrigerant-lubricant mixtures. Part 1: Method assessment [DE93-040215] p 1351 N94-19136
Compatibility of refrigerants and lubricants with motor materials, volume 3 [DE93-040218] p 1352 N94-19191
Surface species in tribology [AD-A270970] p 1446 N94-19754

LUBRICATION
Interdisciplinary research on wear of materials [AD-A268190] p 1443 N94-17730

LUMINOSITY
Search for top quark with D0 detector [DE93-040170] p 1572 N94-19536

LUMPED PARAMETER SYSTEMS
Improved approximations applied to the S(sub N) even-parity equation [DE93-016467] p 1551 N94-19343

LUNAR BASES
Lunar base Controlled Ecological Life Support System (LCELSS): Preliminary conceptual design study [NASA-CR-188479] p 1511 N94-18484
Space transfer concepts and analyses for exploration missions [NASA-CR-193876] p 1332 N94-18820
Space exploration initiative [NASA-TM-109366] p 1323 N94-18981

LUNAR CRATERS
Working group for planetary system nomenclature [NASA-CR-194406] p 1626 N94-18841

Search for lunar water ice in cometary impact craters
[AD-A270130] p 1627 N94-18877

LUNAR ENVIRONMENT
Space transfer concepts and analyses for exploration missions
[NASA-CR-193876] p 1332 N94-18820

LUNAR EXCAVATION EQUIPMENT
Future energy source — Mining Helium-3 on the moon
[NASA-TM-109363] p 1628 N94-18959

LUNAR LANDING
Apollo 11: 20th anniversary
[NASA-TM-109364] p 1323 N94-18979

LUNAR MINING
Future energy source — Mining Helium-3 on the moon
[NASA-TM-109363] p 1628 N94-18959

LUNAR RESOURCES
Search for lunar water ice in cometary impact craters
[AD-A270130] p 1627 N94-18877
Future energy source — Mining Helium-3 on the moon
[NASA-TM-109363] p 1628 N94-18959

LUNAR SURFACE
Search for lunar water ice in cometary impact craters
[AD-A270130] p 1627 N94-18877

LUNAR SURFACE VEHICLES
Activities of the Center for Space Construction
[NASA-CR-193717] p 1335 N94-19371

LYMPHOCYTES
A study of the effects of high power pulsed 2450 MHz microwaves, ELF modulated microwaves, and ELF fields on human lymphocytes and selected cell lines
[AD-A269070] p 1505 N94-18294

M

M STARS
The 0.15 seconds near-infrared imaging of the central parsec of the galaxy
[MPE-PREPRINT-239] p 1621 N94-19415
Stellar coronae at the end of the main sequence: A Rosat survey of the late M dwarfs
[NASA-CR-194700] p 1628 N94-19794

MACH NUMBER
Error propagation equations and tables for estimating the uncertainty in high-speed wind tunnel test results
[DE93-016685] p 1311 N94-18275
A comparative study of turbulence models in predicting hypersonic inlet flows p 1314 N94-18553
Acoustic intensity measurements in the presence of low Mach number flow
[AD-A269995] p 1562 N94-18664

MACHINE LEARNING
Bias in planning and explanation-based learning
[AD-A269608] p 1610 N94-17746
Application of the network discriminant function to learning
[AD-A268793] p 1540 N94-18189
Dialog-Based Learning (DBL) for adaptive interface agents and programming-by-demonstrations systems
[AD-A269154] p 1540 N94-18261
Fast-training algorithm for hidden-layer forward-feed neural networks
[AD-A269253] p 1540 N94-18263
On masking effect
[AD-A269593] p 1541 N94-18462
Towards versatile and practical knowledge acquisition
[AD-A269596] p 1615 N94-18464
Geometrical pattern learning
[DE93-017641] p 1542 N94-19007
A refinement for nonmonotonic logic
[REPT-93-21] p 1542 N94-19092
Learning control of large-scale systems
[MATHS-REPT-A-186] p 1544 N94-19408
Explorations of the practical issues of learning prediction-control tasks using temporal difference learning methods
[AD-A270636] p 1544 N94-19599
VLSI implementation of neuromorphic learning networks
[AD-A270825] p 1407 N94-19665

MACHINE TOOLS
Measuring machines for digitalizing and measuring complex surfaces, models and matrices
[CRIF-MC-97] p 1444 N94-17963
Present evolution of tools management
[CRIF-MC-102] p 1444 N94-17964
The machine reception: A business of experts
[CRIF-MC-94] p 1611 N94-17980
A rational design change methodology based on experimental and analytical modal analysis
[DE93-018537] p 1521 N94-18271
Survey of ceramic machining in Japan
[DE93-018277] p 1372 N94-18946

MACHINERY
Applications of neural networks in fault detection of rotating machinery
[AD-A270755] p 1448 N94-19766

MACHINING
Electrostatic micrometers: Recent developments and perspectives of uses in clock and watch making
p 1425 N94-18014
Survey of ceramic machining in Japan
[DE93-018277] p 1372 N94-18946
Precision machining and polishing of scintillating crystals for large calorimeters and hodoscopes
[DE93-018663] p 1381 N94-19544

MAGELLAN PROJECT (NASA)
Magellan, Galileo, and Ulysses
[NASA-TM-109362] p 1628 N94-18958

MAGELLAN SPACECRAFT (NASA)
Magellan, Galileo, and Ulysses
[NASA-TM-109362] p 1628 N94-18958

MAGELLANIC CLOUDS
Dust in the Small Magellanic Cloud
[NASA-CR-193344] p 1624 N94-17764
Spectrophotometry of emission-line stars in the magellanic clouds
[NASA-CR-194082] p 1628 N94-19425
IRAS galaxies observed in the ROSAT survey: Starbursts or central activity p 1623 N94-19528

MAGNESIUM COMPOUNDS
Advanced civil engineering materials based on inorganic polymers
[AD-A270837] p 1374 N94-19600

MAGNET COILS
Nonparaxial MHD stabilizers for an axisymmetric magnetic mirror
[DE93-017996] p 1587 N94-18505
Contribution to the study of the additional losses in coil elements used in static converters
[ECL-92-60] p 1406 N94-19297

MAGNETIC ANOMALIES
Research in particle physics
[DE93-040875] p 1567 N94-18534

MAGNETIC BEARINGS
Fuzzy control of magnetic bearings
p 1399 N94-18357

MAGNETIC COILS
Fabrication, properties, and microstructures of high (Tc) tapes and coils made from Ag-clad Bi-2223 superconductor
[DE93-017405] p 1602 N94-19122

MAGNETIC COOLING
The 7th International Cryocooler Conference
[AD-A268451] p 1379 N94-18147

MAGNETIC DIPOLES
Toroidal solenoids in the electromagnetic field and Aharonov-Casher effect
[DE93-629861] p 1566 N94-18152
Convection algorithms for magnetospheric particles
[AD-A270103] p 1493 N94-18871

MAGNETIC DISKS
Static Computer Memory Integrity Testing (SCMIT): An experiment flown on STS-40 as part of GAS payload G-616 p 1325 N94-19169
Picoindentation hardness measurements using atomic force microscopy
[AD-A270877] p 1604 N94-19579
Microtribology of magnetic media
[AD-A271209] p 1407 N94-19722
Atomic-scale friction measurements using friction force microscopy. Part 2: Application to magnetic media
[AD-A270759] p 1447 N94-19767
Tribological studies of silicon for magnetic recording applications (Invited)
[AD-A270878] p 1447 N94-19784

MAGNETIC ENERGY STORAGE
Analysis of superconducting magnetic energy storage applications at a proposed wind farm site near Browning, Montana
[DE93-018793] p 1466 N94-18276

MAGNETIC FIELD CONFIGURATIONS
Profile stabilization of tilt mode in a field reversed configuration
[DE93-016770] p 1583 N94-17753
Filamentary magnetohydrodynamic plasmas
[DE93-015616] p 1583 N94-17945
Toroidal solenoids in the electromagnetic field and Aharonov-Casher effect
[DE93-629861] p 1566 N94-18152
Finite beta plasma equilibrium in toroidally linked mirrors
[DE93-040318] p 1590 N94-19193
Magnetic and crystallographic structures in UTX intermetallic compounds
[DE93-018291] p 1605 N94-19735

MAGNETIC FIELD RECONNECTION
Resonant absorption of Alfven waves near a neutral point
[DE93-628761] p 1586 N94-18172

MAGNETIC FIELDS
The phase mixing of shear Alfven waves
[DE93-624920] p 1581 N94-17688
Limits on m = 2, n = 1 error field induced locked mode instability in TPX with typical sources of poloidal field coil error field and a proto type correction coil, C-coil
[DE93-014408] p 1582 N94-17702
Corroboration of magnetic forces in US Maglev design
[DE93-014918] p 1443 N94-17785
Rapid geophysical surveyor
[DE93-016637] p 1461 N94-17851
Synthesis and study of high-T(sub c) superconducting electronic materials
[AD-A268851] p 1402 N94-18390
Comparison of ferrite materials for pulse applications
[DE93-017224] p 1574 N94-18497
Magnetic field measurements of a superconducting undulator for a Harmonic Generation FEL experiment at the NSLS
[DE93-017621] p 1438 N94-18504
Numerical modelling of fringing fields and their use for complex permittivity measurements at high frequencies
[AD-A270198] p 1388 N94-18782
Convection algorithms for magnetospheric particles
[AD-A270103] p 1493 N94-18871
Fabrication and characterization of high-T(sub c) tapes and coils made from Ag-clad Bi-2223 superconductors
[DE93-018615] p 1601 N94-18993
Three dimensional multipole decomposition of fields
[DE93-018530] p 1389 N94-19053
The Cluster magnetic field investigation: Scientific objectives and instrumentation p 1329 N94-19629
The Electron Drift Instrument for Cluster
p 1329 N94-19630
Transient skin effect in a massive cylinder by eccentric location of exciting conduction bands
[ETN-93-95048] p 1391 N94-19646

MAGNETIC FILMS
Picoindentation hardness measurements using atomic force microscopy
[AD-A270877] p 1604 N94-19579
Magnetic Ultrathin Films: Multilayers and Surfaces, Interfaces, and Characterization, volume 313
[AD-A271402] p 1375 N94-19758

MAGNETIC FLUX
Microwave scattering from TAE modes
[DE93-018170] p 1583 N94-17809
Superconducting flux flow devices, digital circuits and memories
[DE93-019072] p 1405 N94-19079

MAGNETIC INDUCTION
Footprint size of a helicopter-borne electromagnetic induction sounding system versus antenna altitude
[AD-A270468] p 1463 N94-19672

MAGNETIC MATERIALS
Magnetic Ultrathin Films: Multilayers and Surfaces, Interfaces, and Characterization, volume 313
[AD-A271402] p 1375 N94-19758

MAGNETIC MEASUREMENT
High resolution SQUID magnetometry for non-destructive evaluation
[AD-A268884] p 1447 N94-18225
Magnetic field measurements of a superconducting undulator for a Harmonic Generation FEL experiment at the NSLS
[DE93-017621] p 1438 N94-18504

MAGNETIC MIRRORS
Nonparaxial MHD stabilizers for an axisymmetric magnetic mirror
[DE93-017996] p 1587 N94-18505
Generalized energy principle for flute perturbations in axisymmetric mirror machines
[DE93-019399] p 1589 N94-19037
Finite beta plasma equilibrium in toroidally linked mirrors
[DE93-040318] p 1590 N94-19193

MAGNETIC MOMENTS
Electric measurement of Lavet motors
p 1408 N94-18022
Toroidal solenoids in the electromagnetic field and Aharonov-Casher effect
[DE93-629861] p 1566 N94-18152
Research in particle physics
[DE93-040875] p 1567 N94-18534
The anomalous magnetic moment of the muon
[DE93-018932] p 1572 N94-19320
Magnetic and crystallographic structures in UTX intermetallic compounds
[DE93-018291] p 1605 N94-19735

MAGNETIC PERMEABILITY
High resolution SQUID magnetometry for non-destructive evaluation
[AD-A268884] p 1447 N94-18225
Realistic theories of heavy electron and other strongly correlated materials
[DE93-010350] p 1571 N94-19204
MAGNETIC PROPERTIES
Magnetic properties of single-crystalline UCu3Al2
[DE93-016607] p 1593 N94-17744
Spin-integrated and spin-dependent photoelectron diffraction
[DE93-016546] p 1565 N94-17850
Comparison of ferrite materials for pulse applications
[DE93-017224] p 1574 N94-18497
High pressure metallization of Mott Insulators: Magnetic, structural and electronic properties
[DE93-018295] p 1404 N94-18805
Superconductivity and magnetism in niobium doped YBa2Cu3O7 related high-(Tc) ceramics
[DE93-018086] p 1601 N94-19049
Some superhigh-frequency and magnetic properties of chemically precipitated films
[AD-A266195] p 1351 N94-19110
Magnetic Ultrathin Films: Multilayers and Surfaces, Interfaces, and Characterization, volume 313
[AD-A271402] p 1375 N94-19758
MAGNETIC RECORDING
Tribological studies of silicon for magnetic recording applications (Invited)
[AD-A270878] p 1447 N94-19784
MAGNETIC RELAXATION
Filamentation, current profiles and transport in a tokamak
[DE93-016768] p 1584 N94-17948
Relaxation of polar orientational order in nonlinear optical polymers by second harmonic generation
[AD-A269059] p 1370 N94-18515
MAGNETIC STORMS
Penetrating radiation environment and effects study
[AD-A270126] p 1485 N94-18874
The effects of magnetic storm phases on f-layer irregularities from auroral to equatorial latitudes
[AD-A267388] p 1486 N94-19008
MAGNETIC SURVEYS
Rapid geophysical surveyor
[DE93-016637] p 1461 N94-17851
MAGNETIC SUSPENSION
Corroboration of magnetic forces in US Maglev design
[DE93-014918] p 1443 N94-17785
Six degree of freedom fine motion positioning stage based on magnetic levitation
[DE93-017651] p 1446 N94-19547
MAGNETIC TAPES
Contribution to the tribological study of magnetic-tape head contact
[ECL-92-57] p 1434 N94-19414
Microtribology of magnetic media
[AD-A271209] p 1407 N94-19722
Atomic-scale friction measurements using friction force microscopy. Part 2: Application to magnetic media
[AD-A270759] p 1447 N94-19767
MAGNETIZATION
Magnetic properties of single-crystalline UCu3Al2
[DE93-016607] p 1593 N94-17744
Ising model on tangled chain. Part 2: Magnetization and susceptibility
[DE93-628794] p 1607 N94-18174
MAGNETO-OPTICS
Magnetic Ultrathin Films: Multilayers and Surfaces, Interfaces, and Characterization, volume 313
[AD-A271402] p 1375 N94-19758
MAGNETOHYDRODYNAMIC FLOW
Profile stabilization of tilt mode in a field reversed configuration
[DE93-016770] p 1583 N94-17753
Viscosity in the edge of tokamak plasmas
[DE93-018039] p 1588 N94-18988
Radiative divertor modeling studies
[DE93-018092] p 1590 N94-19290
MAGNETOHYDRODYNAMIC GENERATORS
Development of a multi-point two-color pyrometer for tube and wall temperature and emissivity measurement at the CFFF
[DE93-014716] p 1429 N94-18207
Study of multi-phase flow characteristics in an MHD power train
[DE93-018570] p 1586 N94-18272
MHD integrated topping cycle project
[DE93-040520] p 1588 N94-18978
MHD Integrated Topping Cycle Project
[DE93-040521] p 1589 N94-19055
MAGNETOHYDRODYNAMIC STABILITY
Transformation of energy and momentum due to Landau damping in space
[DE93-624921] p 1581 N94-17689
Limits on m = 2, n = 1 error field induced locked mode instability in TPX with typical sources of poloidal field coil error field and a proto type correction coil, C-coil
[DE93-014408] p 1582 N94-17702
Self-regulated shear flow turbulence in confined plasmas
[DE93-015823] p 1583 N94-17743
Profile stabilization of tilt mode in a field reversed configuration
[DE93-016770] p 1583 N94-17753
Plasma properties research: Task 3
[DE93-017087] p 1583 N94-17854
Filamentary magnetohydrodynamic plasmas
[DE93-015616] p 1583 N94-17945
AEOLUS-IT MHD simulation code based on a toroidally incompressible plasma model
[DE93-788461] p 1586 N94-18157
Resonant absorption of Alfven waves near a neutral point
[DE93-628761] p 1586 N94-18172
Hydrodynamic instability modeling for ICF
[DE93-018634] p 1587 N94-18274
Nonparaxial MHD stabilizers for an axisymmetric magnetic mirror
[DE93-017996] p 1587 N94-18505
Generalized energy principle for flute perturbations in axisymmetric mirror machines
[DE93-019399] p 1589 N94-19037
On neutral plasma oscillations
[DE93-040319] p 1590 N94-19194
MAGNETOHYDRODYNAMIC WAVES
The phase mixing of shear Alfven waves
[DE93-624920] p 1581 N94-17688
Profile stabilization of tilt mode in a field reversed configuration
[DE93-016770] p 1583 N94-17753
Microwave scattering from TAE modes
[DE93-018170] p 1583 N94-17809
MAGNETOHYDRODYNAMICS
Profile stabilization of tilt mode in a field reversed configuration
[DE93-016770] p 1583 N94-17753
Filamentary magnetohydrodynamic plasmas
[DE93-015616] p 1583 N94-17945
Coupled MHD and transport analysis of improved confinement D3-D discharges
[DE93-016985] p 1585 N94-18057
AEOLUS-IT MHD simulation code based on a toroidally incompressible plasma model
[DE93-788461] p 1586 N94-18157
Study of multi-phase flow characteristics in an MHD power train
[DE93-018570] p 1586 N94-18272
Hydrodynamic instability modeling for ICF
[DE93-018634] p 1587 N94-18274
Nonparaxial MHD stabilizers for an axisymmetric magnetic mirror
[DE93-017996] p 1587 N94-18505
Contributions from geomagnetic inverse theory to the study of hydromagnetic conditions near the core-mantle boundary
[NASA-CR-194303] p 1484 N94-18853
MHD technology transfer, integration and review committee
[DE93-040519] p 1588 N94-18892
Viscosity in the edge of tokamak plasmas
[DE93-018039] p 1588 N94-18988
Generalized energy principle for flute perturbations in axisymmetric mirror machines
[DE93-019399] p 1589 N94-19037
MAGNETOMETERS
High resolution SQUID magnetometry for non-destructive evaluation
[AD-A268884] p 1447 N94-18225
Experience with custom processors in space flight applications p 1336 N94-18338
Aspects of the calibration and processing of the CRRES fluxgate magnetometer data
[AD-A270127] p 1432 N94-18875
STAFF (Spatio-Temporal Analysis of Field Fluctuations) experiment for the Cluster mission p 1328 N94-19625
The Cluster magnetic field investigation: Scientific objectives and instrumentation p 1329 N94-19629
MAGNETOPAUSE
Penetrating radiation environment and effects study
[AD-A270126] p 1485 N94-18874
MAGNETOSTATICS
Magnetostatic waves-based integrated optic bragg cell modules with applications to RF signal processing
[AD-A269115] p 1577 N94-18295
Three dimensional multipole decomposition of fields
[DE93-018530] p 1389 N94-19053
MAGNETOSTRICTION
Magnetostrictive actuators for human sensory feedback
[AD-A269266] p 1511 N94-17841
MAGNONS
Lectures of Fermi liquid theory
[DE93-016630] p 1592 N94-17714
Polaron tunneling in high-temperature superconductors
[DE93-016880] p 1593 N94-17754
Nonlinear dynamics and instabilities in ferromagnetic resonance experiments: Examinations of spheres from yttrium iron garnet in coincidence area of the first Suhl instabilities
[ETN-93-95072] p 1604 N94-19612
MAIN SEQUENCE STARS
Stellar coronae at the end of the main sequence: A Rosat survey of the late M dwarfs
[NASA-CR-194700] p 1628 N94-19794
MAINTENANCE
SUNRAYCE 1993: Working safely with lead-acid batteries and photovoltaic power systems
[DE93-016553] p 1464 N94-17712
Restoration of an 18th century English clock
p 1427 N94-18026
Aircrew life support, AFSC 122X0(1T1X1)
[AD-A268998] p 1511 N94-18394
A case study in software maintenance
[AD-A269923] p 1521 N94-18659
Tehachapi solar thermal system
[DE93-018443] p 1468 N94-19014
Downsizing a database platform for increased performance and decreased costs
[DE93-018687] p 1618 N94-19099
MALES
Effects of a high-energy food supplement on cold-induced thermogenesis
[AD-A269301] p 1504 N94-17823
MAN MACHINE SYSTEMS
Research on man-machine productivity in aviation at Human Engineering Institute of Hangzhou University
[AD-A269952] p 1512 N94-18673
Aerospace medicine and biology: A continuing bibliography with indexes (supplement 382)
[NASA-SP-7011(382)] p 1507 N94-18936
Aerospace medicine and biology: A continuing bibliography with indexes (supplement 381)
[NASA-SP-7011(381)] p 1507 N94-19069
Human-machine interfaces
[AD-A270730] p 1513 N94-19764
MAN-COMPUTER INTERFACE
Current development in selected stress and thermal analysis software interfaces with PRO-ENGINEER
[DE93-014935] p 1518 N94-17943
Interactive Collaborative Environments (ICE) in the design to manufacturing process
[DE93-014994] p 1518 N94-17944
Dialog-Based Learning (DBL) for adaptive interface agents and programming-by-demonstrations systems
[AD-A269154] p 1540 N94-18261
Why are human-computer interfaces difficult to design and implement?
[AD-A268843] p 1514 N94-18317
CONTACT: An Air Force technical report on military satellite control technology
[AD-A269375] p 1334 N94-18408
Distributed Computing Design System (DCDS)
[AD-A270435] p 1534 N94-18509
Automatic documentation generation: The interaction of text and examples
[AD-A269670] p 1616 N94-18570
A case study in software maintenance
[AD-A269923] p 1521 N94-18659
Generating object descriptions: Intergrating examples with text
[AD-A269992] p 1522 N94-18680
A user task analysis for command and control systems and its use in human-computer interaction research
[AD-A269877] p 1512 N94-18774
Working visit to the University of L'Aquila, Italy
[FEL-93-B020] p 1618 N94-19452
Results of a joint Navy/Air Force operational test to evaluate USAF Integrated Maintenance Information Systems (IMIS), Interactive Electronic Technical Manual (IETM) technology applied to the F/A-18 aircraft
[AD-A271322] p 1619 N94-19571
MANAGEMENT INFORMATION SYSTEMS
EDMS: Engineering data management system. User's reference
[PB93-187391] p 1614 N94-18119
Corporate Information Management (CIM) report on the simulation processes, version 2.0
[AD-A269119] p 1617 N94-18770
Denver TMA assessment
[NASA-CR-4554] p 1315 N94-18844
Results of a joint Navy/Air Force operational test to evaluate USAF Integrated Maintenance Information Systems (IMIS), Interactive Electronic Technical Manual (IETM) technology applied to the F/A-18 aircraft
[AD-A271322] p 1619 N94-19571

A comparison Air Force data systems --- Comments on IDA Paper P-2863
[AD-A270662] p 1619 N94-19780

MANAGEMENT METHODS
Present evolution of tools management
[CRIF-MC-102] p 1444 N94-17964
Quality, management, and the interplay of self-assessment, process assessments, and performance-based observations
[DE93-018787] p 1448 N94-19336

MANAGEMENT PLANNING
Current information technology resource requirements of the federal government: Fiscal year 1994
p 1612 N94-17756
Safeguarding our energy future
[DE93-016001] p 1466 N94-18109
The organizational preparation of existing relational databases for the integration of expert systems
[AD-A268823] p 1614 N94-18191
Environmental restoration and waste management five-year plan, fiscal years 1994-1998. Volume 3: Public concerns
[DOE/S-00097P-VOL-3] p 1475 N94-18835
Computing professionals: Changing needs for the 1990's
[B-030] p 1515 N94-19401
Strategic plan, 1991: A strategy for leadership in space through excellence in space science and applications
[NASA-TM-109256] p 1611 N94-19434

MANAGEMENT SYSTEMS
Carbon Dioxide Information Analysis Center: FY 1992 activities
[DE93-013845] p 1471 N94-17774
User's manual of Tokamak Simulation Code
[DE93-788388] p 1586 N94-18212
Reference model for project support environments, version 1.0
[AD-A269110] p 1520 N94-18251
The J85 cost/benefit engine study
[AD-A269280] p 1320 N94-18333

MANEUVERABILITY
Predicted structural response of the lightweight-interceptor technology demonstration vehicle
[DE93-014676] p 1333 N94-17782
An investigation of fighter aircraft agility
[NASA-CR-194608] p 1318 N94-19448

MANEUVERABLE SPACECRAFT
Dynamic characterization of a lightweight, highly maneuverable spacecraft using modal and finite element analyses
[DE93-018095] p 1335 N94-18942

MANGANESE ALLOYS
Bibliography on silicides
[AD-A270516] p 1374 N94-19532

MANGANIN (TRADEMARK)
Deep ion implantation into manganin to modify its pressure and electrothermocharacteristics
[DE93-630229] p 1359 N94-18218

MANIFOLDS (MATHEMATICS)
(1,1)-geodesic maps into Grassmann manifolds
[DE93-624799] p 1545 N94-17684
Groups on transformations in Finslerian spaces
[DE93-624765] p 1606 N94-17794
Some remarks on integrable Hamiltonian systems with two degrees of freedom
[DE93-624766] p 1546 N94-17815
A reduction of the globalization and U(1)-covering
[DE93-624769] p 1546 N94-17817
About structurally stable generating mechanism for invariant hyperbolic sets
[DE93-629858] p 1561 N94-18150
Path integrals on warped product manifolds
[DE93-629859] p 1561 N94-18151

MANIPULATORS
Joint stiffness estimation based on force sensor measurements in industrial manipulators
[REPT-92-053] p 1443 N94-17937
Efficient dynamic modeling of manipulators containing closed kinematic loops
[REPT-92-083] p 1444 N94-17940
Direct kinematics solution architectures for industrial robot manipulators: Bit-serial versus parallel
p 1399 N94-18358
In-situ growth monitoring of molecular beam epitaxy processes
[AD-A269287] p 1598 N94-18616
Cooperative control of multiple space manipulators
[AD-A270291] p 1445 N94-18813
Adaptive path planning: Algorithm and analysis
[DE93-008348] p 1523 N94-18926

MANNED MARS MISSIONS
Space exploration initiative
[NASA-TM-109366] p 1323 N94-18981

MANNED SPACE FLIGHT
Human Transportation System (HTS) study: Executive summary
[NASA-TM-104780] p 1332 N94-18669
Human Transportation System (HTS) study, volume 1
[NASA-TM-104779] p 1332 N94-18670
Return to space
[NASA-TM-109356] p 1332 N94-18955

MANUALS
Results of a joint Navy/Air Force operational test to evaluate USAF Integrated Maintenance Information Systems (IMIS), Interactive Electronic Technical Manual (IETM) technology applied to the F/A-18 aircraft
[AD-A271322] p 1619 N94-19571

MANUFACTURING
Factors which affect fatigue strength of fasteners
[DE93-017272] p 1453 N94-18084
Autonomous neural network controllers for adaptive material handling
[AD-A268908] p 1540 N94-18331
Performance of defect-tolerant set-associative cache memories p 1398 N94-18346
High-efficiency silicon concentrator cell commercialization
[DE93-018491] p 1467 N94-18409
Workshop on Innovation in Materials Processing and Manufacture: Exploratory Concepts for Energy Applications
[DE93-017674] p 1467 N94-18478
New applications for high average power beams
[DE93-018845] p 1439 N94-18522
Materials processing and manufacturing technologies for diamond substrates multichip modules
[AD-A268989] p 1599 N94-18764
Integrated circuits: Resistless processing simplifies production and cuts costs
[DE93-018069] p 1405 N94-18941
Conceptual design of a sodium sulfur cell for US electric van batteries
[DE93-018683] p 1405 N94-19035
MODIL cryocooler producibility demonstration project results
[DE93-017981] p 1335 N94-19275
Manufacturing technology
[DE93-019580] p 1381 N94-19480
Incology 908 database report: On process-structure-property relationship
[DE93-017616] p 1366 N94-19546
Shell designs
[AD-A270656] p 1460 N94-19606
Program descriptions
[NSF-92-123] p 1531 N94-19619
Amorphous silicon batch process cost analysis
[DE93-018203] p 1470 N94-19760

MANY BODY PROBLEM
The physics of cellular automata and coherence and chaos in classical many-body dynamical systems
[DE93-018021] p 1561 N94-18177
A parallel hashed oct-tree N-body algorithm
[DE93-012654] p 1526 N94-19205

MAPPING
CTD oxygen, tracer and nutrient data from RRS Charles Darwin Cruises 58/59 in the NE Atlantic as part of Vivaldi 1991
[IOS-296-1992] p 1496 N94-18065
SeaSoar CTD, fluorescence and scalar irradiance data from RRS Charles Darwin Cruises 58/59, NE Atlantic, Vivaldi 1991
[IOS-299-1992] p 1496 N94-18066
Resolution in radar mapping
[AD-A269730] p 1462 N94-18753

MAPS
The Navy tessellated spheroid map projection system: A comprehensive definition
[AD-A269989] p 1462 N94-18677
Color palette considerations for digital map displays
[AD-A269991] p 1462 N94-18679

MARANGONI CONVECTION
An investigation of low Marangoni number fluid flow in a cold corner
[AD-A271317] p 1422 N94-19569

MARINE CHEMISTRY
Faulted structure of the bottom simulating reflector on the Blake Ridge, western North Atlantic
[AD-A271289] p 1500 N94-19745

MARINE ENVIRONMENTS
Development and evaluation of alternative radioanalytical methods, including mass spectrometry for marine materials
[DE93-625117] p 1345 N94-17691
Coastal Ocean Modeling Workshop
[AD-A268955] p 1497 N94-18393
Work plan for the Marine Aerosol Properties and the Thermal Imager Performance Trial (MAPTIP)
[AD-A270026] p 1483 N94-18712
Estimating the oceanic sound speed environmental for long-range acoustic propagation
[AD-A270231] p 1499 N94-18903
Microstructure and texture control of fatigue in hydrogen and marine environments
[AD-A271277] p 1344 N94-19744
Marine-modified LOWTRAN: The contribution of sun glint
[AD-A269547] p 1500 N94-19762

MARINE METEOROLOGY
Ship-produced cloud line of 13 July 1991
[DE93-016879] p 1472 N94-17986
Rapid oceanic cyclogenesis studies
[AD-A269258] p 1490 N94-18265
The activities of equatorial anticyclones of the Western Pacific and the South China Sea and their effects on the tracks of typhoon movement
[AD-A269954] p 1492 N94-18675
Work plan for the Marine Aerosol Properties and the Thermal Imager Performance Trial (MAPTIP)
[AD-A270026] p 1483 N94-18712

MARINE TECHNOLOGY
Fatigue technology assessment and strategies for fatigue avoidance in marine structures. Appendices
[AD-A269053] p 1455 N94-18716

MARKET RESEARCH
Directory of Energy Information Administration Models 1993
[DE93-016987] p 1616 N94-18707

MARKING
A tight lower bound for on-line monotonic list labeling
[TR-478] p 1531 N94-19508

MARKOV CHAINS
Bayesian analysis of ARMA processes: Complete sampling based inference under full likelihoods
[AD-A269168] p 1557 N94-18694
Adaptive uniformization: Technical details
[MEMO-INF-93-22] p 1558 N94-19265
Tandem queues with deterministic service times
[PB93-197465] p 1543 N94-19324
Adaptive uniformization
[MEMO-INF-92-88] p 1558 N94-19385
Finding optimal policies for Markov decision chains: A unifying framework for mean-variance-tradeoffs
[PB93-191930] p 1559 N94-19555
Production and test of pseudo random elements
[ETN-93-95070] p 1559 N94-19610

MARKOV PROCESSES
Longitudinal beam dynamics with RF noise
[DE93-018649] p 1574 N94-18994
Excursion theory of a finite set via resolvents
[REPT-93-19] p 1557 N94-19090
Excursions of stochastic processes, Cox-point processes, entrance behavior and resolvents
[PB93-197291] p 1558 N94-19323
Compensation approach for three or more dimensional random walks
[PB93-197499] p 1543 N94-19326
Sensitivity and uncertainty analysis of Markov reward models
[MEMO-INF-92-89] p 1559 N94-19386
Equivalence and reduction of hidden Markov models
[AD-A270762] p 1560 N94-19768

MARS (PLANET)
Space transfer concepts and analyses for exploration missions
[NASA-CR-193876] p 1332 N94-18820
Spacework 17: O'Leary's Mars
[NASA-TM-109374] p 1629 N94-18966

MARS SURFACE
Working group for planetary system nomenclature
[NASA-CR-194406] p 1626 N94-18841
JPRS report: Science and technology. Central Eurasia: Space
[JPRS-USP-93-004] p 1323 N94-19146

MARSHLANDS
The ecological and environmental impacts of manmade marshes
[AD-A269213] p 1475 N94-18885

MARTENSITE
Continuum modeling of materials that can undergo martensitic phase transitions
[AD-A268767] p 1360 N94-18386

MARTENSITIC TRANSFORMATION
Omega phase formation in shock-loaded zirconium
[DE93-018343] p 1595 N94-18162
Continuum modeling of materials that can undergo martensitic phase transitions
[AD-A268767] p 1360 N94-18386
The longitudinal free vibrations of a fixed-free two-phase elastic bar
[AD-A268768] p 1453 N94-18387
The temperature at the phase boundary during quasi-static motions of a two-phase thermoelastic bar
[AD-A268769] p 1596 N94-18388

Damping in ferrous shape memory alloys
[AD-A271009] p 1366 N94-19775

MASERS

Design of a tunable 4-MW free electron maser for heating fusion plasmas
[DE93-017172] p 1437 N94-18134
Proof of the feasibility of coherent and incoherent schemes for pumping a gamma ray laser
[AD-A269173] p 1440 N94-18880

MASKING

On masking effect
[AD-A269593] p 1541 N94-18462

MASKS

RF vacuum microelectronics
[AD-A270003] p 1403 N94-18667

MASS

Neutrino mass
[DE93-018467] p 1567 N94-18269

MASS BALANCE

A carbon isotope mass balance for an anoxic marine sediment: Isotopic signatures of diagenesis
p 1477 N94-19232

MASS FLOW

Vane optimization for maximum efficiency using Design Of Experiments (DOX)
[AD-A270270] p 1320 N94-18907
Mathematical modeling of the free surface hydrodynamic and of transport in suspensions of non cohesive sediments: Aid to the interpretation of spatial images
[ETN-93-95011] p 1421 N94-19502

MASS SPECTRA

Crossed molecular beam studies of atmospheric chemical reaction dynamics
[DE93-019246] p 1478 N94-19303
Studies of clusters
[DE93-018961] p 1572 N94-19309
Evaluation of mass spectra for a verification database
[PML-1993-12] p 1619 N94-19453

MASS SPECTROMETERS

The minimum detection limits of RDX and TNT deposited on various surfaces as determined by ion mobility spectroscopy
[DE93-018521] p 1378 N94-19042
Novel mass spectrometric instrument for gaseous and particulate characterization and monitoring
[DE93-019992] p 1433 N94-19054
Crossed molecular beam studies of atmospheric chemical reaction dynamics
[DE93-019246] p 1478 N94-19303

MASS SPECTROSCOPY

Development and evaluation of alternative radioanalytical methods, including mass spectrometry for marine materials
[DE93-625117] p 1345 N94-17691
Detonation reaction steps frozen by free expansion and analyzed by mass spectrometry
[DE93-012734] p 1376 N94-17813
Matrix- and substrate-assisted laser desorption for fast DNA sequencing
[DE93-015332] p 1501 N94-18242
Flame structure studies of a lean 20-torr H2/N2O/Ar flame employing molecular beam mass spectrometry
[AD-A268889] p 1349 N94-18456
Novel mass spectrometric instrument for gaseous and particulate characterization and monitoring
[DE93-019992] p 1433 N94-19054
Research program activities of the ORNL Analytical Chemistry Division
[DE93-017938] p 1339 N94-19117
Evaluation of mass spectra for a verification database
[PML-1993-12] p 1619 N94-19453

MASS TRANSFER

Pulse-timing studies of x ray pulsars
[NASA-CR-193778] p 1621 N94-18611
Adsorption analysis of ammonia in an aqueous solution
[DE93-019512] p 1353 N94-19552
Supercritical thermodynamics of sulfur and nitrogen species
[DE93-041221] p 1610 N94-19670

MASSIVE STARS

Detection of accreting gas toward HD 45677: A newly recognized, Herbig Be proto-planetary system
[NASA-CR-189312] p 1621 N94-19288

MASSIVELY PARALLEL PROCESSORS

PARX, kernel of a system for massively parallel computers: Control of communication between processes
[ETN-93-94353] p 1533 N94-17976
A fast adaptive convex hull algorithm on two-dimensional processor arrays with a reconfigurable BUS system
p 1402 N94-18380
Three-dimensional shock wave physics simulations with MIMD PAGOSA on massively parallel computers
[DE93-011682] p 1455 N94-18829
A massively parallel adaptive finite element method with dynamic load balancing
[DE93-012844] p 1536 N94-19161
Experience in implementing a parallel file system
[DE93-012840] p 1536 N94-19188
MIMD massively parallel methods for engineering and science problems
[DE93-019409] p 1531 N94-19562

MATERIALS HANDLING

Autonomous neural network controllers for adaptive material handling
[AD-A268908] p 1540 N94-18331
Workshop on Innovation in Materials Processing and Manufacture: Exploratory Concepts for Energy Applications
[DE93-017674] p 1467 N94-18478
Coordination of software-development activities among sites that are geographically separated
[DE93-019201] p 1524 N94-19076

MATERIALS RECOVERY

Mechanically refuelable zinc/air electric vehicle cells
[DE93-016446] p 1394 N94-17770

MATERIALS SCIENCE

Workshop on Innovation in Materials Processing and Manufacture: Exploratory Concepts for Energy Applications
[DE93-017674] p 1467 N94-18478
Contribution to the identification of nonlinear behavior laws in material mechanics
[ECL-92-36] p 1458 N94-19411

MATERIALS TESTS

Evaluation of materials proposed for the construction of the Plasma Electrode Pockels Cell (PEPC) on beamlet
[DE93-016952] p 1584 N94-17988
Limited Duration of Candidate Materials Exposure Experiment (LDCE): A Complex Autonomous Payload (CAP) using a Get Away Special (GAS) canister
p 1326 N94-19176

MATHEMATICAL LOGIC

Using semantic information for processing negation and disjunction in logic programs
[DE93-017412] p 1614 N94-18099
Verification of VLSI designs p 1400 N94-18363
A refinement for nonmonotonic logic
[REPT-93-21] p 1542 N94-19092
Technical development of a theory of programs
[ETN-93-95058] p 1532 N94-19652

MATHEMATICAL MODELS

On the Debye-Huckel's theory
[DE93-624789] p 1561 N94-17681
Further on the current algebra of WZNW models at and away from criticality
[DE93-624809] p 1545 N94-17686
Direct Monte Carlo simulation of the chemical equilibrium composition of detonation products
[DE93-014559] p 1376 N94-17751
Modeling and new equipment definition for the vibration isolation box equipment system
[NASA-CR-193185] p 1379 N94-17763
Dust in the Small Magellanic Cloud
[NASA-CR-193344] p 1624 N94-17764
CO2 laser with modulated losses: Theoretical models and experiments in the chaotic regime
[DE93-624901] p 1435 N94-17771
Air pollution effects field research facility. 3: UV-B exposure and monitoring system
[DE93-013098] p 1470 N94-17773
A one dimensional numerical model, with an application to the vertical distribution of dissolved oxygen in the ocean
[DE93-018481] p 1495 N94-17779
A radial transmission line material measurement apparatus
[DE93-018508] p 1394 N94-17780
A new multiphase equation of state for iron
[DE93-017629] p 1357 N94-17819
Considerations for the use of the modified line reversal technique for gas temperature measurement
[DE93-015752] p 1576 N94-17857
The value of windpower: An investigation using a qualified production cost model
[DE93-010043] p 1465 N94-17888
A preliminary model for crack-tip hydrogen transport
[NPL-DMM(A)-84] p 1451 N94-17899
On comparison and extensions of control methods for narrow-band disturbance rejection
[REPT-93-015] p 1540 N94-17922
Ratio of specimen thickness to detection area for reliable hydrogen permeation measurement
[NPL-DMM(A)-103] p 1451 N94-17929
TANGO: A notation for describing advanced transaction models
[REPT-93-014] p 1613 N94-17936
Linear parameter identification methods for ARMA models with periodic coefficients
[REPT-92-070] p 1556 N94-17938
Efficient dynamic modeling of manipulators containing closed kinematic loops
[REPT-92-083] p 1444 N94-17940
Kinetic growth of random-like and ballistic-like deposition models
[DE93-624946] p 1595 N94-17956
Format.m: A usage manual. Towards an efficient symbolic-numeric environment: Extending Mathematica's format rules
[MATHS-REPT-A-185] p 1547 N94-17969
Impact response of composite laminates: A guide to closed form solutions
[FFA-TN-1992-33] p 1339 N94-17971
A free boundary eigenvaue problem
[IPP-6/310] p 1584 N94-17981
Summary report for supercritical carbon dioxide extraction and carbonization of Resorcinol-Formaldehyde (RF) foams
[DE93-016924] p 1346 N94-17987
Limitations on the fidelity of 100 fs pulses produced by chirped pulse amplification
[DE93-017167] p 1396 N94-17991
Computational strategies for composite structures
[PB93-195097] p 1452 N94-18079
Cut and paste based modeling with boundary features
[PB93-187250] p 1520 N94-18117
Navigation in hypermedia applications: Modelling and semantics
[REPT-93-034] p 1520 N94-18136
The physics of cellular automata and coherence and chaos in classical many-body dynamical systems
[DE93-018021] p 1561 N94-18177
Non-linear flight dynamics p 1319 N94-18240
Mechanical modeling of the growth of salt structures
[DE93-015342] p 1596 N94-18243
A rational design change methodology based on experimental and analytical modal analysis
[DE93-018537] p 1521 N94-18271
Hydrodynamic instability modeling for ICF
[DE93-018634] p 1567 N94-18274
Bayesian model choice: Asymptotics and exact calculations
[AD-A269067] p 1557 N94-18516
Microwave (SSM/I) Estimates of the Precipitation Rate to Improve Numerical Atmospheric Model Forecasts
[NASA-CR-193566] p 1491 N94-18602
Diabatic forcing and initialization with assimilation of cloud and rain water in a forecast model: Methodology
p 1491 N94-18603
Moist wind relationships p 1492 N94-18607
Initialization and assimilation of cloud and rainwater in a regional model p 1492 N94-18608
Full Boltzmann discrete spectral wave model, implementation and nondimensional tests
[AD-A269885] p 1498 N94-18685
Soft X Ray Projection Lithography. Organization of the 1993 photonics science optical meetings
[AD-A269159] p 1579 N94-18693
Bayesian analysis of ARMA processes: Complete sampling based inference under full likelihoods
[AD-A269168] p 1557 N94-18694
Directory of Energy Information Administration Models 1993
[DE93-016987] p 1616 N94-18707
Constant-thrust orbit-raising transfer charts
[AD-A269088] p 1334 N94-18718
Solar radiation in Saudi Arabia
[AD-A269970] p 1493 N94-18781
Numerical modelling of fringing fields and their use for complex permittivity measurements at high frequencies
[AD-A270198] p 1388 N94-18782
Knowledge sources for an intelligent MCM analyzer
[AD-A269224] p 1542 N94-18887
Flow volumes for interactive vector field visualization
[DE93-017102] p 1418 N94-18888
BACKSCATTER.FOR: A program to calculate the backscattering strength of an inhomogeneous seabed
[AD-A269235] p 1499 N94-18910
The intelligent processing of materials
[AD-A269250] p 1362 N94-18923
Dynamic characterization of a lightweight, highly maneuverable spacecraft using modal and finite element analyses
[DE93-018095] p 1335 N94-18942
Viscosity in the edge of tokamak plasmas
[DE93-018039] p 1588 N94-18988
A least-squares computational tool kit
[DE93-018400] p 1557 N94-19011
Modeling of the formation of microporosity in alloys
[DE93-017733] p 1364 N94-19044
Plastic mechanism analysis of T-joints in RHS subject to combined bending and concentrated force
[PB93-195774] p 1456 N94-19061

Deterministic growth-dispersal models and branching random walk
[REPT-93-14] p 1550 N94-19088
Similarity solutions for gravity-dominated spreading of a lens of organic contaminant
[REPT-93-24] p 1420 N94-19139
Inverse scattering of surface waves: A new look at surface consistency
[REPT-93-25] p 1486 N94-19140
Modelling software for structure metrics
[MEMO-INF-93-13] p 1526 N94-19200
Molecular dynamics modeling of the mechanical behavior of metallic multilayers
[DE93-017972] p 1365 N94-19263
A unified performability evaluation framework for computer and communication systems
[MEMO-INF-93-21] p 1537 N94-19264
Adaptive uniformization: Technical details
[MEMO-INF-93-22] p 1558 N94-19265
Design for cyclic loading endurance of composites
[NASA-TM-106407] p 1457 N94-19351
Modelization, numerical simulation and optimal control of NET tokamak plasma configuration evolution for the future generation of fusion reactors
[ETN-93-95019] p 1591 N94-19364
Tetravalent chromium (Cr(4+)) as laser-active ion for tunable solid-state lasers
[NASA-CR-194529] p 1441 N94-19369
Numerical analysis of pressure meter tests: Application of parameter identification of soils behavior
[ECL-92-52] p 1487 N94-19380
Contribution to the modelling and the identification of nonlinear mechanical systems
[ECL-92-32] p 1529 N94-19409
Contribution to the identification of nonlinear behavior laws in material mechanics
[ECL-92-36] p 1458 N94-19411
Numerical prediction of transition of the F-16 wing at supersonic speeds
[NASA-CR-194407] p 1312 N94-19433
Contribution to the study of a symmetric film flow (with or without tensio-active elements)
[ECL-93-13] p 1421 N94-19461
Computational Methods for Crashworthiness
[NASA-CP-3223] p 1458 N94-19465
Impact analysis of composite aircraft structures
p 1458 N94-19468
Development and use of computational techniques in Army Aviation research and development programs for crash resistant helicopter technology
p 1459 N94-19469
Explicit solution techniques for impact with contact constraints p 1459 N94-19470
Mathematical sciences, technology, and economic competitiveness
[LC-91-60253] p 1514 N94-19478
Structuration processes in protoplanetary accretion disks
[MPE-243] p 1628 N94-19519
Stability measurements of Rayleigh-Benard convection near the critical state using a spectral model
[MPIS-15/1992] p 1422 N94-19520
Methods for description and control of dynamical systems and their application
[MPIS-17/1992] p 1553 N94-19522
An iterative inverse scattering method for the removal of scattered surface waves
[REPT-93-18] p 1488 N94-19644
Modeling of driver behavior: Information perception, rule and control strategies in experiments and simulations
[ETN-93-95053] p 1510 N94-19649
Remote sensing of Earth terrain
[NASA-CR-194598] p 1464 N94-19681
Updated Contributions to the Twente Workshop on Hamiltonian Graph Theory
[MEMO-1076] p 1554 N94-19683
On Hamilton-connectedness of Cayley graphs
p 1554 N94-19684
Toughness and the cycle structure of graphs
p 1554 N94-19686
The Hopping Lemma p 1554 N94-19687
Cycles containing all vertices of maximum degree
p 1554 N94-19688
Long paths and cycles in tough graphs
p 1554 N94-19689
The complete closure of a graph
p 1555 N94-19690
Twenty odd statements in Twente
p 1555 N94-19691
Generalized closures of graphs p 1555 N94-19692
Two problems related to results of Chvatal-Erdoes
p 1555 N94-19693
Concerning the circumference of certain families of graphs p 1555 N94-19694
Ore-type conditions for cycles through specified vertices p 1555 N94-19695
Hamilton cycles in path-tough graphs
p 1555 N94-19696
Cubic graphs containing k vertex-disjoint subgraphs of given cyclomatic number p 1555 N94-19697
Reports of the 1992 Synoptic Symposium
[KNMI-TR-151] p 1494 N94-19698
HIRLAM p 1494 N94-19699
The WAQUA/CSM-16 model p 1494 N94-19700
The wave forecasting model NEDWAM
p 1495 N94-19701
Amorphous silicon batch process cost analysis
[DE93-018203] p 1470 N94-19760
Equivalence and reduction of hidden Markov models
[AD-A270762] p 1560 N94-19768
A study of the amplification of laser and VLF waves using a simple pendulum model
[AD-A270857] p 1442 N94-19770

MATHEMATICS
Guide to programs, fiscal year 1993
[NSF-92-78] p 1633 N94-19620

MATRICES (MATHEMATICS)
Proposal for a numerical array library
[DE93-015017] p 1516 N94-17786
Differential geometry of CR-submanifolds of a normal almost para contact manifold
[DE93-624764] p 1545 N94-17793
A modified direct preconditioner for indefinite symmetric Toeplitz systems
[DE93-015234] p 1516 N94-17800
A zeta function approach to the semiclassical quantization of maps
[DE93-624774] p 1547 N94-17949
Deformed traces and covariant quantum algebras for quantum groups GL(sub qp)(2) and GL(sub qp)(1/1)
[DE93-629862] p 1561 N94-18153
Phase space representations and quantum probability theory
[DE93-629863] p 1556 N94-18154
Paragrassmann analysis and quantum groups
[DE93-628593] p 1561 N94-18168
On paragrassmann differential calculus
[DE93-628594] p 1548 N94-18169
A multigrid acceleration technique for computing steady solutions to the equations of compressible flow
p 1412 N94-18559
A parallel and pipelined architecture for estimation of direction of arrival using a bilinear transformation method, volume 3
[AD-A270137] p 1389 N94-18897
New insights in GMRES-like methods with variable preconditioners
[REPT-93-10] p 1524 N94-19084
PUMMA: Parallel Universal Matrix Multiplication Algorithms on distributed memory concurrent computers
[DE93-019163] p 1538 N94-19299
The Fourier analysis technique and epsilon-pseudo-eigenvalues
[DE93-018805] p 1551 N94-19337
A comparison of iterative methods for a model coupled system of elliptic equations
[DE93-040482] p 1553 N94-19655
On the computation of versal family of matrices
[RR-892-M] p 1532 N94-19712
Geometric contact for curves and surfaces
[RR-893-M] p 1556 N94-19731

MATRIX MATERIALS
A comprehensive study of matrix fracture mechanisms in fiber-reinforced ceramic matrix composites
[AD-A268809] p 1340 N94-18205
Process relationship as influenced by carbonization rate
[AD-A269680] p 1341 N94-18572
Bibliography on ceramic matrix composites and reinforcing whiskers, platelets, and fibers, 1970-1990
[AD-A270139] p 1371 N94-18750
Experiments and analysis of lateral piezoresistance gauges
[DE93-017874] p 1433 N94-19111

MATRIX METHODS
Improved omit set displacement recoveries in dynamic analysis p 1449 N94-17829
A noniterative improvement of Guyan reduction
p 1449 N94-17833
A methodology to model physical contact between structural components in NASTRAN
p 1450 N94-17836
The respectiveness of response in a bar under static and transient loads
[VTT-TIED-1377] p 1452 N94-17959
Fast-training algorithm for hidden-layer forward-feed neural networks
[AD-A269253] p 1540 N94-18263

MATRIX THEORY
On the computation of versal family of matrices
[RR-892-M] p 1532 N94-19712

MAXIMA
Cycles containing all vertices of maximum degree
p 1554 N94-19688
Concerning the circumference of certain families of graphs p 1555 N94-19694

MAXIMUM ENTROPY METHOD
Exact solution of the generalized time-dependent Jaynes-Cummings Hamiltonian
[DE93-624773] p 1546 N94-17811

MAXIMUM LIKELIHOOD ESTIMATES
EDF tests for normality in linear models after a Box-Cox transformation
[AD-A269068] p 1557 N94-18517
Spectral analysis on the canonical autoregressive decomposition
[AD-A270083] p 1549 N94-18798
Generalized regression trees: Function estimation via recursive partitioning and maximum likelihood
[AD-A271259] p 1560 N94-19726

MAXIMUM PRINCIPLE
Existence of a maximal solution for quasimonotone elliptic systems
[REPT-93-30] p 1550 N94-19153

MAXWELL EQUATION
Advances and applications of ABCI
[DE93-016971] p 1383 N94-18055
Current-potential characteristics of electrochemical systems
[DE93-040303] p 1352 N94-19192

MAXWELL-BOLTZMANN DENSITY FUNCTION
Modelling ideal gas fluorides laser plasmas
[ETN-93-95073] p 1592 N94-19613

MEAN FREE PATH
Wave structure induced by fluid dynamic limits in the Broadwell model
[AD-A268512] p 1410 N94-18385

MEAN SQUARE VALUES
An empirical evaluation of five circular error probable estimation techniques and a method for improving them
[AD-A266528] p 1556 N94-18397
Tracking with time-delayed data in multisensor systems
[AD-A271334] p 1391 N94-19582

MEASURE AND INTEGRATION
Numerical methods for molecular dynamics
[DE93-018321] p 1566 N94-18179

MEASURING INSTRUMENTS
A radial transmission line material measurement apparatus
[DE93-018508] p 1394 N94-17780
Verification of VALISYS cad based CMM software at LLNL
[DE93-013854] p 1517 N94-17911
Measuring machines for digitalizing and measuring complex surfaces, models and matrices
[CRIF-MC-97] p 1444 N94-17963
Simulation of quartz resonators p 1426 N94-18021
Laser induced damage testing: Equipment and techniques
[DE93-017143] p 1437 N94-18060
C-band PARC manual
[FEL-92-B159] p 1383 N94-18070
Belgian Royal Observatory Communications, Series A, No. 104, Geophysics Series No. 175
[COMMUNICATIONS-SER-A-104] p 1482 N94-18622
Recent developments in fast response aerodynamic probe technology p 1431 N94-18645
Experiments and analysis of lateral piezoresistance gauges
[DE93-017874] p 1433 N94-19111
Pantex Plant Meteorological Monitoring Program
[DE93-018495] p 1493 N94-19127
Software quality in test and measurment equipment
[PB93-197846] p 1528 N94-19333
Six degree of freedom fine motion positioning stage based on magnetic levitation
[DE93-017651] p 1446 N94-19547
A comparison of polygraphic and actigraphic monitoring of sleep using a 5-channel programmable-sensitivity actigraph
[AD-A270731] p 1507 N94-19608
The Electron Drift Instrument for Cluster
p 1329 N94-19630
The Cluster Ion Spectroscopy experiment
p 1329 N94-19631

MECHANICAL ENGINEERING
Research activities, Faculty of Civil Engineering, Delft University of Technology, 1990 - 1991
[PB93-195022] p 1380 N94-19254
Program descriptions
[NSF-92-123] p 1531 N94-19619

MECHANICAL MEASUREMENT
Omega phase formation in shock-loaded zirconium
[DE93-018343] p 1595 N94-18162

MECHANICAL PROPERTIES
Metals 2000 [DE93-016761] p 1355 N94-17752
Microstructural analysis of solid-state resistance welds [DE93-017295] p 1443 N94-17761
Atlas of formability: ALLVAC 718 [AD-A268304] p 1357 N94-17804
Measurement and analysis of three 1.5-GPa shock-wave profiles in copper [DE93-016559] p 1451 N94-17864
Mechanical properties of excimer laser modified titanium surfaces [DE93-012663] p 1358 N94-17875
Impact modeling with smooth particle hydrodynamics [DE93-016561] p 1451 N94-17906
Ceramic films and interfaces: Chemical and mechanical properties [DE93-018416] p 1369 N94-18163
Study of mechanical behavior and internal structure of ferritic nanocrystalline material [DE93-019264] p 1596 N94-18184
Mechanical properties of fiber-reinforced YBa2Cu3O(x) and Bi2Sr2CaCu2O(x) bars [DE93-017689] p 1454 N94-18479
Carbon/carbon composites coated with SiC by chemical vapor deposition [AD-A269934] p 1341 N94-18544
Pressureless densification of ceramic matrix composites [AD-A269137] p 1371 N94-18691
Mechanical properties and impact damage resistance of composites fabricated by low cost, vacuum assisted, resin transfer molding [AD-A270361] p 1342 N94-18702
Mechanical-property changes of structural composite materials after low-temperature proton irradiation: Implications for use in SSC magnet systems [DE93-016735] p 1343 N94-18763
Intelligent materials systems and structures. Part 4: The influence of thermomechanical loading on the life of shape memory alloys [PB93-195923] p 1363 N94-18952
High dose effects in neutron irradiated face-centered cubic metals [DE93-017671] p 1364 N94-19043
Polymer technology publication. Series no. 14, 1993 [PB93-195964] p 1372 N94-19052
Molecular dynamics modeling of the mechanical behavior of metallic multilayers [DE93-017972] p 1365 N94-19263
Low-aluminum-content iron-aluminum alloys [DE93-017862] p 1365 N94-19274
Microstructure of the interfacial zone around aggregate particles in concrete [PB93-195790] p 1380 N94-19322
Ni-Al2O3 solid state binding: Elaboration, state of thermal constraints, mechanical behavior [ECL-92-31] p 1366 N94-19436
New aircraft materials and structures [MBB-LME-202-S-PUB-502-A] p 1319 N94-19496
Incology 908 database report: On process-structure-property relationship [DE93-017616] p 1366 N94-19546
Ceramic technology project data base [DE93-019360] p 1374 N94-19561
Picoindentation hardness measurements using atomic force microscopy [AD-A270877] p 1604 N94-19579
Advanced civil engineering materials based on inorganic polymers [AD-A270837] p 1374 N94-19600
Simulation of dynamic material response with the PAGOSA code [DE93-018285] p 1460 N94-19603
Structure and properties of polycarbonate alloys [ETN-93-95071] p 1375 N94-19611
Commercialization effort in support of electroslag-casting technology [DE93-017988] p 1366 N94-19733

MECHANICAL SHOCK
A finite element scheme for shock capturing [AD-A270182] p 1417 N94-18755

MEDIA
Your GAS experiment and the media or why does that other can get all of the publicity? p 1327 N94-19182

MEDICAL ELECTRONICS
Transcutaneous Analyte Measuring Methods (TAMM) [AD-A271387] p 1408 N94-19756

MEDICAL EQUIPMENT
Legacy of the X Ray Laser Program [DE93-019550] p 1442 N94-19554
Transcutaneous Analyte Measuring Methods (TAMM) [AD-A271387] p 1408 N94-19756

MELT SPINNING
Melt spinning study [NASA-CR-193823] p 1380 N94-19423

MELTING
Low-aluminum-content iron-aluminum alloys [DE93-017862] p 1365 N94-19274
Proceedings: International Symposium on Thermal Engineering and Science for Cold Regions [AD-A270636] p 1487 N94-19529

MELTING POINTS
Studies on gel electrolyte based on nitrile-butadiene copolymers [AD-A269450] p 1370 N94-18282

MELTS (CRYSTAL GROWTH)
Polymer technology publication. Series no. 14, 1993 [PB93-195964] p 1372 N94-19052

MEMBRANE STRUCTURES
Cellular and molecular level responses after radiofrequency radiation exposure, alone or in combination with x rays or chemicals [AD-A268189] p 1501 N94-17729
Benchmarking the QUAD4/TRIA3 element p 1450 N94-17837

MEMBRANES
Morphology of polymerized membranes on an amorphous substrate at molecular resolution by AFM [AD-A268760] p 1370 N94-18403
Intracellular physiology of the rat suprachiasmatic nucleus: Electrical properties, neurotransmission and effects of neuromodulators [AD-A268829] p 1505 N94-18538
Molten carbonate fuel cell networks: Principles, analysis, and performance [DE93-000281] p 1468 N94-18925

MEMORY
Cortical substrate of haptic representation [AD-A269583] p 1508 N94-18304
The identification of the computational significance of key neurobiological characteristics found in a number of telencephalic brain regions [AD-A269374] p 1505 N94-18407
Comparing performance on implicit memory tests [AD-A269900] p 1508 N94-18657
Visual perception of features and objects [AD-A269879] p 1508 N94-18682
First results with utile distinction memory for reinforcement learning [TR-446] p 1610 N94-19485

MEMORY (COMPUTERS)
Superconducting/semiconducting hybrids and advance memory concepts for superconducting electronics [AD-A268679] p 1397 N94-18312
An SEU immune logic family p 1398 N94-18342
Performance of defect-tolerant set-associative cache memories p 1398 N94-18346
An improved distributed arithmetic architecture p 1398 N94-18349
Low power signal processing research at Stanford p 1393 N94-18351
Technology, design, simulation, and evaluation for SEP-hardened circuits p 1399 N94-18352
Formal verification of an MMU and MMU cache p 1400 N94-18366
A programming paradigm for distributed-memory computers [DE93-018336] p 1524 N94-19024
Performance and scalability aspects of directory-based cache coherence in shared-memory multiprocessors [DE93-016442] p 1536 N94-19115
Static Computer Memory Integrity Testing (SCMIT): An experiment flown on STS-40 as part of GAS payload G-616 p 1325 N94-19169
Radiation hardened microprocessor for small payloads p 1327 N94-19184
Wide-address spaces: Exploring the design space [MEMO-INF-92-77] p 1537 N94-19219
Toward a high performance distributed memory climate model [DE93-019156] p 1494 N94-19298
PUMMA: Parallel Universal Matrix Multiplication Algorithms on distributed memory concurrent computers [DE93-019163] p 1538 N94-19299
Data-Machine Independence (DMI) [DE93-018008] p 1539 N94-19734

MENISCI
Finite element modeling of evaporation and condensation during sol-gel film and fiber formation [DE93-017655] p 1345 N94-17820

MENTAL PERFORMANCE
A method for cognitive task analysis [IZF-1992-B5] p 1508 N94-17967
Cognitive limitations in coordination in hierarchical information processing structures [AD-A268825] p 1616 N94-18535
Comparing performance on implicit memory tests [AD-A269900] p 1508 N94-18657
Research on man-machine productivity in aviation at Human Engineering Institute of Hangzhou University [AD-A269952] p 1512 N94-18673
Cognitive ability and whole-body rotation [IZF-1993-B-4] p 1510 N94-19440

MERCURY CADMIUM TELLURIDES
IR materials producibility [AD-A268849] p 1577 N94-18223

MESON-NUCLEON INTERACTIONS
Unitary (pi)(pi)N model of N* excitations in (pi)N and (gamma)N reactions [DE93-017422] p 1568 N94-18826
Eta-nucleon interaction and nuclear production of eta mesons [DE93-018469] p 1571 N94-19259

MESONS
Gauge unification of fundamental forces: The story of success [DE93-624813] p 1383 N94-17952
Beauty without charm in B-meson decays [PREPRINT-732] p 1565 N94-17972
Unitary (pi)(pi)N model of N* excitations in (pi)N and (gamma)N reactions [DE93-017422] p 1568 N94-18826
Investigation of physical structures and interactions at high energy [DE93-014444] p 1574 N94-18927

MESOSCALE PHENOMENA
The vertical distribution of heating in the tropical atmosphere [AD-A270452] p 1490 N94-18514
Diabatic forcing and initialization with assimilation of cloud and rain water in a forecast model: Methodology p 1491 N94-18603
Moist wind relationships p 1492 N94-18607
Initialization and assimilation of cloud and rainwater in a regional model p 1492 N94-18608
Preparation of data assimilation and model evaluation experiment data sets [AD-A269996] p 1498 N94-18665
JPRS report: Science and technology. Central Eurasia: Earth Sciences [JPRS-UES-93-004] p 1481 N94-19209

MESOSPHERE
Internal instability of nonparallel flow on an equatorial beta-plane [AD-A268927] p 1490 N94-18486

MESSAGE PROCESSING
Embedded Computer Performance Measurement (ECPM). Advanced avionics subsystems and technology multiprocessor ECPM software documentation [AD-A269921] p 1320 N94-18658
Efficient transparent optimistic rollback recovery for distributed application programs [AD-A268981] p 1522 N94-18696
Corporate Information Management (CIM) report on the simulation processes, version 2.0 [AD-A269119] p 1617 N94-18770
Experience in implementing a parallel file system [DE93-012840] p 1536 N94-19188
Message passing in PUMA [DE93-012841] p 1537 N94-19206
Abstracting inter-object communications using composition filters [MEMO-INF-92-78] p 1528 N94-19220
Automated processing of military messages according to ADatP-3 [FEL-92-A044] p 1393 N94-19798

MESSAGES
Securing electronic mail: The risks and future of electronic mail [DE93-017187] p 1383 N94-17994
Message passing in PUMA [DE93-012841] p 1537 N94-19206

METABOLISM
Metabolic changes and hemodynamic dysfunction following hypothermic shock [AD-A269780] p 1506 N94-18598
Microgravity research in plant biological systems: Realizing the potential of molecular biology p 1503 N94-19216
A study of the effect of hydrocarbon structure on the induction of male rat nephropathy and metabolic structure [AD-A270969] p 1504 N94-19789

METABOLITES
Nuclear Medicine Program [DE93-013896] p 1504 N94-17699

METAL AIR BATTERIES
Mechanically refuelable zinc/air electric vehicle cells [DE93-016446] p 1394 N94-17770

METAL BONDING
Metal/ceramic interfaces: Relationships between structure and chemistry [AD-A268792] p 1369 N94-18188
High performance YBCO films [AD-A269090] p 1599 N94-18719

Joining and Adhesion of Advanced Inorganic Materials Symposium
[AD-A269748] p 1342 N94-18720
Binding of copper to nanocavity surfaces in silicon
[DE93-019073] p 1364 N94-19080

METAL COATINGS
Thermal analysis of coatings and substrate materials during a disruption in fusion reactors
[DE93-017688] p 1588 N94-18971

METAL COMBUSTION
Metal slurry droplet and spray combustion
[AD-A269648] p 1349 N94-18736

METAL CRYSTALS
Photorefractive tungsten bronze crystals for optical computing
[AD-A268859] p 1596 N94-18320
The effect of crystallographic orientation on the performance of single crystal tungsten subscale penetrators
[AD-A268988] p 1597 N94-18468

METAL FATIGUE
Factors which affect fatigue strength of fasteners
[DE93-017272] p 1453 N94-18084
Development of the microstructure based stochastic life prediction models
[AD-A269880] p 1454 N94-18683
Fatigue resistant Ti3Al composites
[AD-A270305] p 1341 N94-18692
Development of the microstructure based stochastic life prediction model
[AD-A269742] p 1361 N94-18742
Intelligent materials systems and structures. Part 4: The influence of thermomechanical loading on the life of shape memory alloys
[PB93-195923] p 1363 N94-18952

METAL FIBERS
Aerosol filtration with steel fiber filters
[DE93-016990] p 1380 N94-18710

METAL FILMS
Superhardness effect in Au/Ni multilayers
[DE93-016444] p 1357 N94-17860
Infrared detection with high-(Tc bolometers and response of Nb tunnel junctions to picosecond voltage pulses
[DE93-016963] p 1595 N94-17989
Metal Film Surface Plasmon Resonance (MFSPR) fibre couplers
[AD-A268871] p 1579 N94-18635

METAL FUELS
Aluminum powder/water reaction ignited by electrical pulsed power
[AD-A269223] p 1376 N94-17840

METAL HYDRIDES
Structural stability of 1100 C heated Pd/k during absorption cycling in protium
[DE93-016270] p 1346 N94-18048

METAL IONS
Modified aequorin shows increased bioluminescence activity
[AD-A268774] p 1347 N94-18185
Novel electrochemical materials prepared by sol-gel chemistry
[AD-A269060] p 1578 N94-18405
Kinetic studies of electrochemical generation of Ag(II) ion and catalytic oxidation of selected organics
[DE93-016601] p 1352 N94-19240
Tetravalent chromium (Cr(4+)) as laser-active ion for tunable solid-state lasers
[NASA-CR-194529] p 1441 N94-19369

METAL JOINTS
Wetting behavior of alternative solder alloys
[DE93-016730] p 1359 N94-18127

METAL MATRIX COMPOSITES
Metals 2000
[DE93-016761] p 1355 N94-17752
Strength optimization of C/Al metal matrix composites produced from prepregs
[DLR-FB-92-39] p 1340 N94-18122
NSWCWODET participation in Space Shuttle mission STS-46
[AD-A268875] p 1332 N94-18321
Fatigue resistant Ti3Al composites
[AD-A270305] p 1341 N94-18692
Wettability and reaction kinetics in metal matrix composites
[AD-A270377] p 1342 N94-18704
Bibliography on ceramic matrix composites and reinforcing whiskers, platelets, and fibers, 1970-1990
[AD-A270139] p 1371 N94-18750
The applications of modified metals in the construction industry
[VTT-TIED-1329] p 1365 N94-19374
Residual strength predictions for fibre metal laminates: The R-curves approach
[LR-717] p 1344 N94-19666
Damage accumulation in advanced metal matrix composites under thermal cycling/creep loadings
[AD-A271207] p 1344 N94-19720
Micromechanics of interfaces in metal matrix composites
[AD-A271012] p 1345 N94-19776

METAL OXIDE SEMICONDUCTORS
Development of analog watch with minute repeater
p 1429 N94-18043
ARPA/CSTO rapid VLSI implementation
[AD-A269170] p 1403 N94-18695
Design of power electronics for TVC EMA systems
[NASA-CR-193839] p 1407 N94-19642

METAL OXIDES
Catalytic hydrocarbon reactions over supported metals
[DE93-018168] p 1345 N94-17808
Surface phases and their influence on metal-oxide interfaces
[DE93-019931] p 1601 N94-19020
Electrocatalysts for oxygen electrodes
[DE93-040446] p 1354 N94-19653

METAL PARTICLES
Metal slurry droplet and spray combustion
[AD-A269648] p 1349 N94-18736
Atomic-scale friction measurements using friction force microscopy. Part 2: Application to magnetic media
[AD-A270759] p 1447 N94-19767

METAL PLATES
Metallurgical evaluation of SRAM 2/SRAM A program mer base plates
[DE93-018689] p 1364 N94-19100
The fire resistance of profiled thin steel sheet structures
[VTT-TIED-1320] p 1380 N94-19373

METAL POWDER
Aluminum powder/water reaction ignited by electrical pulsed power
[AD-A269223] p 1376 N94-17840
Field emission cathode and vacuum microelectronic microwave amplifier development
[AD-A269526] p 1403 N94-18639

METAL PROPELLANTS
Aluminum powder/water reaction ignited by electrical pulsed power
[AD-A269223] p 1376 N94-17840

METAL SHEETS
The fire resistance of profiled thin steel sheet structures
[VTT-TIED-1320] p 1380 N94-19373
Formulation and identification of the anisotropic laws for thin sheets drawing
[ECL-92-55] p 1365 N94-19400

METAL SURFACES
Mechanical properties of excimer laser modified titanium surfaces
[DE93-012663] p 1358 N94-17875
Process for applying high application-temperature coating to heat-sensitive aluminum alloys
[AD-D015823] p 1368 N94-17905
Surface phases and their influence on metal-oxide interfaces
[DE93-019931] p 1601 N94-19020
Binding of copper to nanocavity surfaces in silicon
[DE93-019073] p 1364 N94-19080
Surface species in tribology
[AD-A270970] p 1446 N94-19754

METAL VAPOR LASERS
The copper-pumped dye laser system at Lawrence Livermore National Laboratory
[DE93-014429] p 1435 N94-17723
Safety approaches for high power modular laser operation
[DE93-017213] p 1435 N94-17759
Laser materials processing applications at Lawrence Livermore National Laboratory
[DE93-017976] p 1437 N94-18093
Cutting and drilling studies using high power visible lasers
[DE93-019149] p 1441 N94-19294

METAL VAPORS
Bench-scale screening tests for a boiling sodium-potassium alloy solar receiver
[DE93-018512] p 1469 N94-19040

METAL WORKING
Atlas of formability: Ultimet
[AD-A268352] p 1355 N94-17767
Atlas of formability: HAYNES 556
[AD-A268354] p 1356 N94-17768
Atlas of formability: HAYNES 188
[AD-A268355] p 1356 N94-17769
Atlas of formability: NICKELVAC K-500
[AD-A268351] p 1356 N94-17772
Atlas of formability: Haynes 230
[AD-A268325] p 1356 N94-17788
Atlas of formability: INCONEL 718
[AD-A268350] p 1356 N94-17789
Atlas of formability: Hastelloy C-22
[AD-A268324] p 1356 N94-17796
Atlas of formability: Permalloy - 80 flow stress curves
[AD-A268263] p 1356 N94-17801
Atlas of formability: Nickelvac C-276
[AD-A268264] p 1357 N94-17802
Atlas of formability: Ti-6Al-4V ELI
[AD-A268300] p 1357 N94-17803
Atlas of formability: ALLVAC 718
[AD-A268304] p 1357 N94-17804
Atlas of formability: Waspaloy
[AD-A268323] p 1593 N94-17805
Formulation and identification of the anisotropic laws for thin sheets drawing
[ECL-92-55] p 1365 N94-19400

METAL-GAS SYSTEMS
Effect of oxygen concentration and ordering on vanadium-oxygen alloy vibrational spectra
[DE93-627003] p 1355 N94-17692
Report of the 1991 Workshop on Particle-Material Interactions for Fusion Research
[DE93-788393] p 1573 N94-18156

METAL-METAL BONDING
Beryllium processing technology review for applications in plasma-facing components
[DE93-018396] p 1363 N94-19028

METALLIZING
Development of large-area monolithically integrated silicon-film photovoltaic modules
[DE93-010037] p 1464 N94-17731
RF vacuum microelectronics
[AD-A270003] p 1403 N94-18667
High pressure metallization of Mott Insulators: Magnetic, structural and electronic properties
[DE93-018295] p 1404 N94-18805
Pressure induced metallization of the Mott Insulator 6(sub 2)
[DE93-018296] p 1600 N94-18969
Metallization and charge-transfer gap closure of transition-metal iodides under pressure
[DE93-040301] p 1353 N94-19538

METALLOGRAPHY
Microstructural analysis of solid-state resistance welds
[DE93-017295] p 1443 N94-17761
Dynamical behavior of octahedrite from the Henbury meteorite
[DE93-018834] p 1627 N94-19339

METALORGANIC CHEMICAL VAPOR DEPOSITION
Growth of structures for integrated optoelectronic devices
[AD-A269014] p 1598 N94-18527
Single source precursors for the OMCVD of 3/5 compound semiconductors
[AD-A271147] p 1606 N94-19739
MOCVD-grown InGaAsP heterostructure diode lasers
[AD-A270848] p 1606 N94-19769

METALS
Metals 2000
[DE93-016761] p 1355 N94-17752
Lightweight materials for transportation: Program plan
[DE93-017381] p 1340 N94-18087
A review of the stages of work hardening
[DE93-016456] p 1359 N94-18114
Modified aequorin shows increased bioluminescence activity
[AD-A268774] p 1347 N94-18185
A comparison of wet and dry scrubbing systems for control of metals and dioxin/furan emissions from incinerators
[DE93-017446] p 1474 N94-18502
Self-organized criticality and the Barkhausen effect in amorphous and polycrystalline metals
[AD-A269817] p 1361 N94-18735
Diamond brazed to a metal
[AD-D015877] p 1371 N94-18746
High dose effects in neutron irradiated face-centered cubic metals
[DE93-017671] p 1364 N94-19043
An ab initio Monte Carlo study of low energy positron and electron implantation in elemental metals and multilayers
[DE93-019847] p 1603 N94-19541

METASTABLE STATE
The microstructural mechanism of electromigration failure in narrow interconnects of Al alloys
[DE93-018598] p 1365 N94-19282

METATHESIS
Strained ring energetic binders
[AD-A269056] p 1377 N94-18491

METEOR TRAILS
Meteor burst communications improvement study
[AD-A270866] p 1393 N94-19793

METEORITE COLLISIONS
Search for lunar water ice in cometary impact craters
[AD-A270130] p 1627 N94-18877

METEORITIC COMPOSITION
Dynamical behavior of octahedrite from the Henbury meteorite
[DE93-018834] p 1627 N94-19339
METEOROID SHOWERS
Meteor burst communications improvement study
[AD-A270866] p 1393 N94-19793
METEOROLOGICAL INSTRUMENTS
A rugged, low-cost advanced data acquisition system for field test projects
[DE93-010041] p 1615 N94-18334
METEOROLOGICAL PARAMETERS
Cloudiest year study: An analysis of the 3DNEPH and RTNEPH databases
[AD-A269403] p 1490 N94-18281
Eastern Europe: A climatological study
[AD-A269200] p 1493 N94-18883
Protocol for computation of surface boundary layer parameters used to determine soil moisture flux from meteorological data collected at LLNL, 1992-1993
[DE93-018906] p 1463 N94-19003
Pantex Plant Meteorological Monitoring Program
[DE93-018495] p 1493 N94-19127
Report of the Experts Meeting on Reference Climatological Stations (RCS) and National Climate Data Catalogues (NCC)
[WMO-TD-535] p 1494 N94-19312
Interactive Production Line (IPL) p 1495 N94-19704
METEOROLOGICAL RADAR
A technique for measuring winds in the lower atmosphere using incoherent Doppler lidar
[DE93-017163] p 1488 N94-17758
Boundary layer heat budgets from wind profiler/RASS data: A feasibility study
[DE93-013187] p 1489 N94-18052
SPNDL: A concept for a small satellite Doppler lidar wind sounder p 1327 N94-19181
Investigations of a coherent vector radar technique for the observation of the atmosphere near 10 GHz
[KFK-5068] p 1494 N94-19616
METEOROLOGICAL SATELLITES
Some potential errors in satellite wind estimates using the geostrophic approximation and the thermal wind
[AD-A269784] p 1491 N94-18599
SERCAA cloud analysis integration: Design concepts and interaction with cloud forecast models
[AD-A269104] p 1492 N94-18637
METEOROLOGICAL SERVICES
Integrated Terminal Weather System (ITWS)
[AD-A269884] p 1492 N94-18684
Organized track system: Air ways above the ocean
p 1495 N94-19702
Calamity weather: Environmental calamities and meteorology p 1495 N94-19703
Report of the Second CLICOM Experts Meeting
[WCDMP-19] p 1495 N94-19705
METEOROLOGY
Geography and meteorological studies in the Far East
[DE93-013563] p 1461 N94-17893
Cloud CCN feedback
[DE93-016878] p 1472 N94-17985
Overview of physical oceanographic measurements taken during the Mount Mitchell cruise to ROPME sea area
[DE93-018460] p 1497 N94-18494
An investigation of warm-cloud microphysics using a multi-component cloud model: Interactive effects of the aerosol spectrum
[AD-A270273] p 1493 N94-18812
Eastern Europe: A climatological study
[AD-A269200] p 1493 N94-18883
Pantex Plant Meteorological Monitoring Program
[DE93-018495] p 1493 N94-19127
A survey of current approaches to modelling of hydrological time-series with respect to climate variability and change
[WMO/TD-534] p 1463 N94-19435
Shape of wind gusts at a 130m tower at Wilhelmshaven (Germany)
[BER-BAND-B3] p 1494 N94-19503
Reports of the 1992 Synoptic Symposium
[KNMI-TR-151] p 1494 N94-19698
HIRLAM p 1494 N94-19699
The WAQUA/CSM-16 model p 1494 N94-19700
The wave forecasting model NEDWAM
p 1495 N94-19701
Calamity weather: Environmental calamities and meteorology p 1495 N94-19703
Interactive Production Line (IPL) p 1495 N94-19704
METHANATION
Novel catalysts for methane activation
[DE93-040630] p 1349 N94-18532
The carbon isotope biogeochemistry of (epsilon)CO2 production in a methanogenic marine sediment
p 1477 N94-19233
The carbon isotope biogeochemistry of methane production in anoxic sediments. 1: Field observations
p 1477 N94-19234
Factors that control the stable carbon isotopic composition of methane produced in an anoxic marine sediment p 1477 N94-19235
METHANE
Titanium carbon-hydrogen layers on decorative surfaces p 1375 N94-18010
Fundamental studies of the mechanism of catalytic reactions with catalysts effective in the gasification of carbon solids and the oxidative coupling of methane
[DE93-015262] p 1347 N94-18193
Novel catalysts for methane activation
[DE93-040630] p 1349 N94-18532
Growth, characterization and device development in monocrystalline diamond films
[AD-A270074] p 1599 N94-18797
CDIAC catalog of numeric data and computer model packages
[DE93-017675] p 1475 N94-18832
Land-use related sources of CO2, CH4 and N2O: Current global emissions and projections for the period 1990-2100
[PB93-194819] p 1475 N94-18949
The CAESAR project: Experimental and modeling investigations of methane reforming in a catalytically enhanced solar absorption receiver on a parabolic dish
[DE93-040203] p 1469 N94-19109
Selective methane oxidation over promoted oxide catalysts
[DE93-040002] p 1351 N94-19132
Selective methane oxidation over promoted oxide catalysts
[DE93-040001] p 1351 N94-19150
Carbon Isotope Biogeochemistry of Methane from Anoxic Sediments
[NASA-CR-194620] p 1477 N94-19231
Analysis of satellite-derived ozone and water vapor measurements
[NASA-CR-193810] p 1486 N94-19237
Faulted structure of the bottom simulating reflector on the Blake Ridge, western North Atlantic
[AD-A271289] p 1500 N94-19745
METHYL COMPOUNDS
Photodissociation studies of polyatomic free radicals
[AD-A270084] p 1350 N94-18799
METRIC SPACE
Differential geometry of CR-submanifolds of a normal almost para contact manifold
[DE93-624764] p 1545 N94-17793
Geometrical pattern learning
[DE93-017641] p 1542 N94-19007
Excursion theory of a finite set via resolvents
[REPT-93-19] p 1557 N94-19090
METROLOGY
Soft X Ray Projection Lithography. Organization of the 1993 photonics science optical meetings
[AD-A269159] p 1579 N94-18693
MEXICO
The Mexico City 1991 lidar measurements campaign
[DE93-019960] p 1478 N94-19272
MICA
The direct synthesis of organic and organometallic-containing MICA-type aluminosilicates
[DE93-019001] p 1373 N94-19321
MICHELSON INTERFEROMETERS
Suppression of backscatter and stray reflection induced phase noise in Michelson interferometers
[AD-D015809] p 1382 N94-17902
On the Michelson-Morley experiment
[DE93-629908] p 1608 N94-18268
Developmental testing of a prototype all-reflection Michelson interferometer
[AD-A269064] p 1430 N94-18406
MICROANALYSIS
Detection of single molecules in microspheres
[DE93-017776] p 1567 N94-18493
Atomic resolution electron energy loss spectroscopy in the scanning transmission electron microscope
[DE93-015334] p 1352 N94-19239
MICROCHANNELS
High- and low-temperature bonding techniques for microstructures
[DE93-017173] p 1595 N94-17992
Active neutral particle diagnostics for high temperature plasma
[DE93-788457] p 1586 N94-18214
Thermal stresses in the microchannel heatsink cooled by liquid nitrogen
[DE93-018660] p 1418 N94-18995
MICROCRACKS
Helium-induced weld degradation of HT-9 steel
[DE93-015981] p 1358 N94-17915
Initiation and growth of microcracks in high strength steel butt welds
[AD-A268751] p 1454 N94-18466
Process relationship as influenced by carbonization rate
[AD-A269680] p 1341 N94-18572
A numerical analysis of crack growth in brittle microcracking composites
[DE93-011562] p 1343 N94-18914
MICROELECTRONICS
Aerogels for microelectronic applications: Fast, inexpensive, and light as air
[DE93-017170] p 1395 N94-17882
Silicon micro-actuator p 1408 N94-18017
RF vacuum microelectronics
[AD-A269454] p 1396 N94-18284
Update on parts SEE susceptibility from heavy ions
[AD-A268735] p 1596 N94-18316
Field emission cathode and vacuum microelectronic microwave amplifier development
[AD-A269526] p 1403 N94-18639
RF vacuum microelectronics
[AD-A270003] p 1403 N94-18667
Engineering research, development and technology thrust area report, FY92
[DE93-016334] p 1632 N94-18856
Integrated circuits: Resistless processing simplifies production and cuts costs
[DE93-018069] p 1405 N94-18941
Optoelectronic packaging: A review
[DE93-040059] p 1515 N94-19535
Simulation of the behavior of micro-electronic capacitive pressure sensors
[LAAS-93190] p 1434 N94-19659
MICROGRAVITY
Spacelab 3
[NASA-TM-108750] p 1323 N94-18849
Characterization of fluid physics effects on cardiovascular response to microgravity (G-572)
p 1323 N94-19163
MUZO flight experience with the programmable multizone furnace p 1324 N94-19167
Space Applications Industrial Laser System (SAILS)
p 1325 N94-19173
Space Life Sciences Research: The Importance of Long-Term Space Experiments
[NASA-TM-4502] p 1502 N94-19210
Space research on organs and tissues
p 1503 N94-19214
A scientific role for Space Station Freedom: Research at the cellular level p 1503 N94-19215
Microgravity research in plant biological systems: Realizing the potential of molecular biology
p 1503 N94-19216
Life: Origin and evolution on Earth--How can we escape? p 1503 N94-19217
MICROGRAVITY APPLICATIONS
The first flight of the QUESTS GAS payload G-521
p 1325 N94-19170
MICROHARDNESS
Superhardness effect in Au/Ni multilayers
[DE93-016444] p 1357 N94-17860
Developing and understanding the high temperature behavior of niobium aluminides and niobium aluminide composites
[AD-A268874] p 1341 N94-18636
MICROINSTRUMENTATION
High- and low-temperature bonding techniques for microstructures
[DE93-017173] p 1595 N94-17992
MICROMACHINING
Fabrication process for cantilever beam micromechanical switches
[AD-A269716] p 1404 N94-18749
Cutting and drilling studies using high power visible lasers
[DE93-019149] p 1441 N94-19294
MICROMECHANICS
Fabrication process for cantilever beam micromechanical switches
[AD-A269716] p 1404 N94-18749
The intelligent processing of materials
[AD-A269250] p 1362 N94-18923
Computational mechanics of composite materials
[PB93-195782] p 1343 N94-19281
Subcritical crack growth in continuous-fiber reinforced ceramic composites
[DE93-018784] p 1343 N94-19335
Micromechanics of interfaces in metal matrix composites
[AD-A271012] p 1345 N94-19776
MICROMETERS
Proceedings of the 4th European Congress on Chronometry
[ETN-93-94633] p 1424 N94-18006

Development of ultrasonic motor and application to silent alarm analog quartz watch p 1425 N94-18016
MICROMOTORS
Electrostatic micrometers: Recent developments and perspectives of uses in clock and watch making p 1425 N94-18014
Piezo-electric motor: Perspectives and miniaturization p 1408 N94-18015
Silicon micro-actuator p 1408 N94-18017
Simulation of a quartz-clockwork p 1426 N94-18019
Electric measurement of Lavet motors p 1408 N94-18022
New current reduction system for watches with integrated current regulation motors p 1428 N94-18034
Some variation in the movement base of the ETA 251 series p 1428 N94-18035
MICROORGANISMS
Improving the biodegradative capacity of subsurface bacteria
[DE93-013171] p 1501 N94-18051
Microbial degradation of poly-b-esters: A mechanistic study, cellulose acetate biodegradability
[AD-A271368] p 1374 N94-19586
MICROPARTICLES
Detection of single molecules in microspheres
[DE93-017776] p 1567 N94-18493
Feasibility study: Monodisperse polymer particles containing laser-excitable dyes
[NASA-CR-194280] p 1373 N94-19402
MICROPHONES
Acoustic intensity measurements in the presence of low Mach number flow
[AD-A269995] p 1562 N94-18664
MICROPLASMAS
Rapid analysis of mixed waste samples via the optical emission from laser initiated microplasmas
[DE93-014563] p 1582 N94-17727
MICROPOROSITY
Modeling of the formation of microporosity in alloys
[DE93-017733] p 1364 N94-19044
MICROPROCESSORS
Some variation in the movement base of the ETA 251 series p 1428 N94-18035
Experience with custom processors in space flight applications p 1336 N94-18338
Simplified microprocessor design for VLSI control applications p 1400 N94-18359
Verification of VLSI designs p 1400 N94-18363
VLSI for high-speed digital signal processing
[AD-A270406] p 1404 N94-18706
Motorola MC68040 high-speed design using Altera EPM5000 erasable programmable logic devices
[DE93-017635] p 1523 N94-19006
VPU(tm) demonstration mission vicinity processor unit(tm) overview p 1325 N94-19171
Radiation hardened microprocessor for small payloads p 1327 N94-19184
On-line test methods of microprocessor based systems
[ETN-93-95006] p 1530 N94-19496
MICROSCOPES
Center-of-Excellence: Microlaser microscope
[DE93-040686] p 1442 N94-19658
Atomic-scale friction measurements using friction force microscopy. Part 2: Application to magnetic media
[AD-A270759] p 1447 N94-19767
MICROSCOPY
Morphology of polymerized membranes on an amorphous substrate at molecular resolution by AFM
[AD-A268760] p 1370 N94-18403
Tunneling microscopy of semiconductors
[AD-A270232] p 1600 N94-18904
Picoindentation hardness measurements using atomic force microscopy
[AD-A270877] p 1604 N94-19579
Atomic-scale friction measurements using friction force microscopy. Part 1: General principles and new measurement techniques
[AD-A270749] p 1446 N94-19678
Atomic-scale friction and microfriction of graphite and diamond using friction force microscopy
[AD-A270952] p 1605 N94-19679
Atomic-scale friction measurements using friction force microscopy. Part 2: Application to magnetic media
[AD-A270759] p 1447 N94-19767
MICROSEISMS
Macroseismic study of the Dour (Belgium) earthquakes of 22 March 1987 and of Gulpen (Belgium) 17 October 1988 p 1482 N94-18625
MICROSTRUCTURE
Modeling microstructural evolution and the mechanical response of superplastic materials
[DE93-014417] p 1355 N94-17711
Microstructural analysis of solid-state resistance welds
[DE93-017295] p 1443 N94-17761
Atlas of formability: Ultimet
[AD-A268352] p 1355 N94-17767
Atlas of formability: HAYNES 556
[AD-A268354] p 1356 N94-17768
Atlas of formability: HAYNES 188
[AD-A268355] p 1356 N94-17769
Atlas of formability: NICKELVAC K-500
[AD-A268351] p 1356 N94-17772
Atlas of formability: Nickelvac C-276
[AD-A268264] p 1357 N94-17802
Plastic anisotropy in MoSi2 single crystals
[DE93-012650] p 1594 N94-17874
Mechanical properties of excimer laser modified titanium surfaces
[DE93-012663] p 1358 N94-17875
High- and low-temperature bonding techniques for microstructures
[DE93-017173] p 1595 N94-17992
Microstructurally based thermomechanical fatigue lifetime model of solder joints for electronic applications
[DE93-016508] p 1452 N94-17995
Embrittlement of surface mount solder joints by hot solder-dipped, gold-plated leads
[DE93-017659] p 1358 N94-18003
Omega phase formation in shock-loaded zirconium
[DE93-018343] p 1595 N94-18162
Advanced in macrostatistical hydrodynamics
[DE93-018479] p 1410 N94-18270
Several fundamental issues in the mechanics of inelastic behavior
[AD-A269455] p 1453 N94-18285
Nanostructured materials: Mind over matter
[DE93-017690] p 1597 N94-18480
Fabrication and microstructural development of Ag-clad TIBa2Ca2Cu3O(x) tapes
[DE93-017407] p 1597 N94-18500
Research on stable, high-efficiency amorphous silicon multijunction modules
[DE93-010046] p 1467 N94-18518
Developing and understanding the high temperature behavior of niobium aluminides and niobium aluminide composites
[AD-A268874] p 1341 N94-18636
Development of the microstructure based stochastic life prediction models
[AD-A269880] p 1454 N94-18683
Development of the microstructure based stochastic life prediction models
[AD-A270453] p 1455 N94-18714
Development of the microstructure based stochastic life prediction model
[AD-A269742] p 1361 N94-18742
Fundamental concepts relating local atomic arrangements, deformation, and fracture of intermetallic alloys
[AD-A268745] p 1361 N94-18788
High pressure metallization of Mott Insulators: Magnetic, structural and electronic properties
[DE93-018295] p 1404 N94-18805
Morphology, deformation, and defect structures of TiCr2 in Ti-Cr alloys
[DE93-018332] p 1361 N94-18807
Effects of shock loading on a solid-solution strengthened superalloy
[DE93-018345] p 1362 N94-18809
Development of ductile Fe3Al-based aluminides
[DE93-017865] p 1362 N94-18938
Tensile properties of as-cast iron-aluminide alloys
[DE93-017852] p 1363 N94-18975
Modeling of single-crystal laser-weld microstructures
[DE93-017853] p 1445 N94-18976
Fabrication and characterization of high-T(sub c) tapes and coils made from Ag-clad Bi-2223 superconductors
[DE93-018615] p 1601 N94-18993
High dose effects in neutron irradiated face-centered cubic metals
[DE93-017671] p 1364 N94-19043
X ray studies of microstructures in semiconductor and superconducting materials
[DE93-040690] p 1601 N94-19056
Metallurgical evaluation of SRAM 2/SRAM A programmer base plates
[DE93-018689] p 1364 N94-19100
Fabrication, properties, and microstructures of high (Tc) tapes and coils made from Ag-clad Bi-2223 superconductor
[DE93-017405] p 1602 N94-19122
The microstructural mechanism of electromigration failure in narrow interconnects of Al alloys
[DE93-018598] p 1365 N94-19282
Analytical and experimental evaluation of joining silicon nitride to metal and silicon carbide to metal for advanced heat engine applications
[DE93-018128] p 1446 N94-19291
Cutting and drilling studies using high power visible lasers
[DE93-019149] p 1441 N94-19294
Microstructure of the interfacial zone around aggregate particles in concrete
[PB93-195790] p 1380 N94-19322
Dynamical behavior of octahedrite from the Henbury meteorite
[DE93-018834] p 1627 N94-19339
Role of pressure in the study of fullerenes
[DE93-018839] p 1602 N94-19340
Melt spinning study
[NASA-CR-193823] p 1380 N94-19423
Microstructure and texture control of fatigue in hydrogen and marine environments
[AD-A271277] p 1344 N94-19744
Damping in ferrous shape memory alloys
[AD-A271009] p 1366 N94-19775
MICROWAVE AMPLIFIERS
Plasma klystron amplifier
[AD-D015819] p 1395 N94-17903
Field emission cathode and vacuum microelectronic microwave amplifier development
[AD-A269526] p 1403 N94-18639
MICROWAVE ANTENNAS
Design and fabrication of a Multichannel Adaptive Optical Processor (MADOP)
[AD-A270004] p 1579 N94-18668
MICROWAVE ATTENUATION
Dispersion effects on millimeter wavelength attenuation efficiencies for a variety of fibers
[AD-A268992] p 1386 N94-18454
MICROWAVE CIRCUITS
High efficiency low cost monolithic module for SARSAT distress beacons
[NASA-CR-194234] p 1315 N94-18852
MICROWAVE EQUIPMENT
Engineering research, development and technology thrust area report, FY92
[DE93-016334] p 1632 N94-18856
MICROWAVE IMAGERY
Packaging, deployment, and panel design concepts for a truss-stiffened 7-panel precision deployable reflector with feed boom
[NASA-TM-109000] p 1333 N94-17765
Microwave (SSM/I) Estimates of the Precipitation Rate to Improve Numerical Atmospheric Model Forecasts
[NASA-CR-193566] p 1491 N94-18602
Physical retrieval of precipitation water contents from Special Sensor Microwave/Imager (SSM/I) data. Part 1: A cloud ensemble/radiative parameterization for sensor response (report version) p 1491 N94-18604
Physical retrieval of precipitation water contents from Special Sensor Microwave/Imager (SSM/I) data. Part 2: Retrieval method and applications (report version) p 1491 N94-18605
Atlas of SSM/I satellite ice concentration interpolated to operational ice model domains of the Arctic for 1992
[AD-A270306] p 1499 N94-18727
MICROWAVE OSCILLATORS
Optically controlled active impedance element and filters employing the same
[AD-D015863] p 1396 N94-18062
The gyrotron backward-wave-oscillator experiment --- final progress report
[AD-A268982] p 1403 N94-18452
MICROWAVE RADIOMETERS
Physical retrieval of precipitation water contents from Special Sensor Microwave/Imager (SSM/I) data. Part 1: A cloud ensemble/radiative parameterization for sensor response (report version) p 1491 N94-18604
MICROWAVE SCATTERING
Microwave scattering from TAE modes
[DE93-018170] p 1583 N94-17809
The split-step algorithm for microwave propagation modeling above a conducting surface
[FEL-92-A430] p 1390 N94-19447
Theoretical and experimental research on coherent microwave backscatter from the ocean
[AD-A271276] p 1500 N94-19743
MICROWAVE SENSORS
Physical retrieval of precipitation water contents from Special Sensor Microwave/Imager (SSM/I) data. Part 1: A cloud ensemble/radiative parameterization for sensor response (report version) p 1491 N94-18604
MICROWAVE SIGNATURES
The split-step algorithm for microwave propagation modeling above a conducting surface
[FEL-92-A430] p 1390 N94-19447
A comparison between several computer codes for calculations on microwave propagation
[FEL-92-A435] p 1390 N94-19449
MICROWAVE TRANSMISSION
The split-step algorithm for microwave propagation modeling above a conducting surface
[FEL-92-A430] p 1390 N94-19447

A comparison between several computer codes for calculations on microwave propagation
[FEL-92-A435] p 1390 N94-19449

MICROWAVES

Design of a tunable 4-MW free electron maser for heating fusion plasmas
[DE93-017172] p 1437 N94-18134

A study of the effects of high power pulsed 2450 MHz microwaves, ELF modulated microwaves, and ELF fields on human lymphocytes and selected cell lines
[AD-A269070] p 1505 N94-18294

High-power microwave breakdown of dielectric interfaces
[AD-A268844] p 1397 N94-18318

The gyrotron backward-wave-oscillator experiment --- final progress report
[AD-A268982] p 1403 N94-18452

General geometry PIC for MIMD computers
[AD-A269085] p 1534 N94-18767

Electron cyclotron resonance heating in the microwave tokamak experiment
[DE93-018083] p 1590 N94-19289

Optical frequency division using an optical parametric oscillator
[AD-A270847] p 1581 N94-19578

Quasi-optical transponder using FET's and patch antennas
[AD-A271339] p 1407 N94-19584

MID-OCEAN RIDGES

Faulted structure of the bottom simulating reflector on the Blake Ridge, western North Atlantic
[AD-A271289] p 1500 N94-19745

MIDAIR COLLISIONS

Aircraft accident report: Midair collision, Mitsubishi MU-2B-60, N74FB, and PIPER PA-32-301, N82419, Greenwood Municipal Airport, Greenwood, Indiana, 11 September 1992
[PB93-910406] p 1315 N94-19352

MIDDLE ATMOSPHERE

Analysis of satellite-derived ozone and water vapor measurements
[NASA-CR-193810] p 1486 N94-19237

MIE SCATTERING

Remote sensing of Earth terrain
[NASA-CR-194598] p 1464 N94-19681

MILITARY AIRCRAFT

Naval aviation: Consider all alternatives before proceeding with the F/A-18E/F
[AD-A269302] p 1305 N94-18279

JPRS report: Central Eurasia. Aviation and cosmonautics, no. 12, December 1992
[JPRS-UAC-93-006] p 1632 N94-19148

JPRS report: Central Eurasia: Aviation and cosmonautics, no. 11, November 1992
[JPRS-UAC-93-005] p 1632 N94-19208

MILITARY HELICOPTERS

Army Cockpit Delethalization Program (CDP)
[AD-A268990] p 1512 N94-18765

Research and design activities and the economic balance of MBB
[ETN-93-94909] p 1310 N94-19383

MILITARY OPERATIONS

Coastal Ocean Modeling Workshop
[AD-A268955] p 1497 N94-18393

A comparison of air force data systems
[AD-A269691] p 1616 N94-18575

Road march performance of special operations soldiers carrying various loads and load distributions
[AD-A269198] p 1512 N94-18882

Coordination of software-development activities among sites that are geographically separated
[DE93-019201] p 1524 N94-19076

MILITARY TECHNOLOGY

Military applications of high-accuracy frequency standards and clocks
[AD-A269303] p 1430 N94-18299

An investigation of methods for updating ionospheric scintillation models using topside in-situ plasma density measurements
[AD-A269872] p 1483 N94-18655

Utilization of Shuttle small payload accommodations in the DOD Space Test Program p 1326 N94-19180

MILKY WAY GALAXY

The 0.15 seconds near-infrared imaging of the central parsec of the galaxy
[MPE-PREPRINT-239] p 1621 N94-19415

MILLIMETER WAVES

Dispersion effects on millimeter wavelength attenuation efficiencies for a variety of fibers
[AD-A268992] p 1386 N94-18454

Millimeter wave reflectivity measurement system
[AD-A270008] p 1387 N94-18601

Optical properties of redispersed iron fibers measured at 94 GHz
[AD-A269739] p 1342 N94-18756

Environmental characterization for target acquisition. Report 3: New concepts for evaluating low-grazing angle radar measurements
[AD-A269956] p 1388 N94-18777

Quasi-optical transponder using FET's and patch antennas
[AD-A271339] p 1407 N94-19584

Experimental and theoretical investigation of broadband high-power windows for millimeter waves
[KFK-5157] p 1391 N94-19617

MIMD (COMPUTERS)

Distributed memory parallel computers and computational fluid dynamics p 1413 N94-18568

General geometry PIC for MIMD computers
[AD-A269085] p 1534 N94-18767

Optimal eigenvalue computation on distributed-memory MIMD multiprocessors
[DE93-018337] p 1535 N94-18808

Three-dimensional shock wave physics simulations with MIMD PAGOSA on massively parallel computers
[DE93-011682] p 1455 N94-18829

A massively parallel adaptive finite element method with dynamic load balancing
[DE93-012844] p 1536 N94-19161

MIMD massively parallel methods for engineering and science problems
[DE93-019409] p 1531 N94-19562

MINE DETECTORS

Constructing a reference event list for ARCESS
[AD-A269288] p 1481 N94-18297

MINERAL DEPOSITS

Mechanical modeling of the growth of salt structures
[DE93-015342] p 1596 N94-18243

MINERAL METABOLISM

Space research on organs and tissues
p 1503 N94-19214

MINERALS

In situ observation of radiation induced amorphization of crystals with apatite structure
[DE93-018450] p 1599 N94-18816

MINES (ORDNANCE)

Earth Penetration Radar Imaging System (EPRIS)
[DE93-019890] p 1391 N94-19542

MINIATURIZATION

Piezo-electric motor: Perspectives and miniaturization
p 1408 N94-18015

MINKOWSKI SPACE

Impulsive moving mirror model in a Schroedinger picture with impulse effect in a Banach space
[DE93-629864] p 1561 N94-18155

Impulsive moving mirror model and the stability of linear homogeneous differential equations with impulse effect in a Banach space
[DE93-629906] p 1549 N94-18200

MINORITY CARRIERS

Development of large-area monolithically integrated silicon-film photovoltaic modules
[DE93-010037] p 1464 N94-17731

Defect behavior of polycrystalline solar cell silicon
[DE93-018490] p 1468 N94-19016

MIR SPACE STATION

A stereoscopic vision system with applications to automated docking and tracking
[AD-A270754] p 1333 N94-19765

MIRRORS

Profile stabilization of tilt mode in a field reversed configuration
[DE93-016770] p 1583 N94-17753

Impulsive moving mirror model and the stability of Schroedinger equation with impulse effect in a Banach space
[DE93-629866] p 1548 N94-18196

Impulsive moving mirror model and impulsive differential equations in Banach space
[DE93-629867] p 1549 N94-18197

Impulsive moving mirror model and the stability of linear homogeneous differential equations with impulse effect in a Banach space
[DE93-629906] p 1549 N94-18200

Developmental testing of a prototype all-reflection Michelson interferometer
[AD-A269064] p 1430 N94-18406

Testing and evaluation of large-area heliostats for solar thermal applications
[DE93-018509] p 1467 N94-18520

Development of robust multilayer optics for use in high-peak power radiation environments
[DE93-018557] p 1580 N94-18931

Tetravalent chromium (Cr(4+)) as laser-active ion for tunable solid-state lasers
[NASA-CR-194529] p 1441 N94-19369

Synchrotron/crystal sample preparation
[NASA-CR-193837] p 1603 N94-19513

MISS DISTANCE

An empirical evaluation of five circular error probable estimation techniques and a method for improving them
[AD-A266528] p 1556 N94-18397

MISSILE ANTENNAS

Missile antenna pattern coordinate system and data formats
[AD-A269153] p 1385 N94-18260

MISSILE CONTROL

Military applications of high-accuracy frequency standards and clocks
[AD-A269303] p 1430 N94-18299

MISSILE DEFENSE

Corporate Information Management (CIM) report on the simulation processes, version 2.0
[AD-A269119] p 1617 N94-18770

MISSILE DETECTION

Super-resolution of multi-pixel and sub-pixel images for the SDI
[AD-A268537] p 1462 N94-18631

MISSILE STRUCTURES

Metals 2000
[DE93-016761] p 1355 N94-17752

MISSILE TRACKING

UVPI imaging from the LACE satellite: The Nihka rocket plume
[AD-A268456] p 1334 N94-18149

Super-resolution of multi-pixel and sub-pixel images for the SDI
[AD-A268537] p 1462 N94-18631

UVPI imaging from the LACE satellite: The Strypi rocket plume
[AD-A270967] p 1335 N94-19787

NPAC distributed-parallel system feasibility study
[AD-A270972] p 1539 N94-19790

MISSILE TRAJECTORIES

Missile antenna pattern coordinate system and data formats
[AD-A269153] p 1385 N94-18260

MISSILES

Missile antenna pattern coordinate system and data formats
[AD-A269153] p 1385 N94-18260

Two-dimensional boundary surfaces for axi-symmetric external transonic flows
[AD-A269678] p 1312 N94-18571

Dynamic response analysis of composite structural members during missile launch
[AD-A270023] p 1332 N94-18760

MISSION PLANNING

Human Transportation System (HTS) study: Executive summary
[NASA-TM-104780] p 1332 N94-18669

Human Transportation System (HTS) study, volume 1
[NASA-TM-104779] p 1332 N94-18670

The Navy tessellated spheroid map projection system: A comprehensive definition
[AD-A269989] p 1462 N94-18677

Spacelab 3
[NASA-TM-108750] p 1323 N94-18849

Cluster ground segment and mission operations
p 1330 N94-19636

The Cluster Joint Science Operations Centre
p 1331 N94-19639

MIXED OXIDES

Fabrication and microstructural development of Ag-clad TlBa2Ca2Cu3O(x) tapes
[DE93-017407] p 1597 N94-18500

MIXING

Analysis of supersonic flows using k-epsilon model and the RPLUS code: Progress towards high speed combustor analysis p 1411 N94-18551

MIXING CIRCUITS

Broadband IF matching for quasioptical mixers
[MPE-PREPRINT-240] p 1390 N94-19416

Quasi-optical transponder using FET's and patch antennas
[AD-A271339] p 1407 N94-19584

MIXING LAYERS (FLUIDS)

Studies on high pressure and unsteady flame phenomena: Revision
[AD-A269138] p 1348 N94-18257

The application of front tracking to the simulation of shock refractions and shock accelerated interface mixing
[DE93-018342] p 1419 N94-19025

The effects of initial conditions on the 3-D topology of temporally evolving wakes (ARI on 3-D bluff body wakes)
[AD-A271008] p 1423 N94-19774

MIXING LENGTH FLOW THEORY

On memory effects in turbulence
[DLR-FB-93-03] p 1409 N94-18124

MNEMONICS

Comparing performance on implicit memory tests
[AD-A269900] p 1508 N94-18657

MOBILITY
In situ observation of radiation induced amorphization of crystals with apatite structure
[DE93-018450] p 1599 N94-18816
MODAL RESPONSE
Improved omit set displacement recoveries in dynamic analysis p 1449 N94-17829
Dynamic characterization of a lightweight, highly maneuverable spacecraft using modal and finite element analyses
[DE93-018095] p 1335 N94-18942
MODULATION
Plasma klystron amplifier
[AD-D015819] p 1395 N94-17903
Advanced optical fiber communication systems
[AD-A269120] p 1577 N94-18254
Extrathalamic modulation of cortical function
[AD-A270869] p 1507 N94-19783
MODULATORS
Spatial light modulators and applications: Summaries of papers presented at the Spatial Light Modulators and Applications Topical Meeting
[AD-A269452] p 1577 N94-18283
High efficiency low cost monolithic module for SARSAT distress beacons
[NASA-CR-194234] p 1315 N94-18852
Spice modeling of a FET-switched induction accelerator cell
[DE93-018662] p 1575 N94-18996
MODULES
Research on stable, high-efficiency amorphous silicon multijunction modules
[DE93-010046] p 1467 N94-18518
Knowledge sources for an intelligent MCM analyzer
[AD-A269224] p 1542 N94-18887
MODULUS OF ELASTICITY
New test method to determine modulus of elasticity of rocket grain material
[AD-A269758] p 1377 N94-18758
Elastic properties of amorphous thin films studied by Rayleigh waves
[DE93-018375] p 1372 N94-19202
Molecular dynamics modeling of the mechanical behavior of metallic multilayers
[DE93-017972] p 1365 N94-19263
MOIRE EFFECTS
Steep geometric grating for use in moire interferometry
[AD-A268759] p 1453 N94-18328
MOIRE FRINGES
Steep geometric grating for use in moire interferometry
[AD-A268759] p 1453 N94-18328
MOIRE INTERFEROMETRY
Steep geometric grating for use in moire interferometry
[AD-A268759] p 1453 N94-18328
A comparative evaluation of in-plane shear test methods for laminated graphite-epoxy composites
[NASA-CR-193808] p 1456 N94-19095
MOISTURE CONTENT
Microwave (SSM/I) Estimates of the Precipitation Rate to Improve Numerical Atmospheric Model Forecasts
[NASA-CR-193566] p 1491 N94-18602
Physical retrieval of precipitation water contents from Special Sensor Microwave/Imager (SSM/I) data. Part 1: A cloud ensemble/radiative parameterization for sensor response (report version) p 1491 N94-18604
Physical retrieval of precipitation water contents from Special Sensor Microwave/Imager (SSM/I) data. Part 2: Retrieval method and applications (report version)
p 1491 N94-18605
Forecast model applications of retrieved three dimensional liquid water fields p 1492 N94-18606
MOLECULAR BEAM EPITAXY
Kinetic aspects of lattice mismatch in molecular beam epitaxial growth on planar and patterned substrates
[AD-A270424] p 1597 N94-18506
In-situ growth monitoring of molecular beam epitaxy processes
[AD-A269287] p 1598 N94-18616
Isolation mechanisms in III-V devices
[AD-A271197] p 1605 N94-19717
MOLECULAR BEAMS
Metal/ceramic interfaces: Relationships between structure and chemistry
[AD-A268792] p 1369 N94-18188
Flame structure studies of a lean 20-torr H2/N2O/Ar flame employing molecular beam mass spectrometry
[AD-A268889] p 1349 N94-18456
The Fourteenth Symposium on Molecular Beams
[AD-A268721] p 1568 N94-18787
Crossed molecular beam studies of atmospheric chemical reaction dynamics
[DE93-019246] p 1478 N94-19303
MOLECULAR BIOLOGY
The role of chemical inhibition of gap junctional intercellular communication in toxicology
[AD-A269251] p 1502 N94-18924
Microgravity research in plant biological systems: Realizing the potential of molecular biology
p 1503 N94-19216
MOLECULAR CLOUDS
The molecular environment of S106 IR
[MPE-PREPRINT-241] p 1622 N94-19417
MOLECULAR COLLISIONS
Femtosecond Fourier-transform spectroscopy of low-frequency intermolecular motions in weakly interacting liquids
[DE93-017312] p 1566 N94-18085
The quantum dynamics of electronically nonadiabatic chemical reactions
[NASA-CR-194309] p 1568 N94-18837
Calculation of molecular excitation rates
[NASA-CR-193782] p 1571 N94-19236
MOLECULAR DIFFUSION
Defects in GaAs bulk crystals and multi-layers caused by In diffusion
[DE93-016968] p 1595 N94-18054
MOLECULAR ELECTRONICS
Photosynthetic reaction centers as active molecular electronic components, phase 1
[AD-A271388] p 1503 N94-19757
MOLECULAR ENERGY LEVELS
The A((2)pi(sub u))-X((2)pi(sub g)) system of Br2(+) studied by velocity modulation spectroscopy
[USIP-93-04] p 1569 N94-18847
MOLECULAR EXCITATION
Experimental and theoretical investigation of surface chemistry induced by direct and indirect electronic excitation
[AD-A268846] p 1348 N94-18221
Vibrational dynamics in photoinduced electron transfer
[DE93-040874] p 1567 N94-18533
Nonlinear optical properties of molecules
[AD-A270199] p 1567 N94-18783
Calculation of molecular excitation rates
[NASA-CR-193782] p 1571 N94-19236
Unimolecular photodissociation dynamics of ketene (CH2CO): The singlet/triplet branching ratio and experimental observation of the vibrational level thresholds of the transition-state
[DE93-019252] p 1352 N94-19304
MOLECULAR GASES
Molecular and polymeric ceramic precursors
[DE93-040364] p 1372 N94-18891
MOLECULAR INTERACTIONS
Femtosecond Fourier-transform spectroscopy of low-frequency intermolecular motions in weakly interacting liquids
[DE93-017312] p 1566 N94-18085
The Fourteenth Symposium on Molecular Beams
[AD-A268721] p 1568 N94-18787
Supercritical thermodynamics of sulfur and nitrogen species
[DE93-041221] p 1610 N94-19670
MOLECULAR IONS
The Fourteenth Symposium on Molecular Beams
[AD-A268721] p 1568 N94-18787
The A((2)pi(sub u))-X((2)pi(sub g)) system of Br2(+) studied by velocity modulation spectroscopy
[USIP-93-04] p 1569 N94-18847
MOLECULAR OSCILLATIONS
Proton transfer dynamics and cluster ion fragmentation in phenol/ammonia cLusters
[AD-A269133] p 1348 N94-18256
MOLECULAR PHYSICS
Molecular dynamics modeling of the mechanical behavior of metallic multilayers
[DE93-017972] p 1365 N94-19263
MOLECULAR RELAXATION
Computational techniques for high-speed flows with viscous and chemical effects p 1412 N94-18560
Hydrolysis reaction and positronium decay in silica gels
[AD-A270028] p 1371 N94-18713
MOLECULAR STRUCTURE
X ray absorption spectroscopic studies of the active sites of nickel- and copper-containing metalloproteins
[DE93-017142] p 1347 N94-18059
Numerical methods for molecular dynamics
[DE93-018321] p 1566 N94-18179
Metal/ceramic interfaces: Relationships between structure and chemistry
[AD-A268792] p 1369 N94-18188
Morphology of polymerized membranes on an amorphous substrate at molecular resolution by AFM
[AD-A268760] p 1370 N94-18403
Mesoepitaxy: A universal route to oriented materials
[AD-A270437] p 1598 N94-18511
Molecular structure of low temperature form of triaminoguanidinium nitrate (TAGN)
[AD-A270409] p 1377 N94-18708
A numerical study of hybrid optimization methods for the molecular conformation problems
[DE93-017898] p 1569 N94-18985
Structure-property relationships in radical-cation (electron-donor molecule) and anion-based (including fullerides) organic superconductors and their use in the design of new materials
[DE93-018617] p 1601 N94-19022
Polymer films with enhanced dielectric properties
[AD-A271148] p 1375 N94-19740
Cooperative formation of inorganic-organic interfaces in the synthesis of silicate mesostructures
[AD-A271196] p 1375 N94-19742
MOLECULAR THEORY
Calculation of molecular excitation rates
[NASA-CR-193782] p 1571 N94-19236
MOLECULES
Experimental and theoretical investigation of surface chemistry induced by direct and indirect electronic excitation
[AD-A268846] p 1348 N94-18221
Detection of single molecules in microspheres
[DE93-017776] p 1567 N94-18493
MOLYBDENUM
Plastic anisotropy in MoSi2 single crystals
[DE93-012650] p 1594 N94-17874
MOLYBDENUM ALLOYS
Atlas of formability: Ultimet
[AD-A268352] p 1355 N94-17767
Bibliography on silicides
[AD-A270516] p 1374 N94-19532
MOMENT DISTRIBUTION
Error propagation equations and tables for estimating the uncertainty in high-speed wind tunnel test results
[DE93-018685] p 1311 N94-18275
MOMENTS OF INERTIA
Friction drive position transducer
[AD-D015851] p 1424 N94-17717
MOMENTUM TRANSFER
Transformation of energy and momentum due to Landau damping in space
[DE93-624921] p 1581 N94-17689
MONITORS
Measuring emittance using beam position monitors
[DE93-014470] p 1434 N94-17709
Solid-state, resistive hydrogen sensors for safety monitoring
[DE93-017769] p 1424 N94-17778
VPU(tm) demonstration mission vicinity processor unit(tm) overview p 1325 N94-19171
MONKEYS
Somatosensory responsiveness in behaving monkeys and human subjects
[AD-A268924] p 1501 N94-18231
Extrathalamic modulation of cortical function
[AD-A270869] p 1507 N94-19783
MONOCHROMATIZATION
Conical geometry for sagittal focusing as applied to x rays from synchrotrons
[DE93-017238] p 1593 N94-17760
MONOMOLECULAR FILMS
Nanofabrication by focused ion beam
[AD-A271290] p 1345 N94-19746
MONOTONE FUNCTIONS
Existence of a maximal solution for quasimonotone elliptic systems
[REPT-93-30] p 1550 N94-19153
Using geometric techniques to improve dynamic programming algorithms for the economic lot-sizing problem and extensions
[PB93-197556] p 1528 N94-19330
MONTE CARLO METHOD
Planning under uncertainty solving large-scale stochastic linear programs
[DE93-013920] p 1516 N94-17701
Direct Monte Carlo simulation of the chemical equilibrium composition of detonation products
[DE93-014559] p 1376 N94-17751
Heavy ion nuclear physics research
[DE93-018862] p 1565 N94-17776
Investigation of the relative abundance of heavy versus light nuclei in primary cosmic rays using underground muon bundles
[DE93-017601] p 1630 N94-17818
Criticality benchmark comparisons leading to cross-section upgrades
[DE93-017184] p 1556 N94-18073
Recent studies of short-range order in alloys: The Cowley theory revisited
[DE93-016416] p 1358 N94-18111
Diffusion in ordered alloys
[AD-A268232] p 1359 N94-18322

Simulation of emittance dilution in electron storage ring from Compton backscattering
[DE93-017611] p 1386 N94-18503
Bayesian model choice: Asymptotics and exact calculations
[AD-A269067] p 1557 N94-18516
Bayesian analysis of ARMA processes: Complete sampling based inference under full likelihoods
[AD-A269168] p 1557 N94-18694
Polarimetric statistics of electromagnetic waves scattered by distributed targets
[PB93-195907] p 1389 N94-18951
The PAPAGENO Partonic Monte-Carlo Program
[DE93-018524] p 1571 N94-19247
Single sided tomography of extremely large dense objects
[DE93-017993] p 1580 N94-19268
Sensitivity and uncertainty analysis of Markov reward models
[MEMO-INF-92-89] p 1559 N94-19386
An ab initio Monte Carlo study of low energy positron and electron implantation in elemental metals and multilayers
[DE93-019847] p 1603 N94-19541
Uncertainty versus interindividual variability
[DE93-018105] p 1559 N94-19549

MORPHOLOGY
Morphology of polymerized membranes on an amorphous substrate at molecular resolution by AFM
[AD-A268760] p 1370 N94-18403
Morphology, deformation, and defect structures of TiCr2 in Ti-Cr alloys
[DE93-018332] p 1361 N94-18807
A scientific role for Space Station Freedom: Research at the cellular level p 1503 N94-19215

MOSSBAUER EFFECT
Pressure induced metallization of the Mott Insulator 6(sub 2)
[DE93-018296] p 1600 N94-18969
Gamma scattering in condensed matter with high intensity Moessbauer radiation
[DE93-019461] p 1601 N94-19031

MOTION PERCEPTION
Overview of research in progress at the Center of Excellence
[NASA-CR-194329] p 1618 N94-19256
Pilot studies on object motion perception during linear self-motion after long duration centrifugation of human subjects
[IZF-1993-B-3] p 1510 N94-19439
Applications of motion estimation in image processing
[FEL-92-B356] p 1580 N94-19455
A non-homogeneous, spatio-temporal, wavelet multiresolution analysis and its application to the analysis of motion
[AD-A270621] p 1538 N94-19534

MOTION SICKNESS
The brain electrical activity in different G situations
[AERONAUTICA-ACTA-A-372-199]
p 1507 N94-19523

MOUNTAINS
The Mexico City 1991 lidar measurements campaign
[DE93-019960] p 1478 N94-19272

MOVING TARGET INDICATORS
Low-noise oscillators for airborne radar applications, revision 1
[AD-A269372] p 1403 N94-18471

MULTICHANNEL COMMUNICATION
Multichannel error correction code decoder
[NASA-TM-106331] p 1333 N94-19313

MULTIGRID METHODS
Numerical calculations of high lift flows using structured and unstructured methods p 1307 N94-18428
A multigrid acceleration technique for computing steady solutions to the equations of compressible flow
p 1412 N94-18559
Computational techniques for high-speed flows with viscous and chemical effects p 1412 N94-18560
Multigrid methods for flow transition in three-dimensional boundary layers with surface roughness
[NASA-CR-4540] p 1417 N94-18843
3D composite grids using Bezier curves and surfaces in component adaptive methods
[AD-A269188] p 1549 N94-18863
Multigrid for a groundwater flow problem
[REPT-93-29] p 1420 N94-19144

MULTIMEDIA
Information technology resources assessment
[DE93-015276] p 1613 N94-17894
Pegasus project description
[MEMO-INF-92-75] p 1536 N94-19159
Pegasus: Operating system support for distributed multimedia systems
[MEMO-INF-92-76] p 1536 N94-19160

MULTIPATH TRANSMISSION
Design and fabrication of a Multichannel Adaptive Optical Processor (MADOP)
[AD-A270004] p 1579 N94-18668
Generalized multichannel signal detection
[AD-A271385] p 1391 N94-19587

MULTIPHASE FLOW
Study of multi-phase flow characteristics in an MHD power train
[DE93-018570] p 1586 N94-18272
Transport phenomena and interfacial kinetics in multiphase combustion systems
[AD-A270202] p 1349 N94-18785

MULTIPHOTON ABSORPTION
Removing CFC's from the atmosphere with lasers: A second look
[DE93-017516] p 1473 N94-18101
Harmonic generation at high intensities
[DE93-018632] p 1572 N94-19283

MULTIPLE ACCESS
Communication in the presence of unknown interference
[AD-A271146] p 1392 N94-19738

MULTIPLEXING
VHF air/ground communications for air traffic control: A decision tree approach to system innovations, volume 2
[AD-A268632] p 1386 N94-18495
Specifying and proving communication closedness in protocols
[MEMO-INF-93-23] p 1390 N94-19267
Tandem queues with deterministic service times
[PB93-197465] p 1543 N94-19324

MULTIPOLES
Three dimensional multipole decomposition of fields
[DE93-018530] p 1389 N94-19053

MULTIPROCESSING (COMPUTERS)
SPROC: A multiple-processor DSP IC
p 1398 N94-18347
High-performance multiprocessor architecture for a 3-D lattice gas model p 1400 N94-18362
Parallelization of the Air Force Space Command (AFSPACECOM) satellite motion models
[AD-A269327] p 1334 N94-18470
A programming paradigm for distributed-memory computers
[DE93-018336] p 1524 N94-19024
The p4 Linda: A portable implementation of Linda
[DE93-017752] p 1535 N94-19046
Performance and scalability aspects of directory-based cache coherence in shared-memory multiprocessors
[DE93-016442] p 1536 N94-19115
Pegasus project description
[MEMO-INF-92-75] p 1536 N94-19159
Pegasus: Operating system support for distributed multimedia systems
[MEMO-INF-92-76] p 1536 N94-19160
Wide-address spaces: Exploring the design space
[MEMO-INF-92-77] p 1537 N94-19219
A multi-level data-flow architecture for signal and data processing applications
[DE93-041272] p 1539 N94-19588

MULTIPROGRAMMING
The p4 Linda: A portable implementation of Linda
[DE93-017752] p 1535 N94-19046

MULTISENSOR APPLICATIONS
Operator performance in pattern matching as a function of reference material structure
[AD-A269889] p 1509 N94-18686
Tracking with time-delayed data in multisensor systems
[AD-A271334] p 1391 N94-19582

MULTISTATIC RADAR
The accuracy of monostatic and bistatic radar imaging by range-Doppler-processing with and without motion compensation
[DLR-FB-93-07] p 1384 N94-18071
Statistical description of the bistatic radar cross section distributions for a right circular cylinder
[AD-A270001] p 1387 N94-18666

MULTIVARIABLE CONTROL
Active control of a multivariable system by way of polynomial neural networks: Computer simulation evaluations and laboratory experimental results
[AD-A270033] p 1541 N94-18790

MULTIVARIATE STATISTICAL ANALYSIS
Multivariate wavelet representations and approximations
[AD-A269350] p 1546 N94-17825
Active control of a multivariable system by way of polynomial neural networks: Computer simulation evaluations and laboratory experimental results
[AD-A270033] p 1541 N94-18790
A multivariate anthropometric method for crew station design
[AD-A270652] p 1513 N94-19531

MUONS
Investigation of the relative abundance of heavy versus light nuclei in primary cosmic rays using underground muon bundles
[DE93-017601] p 1630 N94-17818
Investigation of physical structures and interactions at high energy
[DE93-014444] p 1574 N94-18927
SSC detector muon sub-system beam tests
[DE93-018415] p 1569 N94-19013
The anomalous magnetic moment of the muon
[DE93-018932] p 1572 N94-19320
Energy loss measurement of cosmic ray muons
[KFK-5158] p 1631 N94-19504
Measurement of the energy of horizontal cosmic ray muons
[KFK-5163] p 1631 N94-19505
Measurements of cosmic ray muons with multi-wire proportional chambers with a prototype setup for KASCADE
[KFK-5173] p 1631 N94-19506
High rate resistive plate chambers: An inexpensive, fast, large area detector of energetic charged particles for accelerator and non-accelerator applications
[DE93-018664] p 1572 N94-19545

MUSCLES
Control of shoulder muscles during goal directed movements
[PB93-195139] p 1504 N94-18080
Space research on organs and tissues
p 1503 N94-19214

MUSCULAR FUNCTION
Evaluation of physiological and psychological impairment of human performance in cold stressed subjects
[AD-A268637] p 1506 N94-18632

MUSCULOSKELETAL SYSTEM
In vivo animal models of body composition in aging
[DE93-012527] p 1501 N94-17889

MUSEUMS
Pathfinder: Shuttle exhibit
[NASA-TM-109357] p 1333 N94-19071

MUSIC
Analysis, representation and processing of the instrumental gesture: Application to keyboard instruments
[ETN-93-94402] p 1519 N94-17977

N

N-TYPE SEMICONDUCTORS
Selective electrochemical wafer thinning for silicon characterization
[DE93-015083] p 1592 N94-17742
Silicon concentrator solar cell research
[DE93-018489] p 1468 N94-19015

NARROWBAND
On comparison and extensions of control methods for narrow-band disturbance rejection
[REPT-93-015] p 1540 N94-17922

NASA PROGRAMS
OSSA Information Systems Program
[NASA-TM-108774] p 1612 N94-17737
The 1994 NASA authorization, volume 2
[GPO-71-510] p 1620 N94-18842
National Boy Scout Jamboree
[NASA-TM-109367] p 1610 N94-18982
California Student Get Away Special Payload GAS-450
p 1324 N94-19164
The GAMCIT gamma ray burst detector
p 1324 N94-19168
The first flight of the QUESTS GAS payload G-521
p 1325 N94-19170
Marshall Space Flight Center 1989 annual chronology of events
[NASA-TM-109381] p 1633 N94-19486

NASA SPACE PROGRAMS
Human Transportation System (HTS) study: Executive summary
[NASA-TM-104780] p 1332 N94-18669
Human Transportation System (HTS) study, volume 1
[NASA-TM-104779] p 1332 N94-18670

NASTRAN
Design optimization studies using COSMIC NASTRAN
p 1450 N94-17834
The role of NASTRAN in the preliminary design cycle
p 1450 N94-17835
Benchmarking the QUAD4/TRIA3 element
p 1450 N94-17837

NATIONAL AIRSPACE SYSTEM
The FAA Technical Center Human Factors Laboratory information guide
[AD-A269343] p 1513 N94-18992

NATURAL GAS
Report to Congress: Comprehensive Program Plan for Advanced Turbine Systems
[DE93-016718] p 1467 N94-18475
EIA publications directory, 1992
[DE93-016833] p 1617 N94-18983
NATURAL LANGUAGE (COMPUTERS)
Employing knowledge resources in a new text planner architecture
[AD-A269669] p 1516 N94-17732
EXPECT: Intelligent support for knowledge base refinement
[AD-A269602] p 1612 N94-17745
Intelligent help facilities: Generating natural language descriptions with examples
[AD-A269555] p 1521 N94-18290
Automatic documentation generation: The interaction of text and examples
[AD-A269670] p 1616 N94-18570
Generating object descriptions: Intergrating examples with text
[AD-A269992] p 1522 N94-18680
Computer-assisted instruction and natural language systems
[MEMO-INF-92-86] p 1527 N94-19225
NATURAL LANGUAGE PROCESSING
Automatic documentation generation: The interaction of text and examples
[AD-A269670] p 1616 N94-18570
Feasibility study in linguistically motivated object-oriented conceptual design of information systems
[PB93-197754] p 1618 N94-19331
Non-well-foundedness and type freeness can unify the interpretation of functional application
[PB93-191849] p 1560 N94-19710
A real-time spoken-language system for interactive problem-solving, combining linguistic and statistical technology for improved spoken language understanding
[AD-A270901] p 1392 N94-19749
NAUTICAL CHARTS
The Navy tessellated spheroid map projection system: A comprehensive definition
[AD-A269989] p 1462 N94-18677
NAVIER-STOKES EQUATION
Finite element modeling of evaporation and condensation during sol-gel film and fiber formation
[DE93-017655] p 1345 N94-17820
Investigation of a matrix-model for the artificial dissipation in a cell vertex finite volume scheme for solving the Navier-Stokes equations
[DLR-FB-92-33] p 1409 N94-18076
Parabolized Navier-Stokes computation of surface heat transfer characteristics for supersonic and hypersonic KE projectiles
[AD-A268856] p 1410 N94-18391
Navier-Stokes computations of turbulent flow around high-lift configurations p 1306 N94-18420
Efficient simulation of incompressible viscous flow over multi-element airfoils p 1306 N94-18421
Navier-Stokes calculations on multi-element airfoils using a chimera-based solver p 1306 N94-18422
Numerical solution of the Navier-Stokes equations for high-lift configurations on structured composite grids
p 1306 N94-18423
Prediction of the high-lift performance of multi-element aerofoils using an unstructured Navier-Stokes solver
p 1307 N94-18427
Numerical calculations of high lift flows using structured and unstructured methods p 1307 N94-18428
Navier-Stokes simulation of flow field around a blown-flap high-lift system p 1307 N94-18429
An algebraic turbulence model for turbomachinery
p 1411 N94-18554
Variational approaches to CFD: Applications to potential Euler and Navier-Stokes equations
p 1413 N94-18565
Introduction to spectral methods: Application to the Stokes problem p 1413 N94-18566
An introduction to the modelling of turbulence
p 1414 N94-18579
Turbulence modeling for compressible flows and implementation in Navier-Stokes solvers
p 1416 N94-18597
Theoretical study and modelling of homogeneous turbulence under rotation for implantation in a code for solving Navier-Stokes equations
[ECL-93-05] p 1420 N94-19381
On the numerical analysis of nonlinear Galerkin methods: Spectral approximation and finite elements
[ETN-93-94900] p 1552 N94-19407
Numerical prediction of transition of the F-16 wing at supersonic speeds
[NASA-CR-194407] p 1312 N94-19433
Numerical investigation of the incompressible flow around a wing with a fixed spoiler
[ISL-R-109/91] p 1313 N94-19524
Navier-Stokes, dynamics and aeroelastic computations for vortical flows, buffet and flutter applications
[NASA-CR-194520] p 1313 N94-19621
NAVIGATION
Military applications of high-accuracy frequency standards and clocks
[AD-A269303] p 1430 N94-18299
NAVY
Coastal Ocean Modeling Workshop
[AD-A268955] p 1497 N94-18393
The Navy tessellated spheroid map projection system: A comprehensive definition
[AD-A269989] p 1462 N94-18677
Compilation of 1992 annual reports of the navy ELF communications system ecological monitoring program, volume 2
[AD-A269726] p 1388 N94-18751
NEAR INFRARED RADIATION
The 0.15 seconds near-infrared imaging of the central parsec of the galaxy
[MPE-PREPRINT-239] p 1621 N94-19415
NEAR WAKES
The effects of initial conditions on the 3-D topology of temporally evolving wakes (ARI on 3-D bluff body wakes)
[AD-A271008] p 1423 N94-19774
NEARSHORE WATER
Wind products for use in coastal wave and surge models
[AD-A269753] p 1497 N94-18414
NEEL TEMPERATURE
The low-temperature specific heat of CeCu2Ge2 at 0 and 9.5 kbar
[DE93-014914] p 1360 N94-18398
NEGATIVE ELECTRON AFFINITY
Characterization of diamond film nucleation and growth surface
[AD-A269400] p 1597 N94-18459
NEGATIVE FEEDBACK
The Lever oscillator for use in high resistance resonator applications
[DE93-017652] p 1404 N94-18827
NEGATIVE IONS
Oligomer and mixed-metal compounds, potential multielectron transfer catalysts
[DE93-013592] p 1350 N94-19017
NEODYMIUM LASERS
Analysis of neon soft x ray spectra from short-pulse laser-produced plasmas
[DE93-014420] p 1582 N94-17708
Pulsed power supply for Nova Upgrade
[DE93-019626] p 1441 N94-19307
NEON
Analysis of neon soft x ray spectra from short-pulse laser-produced plasmas
[DE93-014420] p 1582 N94-17708
NEPHANALYSIS
Cloudiest year study: An analysis of the 3DNEPH and RTNEPH databases
[AD-A269403] p 1490 N94-18281
SERCAA cloud analysis integration: Design concepts and interaction with cloud forecast models
[AD-A269104] p 1492 N94-18637
NEPTUNE (PLANET)
Detailed analysis of low energy plasma data under the Voyager Uranus data analysis program
[NASA-CR-193668] p 1628 N94-17842
Working group for planetary system nomenclature
[NASA-CR-194406] p 1626 N94-18841
Voyager's last encounter
[NASA-TM-109361] p 1628 N94-18957
NEPTUNE ATMOSPHERE
Voyager's last encounter
[NASA-TM-109361] p 1628 N94-18957
NEPTUNE SATELLITES
Voyager's last encounter
[NASA-TM-109361] p 1628 N94-18957
NERVES
Coupled neural-dendritic processes: Cooperative stochastic effects and the analysis of spike trains
[AD-A270041] p 1506 N94-18793
NETHERLANDS
Reports of the 1992 Synoptic Symposium
[KNMI-TR-151] p 1494 N94-19698
The WAQUA/CSM-16 model p 1494 N94-19700
NETWORK ANALYSIS
APLAC: An object-oriented analog circuit simulator and design tool. 6.1 reference manual
[PB93-187193] p 1396 N94-18091
Exact cost flow problems in acyclic networks
[REPT-93-030] p 1520 N94-18138
Specification and analysis of a high speed transport protocol
[AD-A268941] p 1386 N94-18449
Naval research reviews. Mixing enhancement for air-breathing propulsion. Non-axisymmetric jets increase mixing, volume 44 and volume 45
[AD-A268966] p 1521 N94-18543
Improved HF data network simulator, volume 1
[AD-A270953] p 1393 N94-19752
Improved HF data network simulator, software user's manual, volume 2
[AD-A270954] p 1393 N94-19753
NETWORK CONTROL
Models and building blocks for secure open systems
[FEL-92-B365] p 1619 N94-19457
Protocol service decomposition for high-performance networking
[AD-A270613] p 1538 N94-19533
Congestion/flow control and routing in data networks: A control-theoretic approach
[AD-A271121] p 1392 N94-19737
NEURAL NETS
An object-oriented environment for computer vision and pattern recognition
[DE93-017098] p 1517 N94-17867
Neural networks to classify speaker independent isolated words recorded in radio car environments
[REPT-93-013] p 1383 N94-17935
Application of the network discriminant function to learning
[AD-A268793] p 1540 N94-18189
Proceedings of the 3rd Workshop on Balloon-Borne Experiments with Superconducting Magnet Spectrometers
[DE93-788362] p 1630 N94-18219
Optical associative processors and directed graphs
[AD-A268881] p 1615 N94-18224
Preliminary structural design: Defining the design space
[AD-A268898] p 1317 N94-18227
Fast-training algorithm for hidden-layer forward-feed neural networks
[AD-A269253] p 1540 N94-18263
Cortical substrate of haptic representation
[AD-A269583] p 1508 N94-18304
Autonomous neural network controllers for adaptive material handling
[AD-A268908] p 1540 N94-18331
Optical computing. Organization of the 1993 Photonics Science Topical Meetings. Technical digest series, volume 7
[AD-A269025] p 1578 N94-18332
Low power signal processing research at Stanford
p 1393 N94-18351
Pulse-firing winner-take-all networks
p 1399 N94-18353
Training product unit neural networks with genetic algorithms p 1399 N94-18354
VLSI synthesis of digital application specific neural networks p 1399 N94-18355
Measurement selection for parametric IC fault diagnosis p 1399 N94-18356
The identification of the computational significance of key neurobiological characteristics found in a number of telencephalic brain regions
[AD-A269374] p 1505 N94-18407
Joint services electronics program
[AD-A269383] p 1403 N94-18638
Interaction of intense lasers and relativistic electron beams with solids, gases and plasmas
[AD-A269655] p 1439 N94-18737
Neutral networks: An NRL perspective
[AD-A269122] p 1541 N94-18773
Active control of a multivariable system by way of polynomial neural networks: Computer simulation evaluations and laboratory experimental results
[AD-A270033] p 1541 N94-18790
Coupled neural-dendritic processes: Cooperative stochastic effects and the analysis of spike trains
[AD-A270041] p 1506 N94-18793
Operational parameters of an opto-electronic neural network employing fixed planar holographic interconnects
[DE93-018795] p 1433 N94-19000
An innovative neural manufacturing concept
[DE93-017212] p 1527 N94-19238
Use of shape memory alloys in the robust control of smart structures
[AD-A270827] p 1366 N94-19594
Explorations of the practical issues of learning prediction-control tasks using temporal difference learning methods
[AD-A270836] p 1544 N94-19599
VLSI implementation of neuromorphic learning networks
[AD-A270825] p 1407 N94-19665

Transcutaneous Analyte Measuring Methods (TAMM)
[AD-A271387] p 1408 N94-19756
Applications of neural networks in fault detection of rotating machinery
[AD-A270755] p 1448 N94-19766

NEUROLOGY
Cortical substrate of haptic representation
[AD-A269583] p 1508 N94-18304
Strategies for enhancing catecholamine-mediated neurotransmission
[NASA-CR-193807] p 1506 N94-18862
Interdisciplinary training in life science (FY 1991 ASSERT)
[AD-A269220] p 1512 N94-18886

NEURONS
Somatosensory responsiveness in behaving monkeys and human subjects
[AD-A268924] p 1501 N94-18231
Cortical substrate of haptic representation
[AD-A269583] p 1508 N94-18304
Intracellular physiology of the rat suprachiasmatic nucleus: Electrical properties, neurotransmission and effects of neuromodulators
[AD-A268829] p 1505 N94-18538
Operational parameters of an opto-electronic neural network employing fixed planar holographic interconnects
[DE93-018795] p 1433 N94-19000

NEUROPHYSIOLOGY
Localization of figure background segregation mechanisms in primate visual cortex
[PB93-187961] p 1508 N94-18121
Somatosensory responsiveness in behaving monkeys and human subjects
[AD-A268924] p 1501 N94-18231
Cortical substrate of haptic representation
[AD-A269583] p 1508 N94-18304
Intracellular physiology of the rat suprachiasmatic nucleus: Electrical properties, neurotransmission and effects of neuromodulators
[AD-A268829] p 1505 N94-18538
Strategies for enhancing catecholamine-mediated neurotransmission
[NASA-CR-193807] p 1506 N94-18862

NEUROTRANSMITTERS
Intracellular physiology of the rat suprachiasmatic nucleus: Electrical properties, neurotransmission and effects of neuromodulators
[AD-A268829] p 1505 N94-18538
Strategies for enhancing catecholamine-mediated neurotransmission
[NASA-CR-193807] p 1506 N94-18862

NEUTRAL BEAMS
Active neutral particle diagnostics for high temperature plasma
[DE93-788457] p 1586 N94-18214

NEUTRAL CURRENTS
Weak neutral currents and collapse initiated supernova
[DE93-018652] p 1627 N94-19284

NEUTRAL GASES
Radiative divertor modeling studies
[DE93-018092] p 1590 N94-19290

NEUTRAL PARTICLES
Active neutral particle diagnostics for high temperature plasma
[DE93-788457] p 1586 N94-18214
Exponential characteristic spatial quadrature for discrete ordinates neutral particle transport in two-dimensional cartesian coordinates
[AD-A270458] p 1554 N94-19671

NEUTRINO BEAMS
High energy physics at Tufts University
[DE93-018299] p 1575 N94-19023

NEUTRINOS
Neutrino masses in superstring derived standard-like models
[DE93-624802] p 1565 N94-17951
Neutrino mass
[DE93-018467] p 1567 N94-18269
Inverse neutrinoless double (beta)-decay at the NLC?
[DE93-017397] p 1568 N94-18825
Investigation of physical structures and interactions at high energy
[DE93-014444] p 1574 N94-18927
Weak neutral currents and collapse initiated supernova
[DE93-018652] p 1627 N94-19284

NEUTRON ACTIVATION ANALYSIS
Development and evaluation of alternative radioanalytical methods, including mass spectrometry for marine materials
[DE93-625117] p 1345 N94-17691

NEUTRON COUNTERS
Heavy ion nuclear physics research
[DE93-018862] p 1565 N94-17776
LAHET calculations for accelerator neutron production
[DE93-016518] p 1570 N94-19120
Thermal neutron multiplicity measurements using the pyrochemical multiplicity counter at Lawrence Livermore National Laboratory
[DE93-018538] p 1571 N94-19278

NEUTRON CROSS SECTIONS
Criticality benchmark comparisons leading to cross-section upgrades
[DE93-017184] p 1556 N94-18073
Computer codes for checking, plotting and processing of neutron cross-section covariance data and their application
[DE93-018459] p 1570 N94-19129

NEUTRON DIFFRACTION
Phase separation and ordering process in Al-Li alloys studied by small-angle neutron scattering and neutron diffraction
[DE93-016750] p 1358 N94-17947
Performance of the Amorphous Materials Diffractometer GLAD at IPNS
[DE93-017746] p 1430 N94-18481

NEUTRON DISTRIBUTION
Thermal neutron multiplicity measurements using the pyrochemical multiplicity counter at Lawrence Livermore National Laboratory
[DE93-018538] p 1571 N94-19278

NEUTRON IRRADIATION
Charpy impact toughness of martensitic steels irradiated in FFTF: Effect of heat treatment
[DE93-015960] p 1450 N94-17848
Effects of irradiation temperature on embrittlement of nuclear pressure vessel steels
[DE93-015428] p 1359 N94-18245
Evaluation of fiber optic performance in the ACRR
[DE93-018515] p 1580 N94-18970
High dose effects in neutron irradiated face-centered cubic metals
[DE93-017671] p 1364 N94-19043

NEUTRON SCATTERING
Polaron tunneling in high-temperature superconductors
[DE93-016880] p 1593 N94-17754
Phase transitions and neutron scattering
[DE93-016748] p 1594 N94-17866
Phase separation and ordering process in Al-Li alloys studied by small-angle neutron scattering and neutron diffraction
[DE93-016750] p 1358 N94-17947
The use of chopper spectrometers for cold-to-epithermal neutron scattering at IPNS
[DE93-017798] p 1598 N94-18531
T violating neutron spin rotation asymmetry
[DE93-018470] p 1570 N94-19126

NEUTRON SOURCES
Heavy ion nuclear physics research
[DE93-018862] p 1565 N94-17776
The use of chopper spectrometers for cold-to-epithermal neutron scattering at IPNS
[DE93-017798] p 1598 N94-18531
Generalized energy principle for flute perturbations in axisymmetric mirror machines
[DE93-019399] p 1589 N94-19037
LAHET calculations for accelerator neutron production
[DE93-016518] p 1570 N94-19120

NEUTRON SPECTRA
LAHET calculations for accelerator neutron production
[DE93-016518] p 1570 N94-19120

NEUTRON SPECTROMETERS
Phase transitions and neutron scattering
[DE93-016748] p 1594 N94-17866
The use of chopper spectrometers for cold-to-epithermal neutron scattering at IPNS
[DE93-017798] p 1598 N94-18531

NEUTRON STARS
Evolution of r-process elements in the hot supernova bubble
[DE93-017169] p 1624 N94-17897

NEUTRONS
Heavy ion nuclear physics research
[DE93-018862] p 1565 N94-17776
Characteristics and pulsed radiation response of non-ideal quartz shock stress gauges
[DE93-017628] p 1424 N94-17999
Neutron-induced collision cascade mixing in Nb/V superlattices
[DE93-018575] p 1600 N94-18933
LAHET calculations for accelerator neutron production
[DE93-016518] p 1570 N94-19120
T violating neutron spin rotation asymmetry
[DE93-018470] p 1570 N94-19126

NEWTON THEORY
Essential shift: Scientific revolution in the 20th century
[AD-A270810] p 1610 N94-19663

NICKEL
X ray absorption spectroscopic studies of the active sites of nickel- and copper-containing metalloproteins
[DE93-017142] p 1347 N94-18059
Environmentally assisted cracking of nickel anode substrates in Li/SOCl2 cells: An engineering approach
[DE93-015130] p 1405 N94-18928
Molecular dynamics modeling of the mechanical behavior of metallic multilayers
[DE93-017972] p 1365 N94-19263
Ni-Al2O3 solid state binding: Elaboration, state of thermal constraints, mechanical behavior
[ECL-92-31] p 1366 N94-19436

NICKEL ALLOYS
Atlas of formability: Ultimet
[AD-A268352] p 1355 N94-17767
Atlas of formability: HAYNES 556
[AD-A268354] p 1356 N94-17768
Atlas of formability: HAYNES 188
[AD-A268355] p 1356 N94-17769
Atlas of formability: NICKELVAC K-500
[AD-A268351] p 1356 N94-17772
Atlas of formability: Haynes 230
[AD-A268325] p 1356 N94-17788
Atlas of formability: Nickelvac C-276
[AD-A268264] p 1357 N94-17802
Atlas of formability: ALLVAC 718
[AD-A268304] p 1357 N94-17804
Summary of work on coatings and claddings for fossil energy applications
[DE93-017005] p 1367 N94-17881
Evaluation of the nickel release by horological products p 1367 N94-18009
Diffusion in ordered alloys
[AD-A268232] p 1359 N94-18322
Effects of shock loading on a solid-solution strengthened superalloy
[DE93-018345] p 1382 N94-18809
Environmental degradation of Alloy 600 and welded filler metal EN82 in an elevated temperature aqueous environment
[DE93-018049] p 1363 N94-18940
Intelligent materials systems and structures. Part 4: The influence of thermomechanical loading on the life of shape memory alloys
[PB93-195923] p 1363 N94-18952
Bibliography on silicides
[AD-A270516] p 1374 N94-19532
Incology 908 database report: On process-structure-property relationship
[DE93-017616] p 1366 N94-19546

NICKEL COATINGS
Superhardness effect in Au/Ni multilayers
[DE93-016444] p 1357 N94-17860

NIGHT VISION
Human integration evaluation of three helmet systems
[AD-A271320] p 1513 N94-19570
Electro-optics display research, test, and evaluation laboratory program
[AD-A270947] p 1408 N94-19751

NIOBIUM
Superconductivity and magnetism in niobium doped YBa2Cu3O7 related high-(Tc) ceramics
[DE93-018086] p 1601 N94-19049
Total hemispherical emittance of Niobium-1 percent zirconium fuel cladding for the SP-100 space reactor
[AD-A270456] p 1576 N94-19589

NIOBIUM ALLOYS
Developing and understanding the high temperature behavior of niobium aluminides and niobium aluminide composites
[AD-A268874] p 1341 N94-18636
Bibliography on silicides
[AD-A270516] p 1374 N94-19532

NITRIDES
Nitridation of GaAs(100) by laser-induced decomposition of HN3
[AD-A269147] p 1438 N94-18258

NITRIDING
Nitridation of GaAs(100) by laser-induced decomposition of HN3
[AD-A269147] p 1438 N94-18258

NITROGEN
Dense energetic compounds of C, H, N, and O atoms. 3: 5-(4-nitro-(1,2,5) oxadiazolyl)-5H-(1,2,3) triazolo (4,5-c)(1,2,5) oxadiazole
[AD-A268715] p 1338 N94-18314
Determination of nitrogen to carbon abundance ratios from transition layer emission lines
[NASA-CR-191921] p 1622 N94-19421

NITROGEN COMPOUNDS
Molecular and polymeric ceramic precursors
[DE93-040364] p 1372 N94-18891
Supercritical thermodynamics of sulfur and nitrogen species
[DE93-041221] p 1610 N94-19670

NITROGEN OXIDES
Title 1 implementation: Status report on nonattainment areas
[DE93-017677] p 1471 N94-17777
Land-use related sources of CO2, CH4 and N2O: Current global emissions and projections for the period 1990-2100
[PB93-194819] p 1475 N94-18949
NITROGEN 15
NMR studies of enriched species at interfaces
[AD-A264703] p 1367 N94-17878
NITROUS OXIDES
Analysis of satellite-derived ozone and water vapor measurements
[NASA-CR-193810] p 1486 N94-19237
NOAA SATELLITES
Scientific studies in association with the Shuttle Solar Backscatter Ultraviolet (SSBUV) project
[NASA-CR-193404] p 1630 N94-19437
NOISE (SOUND)
Active control of periodic noise with time-varying frequency
[REPT-93-012] p 1562 N94-17934
Parallel and vector adaptations of the underwater finite element parabolic equation model
[AD-A269990] p 1563 N94-18678
Analysis of data from Columbia Point Arena Ocean-Bottom Seismic Station (OBSS)
[AD-A271263] p 1500 N94-19727
A register of underwater acoustic test facilities in the US, Canada, and the United Kingdom
[AD-A270884] p 1500 N94-19785
Noise measurements on two types of airplanes used for spraying in agriculture
[LR-706] p 1319 N94-19796
NOISE GENERATORS
Acoustic intensity measurements in the presence of low Mach number flow
[AD-A269995] p 1562 N94-18664
NOISE MEASUREMENT
Gear sound levels with various tooth contact ratios and forms
[NASA-TM-106432] p 1446 N94-19318
Noise measurements on two types of airplanes used for spraying in agriculture
[LR-706] p 1319 N94-19796
NOISE POLLUTION
Transport policy options for reducing noise at airports; Hamburg airport taken as an example
[DLR-FB-92-40] p 1322 N94-18123
NOISE REDUCTION
Suppression of backscatter and stray reflection induced phase noise in Michelson interferometers
[AD-D015809] p 1382 N94-17902
Transport policy options for reducing noise at airports; Hamburg airport taken as an example
[DLR-FB-92-40] p 1322 N94-18123
Inverse scattering of surface waves: A new look at surface consistency
[REPT-93-25] p 1486 N94-19140
Gear sound levels with various tooth contact ratios and forms
[NASA-TM-106432] p 1446 N94-19318
Applications of motion estimation in image processing
[FEL-92-B356] p 1580 N94-19455
Supersonic jets from bevelled rectangular nozzles
[NASA-TM-106403] p 1313 N94-19484
NOMENCLATURES
Working group for planetary system nomenclature
[NASA-CR-194406] p 1626 N94-18841
NONADIABATIC CONDITIONS
Polaron tunneling in high-temperature superconductors
[DE93-016880] p 1593 N94-17754
The quantum dynamics of electronically nonadiabatic chemical reactions
[NASA-CR-194309] p 1568 N94-18837
NONCONDENSABLE GASES
Fin-efficiency calculation for condensation in the presence of noncondensable gases
[DE93-017684] p 1409 N94-18004
NONDESTRUCTIVE TESTS
The application of nondestructive techniques to the testing of a wind turbine blade
[DE93-016731] p 1447 N94-18128
High resolution SQUID magnetometry for non-destructive evaluation
[AD-A268884] p 1447 N94-18225
Nondestructive inspection of graphite-epoxy laminates for heat damage using DRIFT and LPF spectroscopies
[DE93-017228] p 1343 N94-18761
Metallurgical evaluation of SRAM 2/SRAM A program mer base plates
[DE93-018689] p 1364 N94-19100
Ultrasonic technique for inspection of GPHS capsule girth weld integrity
[DE93-040072] p 1448 N94-19189
Three dimensional ultrasonic imaging: An aging aircraft nondestructive inspection tool
[DE93-018088] p 1448 N94-19252
Materials characterization of propellants using ultrasonics
[NASA-CR-193877] p 1378 N94-19494
New aircraft materials and structures
[MBB-LME-202-S-PUB-502-A] p 1319 N94-19496
Thermal wave image processing for characterization of subsurface of flaws in materials
[DE93-019024] p 1344 N94-19551
NONEQUILIBRIUM THERMODYNAMICS
Numerical simulation of viscous flows in chemical nonequilibrium
[MBB-LME-211-S-PUB-506] p 1421 N94-19497
Essential shift: Scientific revolution in the 20th century
[AD-A270810] p 1610 N94-19663
NONINTRUSIVE MEASUREMENT
Studies on high pressure and unsteady flame phenomena: Revision
[AD-A269138] p 1348 N94-18257
Earth Penetration Radar Imaging System (EPRIS)
[DE93-019890] p 1391 N94-19542
NONLINEAR EQUATIONS
SAND contact in DYNA3D
[DE93-016451] p 1340 N94-18113
On higher dimensional Ermakov systems: Canonical reductions
[MATHS-REPT-A-182] p 1548 N94-18140
ASYS: a computer algebra package for analysis of nonlinear algebraic equations systems
[DE93-629819] p 1548 N94-18175
On the numerical analysis of nonlinear Galerkin methods: Spectral approximation and finite elements
[ETN-93-94900] p 1552 N94-19407
NONLINEAR FEEDBACK
Nonlinear disturbance decoupling and linearization: A partial interpretation of integral feedback
[PB93-197515] p 1543 N94-19328
NONLINEAR OPTICS
Polaron tunneling in high-temperature superconductors
[DE93-016880] p 1593 N94-17754
Metal-nanocluster composites made by ion implantation: A novel third-order nonlinear material
[DE93-015908] p 1339 N94-17846
Development of short pulse soft x ray lasers
[DE93-017150] p 1437 N94-18131
IR materials producibility
[AD-A268849] p 1577 N94-18223
Tunable synchronously pumped intracavity two-stage optical frequency upconversion
[AD-A269105] p 1438 N94-18250
Integrated photonics research volume 10. Conference edition
[AD-A269298] p 1577 N94-18298
Applications of nonlinear optic effects in new specialty fibers
[AD-A268890] p 1578 N94-18457
Theory of electromagnetic waves propagating in nonlinear anisotropic optical materials
[AD-A269305] p 1386 N94-18469
Quantum Optoelectronics. Organization of the 1993 photonics science topical meetings. Technical digest series, volume 8
[AD-A269026] p 1578 N94-18488
Advanced Solid-State Lasers/Compact Blue-Green Lasers. 1993 technical digest series. Volume 2: Organization of the 1993 photonics science topical meetings
[AD-A269058] p 1438 N94-18492
Relaxation of polar orientational order in nonlinear optical polymers by second harmonic generation
[AD-A269059] p 1370 N94-18515
Photonics in Switching: Organization of the 1993 photonics science topical meetings. Technical digest
[AD-A269024] p 1578 N94-18528
Phase conjugation and beam combination using stimulated brillouin scattering
[AD-A269899] p 1439 N94-18656
Nonlinear optical properties of molecules
[AD-A270199] p 1567 N94-18783
Molecular nonlinear optical susceptibilities in condensed phases
[AD-A270200] p 1568 N94-18784
Consortium for materials development in space
[NASA-CR-194411] p 1379 N94-18840
Final report on subcontract B076260 — borate synthesis
[DE93-019501] p 1604 N94-19565
Electro-optic beam steering using non-linear organic materials
[AD-A270809] p 1374 N94-19577
Ionized-cluster beam/partially ionized beam deposition of electro-optical and nonlinear optical organic materials and device development
[AD-A270832] p 1604 N94-19596
Optical switch evaluation support
[AD-A270948] p 1581 N94-19601
NONLINEAR PROGRAMMING
Design optimization studies using COSMIC NASTRAN
p 1450 N94-17834
NONLINEAR SYSTEMS
Modelling chaotic vibrations using NASTRAN
p 1449 N94-17830
Generalization of optimal control theory: Linear and nonlinear structures
[PB93-188621] p 1540 N94-18125
On higher dimensional Ermakov systems: Canonical reductions
[MATHS-REPT-A-182] p 1548 N94-18140
Non Linear Dynamics and Chaos
[AGARD-LS-191] p 1607 N94-18236
Stability analysis through bifurcation theory, 1
p 1608 N94-18238
Non-linear flight dynamics p 1319 N94-18240
An ab initio study of the weakly bonded CO-Cl2 complex
[AD-A269000] p 1349 N94-18395
Fundamental research in nonlinear random vibration for aerospace applications
[AD-A268929] p 1454 N94-18487
Competitive dynamics and self-organization in photorefractive systems
[AD-A269663] p 1430 N94-18569
Phase-space description of plasma waves: Linear and nonlinear theory
[IRF-SR-211] p 1587 N94-18860
Control of nonlinear systems
[AD-A270141] p 1542 N94-18898
Statistical learning theory and algorithms
[AD-A270209] p 1523 N94-18901
The intelligent processing of materials
[AD-A269250] p 1362 N94-18923
Analysis and design of robust decentralized controllers for nonlinear systems
[DE93-019224] p 1543 N94-19302
Nonlinear disturbance decoupling and linearization: A partial interpretation of integral feedback
[PB93-197515] p 1543 N94-19328
Time dependent identification of nonlinear structures
[ECL-92-64] p 1457 N94-19403
Contribution to the modelling and the identification of nonlinear mechanical systems
[ECL-92-32] p 1529 N94-19409
Contribution to the identification of nonlinear behavior laws in material mechanics
[ECL-92-36] p 1458 N94-19411
NONLINEARITY
The 1992 annual report on scientific programs: A broad research program on the sciences of complexity
[DE93-018151] p 1561 N94-18178
Nonlinear Thomson scattering of intense laser pulse from beams and plasmas
[AD-A269556] p 1438 N94-18460
Fundamental research in nonlinear random vibration for aerospace applications
[AD-A268929] p 1454 N94-18487
Multidimensional wave decompositions for the Euler equations p 1413 N94-18562
Effects of harmonics on EMI/RFI filters operating under nonlinear loading conditions
[AD-A269559] p 1388 N94-18769
Active control of a multivariable system by way of polynomial neural networks: Computer simulation evaluations and laboratory experimental results
[AD-A270033] p 1541 N94-18790
Application of differential sensitivity theory to continuum mechanics
[DE93-012732] p 1609 N94-19187
Singularities and symmetries of nonlinear ordinary and partial differential equations
[DE93-040083] p 1550 N94-19190
Analysis and design of robust decentralized controllers for nonlinear systems
[DE93-019224] p 1543 N94-19302
Time dependent identification of nonlinear structures
[ECL-92-64] p 1457 N94-19403
A comparison of iterative methods for a model coupled system of elliptic equations
[DE93-040482] p 1553 N94-19655
Theoretical studies of turbulence and anomalous transport in toroidal confinement devices
[DE93-040684] p 1592 N94-19656
NONUNIFORM FLOW
Internal instability of nonparallel flow on an equatorial beta-plane
[AD-A268927] p 1490 N94-18486

NONUNIFORMITY
Some problems in the rheological characterisation of composite rocket propellants
[AD-A268806] p 1376 N94-18203

NORMAL DENSITY FUNCTIONS
An empirical evaluation of five circular error probable estimation techniques and a method for improving them
[AD-A266528] p 1556 N94-18397

NORMALITY
EDF tests for normality in linear models after a Box-Cox transformation
[AD-A269068] p 1557 N94-18517

NORMALIZING (STATISTICS)
EDF tests for normality in linear models after a Box-Cox transformation
[AD-A269068] p 1557 N94-18517

NOVA LASER SYSTEM
Evaluation of materials proposed for the construction of the Plasma Electrode Pockels Cell (PEPC) on beamlet
[DE93-016952] p 1584 N94-17988

NOZZLE FLOW
Adaptations to micropep and rocket to allow performance evaluation of multiple grain and/or airbreathing motors
[AD-A268798] p 1337 N94-18202
Workshop on Computational Turbulence Modeling
[NASA-TM-109266] p 1410 N94-18545
High order non-oscillatory schemes for the compressible Euler equations p 1412 N94-18558

NOZZLE GEOMETRY
Study of multi-phase flow characteristics in an MHD power train
[DE93-018570] p 1586 N94-18272
Supersonic jets from bevelled rectangular nozzles
[NASA-TM-106403] p 1313 N94-19484

NOZZLE WALLS
Analysis of film cooling in rocket nozzles
[NASA-CR-194674] p 1338 N94-19438

NUCLEAR BINDING ENERGY
Effect of oxygen concentration and ordering on vanadium-oxygen alloy vibrational spectra
[DE93-627003] p 1355 N94-17692
Binding of copper to nanocavity surfaces in silicon
[DE93-019073] p 1364 N94-19080

NUCLEAR ELECTRIC POWER GENERATION
Directory of Energy Information Administration Models 1993
[DE93-016987] p 1616 N94-18707

NUCLEAR ELECTRIC PROPULSION
Critical technologies for reactors used in nuclear electric propulsion
[DE93-017685] p 1337 N94-17908
Potassium-Rankine power conversion subsystem modeling for nuclear electric propulsion
[NASA-CR-191134] p 1468 N94-18821

NUCLEAR FUELS
EIA publications directory, 1992
[DE93-016833] p 1617 N94-18983
Total hemispherical emittance of Niobium-1 percent zirconium fuel cladding for the SP-100 space reactor
[AD-A270456] p 1576 N94-19589

NUCLEAR FUSION
Magnetic Fusion Energy Technology Fellowship: Report on survey of institutional coordinators
[DE93-014646] p 1583 N94-17739
Plasma properties research: Task 3
[DE93-017087] p 1583 N94-17854
Evolution of r-process elements in the hot supernova bubble
[DE93-017169] p 1624 N94-17897
Electron stripping cross sections for light impurity ions in colliding with atomic hydrogens relevant to fusion research
[DE93-788476] p 1566 N94-18158
Institute of Geophysics and Planetary Physics, 1992
[DE93-019209] p 1627 N94-19077
Transverse beam combiner for ILSE
[DE93-019239] p 1591 N94-19559

NUCLEAR INTERACTIONS
Heavy-ion collisions and the nuclear equation of state
[DE93-019263] p 1566 N94-18104

NUCLEAR MAGNETIC RESONANCE
NMR studies of enriched species at interfaces
[AD-A264703] p 1367 N94-17878
Advanced in macrostatistical hydrodynamics
[DE93-018479] p 1410 N94-18270

NUCLEAR MEDICINE
Nuclear Medicine Program
[DE93-013896] p 1504 N94-17699

NUCLEAR MODELS
Investigation of the relative abundance of heavy versus light nuclei in primary cosmic rays using underground muon bundles
[DE93-017601] p 1630 N94-17818

NUCLEAR PHYSICS
Heavy ion nuclear physics research
[DE93-018862] p 1565 N94-17776
Activities report of the Rutherford Appleton Laboratory
[ETN-93-94555] p 1631 N94-17968
Institute for Nuclear Theory
[DE93-017369] p 1568 N94-18824

NUCLEAR PROPULSION
Mission needs and system commonality for space nuclear power and propulsion
[DE93-016557] p 1337 N94-17863
KINETIC: A system code for analyzing Nuclear thermal propulsion rocket engine transients
[DE93-016825] p 1337 N94-17884

NUCLEAR QUADRUPOLE RESONANCE
Phase separation and superconductivity in La2CuO(4 + delta): Effects of oxygen diffusion
[DE93-016610] p 1594 N94-17907

NUCLEAR REACTIONS
Evolution of r-process elements in the hot supernova bubble
[DE93-017169] p 1624 N94-17897
T violating neutron spin rotation asymmetry
[DE93-018470] p 1570 N94-19126

NUCLEAR REACTORS
Fluid-structure-interaction analyses of reactor vessel using improved hybrid Lagrangian Eulerian code ALICE-II
[DE93-015536] p 1409 N94-18248

NUCLEAR RESEARCH
Magnetic Fusion Energy Technology Fellowship: Report on survey of institutional coordinators
[DE93-014646] p 1583 N94-17739

NUCLEAR STRUCTURE
Institute for Nuclear Theory
[DE93-017369] p 1568 N94-18824

NUCLEAR WEAPONS
Computer/information security design approaches for Complex 21/Reconfiguration facilities
[DE93-018547] p 1535 N94-18930

NUCLEATION
Characterization of diamond film nucleation and growth surface
[AD-A269400] p 1597 N94-18459
Growth, characterization and device development in monocrystalline diamond films
[AD-A270074] p 1599 N94-18797
A numerical analysis of crack growth in brittle microcracking composites
[DE93-011562] p 1343 N94-18914
Surface phases and their influence on metal-oxide interfaces
[DE93-019931] p 1601 N94-19020
Melt spinning study
[NASA-CR-193823] p 1380 N94-19423

NUCLEI (NUCLEAR PHYSICS)
Eta-nucleon interaction and nuclear production of eta mesons
[DE93-018469] p 1571 N94-19259

NUCLEONS
Unitary (pi)(pi)N model of N* excitations in (pi)N and (gamma)N reactions
[DE93-017422] p 1568 N94-18826
Eta-nucleon interaction and nuclear production of eta mesons
[DE93-018469] p 1571 N94-19259

NUMERICAL ANALYSIS
The calculation methods of a cracked plastic composite laminate: A literature survey
[VTT-TIED-1362] p 1339 N94-17958
Format.m: A usage manual. Towards an efficient symbolic-numeric environment: Extending Mathematica's format rules
[MATHS-REPT-A-185] p 1547 N94-17969
Numerical methods for one-dimensional hyperbolic conservation laws
[PB93-194801] p 1547 N94-18078
Numerical methods for molecular dynamics
[DE93-018321] p 1566 N94-18179
Numerical and symbolic signal representation and processing
[AD-A270271] p 1389 N94-18811
A numerical study of hybrid optimization methods for the molecular conformation problems
[DE93-017898] p 1569 N94-18985
Using geometric techniques to improve dynamic programming algorithms for the economic lot-sizing problem and extensions
[PB93-197556] p 1528 N94-19330
Numerical analysis of proximal methods: Decomposition and parallelization
[ETN-93-95017] p 1552 N94-19362
Numerical experiments on the Ginzburg-Landau equations
[DE93-019504] p 1604 N94-19567

NUMERICAL CONTROL
Experience with custom processors in space flight applications p 1336 N94-18338
Simplified microprocessor design for VLSI control applications p 1400 N94-18359
Optimizing wind turbine control system parameters
[DE93-018861] p 1469 N94-19036
Analysis and design of robust decentralized controllers for nonlinear systems
[DE93-019224] p 1543 N94-19302

NUMERICAL FLOW VISUALIZATION
Infrared thermography p 1432 N94-18652
3D composite grids using Bezier curves and surfaces in component adaptive methods
[AD-A269188] p 1549 N94-18863
Content based-grid node selection for vector field visualization
[REPT-93-35] p 1525 N94-19155

NUMERICAL INTEGRATION
Numerical integration of structural elements in NIKE3D and DYNA3D
[DE93-016325] p 1452 N94-18049
Calculation of turbulent boundary layer wall pressure spectra
[AD-A269549] p 1416 N94-18642
Implementation of a nonisothermal unified inelastic-strain theory into ADINA6.0 for a titanium alloy: User guide
[AD-A269927] p 1360 N94-18660

NUMERICAL STABILITY
A modified direct preconditioner for indefinite symmetric Toeplitz systems
[DE93-015234] p 1516 N94-17800
Robustness and efficiency of generalized predictive control algorithms with guaranteed stability
[MATHS-REPT-A-190] p 1530 N94-19412

NUMERICAL WEATHER FORECASTING
Microwave (SSM/I) Estimates of the Precipitation Rate to Improve Numerical Atmospheric Model Forecasts
[NASA-CR-193566] p 1491 N94-18602
Diabatic forcing and initialization with assimilation of cloud and rain water in a forecast model: Methodology
p 1491 N94-18603
Physical retrieval of precipitation water contents from Special Sensor Microwave/Imager (SSM/I) data. Part 2: Retrieval method and applications (report version)
p 1491 N94-18605
Forecast model applications of retrieved three dimensional liquid water fields p 1492 N94-18606
Moist wind relationships p 1492 N94-18607
Initialization and assimilation of cloud and rainwater in a regional model p 1492 N94-18608
SERCAA cloud analysis integration: Design concepts and interaction with cloud forecast models
[AD-A269104] p 1492 N94-18637
On the use of semi-Lagrangian methods for accurate predictions of gravity waves
[DM-61] p 1562 N94-18859
Toward a high performance distributed memory climate model
[DE93-019156] p 1494 N94-19298
Reports of the 1992 Synoptic Symposium
[KNMI-TR-151] p 1494 N94-19698
HIRLAM p 1494 N94-19699
The WAQUA/CSM-16 model p 1494 N94-19700
The wave forecasting model NEDWAM
p 1495 N94-19701

O

O RING SEALS
Effect of temperature and O-ring gland finish on sealing ability of Viton V747-75
[NASA-TP-3391] p 1368 N94-18075

OBJECT-ORIENTED PROGRAMMING
Proposal for a numerical array library
[DE93-015017] p 1516 N94-17786
An object-oriented environment for computer vision and pattern recognition
[DE93-017098] p 1517 N94-17867
A structured approach for modeling, analyzing and simulating real-time control systems
[REPT-93-044] p 1539 N94-17916
An environment for requirement reuse
[REPT-92-082] p 1613 N94-17939
Object-oriented extension of a relational DBMS
[ETN-93-94403] p 1519 N94-17978
The development of a course sequence in real-time systems design
[AD-A269459] p 1522 N94-18726
NASA Electronic Library System (NELS) optimization
[NASA-CR-193688] p 1617 N94-18839
Software engineering for effective utilization of parallel processing computing system
[AD-A269191] p 1535 N94-18865

Asynchronous rendezvous in the presence of backtracking
[PB93-197739] p 1524 N94-19062
Abstracting inter-object communications using composition filters
[MEMO-INF-92-76] p 1526 N94-19220
DataTypeLog: A deductive object oriented query language
[MEMO-INF-92-79] p 1526 N94-19221
The TM typing rules
[MEMO-INF-92-80] p 1526 N94-19222
The TM manual version 1.3 working document
[MEMO-INF-93-06] p 1527 N94-19229
Feasibility study in linguistically motivated object-oriented conceptual design of information systems
[PB93-197754] p 1618 N94-19331
Advanced software development workstation: Object-oriented methodologies and applications for flight planning and mission operations
[NASA-CR-193706] p 1513 N94-19349
Managing persistent objects: From the programming language to the system
[ETN-93-95021] p 1529 N94-19368
Contribution to applications systems design MOSAIC method in the Aristote project
[ETN-93-95022] p 1529 N94-19370
OORA Automated Knowledge System (OAKS) code, appendix C
[AD-A270709] p 1531 N94-19573
Computer security. Evolutions 1987 to 1992: Trends and perspectives
[RR-905-I] p 1532 N94-19713
On the automation of object-oriented requirements analysis
[AD-A270673] p 1532 N94-19782

OCCUPATION

Interdisciplinary training in life science (FY 1991 ASSERT)
[AD-A269220] p 1512 N94-18886

OCCUPATIONAL DISEASES

Review of short-term, high-level exposure to metals: Antimony, barium, and cadmium
[AD-A268896] p 1505 N94-18392

OCEAN BOTTOM

Constraints on crustal structure from long period pressure and displacement measurements on the deep seafloor
[AD-A269931] p 1498 N94-18663
BACKSCATTER.FOR: A program to calculate the backscattering strength of an inhomogeneous seabed
[AD-A269235] p 1499 N94-18910
The interpretation of crustal dynamics data in terms of plate motions and regional deformation near plate boundaries
[NASA-CR-194302] p 1487 N94-19432
Analysis of data from Columbia Point Arena Ocean-Bottom Seismic Station (OBSS)
[AD-A271263] p 1500 N94-19727
Faulted structure of the bottom simulating reflector on the Blake Ridge, western North Atlantic
[AD-A271289] p 1500 N94-19745
Seismic studies of the geologic structure and physical properties of the seabed
[AD-A270895] p 1500 N94-19747
Measurements of ocean surface and bottom backscattering strengths in the northwestern Atlantic Ocean
[AD-A270893] p 1500 N94-19786
A laboratory model of a cooled continental shelf
[AD-A270862] p 1500 N94-19792

OCEAN CURRENTS

Wind products for use in coastal wave and surge models
[AD-A269753] p 1497 N94-18414
ADCIRC: An advanced three-dimensional circulation model for shelves, coasts, and estuaries. Report 3: Development of a tidal constituent database for the western North Atlantic and Gulf of Mexico
[AD-A268685] p 1497 N94-18455
Acoustic travel time perturbations due to an internal tide and internal wave field in the Barents Sea
[AD-A270879] p 1499 N94-19580

OCEAN DATA ACQUISITIONS SYSTEMS

CTD and XBT data collected on ERS-1 validation cruise RRS Charles Darwin Cruise 62A, Iceland-Faeroes region
[IOS-294-1992] p 1461 N94-18063
CTD oxygen, tracer and nutrient data from RRS Charles Darwin Cruises 58/59 in the NE Atlantic as part of Vivaldi 1991
[IOS-296-1992] p 1496 N94-18065
SeaSoar CTD, fluorescence and scalar irradiance data from RRS Charles Darwin Cruises 58/59, NE Atlantic, Vivaldi 1991
[IOS-299-1992] p 1496 N94-18066
Modifications of airborne oceanographic lidar for the long range P-3 missions
[NASA-CR-194682] p 1499 N94-18819
Method for extracting tidal and inertial motion from ARGOS ice buoys applied to the Barents Sea during CEAREX
[PB93-190213] p 1499 N94-19063

OCEAN MODELS

The performance of drag relations in the WAQUA storm surge model
[KNMI-TR-149] p 1496 N94-17923
Coastal Ocean Modeling Workshop
[AD-A268955] p 1497 N94-18393
ADCIRC: An advanced three-dimensional circulation model for shelves, coasts, and estuaries. Report 3: Development of a tidal constituent database for the western North Atlantic and Gulf of Mexico
[AD-A268685] p 1497 N94-18455
Preparation of data assimilation and model evaluation experiment data sets
[AD-A269996] p 1498 N94-18665
Work plan for the Marine Aerosol Properties and the Thermal Imager Performance Trial (MAPTIP)
[AD-A270026] p 1483 N94-18712
DYNLET1 model formulation and user's guide
[AD-A269843] p 1498 N94-18723
Connection machine software conversion of a Navy oceans model
[AD-A269876] p 1535 N94-18772
Estimating the oceanic sound speed environmental for long-range acoustic propagation
[AD-A270231] p 1499 N94-18903
Modeling of current features in Gulf Stream SAR imagery
[AD-A270734] p 1499 N94-19609
A laboratory model of a cooled continental shelf
[AD-A270862] p 1500 N94-19792

OCEAN SURFACE

Rapid oceanic cyclogenesis studies
[AD-A269258] p 1490 N94-18265
Wind products for use in coastal wave and surge models
[AD-A269753] p 1497 N94-18414
Full Boltzmann discrete spectral wave model, implementation and nondimensional tests
[AD-A269885] p 1498 N94-18685
Development of ISY data set, part 2
[NASDA-CNT-930006-PT-2] p 1463 N94-19384
The split-step algorithm for microwave propagation modeling above a conducting surface
[FEL-92-A430] p 1390 N94-19447
Acoustic travel time perturbations due to an internal tide and internal wave field in the Barents Sea
[AD-A270879] p 1499 N94-19580
Modeling of current features in Gulf Stream SAR imagery
[AD-A270734] p 1499 N94-19609
Remote sensing of Earth terrain
[NASA-CR-194598] p 1464 N94-19681
Theoretical and experimental research on coherent microwave backscatter from the ocean
[AD-A271276] p 1500 N94-19743
Measurements of ocean surface and bottom backscattering strengths in the northwestern Atlantic Ocean
[AD-A270893] p 1500 N94-19786

OCEAN TEMPERATURE

CTD and XBT data collected on ERS-1 validation cruise RRS Charles Darwin Cruise 62A, Iceland-Faeroes region
[IOS-294-1992] p 1461 N94-18063
SeaSoar and CTD sections across the Iceland-Faeroes Front and Faeroe Shetland Channel, August 1990
[IOS-295-1992] p 1496 N94-18064
An atlas of bathy-thermograph temperature cross-sections for Coral and Tasman Sea transects from 1960 to 1987
[AD-A268775] p 1497 N94-18329

OCEANOGRAPHIC PARAMETERS

Development and evaluation of alternative radioanalytical methods, including mass spectrometry for marine materials
[DE93-625117] p 1345 N94-17691
SeaSoar and CTD sections across the Iceland-Faeroes Front and Faeroe Shetland Channel, August 1990
[IOS-295-1992] p 1496 N94-18064
CTD oxygen, tracer and nutrient data from RRS Charles Darwin Cruises 58/59 in the NE Atlantic as part of Vivaldi 1991
[IOS-296-1992] p 1496 N94-18065

OCEANOGRAPHY

Development and evaluation of alternative radioanalytical methods, including mass spectrometry for marine materials
[DE93-625117] p 1345 N94-17691
A one dimensional numerical model, with an application to the vertical distribution of dissolved oxygen in the ocean
[DE93-018481] p 1495 N94-17779
Technologies for assessing the geologic and geomorphic history of coasts
[AD-A268780] p 1496 N94-18215
Synoptic ocean prediction experiment. EN216 CTD section data report
[AD-A268903] p 1497 N94-18230
An atlas of bathy-thermograph temperature cross-sections for Coral and Tasman Sea transects from 1960 to 1987
[AD-A268775] p 1497 N94-18329
Overview of physical oceanographic measurements taken during the Mount Mitchell cruise to ROPME sea area
[DE93-018460] p 1497 N94-18494
Preparation of data assimilation and model evaluation experiment data sets
[AD-A269996] p 1498 N94-18665
Atlas of SSM/I satellite ice concentration interpolated to operational ice model domains of the Arctic for 1992
[AD-A270306] p 1499 N94-18727
Estimating the oceanic sound speed environmental for long-range acoustic propagation
[AD-A270231] p 1499 N94-18903

OCEANS

A one dimensional numerical model, with an application to the vertical distribution of dissolved oxygen in the ocean
[DE93-018481] p 1495 N94-17779
Comments on computational underwater acoustics
[DE93-013789] p 1562 N94-17873
Synoptic ocean prediction experiment. EN216 CTD section data report
[AD-A268903] p 1497 N94-18230

OFF-ON CONTROL

Increasing mission reliability using open-loop control
[AD-A271208] p 1545 N94-19721

OIL ADDITIVES

Surface species in tribology
[AD-A270970] p 1446 N94-19754

OIL POLLUTION

Oil spreading in surface waters with an ice cover
[PB93-190767] p 1476 N94-19064

OIL SLICKS

Overview of physical oceanographic measurements taken during the Mount Mitchell cruise to ROPME sea area
[DE93-018460] p 1497 N94-18494
Oil spreading in surface waters with an ice cover
[PB93-190767] p 1476 N94-19064

OILS

Compatibility of refrigerants and lubricants with motor materials, volume 1
[DE93-040216] p 1350 N94-18895

OLIGOMERS

Nonlinear optical properties of molecules
[AD-A270199] p 1567 N94-18783
Oligomer and mixed-metal compounds, potential multielectron transfer catalysts
[DE93-019592] p 1350 N94-19017
Cooperative formation of inorganic-organic interfaces in the synthesis of silicate mesostructures
[AD-A271196] p 1375 N94-19742

ON-LINE PROGRAMMING

High precision on-line standard arithmetic operators: Design and implementation
[ETN-93-95006] p 1552 N94-19487

ON-LINE SYSTEMS

FEDIX on-line information service: Design, develop, test, and implement an on-line research and education information service
[DE93-018818] p 1614 N94-18181
Intelligent help facilities: Generating natural language descriptions with examples
[AD-A269555] p 1521 N94-18290
Handbook for users
[AD-A268726] p 1615 N94-18323
On-line monitoring of incinerator emissions
[DE93-017406] p 1474 N94-18499
Automatic documentation generation: The interaction of text and examples
[AD-A269670] p 1616 N94-18570
Software distribution using xnetlib
[DE93-018278] p 1523 N94-18989
On-line test methods of microprocessor based systems
[ETN-93-95008] p 1530 N94-19498

ONBOARD DATA PROCESSING

VPU(tm) demonstration mission vicinity processor unit(tm) overview p 1325 N94-19171
Multichannel error correction code decoder
[NASA-TM-106331] p 1333 N94-19313

OPACITY
FEEST: A method for tabulating equation of state and opacity tables
[DE93-017965] p 1347 N94-18092
OPERATING COSTS
Optimizing wind turbine control system parameters
[DE93-018861] p 1469 N94-19036
Downsizing a database platform for increased performance and decreased costs
[DE93-018687] p 1618 N94-19099
OPERATING SYSTEMS (COMPUTERS)
PARX: Architecture of an operating system for parallel machines
[ETN-93-94401] p 1533 N94-18068
Embedded Computer Performance Measurement (ECPM). Advanced avionics subsystems and technology multiprocessor ECPM software documentation
[AD-A269921] p 1320 N94-18658
Control of nonlinear systems
[AD-A270141] p 1542 N94-18898
Pegasus project description
[MEMO-INF-92-75] p 1536 N94-19159
Pegasus: Operating system support for distributed multimedia systems
[MEMO-INF-92-76] p 1536 N94-19160
Experience in implementing a parallel file system
[DE93-012840] p 1536 N94-19188
ACOS: A performance based approach to build a parallel complex object server
[MEMO-INF-93-11] p 1537 N94-19198
Message passing in PUMA
[DE93-012841] p 1537 N94-19206
Wide-address spaces: Exploring the design space
[MEMO-INF-92-77] p 1537 N94-19219
Service without servers
[AD-A270612] p 1515 N94-19591
OPERATING TEMPERATURE
Development of a cryogenic heat pipe
[DE93-018448] p 1417 N94-18831
OPERATIONS RESEARCH
Contribution to the analysis of tableaus based decision methods
[ETN-93-94355] p 1560 N94-18067
Polling systems: Moment stability of station times and central limit theorems
[PB93-191955] p 1560 N94-18990
OPERATOR PERFORMANCE
Operator performance in pattern matching as a function of reference material structure
[AD-A269889] p 1509 N94-18686
OPERATORS (MATHEMATICS)
Functional analysis of subelliptic operators on lie groups
[PB93-194793] p 1547 N94-18077
L(sub p)-regularity of subelliptic operators on Lie groups
[PB93-194785] p 1549 N94-18948
Numerical analysis of proximal methods: Decomposition and parallelization
[ETN-93-95017] p 1552 N94-19362
High precision on-line standard arithmetic operators: Design and implementation
[ETN-93-95006] p 1552 N94-19487
Computation of large numbers and VLSI: Application to GCD, to stretched GCD and at euclidian distance
[ETN-93-95009] p 1552 N94-19499
OPTICAL ACTIVITY
Kinetic aspects of lattice mismatch in molecular beam epitaxial growth on planar and patterned substrates
[AD-A270424] p 1597 N94-18506
OPTICAL COMMUNICATION
Intentionally Short Range Communications (ISRC)
[AD-A268788] p 1384 N94-18216
Advanced optical fiber communication systems
[AD-A269120] p 1577 N94-18254
Integrated photonics research volume 10. Conference edition
[AD-A269298] p 1577 N94-18298
Competitive dynamics and self-organization in photorefractive systems
[AD-A269663] p 1430 N94-18569
Integrated Photonics Research: Post-deadline papers
[AD-A269232] p 1609 N94-18908
A highly concurrent medium access control strategy for high speed multiwavelength networks using transceivers with limited tunability
[MEMO-INF-93-07] p 1390 N94-19230
Optical frequency division using an optical parametric oscillator
[AD-A270847] p 1581 N94-19578
Experimental examinations of semiconductor laser amplifiers for optical communication technology
[ETN-93-95050] p 1442 N94-19647
OPTICAL COMPUTERS
Coherent transient systems evaluation
[AD-A268808] p 1576 N94-18204
Optical associative processors and directed graphs
[AD-A268881] p 1615 N94-18224
Optical computing. Organization of the 1993 Photonics Science Topical Meetings. Technical digest series, volume 7
[AD-A269025] p 1578 N94-18332
Advanced Solid-State Lasers/Compact Blue-Green Lasers. 1993 technical digest series. Volume 2: Organization of the 1993 photonics science topical meetings
[AD-A269058] p 1438 N94-18492
Design and fabrication of a Multichannel Adaptive Optical Processor (MADOP)
[AD-A270004] p 1579 N94-18668
OPTICAL CORRELATORS
Coherent transient systems evaluation
[AD-A268808] p 1576 N94-18204
Evaluation of a liquid crystal spatial light modulator capable of amplitude- and phase-modulating modes
[AD-A269252] p 1577 N94-18262
Optimal design of binary phase-only filters using genetic algorithms
[AD-A268737] p 1396 N94-18278
OPTICAL COUNTERMEASURES
Millimeter wave reflectivity measurement system
[AD-A270008] p 1387 N94-18601
OPTICAL COUPLING
Optical computing. Organization of the 1993 Photonics Science Topical Meetings. Technical digest series, volume 7
[AD-A269025] p 1578 N94-18332
Phase conjugation and beam combination using stimulated brillouin scattering
[AD-A269899] p 1439 N94-18656
OPTICAL DATA PROCESSING
Examination of metrics and assumptions used in correlation filter design
[DE93-017636] p 1576 N94-18000
Evaluation of a liquid crystal spatial light modulator capable of amplitude- and phase-modulating modes
[AD-A269252] p 1577 N94-18262
Optimal design of binary phase-only filters using genetic algorithms
[AD-A268737] p 1396 N94-18278
Integrated photonics research volume 10. Conference edition
[AD-A269298] p 1577 N94-18298
Photorefractive tungsten bronze crystals for optical computing
[AD-A268859] p 1596 N94-18320
Optical computing. Organization of the 1993 Photonics Science Topical Meetings. Technical digest series, volume 7
[AD-A269025] p 1578 N94-18332
Quantum Optoelectronics. Organization of the 1993 photonics science topical meetings. Technical digest series, volume 8
[AD-A269026] p 1578 N94-18488
Photonics in Switching: Organization of the 1993 photonics science topical meetings. Technical digest
[AD-A269024] p 1578 N94-18528
Design and fabrication of a Multichannel Adaptive Optical Processor (MADOP)
[AD-A270004] p 1579 N94-18668
Integrated Photonics Research: Post-deadline papers
[AD-A269232] p 1609 N94-18908
Ultrafast Electronics and Optoelectronics: Summaries of papers. Technical digest conference edition
[AD-A269233] p 1405 N94-18909
Evaluation of laser diode based optical switches for optical processors
[AD-A270949] p 1581 N94-19602
OPTICAL DISKS
Photorefractive tungsten bronze crystals for optical computing
[AD-A268859] p 1596 N94-18320
OPTICAL EMISSION SPECTROSCOPY
Imaging and blackbody emission spectra of hot particulates generated during laser ablation
[DE93-015818] p 1439 N94-18724
OPTICAL EQUIPMENT
Experiments in sideband suppression on the Los Alamos National Laboratory Free-Electron Laser
[DE93-014466] p 1435 N94-17724
Considerations for the use of the modified line reversal technique for gas temperature measurement
[DE93-015752] p 1576 N94-17857
Designs for optical components related to the Los Alamos free-electron laser
[DE93-016617] p 1436 N94-17865
Calibration of a high frequency monostatic acoustic echosounder
[AD-A268901] p 1481 N94-18229
Evaluation of a liquid crystal spatial light modulator capable of amplitude- and phase-modulating modes
[AD-A269252] p 1577 N94-18262
Photorefractive receiver study
[AD-A269352] p 1577 N94-18302
Optical design for photonics. Organization of the 1993 Photonics Science Topical Meetings. Technical digest series, volume 9
[AD-A269027] p 1578 N94-18396
Quantum Optoelectronics. Organization of the 1993 photonics science topical meetings. Technical digest series, volume 8
[AD-A269026] p 1578 N94-18488
Advanced Solid-State Lasers/Compact Blue-Green Lasers. 1993 technical digest series. Volume 2: Organization of the 1993 photonics science topical meetings
[AD-A269058] p 1438 N94-18492
Liquid sound speeds at pressure from the optical analyzer technique
[DE93-018362] p 1563 N94-19151
Optical frequency division using an optical parametric oscillator
[AD-A270847] p 1581 N94-19578
OPTICAL FIBERS
Laser induced damage testing: Equipment and techniques
[DE93-017143] p 1437 N94-18060
Advanced optical fiber communication systems
[AD-A269120] p 1577 N94-18254
Applications of nonlinear optic effects in new specialty fibers
[AD-A268890] p 1578 N94-18457
Metal Film Surface Plasmon Resonance (MFSPR) fibre couplers
[AD-A268871] p 1579 N94-18635
Apparatus and method for varying a Bragg wavelength of a Bragg grating formed in an optical fiber
[AD-D015876] p 1579 N94-18743
Evaluation of fiber optic performance in the ACRR
[DE93-018515] p 1580 N94-18970
Penetrometer compatible, fiber-optic sensor for continuous monitoring of chlorinated hydrocarbons: Field test results
[DE93-017974] p 1352 N94-19266
Delamination in composite materials as observed using an optical fiber strain gage
[AD-A270803] p 1344 N94-19662
OPTICAL FILTERS
Experiments in sideband suppression on the Los Alamos National Laboratory Free-Electron Laser
[DE93-014466] p 1435 N94-17724
Optimal design of binary phase-only filters using genetic algorithms
[AD-A268737] p 1396 N94-18278
Integrated Photonics Research: Post-deadline papers
[AD-A269232] p 1609 N94-18908
OPTICAL HETERODYNING
Photorefractive receiver study
[AD-A269352] p 1577 N94-18302
Impact of shorter wavelengths on optical quality for laws
[NASA-CR-193873] p 1579 N94-18858
OPTICAL MATERIALS
IR materials producibility
[AD-A268849] p 1577 N94-18223
Spatial light modulators and applications: Summaries of papers presented at the Spatial Light Modulators and Applications Topical Meeting
[AD-A269452] p 1577 N94-18283
Novel electrochemical materials prepared by sol-gel chemistry
[AD-A269060] p 1578 N94-18405
Theory of electromagnetic waves propagating in nonlinear anisotropic optical materials
[AD-A269305] p 1386 N94-18469
Relaxation of polar orientational order in nonlinear optical polymers by second harmonic generation
[AD-A269059] p 1370 N94-18515
Consortium for materials development in space
[NASA-CR-194411] p 1379 N94-18840
Radiation induced darkening of the optical elements in the Startracker camera
[DE93-018907] p 1433 N94-19004
Surface modification of sapphire for IR window application
[DE93-019168] p 1602 N94-19075
Ionized-cluster beam/partially ionized beam deposition of electro-optical and nonlinear optical organic materials and device development
[AD-A270832] p 1604 N94-19596
Optical switch evaluation support
[AD-A270948] p 1581 N94-19601
OPTICAL MEASUREMENT
Gear train behavior analyzer using laser beam scanning for watch movement p 1427 N94-18028
Space debris detection
[AD-A269254] p 1334 N94-18264

Survey of collision avoidance and ranging sensors for mobile robots, revision 1
[AD-A269846] p 1541 N94-18474
Pressure sensitive paint technique
p 1431 N94-18647
Optical switch evaluation support
[AD-A270948] p 1581 N94-19601
OPTICAL MEASURING INSTRUMENTS
Portable, solid state, fiber optic coupled Doppler interferometer system for detonation and shock diagnostics
[DE93-013917] p 1423 N94-17700
Survey of collision avoidance and ranging sensors for mobile robots, revision 1
[AD-A269846] p 1541 N94-18474
Crossed molecular beam studies of atmospheric chemical reaction dynamics
[DE93-019246] p 1478 N94-19303
OPTICAL MEMORY (DATA STORAGE)
Coherent transient systems evaluation
[AD-A268808] p 1576 N94-18204
Photo-induced and electrooptic properties of (Pb,La)(Zr,Ti)O3 films
[DE93-017496] p 1371 N94-18519
OPTICAL PROPERTIES
Dust in the Small Magellanic Cloud
[NASA-CR-193344] p 1624 N94-17764
Metal-nanocluster composites made by ion implantation: A novel third-order nonlinear material
[DE93-015908] p 1339 N94-17846
Considerations for the use of the modified line reversal technique for gas temperature measurement
[DE93-015752] p 1576 N94-17857
Photorefractive tungsten bronze crystals for optical computing
[AD-A268859] p 1596 N94-18320
Kinetic aspects of lattice mismatch in molecular beam epitaxial growth on planar and patterned substrates
[AD-A270424] p 1597 N94-18506
Research on stable, high-efficiency amorphous silicon multijunction modules
[DE93-010046] p 1467 N94-18518
An ultraviolet faraday rotator glass
[AD-D015879] p 1371 N94-18529
Optical and transport properties of metallic and semiconductor nanostructures
[AD-A270009] p 1598 N94-18609
In-situ growth monitoring of molecular beam epitaxy processes
[AD-A269287] p 1598 N94-18616
Integration of ferroelectric/semiconductor thin films for SLM and photorefractive applications
[AD-A268645] p 1598 N94-18633
Optical properties of oxide coatings prepared by ion-assisted deposition
[AD-A270024] p 1599 N94-18711
Optical properties of redispersed iron fibers measured at 94 GHz
[AD-A269739] p 1342 N94-18756
Nonlinear optical properties of molecules
[AD-A270199] p 1567 N94-18783
Development of robust multilayer optics for use in high-peak power radiation environments
[DE93-018557] p 1580 N94-18931
Evaluation of fiber optic performance in the ACRR
[DE93-018515] p 1580 N94-18970
Surface modification of sapphire for IR window application
[DE93-019168] p 1602 N94-19075
Feasibility study: Monodisperse polymer particles containing laser-excitable dyes
[NASA-CR-194280] p 1373 N94-19402
Refinement of unit cell parameters by least-squares: Comments on an old technique and the development of a new computer program
[AD-A270610] p 1531 N94-19590
Ionized-cluster beam/partially ionized beam deposition of electro-optical and nonlinear optical organic materials and device development
[AD-A270832] p 1604 N94-19596
The deposition of electro-optic films on semiconductors
[AD-A270823] p 1605 N94-19664
OPTICAL PUMPING
Problems related to stimulated electromagnetic emissions, strong turbulence and ionospheric modification
[IRF-SR-212] p 1480 N94-17720
Pulsed power supply for Nova Upgrade
[DE93-019626] p 1441 N94-19307
OPTICAL RADAR
A technique for measuring winds in the lower atmosphere using incoherent Doppler lidar
[DE93-017163] p 1488 N94-17758
Data fusion through simulated annealing of registered range and reflectance images
[DE93-015910] p 1612 N94-17858
Laser imaging radar system
[AD-A270436] p 1387 N94-18510
Modifications of airborne oceanographic lidar for the long range P-3 missions
[NASA-CR-194682] p 1499 N94-18819
Impact of shorter wavelengths on optical quality for laws
[NASA-CR-193873] p 1579 N94-18858
SPNDL: A concept for a small satellite Doppler lidar wind sounder p 1327 N94-19181
The Mexico City 1991 lidar measurements campaign
[DE93-019960] p 1478 N94-19272
OPTICAL REFLECTION
Photodetector array having high pixel density
[AD-D015859] p 1432 N94-18731
OPTICAL RELAY SYSTEMS
Designs for optical components related to the Los Alamos free-electron laser
[DE93-016617] p 1436 N94-17865
OPTICAL RESONANCE
Feasibility study: Monodisperse polymer particles containing laser-excitable dyes
[NASA-CR-194280] p 1373 N94-19402
OPTICAL SCANNERS
High rate resistive plate chambers: An inexpensive, fast, large area detector of energetic charged particles for accelerator and non-accelerator applications
[DE93-018664] p 1572 N94-19545
OPTICAL SWITCHING
Evaluation of materials proposed for the construction of the Plasma Electrode Pockels Cell (PEPC) on beamlet
[DE93-016952] p 1584 N94-17988
Integrated photonics research volume 10. Conference edition
[AD-A269298] p 1577 N94-18298
Quantum Optoelectronics. Organization of the 1993 photonics science topical meetings. Technical digest series, volume 8
[AD-A269026] p 1578 N94-18488
Photonics in Switching: Organization of the 1993 photonics science topical meetings. Technical digest
[AD-A269024] p 1578 N94-18528
Ultrafast Electronics and Optoelectronics: Summaries of papers. Technical digest conference edition
[AD-A269233] p 1405 N94-18909
Improved optical pseudospark switch
[AD-D015821] p 1580 N94-18947
Optical switch evaluation support
[AD-A270948] p 1581 N94-19601
Evaluation of laser diode based optical switches for optical processors
[AD-A270949] p 1581 N94-19602
OPTICAL THICKNESS
Application of fractal methods to estimate the aerosol-optical depth for atmospheric correction of high resolution satellite data
[DLR-FB-93-04] p 1480 N94-18088
OPTICAL WAVEGUIDES
Magnetostatic waves-based integrated optic bragg cell modules with applications to RF signal processing
[AD-A269115] p 1577 N94-18295
High-power microwave breakdown of dielectric interfaces
[AD-A268844] p 1397 N94-18318
Optical design for photonics. Organization of the 1993 Photonics Science Topical Meetings. Technical digest series, volume 9
[AD-A269027] p 1578 N94-18396
Photonics in Switching: Organization of the 1993 photonics science topical meetings. Technical digest
[AD-A269024] p 1578 N94-18528
A tunable compact high power far-infrared grating free-electron laser
[AD-A269875] p 1440 N94-18771
Integrated Photonics Research: Post-deadline papers
[AD-A269232] p 1609 N94-18908
OPTICS
Quantum optoelectronics technical digest, 1993. Voolume 8: Postconference edition
[AD-A268209] p 1576 N94-17887
OPTIMAL CONTROL
Generalization of optimal control theory: Linear and nonlinear structures
[PB93-188621] p 1540 N94-18125
Parallel optimization algorithms and their implementation in VLSI design p 1401 N94-18374
Optimizing wind turbine control system parameters
[DE93-018861] p 1469 N94-19036
The optimal projection equations for finite-dimensional fixed-order H2-optimal control of infinite-dimensional discrete-time systems
[REPT-93-11] p 1542 N94-19085
The fixed, finite-order L(sup 2)-optimal control of infinite-dimensional time-varying discrete-time systems
[REPT-93-23] p 1542 N94-19138
Digital control of Pritchard-Salamon systems
[REPT-93-33] p 1543 N94-19286
Analysis and design of robust decentralized controllers for nonlinear systems
[DE93-019224] p 1543 N94-19302
Phasing strategies of the Hermes type space shuttle: Its optimization considering the thrust failures
[LAAS-93242] p 1544 N94-19361
Modeling of driver behavior: Information perception, rule and control strategies in experiments and simulations
[ETN-93-95053] p 1510 N94-19649
OPTIMIZATION
Applications of an algebraic Monge property
[DE93-016869] p 1546 N94-17885
Heuristics from nature for hard combinatorial optimization problems
[REPT-93-025] p 1547 N94-17961
The optimal numerical algorithm for processing of phase coded time signals for radio-clocks
p 1426 N94-18018
New current reduction system for watches with integrated current regulation motors
p 1428 N94-18034
A study of the automatic generating system. 3: Improvement of the total system performance
p 1429 N94-18040
Preliminary structural design: Defining the design space
[AD-A268898] p 1317 N94-18227
Learning database abstractions for query reformulation
[AD-A269531] p 1616 N94-18641
A numerical study of hybrid optimization methods for the molecular conformation problems
[DE93-017898] p 1569 N94-18985
Numerical analysis of proximal methods: Decomposition and parallelization
[ETN-93-95017] p 1552 N94-19362
Optimal safety system design using fault tree analysis
[MATHS-REPT-A-187] p 1529 N94-19382
On network representation of the solutions in combinatorial optimization
[RR-910-I] p 1552 N94-19392
Reanalysis of structure models
[ECL-93-07] p 1458 N94-19460
The complexity of the optimal spanning hypertree problem
[TR-471] p 1561 N94-19481
Finding optimal policies for Markov decision chains: A unifying framework for mean-variance-tradeoffs
[PB93-191930] p 1559 N94-19555
Shell designs
[AD-A270656] p 1460 N94-19606
OPTOELECTRONIC DEVICES
Optically controlled active impedance element and filters employing the same
[AD-D015863] p 1396 N94-18062
Growth of structures for integrated optoelectronic devices
[AD-A269014] p 1598 N94-18527
Joint services electronics program
[AD-A269383] p 1403 N94-18638
Photodetector array having high pixel density
[AD-D015859] p 1432 N94-18731
Attitude sensor package p 1325 N94-19172
Electro-optic beam steering using non-linear organic materials
[AD-A270809] p 1374 N94-19577
Experimental examinations of semiconductor laser amplifiers for optical communication technology
[ETN-93-95050] p 1442 N94-19647
Feasibility study for a measuring system velocity projectile
[FEL-91-A368] p 1434 N94-19797
ORBIT CALCULATION
SeaTrack: Ground station orbit prediction and planning software for sea-viewing satellites
[NASA-RP-1331] p 1532 N94-19761
ORBITAL ASSEMBLY
Designing Space Station
[NASA-TM-109353] p 1334 N94-18922
Shuttle-C, the future is now
[NASA-TM-109355] p 1332 N94-18954
Space Applications Industrial Laser System (SAILS)
p 1325 N94-19173
ORBITAL ELEMENTS
SeaTrack: Ground station orbit prediction and planning software for sea-viewing satellites
[NASA-RP-1331] p 1532 N94-19761
ORBITAL MANEUVERING VEHICLES
Shuttle-C, the future is now
[NASA-TM-109355] p 1332 N94-18954

ORBITAL MECHANICS
The Cluster orbit and mission scenario
p 1330 N94-19637
ORBITAL RENDEZVOUS
Phasing strategies of the Hermes type space shuttle: Its optimization considering the thrust failures
[LAAS-93242] p 1544 N94-19361
ORBITAL SERVICING
Superfluid Helium On-Orbit Transfer (SHOOT) flight demonstration p 1327 N94-19185
ORDER-DISORDER TRANSFORMATIONS
Effect of oxygen concentration and ordering on vanadium-oxygen alloy vibrational spectra
[DE93-627003] p 1355 N94-17692
Surface phases and their influence on metal-oxide interfaces
[DE93-019931] p 1601 N94-19020
A free energy simulation method based study of interfacial segregation
[DE93-019462] p 1364 N94-19032
ORDNANCE
Earth Penetration Radar Imaging System (EPRIS)
[DE93-019890] p 1391 N94-19542
ORGANIC CHEMISTRY
Royal Society of Chemistry, Heterocyclic Chemistry Group, Lakeland Heterocyclic Symposium
[AD-A270374] p 1338 N94-18703
Research program activities of the ORNL Analytical Chemistry Division
[DE93-017938] p 1339 N94-19117
ORGANIC COMPOUNDS
Title 1 implementation: Status report on nonattainment areas
[DE93-017677] p 1471 N94-17777
Indoor environment program
[DE93-018601] p 1513 N94-18935
Organic carbonyl compounds in Albuquerque, New Mexico, air: A preliminary study of the effects of oxygenated fuel use
[DE93-017748] p 1476 N94-19045
Kinetic studies of electrochemical generation of Ag(II) ion and catalytic oxidation of selected organics
[DE93-016601] p 1352 N94-19240
ORGANIC LIQUIDS
Similarity solutions for gravity-dominated spreading of a lens of organic contaminant
[REPT-93-24] p 1420 N94-19139
ORGANIC MATERIALS
Process relationship as influenced by carbonization rate
[AD-A269680] p 1341 N94-18572
Ionized-cluster beam/partially ionized beam deposition of electro-optical and nonlinear optical organic materials and device development
[AD-A270832] p 1604 N94-19596
ORGANIC SEMICONDUCTORS
Studies of interactions between conducting polymer and organic vapors: Applications to chemical sensing
[DE93-015694] p 1369 N94-18233
ORGANIC SUPERCONDUCTORS
Structure-property relationships in radical-cation (electron-donor molecule) and anion-based (including fullerides) organic superconductors and their use in the design of new materials
[DE93-018617] p 1601 N94-19022
ORGANISMS
Space research with intact organisms: The role of Space Station Freedom p 1502 N94-19213
ORGANIZATIONS
Trends in Information Management at Department of Energy Headquarters
[DE93-017197] p 1615 N94-18496
Quality, management, and the interplay of self-assessment, process assessments, and performance-based observations
[DE93-018787] p 1448 N94-19336
ORGANOMETALLIC COMPOUNDS
X ray absorption spectroscopic studies of the active sites of nickel- and copper-containing metalloproteins
[DE93-017142] p 1347 N94-18059
Molecular and polymeric ceramic precursors
[DE93-040364] p 1372 N94-18891
The direct synthesis of organic and organometallic-containing MICA-type aluminosilicates
[DE93-019001] p 1373 N94-19321
ORIENTATION
Effects of pressure on the orientational ordering and phase transitions in solid C(60) and C(70)
[DE93-018858] p 1603 N94-19347
OROGRAPHY
Effect of spatial resolution on the simulation of regional precipitation in China in a global climate model
[DE93-013433] p 1489 N94-18053
ORTHOGONAL FUNCTIONS
Canonical multi-valued input Reed-Muller trees and forms p 1401 N94-18375
ORTHOGONALITY
Parallel inverse iteration with reorthogonalization
[DE93-012867] p 1533 N94-17693
On polynomials orthogonal with respect to an inner product involving differences (the general case)
[REPT-93-32] p 1551 N94-19285
OSCILLATING FLOW
ENO schemes on unstructured meshes
p 1412 N94-18561
OSCILLATIONS
Decoherence and recoherence of beam in phase space
[DE93-014885] p 1573 N94-17784
FY 1991 AASERT: Spatio-temporal making in human vision and its application to image coding
[AD-A268795] p 1505 N94-18190
Neutrino mass
[DE93-018467] p 1567 N94-18269
Close-coupled oscillating canard effects on post-stall lift enhancement
[AD-A268938] p 1321 N94-18541
OSCILLATORS
X-ray laser oscillator-amplifier experiments
[DE93-017165] p 1436 N94-17868
On a possible algebra morphism of U(sub q)(osp1/2) onto the deformed oscillator algebra W(sub q)(N)
[DE93-629857] p 1548 N94-18176
High-power microwave breakdown of dielectric interfaces
[AD-A268844] p 1397 N94-18318
Designs for a 10.6 micrometer electromagnetic wiggler Free-Electron Laser (FEL)
[AD-A269695] p 1439 N94-18576
The Lever oscillator for use in high resistance resonator applications
[DE93-017652] p 1404 N94-18827
Contribution to the modelling and the identification of nonlinear mechanical systems
[ECL-92-32] p 1529 N94-19409
Optical frequency division using an optical parametric oscillator
[AD-A270847] p 1581 N94-19578
OVER-THE-HORIZON RADAR
RADARC HF ionospheric prediction program for OTH radar
[AD-A269557] p 1385 N94-18291
OVERPRESSURE
Air blast measurements at 20 and 40 km distance from detonating 10 and 20 ton high explosive charges
[PB93-195949] p 1419 N94-19068
OXIDASE
Bienzyme sensors based on electrically wired peroxidase
[AD-A271364] p 1374 N94-19585
OXIDATION
Catalytic hydrocarbon reactions over supported metals
[DE93-018168] p 1345 N94-17808
Fundamental studies of the mechanism of catalytic reactions with catalysts effective in the gasification of carbon solids and the oxidative coupling of methane
[DE93-015262] p 1347 N94-18193
Environmental effects on intermetallic compounds: A guide to the literature
[AD-A269587] p 1359 N94-18306
Analysis of deposit precursors in jet fuels using Fourier transform infrared spectroscopy
[AD-A269035] p 1377 N94-18489
Surface phases and their influence on metal-oxide interfaces
[DE93-019931] p 1601 N94-19020
Selective methane oxidation over promoted oxide catalysts
[DE93-040002] p 1351 N94-19132
Selective methane oxidation over promoted oxide catalysts
[DE93-040001] p 1351 N94-19150
Factors that control the stable carbon isotopic composition of methane produced in an anoxic marine sediment p 1477 N94-19235
OXIDATION RESISTANCE
Environmental effects on intermetallic compounds: A guide to the literature
[AD-A269587] p 1359 N94-18306
Carbon/carbon composites coated with SiC by chemical vapor deposition
[AD-A269934] p 1341 N94-18544
OXIDATION-REDUCTION REACTIONS
Oxygen reduction at a stabilized zirconia interface with Y(1-x)Ca(x)MnO3 or La(1-x)Sr(x)MnO3 cathode materials
[DE93-015681] p 1593 N94-17747
Applications of scanning tunneling microscopy to electrochemistry
[AD-A269129] p 1348 N94-18255
Kinetic studies of electrochemical generation of Ag(II) ion and catalytic oxidation of selected organics
[DE93-016601] p 1352 N94-19240
Bienzyme sensors based on electrically wired peroxidase
[AD-A271364] p 1374 N94-19585
OXIDE FILMS
Surface phases and their influence on metal-oxide interfaces
[DE93-019931] p 1601 N94-19020
Optical switch evaluation support
[AD-A270948] p 1581 N94-19601
Nanofabrication by focused ion beam
[AD-A271290] p 1345 N94-19746
OXIDES
Office of Naval Research Publications/Patents /Presentations/Honors report, 1 October 1992 - 30 September 1993
[AD-A270037] p 1632 N94-18791
Selective methane oxidation over promoted oxide catalysts
[DE93-040002] p 1351 N94-19132
Selective methane oxidation over promoted oxide catalysts
[DE93-040001] p 1351 N94-19150
OXYGEN
Effect of oxygen concentration and ordering on vanadium-oxygen alloy vibrational spectra
[DE93-627003] p 1355 N94-17692
Selective electrochemical wafer thinning for silicon characterization
[DE93-015083] p 1592 N94-17742
Oxygen reduction at a stabilized zirconia interface with Y(1-x)Ca(x)MnO3 or La(1-x)Sr(x)MnO3 cathode materials
[DE93-015681] p 1593 N94-17747
A one dimensional numerical model, with an application to the vertical distribution of dissolved oxygen in the ocean
[DE93-018481] p 1495 N94-17779
Phase separation and superconductivity in La2CuO(4 + delta): Effects of oxygen diffusion
[DE93-016610] p 1594 N94-17907
Dense energetic compounds of C, H, N, and O atoms. 3: 5-(4-nitro-(1,2,5) oxadiazolyl)-5H-(1,2,3) triazolo (4,5-c)(1,2,5) oxadiazole
[AD-A268715] p 1338 N94-18314
Temperature, kinetic energy, and rotational temperature dependences for the reactions of Ar(+)(2)P3/2 with O2 and CO
[AD-A268974] p 1567 N94-18526
Electrocatalysts for oxygen electrodes
[DE93-040446] p 1354 N94-19653
OXYGEN ANALYZERS
CTD oxygen, tracer and nutrient data from RRS Charles Darwin Cruises 58/59 in the NE Atlantic as part of Vivaldi 1991
[IOS-296-1992] p 1496 N94-18065
OXYGEN ATOMS
Effect of oxygen concentration and ordering on vanadium-oxygen alloy vibrational spectra
[DE93-627003] p 1355 N94-17692
NSWCWODET participation in Space Shuttle mission STS-46
[AD-A268875] p 1332 N94-18321
OXYGEN IONS
Low-energy continuum-electron emission at 0 degrees from O(q+) + He collisions
[DE93-018777] p 1570 N94-19108
OXYGEN SPECTRA
Effect of oxygen concentration and ordering on vanadium-oxygen alloy vibrational spectra
[DE93-627003] p 1355 N94-17692
OXYGEN SUPPLY EQUIPMENT
Laboratory test and evaluation report of the essex model 60C-0037-2 molecular sieve oxygen generating system
[AD-A269967] p 1445 N94-18778
OXYGENATION
Organic carbonyl compounds in Albuquerque, New Mexico, air: A preliminary study of the effects of oxygenated fuel use
[DE93-017748] p 1476 N94-19045
OZONE
Air pollution effects field research facility. 3: UV-B exposure and monitoring system
[DE93-013098] p 1470 N94-17773
Title 1 implementation: Status report on nonattainment areas
[DE93-017677] p 1471 N94-17777
Screening analysis for chlorine-free alternative refrigerants to replace R-22 in air conditioning applications
[DE93-015920] p 1367 N94-17847
Analysis of meteorological conditions during AGASP-4: 30 March - 23 April 1992
[PB93-190205] p 1489 N94-18126
Upper atmospheric effects of the HF Active Auroral Research Program Ionospheric Research Instrument (HAARP IRI)
[AD-A268948] p 1481 N94-18451

October 1979-1989 Southern Hemisphere total ozone as seen by TOMS
[NASA-TM-109375] p 1476 N94-18967
Spatiotemporal variability of non-urban ozone concentrations over the eastern United States and its potential replication by satellite data
[PB93-191326] p 1476 N94-19065
Analysis of satellite-derived ozone and water vapor measurements
[NASA-CR-193810] p 1486 N94-19237
Crossed molecular beam studies of atmospheric chemical reaction dynamics
[DE93-019246] p 1478 N94-19303

OZONE DEPLETION
Removing CFC's from the atmosphere with lasers: A second look
[DE93-017516] p 1473 N94-18101
Upper atmospheric effects of the HF Active Auroral Research Program Ionospheric Research Instrument (HAARP IRI)
[AD-A268948] p 1481 N94-18451
Ozone hole
[NASA-TM-109368] p 1476 N94-18960

OZONOSPHERE
Air pollution effects field research facility. 3: UV-B exposure and monitoring system
[DE93-013098] p 1470 N94-17773
Removing CFC's from the atmosphere with lasers: A second look
[DE93-017516] p 1473 N94-18101
Upper atmospheric effects of the HF Active Auroral Research Program Ionospheric Research Instrument (HAARP IRI)
[AD-A268948] p 1481 N94-18451

P

P WAVES
A comparison of single-station backazimuth estimates with regional event locations in the Central Appalachians
[AD-A269697] p 1483 N94-18690

P-N JUNCTIONS
Gallium arsenide-based ternary compounds and multi-band-gap solar cell research
[DE93-010049] p 1467 N94-18483
Defect behavior of polycrystalline solar cell silicon
[DE93-018490] p 1468 N94-19016
MOCVD-grown InGaAsP heterostructure diode lasers
[AD-A270848] p 1606 N94-19769

P-TYPE SEMICONDUCTORS
Selective electrochemical wafer thinning for silicon characterization
[DE93-015083] p 1592 N94-17742

PACIFIC OCEAN
Spectral analysis of synoptic time scale disturbances over the tropical eastern Pacific during summer 1989, 1990 and 1991
[AD-A268821] p 1490 N94-18206

PACKING DENSITY
Equipment for investigation of cryogenic compaction of nanosize silicon nitride powders
[DE93-018740] p 1340 N94-18180
Molecular dynamics modeling of the mechanical behavior of metallic multilayers
[DE93-017972] p 1365 N94-19263

PAINTS
Pressure sensitive paint technique
p 1431 N94-18647

PAIR PRODUCTION
Crystal optics of high energy gamma-beams
[DE93-630228] p 1577 N94-18217

PALEONTOLOGY
Technologies for assessing the geologic and geomorphic history of coasts
[AD-A268780] p 1496 N94-18215

PALLADIUM
Study of mechanical behavior and internal structure of ferritic nanocrystalline material
[DE93-019264] p 1596 N94-18184

PALLADIUM ALLOYS
Realistic theories of heavy electron and other strongly correlated materials
[DE93-010350] p 1571 N94-19204

PALLADIUM COMPOUNDS
Structural stability of 1100 C heated Pd/k during absorption cycling in protium
[DE93-016270] p 1346 N94-18048

PANCREAS
Nuclear Medicine Program
[DE93-013896] p 1504 N94-17699

PANEL METHOD (FLUID DYNAMICS)
A computational and experimental investigation of incompressible oscillatory airfoil flow and flutter problems
[AD-A268748] p 1311 N94-18402
ADAS implementation of a panel method for the prediction of aerodynamic loads
[LR-723] p 1313 N94-19667

PANELS
Packaging, deployment, and panel design concepts for a truss-stiffened 7-panel precision deployable reflector with feed boom
[NASA-TM-109000] p 1333 N94-17765

PARABOLIC REFLECTORS
Packaging, deployment, and panel design concepts for a truss-stiffened 7-panel precision deployable reflector with feed boom
[NASA-TM-109000] p 1333 N94-17765
The CAESAR project: Experimental and modeling investigations of methane reforming in a catalytically enhanced solar absorption receiver on a parabolic dish
[DE93-040203] p 1469 N94-19109

PARALLEL COMPUTERS
Optical computing. Organization of the 1993 Photonics Science Topical Meetings. Technical digest series, volume 7
[AD-A269025] p 1578 N94-18332
Case studies of software development tools for parallel architectures
[AD-A269193] p 1535 N94-18866
Early experiences with the IBM SP-1
[DE93-018398] p 1535 N94-19010
MIMD massively parallel methods for engineering and science problems
[DE93-019409] p 1531 N94-19562

PARALLEL FLOW
Heat load analysis on the cable-in-conduit with central core conductor for the TF coil Rebut layer design
[DE93-013783] p 1395 N94-17872

PARALLEL PLATES
Anomalous dielectric properties of carbon-black filled elastomers
[AD-A269378] p 1370 N94-18280

PARALLEL PROCESSING (COMPUTERS)
Parallel inverse iteration with reorthogonalization
[DE93-012867] p 1533 N94-17693
An efficient implementation of error-valued semantics on imperative machines
[DE93-014658] p 1516 N94-17740
PARX, kernel of a system for massively parallel computers: Control of communication between processes
[ETN-93-94353] p 1533 N94-17976
PARX: Architecture of an operating system for parallel machines
[ETN-93-94401] p 1533 N94-18068
High performance Fortran: An overview
[DE93-017181] p 1519 N94-18072
An evolving infrastructure for scientific computing and the integration of new graphics technology
[DE93-017164] p 1520 N94-18133
Parallel optimization algorithms and their implementation in VLSI design p 1401 N94-18374
A fast adaptive convex hull algorithm on two-dimensional processor arrays with a reconfigurable BUS system
p 1402 N94-18380
Parallelization of the Air Force Space Command (AFSPACECOM) satellite motion models
[AD-A269327] p 1334 N94-18470
The evolution of the PVM concurrent computing system
[DE93-017764] p 1534 N94-18482
Development of parallel architectures for sensor array processing. Volume 2: A parallel architecture for broad-band direction-of-arrival estimation
[AD-A270427] p 1534 N94-18508
Distributed memory parallel computers and computational fluid dynamics p 1413 N94-18568
Parallel and vector adaptations of the underwater finite element parabolic equation model
[AD-A269990] p 1563 N94-18678
Connection machine software conversion of a Navy oceans model
[AD-A269876] p 1535 N94-18772
Neutral networks: An NRL perspective
[AD-A269122] p 1541 N94-18773
Software engineering for effective utilization of parallel processing computing system
[AD-A269191] p 1535 N94-18865
Case studies of software development tools for parallel architectures
[AD-A269193] p 1535 N94-18866
A parallel and pipelined architecture for estimation of direction of arrival using a bilinear transformation method, volume 3
[AD-A270137] p 1389 N94-18897
Early experiences with the IBM SP-1
[DE93-018398] p 1535 N94-19010
Implementation of the turn function method in KIVA-F90
[DE93-018394] p 1419 N94-19027
The p4 Linda: A portable implementation of Linda
[DE93-017752] p 1535 N94-19046
Performance and scalability aspects of directory-based cache coherence in shared-memory multiprocessors
[DE93-016442] p 1536 N94-19115
A massively parallel adaptive finite element method with dynamic load balancing
[DE93-012844] p 1536 N94-19161
A multi-thread approach to coalescing small transfers generated by portable tool sets
[DE93-012128] p 1525 N94-19186
Experience in implementing a parallel file system
[DE93-012840] p 1536 N94-19188
ACOS: A performance based approach to build a parallel complex object server
[MEMO-INF-93-11] p 1537 N94-19198
A parallel hashed oct-tree N-body algorithm
[DE93-012654] p 1526 N94-19205
Message passing in PUMA
[DE93-012841] p 1537 N94-19206
Action systems and action refinement in the development of parallel systems: An algebraic approach
[MEMO-INF-93-14] p 1538 N94-19296
PUMMA: Parallel Universal Matrix Multiplication Algorithms on distributed memory concurrent computers
[DE93-019163] p 1538 N94-19299
Process allocation on distributed memory parallel architectures
[ETN-93-95004] p 1538 N94-19514
MIMD massively parallel methods for engineering and science problems
[DE93-019409] p 1531 N94-19562
CVL: A C vector library manual. Version 2
[AD-A270614] p 1531 N94-19592
Simulation of dynamic material response with the PAGOSA code
[DE93-018285] p 1460 N94-19603
Systolic design with asynchronous controls for digital-signal processing
[AD-A270976] p 1392 N94-19680
Implementation of parallel algorithms
[AD-A271035] p 1539 N94-19682
NPAC distributed-parallel system feasibility study
[AD-A270972] p 1539 N94-19790

PARALLEL PROGRAMMING
PARX: Architecture of an operating system for parallel machines
[ETN-93-94401] p 1533 N94-18068
High performance Fortran: An overview
[DE93-017181] p 1519 N94-18072
The evolution of the PVM concurrent computing system
[DE93-017764] p 1534 N94-18482
Software engineering for effective utilization of parallel processing computing system
[AD-A269191] p 1535 N94-18865
Asynchronous rendezvous in the presence of backtracking
[PB93-197739] p 1524 N94-19062
Performance and scalability aspects of directory-based cache coherence in shared-memory multiprocessors
[DE93-016442] p 1536 N94-19115
An annotated bibliography on parallel parsing: Updated version
[MEMO-INF-92-84] p 1537 N94-19223
Heap construction in the parallel comparison tree model
[TR-409] p 1536 N94-19512

PARAMETER IDENTIFICATION
Linear parameter identification methods for ARMA models with periodic coefficients
[REPT-92-070] p 1556 N94-17938
Comparative examinations of several field oriented position control structures for asynchronous servomotors with a multitransputer system
[ETN-93-95051] p 1406 N94-19390
Contribution to the identification of nonlinear behavior laws in material mechanics
[ECL-92-36] p 1458 N94-19411
Methods for description and control of dynamical systems and their application
[MPIS-17/1992] p 1553 N94-19522
A learning autopilot for automatically controlled robust regulation
[ETN-93-95075] p 1321 N94-19711
Algorithms and architectures for high speed signal processing
[AD-A271000] p 1392 N94-19736

PARAMETRIC AMPLIFIERS
Optical frequency division using an optical parametric oscillator
[AD-A270847] p 1581 N94-19578

PARITY
On the difference caused by CP violation in the energy spectra of pions in K(sup (+-))(yields)(pi)(+-)(pi)(+-)(pi)-+ decays
[DE93-624828] p 1564 N94-17687
Improved approximations applied to the S(sub N) even-parity equation
[DE93-016467] p 1551 N94-19343

PARSING ALGORITHMS
An annotated bibliography on parallel parsing: Updated version
[MEMO-INF-92-84] p 1537 N94-19223
Attribute evaluation during generalized parsing
[MEMO-INF-92-85] p 1526 N94-19224
Non-well-foundedness and type freeness can unify the interpretation of functional application
[PB93-191849] p 1560 N94-19710

PARTIAL DIFFERENTIAL EQUATIONS
Numerical methods for one-dimensional hyperbolic conservation laws
[PB93-194801] p 1547 N94-18078
Introduction to spectral methods: Application to the Stokes problem p 1413 N94-18566
3D composite grids using Bezier curves and surfaces in component adaptive methods
[AD-A269188] p 1549 N94-18863
Application of differential sensitivity theory to continuum mechanics
[DE93-012732] p 1609 N94-19187
Singularities and symmetries of nonlinear ordinary and partial differential equations
[DE93-040083] p 1550 N94-19190
Group-invariant solutions of hydrodynamics and radiation hydrodynamics
[DE93-018373] p 1423 N94-19604

PARTIAL PRESSURE
Control of catalytic hydrotreating selectivity with ammonia
[DE93-041223] p 1354 N94-19660

PARTICLE ACCELERATION
Enhanced acceleration in a self-modulated-laser wakefield accelerator
[AD-A268452] p 1586 N94-18148

PARTICLE ACCELERATOR TARGETS
Compound-lens injector for a 19-MeV, 700-kA electron beam
[DE93-013752] p 1573 N94-17698
Overview of WARP: A particle code for heavy ion fusion
[DE93-018637] p 1588 N94-19034
High energy physics program. Task A: Experiment and theory. Task B: Numerical simulation
[DE93-018140] p 1575 N94-19050
Induction accelerator development for heavy ion fusion
[DE93-019228] p 1591 N94-19479

PARTICLE ACCELERATORS
The design of the MAD Design Program
[DE93-013343] p 1539 N94-17696
Enhanced acceleration in a self-modulated-laser wakefield accelerator
[AD-A268452] p 1586 N94-18148
Halo formation in mismatched, space-charge-dominated beams
[DE93-018581] p 1574 N94-18934
High energy physics at Tufts University
[DE93-018299] p 1575 N94-19023

PARTICLE BEAMS
The Intense Slow Positron Source concept: A theoretical perspective on a proposed INEL Facility
[DE93-013675] p 1564 N94-17738
Advanced methods for the computation of particle beam transport and the computation of electromagnetic fields and beam-cavity interactions
[DE93-018160] p 1573 N94-17807
The Fourteenth Symposium on Molecular Beams
[AD-A268721] p 1568 N94-18787
SSC detector muon sub-system beam tests
[DE93-018415] p 1569 N94-19013
Simulation of the ALS longitudinal multibunch feedback system
[DE93-019227] p 1575 N94-19152
Transverse beam combiner for ILSE
[DE93-019239] p 1591 N94-19559

PARTICLE COLLISIONS
Correlated charge-changing ion-atom collisions
[DE93-018717] p 1564 N94-17775
High-performance multiprocessor architecture for a 3-D lattice gas model p 1400 N94-18362
Research in particle physics
[DE93-040875] p 1567 N94-18534
A bit serial first level calorimeter trigger for an LHC detector
[USIP-92-08] p 1574 N94-18845
Neutron-induced collision cascade mixing in Nb/V superlattices
[DE93-018575] p 1600 N94-18933
Search for resonant electron transfer and double excitation in Kr(sup 34+) + H2 collisions
[DE93-018776] p 1569 N94-18999
High energy physics at Tufts University
[DE93-018299] p 1575 N94-19023
Electron impact polarization and correlation properties of the inert gases
[DE93-018358] p 1570 N94-19125
Experimental study of interactions of highly charged ions with atoms at keV energies
[DE93-040222] p 1571 N94-19257

PARTICLE EMISSION
The Intense Slow Positron Source concept: A theoretical perspective on a proposed INEL Facility
[DE93-013675] p 1564 N94-17738

PARTICLE ENERGY
Convection algorithms for magnetospheric particles
[AD-A270103] p 1493 N94-18871
Advanced fusion diagnostics
[DE93-040085] p 1589 N94-19133
An ab initio Monte Carlo study of low energy positron and electron implantation in elemental metals and multilayers
[DE93-019847] p 1603 N94-19541

PARTICLE FLUX DENSITY
Filamentation, current profiles and transport in a tokamak
[DE93-016768] p 1584 N94-17948

PARTICLE IN CELL TECHNIQUE
General geometry PIC for MIMD computers
[AD-A269085] p 1534 N94-18767
A particle method for history-dependent materials
[DE93-018696] p 1456 N94-19060

PARTICLE INTERACTIONS
Variable time-step integration for intense field effects
[DE93-013296] p 1382 N94-17909
Report of the 1991 Workshop on Particle-Material Interactions for Fusion Research
[DE93-788393] p 1573 N94-18156
Technology, design, simulation, and evaluation for SEP-hardened circuits p 1399 N94-18352
Charmonium physics from (bar p)p interactions
[DE93-017809] p 1569 N94-18973
Task A: Yale Accelerator Users Group (YAUG)
[DE93-018417] p 1570 N94-19029

PARTICLE MASS
Cabibbo mixing in superstring derived standard-like models
[DE93-624814] p 1607 N94-17953

PARTICLE MOTION
High-performance multiprocessor architecture for a 3-D lattice gas model p 1400 N94-18362
Effects of transverse coupling on transverse beam size, simulation and measurements
[DE93-017804] p 1574 N94-18972
Visualization of turbulent flow with particles
[REPT-93-31] p 1423 N94-19645

PARTICLE PRECIPITATION
Global zones of particle precipitation as observed EXOS-C
[AD-A268758] p 1481 N94-18467

PARTICLE PRODUCTION
Beauty without charm in B-meson decays
[PREPRINT-732] p 1565 N94-17972
Experimental consequences of supersymmetry
[DE93-018270] p 1569 N94-18945
Task A: Yale Accelerator Users Group (YAUG)
[DE93-018417] p 1570 N94-19029
Extraction of Z(prime) coupling data from Z(prime) (yields) jj at the LHC and SSC
[DE93-018576] p 1570 N94-19096
Eta-nucleon interaction and nuclear production of eta mesons
[DE93-018469] p 1571 N94-19259

PARTICLE SPIN
Measuring the sea quark polarization
[DE93-015792] p 1566 N94-18234
Research activity on particle spin systems and related problems
[AD-A269456] p 1562 N94-18286

PARTICLE THEORY
Research in particle physics
[DE93-040875] p 1567 N94-18534
High energy physics program. Task A: Experiment and theory. Task B: Numerical simulation
[DE93-018140] p 1575 N94-19050
Electrokinetic transport of heterogeneous particles in suspensions
[NASA-CR-194478] p 1353 N94-19367

PARTICLE TRACKS
Measurements of cosmic ray muons with multi-wire proportional chambers with a prototype setup for KASCADE
[KFK-5173] p 1631 N94-19506

PARTICLE TRAJECTORIES
Experimental research in high energy physics
[DE93-011912] p 1574 N94-18916
Electrokinetic transport of heterogeneous particles in suspensions
[NASA-CR-194478] p 1353 N94-19367

PARTICULATE SAMPLING
Novel mass spectrometric instrument for gaseous and particulate characterization and monitoring
[DE93-019992] p 1433 N94-19054

PARTICULATES
Title 1 implementation: Status report on nonattainment areas
[DE93-017677] p 1471 N94-17777
Imaging and blackbody emission spectra of hot particulates generated during laser ablation
[DE93-015818] p 1439 N94-18724

PARTITIONS (MATHEMATICS)
An efficient implementation of error-valued semantics on imperative machines
[DE93-014658] p 1516 N94-17740
Software engineering for effective utilization of parallel processing computing system
[AD-A269191] p 1535 N94-18865
Decomposition invariance of generalized steady-state of a 1-D diffusion system
[REPT-93-26] p 1550 N94-19141

PARTONS
Measuring the sea quark polarization
[DE93-015792] p 1566 N94-18234
Investigation of physical structures and interactions at high energy
[DE93-014444] p 1574 N94-18927
The PAPAGENO Partonic Monte-Carlo Program
[DE93-018524] p 1571 N94-19247

PATENTS
Numerical and symbolic signal representation and processing
[AD-A270271] p 1389 N94-18811

PATTERN RECOGNITION
An object-oriented environment for computer vision and pattern recognition
[DE93-017098] p 1517 N94-17867
Examination of metrics and assumptions used in correlation filter design
[DE93-017636] p 1576 N94-18000
Application of the network discriminant function to learning
[AD-A268793] p 1540 N94-18189
Optical associative processors and directed graphs
[AD-A268881] p 1615 N94-18224
Evaluation of a liquid crystal spatial light modulator capable of amplitude- and phase-modulating modes
[AD-A269252] p 1577 N94-18262
Optimal design of binary phase-only filters using genetic algorithms
[AD-A268737] p 1396 N94-18278
Constructing a reference event list for ARCESS
[AD-A269288] p 1481 N94-18297
Psychophysical analyses of perceptual representations
[AD-A268711] p 1508 N94-18313
Visual perception of features and objects
[AD-A269879] p 1508 N94-18682
Operator performance in pattern matching as a function of reference material structure
[AD-A269889] p 1509 N94-18686
Neutral networks: An NRL perspective
[AD-A269122] p 1541 N94-18773
Geometrical pattern learning
[DE93-017641] p 1542 N94-19007
Serial pattern complexity: Irregularity and hierarchy
[PB93-191914] p 1509 N94-19348
A non-homogeneous, spatio-temporal, wavelet multiresolution analysis and its application to the analysis of motion
[AD-A270621] p 1538 N94-19534
Transcutaneous Analyte Measuring Methods (TAMM)
[AD-A271387] p 1408 N94-19756
A stereoscopic vision system with applications to automated docking and tracking
[AD-A270754] p 1333 N94-19765
Applications of neural networks in fault detection of rotating machinery
[AD-A270755] p 1448 N94-19766
Equivalence and reduction of hidden Markov models
[AD-A270762] p 1560 N94-19768

PAYLOAD CONTROL
Superfluid Helium On-Orbit Transfer (SHOOT) flight demonstration p 1327 N94-19185
The Cluster Joint Science Operations Centre
p 1331 N94-19639

PAYLOAD INTEGRATION

The first flight of the QUESTS GAS payload G-521
p 1325 N94-19170

Kennedy Space Center processing of Shuttle small payloads
p 1326 N94-19177

PAYLOADS

Cooperative control of multiple space manipulators
[AD-A270291] p 1445 N94-18813

The star identification, pointing and tracking system of UVSTAR, an attached payload instrument system for the Shuttle Hitchhiker-M platform
p 1326 N94-19179

Cluster: Mission, Payload, and Supporting Activities
[ESA-SP-1159] p 1328 N94-19622

PEARSON DISTRIBUTIONS

Synchronisation of cold induced vasodilation at various locations of one hand
[IZF-1992-B3] p 1504 N94-17966

PENDULUMS

A study of the amplification of laser and VLF waves using a simple pendulum model
[AD-A270857] p 1442 N94-19770

PENETRATION

SAND contact in DYNA3D
[DE93-016451] p 1340 N94-18113

The effect of crystallographic orientation on the performance of single crystal tungsten subscale penetrators
[AD-A268988] p 1597 N94-18468

Three-dimensional shock wave physics simulations with MIMD PAGOSA on massively parallel computers
[DE93-011682] p 1455 N94-18829

Earth Penetration Radar Imaging System (EPRIS)
[DE93-019690] p 1391 N94-19542

The influence of the target strength model on computed perforation
[DE93-018659] p 1460 N94-19543

PENETROMETERS

Penetrometer compatible, fiber-optic sensor for continuous monitoring of chlorinated hydrocarbons: Field test results
[DE93-017974] p 1352 N94-19266

PERFORMANCE PREDICTION

Take-off performance monitoring system algorithm and display development
[NLR-TP-91395-U] p 1317 N94-17734

A study of the automatic generating system. 3: Improvement of the total system performance
p 1429 N94-18040

RADARC HF ionospheric prediction program for OTH radar
[AD-A269557] p 1385 N94-18291

Prediction of the high-lift performance of multi-element aerofoils using an unstructured Navier-Stokes solver
p 1307 N94-18427

Turbulence modeling in aircraft icing
p 1412 N94-18555

Toward a high performance distributed memory climate model
[DE93-019156] p 1494 N94-19298

FNAS/summer faculty fellowship research continuation program. Task 6: Integrated model development for liquid fueled rocket propulsion systems. Task 9: Aspects of model-based rocket engine condition monitoring and control
[NASA-CR-194574] p 1338 N94-19706

PERFORMANCE TESTS

The stability and utility of the ESPRIT project, MUSiC, performance-based indicators of usability and tools: An evaluation of the usability of the NPL iSDX telephone system
[NPL-DITC-213/92] p 1613 N94-17925

Electric measurement of Lavet motors
p 1408 N94-18022

Reliability control for wrist watches and their casements
p 1427 N94-18030

Studies of dynamic contact of ceramics and alloys for advanced heat engines
[DE93-016366] p 1368 N94-18110

Performance evaluations of demountable electrical connections
[DE93-017399] p 1396 N94-18135

Adaptations to micropep and rocket to allow performance evaluation of multiple grain and/or airbreathing motors
[AD-A268798] p 1337 N94-18202

First on-sun test of NaK pool-boiler solar receiver
[DE93-015003] p 1466 N94-18208

Magnetic field measurements of a superconducting undulator for a Harmonic Generation FEL experiment at the NSLS
[DE93-017621] p 1438 N94-18504

Research on stable, high-efficiency amorphous silicon multijunction modules
[DE93-010046] p 1467 N94-18518

Testing and evaluation of large-area heliostats for solar thermal applications
[DE93-018509] p 1467 N94-18520

Characterization of the Facility for Atmospheric Corrosion Testing (FACT) at Sandia
[DE93-018510] p 1474 N94-18521

Evaluation of aftermarket LPG conversion kits in light-duty vehicle applications
[DE93-010035] p 1377 N94-18617

Building a joint-service classification research roadmap: Criterion-related issues
[AD-A269735] p 1512 N94-18754

Laboratory test and evaluation report of the essex model 60C-0037-2 molecular sieve oxygen generating system
[AD-A269967] p 1445 N94-18778

Technology test bed
[NASA-TM-109354] p 1322 N94-18953

Metallurgical evaluation of SRAM 2/SRAM A program mer base plates
[DE93-018689] p 1364 N94-19100

Development of a quartz digital accelerometer for environmental sensing and navigation applications
[DE93-018503] p 1433 N94-19243

On-line test methods of microprocessor based systems
[ETN-93-95008] p 1530 N94-19498

Design verification and acceptance tests of the ASST-A helium refrigeration system
[DE93-019746] p 1381 N94-19540

Human integration evaluation of three helmet systems
[AD-A271320] p 1513 N94-19570

Electro-optics display research, test, and evaluation laboratory program
[AD-A270947] p 1408 N94-19751

PERIOD DOUBLING

Bifurcation theory: Chaos and patterns
p 1607 N94-18237

PERIODIC VARIATIONS

Observations of comets with the IUE
[NASA-CR-193652] p 1624 N94-17843

Active control of periodic noise with time-varying frequency
[REPT-93-012] p 1562 N94-17934

Global zones of particle precipitation as observed EXOS-C
[AD-A268758] p 1481 N94-18467

PERMAFROST

Ground movements associated with gas hydrate production
[DE93-019887] p 1486 N94-19018

Proceedings: International Symposium on Thermal Engineering and Science for Cold Regions
[AD-A270636] p 1487 N94-19529

PERMALLOYS (TRADEMARK)

Atlas of formability: Permalloy - 80 flow stress curves
[AD-A268263] p 1356 N94-17801

PERMEABILITY

Aerosol filtration with steel fiber filters
[DE93-016990] p 1380 N94-18710

PERMITTIVITY

Numerical modelling of fringing fields and their use for complex permittivity measurements at high frequencies
[AD-A270198] p 1388 N94-18782

Polymer films with enhanced dielectric properties
[AD-A271148] p 1375 N94-19740

Theoretical and experimental studies of quantum wells
[AD-A271180] p 1606 N94-19741

PERMUTATIONS

Heap construction in the parallel comparison tree model
[TR-409] p 1538 N94-19512

PERSIAN GULF

Overview of physical oceanographic measurements taken during the Mount Mitchell cruise to ROPME sea area
[DE93-018460] p 1497 N94-18494

PERSONAL COMPUTERS

Systolic array IC for genetic computation
p 1400 N94-18361

Downsizing a database platform for increased performance and decreased costs
[DE93-018687] p 1618 N94-19099

PERSONNEL

Human reliability analysis application guide
[DE93-015361] p 1511 N94-18244

Building a joint-service classification research roadmap: Criterion-related issues
[AD-A269735] p 1512 N94-18754

Road march performance of special operations soldiers carrying various loads and load distributions
[AD-A269198] p 1512 N94-18882

PERSONNEL DEVELOPMENT

Building a joint-service classification research roadmap: Criterion-related issues
[AD-A269735] p 1512 N94-18754

PERSONNEL MANAGEMENT

Using controlled daylight exposure and sleep timing in the prevention of shift lag during night operations
[AD-A269304] p 1504 N94-17824

Computing professionals: Changing needs for the 1990's
[B-030] p 1515 N94-19401

PERSONNEL SELECTION

Computing professionals: Changing needs for the 1990's
[B-030] p 1515 N94-19401

PERTURBATION

Further on the current algebra of WZNW models at and away from criticality
[DE93-624809] p 1545 N94-17686

Exchange front stability in packed-column chromatography
[DE93-017526] p 1346 N94-17997

Fundamental research in nonlinear random vibration for aerospace applications
[AD-A268929] p 1454 N94-18487

Resonance Raman and photophysical studies of transition metal complexes in solution and entrapped in zeolites
[DE93-019892] p 1363 N94-19019

PERTURBATION THEORY

Waveguide and resonator perturbation techniques for measuring chirality and non-reciprocity of biisotropic materials
[PB93-187243] p 1384 N94-18116

PERVEANCE

Novel electron beam cathode
[AD-A270106] p 1404 N94-18872

PETRI NETS

TANGO: A notation for describing advanced transaction models
[REPT-93-014] p 1613 N94-17936

Sensitivity and uncertainty analysis of Markov reward models
[MEMO-INF-92-89] p 1559 N94-19386

PHASE CHANGE MATERIALS

Shrinkage void formation and its effect on freeze and thaw processes of lithium and lithium-fluoride for space applications
[DE93-019303] p 1338 N94-19128

PHASE CONJUGATION

Phase conjugation and beam combination using stimulated brillouin scattering
[AD-A269899] p 1439 N94-18656

PHASE DIAGRAMS

A new multiphase equation of state for iron
[DE93-017629] p 1357 N94-17819

Calculation of the LiF-CeF3-BeF2 and LiF-PuF3-BeF2 ternary phase diagrams
[DE93-017437] p 1360 N94-18501

Realistic theories of heavy electron and other strongly correlated materials
[DE93-010350] p 1571 N94-19204

PHASE ERROR

The spatial variance of ionospherically-induced phase errors in SAR imagery
[DE93-015643] p 1385 N94-18232

PHASE LOCKED SYSTEMS

Phase conjugation and beam combination using stimulated brillouin scattering
[AD-A269899] p 1439 N94-18656

A method for eliminating skew introduced by non-uniform buffer delay and wire lengths in clock distribution trees
[AD-A270649] p 1544 N94-19530

Optical frequency division using an optical parametric oscillator
[AD-A270847] p 1581 N94-19578

PHASE MODULATION

The optimal numerical algorithm for processing of phase coded time signals for radio-clocks
p 1426 N94-18018

Evaluation of a liquid crystal spatial light modulator capable of amplitude- and phase-modulating modes
[AD-A269252] p 1577 N94-18262

Alternating-phase focusing with amplitude modulation
[DE93-018618] p 1574 N94-18273

Nanostructured materials: Mind over matter
[DE93-017690] p 1597 N94-18480

Resolution in radar mapping
[AD-A269730] p 1462 N94-18753

Integrated Photonics Research: Post-deadline papers
[AD-A269232] p 1609 N94-18908

PHASE SEPARATION (MATERIALS)

Phase separation and superconductivity in La2CuO(4 + delta): Effects of oxygen diffusion
[DE93-016610] p 1594 N94-17907

Phase separation and ordering process in Al-Li alloys studied by small-angle neutron scattering and neutron diffraction
[DE93-016750] p 1358 N94-17947

PHASE SHIFT

Arc detection and protection in high-power antenna systems
[DE93-013272] p 1382 N94-17695

Development and test of readout electronics for optical quadrature signals
[DLR-MITT-92-11] p 1395 N94-17920

PHASE STABILITY (MATERIALS)

Bench-scale screening tests for a boiling sodium-potassium alloy solar receiver
[DE93-018512] p 1469 N94-19040

Fabrication, properties, and microstructures of high (Tc) tapes and coils made from Ag-clad Bi-2223 superconductor
[DE93-017405] p 1602 N94-19122

Prediction of non-equilibrium solidification modes in austenitic stainless steel laser welds
[DE93-018457] p 1364 N94-19203

PHASE TRANSFORMATIONS

On relation between Berry phase and one-dimensional models with long-range 1/r(sup 2)-interaction
[DE93-624967] p 1592 N94-17690

A new multiphase equation of state for iron
[DE93-017629] p 1357 N94-17819

Phase transitions and neutron scattering
[DE93-016748] p 1594 N94-17866

Structure, thermodynamics, and dynamical properties of supercooled liquids
[DE93-788387] p 1607 N94-18211

Phase structure of (phi(4))(sub 3) field theory at finite temperature
[DE93-629907] p 1608 N94-18267

Research activity on particle spin systems and related problems
[AD-A269456] p 1562 N94-18286

Competitive dynamics and self-organization in photorefractive systems
[AD-A269663] p 1430 N94-18569

Ionic and molecular environments in heterogeneous electrocatalysis: Studies by radioactive labeling and LEED/AUGER spectroscopy
[AD-A268850] p 1567 N94-18766

Deformation mechanisms in a Laves phase
[DE93-018331] p 1361 N94-18806

Toward a characterization of the debris cloud created in a hypervelocity impact on a thin plate
[AD-A269190] p 1455 N94-18864

Pressure induced metallization of the Mott Insulator 6(sub 2)
[DE93-018296] p 1600 N94-18969

A free energy simulation method based study of interfacial segregation
[DE93-019462] p 1364 N94-19032

The study of the phase structure of hadronic matter by searching for the deconfined quark-gluon phase transition using 2 TeV (bar-p)-p collisions, and by searching for critical phenomena in an exclusive study of multifragmentation using 1 GeV/nucleon heavy ion collisions
[DE93-018925] p 1570 N94-19103

Prediction of non-equilibrium solidification modes in austenitic stainless steel laser welds
[DE93-018457] p 1364 N94-19203

Effects of pressure on the orientational ordering and phase transitions in solid C(60) and C(70)
[DE93-018858] p 1603 N94-19347

Optical frequency doubling at adsorbates of silver(110) surface
[ETN-93-94837] p 1603 N94-19355

Melt spinning study
[NASA-CR-193823] p 1380 N94-19423

Metallization and charge-transfer gap closure of transition-metal iodides under pressure
[DE93-040301] p 1353 N94-19538

High resolution transmission electron microscopy of mesoporous MCM-41 type materials
[AD-A271271] p 1354 N94-19728

Cooperative formation of inorganic-organic interfaces in the synthesis of silicate mesostructures
[AD-A271196] p 1375 N94-19742

PHASE VELOCITY

The phase mixing of shear Alfven waves
[DE93-624920] p 1581 N94-17688

Modeling and new equipment definition for the vibration isolation box equipment system
[NASA-CR-193185] p 1379 N94-17763

PHASE-SPACE INTEGRAL

Phase space representations and quantum probability theory
[DE93-629863] p 1556 N94-18154

PHASED ARRAYS

Power compensators for phased operation of antenna arrays on JET and D3-D
[DE93-013208] p 1581 N94-17694

PHENOLS

Proton transfer dynamics and cluster ion fragmentation in phenol/ammonia cLusters
[AD-A269133] p 1348 N94-18256

PHENOMENOLOGY

Phenomenological explanation of elastic anomalies in superlattices
[DE93-017475] p 1594 N94-17871

Institute for Nuclear Theory
[DE93-017369] p 1568 N94-18824

PHONONS

Polaron tunneling in high-temperature superconductors
[DE93-016880] p 1593 N94-17754

Suppressed electron-phonon scattering in superlattices
[AD-A270834] p 1604 N94-19597

Solid-state dynamics in novel semiconductor nanostructures
[AD-A271249] p 1605 N94-19725

PHOSPHATES

An ultraviolet faraday rotator glass
[AD-D015879] p 1371 N94-18529

Advanced civil engineering materials based on inorganic polymers
[AD-A270837] p 1374 N94-19600

PHOTOCATHODES

RF phase stabilization for RF photocathode gun through electro-optical monitoring
[DE93-019059] p 1406 N94-19310

PHOTOCHEMICAL REACTIONS

Pulse radiolytic studies of electron transfer processes and applications to solar photochemistry
[DE93-018715] p 1464 N94-17781

Energy efficiency and the environment: Innovative ways to improve air quality in the Los Angeles Basin
[DE93-016964] p 1473 N94-18050

Research at the Notre Dame Radiation Laboratory
[DE93-018716] p 1566 N94-18165

Experimental and theoretical investigation of surface chemistry induced by direct and indirect electronic excitation
[AD-A268846] p 1348 N94-18221

Photo-induced and electrooptic properties of (Pb,La)(Zr,Ti)O3 films
[DE93-017496] p 1371 N94-18519

Vibrational dynamics in photoinduced electron transfer
[DE93-040874] p 1567 N94-18533

Photodissociation studies of polyatomic free radicals
[AD-A270084] p 1350 N94-18799

Summaries of FY 1993 research in the chemical sciences
[DE93-011855] p 1632 N94-18915

Oligomer and mixed-metal compounds, potential multielectron transfer catalysts
[DE93-019592] p 1350 N94-19017

Resonance Raman and photophysical studies of transition metal complexes in solution and entrapped in zeolites
[DE93-019892] p 1363 N94-19019

Kinetics programs for simulation of tropospheric photochemistry on the global scale
[DE93-019035] p 1476 N94-19104

The Mexico City 1991 lidar measurements campaign
[DE93-019960] p 1478 N94-19272

PHOTOCONDUCTORS

Photodetector array having high pixel density
[AD-D015859] p 1432 N94-18731

PHOTODISSOCIATION

Removing CFC's from the atmosphere with lasers: A second look
[DE93-017516] p 1473 N94-18101

Photodissociation studies of polyatomic free radicals
[AD-A270084] p 1350 N94-18799

Photodissociation dynamics of cluster ions
[AD-A270296] p 1568 N94-18814

Unimolecular photodissociation dynamics of ketene (CH2CO): The singlet/triplet branching ratio and experimental observation of the vibrational level thresholds of the transition-state
[DE93-019252] p 1352 N94-19304

Ultraviolet absorption cross-sections of some carbonyl compounds and their temperature dependence
[AERONAUTICA-ACTA-A-368-199]
p 1353 N94-19456

Temperature dependence of ultraviolet absorption cross-sections of alternative hydrochlorofluorocarbons
[AERONAUTICA-ACTA-A-369-199]
p 1353 N94-19459

PHOTOELECTRIC EMISSION

Dynamics of short-pulse excitation, ionization and harmonic conversion
[DE93-017220] p 1436 N94-17996

Photoemission studies of Zn, Co, and Gd substituted YBa2Cu3O(7-delta)
[DE93-017403] p 1597 N94-18498

PHOTOELECTRON SPECTROSCOPY

Guidelines for the expression of uncertainties in surface chemical analysis by Auger Electron Spectroscopy (AES) and X ray Photoelectron Spectroscopy (XPS)
[NPL-DMM(A)-99] p 1346 N94-17900

PHOTOELECTRONS

Spin-integrated and spin-dependent photoelectron diffraction
[DE93-016546] p 1565 N94-17850

Dynamics of short-pulse excitation, ionization and harmonic conversion
[DE93-017220] p 1436 N94-17996

PHOTOEXCITATION

Direct solar pumping of semiconductor lasers: A feasibility study
[NASA-CR-193760] p 1440 N94-18834

PHOTOGRAPHIC FILM

The performance and survivability of dichromated poly (vinyl alcohol) holograms for space based photonic applications
[AD-A270974] p 1434 N94-19791

PHOTOGRAPHS

Image blur
[DE93-017944] p 1580 N94-19113

PHOTOGRAPHY

High speed 512X512 camera system
[DE93-015871] p 1430 N94-18235

Image blur
[DE93-017944] p 1580 N94-19113

PHOTOIONIZATION

Production of dense vapor targets for laser-plasma interaction studies with intense, ultra-short pulses
[DE93-017175] p 1584 N94-17993

Dynamics of short-pulse excitation, ionization and harmonic conversion
[DE93-017220] p 1436 N94-17996

A physical model for one-dimension and time-dependent ionosphere. Part 1: Description of the model
[DE93-627958] p 1486 N94-19255

Harmonic generation at high intensities
[DE93-018632] p 1572 N94-19283

Ultraviolet observations of clusters of Wolf-Rayet stars in the SBm3 galaxy NGC 4214 and Ultraviolet and optical observations of LINER's
[NASA-CR-194307] p 1622 N94-19431

PHOTOLITHOGRAPHY

Field emission cathode and vacuum microelectronic microwave amplifier development
[AD-A269526] p 1403 N94-18639

PHOTOLUMINESCENCE

Pressure sensitive paint technique
p 1431 N94-18647

Study of GaAs substrates by ambient temperature photoluminescence imagery
[ECL-92-61] p 1603 N94-19357

PHOTOLYSIS

Pulse radiolytic studies of electron transfer processes and applications to solar photochemistry
[DE93-018715] p 1464 N94-17781

Nitridation of GaAs(100) by laser-induced decomposition of HN3
[AD-A269147] p 1438 N94-18258

Vibrational dynamics in photoinduced electron transfer
[DE93-040874] p 1567 N94-18533

Unimolecular photodissociation dynamics of ketene (CH2CO): The singlet/triplet branching ratio and experimental observation of the vibrational level thresholds of the transition-state
[DE93-019252] p 1352 N94-19304

Excited atomic bromine energy transfer and quenching mechanisms
[AD-A270672] p 1572 N94-19607

PHOTOMETERS

An analog retina model for detecting dim moving objects against a bright moving background
p 1399 N94-18350

Photodetector array having high pixel density
[AD-D015859] p 1432 N94-18731

Radiation induced darkening of the optical elements in the Startracker camera
[DE93-018907] p 1433 N94-19004

PHOTOMETRY

Laser guide star measurements at Lawrence Livermore National Laboratory
[DE93-018081] p 1441 N94-19251

PHOTON-ELECTRON INTERACTION

Studies of clusters
[DE93-018961] p 1572 N94-19309

PHOTONICS

Integrated photonics research volume 10. Conference edition
[AD-A269298] p 1577 N94-18298

Optical computing. Organization of the 1993 Photonics Science Topical Meetings. Technical digest series, volume 7
[AD-A269025] p 1578 N94-18332

Optical design for photonics. Organization of the 1993 Photonics Science Topical Meetings. Technical digest series, volume 9
[AD-A269027] p 1578 N94-18396

Quantum Optoelectronics. Organization of the 1993 photonics science topical meetings. Technical digest series, volume 8
[AD-A269026] p 1578 N94-18488

Advanced Solid-State Lasers/Compact Blue-Green Lasers. 1993 technical digest series. Volume 2: Organization of the 1993 photonics science topical meetings
[AD-A269058] p 1438 N94-18492

Photonics in Switching: Organization of the 1993 photonics science topical meetings. Technical digest
[AD-A269024] p 1578 N94-18528

Soft X Ray Projection Lithography. Organization of the 1993 photonics science optical meetings
[AD-A269159] p 1579 N94-18693

Integrated Photonics Research: Post-deadline papers
[AD-A269232] p 1609 N94-18908

Ultrafast Electronics and Optoelectronics: Summaries of papers. Technical digest conference edition
[AD-A269233] p 1405 N94-18909

Silicon MCM substrates for integration of 3-5 photonic devices and CMOS IC's
[DE93-017894] p 1405 N94-19112

Optoelectronic packaging: A review
[DE93-040059] p 1515 N94-19535

Novel nonlinear laser diagnostic techniques
[AD-A270968] p 1442 N94-19788

The performance and survivability of dichromated poly (vinyl alcohol) holograms for space based photonic applications
[AD-A270974] p 1434 N94-19791

PHOTONS

Space and time as outcome of decoherence in an expanding universe
[DE93-016199] p 1624 N94-18047

Criticality benchmark comparisons leading to cross-section upgrades
[DE93-017184] p 1556 N94-18073

Coherent transient systems evaluation
[AD-A268808] p 1576 N94-18204

Experimental and theoretical investigation of surface chemistry induced by direct and indirect electronic excitation
[AD-A268846] p 1348 N94-18221

Simulation of emittance dilution in electron storage ring from Compton backscattering
[DE93-017611] p 1386 N94-18503

Investigation of physical structures and interactions at high energy
[DE93-014444] p 1574 N94-18927

The study of the phase structure of hadronic matter by searching for the deconfined quark-gluon phase transition using 2 TeV (bar-p)-p collisions, and by searching for critical phenomena in an exclusive study of multifragmentation using 1 GeV/nucleon heavy ion collisions
[DE93-018925] p 1570 N94-19103

Harmonic generation at high intensities
[DE93-018632] p 1572 N94-19283

PHOTOPRODUCTION

Investigation of physical structures and interactions at high energy
[DE93-014444] p 1574 N94-18927

Research in high energy physics
[DE93-018031] p 1575 N94-19287

PHOTOSENSITIVITY

Photo-induced and electrooptic properties of (Pb,La)(Zr,Ti)O3 films
[DE93-017496] p 1371 N94-18519

PHOTOSPHERE

Spectrophotometry of emission-line stars in the magellanic clouds
[NASA-CR-194082] p 1628 N94-19425

PHOTOSYNTHESIS

Photobiotechnology: Application of photosynthesis to the production of renewable fuels and chemicals
[DE93-015522] p 1466 N94-18247

Photosynthetic responses to the environment, volume 8
[AD-A269584] p 1502 N94-18305

Photosynthetic reaction centers as active molecular electronic components, phase 1
[AD-A271368] p 1503 N94-19757

PHOTOTHERMAL CONVERSION

First on-sun test of NaK pool-boiler solar receiver
[DE93-015003] p 1466 N94-18208

Tehachapi solar thermal system
[DE93-018443] p 1468 N94-19014

Examination of charge carriers dynamics in silicon and silicon solar cells with photoinduced laser beam deflection
[ETN-93-95060] p 1470 N94-19654

PHOTOVOLTAIC CELLS

SUNRAYCE 1993: Working safely with lead-acid batteries and photovoltaic power systems
[DE93-016553] p 1464 N94-17712

Development of large-area monolithically integrated silicon-film photovoltaic modules
[DE93-010037] p 1464 N94-17731

Research on stable, high-efficiency amorphous silicon multijunction modules
[DE93-010046] p 1467 N94-18518

PHOTOVOLTAIC CONVERSION

Gallium arsenide-based ternary compounds and multi-band-gap solar cell research
[DE93-010049] p 1467 N94-18483

PHYSICAL CHEMISTRY

Energy Conversion and Storage Program
[DE93-018602] p 1469 N94-19098

Physical chemical studies of conducting polymers fundamental and applied
[AD-A270728] p 1374 N94-19574

PHYSICAL PROPERTIES

A new multiphase equation of state for iron
[DE93-017629] p 1357 N94-17819

PHYSICAL SCIENCES

Guide to programs, fiscal year 1993
[NSF-92-78] p 1633 N94-19620

PHYSICS

The 1982 to 1992 decade of research on the vacuum ultraviolet ring at National Synchrotron Light Source
[DE93-019469] p 1603 N94-19564

PHYSIOLOGICAL EFFECTS

Using controlled daylight exposure and sleep timing in the prevention of shift lag during night operations
[AD-A269304] p 1504 N94-17824

Bibliography of scientific publications of the Naval Biodynamics Laboratory, 1980 - 1992
[AD-A268886] p 1505 N94-18226

Compilation of 1992 annual reports of the navy ELF communications system ecological monitoring program. Volume 3: Tabs G - I
[AD-A269727] p 1388 N94-18741

Space research with intact organisms: The role of Space Station Freedom p 1502 N94-19213

Space research on organs and tissues
p 1503 N94-19214

Microgravity research in plant biological systems: Realizing the potential of molecular biology
p 1503 N94-19216

Life: Origin and evolution on Earth--How can we escape? p 1503 N94-19217

PHYSIOLOGICAL FACTORS

JPRS report: Central Eurasia: Aviation and cosmonautics, no. 11, November 1992
[JPRS-UAC-93-005] p 1632 N94-19208

PHYSIOLOGICAL RESPONSES

Evaluation of physiological and psychological impairment of human performance in cold stressed subjects
[AD-A268637] p 1506 N94-18632

Compilation of 1992 annual reports of the navy ELF communications system ecological monitoring program, volume 2
[AD-A269726] p 1388 N94-18751

Characterization of fluid physics effects on cardiovascular response to microgravity (G-572)
p 1323 N94-19163

A scientific role for Space Station Freedom: Research at the cellular level p 1503 N94-19215

Microgravity research in plant biological systems: Realizing the potential of molecular biology
p 1503 N94-19216

PHYSIOLOGY

Using controlled daylight exposure and sleep timing in the prevention of shift lag during night operations
[AD-A269304] p 1504 N94-17824

Evaluation of dried storage of platelets for transfusion: Physiologic integrity and hemostatic functionality
[AD-A270756] p 1507 N94-19593

PICOSECOND PULSES

Tetravalent chromium (Cr(4+)) as laser-active ion for tunable solid-state lasers
[NASA-CR-194528] p 1441 N94-19394

PIEZOELECTRIC CERAMICS

Modeling and characterization of mechanoelectric conversion piezoelectric generators through dynamical or quasi static uniaxial stress
[ISAL-92-0097] p 1406 N94-19490

PIEZOELECTRIC GAGES

Application of piezoelectric stress gauges to the measurement of fast-rise-time multimegampere electric currents
[DE93-017625] p 1429 N94-18102

PIEZOELECTRIC TRANSDUCERS

Application of piezoelectric stress gauges to the measurement of fast-rise-time multimegampere electric currents
[DE93-017625] p 1429 N94-18102

Monolithic low noise preamplifier for piezoelectric sensors
[AD-D015860] p 1563 N94-18734

PIEZOELECTRICITY

PVDF measurement of soft x ray induced shock and filter debris impulse
[DE93-017633] p 1382 N94-17806

Piezo-electric motor: Perspectives and miniaturization
p 1408 N94-18015

Application of piezoelectric stress gauges to the measurement of fast-rise-time multimegampere electric currents
[DE93-017625] p 1429 N94-18102

Office of Naval Research Publications/Patents /Presentations/Honors report, 1 October 1992 - 30 September 1993
[AD-A270037] p 1632 N94-18791

Experiments and analysis of lateral piezoresistance gauges
[DE93-017874] p 1433 N94-19111

Modeling and characterization of mechanoelectric conversion piezoelectric generators through dynamical or quasi static uniaxial stress
[ISAL-92-0097] p 1406 N94-19490

The electromechanical properties of tetragonal BaTiO3 and PbTiO3 single crystals
[DE93-019008] p 1603 N94-19550

PIGMENTS

Polyurethane self-priming topcoats
[AD-D015870] p 1367 N94-17719

PILOT PERFORMANCE

Research on man-machine productivity in aviation at Human Engineering Institute of Hangzhou University
[AD-A269952] p 1512 N94-18673

VMC left turn curved approaches, test results --- (visual meteorological conditions)
[AD-A269476] p 1316 N94-18728

Integrated measurement of crew resource management and technical flying skills
[AD-A270512] p 1510 N94-19677

PINCH EFFECT

Plasma-puff initiation of high Coulomb transfer switches
[NASA-CR-193186] p 1591 N94-19441

PIONS

On the difference caused by CP violation in the energy spectra of pions in K(sup (+-))(yields)(pi)(+-)(pi)(+-)(pi)-+ decays
[DE93-624828] p 1564 N94-17687

Meson production in relativistic heavy-ion collisions at AGS energies
[DE93-016871] p 1565 N94-17984

PIPE FLOW

Examinations of the friction behavior in nonstationary flow processes in pipes
[MITT-7] p 1423 N94-19730

PIPELINING (COMPUTERS)

Cesar user library
[FFI-93/7021] p 1529 N94-19378

PIPES (TUBES)

Summary of work on coatings and claddings for fossil energy applications
[DE93-017005] p 1367 N94-17881

Wideband electromagnetic scattering/analysis program: Far zone electromagnetic scattering from complex shapes using geometrical theory of diffraction
[AD-A268790] p 1384 N94-18187

PISTONS

Studies of dynamic contact of ceramics and alloys for advanced heat engines
[DE93-016366] p 1368 N94-18110

Acoustic propagation modeling using MATLAB
[AD-A270905] p 1564 N94-19750

PITCHING MOMENTS

Comparison between swept and delta canards on a model of a combat aircraft
[AD-A269561] p 1317 N94-17826

Aerodynamic characteristics of a helicopter rotor airfoil as affected by simulated ballistic damage
[AD-A269206] p 1311 N94-18413

Lift and pitching moment induced on jet STOVL aircraft hovering in ground effect
[AD-A269700] p 1317 N94-18577

Lift and pitching moment induced on jet STOVL aircraft by the ground vortex
[AD-A269816] p 1318 N94-18733

PIXELS

Color palette considerations for digital map displays
[AD-A269991] p 1462 N94-18679

Photodetector array having high pixel density
[AD-D015859] p 1432 N94-18731

PLANE STRAIN
Numerical analysis of pressure meter tests: Application of parameter identification of soils behavior
[ECL-92-52] p 1487 N94-19380
PLANE STRESS
Interfacial cracks in plates: A three-dimensional numerical investigation p 1456 N94-19116
Formulation and identification of the anisotropic laws for thin sheets drawing
[ECL-92-55] p 1365 N94-19400
PLANE WAVES
Development of parallel architectures for sensor array processing, volume 1
[AD-A270426] p 1534 N94-18507
A parallel and pipelined architecture for estimation of direction of arrival using a bilinear transformation method, volume 3
[AD-A270137] p 1389 N94-18897
Transmission of acoustic waves through strongly heterogeneous, two-dimensional velocity models
[REPT-93-09] p 1563 N94-19083
PLANETARY BOUNDARY LAYER
A new approach to the study of the turbulence layer
[NASA-CR-194546] p 1487 N94-19397
PLANETARY CRUSTS
JPRS report: Science and technology. Central Eurasia: Space
[JPRS-USP-93-004] p 1323 N94-19146
PLANETARY EVOLUTION
Applications of Quaternary stratigraphic, soil-geomorphic, and quantitative geomorphic analyses to the evaluation of tectonic activity and landscape evolution in the Upper Coastal Plain, South Carolina
[DE93-016269] p 1484 N94-18725
PLANETARY GEOLOGY
Applications of Quaternary stratigraphic, soil-geomorphic, and quantitative geomorphic analyses to the evaluation of tectonic activity and landscape evolution in the Upper Coastal Plain, South Carolina
[DE93-016269] p 1484 N94-18725
Magellan, Galileo, and Ulysses
[NASA-TM-109362] p 1628 N94-18958
JPRS report: Science and technology. Central Eurasia: Space
[JPRS-USP-93-004] p 1323 N94-19146
PLANETARY RINGS
Voyager's last encounter
[NASA-TM-109361] p 1628 N94-18957
PLANETARY STRUCTURE
The use of velocity spectra for stacking receiver functions with application to IRIS/IDA stations OBNINSK (OBN) and ARTI (ARU), Russia
[AD-A269087] p 1483 N94-18717
PLANETARY WAVES
Planetary plasma waves
[NASA-CR-194295] p 1629 N94-19094
PLANNING
Bias in planning and explanation-based learning
[AD-A269608] p 1610 N94-17746
PRACTICAL: Planning and resource allocation in C2-domains with time critical algorithms
[FEL-93-B029] p 1544 N94-19458
Statistical probabilities for planning
[TR-474] p 1559 N94-19511
PLANTING
The carbon dioxide emissions game: Playing the net
[DE93-017670] p 1471 N94-17821
PLANTS (BOTANY)
Photosynthetic responses to the environment, volume 8
[AD-A269584] p 1502 N94-18305
Compilation of 1992 annual reports of the Navy ELF communications system ecological monitoring program, volume 1
[AD-A269569] p 1386 N94-18473
Compilation of 1992 annual reports of the navy ELF communications system ecological monitoring program, volume 2
[AD-A269726] p 1388 N94-18751
Microgravity research in plant biological systems: Realizing the potential of molecular biology
p 1503 N94-19216
PLASMA ACCELERATION
Observations of MeV electrons and scattered light from intense, subpicosecond laser-plasma interactions
[DE93-017153] p 1435 N94-17855
PLASMA ANTENNAS
Plasma production by helicon waves
[DE93-788396] p 1586 N94-18213
PLASMA CONTROL
ITER EDA design confinement capability
[DE93-013729] p 1582 N94-17697
Limits on m = 2, n = 1 error field induced locked mode instability in TPX with typical sources of poloidal field coil error field and a proto type correction coil, C-coil
[DE93-014408] p 1582 N94-17702
Self-regulated shear flow turbulence in confined plasmas
[DE93-015823] p 1583 N94-17743
Analysis of the ITER H-mode confinement database
[DE93-016984] p 1585 N94-18056
Coupled MHD and transport analysis of improved confinement D3-D discharges
[DE93-016985] p 1585 N94-18057
Dependence of helium transport on plasma current and ELM frequency in H-mode discharges in D3-D
[DE93-016986] p 1585 N94-18058
Application of piezoelectric stress gauges to the measurement of fast-rise-time multimegampere electric currents
[DE93-017625] p 1429 N94-18102
Ion mobility and transport barriers in the tokamak plasmas
[DE93-040320] p 1587 N94-18524
Materials processing and manufacturing technologies for diamond substrates multichip modules
[AD-A268989] p 1599 N94-18764
Lower hybrid counter current drive for edge current density modification in D3-D
[DE93-019157] p 1589 N94-19073
Modelization, numerical simulation and optimal control of NET tokamak plasma configuration evolution for the future generation of fusion reactors
[ETN-93-95019] p 1591 N94-19364
Transverse beam combiner for ILSE
[DE93-019239] p 1591 N94-19559
Theoretical studies of turbulence and anomalous transport in toroidal confinement devices
[DE93-040684] p 1592 N94-19656
PLASMA CURRENTS
Detailed analysis of low energy plasma data under the Voyager Uranus data analysis program
[NASA-CR-193668] p 1628 N94-17842
Filamentary magnetohydrodynamic plasmas
[DE93-015616] p 1583 N94-17945
Coupled MHD and transport analysis of improved confinement D3-D discharges
[DE93-016985] p 1585 N94-18057
Dependence of helium transport on plasma current and ELM frequency in H-mode discharges in D3-D
[DE93-016986] p 1585 N94-18058
Lower hybrid counter current drive for edge current density modification in D3-D
[DE93-019157] p 1589 N94-19073
Electron cyclotron resonance heating in the microwave tokamak experiment
[DE93-018083] p 1590 N94-19289
Modelization, numerical simulation and optimal control of NET tokamak plasma configuration evolution for the future generation of fusion reactors
[ETN-93-95019] p 1591 N94-19364
PLASMA DENSITY
Characterization of short pulse laser-produced plasmas at the Lawrence Livermore National Laboratory ultra short-pulse laser
[DE93-017191] p 1585 N94-18082
Plasma production by helicon waves
[DE93-788396] p 1586 N94-18213
An investigation of methods for updating ionospheric scintillation models using topside in-situ plasma density measurements
[AD-A269872] p 1483 N94-18655
Phase-space description of plasma waves: Linear and nonlinear theory
[IRF-SR-211] p 1587 N94-18860
The spherical probe Electric Field and Wave Experiment for the Cluster mission p 1328 N94-19624
WHISPER: A sounder and high-frequency wave analyser experiment p 1328 N94-19626
PLASMA DIAGNOSTICS
Analysis of neon soft x ray spectra from short-pulse laser-produced plasmas
[DE93-014420] p 1582 N94-17708
Application of piezoelectric stress gauges to the measurement of fast-rise-time multimegampere electric currents
[DE93-017625] p 1429 N94-18102
Time-resolved probing of electron thermal conduction in femtosecond-laser-pulse-produced plasmas
[DE93-016996] p 1585 N94-18129
Development of short pulse soft x ray lasers
[DE93-017150] p 1437 N94-18131
Active neutral particle diagnostics for high temperature plasma
[DE93-788457] p 1586 N94-18214
Experiments on nonlinear absorption of ECH waves in MTX and a comparison with theory
[DE93-019158] p 1589 N94-19074
Electron cyclotron resonance heating in the microwave tokamak experiment
[DE93-018083] p 1590 N94-19289
PLASMA DRIFT
Convection algorithms for magnetospheric particles
[AD-A270103] p 1493 N94-18871
PLASMA DYNAMICS
Filamentary magnetohydrodynamic plasmas
[DE93-015616] p 1583 N94-17945
Ion mobility and transport barriers in the tokamak plasmas
[DE93-040320] p 1587 N94-18524
RAPID: The imaging energetic particle spectrometer on Cluster p 1329 N94-19633
PLASMA ELECTRODES
Evaluation of materials proposed for the construction of the Plasma Electrode Pockels Cell (PEPC) on beamlet
[DE93-016952] p 1584 N94-17988
PLASMA EQUILIBRIUM
Profile stabilization of tilt mode in a field reversed configuration
[DE93-016770] p 1583 N94-17753
A free boundary eigenvaue problem
[IPP-6/310] p 1584 N94-17981
Nonparaxial MHD stabilizers for an axisymmetric magnetic mirror
[DE93-017996] p 1587 N94-18505
Finite beta plasma equilibrium in toroidally linked mirrors
[DE93-040318] p 1590 N94-19193
On neutral plasma oscillations
[DE93-040319] p 1590 N94-19194
PLASMA ETCHING
Field emission cathode and vacuum microelectronic microwave amplifier development
[AD-A269526] p 1403 N94-18639
PLASMA HEATING
Power compensators for phased operation of antenna arrays on JET and D3-D
[DE93-013208] p 1581 N94-17694
Arc detection and protection in high-power antenna systems
[DE93-013272] p 1382 N94-17695
ITER EDA design confinement capability
[DE93-013729] p 1582 N94-17697
Design of a tunable 4-MW free electron maser for heating fusion plasmas
[DE93-017172] p 1437 N94-18134
Plasma production by helicon waves
[DE93-788396] p 1586 N94-18213
Experiments on nonlinear absorption of ECH waves in MTX and a comparison with theory
[DE93-019158] p 1589 N94-19074
ICRF direct electron heating experiments in TFTR
[DE93-017857] p 1590 N94-19273
Electron cyclotron resonance heating in the microwave tokamak experiment
[DE93-018083] p 1590 N94-19289
PLASMA INTERACTIONS
Plasma contactor development for Space Station
[NASA-TM-106425] p 1587 N94-18861
The study of the phase structure of hadronic matter by searching for the deconfined quark-gluon phase transition using 2 TeV (bar-p)-p collisions, and by searching for critical phenomena in an exclusive study of multifragmentation using 1 GeV/nucleon heavy ion collisions
[DE93-018925] p 1570 N94-19103
PLASMA LAYERS
Time-resolved probing of electron thermal conduction in femtosecond-laser-pulse-produced plasmas
[DE93-016996] p 1585 N94-18129
Radiative divertor modeling studies
[DE93-018092] p 1590 N94-19290
Behavior of the particle transport coefficients near the density limit in MTX
[DE93-019108] p 1591 N94-19311
PLASMA OSCILLATIONS
On neutral plasma oscillations
[DE93-040319] p 1590 N94-19194
PLASMA PHYSICS
Problems related to stimulated electromagnetic emissions, strong turbulence and ionospheric modification
[IRF-SR-212] p 1480 N94-17720
Self-regulated shear flow turbulence in confined plasmas
[DE93-015823] p 1583 N94-17743
Plasma properties research: Task 3
[DE93-017087] p 1583 N94-17854
Center of Excellence in Theoretical Geoplasma Research
[AD-A270210] p 1588 N94-18902
Review Committee report on the conceptual design of the tokamak physics experiment
[DE93-018408] p 1588 N94-19012

Generalized energy principle for flute perturbations in axisymmetric mirror machines
[DE93-019399] p 1589 N94-19037

PLASMA PINCH
Plasma-puff initiation of high Coulomb transfer switches
[NASA-CR-193186] p 1591 N94-19441

PLASMA POTENTIALS
Plasma contactor development for Space Station
[NASA-TM-106425] p 1587 N94-18861

PLASMA PRESSURE
Finite beta plasma equilibrium in toroidally linked mirrors
[DE93-040318] p 1590 N94-19193

PLASMA RADIATION
Application of piezoelectric stress gauges to the measurement of fast-rise-time multimegampere electric currents
[DE93-017625] p 1429 N94-18102
Substrate temperature measurement and control during thermal plasma CVD
[DE93-040305] p 1433 N94-19135

PLASMA RESONANCE
Resonant absorption of Alfven waves near a neutral point
[DE93-628761] p 1586 N94-18172

PLASMA SHEATHS
Detailed analysis of low energy plasma data under the Voyager Uranus data analysis program
[NASA-CR-193668] p 1628 N94-17842

PLASMA SPECTRA
Detailed analysis of low energy plasma data under the Voyager Uranus data analysis program
[NASA-CR-193668] p 1628 N94-17842

PLASMA TEMPERATURE
Characterization of short pulse laser-produced plasmas at the Lawrence Livermore National Laboratory ultra short-pulse laser
[DE93-017191] p 1585 N94-18082

PLASMA TURBULENCE
Problems related to stimulated electromagnetic emissions, strong turbulence and ionospheric modification
[IRF-SR-212] p 1480 N94-17720
Behavior of the particle transport coefficients near the density limit in MTX
[DE93-019108] p 1591 N94-19311
Radial evolution of the solar wind turbulence with application to charged particle transport
[NASA-CR-194081] p 1629 N94-19427
The Wave Experiment Consortium
p 1328 N94-19623
Theoretical studies of turbulence and anomalous transport in toroidal confinement devices
[DE93-040684] p 1592 N94-19656

PLASMA WAVES
The phase mixing of shear Alfven waves
[DE93-624920] p 1581 N94-17688
Transformation of energy and momentum due to Landau damping in space
[DE93-624921] p 1581 N94-17689
Resonant absorption of Alfven waves near a neutral point
[DE93-628761] p 1586 N94-18172
Plasma production by helicon waves
[DE93-788396] p 1586 N94-18213
Phase-space description of plasma waves: Linear and nonlinear theory
[IRF-SR-211] p 1587 N94-18860
Planetary plasma waves
[NASA-CR-194295] p 1629 N94-19094
On neutral plasma oscillations
[DE93-040319] p 1590 N94-19194
The Wave Experiment Consortium
p 1328 N94-19623
The spherical probe Electric Field and Wave Experiment for the Cluster mission p 1328 N94-19624
WHISPER: A sounder and high-frequency wave analyser experiment p 1328 N94-19626
The wideband plasma wave investigation
p 1328 N94-19627
Implementation of the digital wave-processing experiment p 1329 N94-19628

PLASMA-ELECTROMAGNETIC INTERACTION
Limits on m = 2, n = 1 error field induced locked mode instability in TPX with typical sources of poloidal field coil error field and a proto type correction coil, C-coil
[DE93-014408] p 1582 N94-17702
Wake field in electron-positron plasmas
[DE93-624929] p 1584 N94-17955
Resonant absorption of Alfven waves near a neutral point
[DE93-628761] p 1586 N94-18172
Studies of enhanced radar backscatter
[AD-A269544] p 1385 N94-18288

PLASMA-PARTICLE INTERACTIONS
Advanced fusion diagnostics
[DE93-040085] p 1589 N94-19133

PLASMAS (PHYSICS)
Observations of MeV electrons and scattered light from intense, subpicosecond laser-plasma interactions
[DE93-017153] p 1435 N94-17855
Configuration interaction in LTE spectra of heavy elements
[DE93-017166] p 1584 N94-17990
Analysis of the ITER H-mode confinement database
[DE93-016984] p 1585 N94-18056
Coupled MHD and transport analysis of improved confinement D3-D discharges
[DE93-016985] p 1585 N94-18057
Dependence of helium transport on plasma current and ELM frequency in H-mode discharges in D3-D
[DE93-016986] p 1585 N94-18058
Characterization of short pulse laser-produced plasmas at the Lawrence Livermore National Laboratory ultra short-pulse laser
[DE93-017191] p 1585 N94-18082
AEOLUS-IT MHD simulation code based on a toroidally incompressible plasma model
[DE93-788461] p 1586 N94-18157
RF vacuum microelectronics
[AD-A269454] p 1396 N94-18284
Nonparaxial MHD stabilizers for an axisymmetric magnetic mirror
[DE93-017996] p 1587 N94-18505
Center of Excellence in Theoretical Geoplasma Research
[AD-A270210] p 1588 N94-18902
Viscosity in the edge of tokamak plasmas
[DE93-018039] p 1588 N94-18988
Experiments on nonlinear absorption of ECH waves in MTX and a comparison with theory
[DE93-019158] p 1589 N94-19074
Radiative divertor modeling studies
[DE93-018092] p 1590 N94-19290
Manufacturing technology
[DE93-019580] p 1381 N94-19480

PLASMONS
Experimental and theoretical investigation of surface chemistry induced by direct and indirect electronic excitation
[AD-A268846] p 1348 N94-18221
Metal Film Surface Plasmon Resonance (MFSPR) fibre couplers
[AD-A268871] p 1579 N94-18635

PLASTIC AIRCRAFT STRUCTURES
New aircraft materials and structures
[MBB-LME-202-S-PUB-502-A] p 1319 N94-19496

PLASTIC ANISOTROPY
Plastic anisotropy in MoSi2 single crystals
[DE93-012650] p 1594 N94-17874

PLASTIC DEFORMATION
Modeling microstructural evolution and the mechanical response of superplastic materials
[DE93-014417] p 1355 N94-17711
A benchmark bending test of a thick specimen. Part 1: Experiments
[AD-A268730] p 1360 N94-18325
Dislocation-drag contribution to high-rate plastic deformation in shock-loaded tantalum
[DE93-018286] p 1361 N94-18802
Deformation mechanisms in a Laves phase
[DE93-018331] p 1361 N94-18806
Influence of peak pressure and temperature on the shock-loading response of tantalum
[DE93-018561] p 1457 N94-19279
The effect of composition on the mechanism of continuous recrystallization and superplastic response of aluminum-scandium alloys
[DE93-018594] p 1365 N94-19280
Ni-Al2O3 solid state binding: Elaboration, state of thermal constraints, mechanical behavior
[ECL-92-31] p 1366 N94-19436
Current capabilities for simulating the extreme distortion of thin structures subjected to severe impacts
p 1459 N94-19474
Crashdynamics with DYNA3D: Capabilities and research directions p 1460 N94-19475

PLASTIC FLOW
Interdisciplinary research on wear of materials
[AD-A268190] p 1443 N94-17730
Dislocation-drag contribution to high-rate plastic deformation in shock-loaded tantalum
[DE93-018286] p 1361 N94-18802
HEMP 3D: A finite difference program for calculating elastic-plastic flow, appendix B
[AD-A269171] p 1418 N94-18878

PLASTIC PROPERTIES
Computational strategies for composite structures
[PB93-195097] p 1452 N94-18079
Several fundamental issues in the mechanics of inelastic behavior
[AD-A269455] p 1453 N94-18285
HEMP 3D: A finite difference program for calculating elastic-plastic flow, appendix B
[AD-A269171] p 1418 N94-18878
A constitutive theory for rigid polyurethane foam
[DE93-011596] p 1372 N94-19059
Plastic mechanism analysis of T-joints in RHS subject to combined bending and concentrated force
[PB93-195774] p 1456 N94-19061
Formulation and identification of the anisotropic laws for thin sheets drawing
[ECL-92-55] p 1365 N94-19400

PLASTICS
Sputtered TiN coatings in plastic
p 1367 N94-18011
Ageing in Processed Polymers: Programme, summary, and abstracts discussion meeting
[AD-A268931] p 1370 N94-18448
Simulation of the impact of a plastic flyer on an aluminum block using the hydrocode AUTODYNE
[PML-1992-26] p 1458 N94-19444

PLATELETS
Evaluation of dried storage of platelets for transfusion: Physiologic integrity and hemostatic functionality
[AD-A270756] p 1507 N94-19593

PLATES (STRUCTURAL MEMBERS)
Development of a finite element method program for the analysis of laminated composite plates using first-order shear deformation theory
[AD-A270318] p 1342 N94-18700

PLATES (TECTONICS)
Current (1985-1988) seismic activity in Belgium: Comparison with historical and instrumental seismic data
p 1482 N94-18624
What can gravimetry contribute to recent and current tectonics in Belgium? p 1482 N94-18626

PLATINUM
Potential dependent structural changes of underpotentially deposited copper on an iodine treated platinum surface determined in situ by surface EXAFS and its polarization dependence
[AD-A269890] p 1360 N94-18687

PLOTTING
Computer codes for checking, plotting and processing of neutron cross-section covariance data and their application
[DE93-018459] p 1570 N94-19129

PLUMES
Low power arcjet system spacecraft impacts
[NASA-TM-106307] p 1336 N94-17856
A Bayesian approach to contaminant plume delineation
[DE93-012909] p 1472 N94-17890
UVPI imaging from the LACE satellite: The Nihka rocket plume
[AD-A268456] p 1334 N94-18149
Characterization of vapor plume species and deposition residues resulting from pulsed laser ablation of a graphite/epoxy composite
[AD-A270101] p 1343 N94-18869
Forward scattering of a pulsed continuous wave signal through laminar and turbulent thermal plumes
[AD-A271210] p 1564 N94-19723
UVPI imaging from the LACE satellite: The Strypi rocket plume
[AD-A270967] p 1335 N94-19787

PLUTONIUM FLUORIDES
Calculation of the LiF-CeF3-BeF2 and LiF-PuF3-BeF2 ternary phase diagrams
[DE93-017437] p 1360 N94-18501

PNEUMATIC EQUIPMENT
Friction drive position transducer
[AD-D015851] p 1424 N94-17717
A finite strain ring dynamical model for pneumatic tires
[AD-A269286] p 1444 N94-18266
Study and modeling of compressible flows of flapper nozzle type potentiometric systems
[ETN-93-95012] p 1421 N94-19495

POINT DEFECTS
Lattice damage in ion-implanted compound semiconductors and its effect on electrical activation
[DE93-015907] p 1593 N94-17845

POINTING CONTROL SYSTEMS
The star identification, pointing and tracking system of UVSTAR, an attached payload instrument system for the Shuttle Hitchhiker-M platform p 1326 N94-19179

POINTS (MATHEMATICS)
Interior-point methodology for linear programming: Duality, sensitivity analysis and computational aspects
[REPT-93-28] p 1525 N94-19143

POISSON DENSITY FUNCTIONS
JSEP fellowship: Fractal noise processes
[AD-A268841] p 1557 N94-18540

POISSON EQUATION
Calculation of turbulent boundary layer wall pressure spectra
[AD-A269549] p 1416 N94-18642
Solution of the Poisson equation with application to radar imaging
[PB93-195865] p 1389 N94-18950

POLARIMETRY
Polarimetric statistics of electromagnetic waves scattered by distributed targets
[PB93-195907] p 1389 N94-18951

POLARIZATION
Polarized thin films from dye-substituted polymers containing hydrophobically terminated stilbazolium radicals
[AD-D015873] p 1367 N94-17706

POLARIZATION (CHARGE SEPARATION)
Relaxation of polar orientational order in nonlinear optical polymers by second harmonic generation
[AD-A269059] p 1370 N94-18515

POLARIZATION (SPIN ALIGNMENT)
Measuring the sea quark polarization
[DE93-015792] p 1566 N94-18234

POLARIZATION (WAVES)
Crystal optics of high energy gamma-beams
[DE93-630228] p 1577 N94-18217
Potential dependent structural changes of underpotentially deposited copper on an iodine treated platinum surface determined in situ by surface EXAFS and its polarization dependence
[AD-A269890] p 1360 N94-18687
A comparison of single-station backazimuth estimates with regional event locations in the Central Appalachians
[AD-A269897] p 1483 N94-18690
Polarimetric statistics of electromagnetic waves scattered by distributed targets
[PB93-195907] p 1389 N94-18951

POLARIZATION CHARACTERISTICS
Potential dependent structural changes of underpotentially deposited copper on an iodine treated platinum surface determined in situ by surface EXAFS and its polarization dependence
[AD-A269890] p 1360 N94-18687

POLARIZED LIGHT
Polarized optical emission due to decay or recombination of spin-polarized injected carriers
[AD-D015907] p 1408 N94-19763

POLARIZERS
Mesoepitaxy: A universal route to oriented materials
[AD-A270437] p 1598 N94-18511

POLARONS
Polaron tunneling in high-temperature superconductors
[DE93-016880] p 1593 N94-17754

POLICIES
Setting the global thermostat with an exhaustible tradeable permit system
[DE93-012911] p 1472 N94-17891
Coastal Ocean Modeling Workshop
[AD-A268955] p 1497 N94-18393
Land-use related sources of CO2, CH4 and N2O: Current global emissions and projections for the period 1990-2100
[PB93-194819] p 1475 N94-18949
Finding optimal policies for Markov decision chains: A unifying framework for mean-variance-tradeoffs
[PB93-191930] p 1559 N94-19555

POLISHING
Surface modification of sapphire for IR window application
[DE93-019168] p 1602 N94-19075
Synchrotron/crystal sample preparation
[NASA-CR-193837] p 1603 N94-19513
Precision machining and polishing of scintillating crystals for large calorimeters and hodoscopes
[DE93-018663] p 1381 N94-19544

POLLUTION CONTROL
Title 1 implementation: Status report on nonattainment areas
[DE93-017677] p 1471 N94-17777
The carbon dioxide emissions game: Playing the net
[DE93-017670] p 1471 N94-17821
Cost effective energy strategies for the reduction of CO2 emissions in the United States: Country report for ETSAP Annex 4
[DE93-016842] p 1472 N94-17852
A comparison of wet and dry scrubbing systems for control of metals and dioxin/furan emissions from incinerators
[DE93-017446] p 1474 N94-18502
Land-use related sources of CO2, CH4 and N2O: Current global emissions and projections for the period 1990-2100
[PB93-194819] p 1475 N94-18949
Organic carbonyl compounds in Albuquerque, New Mexico, air: A preliminary study of the effects of oxygenated fuel use
[DE93-017748] p 1476 N94-19045
Valuation of temporary and future greenhouse gas reductions
[DE93-018876] p 1478 N94-19319

POLLUTION MONITORING
On-line monitoring of incinerator emissions
[DE93-017406] p 1474 N94-18499
Organic carbonyl compounds in Albuquerque, New Mexico, air: A preliminary study of the effects of oxygenated fuel use
[DE93-017748] p 1476 N94-19045
Novel mass spectrometric instrument for gaseous and particulate characterization and monitoring
[DE93-019992] p 1433 N94-19054
Spatiotemporal variability of non-urban ozone concentrations over the eastern United States and its potential replication by satellite data
[PB93-191328] p 1476 N94-19065
Advances in passive-remote and extractive Fourier transform infrared systems
[DE93-017402] p 1478 N94-19241

POLLUTION TRANSPORT
A review of wind field models for atmospheric transport
[DE93-016085] p 1488 N94-17895
International Symposium on the Ecological Effects of Arctic Airborne Contaminants --- abstracts
[AD-A269955] p 1475 N94-18775
Inclusion of a three-dimensional washout coefficient in ADPIC
[DE93-018499] p 1476 N94-19038
Application of an atmospheric dispersion model to simulated pollutant releases in the Colorado Front range
[DE93-017118] p 1480 N94-19732

POLYAMIDE RESINS
Mechanical properties and impact damage resistance of composites fabricated by low cost, vacuum assisted, resin transfer molding
[AD-A270361] p 1342 N94-18702

POLYATOMIC MOLECULES
Photodissociation studies of polyatomic free radicals
[AD-A270084] p 1350 N94-18799

POLYCARBONATES
Structure and properties of polycarbonate alloys
[ETN-93-95071] p 1375 N94-19611

POLYCRYSTALS
Development of large-area monolithically integrated silicon-film photovoltaic modules
[DE93-010037] p 1464 N94-17731
Phase separation and ordering process in Al-Li alloys studied by small-angle neutron scattering and neutron diffraction
[DE93-016750] p 1358 N94-17947
Self-organized criticality and the Barkhausen effect in amorphous and polycrystalline metals
[AD-A269817] p 1361 N94-18735
Growth, characterization and device development in monocrystalline diamond films
[AD-A270074] p 1599 N94-18797
Polycrystalline thin-film cadmium telluride solar cells fabricated by electrodeposition
[DE93-018201] p 1468 N94-18944
Defect behavior of polycrystalline solar cell silicon
[DE93-018490] p 1468 N94-19016
Tribological studies of silicon for magnetic recording applications (Invited)
[AD-A270878] p 1447 N94-19784

POLYESTER RESINS
Polymer technology publication. Series no. 14, 1993
[PB93-195964] p 1372 N94-19052

POLYESTERS
Mechanical properties and impact damage resistance of composites fabricated by low cost, vacuum assisted, resin transfer molding
[AD-A270361] p 1342 N94-18702

POLYETHYLENES
Computer simulation of macromolecular crystals and their defects
[DE93-015213] p 1596 N94-18192
Mesoepitaxy: A universal route to oriented materials
[AD-A270437] p 1598 N94-18511

POLYIMIDES
Excimer laser induced permanent electrical conductivity and nanostructures in polymers
[DE93-015965] p 1368 N94-17946
Elastic properties of a polyimide film determined by Brillouin scattering and mechanical techniques
[DE93-017404] p 1368 N94-18098

POLYMER BLENDS
Polymer technology publication. Series no. 14, 1993
[PB93-195964] p 1372 N94-19052
Structure and properties of polycarbonate alloys
[ETN-93-95071] p 1375 N94-19611
Polymer films with enhanced dielectric properties
[AD-A271148] p 1375 N94-19740

POLYMER CHEMISTRY
Royal Society of Chemistry, Heterocyclic Chemistry Group, Lakeland Heterocyclic Symposium
[AD-A270374] p 1338 N94-18703
Molecular and polymeric ceramic precursors
[DE93-040364] p 1372 N94-18891
Physical chemical studies of conducting polymers fundamental and applied
[AD-A270728] p 1374 N94-19574

POLYMER MATRIX COMPOSITES
Molecular composites from liquid crystalline polymers and liquid crystalline thermosets
[DE93-016608] p 1368 N94-18096
Nondestructive inspection of graphite-epoxy laminates for heat damage using DRIFT and LPF spectroscopies
[DE93-017228] p 1343 N94-18761

POLYMERIC FILMS
Polarized thin films from dye-substituted polymers containing hydrophobically terminated stilbazolium radicals
[AD-D015873] p 1367 N94-17706
Elastic properties of a polyimide film determined by Brillouin scattering and mechanical techniques
[DE93-017404] p 1368 N94-18098
Polymer films with enhanced dielectric properties
[AD-A271148] p 1375 N94-19740

POLYMERIZATION
Detonation reaction steps frozen by free expansion and analyzed by mass spectrometry
[DE93-012734] p 1376 N94-17813
Polymerizable lipids in the development of controlled release carriers
[AD-D015789] p 1368 N94-17982
Morphology of polymerized membranes on an amorphous substrate at molecular resolution by AFM
[AD-A268760] p 1370 N94-18403
Strained ring energetic binders
[AD-A269056] p 1377 N94-18491
Cooperative formation of inorganic-organic interfaces in the synthesis of silicate mesostructures
[AD-A271196] p 1375 N94-19742

POLYMERS
NMR studies of enriched species at interfaces
[AD-A264703] p 1367 N94-17878
Mechanical-property changes of structural composite materials after low-temperature proton irradiation: Implications for use in SSC magnet systems
[DE93-016735] p 1343 N94-18763

POLYMETHYL METHACRYLATE
Structure and properties of polycarbonate alloys
[ETN-93-95071] p 1375 N94-19611

POLYNOMIALS
An extension of Wolovich's definition of equivalence of linear systems
[MATHS-REPT-A-183] p 1547 N94-18069
Introduction to spectral methods: Application to the Stokes problem p 1413 N94-18566
Active control of a multivariable system by way of polynomial neural networks: Computer simulation evaluations and laboratory experimental results
[AD-A270033] p 1541 N94-18790
Difference equations for generalized Meixner polynomials
[REPT-93-17] p 1550 N94-19082
A polynomial primal-dual Dikin-type algorithm for linear programming
[REPT-93-36] p 1525 N94-19156
On polynomials orthogonal with respect to an inner product involving differences (the general case)
[REPT-93-32] p 1551 N94-19285
Notes on multi-step ahead prediction based on the principle of concatenation
[MATHS-REPT-A-189] p 1544 N94-19410

POLYPEPTIDES
Polaron tunneling in high-temperature superconductors
[DE93-016880] p 1593 N94-17754

POLYTETRAFLUOROETHYLENE
Mesoepitaxy: A universal route to oriented materials
[AD-A270437] p 1598 N94-18511

POLYTOPES
Finding optimal policies for Markov decision chains: A unifying framework for mean-variance-tradeoffs
[PB93-191930] p 1559 N94-19555

POLYURETHANE FOAM
A constitutive theory for rigid polyurethane foam
[DE93-011596] p 1372 N94-19059

POLYURETHANE RESINS
Polyurethane self-priming topcoats
[AD-D015870] p 1367 N94-17719

POLYVINYL ALCOHOL
The performance and survivability of dichromated poly (vinyl alcohol) holograms for space based photonic applications
[AD-A270974] p 1434 N94-19791

POLYVINYL FLUORIDE
PVDF measurement of soft x ray induced shock and filter debris impulse
[DE93-017633] p 1382 N94-17806

POPULATIONS
Uncertainty versus interindividual variability
[DE93-018105] p 1559 N94-19549

POROSITY
Process relationship as influenced by carbonization rate
[AD-A269680] p 1341 N94-18572
Hydrolysis reaction and positronium decay in silica gels
[AD-A270028] p 1371 N94-18713
Development of the microstructure based stochastic life prediction model
[AD-A269742] p 1361 N94-18742
Numerical simulation of fluid dynamics and combustion for ram accelerator projectile/obturator interaction
[AD-A269715] p 1320 N94-18748
Modeling of the formation of microporosity in alloys
[DE93-017733] p 1364 N94-19044
Microstructure of the interfacial zone around aggregate particles in concrete
[PB93-195790] p 1380 N94-19322
High resolution transmission electron microscopy of mesoporous MCM-41 type materials
[AD-A271271] p 1354 N94-19728

POROUS MATERIALS
The Aerocapacitor: A carbon aerogel based supercapacitor
[DE93-016537] p 1395 N94-17849
Characterization of short pulse laser-produced plasmas at the Lawrence Livermore National Laboratory ultra short-pulse laser
[DE93-017191] p 1585 N94-18082

PORPHYRINS
Pulse radiolytic studies of electron transfer processes and applications to solar photochemistry
[DE93-018715] p 1464 N94-17781

PORTABLE EQUIPMENT
Portable, solid state, fiber optic coupled Doppler interferometer system for detonation and shock diagnostics
[DE93-013917] p 1423 N94-17700
The First International Conference on PCTE
[FEL-92-A134] p 1518 N94-17965

POSITION (LOCATION)
Intentionally Short Range Communications (ISRC)
[AD-A268788] p 1384 N94-18216
Constructing a reference event list for ARCESS
[AD-A269288] p 1481 N94-18297
Historical seismicity of Hainaut, Flanders and Artois
p 1482 N94-18623
A program for passively tracking a target using an array of sensors
[DE93-019554] p 1390 N94-19306

POSITION ERRORS
Limits on m = 2, n = 1 error field induced locked mode instability in TPX with typical sources of poloidal field coil error field and a proto type correction coil, C-coil
[DE93-014408] p 1582 N94-17702
Flight demonstration of image fix-taking with SAR
[DE93-016499] p 1382 N94-17861
About the accuracy of an image-based navigation system during the runway approach
[DLR-MITT-93-01] p 1316 N94-18146

POSITIONING
Six degree of freedom fine motion positioning stage based on magnetic levitation
[DE93-017651] p 1446 N94-19547
Absolute positioning by collecting Global Positioning System (GPS) data along short baselines
[AD-A271324] p 1317 N94-19572

POSITIVE IONS
Novel electrochemical materials prepared by sol-gel chemistry
[AD-A269060] p 1578 N94-18405

POSITRONIUM
Hydrolysis reaction and positronium decay in silica gels
[AD-A270028] p 1371 N94-18713

POSITRONS
The Intense Slow Positron Source concept: A theoretical perspective on a proposed INEL Facility
[DE93-013675] p 1564 N94-17738
An ab initio Monte Carlo study of low energy positron and electron implantation in elemental metals and multilayers
[DE93-019647] p 1603 N94-19541

POTASSIUM
Potassium-Rankine power conversion subsystem modeling for nuclear electric propulsion
[NASA-CR-191134] p 1468 N94-18821

POTASSIUM ALLOYS
First on-sun test of NaK pool-boiler solar receiver
[DE93-015003] p 1466 N94-18208
Bench-scale screening tests for a boiling sodium-potassium alloy solar receiver
[DE93-018512] p 1469 N94-19040

POTENTIAL ENERGY
Seasonal variability of wind electric potential in the US
[DE93-018182] p 1493 N94-19051

POWDER (PARTICLES)
Process for applying high application-temperature coating to heat-sensitive aluminum alloys
[AD-D015823] p 1368 N94-17905
Equipment for investigation of cryogenic compaction of nanosize silicon nitride powders
[DE93-018740] p 1340 N94-18180
Fabrication and microstructural development of Ag-clad TlBa2Ca2Cu3O(x) tapes
[DE93-017407] p 1597 N94-18500
Fabrication and characterization of high-T(sub c) tapes and coils made from Ag-clad Bi-2223 superconductors
[DE93-018615] p 1601 N94-18993

POWDERED ALUMINUM
Aluminum powder/water reaction ignited by electrical pulsed power
[AD-A269223] p 1376 N94-17840

POWER AMPLIFIERS
High efficiency low cost monolithic module for SARSAT distress beacons
[NASA-CR-194234] p 1315 N94-18852
Simulation of the ALS longitudinal multibunch feedback system
[DE93-019227] p 1575 N94-19152

POWER CONDITIONING
Analysis of superconducting magnetic energy storage applications at a proposed wind farm site near Browning, Montana
[DE93-018793] p 1466 N94-18276

POWER CONVERTERS
Potassium-Rankine power conversion subsystem modeling for nuclear electric propulsion
[NASA-CR-191134] p 1468 N94-18821

POWER EFFICIENCY
Fuel cell systems program plan, fiscal year 1993
[DE93-017828] p 1466 N94-18103
National Program Plan Fuel Cells in Transportation
[DE93-017557] p 1469 N94-19346

POWER LINES
Response of transmission line systems to pulse excitation by radiation and injection methods
[DE93-015112] p 1384 N94-18210
Effects of harmonics on EMI/RFI filters operating under nonlinear loading conditions
[AD-A269559] p 1388 N94-18769

POWER SPECTRA
Self-organized criticality and the Barkhausen effect in amorphous and polycrystalline metals
[AD-A269817] p 1361 N94-18735

POWER SUPPLY CIRCUITS
Techniques for low consumption circuits
p 1428 N94-18032
A study of the automatic generating system. 3: Improvement of the total system performance
p 1429 N94-18040
Design of power electronics for TVC EMA systems
[NASA-CR-193839] p 1407 N94-19642

POWER TRANSMISSION
Fluid dynamometer having fluid characteristic power absorption adjustment capability
[AD-D015820] p 1424 N94-17904

POWERED LIFT AIRCRAFT
Design, development, and flight evaluation of the Boeing YC-14 USB powered lift aircraft p 1310 N94-18444

PRANDTL NUMBER
Experimental investigation of turbulent Prandtl number and Reynolds analogy in transitional and post-transitional boundary layers
[AD-A270092] p 1418 N94-18867

PREAMPLIFIERS
A RFI measurement system for field sites
[AD-A269340] p 1385 N94-18301
Monolithic low noise preamplifier for piezoelectric sensors
[AD-D015860] p 1563 N94-18734

PRECIPITATION (CHEMISTRY)
Some superhigh-frequency and magnetic properties of chemically precipitated films
[AD-A266195] p 1351 N94-19110

PRECIPITATION (METEOROLOGY)
Effect of spatial resolution on the simulation of regional precipitation in China in a global climate model
[DE93-013433] p 1489 N94-18053
Station climatic summaries: North America. Volume 1: The contiguous United States
[AD-A269567] p 1490 N94-18303
Global zones of particle precipitation as observed EXOS-C
[AD-A268758] p 1481 N94-18467
Station climatic summaries, North America. Volume 2: Alaska, Canada and Greenland
[AD-A269793] p 1493 N94-18732
Investigations of a coherent vector radar technique for the observation of the atmosphere near 10 GHz
[KFK-5068] p 1494 N94-19616

PRECIPITATION HARDENING
Morphology, deformation, and defect structures of TiCr2 in Ti-Cr alloys
[DE93-018332] p 1361 N94-18807

PRECONDITIONING
Pseudo-compressibility methods for the incompressible flow equations
[NASA-CR-191533] p 1551 N94-19315

PREDICATE CALCULUS
Useful lambda notation
[PB93-191856] p 1524 N94-19066

PREDICTION ANALYSIS TECHNIQUES
Recirculation in forward roll coating
[VKI-TM-48] p 1409 N94-17901
The performance of drag relations in the WAQUA storm surge model
[KNMI-TR-149] p 1496 N94-17923
Development of the microstructure based stochastic life prediction models
[AD-A269880] p 1454 N94-18683
Development of the microstructure based stochastic life prediction models
[AD-A270453] p 1455 N94-18714
On the use of semi-Lagrangian methods for accurate predictions of gravity waves
[DM-61] p 1562 N94-18859
Adsorption analysis of ammonia in an aqueous solution
[DE93-019512] p 1353 N94-19552

PREDICTIONS
Development of the microstructure based stochastic life prediction model
[AD-A269742] p 1361 N94-18742
Statistical learning theory and algorithms
[AD-A270209] p 1523 N94-18901

PREFLIGHT OPERATIONS
Kennedy Space Center processing of Shuttle small payloads p 1326 N94-19177

PREFORMS
Process relationship as influenced by carbonization rate
[AD-A269680] p 1341 N94-18572
Transducers and method for making same
[AD-D015949] p 1408 N94-19759

PREMIXED FLAMES
Studies on high pressure and unsteady flame phenomena: Revision
[AD-A269138] p 1348 N94-18257
Flame structure studies of a lean 20-torr H2/N2O/Ar flame employing molecular beam mass spectrometry
[AD-A268889] p 1349 N94-18456
Mathematical problems in combustion
[AD-A270147] p 1349 N94-18776

PREMIXING
Studies on high pressure and unsteady flame phenomena: Revision
[AD-A269138] p 1348 N94-18257
Research activity on particle spin systems and related problems
[AD-A269456] p 1562 N94-18286
Metal slurry droplet and spray combustion
[AD-A269648] p 1349 N94-18736

PREPOLYMERS
Single source precursors for the OMCVD of 3/5 compound semiconductors
[AD-A271147] p 1606 N94-19739

PREPREGS
Process for preparing thermoplastic composites
[AD-D015864] p 1339 N94-18074

PRESSURE DEPENDENCE
The low-temperature specific heat of CeCu2Ge2 at 0 and 9.5 kbar
[DE93-014914] p 1360 N94-18398
Role of pressure in the study of fullerenes
[DE93-018839] p 1602 N94-19340
Effects of pressure on the orientational ordering and phase transitions in solid C(60) and C(70)
[DE93-018858] p 1603 N94-19347
Metallization and charge-transfer gap closure of transition-metal iodides under pressure
[DE93-040301] p 1353 N94-19538

PRESSURE DISTRIBUTION
Recirculation in forward roll coating
[VKI-TM-48] p 1409 N94-17901

In-flight pressure distributions and skin-friction measurements on a subsonic transport high-lift wing section p 1308 N94-18435
Preliminary design of a water cooled avionics cooling rack
[AD-A268826] p 1320 N94-18536
A comparative study of turbulence models in predicting hypersonic inlet flows p 1314 N94-18553
Finite beta plasma equilibrium in toroidally linked mirrors
[DE93-040318] p 1590 N94-19193
Semi-span model testing in the National Transonic Facility
[NASA-CR-194479] p 1312 N94-19388
Numerical investigation of the incompressible flow around a wing with a fixed spoiler
[ISL-R-109/91] p 1313 N94-19524

PRESSURE EFFECTS
The low-temperature specific heat of CeCu2Ge2 at 0 and 9.5 kbar
[DE93-014914] p 1360 N94-18398
Growth, characterization and device development in monocrystalline diamond films
[AD-A270074] p 1599 N94-18797
Research on Earth's rotation and the effect of atmospheric pressure on vertical deformation and sea level variability
[NASA-CR-194300] p 1484 N94-18838
Influence of peak pressure and temperature on the shock-loading response of tantalum
[DE93-018561] p 1457 N94-19279
Role of pressure in the study of fullerenes
[DE93-018839] p 1602 N94-19340
Effects of pressure on the orientational ordering and phase transitions in solid C(60) and C(70)
[DE93-018858] p 1603 N94-19347
Pressure and temperature effects on the kinetics and quality of diamond films
[AD-A270876] p 1606 N94-19771

PRESSURE MEASUREMENT
Instrumented experiments aboard the frigate WOLF. Wolf 2: Measurement results of the 5.5 kg TNT in the crew aft sleeping compartment
[PML-1992-12] p 1451 N94-17931
Measurement Techniques
[VKI-LS-1993-05] p 1430 N94-18643
Static pressure measurements for near isentropic flows using laser induced iodine fluorescence
p 1431 N94-18646
Pressure sensitive paint technique
p 1431 N94-18647
Construction and evaluation of an environmental chamber for calibration of temperature and pressure sensors for laser interferometers emperature and pressure sensors for laser interferometers)
[PB93-197838] p 1322 N94-19332
Numerical analysis of pressure meter tests: Application of parameter identification of soils behavior
[ECL-92-52] p 1487 N94-19380

PRESSURE OSCILLATIONS
Calculation of turbulent boundary layer wall pressure spectra
[AD-A269549] p 1416 N94-18642
Correlation of incoming boundary layer pitot pressure fluctuations with the unsteadiness of fin-induced shock wave turbulent boundary layer interactions
[AD-A270059] p 1417 N94-18796
Relation between the fluctuating wall pressure and the turbulent structure of a boundary layer on a cylinder in axial flow
[AD-A270242] p 1418 N94-18906

PRESSURE PULSES
A probability method of fracture mechanics analysis for HFIR vessel
[DE93-015510] p 1453 N94-18246
Stress pulse phenomena
[DE93-019064] p 1456 N94-19078

PRESSURE RATIO
Vane optimization for maximum efficiency using Design Of Experiments (DOX)
[AD-A270270] p 1320 N94-18907

PRESSURE REDUCTION
Temperature lowering in cryogenic chemical-synthesis techniques and system
[DE93-018348] p 1562 N94-18810

PRESSURE SENSORS
Calculation of turbulent boundary layer wall pressure spectra
[AD-A269549] p 1416 N94-18642
Recent developments in fast response aerodynamic probe technology p 1431 N94-18645
Construction and evaluation of an environmental chamber for calibration of temperature and pressure sensors for laser interferometers emperature and pressure sensors for laser interferometers)
[PB93-197838] p 1322 N94-19332
Simulation of the behavior of micro-electronic capacitive pressure sensors
[LAAS-93190] p 1434 N94-19659

PRESSURE VESSELS
Effects of irradiation temperature on embrittlement of nuclear pressure vessel steels
[DE93-015428] p 1359 N94-18245
A probability method of fracture mechanics analysis for HFIR vessel
[DE93-015510] p 1453 N94-18246
Fluid-structure-interaction analyses of reactor vessel using improved hybrid Lagrangian Eulerian code ALICE-II
[DE93-015536] p 1409 N94-18248
Mechanism-dependent fractal character of fracture surfaces in high strength and toughness ASTM A723 steels
[AD-A268956] p 1360 N94-18542
Effects of irradiation temperature on Charpy and tensile properties of high-copper, low upper-shelf, submerged-arc welds
[DE93-017858] p 1445 N94-19047

PRESSURIZING
A finite strain ring dynamical model for pneumatic tires
[AD-A269286] p 1444 N94-18266

PRESTRESSING
Interpretation of warm prestress-induced fracture toughness based on crack-tip constraint
[DE93-015967] p 1451 N94-17913

PRETREATMENT
The c-jun gene expression in human cells exposed to either ionizing radiation or hydrogen peroxide
[DE93-017436] p 1502 N94-18476

PRIMARY COSMIC RAYS
Investigation of the relative abundance of heavy versus light nuclei in primary cosmic rays using underground muon bundles
[DE93-017601] p 1630 N94-17818
Measurement of the energy of horizontal cosmic ray muons
[KFK-5163] p 1631 N94-19505

PRIMATES
Localization of figure background segregation mechanisms in primate visual cortex
[PB93-187961] p 1508 N94-18121
Cortical substrate of haptic representation
[AD-A269583] p 1508 N94-18304

PRINCIPAL COMPONENTS ANALYSIS
Spatiotemporal variability of non-urban ozone concentrations over the eastern United States and its potential replication by satellite data
[PB93-191328] p 1476 N94-19065

PRINTED CIRCUITS
Development of alternatives to lead-bearing solders
[DE93-016509] p 1357 N94-17862
Solderability perservative coatings: Electroless tin versus organic azoles
[DE93-017634] p 1370 N94-18477

PRISMS
Metal Film Surface Plasmon Resonance (MFSPR) fibre couplers
[AD-A268871] p 1579 N94-18635

PRIVACY
Securing electronic mail: The risks and future of electronic mail
[DE93-017187] p 1383 N94-17994

PROBABILITY DENSITY FUNCTIONS
A Bayesian approach to contaminant plume delineation
[DE93-012909] p 1472 N94-17890
Polarimetric statistics of electromagnetic waves scattered by distributed targets
[PB93-195907] p 1389 N94-18951

PROBABILITY DISTRIBUTION FUNCTIONS
EDF tests for normality in linear models after a Box-Cox transformation
[AD-A269068] p 1557 N94-18517
Learning control of large-scale systems
[MATHS-REPT-A-186] p 1544 N94-19408

PROBABILITY THEORY
Kinetic growth of random-like and ballistic-like deposition models
[DE93-624946] p 1595 N94-17956
An empirical evaluation of five circular error probable estimation techniques and a method for improving them
[AD-A266528] p 1556 N94-18397
Software reliability: Estimation and prediction
[AD-A268895] p 1521 N94-18458
The rank of the present excursion
[REPT-93-22] p 1558 N94-19137
A simple calculus of finite probabilistic processes
[MEMO-INF-93-08] p 1558 N94-19195
Bahadur-Kiefer theorem beyond the largest observation
[PB93-197473] p 1558 N94-19325
Bounds for expected loss in Bayesian decision theory with imprecise prior probabilities
[PB93-197507] p 1558 N94-19327
A language of finite probabilistic processes and its interleaving semantics
[MEMO-INF-93-24] p 1558 N94-19354
Adaptive uniformization
[MEMO-INF-92-88] p 1558 N94-19385
Fault-tolerance and complexity
[TR-450] p 1530 N94-19483
Statistical probabilities for planning
[TR-474] p 1559 N94-19511
Uncertainty versus interindividual variability
[DE93-018105] p 1559 N94-19549
Problems in probability, statistics and reliability
[AD-A270830] p 1559 N94-19595
Equivalence and reduction of hidden Markov models
[AD-A270762] p 1560 N94-19768

PROBLEM SOLVING
A method for cognitive task analysis
[IZF-1992-B5] p 1508 N94-17967
Why are human-computer interfaces difficult to design and implement?
[AD-A268843] p 1514 N94-18317
On masking effect
[AD-A269593] p 1541 N94-18462
Towards versatile and practical knowledge acquisition
[AD-A269596] p 1615 N94-18464
Efficient domain-independent experimentation
[AD-A269530] p 1557 N94-18640
Putting knowledge to use: The acquisition and transfer of knowledge in situated problem solving environments
[AD-A269746] p 1509 N94-18744
Automatically generating abstractions for planning
[AD-A269772] p 1541 N94-18759
Neutral networks: An NRL perspective
[AD-A269122] p 1541 N94-18773
Adaptive uniformization
[MEMO-INF-92-88] p 1558 N94-19385
Problems in probability, statistics and reliability
[AD-A270830] p 1559 N94-19595
A real-time spoken-language system for interactive problem-solving, combining linguistic and statistical technology for improved spoken language understanding
[AD-A270901] p 1392 N94-19749

PROCEDURES
Safety-routines and guidelines for work in the clean room at the Epitek-Laboratory, Kjeller (Norway)
[FFI-93/7012] p 1322 N94-17735

PROCESS CONTROL (INDUSTRY)
A structured approach for modeling, analyzing and simulating real-time control systems
[REPT-93-044] p 1539 N94-17916
The intelligent processing of materials
[AD-A269250] p 1362 N94-18923

PROCUREMENT
An evolutionary approach to space launch commercialization
[AD-A269861] p 1331 N94-18411

PROCUREMENT MANAGEMENT
Implementation of electronic data interchange in the department of defense: Lessons learned from private industry
[AD-A269532] p 1534 N94-18768

PRODUCT DEVELOPMENT
Cut and paste based modeling with boundary features
[PB93-187250] p 1520 N94-18117
Reference model for project support environments, version 1.0
[AD-A269110] p 1520 N94-18251
Engineering research, development and technology thrust area report, FY92
[DE93-016334] p 1632 N94-18856
Technology benefits model user manual, version 01.00.04
[AD-A270637] p 1620 N94-19777

PRODUCTION COSTS
Integrated circuits: Resistless processing simplifies production and cuts costs
[DE93-018069] p 1405 N94-18941

PRODUCTION ENGINEERING
The intelligent processing of materials
[AD-A269250] p 1362 N94-18923
Integrated circuits: Resistless processing simplifies production and cuts costs
[DE93-018069] p 1405 N94-18941
MODIL cryocooler producibility demonstration project results
[DE93-017981] p 1335 N94-19275

PROGRAM VERIFICATION (COMPUTERS)
Verification of VALISYS cad based CMM software at LLNL
[DE93-013854] p 1517 N94-17911
A verification logic representation of indeterministic signal states p 1401 N94-18372

A case study in software maintenance
[AD-A269923] p 1521 N94-18659
UUGM code development
[AD-A269945] p 1416 N94-18671
Initial Graphics Exchange Specification (IGES)
[AD-A270049] p 1522 N94-18794
How to apply the IEEE standards to software testing
[DE93-018514] p 1527 N94-19245
Software quality in test and measurment equipment
[PB93-197846] p 1528 N94-19333
A research program in empirical computer science
[NASA-CR-194069] p 1530 N94-19429
On-line test methods of microprocessor based systems
[ETN-93-95008] p 1530 N94-19498

PROGRAMMABLE LOGIC DEVICES
Motorola MC68040 high-speed design using Altera EPM5000 erasable programmable logic devices
[DE93-017635] p 1523 N94-19006

PROGRAMMERS
A case study in software maintenance
[AD-A269923] p 1521 N94-18659
The development of a course sequence in real-time systems design
[AD-A269459] p 1522 N94-18726
Performance and scalability aspects of directory-based cache coherence in shared-memory multiprocessors
[DE93-016442] p 1536 N94-19115
Computing professionals: Changing needs for the 1990's
[B-030] p 1515 N94-19401

PROGRAMMING ENVIRONMENTS
An object-oriented environment for computer vision and pattern recognition
[DE93-017098] p 1517 N94-17867
Reference model for project support environments, version 1.0
[AD-A269110] p 1520 N94-18251
The evolution of the PVM concurrent computing system
[DE93-017764] p 1534 N94-18482
Software engineering for effective utilization of parallel processing computing system
[AD-A269191] p 1535 N94-18865
Case studies of software development tools for parallel architectures
[AD-A269193] p 1535 N94-18866
Early experiences with the IBM SP-1
[DE93-018398] p 1535 N94-19010
Cesar user library
[FFI-93/7021] p 1529 N94-19378

PROGRAMMING LANGUAGES
PostScript: A study in conformity
[NPL-DITC-214/93] p 1517 N94-17917
Multistack languages and grammars
[REPT-93-018] p 1518 N94-17926
TANGO: A notation for describing advanced transaction models
[REPT-93-014] p 1613 N94-17936
PARX: Architecture of an operating system for parallel machines
[ETN-93-94401] p 1533 N94-18068
APLAC: An object-oriented analog circuit simulator and design tool. 6.1 reference manual
[PB93-187193] p 1396 N94-18091
Portable parallel ray tracing algorithms
[AD-A268984] p 1522 N94-18698
Connection machine software conversion of a Navy oceans model
[AD-A269876] p 1535 N94-18772
Software engineering for effective utilization of parallel processing computing system
[AD-A269191] p 1535 N94-18865
A teaching tool for linear programming
[AD-A270240] p 1523 N94-18905
Asynchronous rendezvous in the presence of backtracking
[PB93-197739] p 1524 N94-19062
DataTypeLog: A deductive object oriented query language
[MEMO-INF-92-79] p 1526 N94-19221
The TM typing rules
[MEMO-INF-92-80] p 1526 N94-19222
The TM manual version 1.3 working document
[MEMO-INF-93-06] p 1527 N94-19229
Advances in architectural concepts to support distributed systems design
[MEMO-INF-93-17] p 1527 N94-19261
Stochastic grammars: Theory and applications
[MEMO-INF-93-19] p 1528 N94-19262
A language of finite probabilistic processes and its interleaving semantics
[MEMO-INF-93-24] p 1558 N94-19354

PROJECT MANAGEMENT
Lightweight materials for transportation: Program plan
[DE93-017381] p 1340 N94-18087
Safeguarding our energy future
[DE93-016001] p 1466 N94-18109
Reference model for project support environments, version 1.0
[AD-A269110] p 1520 N94-18251
Knowledge sources for an intelligent MCM analyzer
[AD-A269224] p 1542 N94-18887
Review Committee report on the conceptual design of the tokamak physics experiment
[DE93-018408] p 1588 N94-19012
Pantex Plant Meteorological Monitoring Program
[DE93-018495] p 1493 N94-19127

PROJECT PLANNING
Lightweight materials for transportation: Program plan
[DE93-017381] p 1340 N94-18087
Report to Congress: Comprehensive Program Plan for Advanced Turbine Systems
[DE93-016718] p 1467 N94-18475
Automatically generating abstractions for planning
[AD-A269772] p 1541 N94-18759

PROJECTILES
Feasibility study for a measuring system velocity projectile
[FEL-91-A368] p 1434 N94-19797

PROJECTIVE GEOMETRY
VLSI architectures for geometrical mapping problems in high-definition image processing
p 1398 N94-18345

PROLATE SPHEROIDS
Mathematical problems in combustion
[AD-A270147] p 1349 N94-18776

PRONY SERIES
Advances in the identification of transfer function models using Prony analysis
[DE93-017980] p 1548 N94-18094

PROPANE
Conversion of ethane and of propane to higher olefin hydrocarbons
[DE93-015282] p 1347 N94-18194
Evaluation of aftermarket LPG conversion kits in light-duty vehicle applications
[DE93-010035] p 1377 N94-18617

PROPELLANT BINDERS
Strained ring energetic binders
[AD-A269056] p 1377 N94-18491

PROPELLANT COMBUSTION
Aluminum powder/water reaction ignited by electrical pulsed power
[AD-A269223] p 1376 N94-17840

PROPELLANT GRAINS
New test method to determine modulus of elasticity of rocket grain material
[AD-A269758] p 1377 N94-18758

PROPELLANT SPRAYS
Combustion instability phenomena of importance to liquid propellant engines
[AD-A268800] p 1348 N94-18389
A coupled implicit solution method for turbulent spray combustion in propulsion systems p 1411 N94-18549

PROPELLANTS
Shock compression properties of silicon carbide
[DE93-019927] p 1373 N94-19271

PROPORTIONAL COUNTERS
Measurements of cosmic ray muons with multi-wire proportional chambers with a prototype setup for KASCADE
[KFK-5173] p 1631 N94-19506

PROPULSION
KINETIC: A system code for analyzing Nuclear thermal propulsion rocket engine transients
[DE93-016825] p 1337 N94-17884

PROPULSION SYSTEM CONFIGURATIONS
The ANL electric vehicle battery R&D program for DOE-EHP
[DE93-017414] p 1394 N94-17750
Mission needs and system commonality for space nuclear power and propulsion
[DE93-016557] p 1337 N94-17863
National Program Plan Fuel Cells in Transportation
[DE93-017557] p 1469 N94-19346
Overview of STOVL aircraft propulsion research offtakes and vertical lift systems
[NASA-TM-106387] p 1321 N94-19353

PROPULSION SYSTEM PERFORMANCE
The ANL electric vehicle battery R&D program for DOE-EHP
[DE93-017414] p 1394 N94-17750
Mission needs and system commonality for space nuclear power and propulsion
[DE93-016557] p 1337 N94-17863
Adaptations to micropep and rocket to allow performance evaluation of multiple grain and/or airbreathing motors
[AD-A268798] p 1337 N94-18202
Evaluation of aftermarket LPG conversion kits in light-duty vehicle applications
[DE93-010035] p 1377 N94-18617
Technology test bed
[NASA-TM-109354] p 1322 N94-18953
National Program Plan Fuel Cells in Transportation
[DE93-017557] p 1469 N94-19346

PROPULSIVE EFFICIENCY
Fuel cell systems program plan, fiscal year 1993
[DE93-017828] p 1466 N94-18103
National Program Plan Fuel Cells in Transportation
[DE93-017557] p 1469 N94-19346

PROTECTION
The effect of surface treatment and gaseous rust protection paper on the atmospheric corrosion stability of aluminium alloy
[DE93-623326] p 1355 N94-17679

PROTECTIVE CLOTHING
Conductive garments to prevent Radio-Frequency (RF) burns
[AD-D015832] p 1512 N94-18730
Aerospace medicine and biology: A continuing bibliography with indexes (supplement 382)
[NASA-SP-7011(382)] p 1507 N94-18936
Aerospace medicine and biology: A continuing bibliography with indexes (supplement 381)
[NASA-SP-7011(381)] p 1507 N94-19069

PROTECTIVE COATINGS
Titanium carbon-hydrogen layers on decorative surfaces p 1375 N94-18010
Sputtered TiN coatings in plastic
p 1367 N94-18011
Gold-copper-zinc coatings as an alternative to gold-copper-cadmium p 1367 N94-18012
NSWCWODET participation in Space Shuttle mission STS-46
[AD-A268875] p 1332 N94-18321
Solderability perservative coatings: Electroless tin versus organic azoles
[DE93-017634] p 1370 N94-18477
Carbon/carbon composites coated with SiC by chemical vapor deposition
[AD-A269934] p 1341 N94-18544
Joining and Adhesion of Advanced Inorganic Materials Symposium
[AD-A269748] p 1342 N94-18720
JPRS report: Science and technology. Central Eurasia: Materials science
[JPRS-UMS-93-002] p 1339 N94-18833
Thermal analysis of coatings and substrate materials during a disruption in fusion reactors
[DE93-017688] p 1588 N94-18971
Contribution to the tribological study of magnetic-tape head contact
[ECL-92-57] p 1434 N94-19414
Testing of protective coatings in hydrogen
[DE93-040326] p 1375 N94-19651
Tribological studies of silicon for magnetic recording applications (Invited)
[AD-A270878] p 1447 N94-19784

PROTEIN METABOLISM
Space research on organs and tissues
p 1503 N94-19214

PROTEIN SYNTHESIS
Cellular and molecular level responses after radiofrequency radiation exposure, alone or in combination with x rays or chemicals
[AD-A268189] p 1501 N94-17729

PROTEINS
In vivo animal models of body composition in aging
[DE93-012527] p 1501 N94-17889
X ray absorption spectroscopic studies of the active sites of nickel- and copper-containing metalloproteins
[DE93-017142] p 1347 N94-18059
The c-jun gene expression in human cells exposed to either ionizing radiation or hydrogen peroxide
[DE93-017436] p 1502 N94-18476

PROTOCOL (COMPUTERS)
PARX: Architecture of an operating system for parallel machines
[ETN-93-94401] p 1533 N94-18068
Specification and analysis of a high speed transport protocol
[AD-A268941] p 1386 N94-18449
On asynchronous testing
[MEMO-INF-93-03] p 1543 N94-19226
Specification and verification of a dynamic leader election protocol in a broadcast network
[MEMO-INF-93-05] p 1558 N94-19228
Vectorized presentation-level services for scientific distributed applications
[DE93-018091] p 1537 N94-19253
Specifying and proving communication closedness in protocols
[MEMO-INF-93-23] p 1390 N94-19267

Protocol service decomposition for high-performance networking
[AD-A270613] p 1538 N94-19533
Learning about the Internet bibliography and beginner's guide
[AD-A268847] p 1532 N94-19707

PROTON BEAMS
Effects of transverse coupling on transverse beam size, simulation and measurements
[DE93-017804] p 1574 N94-18972

PROTON IRRADIATION
Mechanical-property changes of structural composite materials after low-temperature proton irradiation: Implications for use in SSC magnet systems
[DE93-016735] p 1343 N94-18763

PROTON-PROTON REACTIONS
The PAPAGENO Partonic Monte-Carlo Program
[DE93-018524] p 1571 N94-19247

PROTONS
Proton transfer dynamics and cluster ion fragmentation in phenol/ammonia cLusters
[AD-A269133] p 1348 N94-18256
Global zones of particle precipitation as observed EXOS-C
[AD-A268758] p 1481 N94-18467
Charmonium physics from (bar p)p interactions
[DE93-017809] p 1569 N94-18973

PROTOPLANETS
Structuration processes in protoplanetary accretion disks
[MPE-243] p 1628 N94-19519

PROTOSTARS
The molecular environment of S106 IR
[MPE-PREPRINT-241] p 1622 N94-19417

PROTOTYPES
Developmental testing of a prototype all-reflection Michelson interferometer
[AD-A269064] p 1430 N94-18406
Tunneling spectroscopy of ultrasmall clusters and grains
[AD-A268840] p 1598 N94-18539
ARPA/CSTO rapid VLSI implementation
[AD-A269170] p 1403 N94-18695
Computer-Aided Prototyping System (CAPS) within the software acquisition process. A case study
[AD-A268705] p 1522 N94-18786
Fiber optic Raman spectrograph for in situ environmental monitoring
[DE93-019466] p 1478 N94-19305

PROVING
Verification of 3I retrievals vis-a-vis radiosonde observations
[KNMI-TR-150] p 1488 N94-17924

PROXIMITY EFFECT (ELECTRICITY)
Thin film studies of the proximity Josephson effect
[AD-A270129] p 1600 N94-18876

PSEUDORANDOM SEQUENCES
Production and test of pseudo random elements
[ETN-93-95070] p 1559 N94-19610

PSYCHOLOGY
Interdisciplinary training in life science (FY 1991 ASSERT)
[AD-A269220] p 1512 N94-18886

PSYCHOMOTOR PERFORMANCE
Evaluation of physiological and psychological impairment of human performance in cold stressed subjects
[AD-A268637] p 1506 N94-18632
Effects of practice in selecting and executing keypressing sequences
[IZF-1992-B-10] p 1509 N94-19420
A forthcoming key press can be selected while earlier ones are executed
[IZF-1993-B-2] p 1509 N94-19422

PSYCHOPHYSICS
Context-related scaling of human judgement in the multiplicative AHP, SMART and ELECTRE
[REPT-93-38] p 1611 N94-19158

PSYCHOPHYSIOLOGY
Psychophysical analyses of perceptual representations
[AD-A268711] p 1508 N94-18313

PUBLIC HEALTH
International Symposium on the Ecological Effects of Arctic Airborne Contaminants — abstracts
[AD-A269955] p 1475 N94-18775

PULLING
Analysis of pultrusion processing for long fiber reinforced thermoplastic composite system
[NASA-CR-194504] p 1339 N94-17766

PULSARS
Pulse-timing studies of x ray pulsars
[NASA-CR-193778] p 1621 N94-18611
Eclipsing cataclysmic variables. Deep eclipses in H0928+501. YY Draconis, the whirling dervish. New x ray pulsar candidates from HEAO-1
[NASA-CR-194027] p 1621 N94-18855
Computational astrophysics: Pulsating stars
[DE93-018369] p 1627 N94-18857

PULSE AMPLITUDE
Conversion of ADC pulse heights into MIP units: NUMASS test data, September 1991
[USIP-93-03] p 1432 N94-18846

PULSE COMMUNICATION
VHF air/ground communications for air traffic control. Volume 1: A decision tree approach to system innovations
[AD-A268485] p 1316 N94-18384
Initial Graphics Exchange Specification (IGES)
[AD-A270049] p 1522 N94-18794

PULSE COMPRESSION
Resolution in radar mapping
[AD-A269730] p 1462 N94-18753

PULSE DURATION
Development of short pulse soft x ray lasers
[DE93-017150] p 1437 N94-18131
Resolution in radar mapping
[AD-A269730] p 1462 N94-18753
Spice modeling of a FET-switched induction accelerator cell
[DE93-018662] p 1575 N94-18996

PULSE DURATION MODULATION
Design of power electronics for TVC EMA systems
[NASA-CR-193839] p 1407 N94-19642

PULSE HEATING
Experiments on nonlinear absorption of ECH waves in MTX and a comparison with theory
[DE93-019158] p 1589 N94-19074

PULSE MODULATION
Enhanced acceleration in a self-modulated-laser wakefield accelerator
[AD-A268452] p 1586 N94-18148

PULSE RADAR
The accuracy of monostatic and bistatic radar imaging by range-Doppler-processing with and without motion compensation
[DLR-FB-93-07] p 1384 N94-18071
Missile antenna pattern coordinate system and data formats
[AD-A269153] p 1385 N94-18260

PULSE RATE
Spice modeling of a FET-switched induction accelerator cell
[DE93-018662] p 1575 N94-18996

PULSE REPETITION RATE
First and second order Stokes generation by SRS in methane: Influence of rep-rate, beam quality and astigmatism
[FEL-92-A125] p 1441 N94-19426

PULSED LASER DEPOSITION
Imaging and blackbody emission spectra of hot particulates generated during laser ablation
[DE93-015818] p 1439 N94-18724

PULSED LASERS
The copper-pumped dye laser system at Lawrence Livermore National Laboratory
[DE93-014429] p 1435 N94-17723
Pulse radiolytic studies of electron transfer processes and applications to solar photochemistry
[DE93-018715] p 1464 N94-17781
Observations of MeV electrons and scattered light from intense, subpicosecond laser-plasma interactions
[DE93-017153] p 1435 N94-17855
Pulsed LASER for testing silicon strip detectors
[DE93-017816] p 1436 N94-17883
Limitations on the fidelity of 100 fs pulses produced by chirped pulse amplification
[DE93-017167] p 1396 N94-17991
Production of dense vapor targets for laser-plasma interaction studies with intense, ultra-short pulses
[DE93-017175] p 1584 N94-17993
Dynamics of short-pulse excitation, ionization and harmonic conversion
[DE93-017220] p 1436 N94-17996
Ultra-shallow box-like profiles fabricated by pulsed UV-laser doping process
[DE93-017221] p 1437 N94-18083
Development of short pulse soft x ray lasers
[DE93-017150] p 1437 N94-18131
Enhanced acceleration in a self-modulated-laser wakefield accelerator
[AD-A268452] p 1586 N94-18148
Integrated photonics research volume 10. Conference edition
[AD-A269298] p 1577 N94-18298
Nonlinear Thomson scattering of intense laser pulse from beams and plasmas
[AD-A269556] p 1438 N94-18460
Quantum Optoelectronics. Organization of the 1993 photonics science topical meetings. Technical digest series, volume 8
[AD-A269026] p 1578 N94-18488
Advanced Solid-State Lasers/Compact Blue-Green Lasers. 1993 technical digest series. Volume 2: Organization of the 1993 photonics science topical meetings
[AD-A269058] p 1438 N94-18492
Photonics in Switching: Organization of the 1993 photonics science topical meetings. Technical digest
[AD-A269024] p 1578 N94-18528
High spatial resolution, range gated, underwater imaging method and apparatus
[AD-D015882] p 1430 N94-18530
Single-transverse-mode, narrow-bandwidth pulsed tunable dye laser with hollow circular intracavity dielectric waveguide
[AD-A270022] p 1439 N94-18614
Characterization of vapor plume species and deposition residues resulting from pulsed laser ablation of a graphite/epoxy composite
[AD-A270101] p 1343 N94-18869
Multi-terrawatt, 100 fsec laser system using flashlamp-pumped, dye-converted Ti:sapphire as an amplifier
[DE93-017190] p 1440 N94-18889
Ultrafast Electronics and Optoelectronics: Summaries of papers. Technical digest conference edition
[AD-A269233] p 1405 N94-18909
Growth of epitaxial semiconductor alloys and superlattices with continuously variable composition by pulsed-laser ablation
[DE93-018726] p 1601 N94-18998
Electron cyclotron resonance heating in the microwave tokamak experiment
[DE93-018083] p 1590 N94-19289
Tetravalent chromium (Cr(4+)) as laser-active ion for tunable solid-state lasers
[NASA-CR-194528] p 1441 N94-19394
Spectrally and temporally resolved laser emission from vertical cavity surface emitting lasers
[DE93-019410] p 1442 N94-19563

PULSED RADIATION
Characteristics and pulsed radiation response of non-ideal quartz shock stress gauges
[DE93-017628] p 1424 N94-17999
A study of the effects of high power pulsed 2450 MHz microwaves, ELF modulated microwaves, and ELF fields on human lymphocytes and selected cell lines
[AD-A269070] p 1505 N94-18294
First and second order Stokes generation by SRS in methane: Influence of rep-rate, beam quality and astigmatism
[FEL-92-A125] p 1441 N94-19426

PULTRUSION
Analysis of pultrusion processing for long fiber reinforced thermoplastic composite system
[NASA-CR-194504] p 1339 N94-17766

PYRIDINES
The direct synthesis of organic and organometallic-containing MICA-type aluminosilicates
[DE93-019001] p 1373 N94-19321

PYROLYSIS
Characterization of vapor plume species and deposition residues resulting from pulsed laser ablation of a graphite/epoxy composite
[AD-A270101] p 1343 N94-18869
Molecular and polymeric ceramic precursors
[DE93-040364] p 1372 N94-18891
Accelerated screening methods for determining chemical and thermal stability of refrigerant-lubricant mixtures. Part 1: Method assessment
[DE93-040215] p 1351 N94-19136

PYROLYTIC GRAPHITE
Tunneling spectroscopy of ultrasmall clusters and grains
[AD-A268840] p 1598 N94-18539
Atomic-scale friction and microfriction of graphite and diamond using friction force microscopy
[AD-A270952] p 1605 N94-19679

PYROMETERS
Development of a multi-point two-color pyrometer for tube and wall temperature and emissivity measurement at the CFFF
[DE93-014716] p 1429 N94-18207

Q

QUADRATURE PHASE SHIFT KEYING
Development and test of readout electronics for optical quadrature signals
[DLR-MITT-92-11] p 1395 N94-17920

QUADRATURES
Exponential characteristic spatial quadrature for discrete ordinates neutral particle transport in two-dimensional cartesian coordinates
[AD-A270458] p 1554 N94-19671

QUADRUPOLES
Heavy Ion Fusion Injector Program
[DE93-018706] p 1575 N94-18997
QUALITY CONTROL
Verification of VALISYS cad based CMM software at LLNL
[DE93-013854] p 1517 N94-17911
Process and quality on-line control in laser welding
p 1426 N94-18020
Testing and evaluation of large-area heliostats for solar thermal applications
[DE93-018509] p 1467 N94-18520
Metallurgical evaluation of SRAM 2/SRAM A program mer base plates
[DE93-018689] p 1364 N94-19100
Image blur
[DE93-017944] p 1580 N94-19113
Pantex Plant Meteorological Monitoring Program
[DE93-018495] p 1493 N94-19127
Incology 908 database report: On process-structure-property relationship
[DE93-017616] p 1366 N94-19546
QUANTILES
Bahadur-Kiefer theorem beyond the largest observation
[PB93-197473] p 1558 N94-19325
QUANTITATIVE ANALYSIS
Analysis of deposit precursors in jet fuels using Fourier transform infrared spectroscopy
[AD-A269035] p 1377 N94-18489
Integrated test plan for the demonstration of a commercial Fourier Transform Infrared instrument
[DE93-018518] p 1433 N94-19041
Novel mass spectrometric instrument for gaseous and particulate characterization and monitoring
[DE93-019992] p 1433 N94-19054
QUANTUM CHROMODYNAMICS
Measuring the sea quark polarization
[DE93-015792] p 1566 N94-18234
Institute for Nuclear Theory
[DE93-017369] p 1568 N94-18824
Charmonium physics from (bar p)p interactions
[DE93-017809] p 1569 N94-18973
Investigations in gauge theories, topological solitons, and string theories
[DE93-015029] p 1609 N94-19250
QUANTUM EFFICIENCY
Simplified processing for 23 percent-efficient silicon concentrator solar cells
[DE93-015018] p 1464 N94-17787
QUANTUM ELECTRODYNAMICS
Quantum optoelectronics technical digest, 1993. Voolume 8: Postconference edition
[AD-A268209] p 1576 N94-17887
Detection of single molecules in microspheres
[DE93-017776] p 1567 N94-18493
Relativistic configuration interaction calculation of the correlation energies of heliumlike ions
[DE93-018093] p 1571 N94-19201
QUANTUM ELECTRONICS
Spatial light modulators and applications: Summaries of papers presented at the Spatial Light Modulators and Applications Topical Meeting
[AD-A269452] p 1577 N94-18283
Quantum Optoelectronics. Organization of the 1993 photonics science topical meetings. Technical digest series, volume 8
[AD-A269026] p 1578 N94-18488
Advanced Solid-State Lasers/Compact Blue-Green Lasers. 1993 technical digest series. Volume 2: Organization of the 1993 photonics science topical meetings
[AD-A269058] p 1438 N94-18492
Photonics in Switching: Organization of the 1993 photonics science topical meetings. Technical digest
[AD-A269024] p 1578 N94-18528
Joint services electronics program
[AD-A269383] p 1403 N94-18638
Ultrafast Electronics and Optoelectronics: Summaries of papers. Technical digest conference edition
[AD-A269233] p 1405 N94-18909
Theoretical and experimental studies of quantum wells
[AD-A271180] p 1606 N94-19741
QUANTUM MECHANICS
Tensorial structure of a q-deformed sp(4,R) superalgebra
[DE93-624806] p 1545 N94-17685
On relation between Berry phase and one-dimensional models with long-range 1/r(sup 2)-interaction
[DE93-624967] p 1592 N94-17690
A zeta function approach to the semiclassical quantization of maps
[DE93-624774] p 1547 N94-17949
Space and time as outcome of decoherence in an expanding universe
[DE93-016199] p 1624 N94-18047
Advanced Solid-State Lasers/Compact Blue-Green Lasers. 1993 technical digest series. Volume 2: Organization of the 1993 photonics science topical meetings
[AD-A269058] p 1438 N94-18492
Space and time from quantum mechanics
[DE93-015263] p 1609 N94-18629
The quantum dynamics of electronically nonadiabatic chemical reactions
[NASA-CR-194309] p 1568 N94-18837
QUANTUM THEORY
On a conformal perfect fluid in the classical vacuum
[DE93-624797] p 1480 N94-17682
Infinite Grassmannian and moduli space of G-bundles
[DE93-624798] p 1545 N94-17683
International Centre for Theoretical Physics, Trieste Scientific activities in 1991
[DE93-624757] p 1606 N94-17792
Avoiding degenerate coframes in an affine gauge approach to quantum gravity
[DE93-013146] p 1607 N94-17892
Phase space representations and quantum probability theory
[DE93-629863] p 1556 N94-18154
Four-fermion interactions
[DE93-629905] p 1566 N94-18199
Optical and transport properties of metallic and semiconductor nanostructures
[AD-A270009] p 1598 N94-18609
Space and time from quantum mechanics
[DE93-015263] p 1609 N94-18629
Investigations in gauge theories, topological solitons, and string theories
[DE93-015029] p 1609 N94-19250
Essential shift: Scientific revolution in the 20th century
[AD-A270810] p 1610 N94-19663
Schroedinger's hope
[AD-A270988] p 1581 N94-19772
QUANTUM WELL LASERS
Quantum optoelectronics technical digest, 1993. Voolume 8: Postconference edition
[AD-A268209] p 1576 N94-17887
Direct solar pumping of semiconductor lasers: A feasibility study
[NASA-CR-193760] p 1440 N94-18834
QUANTUM WELLS
Kinetic aspects of lattice mismatch in molecular beam epitaxial growth on planar and patterned substrates
[AD-A270424] p 1597 N94-18506
Fundamental properties and device applications of Ge(x)Si(1-x)/Si superlattices (supplemental)
[AD-A269212] p 1600 N94-18884
Suppressed electron-phonon scattering in superlattices
[AD-A270834] p 1604 N94-19597
Solid-state dynamics in novel semiconductor nanostructures
[AD-A271249] p 1605 N94-19725
Theoretical and experimental studies of quantum wells
[AD-A271180] p 1606 N94-19741
QUARK MODELS
Search for top quark with D0 detector
[DE93-040170] p 1572 N94-19536
QUARKS
Beauty without charm in B-meson decays
[PREPRINT-732] p 1565 N94-17972
Measuring the sea quark polarization
[DE93-015792] p 1566 N94-18234
Charmonium physics from (bar p)p interactions
[DE93-017809] p 1569 N94-18973
Search for top quark with D0 detector
[DE93-040170] p 1572 N94-19536
QUARTIC EQUATIONS
Enumerative geometry of Del Pezzo Surfaces
[DE93-624768] p 1546 N94-17816
QUARTZ
The Lever oscillator for use in high resistance resonator applications
[DE93-017652] p 1404 N94-18827
Development of a quartz digital accelerometer for environmental sensing and navigation applications
[DE93-018503] p 1433 N94-19243
QUARTZ CRYSTALS
Proceedings of the 4th European Congress on Chronometry
[ETN-93-94633] p 1424 N94-18006
Simulation of a quartz-clockwork
p 1426 N94-18019
Simulation of quartz resonators p 1426 N94-18021
Quartz analog watch with perpetual calendar
p 1429 N94-18042
QUASARS
EGRET Mission and Data Analysis
[MPE-PREPRINT-223] p 1622 N94-19462
EGRET observations of 3 C 273
p 1623 N94-19464
QUASI-STEADY STATES
The temperature at the phase boundary during quasi-static motions of a two-phase thermoelastic bar
[AD-A268769] p 1596 N94-18388
QUENCHING (COOLING)
Ageing in Processed Polymers: Programme, summary, and abstracts discussion meeting
[AD-A268931] p 1370 N94-18448
QUERY LANGUAGES
EDMS: Engineering data management system. User's reference
[PB93-187391] p 1614 N94-18119
Learning database abstractions for query reformulation
[AD-A269531] p 1616 N94-18641
DataTypeLog: A deductive object oriented query language
[MEMO-INF-92-79] p 1526 N94-19221
Working visit to the University of L'Aquila, Italy
[FEL-93-B020] p 1618 N94-19452
QUEUEING THEORY
Efficient simulation of DEDS by means of standard clock techniques: Queueing and integrated radio network examples
[AD-A269878] p 1432 N94-18681
Polling systems: Moment stability of station times and central limit theorems
[PB93-191955] p 1560 N94-18990
On asynchronous testing
[MEMO-INF-93-03] p 1543 N94-19226
Tandem queues with deterministic service times
[PB93-197465] p 1543 N94-19324
Compensation approach for three or more dimensional random walks
[PB93-197499] p 1543 N94-19326
Control of integrated voice/data multi-hop radio networks via reduced-load approximations
[AD-A270661] p 1393 N94-19779

R

RADAR ANTENNAS
C-band PARC manual
[FEL-92-B159] p 1383 N94-18070
Modeling a Yagi array antenna for VHF radar use
[AD-A268973] p 1387 N94-18525
RADAR APPROACH CONTROL
Terminal area forecasts, FY 1993-2005
[AD-A269855] p 1316 N94-18336
RADAR BEACONS
Missile antenna pattern coordinate system and data formats
[AD-A269153] p 1385 N94-18260
RADAR BEAMS
Resolution in radar mapping
[AD-A269730] p 1462 N94-18753
RADAR CROSS SECTIONS
Statistical description of the bistatic radar cross section distributions for a right circular cylinder
[AD-A270001] p 1387 N94-18666
RADAR DATA
Environmental characterization for target acquisition. Report 3: New concepts for evaluating low-grazing angle radar measurements
[AD-A269956] p 1388 N94-18777
Polarimetric statistics of electromagnetic waves scattered by distributed targets
[PB93-195907] p 1389 N94-18951
Moments of ambient Doppler spectra
[DE93-017948] p 1390 N94-19114
RADAR DETECTION
Tomographic mathematical ideas applied to radar detection
[AD-A268789] p 1384 N94-18186
Space debris detection
[AD-A269254] p 1334 N94-18264
Low-noise oscillators for airborne radar applications, revision 1
[AD-A269372] p 1403 N94-18471
A comparison between several computer codes for calculations on microwave propagation
[FEL-92-A435] p 1390 N94-19449
Earth Penetration Radar Imaging System (EPRIS)
[DE93-019890] p 1391 N94-19542
RADAR EQUIPMENT
Space debris detection
[AD-A269254] p 1334 N94-18264
RADAR IMAGERY
The accuracy of monostatic and bistatic radar imaging by range-Doppler-processing with and without motion compensation
[DLR-FB-93-07] p 1384 N94-18071
Tomographic mathematical ideas applied to radar detection
[AD-A268789] p 1384 N94-18186

The spatial variance of ionospherically-induced phase errors in SAR imagery
[DE93-015643] p 1385 N94-18232
Laser imaging radar system
[AD-A270436] p 1387 N94-18510
Application of Fourier-based features for classification of synthetic aperture radar imagery
[AD-A270450] p 1387 N94-18513
Resolution in radar mapping
[AD-A269730] p 1462 N94-18753
Solution of the Poisson equation with application to radar imaging
[PB93-195865] p 1389 N94-18950
Modeling of current features in Gulf Stream SAR imagery
[AD-A270734] p 1499 N94-19609
Remote sensing of Earth terrain
[NASA-CR-194598] p 1464 N94-19681
SeaTrack: Ground station orbit prediction and planning software for sea-viewing satellites
[NASA-RP-1331] p 1532 N94-19761

RADAR MAPS
Resolution in radar mapping
[AD-A269730] p 1462 N94-18753

RADAR MEASUREMENT
Flight demonstration of image fix-taking with SAR
[DE93-016499] p 1382 N94-17861
Environmental characterization for target acquisition. Report 3: New concepts for evaluating low-grazing angle radar measurements
[AD-A269956] p 1388 N94-18777
The Mexico City 1991 lidar measurements campaign
[DE93-019960] p 1478 N94-19272
Investigations of a coherent vector radar technique for the observation of the atmosphere near 10 GHz
[KFK-5068] p 1494 N94-19616

RADAR SCATTERING
The split-step algorithm for microwave propagation modeling above a conducting surface
[FEL-92-A430] p 1390 N94-19447
A comparison between several computer codes for calculations on microwave propagation
[FEL-92-A435] p 1390 N94-19449

RADAR SIGNATURES
Environmental characterization for target acquisition. Report 3: New concepts for evaluating low-grazing angle radar measurements
[AD-A269956] p 1388 N94-18777

RADAR TARGETS
The accuracy of monostatic and bistatic radar imaging by range-Doppler-processing with and without motion compensation
[DLR-FB-93-07] p 1384 N94-18071
Millimeter wave reflectivity measurement system
[AD-A270008] p 1387 N94-18601

RADAR TRACKING
Range safety transponder catalog
[AD-A270882] p 1323 N94-19581

RADIAL DISTRIBUTION
A radial transmission line material measurement apparatus
[DE93-018508] p 1394 N94-17780

RADIANCE
Spectral radiance measurements on a bluff body stabilized flame: Characterization of the IR signature
[PB93-195899] p 1347 N94-18081
Work plan for the Marine Aerosol Properties and the Thermal Imager Performance Trial (MAPTIP)
[AD-A270026] p 1483 N94-18712
Cutting and drilling studies using high power visible lasers
[DE93-019149] p 1441 N94-19294
Scientific studies in association with the Shuttle Solar Backscatter Ultraviolet (SSBUV) project
[NASA-CR-193404] p 1630 N94-19437
Marine-modified LOWTRAN: The contribution of sun glint
[AD-A269547] p 1500 N94-19762

RADIANT FLUX DENSITY
High temperature co-axial winding transformers
[NASA-CR-194580] p 1407 N94-19643
UVPI imaging from the LACE satellite: The Strypi rocket plume
[AD-A270967] p 1335 N94-19787

RADIATION ABSORPTION
Work plan for the Marine Aerosol Properties and the Thermal Imager Performance Trial (MAPTIP)
[AD-A270026] p 1483 N94-18712
Evaluation of fiber optic performance in the ACRR
[DE93-018515] p 1580 N94-18970
Radiation induced darkening of the optical elements in the Startracker camera
[DE93-018907] p 1433 N94-19004

RADIATION BELTS
Penetrating radiation environment and effects study
[AD-A270126] p 1485 N94-18874

RADIATION CHEMISTRY
Research at the Notre Dame Radiation Laboratory
[DE93-018716] p 1566 N94-18165
Summaries of FY 1993 research in the chemical sciences
[DE93-011855] p 1632 N94-18915

RADIATION COUNTERS
A bit serial first level calorimeter trigger for an LHC detector
[USIP-92-08] p 1574 N94-18845
Research in high energy physics
[DE93-018031] p 1575 N94-19287
A programmable systolic trigger processor for FERA-bus data
[USIP-92-04] p 1405 N94-19292
Search for top quark with D0 detector
[DE93-040170] p 1572 N94-19536

RADIATION DAMAGE
Report of the 1991 Workshop on Particle-Material Interactions for Fusion Research
[DE93-788393] p 1573 N94-18156
Studies of deep levels in high resistivity silicon detectors irradiated by high fluence fast neutrons using a thermally stimulated current spectrometer
[DE93-016133] p 1602 N94-19258

RADIATION DETECTORS
New room temperature high resolution solid-state detector (CdZnTe) for hard x rays and gamma rays
p 1324 N94-19165
The GAMCIT gamma ray burst detector
p 1324 N94-19168
High rate resistive plate chambers: An inexpensive, fast, large area detector of energetic charged particles for accelerator and non-accelerator applications
[DE93-018664] p 1572 N94-19545

RADIATION DOSAGE
Cellular and molecular level responses after radiofrequency radiation exposure, alone or in combination with x rays or chemicals
[AD-A268189] p 1501 N94-17729
High dose effects in neutron irradiated face-centered cubic metals
[DE93-017671] p 1364 N94-19043
Effect of EMP fields on cell membrane potentials
[DE93-015819] p 1503 N94-19341

RADIATION EFFECTS
Air pollution effects field research facility. 3: UV-B exposure and monitoring system
[DE93-013098] p 1470 N94-17773
PVDF measurement of soft x ray induced shock and filter debris impulse
[DE93-017633] p 1382 N94-17806
Using controlled daylight exposure and sleep timing in the prevention of shift lag during night operations
[AD-A269304] p 1504 N94-17824
Charpy impact toughness of martensitic steels irradiated in FFTF: Effect of heat treatment
[DE93-015960] p 1450 N94-17848
Characteristics and pulsed radiation response of non-ideal quartz shock stress gauges
[DE93-017628] p 1424 N94-17999
Report of the 1991 Workshop on Particle-Material Interactions for Fusion Research
[DE93-788393] p 1573 N94-18156
Study on radiation-induced deterioration of grease at high temperature, 3
[DE93-788368] p 1369 N94-18220
Effects of irradiation temperature on embrittlement of nuclear pressure vessel steels
[DE93-015428] p 1359 N94-18245
A study of the effects of high power pulsed 2450 MHz microwaves, ELF modulated microwaves, and ELF fields on human lymphocytes and selected cell lines
[AD-A269070] p 1505 N94-18294
Experience with custom processors in space flight applications p 1336 N94-18338
Upper atmospheric effects of the HF Active Auroral Research Program Ionospheric Research Instrument (HAARP IRI)
[AD-A268948] p 1481 N94-18451
Compilation of 1992 annual reports of the Navy ELF communications system ecological monitoring program, volume 1
[AD-A269569] p 1386 N94-18473
The c-jun gene expression in human cells exposed to either ionizing radiation or hydrogen peroxide
[DE93-017436] p 1502 N94-18476
Electromagnetic environmental effects compendium
[AD-A270441] p 1387 N94-18512
The LET spectrum and its uncertainty during the CRRES mission
[AD-A269977] p 1630 N94-18676
Mechanical-property changes of structural composite materials after low-temperature proton irradiation: Implications for use in SSC magnet systems
[DE93-016735] p 1343 N94-18763
Penetrating radiation environment and effects study
[AD-A270126] p 1485 N94-18874
Development of robust multilayer optics for use in high-peak power radiation environments
[DE93-018557] p 1580 N94-18931
Neutron-induced collision cascade mixing in Nb/V superlattices
[DE93-018575] p 1600 N94-18933
Evaluation of fiber optic performance in the ACRR
[DE93-018515] p 1580 N94-18970
Radiation induced darkening of the optical elements in the Startracker camera
[DE93-018907] p 1433 N94-19004
High dose effects in neutron irradiated face-centered cubic metals
[DE93-017671] p 1364 N94-19043
Effects of irradiation temperature on Charpy and tensile properties of high-copper, low upper-shelf, submerged-arc welds
[DE93-017858] p 1445 N94-19047
Static Computer Memory Integrity Testing (SCMIT): An experiment flown on STS-40 as part of GAS payload G-616 p 1325 N94-19169
Overlay welding irradiated stainless steel
[DE93-018767] p 1446 N94-19334
Effect of EMP fields on cell membrane potentials
[DE93-015819] p 1503 N94-19341
The performance and survivability of dichromated poly (vinyl alcohol) holograms for space based photonic applications
[AD-A270974] p 1434 N94-19791

RADIATION HARDENING
Technology, design, simulation, and evaluation for SEP-hardened circuits p 1399 N94-18352
Radiation hardened microprocessor for small payloads
p 1327 N94-19184

RADIATION INJURIES
Conductive garments to prevent Radio-Frequency (RF) burns
[AD-D015832] p 1512 N94-18730

RADIATION MEASUREMENT
Development and evaluation of alternative radioanalytical methods, including mass spectrometry for marine materials
[DE93-625117] p 1345 N94-17691
Planetary plasma waves
[NASA-CR-194295] p 1629 N94-19094

RADIATION SHIELDING
Exponential characteristic spatial quadrature for discrete ordinates neutral particle transport in two-dimensional cartesian coordinates
[AD-A270458] p 1554 N94-19671

RADIATION SOURCES
Conical geometry for sagittal focusing as applied to x rays from synchrotrons
[DE93-017238] p 1593 N94-17760
General geometry PIC for MIMD computers
[AD-A269085] p 1534 N94-18767
Harmonic generation at high intensities
[DE93-018632] p 1572 N94-19283

RADIATION SPECTRA
Development of robust multilayer optics for use in high-peak power radiation environments
[DE93-018557] p 1580 N94-18931
EGRET Mission and Data Analysis
[MPE-PREPRINT-223] p 1622 N94-19462
Suitability of infrared spectroscopy for remote sensing of tropospheric trace gases
[KFK-5183] p 1479 N94-19507

RADIATION TOLERANCE
Experience with custom processors in space flight applications p 1336 N94-18338
Radiation hardened microprocessor for small payloads
p 1327 N94-19184

RADIATIVE HEAT TRANSFER
Heat transfer quantitative characterization: Passive and active methods p 1431 N94-18650
Total hemispherical emittance of Niobium-1 percent zirconium fuel cladding for the SP-100 space reactor
[AD-A270456] p 1576 N94-19589

RADIATIVE TRANSFER
The vertical distribution of heating in the tropical atmosphere
[AD-A270452] p 1490 N94-18514
Physical retrieval of precipitation water contents from Special Sensor Microwave/Imager (SSM/I) data. Part 1: A cloud ensemble/radiative parameterization for sensor response (report version) p 1491 N94-18604
Computational astrophysics: Pulsating stars
[DE93-018369] p 1627 N94-18857
Radiosity algorithms using higher order finite element methods
[DE93-018098] p 1531 N94-19548
Remote sensing of Earth terrain
[NASA-CR-194598] p 1464 N94-19681

RADIO ANTENNAS
Meteor burst communications improvement study
[AD-A270866] p 1393 N94-19793
RADIO BEACONS
High efficiency low cost monolithic module for SARSAT distress beacons
[NASA-CR-194234] p 1315 N94-18852
RADIO COMMUNICATION
Swatch Pager p 1428 N94-18039
Control of integrated voice/data multi-hop radio networks via reduced-load approximations
[AD-A270661] p 1393 N94-19779
RADIO EQUIPMENT
Radio wave propagation in structured ionization for satellite and radar applications
[AD-A268457] p 1382 N94-17844
Intentionally Short Range Communications (ISRC)
[AD-A268788] p 1384 N94-18216
Efficient simulation of DEDS by means of standard clock techniques: Queueing and integrated radio network examples
[AD-A269878] p 1432 N94-18681
Control of integrated voice/data multi-hop radio networks via reduced-load approximations
[AD-A270661] p 1393 N94-19779
RADIO FREQUENCIES
Power compensators for phased operation of antenna arrays on JET and D3-D
[DE93-013208] p 1581 N94-17694
Synchrotron beam-loading stability with a higher RF harmonic
[DE93-014549] p 1573 N94-17726
RF vacuum microelectronics
[AD-A269454] p 1396 N94-18284
Broadband RF spectrum from electrostatic discharges on spacecraft
[AD-A269543] p 1385 N94-18287
Field emitter array RF amplifier development project, phase 1, option 1
[AD-A268687] p 1396 N94-18293
Magnetostatic waves-based integrated optic bragg cell modules with applications to RF signal processing
[AD-A269115] p 1577 N94-18295
Millimeter wave reflectivity measurement system
[AD-A270008] p 1387 N94-18601
RF vacuum microelectronics
[AD-A270003] p 1403 N94-18667
Conductive garments to prevent Radio-Frequency (RF) burns
[AD-D015832] p 1512 N94-18730
Experiments on nonlinear absorption of ECH waves in MTX and a comparison with theory
[DE93-019158] p 1589 N94-19074
Advanced fusion diagnostics
[DE93-040085] p 1589 N94-19133
RF phase stabilization for RF photocathode gun through electro-optical monitoring
[DE93-019059] p 1406 N94-19310
Study of coupled-bunch collective effects in the ALS
[DE93-019236] p 1575 N94-19558
RADIO FREQUENCY HEATING
ICRF direct electron heating experiments in TFTR
[DE93-017857] p 1590 N94-19273
RADIO FREQUENCY INTERFERENCE
Studies of enhanced radar backscatter
[AD-A269544] p 1385 N94-18288
A RFI measurement system for field sites
[AD-A269340] p 1385 N94-18301
Communication in the presence of unknown interference
[AD-A271146] p 1392 N94-19738
RADIO METEORS
Meteor burst communications improvement study
[AD-A270866] p 1393 N94-19793
RADIO RECEIVERS
Swatch Pager p 1428 N94-18039
RADIO SIGNALS
A RFI measurement system for field sites
[AD-A269340] p 1385 N94-18301
RADIO TRANSMISSION
Radio wave propagation in structured ionization for satellite and radar applications
[AD-A268457] p 1382 N94-17844
Studies of enhanced radar backscatter
[AD-A269544] p 1385 N94-18288
Morphology and characteristics of disturbed HF skywave channels
[AD-A269755] p 1388 N94-18722
Compilation of 1992 annual reports of the navy ELF communications system ecological monitoring program. Volume 3: Tabs G - I
[AD-A269727] p 1388 N94-18741
Compilation of 1992 annual reports of the navy ELF communications system ecological monitoring program, volume 2
[AD-A269726] p 1388 N94-18751
Quasi-optical transponder using FET's and patch antennas
[AD-A271339] p 1407 N94-19584
Communication in the presence of unknown interference
[AD-A271146] p 1392 N94-19738
Meteor burst communications improvement study
[AD-A270866] p 1393 N94-19793
RADIO TRANSMITTERS
The optimal numerical algorithm for processing of phase coded time signals for radio-clocks
p 1426 N94-18018
Compilation of 1992 annual reports of the Navy ELF communications system ecological monitoring program, volume 1
[AD-A269569] p 1386 N94-18473
Aircraft fire sentry. Volume 1: Summary
[AD-A270087] p 1315 N94-18822
Aircraft fire sentry. Volume 2: Appendices A, B, C and D
[AD-A270088] p 1315 N94-18823
RADIO WAVES
Radio wave propagation in structured ionization for satellite and radar applications
[AD-A268457] p 1382 N94-17844
Studies of enhanced radar backscatter
[AD-A269544] p 1385 N94-18288
RADIOACTIVE CONTAMINANTS
A review of wind field models for atmospheric transport
[DE93-016085] p 1488 N94-17895
Inclusion of a three-dimensional washout coefficient in ADPIC
[DE93-018499] p 1476 N94-19038
RADIOACTIVE DECAY
Investigation of the relative abundance of heavy versus light nuclei in primary cosmic rays using underground muon bundles
[DE93-017601] p 1630 N94-17818
Beauty without charm in B-meson decays
[PREPRINT-732] p 1565 N94-17972
Neutrino mass
[DE93-018467] p 1567 N94-18269
Research in particle physics
[DE93-040875] p 1567 N94-18534
Inverse neutrinoless double (beta)-decay at the NLC?
[DE93-017397] p 1568 N94-18825
Experimental research in high energy physics
[DE93-011912] p 1574 N94-18916
High energy physics at Tufts University
[DE93-018299] p 1575 N94-19023
RADIOACTIVE ISOTOPES
Development and evaluation of alternative radioanalytical methods, including mass spectrometry for marine materials
[DE93-625117] p 1345 N94-17691
Gamma scattering in condensed matter with high intensity Moessbauer radiation
[DE93-019461] p 1601 N94-19031
Studies of clusters
[DE93-018961] p 1572 N94-19309
RADIOACTIVE WASTES
Rapid analysis of mixed waste samples via the optical emission from laser initiated microplasmas
[DE93-014563] p 1582 N94-17727
Rapid geophysical surveyor
[DE93-016637] p 1461 N94-17851
RADIOACTIVITY
Development and evaluation of alternative radioanalytical methods, including mass spectrometry for marine materials
[DE93-625117] p 1345 N94-17691
RADIOCHEMISTRY
Ionic and molecular environments in heterogeneous electrocatalysis: Studies by radioactive labeling and LEED/AUGER spectroscopy
[AD-A268850] p 1567 N94-18766
Research program activities of the ORNL Analytical Chemistry Division
[DE93-017938] p 1339 N94-19117
RADIOGRAPHY
Single sided tomography of extremely large dense objects
[DE93-017993] p 1580 N94-19268
RADIOLOGY
Development and evaluation of alternative radioanalytical methods, including mass spectrometry for marine materials
[DE93-625117] p 1345 N94-17691
RADIOLYSIS
Pulse radiolytic studies of electron transfer processes and applications to solar photochemistry
[DE93-018715] p 1464 N94-17781
The effects of radiolysis on the corrosion and stress corrosion behavior of 316 stainless steels
[DE93-019933] p 1363 N94-19021
RADIOMETERS
The Earth radiation budget experiment: Overview of data-processing and error sources
[KNMI-TR-146] p 1481 N94-18142
Broadband IF matching for quasioptical mixers
[MPE-PREPRINT-240] p 1390 N94-19416
RADIOSONDES
Verification of 3I retrievals vis-a-vis radiosonde observations
[KNMI-TR-150] p 1488 N94-17924
Radiosonde data collected on the ERS-1 validation cruise RRS Charles Darwin Cruise 62A, Iceland Faeroes region
[IOS-297-1992] p 1461 N94-18137
RADON
Indoor environment program
[DE93-018601] p 1513 N94-18935
RAIN
Initialization and assimilation of cloud and rainwater in a regional model p 1492 N94-18608
Inclusion of a three-dimensional washout coefficient in ADPIC
[DE93-018499] p 1476 N94-19038
RAMAN SPECTRA
Applications of nonlinear optic effects in new specialty fibers
[AD-A268890] p 1578 N94-18457
Resonance Raman and photophysical studies of transition metal complexes in solution and entrapped in zeolites
[DE93-019892] p 1363 N94-19019
First and second order Stokes generation by SRS in methane: Influence of rep-rate, beam quality and astigmatism
[FEL-92-A125] p 1441 N94-19426
RAMAN SPECTROSCOPY
Femtosecond Fourier-transform spectroscopy of low-frequency intermolecular motions in weakly interacting liquids
[DE93-017312] p 1566 N94-18085
Remote cure monitoring of polymeric resins by laser Raman spectroscopy
[DE93-016445] p 1369 N94-18112
Fiber optic Raman spectrograph for in situ environmental monitoring
[DE93-019466] p 1478 N94-19305
RAMJET ENGINES
Numerical simulation of fluid dynamics and combustion for ram accelerator projectile/obturator interaction
[AD-A269715] p 1320 N94-18748
RANDOM ACCESS
VHF air/ground communications for air traffic control. Volume 1: A decision tree approach to system innovations
[AD-A268485] p 1316 N94-18384
Communication in the presence of unknown interference
[AD-A271146] p 1392 N94-19738
RANDOM ACCESS MEMORY
Performance of defect-tolerant set-associative cache memories p 1398 N94-18346
VLSI for high-speed digital signal processing
[AD-A270406] p 1404 N94-18706
RANDOM ERRORS
An extended Reed Solomon decoder design
p 1398 N94-18348
RANDOM NOISE
Fundamental research in nonlinear random vibration for aerospace applications
[AD-A268929] p 1454 N94-18487
JSEP fellowship: Fractal noise processes
[AD-A268841] p 1557 N94-18540
Analytic approximations of an integral in remote sensing
[AD-A270085] p 1463 N94-18800
RANDOM NUMBERS
Production and test of pseudo random elements
[ETN-93-95070] p 1559 N94-19610
RANDOM PROCESSES
Non Linear Dynamics and Chaos
[AGARD-LS-191] p 1607 N94-18236
Generalized multichannel signal detection
[AD-A271385] p 1391 N94-19587
RANDOM VARIABLES
Bahadur-Kiefer theorem beyond the largest observation
[PB93-197473] p 1558 N94-19325
Sensitivity and uncertainty analysis of Markov reward models
[MEMO-INF-92-89] p 1559 N94-19386
RANDOM VIBRATION
Low-noise oscillators for airborne radar applications, revision 1
[AD-A269372] p 1403 N94-18471

Fundamental research in nonlinear random vibration for aerospace applications
[AD-A268929] p 1454 N94-18487

RANDOM WALK
Deterministic growth-dispersal models and branching random walk
[REPT-93-14] p 1550 N94-19088
Compensation approach for three or more dimensional random walks
[PB93-197499] p 1543 N94-19326

RANGE SAFETY
Range safety transponder catalog
[AD-A270882] p 1323 N94-19581

RANGEFINDING
Data fusion through simulated annealing of registered range and reflectance images
[DE93-015910] p 1612 N94-17858
Flight demonstration of image fix-taking with SAR
[DE93-016499] p 1382 N94-17861
Survey of collision avoidance and ranging sensors for mobile robots, revision 1
[AD-A269846] p 1541 N94-18474
Absolute positioning by collecting Global Positioning System (GPS) data along short baselines
[AD-A271324] p 1317 N94-19572

RANK TESTS
The rank of the present excursion
[REPT-93-22] p 1558 N94-19137

RANKINE CYCLE
Potassium-Rankine power conversion subsystem modeling for nuclear electric propulsion
[NASA-CR-191134] p 1468 N94-18821

RAPID QUENCHING (METALLURGY)
Melt spinning study
[NASA-CR-193823] p 1380 N94-19423
Recent advances in high density tungsten composite processing
[AD-A270764] p 1344 N94-19576

RARE EARTH ALLOYS
Bibliography on silicides
[AD-A270516] p 1374 N94-19532

RARE GASES
Structure, thermodynamics, and dynamical properties of supercooled liquids
[DE93-788387] p 1607 N94-18211
Excited atomic bromine energy transfer and quenching mechanisms
[AD-A270672] p 1572 N94-19607

RATES (PER TIME)
Template based low data rate speech encoder
[AD-A270900] p 1392 N94-19748

RATS
Intracellular physiology of the rat suprachiasmatic nucleus: Electrical properties, neurotransmission and effects of neuromodulators
[AD-A268829] p 1505 N94-18538
A study of the effect of hydrocarbon structure on the induction of male rat nephropathy and metabolic structure
[AD-A270969] p 1504 N94-19789

RAY TRACING
Portable parallel ray tracing algorithms
[AD-A268984] p 1522 N94-18698

RAYLEIGH NUMBER
Stability measurements of Rayleigh-Benard convection near the critical state using a spectral model
[MPIS-15/1992] p 1422 N94-19520

RAYLEIGH WAVES
High resolution geological site characterization utilizing ground motion data
[AD-A268926] p 1481 N94-18485
Experimental investigation of wave and fracture phenomena in impacted ceramics: Experiments on sapphire
[AD-A270040] p 1372 N94-18792
Surface wave group velocity tomography of East Asia, part 1
[AD-A270100] p 1484 N94-18868
Elastic properties of amorphous thin films studied by Rayleigh waves
[DE93-018375] p 1372 N94-19202

RAYLEIGH-BENARD CONVECTION
Stability measurements of Rayleigh-Benard convection near the critical state using a spectral model
[MPIS-15/1992] p 1422 N94-19520

RDX
The minimum detection limits of RDX and TNT deposited on various surfaces as determined by ion mobility spectroscopy
[DE93-018521] p 1378 N94-19042

REACTING FLOW
Chemical reactions in turbulent mixing flows
[AD-A269377] p 1410 N94-18472
A coupled implicit solution method for turbulent spray combustion in propulsion systems p 1411 N94-18549
Numerical investigation of complex, transitional, and chemically reacting flows p 1411 N94-18550
Analysis of supersonic flows using k-epsilon model and the RPLUS code: Progress towards high speed combustor analysis p 1411 N94-18551
Numerical simulation of turbulent mixing and combustion near the inlet of a burner
[DE93-017960] p 1350 N94-18987
Numerical simulation of viscous flows in chemical nonequilibrium
[MBB-LME-211-S-PUB-506] p 1421 N94-19497

REACTION KINETICS
Fundamental studies of the mechanism of catalytic reactions with catalysts effective in the gasification of carbon solids and the oxidative coupling of methane
[DE93-015262] p 1347 N94-18193
Applications of scanning tunneling microscopy to electrochemistry
[AD-A269129] p 1348 N94-18255
Temperature, kinetic energy, and rotational temperature dependences for the reactions of Ar(+)(2)P3/2 with O2 and CO
[AD-A268974] p 1567 N94-18526
Numerical investigation of complex, transitional, and chemically reacting flows p 1411 N94-18550
Wettability and reaction kinetics in metal matrix composites
[AD-A270377] p 1342 N94-18704
Transport phenomena and interfacial kinetics in multiphase combustion systems
[AD-A270202] p 1349 N94-18785
The Fourteenth Symposium on Molecular Beams
[AD-A268721] p 1568 N94-18787
LX-17 chemical kinetic material model for Chemical TOPAZ2D
[DE93-014363] p 1377 N94-18893
Surface phases and their influence on metal-oxide interfaces
[DE93-019931] p 1601 N94-19020
Chemical dynamics in time and energy space
[DE93-018595] p 1350 N94-19097
Kinetics programs for simulation of tropospheric photochemistry on the global scale
[DE93-019035] p 1476 N94-19104
Environmental Research Program
[DE93-019101] p 1477 N94-19105
Single source precursors for the OMCVD of 3/5 compound semiconductors
[AD-A271147] p 1606 N94-19739
Pressure and temperature effects on the kinetics and quality of diamond films
[AD-A270876] p 1606 N94-19771
Collaborative research on combustion diagnostics and modeling between Rolls-Royce, Inc. and the United States Air Force Wright Laboratory
[AD-A270660] p 1354 N94-19778

REACTION PRODUCTS
Penetrometer compatible, fiber-optic sensor for continuous monitoring of chlorinated hydrocarbons: Field test results
[DE93-017974] p 1352 N94-19266

REACTIVITY
Temperature, kinetic energy, and rotational temperature dependences for the reactions of Ar(+)(2)P3/2 with O2 and CO
[AD-A268974] p 1567 N94-18526
Photodissociation dynamics of cluster ions
[AD-A270296] p 1566 N94-18814

REACTOR DESIGN
Laboratory microfusion capability study
[DE93-014373] p 1583 N94-17912
Review Committee report on the conceptual design of the tokamak physics experiment
[DE93-018408] p 1588 N94-19012
Thermo-hydraulic analysis of superconducting toroidal-field magnets for the Tokamak Physics Experiment
[DE93-018096] p 1590 N94-19269

REACTOR MATERIALS
Using the Tritium Plasma Experiment to evaluate ITER PFC safety
[DE93-016614] p 1582 N94-17713
Report of the 1991 Workshop on Particle-Material Interactions for Fusion Research
[DE93-788393] p 1573 N94-18156
Effects of irradiation temperature on embrittlement of nuclear pressure vessel steels
[DE93-015428] p 1359 N94-18245
A probability method of fracture mechanics analysis for HFIR vessel
[DE93-015510] p 1453 N94-18246
Thermal analysis of coatings and substrate materials during a disruption in fusion reactors
[DE93-017688] p 1588 N94-18971
The effects of radiolysis on the corrosion and stress corrosion behavior of 316 stainless steels
[DE93-019933] p 1363 N94-19021
Beryllium processing technology review for applications in plasma-facing components
[DE93-018396] p 1363 N94-19028
Overlay welding irradiated stainless steel
[DE93-018767] p 1446 N94-19334

REACTOR SAFETY
Using the Tritium Plasma Experiment to evaluate ITER PFC safety
[DE93-016614] p 1582 N94-17713
Safety approaches for high power modular laser operation
[DE93-017213] p 1435 N94-17759
A probability method of fracture mechanics analysis for HFIR vessel
[DE93-015510] p 1453 N94-18246
Fluid-structure-interaction analyses of reactor vessel using improved hybrid Lagrangian Eulerian code ALICE-II
[DE93-015536] p 1409 N94-18248
Review Committee report on the conceptual design of the tokamak physics experiment
[DE93-018408] p 1588 N94-19012

REACTOR TECHNOLOGY
Beryllium processing technology review for applications in plasma-facing components
[DE93-018396] p 1363 N94-19028

READOUT
Development and test of readout electronics for optical quadrature signals
[DLR-MITT-92-11] p 1395 N94-17920

REAL TIME OPERATION
Magnetostrictive actuators for human sensory feedback
[AD-A269266] p 1511 N94-17841
An object-oriented environment for computer vision and pattern recognition
[DE93-017098] p 1517 N94-17867
A structured approach for modeling, analyzing and simulating real-time control systems
[REPT-93-044] p 1539 N94-17916
Single phase dynamic CMOS PLA using charge sharing technique p 1397 N94-18341
VHF air/ground communications for air traffic control: A decision tree approach to system innovations, volume 2
[AD-A268632] p 1386 N94-18495
Distributed Computing Design System (DCDS)
[AD-A270435] p 1534 N94-18509
SERCAA cloud analysis integration: Design concepts and interaction with cloud forecast models
[AD-A269104] p 1492 N94-18637
The development of a course sequence in real-time systems design
[AD-A269459] p 1522 N94-18726
Atlas of SSM/I satellite ice concentration interpolated to operational ice model domains of the Arctic for 1992
[AD-A270306] p 1499 N94-18727
ControlShell: A real-time software framework
[AD-A269172] p 1523 N94-18879
Adaptive path planning: Algorithm and analysis
[DE93-008348] p 1523 N94-18926
Template based low data rate speech encoder
[AD-A270900] p 1392 N94-19748
A real-time spoken-language system for interactive problem-solving, combining linguistic and statistical technology for improved spoken language understanding
[AD-A270901] p 1392 N94-19749
Improved HF data network simulator, software user's manual, volume 2
[AD-A270954] p 1393 N94-19753

RECEIVERS
Development of a selective volumetric receiver for central receiver systems: Investigation of parameters and exergetic evaluation
[DLR-FB-93-05] p 1465 N94-18089
Advanced optical fiber communication systems
[AD-A269120] p 1577 N94-18254
Photorefractive receiver study
[AD-A269352] p 1577 N94-18302
Testing and evaluation of large-area heliostats for solar thermal applications
[DE93-018509] p 1467 N94-18520
The use of velocity spectra for stacking receiver functions with application to IRIS/IDA stations OBNINSK (OBN) and ARTI (ARU), Russia
[AD-A269087] p 1483 N94-18717
Quasi-optical transponder using FET's and patch antennas
[AD-A271339] p 1407 N94-19584

RECEPTORS (PHYSIOLOGY)
Modified aequorin shows increased bioluminescence activity
[AD-A268774] p 1347 N94-18185

Intracellular physiology of the rat suprachiasmatic nucleus: Electrical properties, neurotransmission and effects of neuromodulators
[AD-A268829] p 1505 N94-18538

RECIRCULATIVE FLUID FLOW

Recirculation in forward roll coating
[VKI-TM-48] p 1409 N94-17901

RECLAMATION

Rapid geophysical surveyor
[DE93-016637] p 1461 N94-17851

RECOIL IONS

Experimental study of interactions of highly charged ions with atoms at keV energies
[DE93-040222] p 1571 N94-19257

RECOMBINATION REACTIONS

A physical model for one-dimension and time-dependent ionosphere. Part 1: Description of the model
[DE93-627958] p 1486 N94-19255

RECOMMENDATIONS

Guidelines for the expression of uncertainties in surface chemical analysis by Auger Electron Spectroscopy (AES) and X ray Photoelectron Spectroscopy (XPS)
[NPL-DMM(A)-99] p 1346 N94-17900

RECONSTRUCTION

ENO schemes on unstructured meshes
p 1412 N94-18561

RECORDING HEADS

Contribution to the tribological study of magnetic-tape head contact
[ECL-92-57] p 1434 N94-19414

RECORDS MANAGEMENT

Document control and conduct of operations
[DE93-016555] p 1613 N94-17880

Networked MS windows 3.1 based classified document control system (CDOCS)
[DE93-017880] p 1617 N94-18984

A comparison Air Force data systems — Comments on IDA Paper P-2863
[AD-A270662] p 1619 N94-19780

RECRYSTALLIZATION

Atlas of formability: Nickelvac C-276
[AD-A268264] p 1357 N94-17802

Atlas of formability: ALLVAC 718
[AD-A268304] p 1357 N94-17804

The effect of composition on the mechanism of continuous recrystallization and superplastic response of aluminum-scandium alloys
[DE93-018594] p 1365 N94-19280

RECTANGULAR WINGS

Viscous-inviscid calculation of high-lift separated compressible flows over airfoils and wings
p 1309 N94-18440

RECURSIVE FUNCTIONS

Using geometric techniques to improve dynamic programming algorithms for the economic lot-sizing problem and extensions
[PB93-197556] p 1528 N94-19330

Time dependent identification of nonlinear structures
[ECL-92-64] p 1457 N94-19403

Notes on multi-step ahead prediction based on the principle of concatenation
[MATHS-REPT-A-189] p 1544 N94-19410

RED SHIFT

The universe at moderate redshift
[NASA-CR-193771] p 1627 N94-19093

REDUCTION (CHEMISTRY)

Oxygen reduction at a stabilized zirconia interface with Y(1-x)Ca(x)MnO3 or La(1-x)Sr(x)MnO3 cathode materials
[DE93-015681] p 1593 N94-17747

REDUNDANCY

Computation of large numbers and VLSI: Application to GCD, to stretched GCD and at euclidian distance
[ETN-93-95009] p 1552 N94-19499

REDUNDANCY ENCODING

Fault tolerant sequential circuits using sequence invariant state machines p 1398 N94-18344

REDUNDANT COMPONENTS

Synthesis techniques and analysis tool for on-chip fault-tolerance
[AD-A269148] p 1521 N94-18259

REED-SOLOMON CODES

An extended Reed Solomon decoder design
p 1398 N94-18348

REENTRY TRAJECTORIES

START user manual version 2.1
[LR-726] p 1335 N94-19614

REFLECTANCE

Data fusion through simulated annealing of registered range and reflectance images
[DE93-015910] p 1612 N94-17858

Time-resolved probing of electron thermal conduction in femtosecond-laser-pulse-produced plasmas
[DE93-016996] p 1585 N94-18129

Studies of enhanced radar backscatter
[AD-A269544] p 1385 N94-18288

Testing and evaluation of large-area heliostats for solar thermal applications
[DE93-018509] p 1467 N94-18520

Millimeter wave reflectivity measurement system
[AD-A270008] p 1387 N94-18601

REFRACTION

Using computerized tomography to determine ionospheric structures
[DE93-018904] p 1485 N94-19002

REFRACTIVITY

Photorefractive receiver study
[AD-A269352] p 1577 N94-18302

Apparatus and method for varying a Bragg wavelength of a Bragg grating formed in an optical fiber
[AD-D015876] p 1579 N94-18743

A comparison between several computer codes for calculations on microwave propagation
[FEL-92-A435] p 1390 N94-19449

Optical switch evaluation support
[AD-A270948] p 1581 N94-19601

REFRACTORY MATERIALS

Plastic anisotropy in MoSi2 single crystals
[DE93-012650] p 1594 N94-17874

The 6th Japan-U.S. conference on composite materials
[AD-A268535] p 1341 N94-18630

Developing and understanding the high temperature behavior of niobium aluminides and niobium aluminide composites
[AD-A268874] p 1341 N94-18636

REFRACTORY METAL ALLOYS

Fundamental concepts relating local atomic arrangements, deformation, and fracture of intermetallic alloys
[AD-A268745] p 1361 N94-18788

REFRIGERANTS

Malone refrigeration
[DE93-014468] p 1379 N94-17725

Compatibility of refrigerants and lubricants with motor materials, volume 1
[DE93-040216] p 1350 N94-18895

Compatibility of refrigerants and lubricants with motor materials, volume 2
[DE93-040217] p 1350 N94-18896

Measurement of viscosity, density, and gas solubility of refrigerant blends in selected synthetic lubricants
[DE93-040221] p 1350 N94-18977

Thermophysical properties
[DE93-040219] p 1351 N94-19134

Accelerated screening methods for determining chemical and thermal stability of refrigerant-lubricant mixtures. Part 1: Method assessment
[DE93-040215] p 1351 N94-19136

Compatibility of refrigerants and lubricants with motor materials, volume 3
[DE93-040218] p 1352 N94-19181

REFRIGERATING

Malone refrigeration
[DE93-014468] p 1379 N94-17725

The 7th International Cryocooler Conference
[AD-A268451] p 1379 N94-18147

Regenerator optimization for Stirling cycle refrigeration
[DE93-018468] p 1380 N94-18818

Design verification and acceptance tests of the ASST-A helium refrigeration system
[DE93-019746] p 1381 N94-19540

REFRIGERATORS

The 7th International Cryocooler Conference
[AD-A268451] p 1379 N94-18147

Design verification and acceptance tests of the ASST-A helium refrigeration system
[DE93-019746] p 1381 N94-19540

REFUELING

Mechanically refuelable zinc/air electric vehicle cells
[DE93-016446] p 1394 N94-17770

REGENERATIVE FUEL CELLS

Regenerative fuel cells for High Altitude Long Endurance Solar Powered Aircraft
[DE93-016991] p 1465 N94-17853

REGENERATORS

The 7th International Cryocooler Conference
[AD-A268451] p 1379 N94-18147

Regenerator optimization for Stirling cycle refrigeration
[DE93-018468] p 1380 N94-18818

REGIONS

Eastern Europe: A climatological study
[AD-A269200] p 1493 N94-18883

REGRESSION ANALYSIS

Linear parameter identification methods for ARMA models with periodic coefficients
[REPT-92-070] p 1556 N94-17938

EDF tests for normality in linear models after a Box-Cox transformation
[AD-A269068] p 1557 N94-18517

Modeling of driver behavior: Information perception, rule and control strategies in experiments and simulations
[ETN-93-95053] p 1510 N94-19649

Generalized regression trees: Function estimation via recursive partitioning and maximum likelihood
[AD-A271259] p 1560 N94-19726

REGULARITY

Serial pattern complexity: Irregularity and hierarchy
[PB93-191914] p 1509 N94-19348

REGULATIONS

Safeguarding our energy future
[DE93-016001] p 1466 N94-18109

Airport activity statistics of certificated route air carriers, 1992
[AD-A269042] p 1315 N94-18490

REINFORCED PLASTICS

The calculation methods of a cracked plastic composite laminate: A literature survey
[VTT-TIED-1362] p 1339 N94-17958

REINFORCING FIBERS

A comprehensive study of matrix fracture mechanisms in fiber-reinforced ceramic matrix composites
[AD-A268809] p 1340 N94-18205

Bibliography on ceramic matrix composites and reinforcing whiskers, platelets, and fibers, 1970-1990
[AD-A270139] p 1371 N94-18750

RELATIVISTIC EFFECTS

Acoustic travel time perturbations due to an internal tide and internal wave field in the Barents Sea
[AD-A270879] p 1499 N94-19580

RELATIVISTIC ELECTRON BEAMS

Interaction of intense lasers and relativistic electron beams with solids, gases and plasmas
[AD-A269655] p 1439 N94-18737

RELATIVISTIC PARTICLES

Meson production in relativistic heavy-ion collisions at AGS energies
[DE93-016871] p 1565 N94-17984

Relativistic configuration interaction calculation of the correlation energies of heliumlike ions
[DE93-018093] p 1571 N94-19201

RELATIVISTIC PLASMAS

Enhanced acceleration in a self-modulated-laser wakefield accelerator
[AD-A268452] p 1586 N94-18148

RELATIVISTIC THEORY

Meson production in relativistic heavy-ion collisions at AGS energies
[DE93-016871] p 1565 N94-17984

RELATIVITY

Maximal hypersurfaces in asymptotically stationary spacetimes
[MPA-708] p 1621 N94-18141

RELAXATION METHOD (MATHEMATICS)

Shop problems with two machines and time lags
[REPT-93-020] p 1518 N94-17927

RELAXATION TIME

Relaxation of polar orientational order in nonlinear optical polymers by second harmonic generation
[AD-A269059] p 1370 N94-18515

RELIABILITY

Development of a new concept diver's watch
p 1429 N94-18041

Laser materials processing applications at Lawrence Livermore National Laboratory
[DE93-017976] p 1437 N94-18093

Performance evaluations of demountable electrical connections
[DE93-017399] p 1396 N94-18135

Problems in probability, statistics and reliability
[AD-A270830] p 1559 N94-19595

Increasing mission reliability using open-loop control
[AD-A271208] p 1545 N94-19721

RELIABILITY ANALYSIS

FAROW: A tool for fatigue and reliability of wind turbines
[DE93-017639] p 1465 N94-18001

Human reliability analysis application guide
[DE93-015361] p 1511 N94-18244

Software reliability: Estimation and prediction
[AD-A268895] p 1521 N94-18458

Knowledge sources for an intelligent MCM analyzer
[AD-A269224] p 1542 N94-18887

RELIABILITY ENGINEERING

Reliability control for wrist watches and their casements p 1427 N94-18030

Mutrometre: Construction for fast water proof measurements under low pressure and air suppression
p 1427 N94-18031

REMOTE CONTROL

Magnetostrictive actuators for human sensory feedback
[AD-A269266] p 1511 N94-17841

A wind tunnel model control surface actuator interface
[AD-A268729] p 1322 N94-18324

Design considerations for remotely operated welding in space: Task definition and visual weld monitoring experiment
[AD-A268752] p 1445 N94-18634
VPU(tm) demonstration mission vicinity processor unit(tm) overview p 1325 N94-19171

REMOTE MANIPULATOR SYSTEM
Robotics
[NASA-TM-109351] p 1332 N94-18920

REMOTE SENSING
Packaging, deployment, and panel design concepts for a truss-stiffened 7-panel precision deployable reflector with feed boom
[NASA-TM-109000] p 1333 N94-17765
A mobile remote sensing laboratory for water vapor, trace gas, aerosol, and wind speed measurements
[DE93-017158] p 1489 N94-18132
Arctic ice studies
[AD-A268608] p 1497 N94-18277
A RFI measurement system for field sites
[AD-A269340] p 1385 N94-18301
Microwave (SSM/I) Estimates of the Precipitation Rate to Improve Numerical Atmospheric Model Forecasts
[NASA-CR-193566] p 1491 N94-18602
Physical retrieval of precipitation water contents from Special Sensor Microwave/Imager (SSM/I) data. Part 1: A cloud ensemble/radiative parameterization for sensor response (report version) p 1491 N94-18604
Physical retrieval of precipitation water contents from Special Sensor Microwave/Imager (SSM/I) data. Part 2: Retrieval method and applications (report version)
p 1491 N94-18605
Forecast model applications of retrieved three dimensional liquid water fields p 1492 N94-18606
Current positioning possibilities by spatial techniques and the Royal Oservatory of Belgium program
p 1483 N94-18627
Atlas of SSM/I satellite ice concentration interpolated to operational ice model domains of the Arctic for 1992
[AD-A270306] p 1499 N94-18727
Analytic approximations of an integral in remote sensing
[AD-A270085] p 1463 N94-18800
Engineering research, development and technology thrust area report, FY92
[DE93-016334] p 1632 N94-18856
Spatiotemporal variability of non-urban ozone concentrations over the eastern United States and its potential replication by satellite data
[PB93-191328] p 1476 N94-19065
Development of ISY data set, part 2
[NASDA-CNT-930006-PT-2] p 1463 N94-19384
Suitability of infrared spectroscopy for remote sensing of tropospheric trace gases
[KFK-5183] p 1479 N94-19507
Airborne studies of ocean-particle-cloud interactions in the Arctic
[AD-A270752] p 1479 N94-19575
Footprint size of a helicopter-borne electromagnetic induction sounding system versus antenna altitude
[AD-A270468] p 1463 N94-19672
Remote sensing of Earth terrain
[NASA-CR-194598] p 1464 N94-19681

RENDEZVOUS TRAJECTORIES
Automated rendezvous and capture demonstration study
[NASA-CR-192587] p 1331 N94-19366

RENORMALIZATION GROUP METHODS
Renormalizations in supersymmetric and nonsupersymmetric non-abelian Chern-Simons field theories with matter
[DE93-626646] p 1593 N94-17748

REPEATERS
Development of analog watch with minute repeater
p 1429 N94-18043

REPORTS
Activities report of the Rutherford Appleton Laboratory
[ETN-93-94555] p 1631 N94-17968

REPRODUCTION (BIOLOGY)
Opportunities and questions for the fundamental biological sciences in space p 1502 N94-19212

REPRODUCTION (COPYING)
Color test chart for facsimile
[AD-A269754] p 1387 N94-18721

REPUBLIC OF SOUTH AFRICA
The South African Astronomical Observatory
[SAAO-17] p 1623 N94-19657

REQUIREMENTS
An environment for requirement reuse
[REPT-92-082] p 1613 N94-17939
Secure open systems: An investigation of current standardisation efforts for security in open systems
[FEL-92-B225] p 1618 N94-19450

RESCUE OPERATIONS
AN/APS-137 Forward Looking Airborne Radar (FLAR) evaluation Spring 1992 experiment
[AD-A268899] p 1384 N94-18228

RESEARCH
White House technology reinvestment project: Briefing and transcripts
[PB93-169829] p 1611 N94-18090
Research activities, Faculty of Civil Engineering, Delft University of Technology, 1990 - 1991
[PB93-195022] p 1380 N94-19254
A foundation for the 21st Century: A progressive framework for the National Science Foundation. Report of the National Science Board Commission on the future of the National Science Foundation
[NSB-92-196] p 1611 N94-19618

RESEARCH AIRCRAFT
Ozone hole
[NASA-TM-109368] p 1476 N94-18960
X-29: Research aircraft
[NASA-TM-109370] p 1316 N94-18962
The world's largest wind tunnel
[NASA-TM-109371] p 1322 N94-18963

RESEARCH AND DEVELOPMENT
The ANL electric vehicle battery R&D program for DOE-EHP
[DE93-017414] p 1394 N94-17750
Activities report of the Rutherford Appleton Laboratory
[ETN-93-94555] p 1631 N94-17968
Lightweight materials for transportation: Program plan
[DE93-017381] p 1340 N94-18087
White House technology reinvestment project: Briefing and transcripts
[PB93-169829] p 1611 N94-18090
Trends in Information Management at Department of Energy Headquarters
[DE93-017197] p 1615 N94-18496
The 1994 NASA authorization, volume 2
[GPO-71-510] p 1620 N94-18842
The FAA Technical Center Human Factors Laboratory information guide
[AD-A269343] p 1513 N94-18992
Research and design activities and the economic balance of MBB
[ETN-93-94909] p 1310 N94-19383
Report on the activities of Space Science Department, 1990 - mid 1992
[ESA-SP-1161] p 1633 N94-19404
Program descriptions
[NSF-92-123] p 1531 N94-19619

RESEARCH FACILITIES
Activities report of the Rutherford Appleton Laboratory
[ETN-93-94555] p 1631 N94-17968
The world's most powerful computer
[NASA-TM-109369] p 1514 N94-18961
The world's largest wind tunnel
[NASA-TM-109371] p 1322 N94-18963
The FAA Technical Center Human Factors Laboratory information guide
[AD-A269343] p 1513 N94-18992

RESEARCH MANAGEMENT
Activities report of the Rutherford Appleton Laboratory
[ETN-93-94555] p 1631 N94-17968
A foundation for the 21st Century: A progressive framework for the National Science Foundation. Report of the National Science Board Commission on the future of the National Science Foundation
[NSB-92-196] p 1611 N94-19618

RESEARCH PROJECTS
Research at the Notre Dame Radiation Laboratory
[DE93-018716] p 1566 N94-18165
Where is high-lift today? A review of past UK research programmes p 1305 N94-18416
The GARTEUR high lift research programme
p 1307 N94-18430
Langley's 50th year
[NASA-TM-109365] p 1632 N94-18980
Report on the activities of Space Science Department, 1990 - mid 1992
[ESA-SP-1161] p 1633 N94-19404
Guide to programs, fiscal year 1993
[NSF-92-78] p 1633 N94-19620

RESIDUAL STRENGTH
Residual strength predictions for fibre metal laminates: The R-curves approach
[LR-717] p 1344 N94-19666

RESIDUAL STRESS
Residual strain measurement on the production-grade class 4 flextensional transducer shell
[AD-A268828] p 1430 N94-18537
Fatigue resistant Ti3Al composites
[AD-A270305] p 1341 N94-18692
Analytical and experimental evaluation of joining silicon nitride to metal and silicon carbide to metal for advanced heat engine applications
[DE93-018128] p 1446 N94-19291
Ni-Al2O3 solid state binding: Elaboration, state of thermal constraints, mechanical behavior
[ECL-92-31] p 1366 N94-19436

RESIDUES
Analysis of deposit precursors in jet fuels using Fourier transform infrared spectroscopy
[AD-A269035] p 1377 N94-18489
The use of post detonation analysis of stable isotope ratios to determine the type and production process of the explosive involved
[DE93-018497] p 1378 N94-19242
Bits and relative order from residues, space efficiently
[TR-464] p 1530 N94-19482

RESILIENCE
Filamentation, current profiles and transport in a tokamak
[DE93-016768] p 1584 N94-17948

RESIN MATRIX COMPOSITES
Analysis of pultrusion processing for long fiber reinforced thermoplastic composite system
[NASA-CR-194504] p 1339 N94-17766

RESIN TRANSFER MOLDING
Mechanical properties and impact damage resistance of composites fabricated by low cost, vacuum assisted, resin transfer molding
[AD-A270361] p 1342 N94-18702

RESONANCE
Metal Film Surface Plasmon Resonance (MFSPR) fibre couplers
[AD-A268871] p 1579 N94-18635
Resonance Raman and photophysical studies of transition metal complexes in solution and entrapped in zeolites
[DE93-019892] p 1363 N94-19019
Contribution to the modelling and the identification of nonlinear mechanical systems
[ECL-92-32] p 1529 N94-19409

RESONANCE LINES
Electron impact excitation of copper atoms
[DE93-017995] p 1363 N94-18939

RESONANCE PROBES
WHISPER: A sounder and high-frequency wave analyser experiment p 1328 N94-19626

RESONANT FREQUENCIES
Predicted structural response of the lightweight-interceptor technology demonstration vehicle
[DE93-014676] p 1333 N94-17782
The Lever oscillator for use in high resistance resonator applications
[DE93-017652] p 1404 N94-18827
Free fall liquid column dynamics in a droptower
[LRT-WE-9-FB-6-1992] p 1379 N94-19491
Transient response of a viscous and anchored liquid bridge to an axial pulse
[LRT-WE-9-FB-7-1992] p 1379 N94-19492

RESONANT TUNNELING
Metal Film Surface Plasmon Resonance (MFSPR) fibre couplers
[AD-A268871] p 1579 N94-18635
Theoretical and experimental studies of quantum wells
[AD-A271180] p 1606 N94-19741

RESONANT VIBRATION
Time dependent identification of nonlinear structures
[ECL-92-64] p 1457 N94-19403
Blade and hub loads of ballistically damaged helicopter rotors
[AD-A270663] p 1319 N94-19781

RESONATORS
Simulation of quartz resonators p 1426 N94-18021
The Lever oscillator for use in high resistance resonator applications
[DE93-017652] p 1404 N94-18827

RESOURCE ALLOCATION
An annealing approach to multi-facility location problems in euclidean spaces
[REPT-93-022] p 1547 N94-17928
Annealing algorithms for multiresource absolute location problems on graph
[REPT-93-028] p 1520 N94-18145
PRACTICAL: Planning and resource allocation in C2-domains with time critical algorithms
[FEL-93-B029] p 1544 N94-19458

RESOURCES MANAGEMENT
Trends in Information Management at Department of Energy Headquarters
[DE93-017197] p 1615 N94-18496
The ecological and environmental impacts of manmade marshes
[AD-A269213] p 1475 N94-18885
Integrated measurement of crew resource management and technical flying skills
[AD-A270512] p 1510 N94-19677

RESPIRATORY RATE

Evaluation of physiological and psychological impairment of human performance in cold stressed subjects
[AD-A268637] p 1506 N94-18632

RESPONSE TIME (COMPUTERS)

Conception and analysis of numerical parallel algorithms: Realization on the Connection Machine
[ETN-93-95005] p 1531 N94-19517

RESTORATION

Restoration of an 18th century English clock
p 1427 N94-18026

Environmental restoration and waste management five-year plan, fiscal years 1994-1998. Volume 3: Public concerns
[DOE/S-00097P-VOL-3] p 1475 N94-18835

Fiber optic Raman spectrograph for in situ environmental monitoring
[DE93-019466] p 1478 N94-19305

RETENTION (PSYCHOLOGY)

Comparing performance on implicit memory tests
[AD-A269900] p 1508 N94-18657

RETINA

Localization of figure background segregation mechanisms in primate visual cortex
[PB93-187961] p 1508 N94-18121

An analog retina model for detecting dim moving objects against a bright moving background
p 1399 N94-18350

REVERSE FIELD PINCH

Profile stabilization of tilt mode in a field reversed configuration
[DE93-016770] p 1583 N94-17753

REYNOLDS NUMBER

Error propagation equations and tables for estimating the uncertainty in high-speed wind tunnel test results
[DE93-018685] p 1311 N94-18275

An experimental investigation of attachment-line transition on the slat of a combat aircraft model
p 1308 N94-18432

Semi-span model testing in the National Transonic Facility
[NASA-CR-194479] p 1312 N94-19388

Numerical prediction of transition of the F-16 wing at supersonic speeds
[NASA-CR-194407] p 1312 N94-19433

Numerical investigation of the incompressible flow around a wing with a fixed spoiler
[ISL-R-109/91] p 1313 N94-19524

An investigation of low Marangoni number fluid flow in a cold corner
[AD-A271317] p 1422 N94-19569

REYNOLDS STRESS

Self-regulated shear flow turbulence in confined plasmas
[DE93-015823] p 1583 N94-17743

On memory effects in turbulence
[DLR-FB-93-03] p 1409 N94-18124

Assessment and development of second order turbulence models p 1411 N94-18548

Numerical implementation and performance of Reynolds-stress closures in finite-volume computations of recirculating and strongly swirling flows
p 1415 N94-18589

Modelling engineering flows with Reynolds stress turbulence closure p 1415 N94-18591

RHEOLOGY

Some problems in the rheological characterisation of composite rocket propellants
[AD-A268806] p 1376 N94-18203

Numerical analysis of pressure meter tests: Application of parameter identification of soils behavior
[ECL-92-52] p 1487 N94-19380

RHEOMETERS

Some problems in the rheological characterisation of composite rocket propellants
[AD-A268806] p 1376 N94-18203

RIBLETS

The effect of fine surface riblets on the flow around an inclined axially symmetrical body
[MPIS-105/1993] p 1420 N94-19356

RICCATI EQUATION

The optimal projection equations for finite-dimensional fixed-order H2-optimal control of infinite-dimensional discrete-time systems
[REPT-93-11] p 1542 N94-19085

The fixed, finite-order L(sup 2)-optimal control of infinite-dimensional time-varying discrete-time systems
[REPT-93-23] p 1542 N94-19138

Discrete-time infinity control problem with measurement feedback
[PB93-197523] p 1543 N94-19329

RIEMANN MANIFOLD

Differential geometry of CR-submanifolds of a normal almost para contact manifold
[DE93-624764] p 1545 N94-17793

Unbounded components in parameter space of rational maps
[DE93-628621] p 1546 N94-18170

Contact 3-manifolds, integrable Hamiltonian systems and exotic symplectic structures in R(sup 4)
[DE93-624767] p 1551 N94-19248

RIGID STRUCTURES

Crashdynamics with DYNA3D: Capabilities and research directions p 1460 N94-19475

RING CURRENTS

Penetrating radiation environment and effects study
[AD-A270126] p 1485 N94-18874

RINGS (MATHEMATICS)

Stabilization of time-delay systems: An overview of the algebraic approach
[PB93-191989] p 1553 N94-19556

RISK

Indoor environment program
[DE93-018601] p 1513 N94-18935

Uncertainty versus interindividual variability
[DE93-018105] p 1559 N94-19549

RIVERS

The ecological and environmental impacts of manmade marshes
[AD-A269213] p 1475 N94-18885

RIVETED JOINTS

Fatigue crack initiation in riveted lap joints and in pressurized fuselages
[LR-725] p 1461 N94-19669

ROBOT CONTROL

Efficient dynamic modeling of manipulators containing closed kinematic loops
[REPT-92-083] p 1444 N94-17940

Autonomous neural network controllers for adaptive material handling
[AD-A268908] p 1540 N94-18331

Flexible integration of path-planning capabilities
[AD-A269594] p 1541 N94-18463

MART: An overview of the Mobile Autonomous Robot Twente project
[MEMO-INF-93-12] p 1543 N94-19199

Robot navigation in unknown terrains: Introductory survey of non-heuristic algorithms
[DE93-019221] p 1316 N94-19300

ROBOT DYNAMICS

Joint stiffness estimation based on force sensor measurements in industrial manipulators
[REPT-92-053] p 1443 N94-17937

Direct kinematics solution architectures for industrial robot manipulators: Bit-serial versus parallel
p 1399 N94-18358

Survey of collision avoidance and ranging sensors for mobile robots, revision 1
[AD-A269846] p 1541 N94-18474

ROBOT SENSORS

MART: An overview of the Mobile Autonomous Robot Twente project
[MEMO-INF-93-12] p 1543 N94-19199

Automated rendezvous and capture demonstration study
[NASA-CR-192587] p 1331 N94-19366

ROBOTICS

Magnetostrictive actuators for human sensory feedback
[AD-A269266] p 1511 N94-17841

Joint stiffness estimation based on force sensor measurements in industrial manipulators
[REPT-92-053] p 1443 N94-17937

Autonomous neural network controllers for adaptive material handling
[AD-A268908] p 1540 N94-18331

Survey of collision avoidance and ranging sensors for mobile robots, revision 1
[AD-A269846] p 1541 N94-18474

Robotics
[NASA-TM-109351] p 1332 N94-18920

ROBOTS

An object-oriented environment for computer vision and pattern recognition
[DE93-017098] p 1517 N94-17867

Joint stiffness estimation based on force sensor measurements in industrial manipulators
[REPT-92-053] p 1443 N94-17937

Flexible integration of path-planning capabilities
[AD-A269594] p 1541 N94-18463

Survey of collision avoidance and ranging sensors for mobile robots, revision 1
[AD-A269846] p 1541 N94-18474

Robotics
[NASA-TM-109351] p 1332 N94-18920

Adaptive path planning: Algorithm and analysis
[DE93-008348] p 1523 N94-18926

Geometrical pattern learning
[DE93-017641] p 1542 N94-19007

MART: An overview of the Mobile Autonomous Robot Twente project
[MEMO-INF-93-12] p 1543 N94-19199

Robot navigation in unknown terrains: Introductory survey of non-heuristic algorithms
[DE93-019221] p 1316 N94-19300

ROBUSTNESS (MATHEMATICS)

An overview of the SAFSIM computer program
[DE93-017657] p 1519 N94-18002

Non Linear Dynamics and Chaos
[AGARD-LS-191] p 1607 N94-18236

Robustness and efficiency of generalized predictive control algorithms with guaranteed stability
[MATHS-REPT-A-190] p 1530 N94-19412

Fault-tolerance and complexity
[TR-450] p 1530 N94-19483

Use of shape memory alloys in the robust control of smart structures
[AD-A270827] p 1366 N94-19594

A learning autopilot for automatically controlled robust regulation
[ETN-93-95075] p 1321 N94-19711

A real-time spoken-language system for interactive problem-solving, combining linguistic and statistical technology for improved spoken language understanding
[AD-A270901] p 1392 N94-19749

ROCK MECHANICS

Ground movements associated with gas hydrate production
[DE93-019887] p 1486 N94-19018

ROCKET ENGINE CONTROL

FNAS/summer faculty fellowship research continuation program. Task 6: Integrated model development for liquid fueled rocket propulsion systems. Task 9: Aspects of model-based rocket engine condition monitoring and control
[NASA-CR-194574] p 1338 N94-19706

ROCKET ENGINES

KINETIC: A system code for analyzing Nuclear thermal propulsion rocket engine transients
[DE93-016825] p 1337 N94-17884

Adaptations to micropep and rocket to allow performance evaluation of multiple grain and/or airbreathing motors
[AD-A268798] p 1337 N94-18202

ROCKET EXHAUST

UVPI imaging from the LACE satellite: The Nihka rocket plume
[AD-A268456] p 1334 N94-18149

Ultraviolet plume instrument calibration and sensor assessment
[AD-A269687] p 1337 N94-18574

JPRS report: Science and technology. Central Eurasia: Earth Sciences
[JPRS-UES-93-004] p 1461 N94-19209

ROCKET NOZZLES

Analysis of film cooling in rocket nozzles
[NASA-CR-194674] p 1338 N94-19438

ROCKET OXIDIZERS

Aluminum powder/water reaction ignited by electrical pulsed power
[AD-A269223] p 1376 N94-17840

ROCKET PROPELLANTS

Some problems in the rheological characterisation of composite rocket propellants
[AD-A268806] p 1376 N94-18203

New test method to determine modulus of elasticity of rocket grain material
[AD-A269758] p 1377 N94-18758

ROCKWELL HARDNESS

Thermal insulation of wet shielded metal arc welds
[AD-A268697] p 1445 N94-18465

RODS

A finite strain ring dynamical model for pneumatic tires
[AD-A269286] p 1444 N94-18266

The influence of the target strength model on computed perforation
[DE93-018659] p 1460 N94-19543

ROLLING CONTACT LOADS

Measuring methods for evaluation of dynamic tyre properties
[ETN-93-95054] p 1381 N94-19650

ROOM TEMPERATURE

New room temperature high resolution solid-state detector (CdZnTe) for hard x rays and gamma rays
p 1324 N94-19165

ROSAT MISSION

Rosat and optical observations of two X-ray transients: MX 0836-42 and GS 0834-430
[MPE-PREPRINT-237] p 1622 N94-19451

ROSAT and IRAS observations
[MPE-PREPRINT-231] p 1623 N94-19526

ROSAT X ray observation of the 30 Dor giant HII region p 1623 N94-19527

IRAS galaxies observed in the ROSAT survey: Starbursts or central activity p 1623 N94-19528

Particle induced background by Roentgen satellites
[MPE-242] p 1631 N94-19714
Stellar coronae at the end of the main sequence: A Rosat survey of the late M dwarfs
[NASA-CR-194700] p 1628 N94-19794

ROTARY WINGS
Aerodynamic characteristics of a helicopter rotor airfoil as affected by simulated ballistic damage
[AD-A269206] p 1311 N94-18413
Blade and hub loads of ballistically damaged helicopter rotors
[AD-A270663] p 1319 N94-19781

ROTATING BODIES
Applications of neural networks in fault detection of rotating machinery
[AD-A270755] p 1448 N94-19766

ROTATING SHAFTS
Fluid dynamometer having fluid characteristic power absorption adjustment capability
[AD-D015820] p 1424 N94-17904

ROTATION
Theoretical study and modelling of homogeneous turbulence under rotation for implantation in a code for solving Navier-Stokes equations
[ECL-93-05] p 1420 N94-19381
Cognitive ability and whole-body rotation
[IZF-1993-B-4] p 1510 N94-19440

ROTORS
A survey on technical problems in designing high-speed rotors with developing materials
[DE93-788519] p 1444 N94-18159
Some problems in the rheological characterisation of composite rocket propellants
[AD-A268806] p 1376 N94-18203

ROUTES
Airport activity statistics of certificated route air carriers, 1992
[AD-A269042] p 1315 N94-18490

RULES
Better termination analysis for active databases
[REPT-93-026] p 1614 N94-18144

RUNGE-KUTTA METHOD
Numerical calculations of high lift flows using structured and unstructured methods p 1307 N94-18428
An algebraic turbulence model for turbomachinery
p 1411 N94-18554

RURAL AREAS
Spatiotemporal variability of non-urban ozone concentrations over the eastern United States and its potential replication by satellite data
[PB93-191328] p 1476 N94-19065

S

S MATRIX THEORY
Polarimetric statistics of electromagnetic waves scattered by distributed targets
[PB93-195907] p 1389 N94-18951

S WAVES
The phase mixing of shear Alfven waves
[DE93-624920] p 1581 N94-17688
Constraints on crustal structure from long period pressure and displacement measurements on the deep seafloor
[AD-A269931] p 1498 N94-18663
Seismic studies of the geologic structure and physical properties of the seabed
[AD-A270895] p 1500 N94-19747

S-N DIAGRAMS
Factors which affect fatigue strength of fasteners
[DE93-017272] p 1453 N94-18084

SAFETY
SUNRAYCE 1993: Working safely with lead-acid batteries and photovoltaic power systems
[DE93-016553] p 1464 N94-17712
Safety-routines and guidelines for work in the clean room at the Epitek-Laboratory, Kjeller (Norway)
[FFI-93/7012] p 1322 N94-17735
Laboratory test and evaluation report of the essex model 60C-0037-2 molecular sieve oxygen generating system
[AD-A269967] p 1445 N94-18778

SAFETY DEVICES
Solid-state, resistive hydrogen sensors for safety monitoring
[DE93-017769] p 1424 N94-17778
Army Cockpit Delethalization Program (CDP)
[AD-A268990] p 1512 N94-18765
Plasma contactor development for Space Station
[NASA-TM-106425] p 1587 N94-18861

SAFETY MANAGEMENT
Safety approaches for high power modular laser operation
[DE93-017213] p 1435 N94-17759
Human reliability analysis application guide
[DE93-015361] p 1511 N94-18244

SALINITY
CTD and XBT data collected on ERS-1 validation cruise RRS Charles Darwin Cruise 62A, Iceland-Faeroes region
[IOS-294-1992] p 1461 N94-18063
SeaSoar and CTD sections across the Iceland-Faeroes Front and Faeroe Shetland Channel, August 1990
[IOS-295-1992] p 1496 N94-18064
SeaSoar CTD, fluorescence and scalar irradiance data from RRS Charles Darwin Cruises 58/59, NE Atlantic, Vivaldi 1991
[IOS-299-1992] p 1496 N94-18066
Synoptic ocean prediction experiment. EN216 CTD section data report
[AD-A268903] p 1497 N94-18230
Overview of physical oceanographic measurements taken during the Mount Mitchell cruise to ROPME sea area
[DE93-018460] p 1497 N94-18494

SALTS
Mechanical modeling of the growth of salt structures
[DE93-015342] p 1596 N94-18243

SAMPLED DATA SYSTEMS
High accuracy switched-current circuits using an improved dynamic mirror p 1401 N94-18368

SAMPLERS
Novel mass spectrometric instrument for gaseous and particulate characterization and monitoring
[DE93-019992] p 1433 N94-19054

SAMPLES
Practical reporting times for environmental samples
[DE93-013461] p 1472 N94-17910

SAMPLING
Practical reporting times for environmental samples
[DE93-013461] p 1472 N94-17910
Bayesian analysis of ARMA processes: Complete sampling based inference under full likelihoods
[AD-A269168] p 1557 N94-18694
Ultrafast Electronics and Optoelectronics: Summaries of papers. Technical digest conference edition
[AD-A269233] p 1405 N94-18909

SAN ANDREAS FAULT
Heterogeneous slip and rupture models of the San Andreas fault zone based upon three-dimensional earthquake tomography
[DE93-015037] p 1480 N94-17898
Analysis of regional deformation and strain accumulation data adjacent to the San Andreas fault
[NASA-CR-194072] p 1487 N94-19428

SANDS
Centrifuge modeling of explosion-induced craters in unsaturated sand
[AD-A270194] p 1417 N94-18780

SANDWICH STRUCTURES
Packaging, deployment, and panel design concepts for a truss-stiffened 7-panel precision deployable reflector with feed boom
[NASA-TM-109000] p 1333 N94-17765

SANITATION
Research activities, Faculty of Civil Engineering, Delft University of Technology, 1990 - 1991
[PB93-195022] p 1380 N94-19254

SAPPHIRE
Experimental investigation of wave and fracture phenomena in impacted ceramics: Experiments on sapphire
[AD-A270040] p 1372 N94-18792
Multi-terrawatt, 100 fsec laser system using flashlamp-pumped, dye-converted Ti:sapphire as an amplifier
[DE93-017190] p 1440 N94-18889
Surface modification of sapphire for IR window application
[DE93-019168] p 1602 N94-19075

SARSAT
High efficiency low cost monolithic module for SARSAT distress beacons
[NASA-CR-194234] p 1315 N94-18852

SATELLITE ANTENNAS
Missile antenna pattern coordinate system and data formats
[AD-A269153] p 1385 N94-18260

SATELLITE ATTITUDE CONTROL
The star identification, pointing and tracking system of UVSTAR, an attached payload instrument system for the Shuttle Hitchhiker-M platform p 1326 N94-19179

SATELLITE COMMUNICATION
Radio wave propagation in structured ionization for satellite and radar applications
[AD-A268457] p 1382 N94-17844
Direct solar pumping of semiconductor lasers: A feasibility study
[NASA-CR-193760] p 1440 N94-18834

SATELLITE CONTROL
CONTACT: An Air Force technical report on military satellite control technology
[AD-A269375] p 1334 N94-18408
Corporate Information Management (CIM) report on the simulation processes, version 2.0
[AD-A269119] p 1617 N94-18770

SATELLITE IMAGERY
Ship-produced cloud line of 13 July 1991
[DE93-016879] p 1472 N94-17986
Application of fractal methods to estimate the aerosol-optical depth for atmospheric correction of high resolution satellite data
[DLR-FB-93-04] p 1480 N94-18088
Three-dimensional cloud visualization based on satellite imagery
[AD-A269318] p 1490 N94-18300
The Navy tessellated spheroid map projection system: A comprehensive definition
[AD-A269989] p 1462 N94-18677
Ozone hole
[NASA-TM-109368] p 1476 N94-18960
Mathematical modeling of the free surface hydrodynamic and of transport in suspensions of non cohesive sediments: Aid to the interpretation of spatial images
[ETN-93-95011] p 1421 N94-19502

SATELLITE INSTRUMENTS
Experience with custom processors in space flight applications p 1336 N94-18338
Ultraviolet plume instrument calibration and sensor assessment
[AD-A269687] p 1337 N94-18574

SATELLITE NETWORKS
CONTACT: An Air Force technical report on military satellite control technology
[AD-A269375] p 1334 N94-18408

SATELLITE OBSERVATION
Current positioning possibilities by spatial techniques and the Royal Oservatory of Belgium program
p 1483 N94-18627
Modifications of airborne oceanographic lidar for the long range P-3 missions
[NASA-CR-194682] p 1499 N94-18819
Development of ISY data set, part 2
[NASDA-CNT-930006-PT-2] p 1463 N94-19384
SeaTrack: Ground station orbit prediction and planning software for sea-viewing satellites
[NASA-RP-1331] p 1532 N94-19761

SATELLITE SOUNDING
Verification of 3I retrievals vis-a-vis radiosonde observations
[KNMI-TR-150] p 1488 N94-17924
Some potential errors in satellite wind estimates using the geostrophic approximation and the thermal wind
[AD-A269784] p 1491 N94-18599

SATELLITE TRACKING
CONTACT: An Air Force technical report on military satellite control technology
[AD-A269375] p 1334 N94-18408
Parallelization of the Air Force Space Command (AFSPACECOM) satellite motion models
[AD-A269327] p 1334 N94-18470

SATELLITE-BORNE PHOTOGRAPHY
JPRS report: Central Eurasia. Aviation and cosmonautics, no. 1, January 1993
[JPRS-UAC-93-007] p 1632 N94-19147

SATURN 5 LAUNCH VEHICLES
Technology test bed
[NASA-TM-109354] p 1322 N94-18953

SCALARS
On a conformal perfect fluid in the classical vacuum
[DE93-624797] p 1480 N94-17682
Texture splats for 3D vector and scalar field visualization
[DE93-017104] p 1520 N94-18130

SCALE EFFECT
An experimental investigation of attachment-line transition on the slat of a combat aircraft model
p 1308 N94-18432

SCALE MODELS
The application of nondestructive techniques to the testing of a wind turbine blade
[DE93-016731] p 1447 N94-18128
A study of the use of half-models in high-lift wind-tunnel testing p 1308 N94-18434

SCALING LAWS
Scaling laws for diffraction loading by air blast
[PML-1991-54] p 1452 N94-17941
Analysis of the ITER H-mode confinement database
[DE93-016984] p 1585 N94-18056
Scaling laws for diamond chemical vapor deposition. 2: Atomic hydrogen transport
[AD-A269842] p 1371 N94-18740
Scaling laws for diamond chemical vapor deposition. Diamond surface chemistry
[AD-A269874] p 1599 N94-18745
Centrifuge modeling of explosion-induced craters in unsaturated sand
[AD-A270194] p 1417 N94-18780

SCANNING ELECTRON MICROSCOPY
Applications of scanning tunneling microscopy to electrochemistry
[AD-A269129] p 1348 N94-18255
Thin film studies of the proximity Josephson effect
[AD-A270129] p 1600 N94-18876
Atomic resolution electron energy loss spectroscopy in the scanning transmission electron microscope
[DE93-015334] p 1352 N94-19239
Microtribology of magnetic media
[AD-A271209] p 1407 N94-19722
SCANNING TUNNELING MICROSCOPY
Applications of scanning tunneling microscopy to electrochemistry
[AD-A269129] p 1348 N94-18255
Tunneling spectroscopy of ultrasmall clusters and grains
[AD-A268840] p 1598 N94-18539
Thin film studies of the proximity Josephson effect
[AD-A270129] p 1600 N94-18876
SCATTER PROPAGATION
BACKSCATTER.FOR: A program to calculate the backscattering strength of an inhomogeneous seabed
[AD-A269235] p 1499 N94-18910
SCATTERING
Optical properties of redispersed iron fibers measured at 94 GHz
[AD-A269738] p 1342 N94-18756
Analytic approximations of an integral in remote sensing
[AD-A270085] p 1463 N94-18800
Research in high energy physics
[DE93-018031] p 1575 N94-19287
SCATTERING AMPLITUDE
Lectures of Fermi liquid theory
[DE93-016630] p 1592 N94-17714
First and second order Stokes generation by SRS in methane: Influence of rep-rate, beam quality and astigmatism
[FEL-92-A125] p 1441 N94-19426
SCATTERING COEFFICIENTS
Analysis of meteorological conditions during AGASP-4: 30 March - 23 April 1992
[PB93-190205] p 1489 N94-18126
SCATTERING CROSS SECTIONS
Criticality benchmark comparisons leading to cross-section upgrades
[DE93-017184] p 1556 N94-18073
SCATTERING FUNCTIONS
Forward scattering of a pulsed continuous wave signal through laminar and turbulent thermal plumes
[AD-A271210] p 1564 N94-19723
SCATTEROMETERS
Theoretical and experimental research on coherent microwave backscatter from the ocean
[AD-A271276] p 1500 N94-19743
SCHEDULES
Using controlled daylight exposure and sleep timing in the prevention of shift lag during night operations
[AD-A269304] p 1504 N94-17824
SCHEDULING
Shop problems with two machines and time lags
[REPT-93-020] p 1518 N94-17927
PRACTICAL: Planning and resource allocation in C2-domains with time critical algorithms
[FEL-93-B029] p 1544 N94-19458
SCHOOLS
Undergraduate origins of recent science and engineering doctorate recipients
[NSF-92-332] p 1610 N94-19389
Undergraduate course and curriculum development program and calculus and the bridge to calculus program: 1992 awards
[NSF-93-24] p 1610 N94-19446
SCHROEDINGER EQUATION
Variable time-step integration for intense field effects
[DE93-013296] p 1382 N94-17909
Impulsive moving mirror model in a Schroedinger picture with impulse effect in a Banach space
[DE93-629864] p 1561 N94-18155
Asymptotic behaviour of the solutions of Schroedinger equation with impulse effect in a Banach space
[DE93-629865] p 1548 N94-18195
Impulsive moving mirror model and the stability of Schroedinger equation with impulse effect in a Banach space
[DE93-629866] p 1548 N94-18196
Impulsive moving mirror model and impulsive differential equations in Banach space
[DE93-629867] p 1549 N94-18197
A hydrogen atom in the curved space. Expansion over free solutions on the three-dimensional sphere
[DE93-629868] p 1549 N94-18198
The rise of accuracy for the multichannel scattering problem solving
[DE93-630145] p 1608 N94-18253
Schroedinger's hope
[AD-A270988] p 1581 N94-19772
SCIENCE
A foundation for the 21st Century: A progressive framework for the National Science Foundation. Report of the National Science Board Commission on the future of the National Science Foundation
[NSB-92-196] p 1611 N94-19618
SCIENTIFIC SATELLITES
Space debris detection
[AD-A269254] p 1334 N94-18264
SCIENTIFIC VISUALIZATION
Texture splats for 3D vector and scalar field visualization
[DE93-017104] p 1520 N94-18130
An evolving infrastructure for scientific computing and the integration of new graphics technology
[DE93-017164] p 1520 N94-18133
Three-dimensional cloud visualization based on satellite imagery
[AD-A269318] p 1490 N94-18300
VHDL simulation with access to transistor models
p 1402 N94-18381
3D composite grids using Bezier curves and surfaces in component adaptive methods
[AD-A269188] p 1549 N94-18863
A visualization environment for supercomputing-based applications in computational mechanics
[DE93-015024] p 1537 N94-19249
Volume rendering of 3D scalar and vector fields at Lawrence Livermore National Laboratory
[DE93-018000] p 1528 N94-19276
SCIENTISTS
Magnetic Fusion Energy Technology Fellowship: Report on survey of institutional coordinators
[DE93-014646] p 1583 N94-17739
Origins of solar activity. First year report, AASERT grant
[AD-A268848] p 1629 N94-18222
Computing professionals: Changing needs for the 1990's
[B-030] p 1515 N94-19401
SCINTILLATION
Radio wave propagation in structured ionization for satellite and radar applications
[AD-A268457] p 1382 N94-17844
An investigation of methods for updating ionospheric scintillation models using topside in-situ plasma density measurements
[AD-A269872] p 1483 N94-18655
Precision machining and polishing of scintillating crystals for large calorimeters and hodoscopes
[DE93-018663] p 1381 N94-19544
SCINTILLATION COUNTERS
An investigation of methods for updating ionospheric scintillation models using topside in-situ plasma density measurements
[AD-A269872] p 1483 N94-18655
Conversion of ADC pulse heights into MIP units: NUMASS test data, September 1991
[USIP-93-03] p 1432 N94-18846
SSC detector muon sub-system beam tests
[DE93-018415] p 1569 N94-19013
New room temperature high resolution solid-state detector (CdZnTe) for hard x rays and gamma rays
p 1324 N94-19165
Telescope for x ray and gamma ray studies in astrophysics p 1324 N94-19166
SEA FLOOR SPREADING
Constraints on crustal structure from long period pressure and displacement measurements on the deep seafloor
[AD-A269931] p 1498 N94-18663
SEA ICE
Atlas of SSM/I satellite ice concentration interpolated to operational ice model domains of the Arctic for 1992
[AD-A270306] p 1499 N94-18727
Method for extracting tidal and inertial motion from ARGOS ice buoys applied to the Barents Sea during CEAREX
[PB93-190213] p 1499 N94-19063
Oil spreading in surface waters with an ice cover
[PB93-190767] p 1476 N94-19064
Airborne studies of ocean-particle-cloud interactions in the Arctic
[AD-A270752] p 1479 N94-19575
SEA LEVEL
Research on Earth's rotation and the effect of atmospheric pressure on vertical deformation and sea level variability
[NASA-CR-194300] p 1484 N94-18838
The WAQUA/CSM-16 model p 1494 N94-19700
SEA SURFACE TEMPERATURE
Effect of spatial resolution on the simulation of regional precipitation in China in a global climate model
[DE93-013433] p 1489 N94-18053
SeaSoar CTD, fluorescence and scalar irradiance data from RRS Charles Darwin Cruises 58/59, NE Atlantic, Vivaldi 1991
[IOS-299-1992] p 1496 N94-18066
SEALING
Joining and Adhesion of Advanced Inorganic Materials Symposium
[AD-A269748] p 1342 N94-18720
SEARCH PROFILES
Software Toolkit for Analysis Research (STAR)
[DE93-017368] p 1519 N94-18086
SEARCHING
Finding the strong components in a directed graph
[PB93-187342] p 1555 N94-19708
SEAS
An atlas of bathy-thermograph temperature cross-sections for Coral and Tasman Sea transects from 1960 to 1987
[AD-A268775] p 1497 N94-18329
Overview of physical oceanographic measurements taken during the Mount Mitchell cruise to ROPME sea area
[DE93-018460] p 1497 N94-18494
SeaTrack: Ground station orbit prediction and planning software for sea-viewing satellites
[NASA-RP-1331] p 1532 N94-19761
SEASONS
CTD oxygen, tracer and nutrient data from RRS Charles Darwin Cruises 58/59 in the NE Atlantic as part of Vivaldi 1991
[IOS-296-1992] p 1496 N94-18065
SEAT BELTS
Numerical simulation of vehicle crashworthiness and occupant protection p 1459 N94-19471
Efficiency and biofidelity of occupant simulations
p 1459 N94-19473
SEATS
Analysis of seating and restraint limitations restricting total body weight for aircrew and passengers on US Army helicopters
[AD-A269117] p 1511 N94-18296
Army Cockpit Delethalization Program (CDP)
[AD-A268990] p 1512 N94-18765
SECONDARY FLOW
STREMR: Numerical model for depth-averaged incompressible flow
[AD-A269949] p 1417 N94-18672
SECONDARY ION MASS SPECTROMETRY
Ultra-shallow box-like profiles fabricated by pulsed UV-laser doping process
[DE93-017221] p 1437 N94-18083
Research program activities of the ORNL Analytical Chemistry Division
[DE93-017938] p 1339 N94-19117
SECURITY
Automated assistance for detecting malicious code
[DE93-018106] p 1523 N94-18943
SEDIMENT TRANSPORT
Mathematical modeling of the free surface hydrodynamic and of transport in suspensions of non cohesive sediments: Aid to the interpretation of spatial images
[ETN-93-95011] p 1421 N94-19502
SEDIMENTARY ROCKS
Shock propagation in crustal rock
[AD-A270148] p 1485 N94-18899
SEDIMENTS
Three-dimensional high-resolution seismic profiling on the New Jersey outer continental shelf
[AD-A269835] p 1498 N94-18600
Carbon Isotope Biogeochemistry of Methane from Anoxic Sediments
[NASA-CR-194620] p 1477 N94-19231
A carbon isotope mass balance for an anoxic marine sediment: Isotopic signatures of diagenesis
p 1477 N94-19232
The carbon isotope biogeochemistry of (epsilon)CO2 production in a methanogenic marine sediment
p 1477 N94-19233
The carbon isotope biogeochemistry of methane production in anoxic sediments. 1: Field observations
p 1477 N94-19234
Factors that control the stable carbon isotopic composition of methane produced in an anoxic marine sediment p 1477 N94-19235
Gravity and the geoid in the Nepal Himalaya
[NASA-CR-194166] p 1463 N94-19430
Mathematical modeling of the free surface hydrodynamic and of transport in suspensions of non cohesive sediments: Aid to the interpretation of spatial images
[ETN-93-95011] p 1421 N94-19502
Faulted structure of the bottom simulating reflector on the Blake Ridge, western North Atlantic
[AD-A271289] p 1500 N94-19745

SEISMIC ENERGY

Analysis of regional bodywave phases from earthquakes in western China, part 2
[AD-A270125] p 1485 N94-18873

SEISMIC WAVES

Generalized seismic analysis p 1449 N94-17832

A comparison of single-station backazimuth estimates with regional event locations in the Central Appalachians
[AD-A269897] p 1483 N94-18690

Wave propagation near explosive sources
[AD-A270102] p 1418 N94-18870

Analysis of regional bodywave phases from earthquakes in western China, part 2
[AD-A270125] p 1485 N94-18873

Fast iterative solution of sparsely sampled seismic inverse problems
[REPT-93-16] p 1486 N94-19081

Transmission of acoustic waves through strongly heterogeneous, two-dimensional velocity models
[REPT-93-09] p 1563 N94-19083

Inverse scattering of surface waves: A new look at surface consistency
[REPT-93-25] p 1486 N94-19140

An iterative inverse scattering method for the removal of scattered surface waves
[REPT-93-18] p 1488 N94-19644

Analysis of data from Columbia Point Arena Ocean-Bottom Seismic Station (OBSS)
[AD-A271263] p 1500 N94-19727

SEISMOGRAMS

Analysis of regional bodywave phases from earthquakes in western China, part 2
[AD-A270125] p 1485 N94-18873

SEISMOGRAPHS

Analysis of regional bodywave phases from earthquakes in western China, part 2
[AD-A270125] p 1485 N94-18873

SEISMOLOGY

Generalized seismic analysis p 1449 N94-17832

Constructing a reference event list for ARCESS
[AD-A269288] p 1481 N94-18297

High resolution geological site characterization utilizing ground motion data
[AD-A268926] p 1481 N94-18485

Belgian Royal Observatory Communications, Series A, No. 104, Geophysics Series No. 175
[COMMUNICATIONS-SER-A-104] p 1482 N94-18622

Historical seismicity of Hainaut, Flanders and Artois
p 1482 N94-18623

Current (1985-1988) seismic activity in Belgium: Comparison with historical and instrumental seismic data
p 1482 N94-18624

Macroseismic study of the Dour (Belgium) earthquakes of 22 March 1987 and of Gulpen (Belgium) 17 October 1988 p 1482 N94-18625

Current positioning possibilities by spatial techniques and the Royal Oservatory of Belgium program
p 1483 N94-18627

The use of velocity spectra for stacking receiver functions with application to IRIS/IDA stations OBNINSK (OBN) and ARTI (ARU), Russia
[AD-A269087] p 1483 N94-18717

Analysis of regional deformation and strain accumulation data adjacent to the San Andreas fault
[NASA-CR-194072] p 1487 N94-19428

The interpretation of crustal dynamics data in terms of plate motions and regional deformation near plate boundaries
[NASA-CR-194302] p 1487 N94-19432

Seismic studies of the geologic structure and physical properties of the seabed
[AD-A270895] p 1500 N94-19747

SELECTIVE DISSEMINATION OF INFORMATION

NASA aeronautics: Protecting sensitive technology. Report to Congressional requesters
[GAO/NSIAD-93-201] p 1617 N94-18848

Inventory management plan for a research and development local area network
[DE93-018381] p 1617 N94-19026

Secure open systems: An investigation of current standardisation efforts for security in open systems
[FEL-92-B225] p 1618 N94-19450

Secure open systems: An investigation
[FEL-91-B293] p 1619 N94-19454

Computer security. Evolutions 1987 to 1992: Trends and perspectives
[RR-905-I] p 1532 N94-19713

SELECTIVE SURFACES

Development of a selective volumetric receiver for central receiver systems: Investigation of parameters and exergetic evaluation
[DLR-FB-93-05] p 1465 N94-18089

SELECTIVITY

Stimulus-driven capture and attentional set: Selective search for color and visual abrupt onsets
[IZF-1992-B-9] p 1509 N94-19419

SELF CONSISTENT FIELDS

Polaron tunneling in high-temperature superconductors
[DE93-016880] p 1593 N94-17754

Overview of WARP: A particle code for heavy ion fusion
[DE93-018637] p 1588 N94-19034

SELF FOCUSING

Singularities and symmetries of nonlinear ordinary and partial differential equations
[DE93-040083] p 1550 N94-19190

SELF ORGANIZING SYSTEMS

Application of the network discriminant function to learning
[AD-A268793] p 1540 N94-18189

Competitive dynamics and self-organization in photorefractive systems
[AD-A269663] p 1430 N94-18569

SELF OSCILLATION

Quasi-optical transponder using FET's and patch antennas
[AD-A271339] p 1407 N94-19584

SEMANTICS

Using semantic information for processing negation and disjunction in logic programs
[DE93-017412] p 1614 N94-18099

Navigation in hypermedia applications: Modelling and semantics
[REPT-93-034] p 1520 N94-18136

Asynchronous rendezvous in the presence of backtracking
[PB93-197739] p 1524 N94-19062

Axiomatization, declarative semantics and operational semantics of passive and active updates in logic databases
[PB93-195956] p 1618 N94-19067

The TM typing rules
[MEMO-INF-92-80] p 1526 N94-19222

Attribute evaluation during generalized parsing
[MEMO-INF-92-85] p 1526 N94-19224

Action systems and action refinement in the development of parallel systems: An algebraic approach
[MEMO-INF-93-14] p 1538 N94-19296

A language of finite probabilistic processes and its interleaving semantics
[MEMO-INF-93-24] p 1558 N94-19354

Non-well-foundedness and type freeness can unify the interpretation of functional application
[PB93-191849] p 1560 N94-19710

Semantic models for distributed data base management. Part 2: Development of an integral meta-model for data modeling and data base modeling
[REPT-93-08-PT-2] p 1620 N94-19795

SEMICONDUCTOR DEVICES

Joint services electronics program
[AD-A269383] p 1403 N94-18638

Recent developments in fast response aerodynamic probe technology p 1431 N94-18645

Optoelectronic packaging: A review
[DE93-040059] p 1515 N94-19535

A comparison of iterative methods for a model coupled system of elliptic equations
[DE93-040482] p 1553 N94-19655

SEMICONDUCTOR DIODES

Laser imaging radar system
[AD-A270436] p 1387 N94-18510

SEMICONDUCTOR JUNCTIONS

Ultra-shallow box-like profiles fabricated by pulsed UV-laser doping process
[DE93-017221] p 1437 N94-18083

SEMICONDUCTOR LASERS

Pulsed LASER for testing silicon strip detectors
[DE93-017816] p 1436 N94-17883

Advanced optical fiber communication systems
[AD-A269120] p 1577 N94-18254

Laser imaging radar system
[AD-A270436] p 1387 N94-18510

Ultrafast Electronics and Optoelectronics: Summaries of papers. Technical digest conference edition
[AD-A269233] p 1405 N94-18909

Evaluation of laser diode based optical switches for optical processors
[AD-A270949] p 1581 N94-19602

Experimental examinations of semiconductor laser amplifiers for optical communication technology
[ETN-93-95050] p 1442 N94-19647

SEMICONDUCTORS (MATERIALS)

Design and test of a low jitter metal to metal contact solid dielectric switch
[DE93-016957] p 1394 N94-17755

Lattice damage in ion-implanted compound semiconductors and its effect on electrical activation
[DE93-015907] p 1593 N94-17845

Feasibility survey of thermoelectric conversion technology using semiconductors
[DE93-520882] p 1595 N94-18105

Experimental and theoretical investigation of surface chemistry induced by direct and indirect electronic excitation
[AD-A268846] p 1348 N94-18221

Superconducting/semiconducting hybrids and advance memory concepts for superconducting electronics
[AD-A268679] p 1397 N94-18312

Gallium arsenide-based ternary compounds and multi-band-gap solar cell research
[DE93-010049] p 1467 N94-18483

Optical and transport properties of metallic and semiconductor nanostructures
[AD-A270009] p 1598 N94-18609

In-situ growth monitoring of molecular beam epitaxy processes
[AD-A269287] p 1598 N94-18616

Integration of ferroelectric/semiconductor thin films for SLM and photorefractive applications
[AD-A268645] p 1598 N94-18633

Joint services electronics program
[AD-A269383] p 1403 N94-18638

Photodetector array having high pixel density
[AD-D015859] p 1432 N94-18731

Tunneling microscopy of semiconductors
[AD-A270232] p 1600 N94-18904

Ultrafast Electronics and Optoelectronics: Summaries of papers. Technical digest conference edition
[AD-A269233] p 1405 N94-18909

Growth of epitaxial semiconductor alloys and superlattices with continuously variable composition by pulsed-laser ablation
[DE93-018726] p 1601 N94-18998

X ray studies of microstructures in semiconductor and superconducting materials
[DE93-040690] p 1601 N94-19056

Radiation hardened microprocessor for small payloads
p 1327 N94-19184

A comparison of iterative methods for a model coupled system of elliptic equations
[DE93-040482] p 1553 N94-19655

The deposition of electro-optic films on semiconductors
[AD-A270823] p 1605 N94-19664

Solid-state dynamics in novel semiconductor nanostructures
[AD-A271249] p 1605 N94-19725

Single source precursors for the OMCVD of 3/5 compound semiconductors
[AD-A271147] p 1606 N94-19739

Nanofabrication by focused ion beam
[AD-A271290] p 1345 N94-19746

Polarized optical emission due to decay or recombination of spin-polarized injected carriers
[AD-D015907] p 1408 N94-19763

MOCVD-grown InGaAsP heterostructure diode lasers
[AD-A270848] p 1606 N94-19769

SEMISPAN MODELS

Semi-span model testing in the National Transonic Facility
[NASA-CR-194479] p 1312 N94-19388

SENSITIVITY

Scale sensitivity in the multiplicative AHP and SMART
[REPT-93-37] p 1611 N94-19157

Round robin experiments on the Explosive Components Water Gap Test (ECWGT)
[PML-1992-69] p 1378 N94-19445

SENSORS

Solid-state, resistive hydrogen sensors for safety monitoring
[DE93-017769] p 1424 N94-17778

SENSORY FEEDBACK

Magnetostrictive actuators for human sensory feedback
[AD-A269266] p 1511 N94-17841

SENSORY PERCEPTION

The clocks and the perception of time in the 18th century society p 1424 N94-18007

About time p 1426 N94-18024

Somatosensory responsiveness in behaving monkeys and human subjects
[AD-A268924] p 1501 N94-18231

Comparing performance on implicit memory tests
[AD-A269900] p 1508 N94-18657

SENSORY STIMULATION

Effects of practice in selecting and executing keypressing sequences
[IZF-1992-B-10] p 1509 N94-19420

SENTENCES

Non-well-foundedness and type freeness can unify the interpretation of functional application
[PB93-191849] p 1560 N94-19710

SEPARATED FLOW

Numerical solution of the Navier-Stokes equations for high-lift configurations on structured composite grids
p 1306 N94-18423

A viscous-inviscid solver for high-lift incompressible flows over multi-element airfoils at deep separation conditions p 1306 N94-18425
Viscous-inviscid calculation of high-lift separated compressible flows over airfoils and wings
p 1309 N94-18440
Correlation of incoming boundary layer pitot pressure fluctuations with the unsteadiness of fin-induced shock wave turbulent boundary layer interactions
[AD-A270059] p 1417 N94-18796
Interferometric investigations of compressible dynamic stall over a transiently pitching airfoil
[NASA-TM-109380] p 1312 N94-19119

SEQUENCING
Shop problems with two machines and time lags
[REPT-93-020] p 1518 N94-17927
Matrix- and substrate-assisted laser desorption for fast DNA sequencing
[DE93-015332] p 1501 N94-18242

SEQUENTIAL CONTROL
Motorola MC68040 high-speed design using Altera EPM5000 erasable programmable logic devices
[DE93-017635] p 1523 N94-19006

SERIES (MATHEMATICS)
Time dependent identification of nonlinear structures
[ECL-92-64] p 1457 N94-19403

SERIES EXPANSION
Decomposition invariance of generalized steady-state of a 1-D diffusion system
[REPT-93-26] p 1550 N94-19141

SEROTONIN
Strategies for enhancing catecholamine-mediated neurotransmission
[NASA-CR-193807] p 1506 N94-18862

SERVOCONTROL
Increasing mission reliability using open-loop control
[AD-A271208] p 1545 N94-19721

SERVOMECHANISMS
Design of power electronics for TVC EMA systems
[NASA-CR-193839] p 1407 N94-19642

SERVOMOTORS
Increasing mission reliability using open-loop control
[AD-A271208] p 1545 N94-19721

SET THEORY
Fuzzy almost linear spaces
[DE93-624772] p 1545 N94-17680
Performance of defect-tolerant set-associative cache memories p 1398 N94-18346
Fuzzy hypergraphs and fuzzy intersection graphs
[AD-A270303] p 1549 N94-18815
Excursion theory of a finite set via resolvents
[REPT-93-19] p 1557 N94-19090
Excursions of stochastic processes, Cox-point processes, entrance behavior and resolvents
[PB93-197291] p 1558 N94-19323
On network representation of the solutions in combinatorial optimization
[RR-910-I] p 1552 N94-19392
A perfection-preserving operation
[RR-911-I] p 1552 N94-19393
Neighbourhood-perfect line graphs
[RR-915-I] p 1552 N94-19395
On Hamilton-connectedness of Cayley graphs
p 1554 N94-19684
On Hamiltonian properties of 2-tough graphs
p 1554 N94-19685
Toughness and the cycle structure of graphs
p 1554 N94-19686
The Hopping Lemma p 1554 N94-19687
Two problems related to results of Chvatal-Erdoes
p 1555 N94-19693
Non-well-foundedness and type freeness can unify the interpretation of functional application
[PB93-191849] p 1560 N94-19710

SH WAVES
High resolution geological site characterization utilizing ground motion data
[AD-A268926] p 1481 N94-18485

SHAFTS (MACHINE ELEMENTS)
Friction drive position transducer
[AD-D015851] p 1424 N94-17717

SHALLOW WATER
Comments on computational underwater acoustics
[DE93-013789] p 1562 N94-17873
DYNLET1 model formulation and user's guide
[AD-A269843] p 1498 N94-18723
A finite element scheme for shock capturing
[AD-A270182] p 1417 N94-18755
Seismic studies of the geologic structure and physical properties of the seabed
[AD-A270895] p 1500 N94-19747

SHAPE MEMORY ALLOYS
Intelligent materials systems and structures. Part 4: The influence of thermomechanical loading on the life of shape memory alloys
[PB93-195923] p 1363 N94-18952
The applications of modified metals in the construction industry
[VTT-TIED-1329] p 1365 N94-19374
Use of shape memory alloys in the robust control of smart structures
[AD-A270827] p 1366 N94-19594
Damping in ferrous shape memory alloys
[AD-A271009] p 1366 N94-19775

SHAPED CHARGES
Instrumented experiments aboard the frigate WOLF. Wolf 2: Measurement results of the 5.5 kg TNT in the crew aft sleeping compartment
[PML-1992-12] p 1451 N94-17931

SHAPES
Wideband electromagnetic scattering/analysis program: Far zone electromagnetic scattering from complex shapes using geometrical theory of diffraction
[AD-A268790] p 1384 N94-18187

SHEAR FLOW
Self-regulated shear flow turbulence in confined plasmas
[DE93-015823] p 1583 N94-17743
On memory effects in turbulence
[DLR-FB-93-03] p 1409 N94-18124
Research on two equation models
p 1411 N94-18547
Large-eddy simulation of turbulent diffusion in stably stratified shear flow p 1416 N94-18595
Research and training activities of the Joint Institute for Aeronautics and Acoustics
[NASA-CR-194742] p 1421 N94-19493
The effects of initial conditions on the 3-D topology of temporally evolving wakes (ARI on 3-D bluff body wakes)
[AD-A271008] p 1423 N94-19774

SHEAR LAYERS
Chemical reactions in turbulent mixing flows
[AD-A269377] p 1410 N94-18472

SHEAR PROPERTIES
Numerical integration of structural elements in NIKE3D and DYNA3D
[DE93-016325] p 1452 N94-18049
Chemical reactions in turbulent mixing flows
[AD-A269377] p 1410 N94-18472
Development of a finite element method program for the analysis of laminated composite plates using first-order shear deformation theory
[AD-A270318] p 1342 N94-18700
Elastic properties of amorphous thin films studied by Rayleigh waves
[DE93-018375] p 1372 N94-19202
Development and characterization of adiabatic shear prone tungsten heavy alloys
[AD-A270477] p 1366 N94-19673

SHEAR STRENGTH
Evaluation of the production-grade class 4 flextensional transducer shell
[AD-A268796] p 1340 N94-18201

SHEAR STRESS
Dislocation-drag contribution to high-rate plastic deformation in shock-loaded tantalum
[DE93-018286] p 1361 N94-18802
Stress pulse phenomena
[DE93-019064] p 1456 N94-19078
A comparative evaluation of in-plane shear test methods for laminated graphite-epoxy composites
[NASA-CR-193808] p 1456 N94-19095
Development of engineering models for calculation of failure loads and defect states of steel concrete beams and plates
[ETN-93-95052] p 1460 N94-19648
Collaborative research on combustion diagnostics and modeling between Rolls-Royce, Inc. and the United States Air Force Wright Laboratory
[AD-A270660] p 1354 N94-19778

SHELL THEORY
Numerical integration of structural elements in NIKE3D and DYNA3D
[DE93-016325] p 1452 N94-18049

SHELLS (STRUCTURAL FORMS)
Evaluation of the production-grade class 4 flextensional transducer shell
[AD-A268796] p 1340 N94-18201
Residual strain measurement on the production-grade class 4 flextensional transducer shell
[AD-A268828] p 1430 N94-18537

SHIPS
Instrumented experiments aboard the frigate WOLF. Wolf 2: Measurement results of the 5.5 kg TNT in the crew aft sleeping compartment
[PML-1992-12] p 1451 N94-17931
Ship-produced cloud line of 13 July 1991
[DE93-016879] p 1472 N94-17986

SHIVERING
Evaluation of physiological and psychological impairment of human performance in cold stressed subjects
[AD-A268637] p 1506 N94-18632

SHOCK FRONTS
Velocity measurements in a boundary layer with a density gradient
[DE93-019627] p 1422 N94-19515

SHOCK LOADS
Omega phase formation in shock-loaded zirconium
[DE93-018343] p 1595 N94-18162
Dislocation-drag contribution to high-rate plastic deformation in shock-loaded tantalum
[DE93-018286] p 1361 N94-18802
Effects of shock loading on a solid-solution strengthened superalloy
[DE93-018345] p 1362 N94-18809
Toward a characterization of the debris cloud created in a hypervelocity impact on a thin plate
[AD-A269190] p 1455 N94-18864
Shock-loading response of advanced materials
[DE93-018344] p 1455 N94-19033
Shock compression properties of silicon carbide
[DE93-019927] p 1373 N94-19271
Influence of peak pressure and temperature on the shock-loading response of tantalum
[DE93-018561] p 1457 N94-19279
Simulation of the impact of a plastic flyer on an aluminum block using the hydrocode AUTODYNE
[PML-1992-26] p 1458 N94-19444

SHOCK TUBES
Film condensation in a shock wave
[MPIS-22/1992] p 1422 N94-19509

SHOCK WAVE PROFILES
Measurement and analysis of three 1.5-GPa shock-wave profiles in copper
[DE93-016559] p 1451 N94-17864
Wave structure induced by fluid dynamic limits in the Broadwell model
[AD-A268512] p 1410 N94-18385

SHOCK WAVES
PVDF measurement of soft x ray induced shock and filter debris impulse
[DE93-017633] p 1382 N94-17806
A new multiphase equation of state for iron
[DE93-017629] p 1357 N94-17819
Measurement and analysis of three 1.5-GPa shock-wave profiles in copper
[DE93-016559] p 1451 N94-17864
Modeling shock initiation in Composition B
[DE93-016544] p 1376 N94-18095
Wave structure induced by fluid dynamic limits in the Broadwell model
[AD-A268512] p 1410 N94-18385
Introduction to spectral methods for hyperbolic system of conservation laws p 1413 N94-18567
Correlation of incoming boundary layer pitot pressure fluctuations with the unsteadiness of fin-induced shock wave turbulent boundary layer interactions
[AD-A270059] p 1417 N94-18796
Three-dimensional shock wave physics simulations with MIMD PAGOSA on massively parallel computers
[DE93-011682] p 1455 N94-18829
Shock propagation in crustal rock
[AD-A270148] p 1485 N94-18899
The effects of reverberant impulse noise (blast waves) on hearing: Parametric studies
[AD-A269242] p 1506 N94-18911
Visualization for applications in shock physics
[DE93-012849] p 1418 N94-18918
The application of front tracking to the simulation of shock refractions and shock accelerated interface mixing
[DE93-018342] p 1419 N94-19025
Shock-loading response of advanced materials
[DE93-018344] p 1455 N94-19033
Air blast measurements at 20 and 40 km distance from detonating 10 and 20 ton high explosive charges
[PB93-195949] p 1419 N94-19068
Experiments and analysis of lateral piezoresistance gauges
[DE93-017874] p 1433 N94-19111
Liquid sound speeds at pressure from the optical analyzer technique
[DE93-018362] p 1563 N94-19151
Impact strength and indentation hardness of high-strength ceramics
[DE93-018833] p 1373 N94-19338
Simulation of the impact of a plastic flyer on an aluminum block using the hydrocode AUTODYNE
[PML-1992-26] p 1458 N94-19444
Velocity measurements in a boundary layer with a density gradient
[DE93-019627] p 1422 N94-19515

Locally adaptive remeshing scheme for calculating fluid instabilities
[DE93-019577] p 1422 N94-19568

SHORELINES
Ecological and environmental impacts of construction in the coastal zone
[AD-A269196] p 1475 N94-18881

SHORT CIRCUITS
Impedence calculation with recursive folding
[ETN-93-95049] p 1406 N94-19387

SHORT TAKEOFF AIRCRAFT
Design, development, and flight evaluation of the Boeing YC-14 USB powered lift aircraft p 1310 N94-18444
Lift and pitching moment induced on jet STOVL aircraft by the ground vortex
[AD-A269816] p 1318 N94-18733

SHOT NOISE
JSEP fellowship: Fractal noise processes
[AD-A268841] p 1557 N94-18540

SHOULDERS
Control of shoulder muscles during goal directed movements
[PB93-195139] p 1504 N94-18080

SHRINKAGE
Shrinkage void formation and its effect on freeze and thaw processes of lithium and lithium-fluoride for space applications
[DE93-019303] p 1338 N94-19128

SHUTTLE DERIVED VEHICLES
Shuttle-C, the future is now
[NASA-TM-109355] p 1332 N94-18954

SIDEBANDS
Experiments in sideband suppression on the Los Alamos National Laboratory Free-Electron Laser
[DE93-014466] p 1435 N94-17724

SIDELOBES
Nontraditional windows in spectral analysis
[AD-A271336] p 1553 N94-19583

SIGNAL ANALYSIS
A non-homogeneous, spatio-temporal, wavelet multiresolution analysis and its application to the analysis of motion
[AD-A270621] p 1538 N94-19534

SIGNAL ANALYZERS
Coherent transient systems evaluation
[AD-A268808] p 1576 N94-18204
Widget: A data acquisition system for a balloon borne Si particle calorimeter
[DE93-624668] p 1630 N94-18762

SIGNAL DETECTION
A RFI measurement system for field sites
[AD-A269340] p 1385 N94-18301
Wavelet transform for time-frequency analysis of the vibrational signature and its application
[AD-A269928] p 1454 N94-18661
Generalized multichannel signal detection
[AD-A271385] p 1391 N94-19587

SIGNAL DETECTORS
Monolithic low noise preamplifier for piezoelectric sensors
[AD-D015860] p 1563 N94-18734

SIGNAL ENCODING
Friction drive position transducer
[AD-D015851] p 1424 N94-17717

SIGNAL FADING
Radio wave propagation in structured ionization for satellite and radar applications
[AD-A268457] p 1382 N94-17844

SIGNAL FLOW GRAPHS
SPROC: A multiple-processor DSP IC
p 1398 N94-18347

SIGNAL MEASUREMENT
Variable wide band fiber optic delay line
[AD-D015848] p 1576 N94-17716

SIGNAL PROCESSING
Design of a general purpose and autonomous transmitter and receiver system for underwater acoustic experiments at sea
[AD-A269268] p 1495 N94-17822
Development and test of readout electronics for optical quadrature signals
[DLR-MITT-92-11] p 1395 N94-17920
Neural networks to classify speaker independent isolated words recorded in radio car environments
[REPT-93-013] p 1383 N94-17935
Analysis, representation and processing of the instrumental gesture: Application to keyboard instruments
[ETN-93-94402] p 1519 N94-17977
Coherent transient systems evaluation
[AD-A268808] p 1576 N94-18204
Magnetostatic waves-based integrated optic bragg cell modules with applications to RF signal processing
[AD-A269115] p 1577 N94-18295
Single phase dynamic CMOS PLA using charge sharing technique p 1397 N94-18341
SPROC: A multiple-processor DSP IC
p 1398 N94-18347
An improved distributed arithmetic architecture
p 1398 N94-18349
Low power signal processing research at Stanford
p 1393 N94-18351
High accuracy switched-current circuits using an improved dynamic mirror p 1401 N94-18368
A verification logic representation of indeterministic signal states p 1401 N94-18372
On timing faults in digital logic circuits
[AD-A268714] p 1402 N94-18400
The identification of the computational significance of key neurobiological characteristics found in a number of telencephalic brain regions
[AD-A269374] p 1505 N94-18407
Development of parallel architectures for sensor array processing, volume 1
[AD-A270426] p 1534 N94-18507
Development of parallel architectures for sensor array processing. Volume 2: A parallel architecture for broad-band direction-of-arrival estimation
[AD-A270427] p 1534 N94-18508
Data acquisition in aerodynamic research
p 1431 N94-18644
A general theory of signal integration for fault-tolerant dynamic distributed sensor networks
[AD-A270316] p 1534 N94-18699
VLSI for high-speed digital signal processing
[AD-A270406] p 1404 N94-18706
Programmable linear phase digital filters
[AD-A270413] p 1404 N94-18709
Monolithic low noise preamplifier for piezoelectric sensors
[AD-D015860] p 1563 N94-18734
Widget: A data acquisition system for a balloon borne Si particle calorimeter
[DE93-624668] p 1630 N94-18762
Neutral networks: An NRL perspective
[AD-A269122] p 1541 N94-18773
Spectral analysis on the canonical autoregressive decomposition
[AD-A270083] p 1549 N94-18798
Analytic approximations of an integral in remote sensing
[AD-A270085] p 1463 N94-18800
Introduction to wavelets
[AD-A268465] p 1389 N94-18801
Numerical and symbolic signal representation and processing
[AD-A270271] p 1389 N94-18811
A parallel and pipelined architecture for estimation of direction of arrival using a bilinear transformation method, volume 3
[AD-A270137] p 1389 N94-18897
Solution of the Poisson equation with application to radar imaging
[PB93-195865] p 1389 N94-18950
MIMD massively parallel methods for engineering and science problems
[DE93-019409] p 1531 N94-19562
Generalized multichannel signal detection
[AD-A271385] p 1391 N94-19587
A multi-level data-flow architecture for signal and data processing applications
[DE93-041272] p 1539 N94-19588
Systolic design with asynchronous controls for digital-signal processing
[AD-A270976] p 1392 N94-19680
Signal processing algorithms for heterogeneous architectures
[AD-A271248] p 1392 N94-19724
Algorithms and architectures for high speed signal processing
[AD-A271000] p 1392 N94-19736
Transcutaneous Analyte Measuring Methods (TAMM)
[AD-A271387] p 1408 N94-19756

SIGNAL RECEPTION
Photorefractive receiver study
[AD-A269352] p 1577 N94-18302

SIGNAL TO NOISE RATIOS
Laser imaging radar system
[AD-A270436] p 1387 N94-18510
A comparison of single-station backazimuth estimates with regional event locations in the Central Appalachians
[AD-A269897] p 1483 N94-18690
The use of velocity spectra for stacking receiver functions with application to IRIS/IDA stations OBNINSK (OBN) and ARTI (ARU), Russia
[AD-A269087] p 1483 N94-18717
Nontraditional windows in spectral analysis
[AD-A271336] p 1553 N94-19583
Transcutaneous Analyte Measuring Methods (TAMM)
[AD-A271387] p 1408 N94-19756
Feasibility study for a measuring system velocity projectile
[FEL-91-A368] p 1434 N94-19797

SIGNAL TRANSMISSION
Design of a general purpose and autonomous transmitter and receiver system for underwater acoustic experiments at sea
[AD-A269268] p 1495 N94-17822
Swatch Pager p 1428 N94-18039
A method for eliminating skew introduced by non-uniform buffer delay and wire lengths in clock distribution trees
[AD-A270649] p 1544 N94-19530

SIGNATURE ANALYSIS
An analytical approach to error localization by using information derived from error signature
[REPT-93-023] p 1518 N94-17960
Wavelet transform for time-frequency analysis of the vibrational signature and its application
[AD-A269928] p 1454 N94-18661
Environmental characterization for target acquisition. Report 3: New concepts for evaluating low-grazing angle radar measurements
[AD-A269956] p 1388 N94-18777

SIGNS AND SYMPTOMS
Using controlled daylight exposure and sleep timing in the prevention of shift lag during night operations
[AD-A269304] p 1504 N94-17824
Cerebral ischemia and reperfusion injury: A brief review
[AD-A270480] p 1507 N94-19675

SILANES
NMR studies of enriched species at interfaces
[AD-A264703] p 1367 N94-17878

SILICA GEL
Hydrolysis reaction and positronium decay in silica gels
[AD-A270028] p 1371 N94-18713

SILICA GLASS
Laser induced damage testing: Equipment and techniques
[DE93-017143] p 1437 N94-18060

SILICATES
Cooperative formation of inorganic-organic interfaces in the synthesis of silicate mesostructures
[AD-A271196] p 1375 N94-19742

SILICIDES
Plastic anisotropy in MoSi2 single crystals
[DE93-012650] p 1594 N94-17874
Bibliography on silicides
[AD-A270516] p 1374 N94-19532

SILICON
Selective electrochemical wafer thinning for silicon characterization
[DE93-015083] p 1592 N94-17742
Simplified processing for 23 percent-efficient silicon concentrator solar cells
[DE93-015018] p 1464 N94-17787
Pulsed LASER for testing silicon strip detectors
[DE93-017816] p 1436 N94-17883
Electron mobility in high resistivity silicon
[REPT-93-007] p 1565 N94-17933
High- and low-temperature bonding techniques for microstructures
[DE93-017173] p 1595 N94-17992
Electrostatic micrometers: Recent developments and perspectives of uses in clock and watch making
p 1425 N94-18014
Silicon micro-actuator p 1408 N94-18017
High-efficiency silicon concentrator cell commercialization
[DE93-018491] p 1467 N94-18409
Research on stable, high-efficiency amorphous silicon multijunction modules
[DE93-010046] p 1467 N94-18518
Thermal stresses in the microchannel heatsink cooled by liquid nitrogen
[DE93-018660] p 1418 N94-18995
Binding of copper to nanocavity surfaces in silicon
[DE93-019073] p 1364 N94-19080
Silicon MCM substrates for integration of 3-5 photonic devices and CMOS IC's
[DE93-017894] p 1405 N94-19112
Studies of deep levels in high resistivity silicon detectors irradiated by high fluence fast neutrons using a thermally stimulated current spectrometer
[DE93-016133] p 1602 N94-19258
Picoindentation hardness measurements using atomic force microscopy
[AD-A270877] p 1604 N94-19579
Examination of charge carriers dynamics in silicon and silicon solar cells with photoinduced laser beam deflection
[ETN-93-95060] p 1470 N94-19654

SILICON ALLOYS
Research on stable, high-efficiency amorphous silicon multijunction modules
[DE93-010046] p 1467 N94-18518
Fundamental properties and device applications of Ge(x)Si(1-x)/Si superlattices (supplemental)
[AD-A269212] p 1600 N94-18884
SILICON CARBIDES
Carbon/carbon composites coated with SiC by chemical vapor deposition
[AD-A269934] p 1341 N94-18544
Shock compression properties of silicon carbide
[DE93-019927] p 1373 N94-19271
Analytical and experimental evaluation of joining silicon nitride to metal and silicon carbide to metal for advanced heat engine applications
[DE93-018128] p 1446 N94-19291
SILICON CONTROLLED RECTIFIERS
Design of power electronics for TVC EMA systems
[NASA-CR-193839] p 1407 N94-19642
SILICON DIOXIDE
Catalytic hydrocarbon reactions over supported metals
[DE93-018168] p 1345 N94-17808
Aerogels for microelectronic applications: Fast, inexpensive, and light as air
[DE93-017170] p 1395 N94-17882
Optical properties of oxide coatings prepared by ion-assisted deposition
[AD-A270024] p 1599 N94-18711
High resolution transmission electron microscopy of mesoporous MCM-41 type materials
[AD-A271271] p 1354 N94-19728
SILICON FILMS
Development of large-area monolithically integrated silicon-film photovoltaic modules
[DE93-010037] p 1464 N94-17731
SILICON NITRIDES
Equipment for investigation of cryogenic compaction of nanosize silicon nitride powders
[DE93-018740] p 1340 N94-18180
Analytical and experimental evaluation of joining silicon nitride to metal and silicon carbide to metal for advanced heat engine applications
[DE93-018128] p 1446 N94-19291
Atomic-scale friction and microfriction of graphite and diamond using friction force microscopy
[AD-A270952] p 1605 N94-19679
SILICON RADIATION DETECTORS
Experimental research in high energy physics
[DE93-011912] p 1574 N94-18916
SILVER
Surface second harmonic generation studies of stepped Ag(111) electrode surfaces
[AD-A265205] p 1594 N94-17876
Optical frequency doubling at adsorbates of silver(110) surface
[ETN-93-94837] p 1603 N94-19355
SIMD (COMPUTERS)
Parallel optimization algorithms and their implementation in VLSI design p 1401 N94-18374
Distributed memory parallel computers and computational fluid dynamics p 1413 N94-18568
Conception and analysis of numerical parallel algorithms: Realization on the Connection Machine
[ETN-93-95005] p 1531 N94-19517
SIMILARITY THEOREM
Similarity solutions for gravity-dominated spreading of a lens of organic contaminant
[REPT-93-24] p 1420 N94-19139
SIMPLEX METHOD
Parallel optimization algorithms and their implementation in VLSI design p 1401 N94-18374
A teaching tool for linear programming
[AD-A270240] p 1523 N94-18905
SIMULATED ANNEALING
Data fusion through simulated annealing of registered range and reflectance images
[DE93-015910] p 1612 N94-17858
SIMULATION
Efficient simulation of DEDS by means of standard clock techniques: Queueing and integrated radio network examples
[AD-A269878] p 1432 N94-18681
Efficiency and biofidelity of occupant simulations
p 1459 N94-19473
SIMULATORS
An overview of the SAFSIM computer program
[DE93-017657] p 1519 N94-18002
New applications for high average power beams
[DE93-018845] p 1439 N94-18522
Improved HF data network simulator, volume 1
[AD-A270953] p 1393 N94-19752
Improved HF data network simulator, software user's manual, volume 2
[AD-A270954] p 1393 N94-19753
SINE WAVES
Active control of periodic noise with time-varying frequency
[REPT-93-012] p 1562 N94-17934
Spectral analysis on the canonical autoregressive decomposition
[AD-A270083] p 1549 N94-18798
SINGLE CRYSTALS
Magnetic properties of single-crystalline UCu3Al2
[DE93-016607] p 1593 N94-17744
Plastic anisotropy in MoSi2 single crystals
[DE93-012650] p 1594 N94-17874
Recent studies of short-range order in alloys: The Cowley theory revisited
[DE93-016416] p 1358 N94-18111
Nitridation of GaAs(100) by laser-induced decomposition of HN3
[AD-A269147] p 1438 N94-18258
Photorefractive tungsten bronze crystals for optical computing
[AD-A268859] p 1596 N94-18320
The effect of crystallographic orientation on the performance of single crystal tungsten subscale penetrators
[AD-A268988] p 1597 N94-18468
Ionic and molecular environments in heterogeneous electrocatalysis: Studies by radioactive labeling and LEED/AUGER spectroscopy
[AD-A268850] p 1567 N94-18766
Experimental investigation of wave and fracture phenomena in impacted ceramics: Experiments on sapphire
[AD-A270040] p 1372 N94-18792
Growth, characterization and device development in monocrystalline diamond films
[AD-A270074] p 1599 N94-18797
Modeling of single-crystal laser-weld microstructures
[DE93-017853] p 1445 N94-18976
Surface phases and their influence on metal-oxide interfaces
[DE93-019931] p 1601 N94-19020
The electromechanical properties of tetragonal BaTiO3 and PbTiO3 single crystals
[DE93-019008] p 1603 N94-19550
Final report on subcontract B076260 — borate synthesis
[DE93-019501] p 1604 N94-19565
SINGLE EVENT UPSETS
Experience with custom processors in space flight applications p 1336 N94-18338
An SEU immune logic family p 1398 N94-18342
Technology, design, simulation, and evaluation for SEP-hardened circuits p 1399 N94-18352
The LET spectrum and its uncertainty during the CRRES mission
[AD-A269977] p 1630 N94-18676
Static Computer Memory Integrity Testing (SCMIT): An experiment flown on STS-40 as part of GAS payload G-616 p 1325 N94-19169
SINGLE STAGE ROCKET VEHICLES
Single STAGE Rocket Technology (SSRT) DC-X test program environmental assessment
[AD-A265940] p 1337 N94-17879
SINGULARITY (MATHEMATICS)
Finite-dimensional singletons of the quantum anti de Sitter algebra
[DE93-624771] p 1546 N94-17810
Some remarks on integrable Hamiltonian systems with two degrees of freedom
[DE93-624766] p 1546 N94-17815
Singularities and symmetries of nonlinear ordinary and partial differential equations
[DE93-040083] p 1550 N94-19190
Bits and relative order from residues, space efficiently
[TR-464] p 1530 N94-19482
SINTERING
Pressureless densification of ceramic matrix composites
[AD-A269137] p 1371 N94-18691
Manufacturing technology
[DE93-019580] p 1381 N94-19480
SIS (SUPERCONDUCTORS)
Infrared detection with high-(Tc bolometers and response of Nb tunnel junctions to picosecond voltage pulses
[DE93-016963] p 1595 N94-17989
SIZE DISTRIBUTION
Dispersion effects on millimeter wavelength attenuation efficiencies for a variety of fibers
[AD-A268992] p 1386 N94-18454
Hydrolysis reaction and positronium decay in silica gels
[AD-A270028] p 1371 N94-18713
Development of the microstructure based stochastic life prediction models
[AD-A270453] p 1455 N94-18714
SKEWNESS
The theory of linear programming: Skew symmetric self-dual problems and the central path
[REPT-93-15] p 1524 N94-19089
SKIN FRICTION
In-flight pressure distributions and skin-friction measurements on a subsonic transport high-lift wing section p 1308 N94-18435
SKIN RESISTANCE
Transient skin effect in a massive cylinder by eccentric location of exciting conduction bands
[ETN-93-95048] p 1391 N94-19646
SKIN TEMPERATURE (BIOLOGY)
Effects of a high-energy food supplement on cold-induced thermogenesis
[AD-A269301] p 1504 N94-17823
Synchronisation of cold induced vasodilation at various locations of one hand
[IZF-1992-B3] p 1504 N94-17966
SKY WAVES
Morphology and characteristics of disturbed HF skywave channels
[AD-A269755] p 1388 N94-18722
SLEEP
Using controlled daylight exposure and sleep timing in the prevention of shift lag during night operations
[AD-A269304] p 1504 N94-17824
A comparison of polygraphic and actigraphic monitoring of sleep using a 5-channel programmable-sensitivity actigraph
[AD-A270731] p 1507 N94-19608
SLIDING
Heterogeneous slip and rupture models of the San Andreas fault zone based upon three-dimensional earthquake tomography
[DE93-015037] p 1480 N94-17898
Fatigue resistant Ti3Al composites
[AD-A270305] p 1341 N94-18692
SLIDING FRICTION
Interdisciplinary research on wear of materials
[AD-A268190] p 1443 N94-17730
Atomic-scale friction and microfriction of graphite and diamond using friction force microscopy
[AD-A270952] p 1605 N94-19679
Tribological studies of silicon for magnetic recording applications (Invited)
[AD-A270878] p 1447 N94-19784
SLOTS
High-Lift System Aerodynamics
[AGARD-CP-515] p 1305 N94-18415
SLUMPING
A review and evaluation of the ADAM 2.1 dispersion model
[AD-A269896] p 1474 N94-18688
SLURRIES
Advanced in macrostatistical hydrodynamics
[DE93-018479] p 1410 N94-18270
Metal slurry droplet and spray combustion
[AD-A269648] p 1349 N94-18736
SMART STRUCTURES
The 6th Japan-U.S. conference on composite materials
[AD-A268535] p 1341 N94-18630
Use of shape memory alloys in the robust control of smart structures
[AD-A270827] p 1366 N94-19594
SMOG
Energy efficiency and the environment: Innovative ways to improve air quality in the Los Angeles Basin
[DE93-016964] p 1473 N94-18050
SMOOTHING
A time-frequency smoothing algorithm for cyclic spectral analysis
[DE93-016634] p 1519 N94-18097
SNOW
Condensed gases under winter conditions: A study for the rescue services
[FOA-C-40305-4.5] p 1473 N94-18139
SOBOLEV SPACE
On polynomials orthogonal with respect to an inner product involving differences (the general case)
[REPT-93-32] p 1551 N94-19285
SOCIAL FACTORS
The clocks and the perception of time in the 18th century society p 1424 N94-18007
SODIUM
First on-sun test of NaK pool-boiler solar receiver
[DE93-015003] p 1466 N94-18208
Developmental testing of a prototype all-reflection Michelson interferometer
[AD-A269064] p 1430 N94-18406
SODIUM ALLOYS
Bench-scale screening tests for a boiling sodium-potassium alloy solar receiver
[DE93-018512] p 1469 N94-19040

SODIUM SULFUR BATTERIES
Conceptual design of a sodium sulfur cell for US electric van batteries
[DE93-018683] p 1405 N94-19035

SOFTWARE ENGINEERING
The design of the MAD Design Program
[DE93-013343] p 1539 N94-17696
The First International Conference on PCTE
[FEL-92-A134] p 1518 N94-17965
Format.m: A usage manual. Towards an efficient symbolic-numeric environment: Extending Mathematica's format rules
[MATHS-REPT-A-185] p 1547 N94-17969
Reference model for project support environments, version 1.0
[AD-A269110] p 1520 N94-18251
Teaching a computer simulation course with Ada
[AD-A267901] p 1521 N94-18308
Why are human-computer interfaces difficult to design and implement?
[AD-A268843] p 1514 N94-18317
VLSI synthesis of digital application specific neural networks p 1399 N94-18355
The CMU masters in software engineering core curriculum
[AD-A268983] p 1521 N94-18453
The evolution of the PVM concurrent computing system
[DE93-017764] p 1534 N94-18482
UUGM code development
[AD-A269945] p 1416 N94-18671
The development of a course sequence in real-time systems design
[AD-A269459] p 1522 N94-18726
Case studies of software development tools for parallel architectures
[AD-A269193] p 1535 N94-18866
ControlShell: A real-time software framework
[AD-A269172] p 1523 N94-18879
Modelling software for structure metrics
[MEMO-INF-93-13] p 1526 N94-19200
How to apply the IEEE standards to software testing
[DE93-018514] p 1527 N94-19245
Advanced software development workstation: Object-oriented methodologies and applications for flight planning and mission operations
[NASA-CR-193706] p 1513 N94-19349
A multi-level data-flow architecture for signal and data processing applications
[DE93-041272] p 1539 N94-19588
Technical development of a theory of programs
[ETN-93-95058] p 1532 N94-19652
Report of the Second CLICOM Experts Meeting
[WCDMP-19] p 1495 N94-19705
Software reuse: Major issues need to be resolved before benefits can be achieved. Report to the Chairman, Subcommittee on Defense, Committee on Appropriations, House of Representatives
[GAO/IMTEC-93-16] p 1532 N94-19716
Technology benefits model user manual, version 01.00.04
[AD-A270637] p 1620 N94-19777

SOFTWARE RELIABILITY
An efficient implementation of error-valued semantics on imperative machines
[DE93-014658] p 1516 N94-17740
Software reliability: Estimation and prediction
[AD-A268895] p 1521 N94-18458
Software quality in test and measurment equipment
[PB93-197846] p 1528 N94-19333

SOFTWARE REUSE
An environment for requirement reuse
[REPT-92-082] p 1613 N94-17939
High performance Fortran: An overview
[DE93-017181] p 1519 N94-18072
Software reuse: Major issues need to be resolved before benefits can be achieved. Report to the Chairman, Subcommittee on Defense, Committee on Appropriations, House of Representatives
[GAO/IMTEC-93-16] p 1532 N94-19716

SOFTWARE TOOLS
A structured approach for modeling, analyzing and simulating real-time control systems
[REPT-93-044] p 1539 N94-17916
An environment for requirement reuse
[REPT-92-082] p 1613 N94-17939
The First International Conference on PCTE
[FEL-92-A134] p 1518 N94-17965
Software Toolkit for Analysis Research (STAR)
[DE93-017368] p 1519 N94-18086
Cut and paste based modeling with boundary features
[PB93-187250] p 1520 N94-18117
Dialog-Based Learning (DBL) for adaptive interface agents and programming-by-demonstrations systems
[AD-A269154] p 1540 N94-18261
A special purpose silicon compiler for designing supercomputing VLSI systems p 1402 N94-18379
VHDL simulation with access to transistor models
p 1402 N94-18381
CONTACT: An Air Force technical report on military satellite control technology
[AD-A269375] p 1334 N94-18408
Embedded Computer Performance Measurement (ECPM). Advanced avionics subsystems and technology multiprocessor ECPM software documentation
[AD-A269921] p 1320 N94-18658
A case study in software maintenance
[AD-A269923] p 1521 N94-18659
NASA Electronic Library System (NELS) optimization
[NASA-CR-193688] p 1617 N94-18839
3D composite grids using Bezier curves and surfaces in component adaptive methods
[AD-A269188] p 1549 N94-18863
Case studies of software development tools for parallel architectures
[AD-A269193] p 1535 N94-18866
Early experiences with the IBM SP-1
[DE93-018398] p 1535 N94-19010
A least-squares computational tool kit
[DE93-018400] p 1557 N94-19011
A programming paradigm for distributed-memory computers
[DE93-018336] p 1524 N94-19024
CAVEMAN: Configuration and version management
[DE93-018066] p 1524 N94-19048
An ORACLE CASE history: Experiences with ORACLE CASE tools
[DE93-010827] p 1617 N94-19057
Computer codes for checking, plotting and processing of neutron cross-section covariance data and their application
[DE93-018459] p 1570 N94-19129
A multi-thread approach to coalescing small transfers generated by portable tool sets
[DE93-012128] p 1525 N94-19186
Vectorized presentation-level services for scientific distributed applications
[DE93-018091] p 1537 N94-19253
European network for the numerical simulation of space plasmas p 1331 N94-19641
Report of the Second CLICOM Experts Meeting
[WCDMP-19] p 1495 N94-19705
Data-Machine Independence (DMI)
[DE93-018008] p 1539 N94-19734
Technology benefits model user manual, version 01.00.04
[AD-A270637] p 1620 N94-19777

SOIL EROSION
Three-dimensional high-resolution seismic profiling on the New Jersey outer continental shelf
[AD-A269835] p 1498 N94-18600
Gravity and the geoid in the Nepal Himalaya
[NASA-CR-194166] p 1463 N94-19430

SOIL MECHANICS
Centrifuge modeling of explosion-induced craters in unsaturated sand
[AD-A270194] p 1417 N94-18780
Numerical analysis of pressure meter tests: Application of parameter identification of soils behavior
[ECL-92-52] p 1487 N94-19380
Proceedings: International Symposium on Thermal Engineering and Science for Cold Regions
[AD-A270636] p 1487 N94-19529

SOIL MOISTURE
Protocol for computation of surface boundary layer parameters used to determine soil moisture flux from meteorological data collected at LLNL, 1992-1993
[DE93-018906] p 1463 N94-19003

SOILS
Rapid geophysical surveyor
[DE93-016637] p 1461 N94-17851
Applications of Quaternary stratigraphic, soil-geomorphic, and quantitative geomorphic analyses to the evaluation of tectonic activity and landscape evolution in the Upper Coastal Plain, South Carolina
[DE93-016269] p 1484 N94-18725

SOL-GEL PROCESSES
Finite element modeling of evaporation and condensation during sol-gel film and fiber formation
[DE93-017655] p 1345 N94-17820
Novel electrochemical materials prepared by sol-gel chemistry
[AD-A269060] p 1578 N94-18405
Photo-induced and electrooptic properties of (Pb,La)(Zr,Ti)O3 films
[DE93-017496] p 1371 N94-18519
Hydrolysis reaction and positronium decay in silica gels
[AD-A270028] p 1371 N94-18713

SOLAR ACTIVITY
Origins of solar activity. First year report, AASERT grant
[AD-A268848] p 1629 N94-18222

SOLAR ATMOSPHERE
The solar optical telescope
[NASA-TM-109240] p 1621 N94-18850

SOLAR CELLS
Development of large-area monolithically integrated silicon-film photovoltaic modules
[DE93-010037] p 1464 N94-17731
Simplified processing for 23 percent-efficient silicon concentrator solar cells
[DE93-015018] p 1464 N94-17787
Photovoltaic concentrator initiative: Concentrator cell development
[DE93-018505] p 1466 N94-18335
High-efficiency silicon concentrator cell commercialization
[DE93-018491] p 1467 N94-18409
Gallium arsenide-based ternary compounds and multi-band-gap solar cell research
[DE93-010049] p 1467 N94-18483
Research on stable, high-efficiency amorphous silicon multijunction modules
[DE93-010046] p 1467 N94-18518
Polycrystalline thin-film cadmium telluride solar cells fabricated by electrodeposition
[DE93-018201] p 1468 N94-18944
Silicon concentrator solar cell research
[DE93-018489] p 1468 N94-19015
Defect behavior of polycrystalline solar cell silicon
[DE93-018490] p 1468 N94-19016
A Sandia Technology Bulletin: Testing technology, July 1993
[DE93-040197] p 1633 N94-19537
Examination of charge carriers dynamics in silicon and silicon solar cells with photoinduced laser beam deflection
[ETN-93-95060] p 1470 N94-19654
Amorphous silicon batch process cost analysis
[DE93-018203] p 1470 N94-19760

SOLAR COLLECTORS
Development of a selective volumetric receiver for central receiver systems: Investigation of parameters and exergetic evaluation
[DLR-FB-93-05] p 1465 N94-18089
First on-sun test of NaK pool-boiler solar receiver
[DE93-015003] p 1466 N94-18208
Photovoltaic concentrator initiative: Concentrator cell development
[DE93-018505] p 1466 N94-18335
High-efficiency silicon concentrator cell commercialization
[DE93-018491] p 1467 N94-18409
Testing and evaluation of large-area heliostats for solar thermal applications
[DE93-018509] p 1467 N94-18520
Tehachapi solar thermal system
[DE93-018443] p 1468 N94-19014
Bench-scale screening tests for a boiling sodium-potassium alloy solar receiver
[DE93-018512] p 1469 N94-19040
The CAESAR project: Experimental and modeling investigations of methane reforming in a catalytically enhanced solar absorption receiver on a parabolic dish
[DE93-040203] p 1469 N94-19109

SOLAR CORPUSCULAR RADIATION
Solar flares and magnetospheric particles: Investigations based upon the ONR-602 and ONR-604 experiments
[AD-A269495] p 1629 N94-18705

SOLAR DYNAMIC POWER SYSTEMS
Performance mapping of the STM4-120 kinematic Stirling engine using a statistical design of experiments method
[DE93-015132] p 1464 N94-17798

SOLAR ENERGY
Solar radiation in Saudi Arabia
[AD-A269970] p 1493 N94-18781
Effects of the Mount Pinatubo eruption on solar insolation: Four case studies
[DE93-018454] p 1475 N94-18817
EIA publications directory, 1992
[DE93-016833] p 1617 N94-18983

SOLAR ENERGY CONVERSION
Pulse radiolytic studies of electron transfer processes and applications to solar photochemistry
[DE93-018715] p 1464 N94-17781
S/EV 1992: Solar and Electric Vehicles. Volume 1: Proceedings
[DE93-015762] p 1445 N94-18307
Research on stable, high-efficiency amorphous silicon multijunction modules
[DE93-010046] p 1467 N94-18518
Silicon concentrator solar cell research
[DE93-018489] p 1468 N94-19015

SOLAR FLARES
Solar flares and magnetospheric particles: Investigations based upon the ONR-602 and ONR-604 experiments
[AD-A269495] p 1629 N94-18705
The solar optical telescope
[NASA-TM-109240] p 1621 N94-18850
EGRET Mission and Data Analysis
[MPE-PREPRINT-223] p 1622 N94-19462
Detection of a long-duration solar gamma-ray flare on Jun. 11, 1991 with EGRET on Compton-GRO
p 1623 N94-19463

SOLAR FLUX
The Sudbury Neutrino Observatory and the solar neutrino problem
[DE93-018528] p 1629 N94-19260

SOLAR GENERATORS
First on-sun test of NaK pool-boiler solar receiver
[DE93-015003] p 1466 N94-18208

SOLAR HEATING
Tehachapi solar thermal system
[DE93-018443] p 1468 N94-19014

SOLAR NEUTRINOS
Neutrino mass
[DE93-018467] p 1567 N94-18269
The Sudbury Neutrino Observatory and the solar neutrino problem
[DE93-018528] p 1629 N94-19260

SOLAR OPTICAL TELESCOPE
The solar optical telescope
[NASA-TM-109240] p 1621 N94-18850

SOLAR OSCILLATIONS
The Sudbury Neutrino Observatory and the solar neutrino problem
[DE93-018528] p 1629 N94-19260

SOLAR PHYSICS
Origins of solar activity. First year report, AASERT grant
[AD-A268848] p 1629 N94-18222
The solar optical telescope
[NASA-TM-109240] p 1621 N94-18850
The Sudbury Neutrino Observatory and the solar neutrino problem
[DE93-018528] p 1629 N94-19260

SOLAR POWERED AIRCRAFT
Regenerative fuel cells for High Altitude Long Endurance Solar Powered Aircraft
[DE93-016991] p 1465 N94-17853

SOLAR PROPULSION
S/EV 1992: Solar and Electric Vehicles. Volume 1: Proceedings
[DE93-015762] p 1445 N94-18307

SOLAR RADIATION
Pulse radiolytic studies of electron transfer processes and applications to solar photochemistry
[DE93-018715] p 1464 N94-17781
Global zones of particle precipitation as observed EXOS-C
[AD-A268758] p 1481 N94-18467
Solar radiation in Saudi Arabia
[AD-A269970] p 1493 N94-18781
Effects of the Mount Pinatubo eruption on solar insolation: Four case studies
[DE93-018454] p 1475 N94-18817
Marine-modified LOWTRAN: The contribution of sun glint
[AD-A269547] p 1500 N94-19762

SOLAR REFLECTORS
Development of a selective volumetric receiver for central receiver systems: Investigation of parameters and exergetic evaluation
[DLR-FB-93-05] p 1465 N94-18089

SOLAR SPECTRA
Tunable ytterbium-doped solid state laser
[AD-D015878] p 1440 N94-18747

SOLAR TERRESTRIAL INTERACTIONS
ISTP Global Geospace Science. Energy transfer in geospace
[NASA-TM-109239] p 1620 N94-18851
The Wave Experiment Consortium
p 1328 N94-19623

SOLAR WIND
ISTP Global Geospace Science. Energy transfer in geospace
[NASA-TM-109239] p 1620 N94-18851
Radial evolution of the solar wind turbulence with application to charged particle transport
[NASA-CR-194081] p 1629 N94-19427

SOLAR-PUMPED LASERS
Direct solar pumping of semiconductor lasers: A feasibility study
[NASA-CR-193760] p 1440 N94-18834

SOLDERED JOINTS
Microstructurally based thermomechanical fatigue lifetime model of solder joints for electronic applications
[DE93-016506] p 1452 N94-17995
Embrittlement of surface mount solder joints by hot solder-dipped, gold-plated leads
[DE93-017659] p 1358 N94-18003
Wetting behavior of alternative solder alloys
[DE93-016730] p 1359 N94-18127
Reducing inadvertent alloying of metal/ceramic brazes
[DE93-009842] p 1373 N94-19308

SOLDERING
Development of alternatives to lead-bearing solders
[DE93-016509] p 1357 N94-17862
Automatic soldering for watch circuit components
p 1428 N94-18037
Solderability perservative coatings: Electroless tin versus organic azoles
[DE93-017634] p 1370 N94-18477

SOLDERS
Development of alternatives to lead-bearing solders
[DE93-016509] p 1357 N94-17862
Wetting behavior of alternative solder alloys
[DE93-016730] p 1359 N94-18127
Solderability perservative coatings: Electroless tin versus organic azoles
[DE93-017634] p 1370 N94-18477

SOLENOIDS
Toroidal solenoids in the electromagnetic field and Aharonov-Casher effect
[DE93-629861] p 1566 N94-18152
Generalized energy principle for flute perturbations in axisymmetric mirror machines
[DE93-019399] p 1589 N94-19037

SOLID ELECTROLYTES
Mixed polymer electrolyte and mixed polymer electrolyte battery
[AD-D015856] p 1394 N94-17718
Oxygen reduction at a stabilized zirconia interface with Y(1-x)Ca(x)MnO3 or La(1-x)Sr(x)MnO3 cathode materials
[DE93-015681] p 1593 N94-17747
Fuel cell systems program plan, fiscal year 1993
[DE93-017828] p 1466 N94-18103
Novel electrochemical materials prepared by sol-gel chemistry
[AD-A269060] p 1578 N94-18405

SOLID LUBRICANTS
Titanium carbon-hydrogen layers on decorative surfaces p 1375 N94-18010
Physico chemical and mechanic approach of lubricating properties of graphite + additive powders
[ECL-93-02] p 1373 N94-19405

SOLID MECHANICS
HEMP 3D: A finite difference program for calculating elastic-plastic flow, appendix B
[AD-A269171] p 1418 N94-18878

SOLID PHASES
A new multiphase equation of state for iron
[DE93-017629] p 1357 N94-17819
Deformation mechanisms in a Laves phase
[DE93-018331] p 1361 N94-18806
Morphology, deformation, and defect structures of TiCr2 in Ti-Cr alloys
[DE93-018332] p 1361 N94-18807

SOLID ROCKET PROPELLANTS
Adaptations to micropep and rocket to allow performance evaluation of multiple grain and/or airbreathing motors
[AD-A268798] p 1337 N94-18202
Materials characterization of propellants using ultrasonics
[NASA-CR-193877] p 1378 N94-19494

SOLID SOLUTIONS
Effects of shock loading on a solid-solution strengthened superalloy
[DE93-018345] p 1362 N94-18809

SOLID STATE
Polaron tunneling in high-temperature superconductors
[DE93-016880] p 1593 N94-17754
Microstructural analysis of solid-state resistance welds
[DE93-017295] p 1443 N94-17761
Solid State Sciences Committee Forum
[AD-A270454] p 1342 N94-18715
Solid-state dynamics in novel semiconductor nanostructures
[AD-A271249] p 1605 N94-19725

SOLID STATE DEVICES
Portable, solid state, fiber optic coupled Doppler interferometer system for detonation and shock diagnostics
[DE93-013917] p 1423 N94-17700
Solid-state, resistive hydrogen sensors for safety monitoring
[DE93-017769] p 1424 N94-17778
New room temperature high resolution solid-state detector (CdZnTe) for hard x rays and gamma rays
p 1324 N94-19165

SOLID STATE LASERS
Integrated photonics research volume 10. Conference edition
[AD-A269298] p 1577 N94-18298
Quantum Optoelectronics. Organization of the 1993 photonics science topical meetings. Technical digest series, volume 8
[AD-A269026] p 1578 N94-18488
Advanced Solid-State Lasers/Compact Blue-Green Lasers. 1993 technical digest series. Volume 2: Organization of the 1993 photonics science topical meetings
[AD-A269058] p 1438 N94-18492
Photonics in Switching: Organization of the 1993 photonics science topical meetings. Technical digest
[AD-A269024] p 1578 N94-18528
Tunable ytterbium-doped solid state laser
[AD-D015878] p 1440 N94-18747
Impact of shorter wavelengths on optical quality for laws
[NASA-CR-193873] p 1579 N94-18858
Proof of the feasibility of coherent and incoherent schemes for pumping a gamma ray laser
[AD-A269173] p 1440 N94-18880
Tetravalent chromium (Cr(4+)) as laser-active ion for tunable solid-state lasers
[NASA-CR-194529] p 1441 N94-19369
Tetravalent chromium (Cr(4+)) as laser-active ion for tunable solid-state lasers
[NASA-CR-194528] p 1441 N94-19394
Center-of-Excellence: Microlaser microscope
[DE93-040688] p 1442 N94-19658

SOLID STATE PHYSICS
Solid State Sciences Committee Forum
[AD-A270454] p 1342 N94-18715

SOLID SURFACES
NMR studies of enriched species at interfaces
[AD-A264703] p 1367 N94-17878

SOLID SUSPENSIONS
Advanced in macrostatistical hydrodynamics
[DE93-018479] p 1410 N94-18270

SOLID-SOLID INTERFACES
Experimental contribution to the contact between two bodies and the effect of roughness
[ECL-91-41] p 1451 N94-17918
Micromechanics of interfaces in metal matrix composites
[AD-A271012] p 1345 N94-19776

SOLIDIFICATION
Prediction of non-equilibrium solidification modes in austenitic stainless steel laser welds
[DE93-018457] p 1364 N94-19203
Recent advances in high density tungsten composite processing
[AD-A270764] p 1344 N94-19576

SOLIDS
Interaction of intense lasers and relativistic electron beams with solids, gases and plasmas
[AD-A269655] p 1439 N94-18737
Stress pulse phenomena
[DE93-019064] p 1456 N94-19078

SOLITARY WAVES
A method for solving the KDV equation and some numerical experiments
[DE93-624726] p 1550 N94-19246
Investigations in gauge theories, topological solitons, and string theories
[DE93-015029] p 1609 N94-19250

SOLUBILITY
Molecular composites from liquid crystalline polymers and liquid crystalline thermosets
[DE93-016608] p 1368 N94-18096
Measurement of viscosity, density, and gas solubility of refrigerant blends in selected synthetic lubricants
[DE93-040221] p 1350 N94-18977

SOLUTES
The effect of composition on the mechanism of continuous recrystallization and superplastic response of aluminum-scandium alloys
[DE93-018594] p 1365 N94-19280
Melt spinning study
[NASA-CR-193823] p 1380 N94-19423

SOLVATION
Femtosecond Fourier-transform spectroscopy of low-frequency intermolecular motions in weakly interacting liquids
[DE93-017312] p 1566 N94-18085

SOLVENT EXTRACTION
Summary report for supercritical carbon dioxide extraction and carbonization of Resorcinol-Formaldehyde (RF) foams
[DE93-016924] p 1346 N94-17987

SOLVENTS
Densities and viscosities of ternary ammonia/water fluids
[DE93-015966] p 1351 N94-19118

SONAR
Processing and analysis of SeaMARC 2 data: Fieberling guyot; raw phase experiment in Norwegian-Greenland Sea
[AD-A269930] p 1498 N94-18662
A register of underwater acoustic test facilities in the US, Canada, and the United Kingdom
[AD-A270884] p 1500 N94-19785
SOOT
Novel catalysts for methane activation
[DE93-040630] p 1349 N94-18532
SOS (SEMICONDUCTORS)
Radiation hardened microprocessor for small payloads
p 1327 N94-19184
SOUND FIELDS
Acoustic intensity measurements in the presence of low Mach number flow
[AD-A269995] p 1562 N94-18664
SOUND GENERATORS
Acoustic propagation modeling using MATLAB
[AD-A270905] p 1564 N94-19750
SOUND LOCALIZATION
Human-machine interfaces
[AD-A270730] p 1513 N94-19764
SOUND PRESSURE
Transducers and method for making same
[AD-D015949] p 1408 N94-19759
SOUND PROPAGATION
Ultrasonic technique for inspection of GPHS capsule girth weld integrity
[DE93-040072] p 1448 N94-19189
Numerical simulation of acoustic waves propagation in turbulent media
[ECL-92-37] p 1563 N94-19413
Examinations of converging cylindrically symmetric second sound propagation in He2
[MPIS-9/1992] p 1564 N94-19715
SOUND WAVES
Comments on computational underwater acoustics
[DE93-013789] p 1562 N94-17873
Low-noise oscillators for airborne radar applications, revision 1
[AD-A269372] p 1403 N94-18471
Acoustic intensity measurements in the presence of low Mach number flow
[AD-A269995] p 1562 N94-18664
Estimating the oceanic sound speed environmental for long-range acoustic propagation
[AD-A270231] p 1499 N94-18903
Elastic properties of amorphous thin films studied by Rayleigh waves
[DE93-018375] p 1372 N94-19202
Comments on computational underwater acoustics
[DE93-019880] p 1563 N94-19270
Low frequency acoustics of laminated composite axisymmetric structures
[DRA-TM(USGR)-93302] p 1344 N94-19391
Numerical simulation of acoustic waves propagation in turbulent media
[ECL-92-37] p 1563 N94-19413
The electromechanical properties of tetragonal BaTiO3 and PbTiO3 single crystals
[DE93-019008] p 1603 N94-19550
Acoustic travel time perturbations due to an internal tide and internal wave field in the Barents Sea
[AD-A270879] p 1499 N94-19580
Seismic studies of the geologic structure and physical properties of the seabed
[AD-A270895] p 1500 N94-19747
Acoustic propagation modeling using MATLAB
[AD-A270905] p 1564 N94-19750
SOUNDING ROCKETS
UVPI imaging from the LACE satellite: The Nihka rocket plume
[AD-A268456] p 1334 N94-18149
SOUTH CAROLINA
Applications of Quaternary stratigraphic, soil-geomorphic, and quantitative geomorphic analyses to the evaluation of tectonic activity and landscape evolution in the Upper Coastal Plain, South Carolina
[DE93-016269] p 1484 N94-18725
SPACE CHARGE
Nonlinear Thomson scattering of intense laser pulse from beams and plasmas
[AD-A269556] p 1438 N94-18460
Halo formation in mismatched, space-charge-dominated beams
[DE93-018581] p 1574 N94-18934
Correction of longitudinal errors in accelerators for heavy-ion fusion
[DE93-018656] p 1575 N94-19106
Induction accelerator development for heavy ion fusion
[DE93-019228] p 1591 N94-19479
SPACE COMMERCIALIZATION
An evolutionary approach to space launch commercialization
[AD-A269861] p 1331 N94-18411
Future energy source --- Mining Helium-3 on the moon
[NASA-TM-109363] p 1628 N94-18959
SPACE DEBRIS
Space debris detection
[AD-A269254] p 1334 N94-18264
Proceedings of the 11th Space Surveillance Workshop
[AD-A269477] p 1462 N94-18729
SPACE EXPLORATION
Space transfer concepts and analyses for exploration missions
[NASA-CR-193876] p 1332 N94-18820
Shuttle-C, the future is now
[NASA-TM-109355] p 1332 N94-18954
Magellan, Galileo, and Ulysses
[NASA-TM-109362] p 1628 N94-18958
Spacework 17: O'Leary's Mars
[NASA-TM-109374] p 1629 N94-18966
Space exploration initiative
[NASA-TM-109366] p 1323 N94-18981
SPACE HABITATS
Space transfer concepts and analyses for exploration missions
[NASA-CR-193876] p 1332 N94-18820
SPACE INDUSTRIALIZATION
Consortium for materials development in space
[NASA-CR-194411] p 1379 N94-18840
SPACE LABORATORIES
Consortium for materials development in space
[NASA-CR-194411] p 1379 N94-18840
Opportunities and questions for the fundamental biological sciences in space p 1502 N94-19212
SPACE MANUFACTURING
Activities of the Center for Space Construction
[NASA-CR-193717] p 1335 N94-19371
SPACE MISSIONS
Mission needs and system commonality for space nuclear power and propulsion
[DE93-016557] p 1337 N94-17863
Human Transportation System (HTS) study: Executive summary
[NASA-TM-104780] p 1332 N94-18669
Human Transportation System (HTS) study, volume 1
[NASA-TM-104779] p 1332 N94-18670
Report on the activities of Space Science Department, 1990 - mid 1992
[ESA-SP-1161] p 1633 N94-19404
SPACE NAVIGATION
Radiation induced darkening of the optical elements in the Startracker camera
[DE93-018907] p 1433 N94-19004
SPACE OBSERVATIONS (FROM EARTH)
Hubble Space Telescope
[NASA-TM-109359] p 1621 N94-19072
Co-ordination of ground-based observations with Cluster p 1331 N94-19640
SPACE PERCEPTION
Psychophysical analyses of perceptual representations
[AD-A268711] p 1508 N94-18313
Modeling of driver behavior: Information perception, rule and control strategies in experiments and simulations
[ETN-93-95053] p 1510 N94-19649
SPACE PLASMAS
Correlated charge-changing ion-atom collisions
[DE93-018717] p 1564 N94-17775
Detailed analysis of low energy plasma data under the Voyager Uranus data analysis program
[NASA-CR-193668] p 1628 N94-17842
Plasma properties research: Task 3
[DE93-017087] p 1583 N94-17854
An investigation of methods for updating ionospheric scintillation models using topside in-situ plasma density measurements
[AD-A269872] p 1483 N94-18655
Plasma contactor development for Space Station
[NASA-TM-106425] p 1587 N94-18861
Convection algorithms for magnetospheric particles
[AD-A270103] p 1493 N94-18871
Cluster: Mission, Payload, and Supporting Activities
[ESA-SP-1159] p 1328 N94-19622
The Cluster Ion Spectroscopy experiment
p 1329 N94-19631
PEACE: A Plasma Electron and Current Experiment
p 1329 N94-19632
European network for the numerical simulation of space plasmas p 1331 N94-19641
SPACE PLATFORMS
ISOBUS: A new versatile spacecraft platform using Shuttle small payloads p 1327 N94-19183
Activities of the Center for Space Construction
[NASA-CR-193717] p 1335 N94-19371
SPACE POWER REACTORS
Mission needs and system commonality for space nuclear power and propulsion
[DE93-016557] p 1337 N94-17863
Total hemispherical emittance of Niobium-1 percent zirconium fuel cladding for the SP-100 space reactor
[AD-A270456] p 1576 N94-19589
SPACE PROBES
Predicted structural response of the lightweight-interceptor technology demonstration vehicle
[DE93-014676] p 1333 N94-17782
SPACE PROCESSING
The first flight of the QUESTS GAS payload G-521
p 1325 N94-19170
Space Applications Industrial Laser System (SAILS)
p 1325 N94-19173
SPACE RENDEZVOUS
Automated rendezvous and capture demonstration study
[NASA-CR-192587] p 1331 N94-19366
SPACE SHUTTLE BOOSTERS
Effect of temperature and O-ring gland finish on sealing ability of Viton V747-75
[NASA-TP-3391] p 1368 N94-18075
SPACE SHUTTLE MAIN ENGINE
Technology test bed
[NASA-TM-109354] p 1322 N94-18953
FNAS/summer faculty fellowship research continuation program. Task 6: Integrated model development for liquid fueled rocket propulsion systems. Task 9: Aspects of model-based rocket engine condition monitoring and control
[NASA-CR-194574] p 1338 N94-19706
SPACE SHUTTLE MISSIONS
Return to space
[NASA-TM-109356] p 1332 N94-18955
Your GAS experiment and the media or why does that other can get all of the publicity? p 1327 N94-19182
SPACE SHUTTLE ORBITERS
Pathfinder: Shuttle exhibit
[NASA-TM-109357] p 1333 N94-19071
A high resolution ultraviolet Shuttle glow spectrograph
p 1325 N94-19174
Kennedy Space Center processing of Shuttle small payloads p 1326 N94-19177
Utilization of Shuttle small payload accommodations in the DOD Space Test Program p 1326 N94-19180
SPACE SHUTTLE PAYLOADS
LDEF update
[NASA-TM-109352] p 1334 N94-18921
The 1993 Shuttle Small Payloads Symposium
[NASA-CP-3233] p 1323 N94-19162
VPU(tm) demonstration mission vicinity processor unit(tm) overview p 1325 N94-19171
Space Applications Industrial Laser System (SAILS)
p 1325 N94-19173
Kennedy Space Center processing of Shuttle small payloads p 1326 N94-19177
Utilization of Shuttle small payload accommodations in the DOD Space Test Program p 1326 N94-19180
ISOBUS: A new versatile spacecraft platform using Shuttle small payloads p 1327 N94-19183
Radiation hardened microprocessor for small payloads
p 1327 N94-19184
Superfluid Helium On-Orbit Transfer (SHOOT) flight demonstration p 1327 N94-19185
SPACE SHUTTLES
Robotics
[NASA-TM-109351] p 1332 N94-18920
Langley's 50th year
[NASA-TM-109365] p 1632 N94-18980
A stereoscopic vision system with applications to automated docking and tracking
[AD-A270754] p 1333 N94-19765
SPACE STATION FREEDOM
Designing Space Station
[NASA-TM-109353] p 1334 N94-18922
Space exploration initiative
[NASA-TM-109366] p 1323 N94-18981
Space Applications Industrial Laser System (SAILS)
p 1325 N94-19173
Space research with intact organisms: The role of Space Station Freedom p 1502 N94-19213
Strategic plan, 1991: A strategy for leadership in space through excellence in space science and applications
[NASA-TM-109256] p 1611 N94-19434
SPACE STATION POWER SUPPLIES
Plasma contactor development for Space Station
[NASA-TM-106425] p 1587 N94-18861
SPACE STATIONS
The 1994 NASA authorization, volume 2
[GPO-71-510] p 1620 N94-18842
Plasma contactor development for Space Station
[NASA-TM-106425] p 1587 N94-18861
Shuttle-C, the future is now
[NASA-TM-109355] p 1332 N94-18954

SPACE SURVEILLANCE (GROUND BASED)
Super-resolution of multi-pixel and sub-pixel images for the SDI [AD-A268537] p 1462 N94-18631
Proceedings of the 11th Space Surveillance Workshop [AD-A269477] p 1462 N94-18729

SPACE SURVEILLANCE (SPACEBORNE)
UVPI imaging from the LACE satellite: The Nihka rocket plume [AD-A268456] p 1334 N94-18149
Proceedings of the 11th Space Surveillance Workshop [AD-A269477] p 1462 N94-18729

SPACE TRANSPORTATION
Human Transportation System (HTS) study: Executive summary [NASA-TM-104780] p 1332 N94-18669
Human Transportation System (HTS) study, volume 1 [NASA-TM-104779] p 1332 N94-18670

SPACE TRANSPORTATION SYSTEM
The 1994 NASA authorization, volume 2 [GPO-71-510] p 1620 N94-18842

SPACE TRANSPORTATION SYSTEM FLIGHTS
Return to space [NASA-TM-109356] p 1332 N94-18955

SPACE-TIME FUNCTIONS
Space and time as outcome of decoherence in an expanding universe [DE93-016199] p 1624 N94-18047
Impulsive moving mirror model in a Schroedinger picture with impulse effect in a Banach space [DE93-629864] p 1561 N94-18155
Space and time from quantum mechanics [DE93-015263] p 1609 N94-18629

SPACEBORNE ASTRONOMY
The Einstein Observatory catalog of IPC x ray sources. Volume 4E: Right ascension range 08h 00m to 11h 59m [NASA-TM-108401-VOL-4E] p 1625 N94-18612
The Einstein Observatory catalog of IPC x ray sources. Volume 5E: Right ascension range 12h 00m to 15h 59m [NASA-TM-108401-VOL-5E] p 1625 N94-18613
The Einstein Observatory catalog of IPC x ray sources. Volume 6E: Right ascension range 16h 00m to 19h 59m [NASA-TM-108401-VOL-6E] p 1625 N94-18615
The Einstein Observatory catalog of IPC x ray sources. Volume 7E: Right ascension range 20h 00m to 23h 59m [NASA-TM-108401-VOL-7E] p 1625 N94-18618
The Einstein Observatory catalog of IPC x ray sources. Volume 1E: Documentation [NASA-TM-108401-VOL-1E] p 1626 N94-18619
The Einstein Observatory catalog of IPC x ray sources. Volume 2E: Right ascension range 00h 00m to 03h 59m [NASA-TM-108401-VOL-2E] p 1626 N94-18620
The Einstein Observatory catalog of IPC x ray sources. Volume 3E: Right ascension range 04h 00m to 07h 59m [NASA-TM-108401-VOL-3E] p 1626 N94-18621
ASTRO-1 to explore invisible universe [NASA-TM-109360] p 1336 N94-18956
The star identification, pointing and tracking system of UVSTAR, an attached payload instrument system for the Shuttle Hitchhiker-M platform p 1326 N94-19179
Particle induced background by Roentgen satellites [MPE-242] p 1631 N94-19714

SPACEBORNE EXPERIMENTS
Consortium for materials development in space [NASA-CR-194411] p 1379 N94-18840
Spacelab 3 [NASA-TM-108750] p 1323 N94-18849
California Student Get Away Special Payload GAS-450 p 1324 N94-19164
MUZO flight experience with the programmable multizone furnace p 1324 N94-19167
Static Computer Memory Integrity Testing (SCMIT): An experiment flown on STS-40 as part of GAS payload G-616 p 1325 N94-19169
The first flight of the QUESTS GAS payload G-521 p 1325 N94-19170
VPU(tm) demonstration mission vicinity processor unit(tm) overview p 1325 N94-19171
Materials flight experiment carrier capability and future flight experiments on Hitchhiker-M carrier program p 1326 N94-19175
Limited Duration of Candidate Materials Exposure Experiment (LDCE): A Complex Autonomous Payload (CAP) using a Get Away Special (GAS) canister p 1326 N94-19176
Utilization of Shuttle small payload accommodations in the DOD Space Test Program p 1326 N94-19180
Your GAS experiment and the media or why does that other can get all of the publicity? p 1327 N94-19182
Space Life Sciences Research: The Importance of Long-Term Space Experiments [NASA-TM-4502] p 1502 N94-19210

SPACEBORNE LASERS
Direct solar pumping of semiconductor lasers: A feasibility study [NASA-CR-193760] p 1440 N94-18834
SPNDL: A concept for a small satellite Doppler lidar wind sounder p 1327 N94-19181

SPACEBORNE TELESCOPES
ASTRO-1 to explore invisible universe [NASA-TM-109360] p 1336 N94-18956
UVSTAR: An imaging spectrograph with telescope for the Shuttle Hitchhiker-M platform p 1326 N94-19178
The star identification, pointing and tracking system of UVSTAR, an attached payload instrument system for the Shuttle Hitchhiker-M platform p 1326 N94-19179

SPACECRAFT ANTENNAS
Missile antenna pattern coordinate system and data formats [AD-A269153] p 1385 N94-18260

SPACECRAFT CHARGING
Broadband RF spectrum from electrostatic discharges on spacecraft [AD-A269543] p 1385 N94-18287
Active spacecraft potential control: An ion emitter experiment for Cluster p 1330 N94-19634

SPACECRAFT CONFIGURATIONS
ISOBUS: A new versatile spacecraft platform using Shuttle small payloads p 1327 N94-19183

SPACECRAFT CONSTRUCTION MATERIALS
Low power arcjet system spacecraft impacts [NASA-TM-106307] p 1336 N94-17856
Consortium for materials development in space [NASA-CR-194411] p 1379 N94-18840
Materials flight experiment carrier capability and future flight experiments on Hitchhiker-M carrier program p 1326 N94-19175
Limited Duration of Candidate Materials Exposure Experiment (LDCE): A Complex Autonomous Payload (CAP) using a Get Away Special (GAS) canister p 1326 N94-19176

SPACECRAFT CONTAMINATION
Low power arcjet system spacecraft impacts [NASA-TM-106307] p 1336 N94-17856
The application of jet spray and ion beam contamination removal techniques to samples from the LDEF spacecraft [AD-A270973] p 1354 N94-19755

SPACECRAFT CONTROL
Cooperative control of multiple space manipulators [AD-A270291] p 1445 N94-18813
Phasing strategies of the Hermes type space shuttle: Its optimization considering the thrust failures [LAAS-93242] p 1544 N94-19361
Automated rendezvous and capture demonstration study [NASA-CR-192587] p 1331 N94-19366
Activities of the Center for Space Construction [NASA-CR-193717] p 1335 N94-19371

SPACECRAFT DESIGN
Designing Space Station [NASA-TM-109353] p 1334 N94-18922
Shuttle-C, the future is now [NASA-TM-109355] p 1332 N94-18954
ISOBUS: A new versatile spacecraft platform using Shuttle small payloads p 1327 N94-19183
Activities of the Center for Space Construction [NASA-CR-193717] p 1335 N94-19371
Cluster: Mission, Payload, and Supporting Activities [ESA-SP-1159] p 1328 N94-19622
The Cluster spacecraft p 1330 N94-19635

SPACECRAFT DOCKING
Automated rendezvous and capture demonstration study [NASA-CR-192587] p 1331 N94-19366
A stereoscopic vision system with applications to automated docking and tracking [AD-A270754] p 1333 N94-19765

SPACECRAFT ENVIRONMENTS
Environmental control and life support [ESA-PSS-03-40-ISSUE-1] p 1513 N94-19442

SPACECRAFT GLOW
A high resolution ultraviolet Shuttle glow spectrograph p 1325 N94-19174

SPACECRAFT LANDING
Single STAGE Rocket Technology (SSRT) DC-X test program environmental assessment [AD-A265940] p 1337 N94-17879

SPACECRAFT LAUNCHING
Single STAGE Rocket Technology (SSRT) DC-X test program environmental assessment [AD-A265940] p 1337 N94-17879
An evolutionary approach to space launch commercialization [AD-A269861] p 1331 N94-18411

SPACECRAFT MAINTENANCE
Robotics [NASA-TM-109351] p 1332 N94-18920

SPACECRAFT MANEUVERS
Constant-thrust orbit-raising transfer charts [AD-A269088] p 1334 N94-18718

SPACECRAFT MOTION
Dynamic characterization of a lightweight, highly maneuverable spacecraft using modal and finite element analyses [DE93-018095] p 1335 N94-18942

SPACECRAFT ORBITS
The Cluster orbit and mission scenario p 1330 N94-19637

SPACECRAFT POWER SUPPLIES
Mission needs and system commonality for space nuclear power and propulsion [DE93-016557] p 1337 N94-17863
Ultrasonic technique for inspection of GPHS capsule girth weld integrity [DE93-040072] p 1448 N94-19189
Rationale for the power standard [ESA-PSS-02-10-VOL-2-ISSUE-] p 1338 N94-19516

SPACECRAFT PROPULSION
Mission needs and system commonality for space nuclear power and propulsion [DE93-016557] p 1337 N94-17863
Critical technologies for reactors used in nuclear electric propulsion [DE93-017685] p 1337 N94-17908
Technology test bed [NASA-TM-109354] p 1322 N94-18953

SPACECRAFT RECOVERY
LDEF update [NASA-TM-109352] p 1334 N94-18921

SPACECRAFT STRUCTURES
Design considerations for remotely operated welding in space: Task definition and visual weld monitoring experiment [AD-A268752] p 1445 N94-18634
Activities of the Center for Space Construction [NASA-CR-193717] p 1335 N94-19371

SPACECRAFT TRAJECTORIES
Parallelization of the Air Force Space Command (AFSPACECOM) satellite motion models [AD-A269327] p 1334 N94-18470
Constant-thrust orbit-raising transfer charts [AD-A269088] p 1334 N94-18718
START user manual version 2.1 [LR-726] p 1335 N94-19614

SPACELAB
Spacelab 3 [NASA-TM-108750] p 1323 N94-18849

SPALLATION
Mechanical-property changes of structural composite materials after low-temperature proton irradiation: Implications for use in SSC magnet systems [DE93-016735] p 1343 N94-18763

SPARK IGNITION
Evaluation of aftermarket LPG conversion kits in light-duty vehicle applications [DE93-010035] p 1377 N94-18617

SPATIAL DISTRIBUTION
Observations of comets with the IUE [NASA-CR-193652] p 1624 N94-17843
A Bayesian approach to contaminant plume delineation [DE93-012909] p 1472 N94-17890
Efficiency of fiber dispersion [AD-A269740] p 1342 N94-18757
Spatiotemporal variability of non-urban ozone concentrations over the eastern United States and its potential replication by satellite data [PB93-191328] p 1476 N94-19065

SPATIAL FILTERING
Evaluation of a liquid crystal spatial light modulator capable of amplitude- and phase-modulating modes [AD-A269252] p 1577 N94-18262
Interferometer stations at the Air Force Aeroballistic Research Facility [AD-A268776] p 1322 N94-18330
A non-homogeneous, spatio-temporal, wavelet multiresolution analysis and its application to the analysis of motion [AD-A270621] p 1538 N94-19534

SPATIAL RESOLUTION
Effect of spatial resolution on the simulation of regional precipitation in China in a global climate model [DE93-013433] p 1489 N94-18053
The land component of the global climate system with adequate spatial resolution [DE93-018951] p 1474 N94-18183
High spatial resolution, range gated, underwater imaging method and apparatus [AD-D015882] p 1430 N94-18530
Description of an infrared zoomcollimator [FEL-93-A034] p 1580 N94-19424
Earth Penetration Radar Imaging System (EPRIS) [DE93-019890] p 1391 N94-19542

SPECIFIC HEAT
The low-temperature specific heat of CeCu2Ge2 at 0 and 9.5 kbar
[DE93-014914] p 1360 N94-18398
Specific heat of La(1.875-x)Nd(x)Sr(0.125)CuO4: Magnetic and structural transitions
[DE93-016978] p 1600 N94-18968
Thermophysical properties
[DE93-040219] p 1351 N94-19134
Realistic theories of heavy electron and other strongly correlated materials
[DE93-010350] p 1571 N94-19204
SPECIFICATIONS
PostScript: A study in conformity
[NPL-DITC-214/93] p 1517 N94-17917
The TM manual version 1.3 working document
[MEMO-INF-93-06] p 1527 N94-19229
SPECIMEN GEOMETRY
Interfacial cracks in plates: A three-dimensional numerical investigation p 1456 N94-19116
SPECTRA
A time-frequency smoothing algorithm for cyclic spectral analysis
[DE93-016634] p 1519 N94-18097
UVPI imaging from the LACE satellite: The Nihka rocket plume
[AD-A268456] p 1334 N94-18149
The LET spectrum and its uncertainty during the CRRES mission
[AD-A269977] p 1630 N94-18676
SPECTRAL CORRELATION
A time-frequency smoothing algorithm for cyclic spectral analysis
[DE93-016634] p 1519 N94-18097
SPECTRAL ENERGY DISTRIBUTION
Acoustic intensity measurements in the presence of low Mach number flow
[AD-A269995] p 1562 N94-18664
Relation between the fluctuating wall pressure and the turbulent structure of a boundary layer on a cylinder in axial flow
[AD-A270242] p 1418 N94-18906
EXANA: A program for analysing extended energy loss fine structures, EXELFS spectra
[USIP-92-01] p 1525 N94-19145
Structuration processes in protoplanetary accretion disks
[MPE-243] p 1628 N94-19519
SPECTRAL METHODS
Computational Fluid Dynamics
[VKI-LS-1993-04] p 1412 N94-18557
Introduction to spectral methods: Application to the Stokes problem p 1413 N94-18566
Introduction to spectral methods for hyperbolic system of conservation laws p 1413 N94-18567
On the numerical analysis of nonlinear Galerkin methods: Spectral approximation and finite elements
[ETN-93-94900] p 1552 N94-19407
Stability measurements of Rayleigh-Benard convection near the critical state using a spectral model
[MPIS-15/1992] p 1422 N94-19520
SPECTRAL RESOLUTION
Monitoring the response of the upper troposphere/lower stratosphere to a greenhouse gas scenario
[DE93-014509] p 1470 N94-17710
Detailed analysis of low energy plasma data under the Voyager Uranus data analysis program
[NASA-CR-193668] p 1628 N94-17842
New room temperature high resolution solid-state detector (CdZnTe) for hard x rays and gamma rays
p 1324 N94-19165
A high resolution ultraviolet Shuttle glow spectrograph
p 1325 N94-19174
SPECTRAL SIGNATURES
Materials processing and manufacturing technologies for diamond substrates multichip modules
[AD-A268989] p 1599 N94-18764
SPECTRAL THEORY
Full Boltzmann discrete spectral wave model, implementation and nondimensional tests
[AD-A269885] p 1498 N94-18685
SPECTROGRAPHS
UVSTAR: An imaging spectrograph with telescope for the Shuttle Hitchhiker-M platform p 1326 N94-19178
The star identification, pointing and tracking system of UVSTAR, an attached payload instrument system for the Shuttle Hitchhiker-M platform p 1326 N94-19179
Fiber optic Raman spectrograph for in situ environmental monitoring
[DE93-019466] p 1478 N94-19305
SPECTROMETERS
Designs for optical components related to the Los Alamos free-electron laser
[DE93-016617] p 1436 N94-17865
Proceedings of the 3rd Workshop on Balloon-Borne Experiments with Superconducting Magnet Spectrometers
[DE93-788362] p 1630 N94-18219
Fiber optic Raman spectrograph for in situ environmental monitoring
[DE93-019466] p 1478 N94-19305
Legacy of the X Ray Laser Program
[DE93-019550] p 1442 N94-19554
SPECTROSCOPIC ANALYSIS
Analysis of neon soft x ray spectra from short-pulse laser-produced plasmas
[DE93-014420] p 1582 N94-17708
Flame structure studies of a lean 20-torr H2/N2O/Ar flame employing molecular beam mass spectrometry
[AD-A268889] p 1349 N94-18456
Nondestructive inspection of graphite-epoxy laminates for heat damage using DRIFT and LPF spectroscopies
[DE93-017228] p 1343 N94-18761
The minimum detection limits of RDX and TNT deposited on various surfaces as determined by ion mobility spectroscopy
[DE93-018521] p 1378 N94-19042
Examination of charge carriers dynamics in silicon and silicon solar cells with photoinduced laser beam deflection
[ETN-93-95060] p 1470 N94-19654
The application of jet spray and ion beam contamination removal techniques to samples from the LDEF spacecraft
[AD-A270973] p 1354 N94-19755
Micromechanics of interfaces in metal matrix composites
[AD-A271012] p 1345 N94-19776
SPECTROSCOPY
Analysis of HgI2 and PbI2 crystals and detectors by Particle-Induced X Ray Emission (PIXE) and Ion Backscattering Spectroscopy (IBS)
[DE93-017168] p 1594 N94-17896
Tunneling spectroscopy of ultrasmall clusters and grains
[AD-A268840] p 1598 N94-18539
Photodissociation studies of polyatomic free radicals
[AD-A270084] p 1350 N94-18799
High pressure metallization of Mott Insulators: Magnetic, structural and electronic properties
[DE93-018295] p 1404 N94-18805
Nontraditional windows in spectral analysis
[AD-A271336] p 1553 N94-19583
The Cluster Ion Spectroscopy experiment
p 1329 N94-19631
SPECTRUM ANALYSIS
Rapid analysis of mixed waste samples via the optical emission from laser initiated microplasmas
[DE93-014563] p 1582 N94-17727
A time-frequency smoothing algorithm for cyclic spectral analysis
[DE93-016634] p 1519 N94-18097
Spectral analysis of synoptic time scale disturbances over the tropical eastern Pacific during summer 1989, 1990 and 1991
[AD-A268821] p 1490 N94-18206
Full Boltzmann discrete spectral wave model, implementation and nondimensional tests
[AD-A269885] p 1498 N94-18685
The use of velocity spectra for stacking receiver functions with application to IRIS/IDA stations OBNINSK (OBN) and ARTI (ARU), Russia
[AD-A269087] p 1483 N94-18717
Spectral analysis on the canonical autoregressive decomposition
[AD-A270083] p 1549 N94-18798
Advanced fusion diagnostics
[DE93-040085] p 1589 N94-19133
EXANA: A program for analysing extended energy loss fine structures, EXELFS spectra
[USIP-92-01] p 1525 N94-19145
New room temperature high resolution solid-state detector (CdZnTe) for hard x rays and gamma rays
p 1324 N94-19165
Detection of a long-duration solar gamma-ray flare on Jun. 11, 1991 with EGRET on Compton-GRO
p 1623 N94-19463
EGRET observations of 3 C 273
p 1623 N94-19464
Nontraditional windows in spectral analysis
[AD-A271336] p 1553 N94-19583
STAFF (Spatio-Temporal Analysis of Field Fluctuations) experiment for the Cluster mission p 1328 N94-19625
SPECULAR REFLECTION
Electro-optic beam steering using non-linear organic materials
[AD-A270809] p 1374 N94-19577
Marine-modified LOWTRAN: The contribution of sun glint
[AD-A269547] p 1500 N94-19762
SPEECH RECOGNITION
Neural networks to classify speaker independent isolated words recorded in radio car environments
[REPT-93-013] p 1383 N94-17935
Feasibility study in linguistically motivated object-oriented conceptual design of information systems
[PB93-197754] p 1618 N94-19331
A real-time spoken-language system for interactive problem-solving, combining linguistic and statistical technology for improved spoken language understanding
[AD-A270901] p 1392 N94-19749
SPENT FUELS
Development and characterization of adiabatic shear prone tungsten heavy alloys
[AD-A270477] p 1366 N94-19673
SPHERES
Geometrical pattern learning
[DE93-017641] p 1542 N94-19007
SPHERICAL HARMONICS
Asymptotic derivation of the modified time-dependent SP2 equations and numerical calculations
[DE93-016466] p 1551 N94-19342
SPHEROIDS
The Navy tessellated spheroid map projection system: A comprehensive definition
[AD-A269989] p 1462 N94-18677
Color palette considerations for digital map displays
[AD-A269991] p 1462 N94-18679
SPILLING
Condensed gases under winter conditions: A study for the rescue services
[FOA-C-40305-4.5] p 1473 N94-18139
SPIN
Phase space representations and quantum probability theory
[DE93-629863] p 1556 N94-18154
Nonlinear dynamics and instabilities in ferromagnetic resonance experiments: Examinations of spheres from yttrium iron garnet in coincidence area of the first Suhl instabilities
[ETN-93-95072] p 1604 N94-19612
SPIN DYNAMICS
T violating neutron spin rotation asymmetry
[DE93-018470] p 1570 N94-19126
SPIN REDUCTION
Aspects of the calibration and processing of the CRRES fluxgate magnetometer data
[AD-A270127] p 1432 N94-18875
SPIN-ORBIT INTERACTIONS
Spin-integrated and spin-dependent photoelectron diffraction
[DE93-016546] p 1565 N94-17850
Electron impact polarization and correlation properties of the inert gases
[DE93-018358] p 1570 N94-19125
SPINE
Multimodal image correlation applied to computer aided pedicular screwing
[ETN-93-95018] p 1528 N94-19363
SPIRAL ANTENNAS
Earth Penetration Radar Imaging System (EPRIS)
[DE93-019890] p 1391 N94-19542
SPLINE FUNCTIONS
Multivariate wavelet representations and approximations
[AD-A269350] p 1546 N94-17825
SPOILERS
High Reynolds number configuration development of a high-lift airfoil p 1306 N94-18424
Numerical investigation of the incompressible flow around a wing with a fixed spoiler
[ISL-R-109/91] p 1313 N94-19524
SPONTANEOUS EMISSION
Coherence and linewidth studies of a 4-nm high power FEL
[DE93-018533] p 1441 N94-19030
Novel nonlinear laser diagnostic techniques
[AD-A270968] p 1442 N94-19788
SPRAYED COATINGS
Thermal analysis of coatings and substrate materials during a disruption in fusion reactors
[DE93-017688] p 1588 N94-18971
SPRAYERS
Metal slurry droplet and spray combustion
[AD-A269648] p 1349 N94-18736
The application of jet spray and ion beam contamination removal techniques to samples from the LDEF spacecraft
[AD-A270973] p 1354 N94-19755
SPREAD SPECTRUM TRANSMISSION
Military applications of high-accuracy frequency standards and clocks
[AD-A269303] p 1430 N94-18299

Application of wavelet transform techniques to spread spectrum demodulation and jamming
[AD-A267389] p 1389 N94-19009

SPREADING
Oil spreading in surface waters with an ice cover
[PB93-190767] p 1476 N94-19064
Similarity solutions for gravity-dominated spreading of a lens of organic contaminant
[REPT-93-24] p 1420 N94-19139

SPUTTERING
Sputtered TiN coatings in plastic
p 1367 N94-18011
RF vacuum microelectronics
[AD-A270003] p 1403 N94-18667
The deposition of electro-optic films on semiconductors
[AD-A270823] p 1605 N94-19664

SQUARE WELLS
Acoustic propagation modeling using MATLAB
[AD-A270905] p 1564 N94-19750

SQUARES (MATHEMATICS)
Catalogue of simple perfect squared squares of orders 21 through 25
[PB93-191971] p 1550 N94-18991

SQUID (DETECTORS)
High resolution SQUID magnetometry for non-destructive evaluation
[AD-A268884] p 1447 N94-18225

STABILITY
Lectures of Fermi liquid theory
[DE93-016630] p 1592 N94-17714
Impulsive moving mirror model and the stability of linear homogeneous differential equations with impulse effect in a Banach space
[DE93-629906] p 1549 N94-18200
The microstructural mechanism of electromigration failure in narrow interconnects of Al alloys
[DE93-018598] p 1365 N94-19282
Electrocatalysts for oxygen electrodes
[DE93-040446] p 1354 N94-19653

STABILITY TESTS
A one dimensional numerical model, with an application to the vertical distribution of dissolved oxygen in the ocean
[DE93-018481] p 1495 N94-17779
Competitive dynamics and self-organization in photorefractive systems
[AD-A269663] p 1430 N94-18569

STABILIZATION
Stabilization of time-delay systems: An overview of the algebraic approach
[PB93-191989] p 1553 N94-19556

STABILIZERS (FLUID DYNAMICS)
Procedures and design data for the formulation of aircraft configurations
[AD-A270150] p 1318 N94-18779

STAGNATION TEMPERATURE
A comparative study of turbulence models in predicting hypersonic inlet flows p 1314 N94-18553

STAINLESS STEELS
Assessment of an improved multiaxial strength theory based on creep-rupture data for Inconel 600
[DE93-015929] p 1356 N94-17791
Summary of work on coatings and claddings for fossil energy applications
[DE93-017005] p 1367 N94-17881
Development and application of specially-focused ultrasonic transducers to location and sizing of defects in 75 mm- to 127 mm-thick austenitic stainless steel weld metals
[DE93-015975] p 1453 N94-18108
A probability method of fracture mechanics analysis for HFIR vessel
[DE93-015510] p 1453 N94-18246
Aerosol filtration with steel fiber filters
[DE93-016990] p 1380 N94-18710
Foil support structure for large electron guns
[DE93-018478] p 1322 N94-18890
Finite difference program for calculating hydride bed wall temperature profiles
[DE93-019272] p 1523 N94-19005
The effects of radiolysis on the corrosion and stress corrosion behavior of 316 stainless steels
[DE93-019933] p 1363 N94-19021
Overlay welding irradiated stainless steel
[DE93-018767] p 1446 N94-19334

STANDARD DEVIATION
Moments of ambient Doppler spectra
[DE93-017948] p 1390 N94-19114

STANDARDIZATION
PostScript: A study in conformity
[NPL-DITC-214/93] p 1517 N94-17917
Secure open systems: An investigation of current standardisation efforts for security in open systems
[FEL-92-B225] p 1618 N94-19450

STANDARDS
PostScript: A study in conformity
[NPL-DITC-214/93] p 1517 N94-17917
The stability and utility of the ESPRIT project, MUSiC, performance-based indicators of usability and tools: An evaluation of the usability of the NPL iSDX telephone system
[NPL-DITC-213/92] p 1613 N94-17925
About time p 1426 N94-18024
Rationale for the power standard
[ESA-PSS-02-10-VOL-2-ISSUE-] p 1338 N94-19516

STANDING WAVES
Three-dimensional simulation analysis of the first sections of a standing-wave free-electron laser two-beam accelerator
[DE93-016977] p 1436 N94-17869

STAR CLUSTERS
Ultraviolet observations of clusters of Wolf-Rayet stars in the SBm3 galaxy NGC 4214 and Ultraviolet and optical observations of LINER's
[NASA-CR-194307] p 1622 N94-19431

STAR DISTRIBUTION
The star identification, pointing and tracking system of UVSTAR, an attached payload instrument system for the Shuttle Hitchhiker-M platform p 1326 N94-19179

STAR TRACKERS
The star identification, pointing and tracking system of UVSTAR, an attached payload instrument system for the Shuttle Hitchhiker-M platform p 1326 N94-19179

STARBURST GALAXIES
ROSAT and IRAS observations
[MPE-PREPRINT-231] p 1623 N94-19526
ROSAT X ray observation of the 30 Dor giant HII region p 1623 N94-19527

STATE VECTORS
An extension of Wolovich's definition of equivalence of linear systems
[MATHS-REPT-A-183] p 1547 N94-18069
Space and time from quantum mechanics
[DE93-015263] p 1609 N94-18629

STATIC CHARACTERISTICS
Study and modeling of compressible flows of flapper nozzle type potentiometric systems
[ETN-93-95012] p 1421 N94-19495

STATIC LOADS
Implementation of mixed formulation elements in PC/NASTRAN p 1449 N94-17828
Spectrum fatigue testing of T-shaped tension clips
[FFA-TN-1992-22] p 1452 N94-17970

STATIC PRESSURE
Static pressure measurements for near isentropic flows using laser induced iodine fluorescence
p 1431 N94-18646
New test method to determine modulus of elasticity of rocket grain material
[AD-A269758] p 1377 N94-18758

STATIC TESTS
Static Computer Memory Integrity Testing (SCMIT): An experiment flown on STS-40 as part of GAS payload G-616 p 1325 N94-19169

STATISTICAL ANALYSIS
Planning under uncertainty solving large-scale stochastic linear programs
[DE93-013920] p 1516 N94-17701
Statistical intercomparison of global climate models: A common principal component approach with application to GCM data
[DE93-017951] p 1473 N94-18005
Putting knowledge to use: The acquisition and transfer of knowledge in situated problem solving environments
[AD-A269746] p 1509 N94-18744
Spectral analysis on the canonical autoregressive decomposition
[AD-A270083] p 1549 N94-18798
Statistical learning theory and algorithms
[AD-A270209] p 1523 N94-18901
Stochastic grammars: Theory and applications
[MEMO-INF-93-19] p 1528 N94-19262
Mathematical communications, volume 27, numbers 1 and 2, 1992. List and abstracts of memoranda published in the period July - December 1991
[PB93-191997] p 1553 N94-19557
A real-time spoken-language system for interactive problem-solving, combining linguistic and statistical technology for improved spoken language understanding
[AD-A270901] p 1392 N94-19749

STATISTICAL DECISION THEORY
Examination of metrics and assumptions used in correlation filter design
[DE93-017636] p 1576 N94-18000
Bounds for expected loss in Bayesian decision theory with imprecise prior probabilities
[PB93-197507] p 1558 N94-19327
Problems in probability, statistics and reliability
[AD-A270830] p 1559 N94-19595

STATISTICAL DISTRIBUTIONS
JSEP fellowship: Fractal noise processes
[AD-A268841] p 1557 N94-18540
Statistical description of the bistatic radar cross section distributions for a right circular cylinder
[AD-A270001] p 1387 N94-18666
Bahadur-Kiefer theorem beyond the largest observation
[PB93-197473] p 1558 N94-19325

STATISTICAL MECHANICS
Advanced in macrostatistical hydrodynamics
[DE93-018479] p 1410 N94-18270

STEADY FLOW
Cell vertex methods for steady inviscid flow
p 1413 N94-18563
Two-dimensional boundary surfaces for axi-symmetric external transonic flows
[AD-A269678] p 1312 N94-18571
Numerical solutions for a flow with mixed convection in a vertical geometry
[DE93-011592] p 1419 N94-19058

STEADY STATE
An overview of the SAFSIM computer program
[DE93-017657] p 1519 N94-18002
Decomposition invariance of generalized steady-state of a 1-D diffusion system
[REPT-93-26] p 1550 N94-19141
Excited atomic bromine energy transfer and quenching mechanisms
[AD-A270672] p 1572 N94-19607
Control of catalytic hydrotreating selectivity with ammonia
[DE93-041223] p 1354 N94-19660

STEEL STRUCTURES
The fire resistance of profiled thin steel sheet structures
[VTT-TIED-1320] p 1380 N94-19373

STEELS
Inelastic deformation and damage at high temperature
[DE93-018155] p 1448 N94-17814
Effects of irradiation temperature on embrittlement of nuclear pressure vessel steels
[DE93-015428] p 1359 N94-18245
The effect of crystallographic orientation on the performance of single crystal tungsten subscale penetrators
[AD-A268988] p 1597 N94-18468
Effects of irradiation temperature on Charpy and tensile properties of high-copper, low upper-shelf, submerged-arc welds
[DE93-017858] p 1445 N94-19047

STEEPEST DESCENT METHOD
Steepest descent method for set-valued locally accretive mappings
[DE93-628592] p 1548 N94-18106

STEERING
Electro-optic beam steering using non-linear organic materials
[AD-A270809] p 1374 N94-19577

STEFAN-BOLTZMANN LAW
Total hemispherical emittance of Niobium-1 percent zirconium fuel cladding for the SP-100 space reactor
[AD-A270456] p 1576 N94-19589

STELLAR ATMOSPHERES
Unified NLTE model atmospheres including spherical extension and stellar winds, 4: Improved line transfer and wind contamination of H, He profiles
[MPA-905] p 1624 N94-17736

STELLAR COMPOSITION
Determination of nitrogen to carbon abundance ratios from transition layer emission lines
[NASA-CR-191921] p 1622 N94-19421

STELLAR CORONAS
Stellar coronae at the end of the main sequence: A Rosat survey of the late M dwarfs
[NASA-CR-194700] p 1628 N94-19794

STELLAR ENVELOPES
Detection of accreting gas toward HD 45677: A newly recognized, Herbig Be proto-planetary system
[NASA-CR-189312] p 1621 N94-19288
The molecular environment of S106 IR
[MPE-PREPRINT-241] p 1622 N94-19417

STELLAR EVOLUTION
A new approach to the study of the turbulence layer
[NASA-CR-194546] p 1487 N94-19397
Structuration processes in protoplanetary accretion disks
[MPE-243] p 1628 N94-19519

STELLAR GRAVITATION
Structuration processes in protoplanetary accretion disks
[MPE-243] p 1628 N94-19519

STELLAR MASS ACCRETION
Detection of accreting gas toward HD 45677: A newly recognized, Herbig Be proto-planetary system
[NASA-CR-189312] p 1621 N94-19288

STELLAR MODELS
Computational astrophysics: Pulsating stars
[DE93-018369] p 1627 N94-18857
Structuration processes in protoplanetary accretion disks
[MPE-243] p 1628 N94-19519
STELLAR RADIATION
Computational astrophysics: Pulsating stars
[DE93-018369] p 1627 N94-18857
STELLAR ROTATION
Plasma properties research: Task 3
[DE93-017087] p 1583 N94-17854
Pulse-timing studies of x ray pulsars
[NASA-CR-193778] p 1621 N94-18611
STELLAR SPECTRA
Determination of nitrogen to carbon abundance ratios from transition layer emission lines
[NASA-CR-191921] p 1622 N94-19421
STELLAR STRUCTURE
A new approach to the study of the turbulence layer
[NASA-CR-194546] p 1487 N94-19397
STELLAR TEMPERATURE
Spectrophotometry of emission-line stars in the magellanic clouds
[NASA-CR-194082] p 1628 N94-19425
STELLAR WINDS
Unified NLTE model atmospheres including spherical extension and stellar winds, 4: Improved line transfer and wind contamination of H, He profiles
[MPA-905] p 1624 N94-17736
Spectrophotometry of emission-line stars in the magellanic clouds
[NASA-CR-194082] p 1628 N94-19425
STEPPING MOTORS
Control of torque in stepping motors of quartz watches and clocks p 1408 N94-18023
STEREOCHEMISTRY
Microbial degradation of poly-b-esters: A mechanistic study, cellulose acetate biodegradability
[AD-A271368] p 1374 N94-19586
STEREOSCOPIC VISION
A stereoscopic vision system with applications to automated docking and tracking
[AD-A270754] p 1333 N94-19765
STIFFENING
Compression strength of composite primary structural components
[NASA-CR-194562] p 1457 N94-19350
STIFFNESS
Packaging, deployment, and panel design concepts for a truss-stiffened 7-panel precision deployable reflector with feed boom
[NASA-TM-109000] p 1333 N94-17765
Analysis of high contact resistances associated with hermetic and lightning arrestor connectors
[DE93-014850] p 1395 N94-17783
Joint stiffness estimation based on force sensor measurements in industrial manipulators
[REPT-92-053] p 1443 N94-17937
Elastic properties of a polyimide film determined by Brillouin scattering and mechanical techniques
[DE93-017404] p 1368 N94-18098
A constitutive theory for rigid polyurethane foam
[DE93-011596] p 1372 N94-19059
STIMULATED EMISSION
Problems related to stimulated electromagnetic emissions, strong turbulence and ionospheric modification
[IRF-SR-212] p 1480 N94-17720
STIRLING CYCLE
Performance mapping of the STM4-120 kinematic Stirling engine using a statistical design of experiments method
[DE93-015132] p 1464 N94-17798
The 7th International Cryocooler Conference
[AD-A268451] p 1379 N94-18147
Regenerator optimization for Stirling cycle refrigeration
[DE93-018468] p 1380 N94-18818
STIRLING ENGINES
Performance mapping of the STM4-120 kinematic Stirling engine using a statistical design of experiments method
[DE93-015132] p 1464 N94-17798
STOCHASTIC PROCESSES
Planning under uncertainty solving large-scale stochastic linear programs
[DE93-013920] p 1516 N94-17701
Data fusion through simulated annealing of registered range and reflectance images
[DE93-015910] p 1612 N94-17858
Stochastic models of attention and search
[AD-A268622] p 1508 N94-18292
JSEP fellowship: Fractal noise processes
[AD-A268841] p 1557 N94-18540
Development of the microstructure based stochastic life prediction models
[AD-A269880] p 1454 N94-18683
Development of the microstructure based stochastic life prediction model
[AD-A269742] p 1361 N94-18742
Coupled neural-dendritic processes: Cooperative stochastic effects and the analysis of spike trains
[AD-A270041] p 1506 N94-18793
Statistical learning theory and algorithms
[AD-A270209] p 1523 N94-18901
Adaptive path planning: Algorithm and analysis
[DE93-008348] p 1523 N94-18926
A numerical study of hybrid optimization methods for the molecular conformation problems
[DE93-017898] p 1569 N94-18985
A simple calculus of finite probabilistic processes
[MEMO-INF-93-08] p 1558 N94-19195
Stochastic grammars: Theory and applications
[MEMO-INF-93-19] p 1528 N94-19262
Excursions of stochastic processes, Cox-point processes, entrance behavior and resolvents
[PB93-197291] p 1558 N94-19323
The brain electrical activity in different G situations
[AERONAUTICA-ACTA-A-372-199]
p 1507 N94-19523
Equivalence and reduction of hidden Markov models
[AD-A270762] p 1560 N94-19768
STORAGE BATTERIES
Mechanically refuelable zinc/air electric vehicle cells
[DE93-016446] p 1394 N94-17770
STORAGE RINGS (PARTICLE ACCELERATORS)
Simulation of emittance dilution in electron storage ring from Compton backscattering
[DE93-017611] p 1386 N94-18503
Effects of transverse coupling on transverse beam size, simulation and measurements
[DE93-017804] p 1574 N94-18972
Simulation of the ALS longitudinal multibunch feedback system
[DE93-019227] p 1575 N94-19152
Study of coupled-bunch collective effects in the ALS
[DE93-019236] p 1575 N94-19558
STORAGE STABILITY
Practical reporting times for environmental samples
[DE93-013461] p 1472 N94-17910
STORM SURGES
The performance of drag relations in the WAQUA storm surge model
[KNMI-TR-149] p 1496 N94-17923
Wind products for use in coastal wave and surge models
[AD-A269753] p 1497 N94-18414
STORMS (METEOROLOGY)
Diabatic forcing and initialization with assimilation of cloud and rain water in a forecast model: Methodology
p 1491 N94-18603
STOVL AIRCRAFT
Lift and pitching moment induced on jet STOVL aircraft hovering in ground effect
[AD-A269700] p 1317 N94-18577
Lift and pitching moment induced on jet STOVL aircraft by the ground vortex
[AD-A269816] p 1318 N94-18733
Overview of STOVL aircraft propulsion research offtakes and vertical lift systems
[NASA-TM-106387] p 1321 N94-19353
STRAIN DISTRIBUTION
Spectrum fatigue testing of T-shaped tension clips
[FFA-TN-1992-22] p 1452 N94-17970
Analysis of regional deformation and strain accumulation data adjacent to the San Andreas fault
[NASA-CR-194072] p 1487 N94-19428
STRAIN GAGES
Characteristics and pulsed radiation response of non-ideal quartz shock stress gauges
[DE93-017628] p 1424 N94-17999
Residual strain measurement on the production-grade class 4 flextensional transducer shell
[AD-A268828] p 1430 N94-18537
A comparative evaluation of in-plane shear test methods for laminated graphite-epoxy composites
[NASA-CR-193808] p 1456 N94-19095
Experiments and analysis of lateral piezoresistance gauges
[DE93-017874] p 1433 N94-19111
High temperature strain measurement with a resistance strain gage
[NASA-CR-194441] p 1434 N94-19314
STRAIN HARDENING
A review of the stages of work hardening
[DE93-016456] p 1359 N94-18114
Effects of shock loading on a solid-solution strengthened superalloy
[DE93-018345] p 1362 N94-18809
STRAIN MEASUREMENT
Instrumented experiments aboard the frigate WOLF. Wolf 2: Measurement results of the 5.5 kg TNT in the crew aft sleeping compartment
[PML-1992-12] p 1451 N94-17931
Residual strain measurement on the production-grade class 4 flextensional transducer shell
[AD-A268828] p 1430 N94-18537
High temperature strain measurement with a resistance strain gage
[NASA-CR-194441] p 1434 N94-19314
Delamination in composite materials as observed using an optical fiber strain gage
[AD-A270803] p 1344 N94-19662
STRAIN RATE
Modeling microstructural evolution and the mechanical response of superplastic materials
[DE93-014417] p 1355 N94-17711
Atlas of formability: Ultimet
[AD-A268352] p 1355 N94-17767
Atlas of formability: HAYNES 556
[AD-A268354] p 1356 N94-17768
Atlas of formability: HAYNES 188
[AD-A268355] p 1356 N94-17769
Atlas of formability: NICKELVAC K-500
[AD-A268351] p 1356 N94-17772
Atlas of formability: INCONEL 718
[AD-A268350] p 1356 N94-17789
Atlas of formability: Hastelloy C-22
[AD-A268324] p 1356 N94-17796
Atlas of formability: Permalloy - 80 flow stress curves
[AD-A268263] p 1356 N94-17801
Atlas of formability: Nickelvac C-276
[AD-A268264] p 1357 N94-17802
Atlas of formability: Ti-6Al-4V ELI
[AD-A268300] p 1357 N94-17803
Atlas of formability: ALLVAC 718
[AD-A268304] p 1357 N94-17804
Atlas of formability: Waspaloy
[AD-A268323] p 1593 N94-17805
A review of the stages of work hardening
[DE93-016456] p 1359 N94-18114
Several fundamental issues in the mechanics of inelastic behavior
[AD-A269455] p 1453 N94-18265
Implementation of a nonisothermal unified inelastic-strain theory into ADINA6.0 for a titanium alloy: User guide
[AD-A269927] p 1360 N94-18660
Dislocation-drag contribution to high-rate plastic deformation in shock-loaded tantalum
[DE93-018286] p 1361 N94-18802
Effects of shock loading on a solid-solution strengthened superalloy
[DE93-018345] p 1362 N94-18809
Three-dimensional shock wave physics simulations with MIMD PAGOSA on massively parallel computers
[DE93-011682] p 1455 N94-18829
Effect of internal heating during hot compression testing on the stress-strain behavior and hot working characteristics of alloy 304L
[DE93-012701] p 1362 N94-18917
The effect of composition on the mechanism of continuous recrystallization and superplastic response of aluminum-scandium alloys
[DE93-018594] p 1365 N94-19280
Impact strength and indentation hardness of high-strength ceramics
[DE93-018833] p 1373 N94-19338
Dynamical behavior of octahedrite from the Henbury meteorite
[DE93-018834] p 1627 N94-19339
Mechanical response comparison of gun propellants evaluated under equivalent time-temperature conditions
[AD-A270479] p 1378 N94-19674
STRANGE ATTRACTORS
Homoclinic crises in a model for the CO2 laser
[DE93-624900] p 1436 N94-17954
The brain electrical activity in different G situations
[AERONAUTICA-ACTA-A-372-199]
p 1507 N94-19523
STRANGENESS
Institute for Nuclear Theory
[DE93-017369] p 1568 N94-18824
STRATEGY
A method for cognitive task analysis
[IZF-1992-B5] p 1508 N94-17967
STRATIFIED FLOW
Numerical simulations of turbulent buoyant flows by finite element method: Application to the study of strongly heated or cooled stratified flow
[ECL-92-28] p 1421 N94-19399
STRATIGRAPHY
Three-dimensional high-resolution seismic profiling on the New Jersey outer continental shelf
[AD-A269835] p 1498 N94-18600

Applications of Quaternary stratigraphic, soil-geomorphic, and quantitative geomorphic analyses to the evaluation of tectonic activity and landscape evolution in the Upper Coastal Plain, South Carolina
[DE93-016269] p 1484 N94-18725

STRATOSPHERE
Monitoring the response of the upper troposphere/lower stratosphere to a greenhouse gas scenario
[DE93-014509] p 1470 N94-17710
Screening analysis for chlorine-free alternative refrigerants to replace R-22 in air conditioning applications
[DE93-015920] p 1367 N94-17847
Ozone hole
[NASA-TM-109368] p 1476 N94-18960

STRATUS CLOUDS
Three-dimensional cloud visualization based on satellite imagery
[AD-A269318] p 1490 N94-18300

STREAM FUNCTIONS (FLUIDS)
Numerical investigation of the incompressible flow around a wing with a fixed spoiler
[ISL-R-109/91] p 1313 N94-19524

STRESS (PHYSIOLOGY)
Effects of a high-energy food supplement on cold-induced thermogenesis
[AD-A269301] p 1504 N94-17823
Road march performance of special operations soldiers carrying various loads and load distributions
[AD-A269198] p 1512 N94-18882

STRESS ANALYSIS
PVDF measurement of soft x ray induced shock and filter debris impulse
[DE93-017633] p 1382 N94-17806
Generalized seismic analysis p 1449 N94-17832
Current development in selected stress and thermal analysis software interfaces with PRO-ENGINEER
[DE93-014935] p 1518 N94-17943
Characteristics and pulsed radiation response of non-ideal quartz shock stress gauges
[DE93-017628] p 1424 N94-17999
Numerical integration of structural elements in NIKE3D and DYNA3D
[DE93-016325] p 1452 N94-18049
Steep geometric grating for use in moire interferometry
[AD-A268759] p 1453 N94-18328
The 6th Japan-U.S. conference on composite materials
[AD-A268535] p 1341 N94-18630
Fatigue technology assessment and strategies for fatigue avoidance in marine structures. Appendices
[AD-A269053] p 1455 N94-18716
A constitutive theory for rigid polyurethane foam
[DE93-011596] p 1372 N94-19059
Plastic mechanism analysis of T-joints in RHS subject to combined bending and concentrated force
[PB93-195774] p 1456 N94-19061
A comparative evaluation of in-plane shear test methods for laminated graphite-epoxy composites
[NASA-CR-193808] p 1456 N94-19095
Interfacial cracks in plates: A three-dimensional numerical investigation p 1456 N94-19116
The interpretation of optical caustics in the presence of dynamic non-uniform crack-tip motion histories: A study based on a higher order transient crack-tip expansion
[SM91-12] p 1456 N94-19130
Modeling and characterization of mechanoelectric conversion piezoelectric generators through dynamical or quasi static uniaxial stress
[ISAL-92-0097] p 1406 N94-19490

STRESS CONCENTRATION
Fatigue technology assessment and strategies for fatigue avoidance in marine structures. Appendices
[AD-A269053] p 1455 N94-18716

STRESS CORROSION
Environmentally assisted cracking of nickel anode substrates in Li/SOCl2 cells: An engineering approach
[DE93-015130] p 1405 N94-18928
The effects of radiolysis on the corrosion and stress corrosion behavior of 316 stainless steels
[DE93-019933] p 1363 N94-19021

STRESS CORROSION CRACKING
Environmental degradation of Alloy 600 and welded filler metal EN82 in an elevated temperature aqueous environment
[DE93-018049] p 1363 N94-18940

STRESS CYCLES
Defining the normal turbine inflow within a wind park environment
[DE93-010032] p 1489 N94-18046

STRESS DISTRIBUTION
Implementation of mixed formulation elements in PC/NASTRAN p 1449 N94-17828
Impact response of composite laminates: A guide to closed form solutions
[FFA-TN-1992-33] p 1339 N94-17971
Numerical integration of structural elements in NIKE3D and DYNA3D
[DE93-016325] p 1452 N94-18049
New test method to determine modulus of elasticity of rocket grain material
[AD-A269758] p 1377 N94-18758
A numerical analysis of crack growth in brittle microcracking composites
[DE93-011562] p 1343 N94-18914

STRESS INTENSITY FACTORS
Interfacial cracks in plates: A three-dimensional numerical investigation p 1456 N94-19116
The interpretation of optical caustics in the presence of dynamic non-uniform crack-tip motion histories: A study based on a higher order transient crack-tip expansion
[SM91-12] p 1456 N94-19130
Subcritical crack growth in continuous-fiber reinforced ceramic composites
[DE93-018784] p 1343 N94-19335
Residual strength predictions for fibre metal laminates: The R-curves approach
[LR-717] p 1344 N94-19666

STRESS MEASUREMENT
PVDF measurement of soft x ray induced shock and filter debris impulse
[DE93-017633] p 1382 N94-17806
Application of piezoelectric stress gauges to the measurement of fast-rise-time multimegampere electric currents
[DE93-017625] p 1429 N94-18102
A comparative evaluation of in-plane shear test methods for laminated graphite-epoxy composites
[NASA-CR-193808] p 1456 N94-19095

STRESS RELAXATION
Mechanical response comparison of gun propellants evaluated under equivalent time-temperature conditions
[AD-A270479] p 1378 N94-19674

STRESS TENSORS
On a conformal perfect fluid in the classical vacuum
[DE93-624797] p 1480 N94-17682
Assessment of an improved multiaxial strength theory based on creep-rupture data for Inconel 600
[DE93-015929] p 1356 N94-17791

STRESS-STRAIN RELATIONSHIPS
Modeling microstructural evolution and the mechanical response of superplastic materials
[DE93-014417] p 1355 N94-17711
Atlas of formability: Ultimet
[AD-A268352] p 1355 N94-17767
Atlas of formability: HAYNES 556
[AD-A268354] p 1356 N94-17768
Atlas of formability: HAYNES 188
[AD-A268355] p 1356 N94-17769
Atlas of formability: Nickelvac C-276
[AD-A268264] p 1357 N94-17802
Ceramic films and interfaces: Chemical and mechanical properties
[DE93-018416] p 1369 N94-18163
Evaluation of the production-grade class 4 flextensional transducer shell
[AD-A266796] p 1340 N94-18201
A finite strain ring dynamical model for pneumatic tires
[AD-A269286] p 1444 N94-18266
Residual strain measurement on the production-grade class 4 flextensional transducer shell
[AD-A268828] p 1430 N94-18537
Implementation of a nonisothermal unified inelastic-strain theory into ADINA6.0 for a titanium alloy: User guide
[AD-A269927] p 1360 N94-18660
Dislocation-drag contribution to high-rate plastic deformation in shock-loaded tantalum
[DE93-018286] p 1361 N94-18802
Wave propagation near explosive sources
[AD-A270102] p 1418 N94-18870
Effect of internal heating during hot compression testing on the stress-strain behavior and hot working characteristics of alloy 304L
[DE93-012701] p 1362 N94-18917
Experiments and analysis of lateral piezoresistance gauges
[DE93-017874] p 1433 N94-19111
Shock compression properties of silicon carbide
[DE93-019927] p 1373 N94-19271
A review of aeronautical fatigue investigations in Sweden during the period May 1991 to April 1993
[FFA-TN-1993-22] p 1457 N94-19358
Current capabilities for simulating the extreme distortion of thin structures subjected to severe impacts
p 1459 N94-19474
Development of engineering models for calculation of failure loads and defect states of steel concrete beams and plates
[ETN-93-95052] p 1460 N94-19648
Residual strength predictions for fibre metal laminates: The R-curves approach
[LR-717] p 1344 N94-19666

STRESSES
The respectiveness of response in a bar under static and transient loads
[VTT-TIED-1377] p 1452 N94-17959

STRING THEORY
Gauge coupling unification in superstring derived standard-like models
[DE93-624801] p 1607 N94-17950
Neutrino masses in superstring derived standard-like models
[DE93-624802] p 1565 N94-17951
Cabibbo mixing in superstring derived standard-like models
[DE93-624814] p 1607 N94-17953
Investigations in gauge theories, topological solitons, and string theories
[DE93-015029] p 1609 N94-19250

STROKE VOLUME
Characterization of fluid physics effects on cardiovascular response to microgravity (G-572)
p 1323 N94-19163

STRONTIUM OXIDES
Specific heat of La(1.875-x)Nd(x)Sr(0.125)CuO4: Magnetic and structural transitions
[DE93-016978] p 1600 N94-18968

STRONTIUM TITANATES
Phase transitions and neutron scattering
[DE93-016748] p 1594 N94-17866

STRUCTURAL ANALYSIS
The Twenty-First NASTRAN (R) Users' Colloquium
[NASA-CP-3203] p 1449 N94-17827
Implementation of mixed formulation elements in PC/NASTRAN p 1449 N94-17828
The respectiveness of response in a bar under static and transient loads
[VTT-TIED-1377] p 1452 N94-17959
Numerical integration of structural elements in NIKE3D and DYNA3D
[DE93-016325] p 1452 N94-18049
Computational strategies for composite structures
[PB93-195097] p 1452 N94-18079
Preliminary structural design: Defining the design space
[AD-A268898] p 1317 N94-18227
The 6th Japan-U.S. conference on composite materials
[AD-A268535] p 1341 N94-18630
Potential dependent structural changes of underpotentially deposited copper on an iodine treated platinum surface determined in situ by surface EXAFS and its polarization dependence
[AD-A269890] p 1360 N94-18687
Research activities, Faculty of Civil Engineering, Delft University of Technology, 1990 - 1991
[PB93-195022] p 1380 N94-19254
Preparation and characterisation of the compound Tl(0.65) Bi(0.35) Ca(0.8) Sr(1.7) Cu2 O(y) using oxalate coprecipitation and analytical CBED and an initial preparation of Bi2Ca(n-1) Sr2Cu(n) O(4+2n) for n=5
[DE93-625470] p 1602 N94-19277
Design for cyclic loading endurance of composites
[NASA-TM-106407] p 1457 N94-19351
Time dependent identification of nonlinear structures
[ECL-92-64] p 1457 N94-19403
Refinement of unit cell parameters by least-squares: Comments on an old technique and the development of a new computer program
[AD-A270610] p 1531 N94-19590

STRUCTURAL DESIGN
Design optimization studies using COSMIC NASTRAN
p 1450 N94-17834
Preliminary structural design: Defining the design space
[AD-A268898] p 1317 N94-18227
Centrifuge modeling of explosion-induced craters in unsaturated sand
[AD-A270194] p 1417 N94-18780
Optimizing wind turbine control system parameters
[DE93-018861] p 1469 N94-19036
Numerical simulation of vehicle crashworthiness and occupant protection p 1459 N94-19471

STRUCTURAL DESIGN CRITERIA
ADAS implementation of a panel method for the prediction of aerodynamic loads
[LR-723] p 1313 N94-19667

STRUCTURAL ENGINEERING
Scaling laws for diffraction loading by air blast
[PML-1991-54] p 1452 N94-17941

The ecological and environmental impacts of manmade marshes
[AD-A269213] p 1475 N94-18885

Research activities, Faculty of Civil Engineering, Delft University of Technology, 1990 - 1991
[PB93-195022] p 1380 N94-19254

STRUCTURAL FAILURE

Computational strategies for composite structures
[PB93-195097] p 1452 N94-18079

Fluid-structure-interaction analyses of reactor vessel using improved hybrid Lagrangian Eulerian code ALICE-II
[DE93-015536] p 1409 N94-18248

Fundamental research in nonlinear random vibration for aerospace applications
[AD-A268929] p 1454 N94-18487

Impact analysis of composite aircraft structures
p 1458 N94-19468

Delamination in composite materials as observed using an optical fiber strain gage
[AD-A270803] p 1344 N94-19662

STRUCTURAL MEMBERS

Dynamic response analysis of composite structural members during missile launch
[AD-A270023] p 1332 N94-18760

STRUCTURAL PROPERTIES (GEOLOGY)

Seismic studies of the geologic structure and physical properties of the seabed
[AD-A270895] p 1500 N94-19747

STRUCTURAL RELIABILITY

FAROW: A tool for fatigue and reliability of wind turbines
[DE93-017639] p 1465 N94-18001

STRUCTURAL STABILITY

Structural stability of 1100 C heated Pd/k during absorption cycling in protium
[DE93-016270] p 1346 N94-18048

About structurally stable generating mechanism for invariant hyperbolic sets
[DE93-629858] p 1561 N94-18150

STRUCTURAL VIBRATION

Modelling chaotic vibrations using NASTRAN
p 1449 N94-17830

Generalization of optimal control theory: Linear and nonlinear structures
[PB93-188621] p 1540 N94-18125

The effects of initial conditions and control time on optimal actuator placement by way of a max-min genetic algorithm
[DE93-017640] p 1525 N94-19124

STRUCTURAL WEIGHT

Regenerative fuel cells for High Altitude Long Endurance Solar Powered Aircraft
[DE93-016991] p 1465 N94-17853

STUDENTS

Magnetic Fusion Energy Technology Fellowship: Report on survey of institutional coordinators
[DE93-014646] p 1583 N94-17739

Joint services electronics program
[AD-A269383] p 1403 N94-18638

National Boy Scout Jamboree
[NASA-TM-109367] p 1610 N94-18982

California Student Get Away Special Payload GAS-450
p 1324 N94-19164

Undergraduate origins of recent science and engineering doctorate recipients
[NSF-92-332] p 1610 N94-19389

Undergraduate course and curriculum development program and calculus and the bridge to calculus program: 1992 awards
[NSF-93-24] p 1610 N94-19446

SUBROUTINE LIBRARIES (COMPUTERS)

Cesar user library
[FFI-93/7021] p 1529 N94-19378

SUBROUTINES

Radio wave propagation in structured ionization for satellite and radar applications
[AD-A268457] p 1382 N94-17844

SUBSIDENCE

Ground movements associated with gas hydrate production
[DE93-019887] p 1486 N94-19018

SUBSONIC FLOW

A fast computing method for the flow over high-lift wings p 1308 N94-18437

SUBSTITUTES

Development of alternatives to lead-bearing solders
[DE93-016509] p 1357 N94-17862

SUBSTRATES

Metal-nanocluster composites made by ion implantation: A novel third-order nonlinear material
[DE93-015908] p 1339 N94-17846

Characterization of diamond film nucleation and growth surface
[AD-A269400] p 1597 N94-18459

Kinetic aspects of lattice mismatch in molecular beam epitaxial growth on planar and patterned substrates
[AD-A270424] p 1597 N94-18506

Diamond brazed to a metal
[AD-D015877] p 1371 N94-18746

Growth, characterization and device development in monocrystalline diamond films
[AD-A270074] p 1599 N94-18797

Thermal analysis of coatings and substrate materials during a disruption in fusion reactors
[DE93-017688] p 1588 N94-18971

The minimum detection limits of RDX and TNT deposited on various surfaces as determined by ion mobility spectroscopy
[DE93-018521] p 1378 N94-19042

Silicon MCM substrates for integration of 3-5 photonic devices and CMOS IC's
[DE93-017894] p 1405 N94-19112

The microstructural mechanism of electromigration failure in narrow interconnects of Al alloys
[DE93-018598] p 1365 N94-19282

Study of GaAs substrates by ambient temperature photoluminescence imagery
[ECL-92-61] p 1603 N94-19357

Testing of protective coatings in hydrogen
[DE93-040326] p 1375 N94-19651

SUBURBAN AREAS

Spatiotemporal variability of non-urban ozone concentrations over the eastern United States and its potential replication by satellite data
[PB93-191328] p 1476 N94-19065

SUHL EFFECT

Nonlinear dynamics and instabilities in ferromagnetic resonance experiments: Examinations of spheres from yttrium iron garnet in coincidence area of the first Suhl instabilities
[ETN-93-95072] p 1604 N94-19612

SULFATES

The global atmospheric sulfur cycle: An evaluation of model predictions and observations
[CM-81] p 1479 N94-19379

SULFIDES

The global atmospheric sulfur cycle: An evaluation of model predictions and observations
[CM-81] p 1479 N94-19379

SULFUR

The d(exp 3)delta-a(exp 3)delta and b(exp 3)phi-a(exp 3)delta systems of ZrS, Part 2: Appendix, list of wavenumbers
[USIP-92-05] p 1602 N94-19293

SULFUR COMPOUNDS

Supercritical thermodynamics of sulfur and nitrogen species
[DE93-041221] p 1610 N94-19670

SULFUR DIOXIDES

Condensed gases under winter conditions: A study for the rescue services
[FOA-C-40305-4.5] p 1473 N94-18139

Photodissociation studies of polyatomic free radicals
[AD-A270084] p 1350 N94-18799

Effects of the Mount Pinatubo eruption on solar insolation: Four case studies
[DE93-018454] p 1475 N94-18817

The global atmospheric sulfur cycle: An evaluation of model predictions and observations
[CM-81] p 1479 N94-19379

SULFUR FLUORIDES

Application of an atmospheric dispersion model to simulated pollutant releases in the Colorado Front range
[DE93-017118] p 1480 N94-19732

SULFUR OXIDES

Photodissociation studies of polyatomic free radicals
[AD-A270084] p 1350 N94-18799

SUMMARIES

Summaries of FY 1993 research in the chemical sciences
[DE93-011855] p 1632 N94-18915

SUMMER

Spectral analysis of synoptic time scale disturbances over the tropical eastern Pacific during summer 1989, 1990 and 1991
[AD-A268821] p 1490 N94-18206

SUPERCOMPUTERS

Introductory user's guide to the ARL supercomputer facility at Aberdeen Proving Ground
[AD-A265204] p 1514 N94-17877

An evolving infrastructure for scientific computing and the integration of new graphics technology
[DE93-017164] p 1520 N94-18133

A special purpose silicon compiler for designing supercomputing VLSI systems p 1402 N94-18379

Visualization for applications in shock physics
[DE93-012849] p 1418 N94-18918

The world's most powerful computer
[NASA-TM-109369] p 1514 N94-18961

SUPERCONDUCTING DEVICES

Superconducting flux flow devices, digital circuits and memories
[DE93-019072] p 1405 N94-19079

SUPERCONDUCTING FILMS

Synthesis and study of high-T(sub c) superconducting electronic materials
[AD-A268851] p 1402 N94-18390

Fabrication and microstructural development of Ag-clad TlBa2Ca2Cu3O(x) tapes
[DE93-017407] p 1597 N94-18500

High performance YBCO films
[AD-A269090] p 1599 N94-18719

Fabrication and characterization of high-T(sub c) tapes and coils made from Ag-clad Bi-2223 superconductors
[DE93-018615] p 1601 N94-18993

LLE Review
[DE93-017618] p 1602 N94-19123

SUPERCONDUCTING MAGNETS

Corroboration of magnetic forces in US Maglev design
[DE93-014918] p 1443 N94-17785

A superconducting short period undulator for a harmonic generation FEL experiment
[DE93-017581] p 1436 N94-17998

Development and application of specially-focused ultrasonic transducers to location and sizing of defects in 75 mm- to 127 mm-thick austenitic stainless steel weld metals
[DE93-015975] p 1453 N94-18108

Proceedings of the 3rd Workshop on Balloon-Borne Experiments with Superconducting Magnet Spectrometers
[DE93-788362] p 1630 N94-18219

Analysis of superconducting magnetic energy storage applications at a proposed wind farm site near Browning, Montana
[DE93-018793] p 1466 N94-18276

Magnetic field measurements of a superconducting undulator for a Harmonic Generation FEL experiment at the NSLS
[DE93-017621] p 1438 N94-18504

Fabrication and characterization of high-T(sub c) tapes and coils made from Ag-clad Bi-2223 superconductors
[DE93-018615] p 1601 N94-18993

Thermo-hydraulic analysis of superconducting toroidal-field magnets for the Tokamak Physics Experiment
[DE93-018096] p 1590 N94-19269

Incology 908 database report: On process-structure-property relationship
[DE93-017616] p 1366 N94-19546

SUPERCONDUCTING SUPER COLLIDER

Mechanical-property changes of structural composite materials after low-temperature proton irradiation: Implications for use in SSC magnet systems
[DE93-016735] p 1343 N94-18763

Experimental research in high energy physics
[DE93-011912] p 1574 N94-18916

Investigation of physical structures and interactions at high energy
[DE93-014444] p 1574 N94-18927

Longitudinal beam dynamics with RF noise
[DE93-018649] p 1574 N94-18994

SSC detector muon sub-system beam tests
[DE93-018415] p 1569 N94-19013

High energy physics program. Task A: Experiment and theory. Task B: Numerical simulation
[DE93-018140] p 1575 N94-19050

Extraction of Z(prime) coupling data from Z(prime) (yields) jj at the LHC and SSC
[DE93-018576] p 1570 N94-19096

Design verification and acceptance tests of the ASST-A helium refrigeration system
[DE93-019746] p 1381 N94-19540

High rate resistive plate chambers: An inexpensive, fast, large area detector of energetic charged particles for accelerator and non-accelerator applications
[DE93-018664] p 1572 N94-19545

SUPERCONDUCTIVITY

Phase separation and superconductivity in La2CuO(4 + delta): Effects of oxygen diffusion
[DE93-016610] p 1594 N94-17907

Report of the 1991 Workshop on Particle-Material Interactions for Fusion Research
[DE93-788393] p 1573 N94-18156

Superconducting/semiconducting hybrids and advance memory concepts for superconducting electronics
[AD-A268679] p 1397 N94-18312

High energy resolution ARPES measurements of the normal and superconducting states of Bi2Sr2CaCu2O(8 + delta)
[DE93-018294] p 1599 N94-18804

Specific heat of La(1.875-x)Nd(x)Sr(0.125)CuO4: Magnetic and structural transitions
[DE93-016978] p 1600 N94-18968

Superconductivity and magnetism in niobium doped YBa2Cu3O7 related high-(Tc) ceramics [DE93-018086] p 1601 N94-19049

Fabrication, properties, and microstructures of high (Tc) tapes and coils made from Ag-clad Bi-2223 superconductor [DE93-017405] p 1602 N94-19122

Crossover from BCS to Bose superconductivity: A functional integral approach [DE93-019503] p 1604 N94-19566

Numerical experiments on the Ginzburg-Landau equations [DE93-019504] p 1604 N94-19567

SUPERCONDUCTORS

Superconducting/semiconducting hybrids and advance memory concepts for superconducting electronics [AD-A268679] p 1397 N94-18312

The low-temperature specific heat of CeCu2Ge2 at 0 and 9.5 kbar [DE93-014914] p 1360 N94-18398

Thin film studies of the proximity Josephson effect [AD-A270129] p 1600 N94-18876

Ultrafast Electronics and Optoelectronics: Summaries of papers. Technical digest conference edition [AD-A269233] p 1405 N94-18909

Dimensional crossover in the torque in a layered superconductor [DE93-019544] p 1407 N94-19553

SUPERCRITICAL AIRFOILS

Navier-Stokes simulation of flow field around a blown-flap high-lift system p 1307 N94-18429

SUPERCRITICAL FLUIDS

Supercritical thermodynamics of sulfur and nitrogen species [DE93-041221] p 1610 N94-19670

SUPERCRITICAL WINGS

High lift and the forward swept wing p 1308 N94-18436

SUPERFLUIDITY

The 7th International Cryocooler Conference [AD-A268451] p 1379 N94-18147

Superfluid Helium On-Orbit Transfer (SHOOT) flight demonstration p 1327 N94-19185

Two-dimensional turbulent nonstationary superfluid counterflows: Numerical simulations, qualitative effects [MPIS-23/1992] p 1422 N94-19510

Examinations of converging cylindrically symmetric second sound propagation in He2 [MPIS-9/1992] p 1564 N94-19715

SUPERGIANT STARS

Determination of nitrogen to carbon abundance ratios from transition layer emission lines [NASA-CR-191921] p 1622 N94-19421

SUPERHIGH FREQUENCIES

Numerical modelling of fringing fields and their use for complex permittivity measurements at high frequencies [AD-A270198] p 1388 N94-18782

Some superhigh-frequency and magnetic properties of chemically precipitated films [AD-A266195] p 1351 N94-19110

SUPERLATTICES

Superhardness effect in Au/Ni multilayers [DE93-016444] p 1357 N94-17860

Phenomenological explanation of elastic anomalies in superlattices [DE93-017475] p 1594 N94-17871

Fundamental properties and device applications of Ge(x)Si(1-x)/Si superlattices (supplemental) [AD-A269212] p 1600 N94-18884

Neutron-induced collision cascade mixing in Nb/V superlattices [DE93-018575] p 1600 N94-18933

Growth of epitaxial semiconductor alloys and superlattices with continuously variable composition by pulsed-laser ablation [DE93-018726] p 1601 N94-18998

Suppressed electron-phonon scattering in superlattices [AD-A270834] p 1604 N94-19597

SUPERNOVAE

Evolution of r-process elements in the hot supernova bubble [DE93-017169] p 1624 N94-17897

Weak neutral currents and collapse initiated supernova [DE93-018652] p 1627 N94-19284

SUPERPLASTICITY

Modeling microstructural evolution and the mechanical response of superplastic materials [DE93-014417] p 1355 N94-17711

Ceramic films and interfaces: Chemical and mechanical properties [DE93-018416] p 1369 N94-18163

The effect of composition on the mechanism of continuous recrystallization and superplastic response of aluminum-scandium alloys [DE93-018594] p 1365 N94-19280

SUPERSATURATION

Film condensation in a shock wave [MPIS-22/1992] p 1422 N94-19509

SUPERSONIC BOUNDARY LAYERS

Studies on high pressure and unsteady flame phenomena: Revision [AD-A269138] p 1348 N94-18257

SUPERSONIC COMBUSTION

Studies on high pressure and unsteady flame phenomena: Revision [AD-A269138] p 1348 N94-18257

Numerical simulation of fluid dynamics and combustion for ram accelerator projectile/obturator interaction [AD-A269715] p 1320 N94-18748

SUPERSONIC COMBUSTION RAMJET ENGINES

Analysis of supersonic flows using k-epsilon model and the RPLUS code: Progress towards high speed combustor analysis p 1411 N94-18551

SUPERSONIC FLOW

Analysis of supersonic flows using k-epsilon model and the RPLUS code: Progress towards high speed combustor analysis p 1411 N94-18551

SUPERSONIC JET FLOW

Computational aero-acoustics as a branch of turbulence research p 1411 N94-18552

Unimolecular photodissociation dynamics of ketene (CH2CO): The singlet/triplet branching ratio and experimental observation of the vibrational level thresholds of the transition-state [DE93-019252] p 1352 N94-19304

Supersonic jets from bevelled rectangular nozzles [NASA-TM-106403] p 1313 N94-19484

SUPERSONIC NOZZLES

Electrically excited CO-lasers with gas dynamic cooling [DLR-FB-93-08] p 1437 N94-18061

MHD integrated topping cycle project [DE93-040520] p 1588 N94-18978

MHD Integrated Topping Cycle Project [DE93-040521] p 1589 N94-19055

SUPERSONIC SPEED

Numerical prediction of transition of the F-16 wing at supersonic speeds [NASA-CR-194407] p 1312 N94-19433

SUPERSONIC WIND TUNNELS

Error propagation equations and tables for estimating the uncertainty in high-speed wind tunnel test results [DE93-018685] p 1311 N94-18275

SUPERSYMMETRY

Tensorial structure of a q-deformed sp(4,R) superalgebra [DE93-624808] p 1545 N94-17685

Renormalizations in supersymmetric and nonsupersymmetric non-abelian Chern-Simons field theories with matter [DE93-626646] p 1593 N94-17748

Paragrassmann analysis and quantum groups [DE93-628593] p 1561 N94-18168

Experimental consequences of supersymmetry [DE93-018270] p 1569 N94-18945

SUPPORT SYSTEMS

Reference model for project support environments, version 1.0 [AD-A269110] p 1520 N94-18251

Lunar base Controlled Ecological Life Support System (LCELSS): Preliminary conceptual design study [NASA-CR-188479] p 1511 N94-18484

SURFACE DEFECTS

Defects in GaAs bulk crystals and multi-layers caused by In diffusion [DE93-016968] p 1595 N94-18054

Surface modification of sapphire for IR window application [DE93-019168] p 1602 N94-19075

SURFACE DIFFUSION

Tunneling microscopy of semiconductors [AD-A270232] p 1600 N94-18904

SURFACE DISTORTION

Measuring machines for digitalizing and measuring complex surfaces, models and matrices [CRIF-MC-97] p 1444 N94-17963

A benchmark bending test of a thick specimen. Part 1: Experiments [AD-A268730] p 1360 N94-18325

SURFACE EMITTING LASERS

Spectrally and temporally resolved laser emission from vertical cavity surface emitting lasers [DE93-019410] p 1442 N94-19563

SURFACE FINISHING

Titanium carbon-hydrogen layers on decorative surfaces p 1375 N94-18010

Effect of temperature and O-ring gland finish on sealing ability of Viton V747-75 [NASA-TP-3391] p 1368 N94-18075

Soft X Ray Projection Lithography. Organization of the 1993 photonics science optical meetings [AD-A269159] p 1579 N94-18693

Synchrotron/crystal sample preparation [NASA-CR-193837] p 1603 N94-19513

Precision machining and polishing of scintillating crystals for large calorimeters and hodoscopes [DE93-018663] p 1381 N94-19544

SURFACE GEOMETRY

Morphology of polymerized membranes on an amorphous substrate at molecular resolution by AFM [AD-A268760] p 1370 N94-18403

SURFACE LAYERS

Mechanical properties of excimer laser modified titanium surfaces [DE93-012663] p 1358 N94-17875

Time-resolved probing of electron thermal conduction in femtosecond-laser-pulse-produced plasmas [DE93-016996] p 1585 N94-18129

SURFACE NAVIGATION

Survey of collision avoidance and ranging sensors for mobile robots, revision 1 [AD-A269846] p 1541 N94-18474

SURFACE PROPERTIES

Friction drive position transducer [AD-D015851] p 1424 N94-17717

A radial transmission line material measurement apparatus [DE93-018508] p 1394 N94-17780

Mechanical properties of excimer laser modified titanium surfaces [DE93-012663] p 1358 N94-17875

Surface second harmonic generation studies of stepped Ag(111) electrode surfaces [AD-A265205] p 1594 N94-17876

Accelerated tests on the tarnish resistance of gold alloys p 1367 N94-18008

Energy efficiency and the environment: Innovative ways to improve air quality in the Los Angeles Basin [DE93-016964] p 1473 N94-18050

Working group for planetary system nomenclature [NASA-CR-194406] p 1626 N94-18841

Surface modification of sapphire for IR window application [DE93-019168] p 1602 N94-19075

SURFACE REACTIONS

Interdisciplinary research on wear of materials [AD-A268190] p 1443 N94-17730

Kinetic growth of random-like and ballistic-like deposition models [DE93-624946] p 1595 N94-17956

Accelerated tests on the tarnish resistance of gold alloys p 1367 N94-18008

Report of the 1991 Workshop on Particle-Material Interactions for Fusion Research [DE93-788393] p 1573 N94-18156

The land component of the global climate system with adequate spatial resolution [DE93-018951] p 1474 N94-18183

Experimental and theoretical investigation of surface chemistry induced by direct and indirect electronic excitation [AD-A268846] p 1348 N94-18221

Hydrolysis reaction and positronium decay in silica gels [AD-A270028] p 1371 N94-18713

Scaling laws for diamond chemical vapor deposition. Diamond surface chemistry [AD-A269874] p 1599 N94-18745

Ionic and molecular environments in heterogeneous electrocatalysis: Studies by radioactive labeling and LEED/AUGER spectroscopy [AD A268850] p 1567 N94-18766

Surface species in tribology [AD-A270970] p 1446 N94-19754

SURFACE ROUGHNESS

Experimental contribution to the contact between two bodies and the effect of roughness [ECL-91-41] p 1451 N94-17918

Turbulence modeling in aircraft icing p 1412 N94-18555

Multigrid methods for flow transition in three-dimensional boundary layers with surface roughness [NASA-CR-4540] p 1417 N94-18843

Synchrotron/crystal sample preparation [NASA-CR-193837] p 1603 N94-19513

Precision machining and polishing of scintillating crystals for large calorimeters and hodoscopes [DE93-018663] p 1381 N94-19544

Comparative evaluation of Kirchhoff, perturbation, and full wave methods for rough surface scattering [AD-A271198] p 1392 N94-19718

Atomic-scale friction measurements using friction force microscopy. Part 2: Application to magnetic media
[AD-A270759] p 1447 N94-19767

SURFACE TEMPERATURE
Development of a multi-point two-color pyrometer for tube and wall temperature and emissivity measurement at the CFFF
[DE93-014716] p 1429 N94-18207
The application of liquid crystal techniques to determine heat transfer rates p 1432 N94-18654

SURFACE TREATMENT
The effect of surface treatment and gaseous rust protection paper on the atmospheric corrosion stability of aluminium alloy
[DE93-623326] p 1355 N94-17679
Cutting and drilling studies using high power visible lasers
[DE93-019149] p 1441 N94-19294

SURFACE WATER
Oil spreading in surface waters with an ice cover
[PB93-190767] p 1476 N94-19064
Mathematical modeling of the free surface hydrodynamic and of transport in suspensions of non cohesive sediments: Aid to the interpretation of spatial images
[ETN-93-95011] p 1421 N94-19502

SURFACE WAVES
The phase mixing of shear Alfven waves
[DE93-624920] p 1581 N94-17688
Resonant absorption of Alfven waves near a neutral point
[DE93-628761] p 1586 N94-18172
High resolution geological site characterization utilizing ground motion data
[AD-A268926] p 1481 N94-18485
Constraints on crustal structure from long period pressure and displacement measurements on the deep seafloor
[AD-A269931] p 1498 N94-18663
Surface wave group velocity tomography of East Asia, part 1
[AD-A270100] p 1484 N94-18868
Inverse scattering of surface waves: A new look at surface consistency
[REPT-93-25] p 1486 N94-19140
An iterative inverse scattering method for the removal of scattered surface waves
[REPT-93-18] p 1488 N94-19644

SURFACTANTS
Cooperative formation of inorganic-organic interfaces in the synthesis of silicate mesostructures
[AD-A271196] p 1375 N94-19742

SURGERY
Multimodal image correlation applied to computer aided pedicular screwing
[ETN-93-95018] p 1528 N94-19363

SURVEILLANCE
Military applications of high-accuracy frequency standards and clocks
[AD-A269303] p 1430 N94-18299

SURVEILLANCE RADAR
Military applications of high-accuracy frequency standards and clocks
[AD-A269303] p 1430 N94-18299

SURVEYS
Magnetic Fusion Energy Technology Fellowship: Report on survey of institutional coordinators
[DE93-014646] p 1583 N94-17739
Rapid geophysical surveyor
[DE93-016637] p 1461 N94-17851
A survey on technical problems in designing high-speed rotors with developing materials
[DE93-788519] p 1444 N94-18159
Aircrew life support, AFSC 122X0(1T1X1)
[AD-A268998] p 1511 N94-18394
Survey of collision avoidance and ranging sensors for mobile robots, revision 1
[AD-A269846] p 1541 N94-18474
Commercialization effort in support of electroslag-casting technology
[DE93-017988] p 1366 N94-19733

SUSPENSIONS
Electrokinetic transport of heterogeneous particles in suspensions
[NASA-CR-194478] p 1353 N94-19367

SWEPT FORWARD WINGS
High lift and the forward swept wing
p 1308 N94-18436
X-29: Research aircraft
[NASA-TM-109370] p 1318 N94-18962

SWEPT WINGS
Comparison between swept and delta canards on a model of a combat aircraft
[AD-A269561] p 1317 N94-17826
Viscous-inviscid calculation of high-lift separated compressible flows over airfoils and wings
p 1309 N94-18440
Numerical prediction of transition of the F-16 wing at supersonic speeds
[NASA-CR-194407] p 1312 N94-19433

SWEPTBACK WINGS
An experimental investigation of the optimum slat setting on a combat aircraft model p 1308 N94-18431
An experimental investigation of attachment-line transition on the slat of a combat aircraft model
p 1308 N94-18432

SWIRLING
Collaborative research on combustion diagnostics and modeling between Rolls-Royce, Inc. and the United States Air Force Wright Laboratory
[AD-A270660] p 1354 N94-19778

SWITCHES
Fabrication process for cantilever beam micromechanical switches
[AD-A269716] p 1404 N94-18749
Improved optical pseudospark switch
[AD-D015821] p 1580 N94-18947

SWITCHING
Plasma-puff initiation of high Coulomb transfer switches
[NASA-CR-193186] p 1591 N94-19441

SWITCHING CIRCUITS
Pulsed LASER for testing silicon strip detectors
[DE93-017816] p 1436 N94-17883
Training product unit neural networks with genetic algorithms p 1399 N94-18354
Asynchronous sequential circuit design using pass transistor iterative logic arrays p 1402 N94-18376
Pulse mode VLSI asynchronous circuits
p 1402 N94-18377
Improved self arbitrated VLSI asynchronous circuits
p 1402 N94-18378
Compensation approach for three or more dimensional random walks
[PB93-197499] p 1543 N94-19326
Evaluation of laser diode based optical switches for optical processors
[AD-A270949] p 1581 N94-19602

SYMMETRY
On the difference caused by CP violation in the energy spectra of pions in K(sup (+-))(yields)(pi)(+-)(pi)(+-)(pi)-+ decays
[DE93-624828] p 1564 N94-17687
Beauty without charm in B-meson decays
[PREPRINT-732] p 1565 N94-17972
Deformed traces and covariant quantum algebras for quantum groups GL(sub qp)(2) and GL(sub qp)(1/1)
[DE93-629862] p 1561 N94-18153
About symmetry of the gravitational action
[DE93-629955] p 1608 N94-18252
The theory of linear programming: Skew symmetric self-dual problems and the central path
[REPT-93-15] p 1524 N94-19089

SYNAPSES
The identification of the computational significance of key neurobiological characteristics found in a number of telencephalic brain regions
[AD-A269374] p 1505 N94-18407

SYNCHRONISM
On asynchronous testing
[MEMO-INF-93-03] p 1543 N94-19226
Systolic design with asynchronous controls for digital-signal processing
[AD-A270976] p 1392 N94-19680

SYNCHROTRON RADIATION
Conical geometry for sagittal focusing as applied to x rays from synchrotrons
[DE93-017238] p 1593 N94-17760
Nonlinear Thomson scattering of intense laser pulse from beams and plasmas
[AD-A269556] p 1438 N94-18460
A tunable compact high power far-infrared grating free-electron laser
[AD-A269875] p 1440 N94-18771
Simulation of the ALS longitudinal multibunch feedback system
[DE93-019227] p 1575 N94-19152
Study of coupled-bunch collective effects in the ALS
[DE93-019236] p 1575 N94-19558

SYNCHROTRONS
Synchrotron beam-loading stability with a higher RF harmonic
[DE93-014549] p 1573 N94-17726
Conical geometry for sagittal focusing as applied to x rays from synchrotrons
[DE93-017238] p 1593 N94-17760
Magnetic field measurements of a superconducting undulator for a Harmonic Generation FEL experiment at the NSLS
[DE93-017621] p 1438 N94-18504
Laser powered beam conditioner for free-electron lasers and synchrotrons
[DE93-017821] p 1441 N94-18974
The 1982 to 1992 decade of research on the vacuum ultraviolet ring at National Synchrotron Light Source
[DE93-019469] p 1603 N94-19564

SYNOPTIC METEOROLOGY
Spectral analysis of synoptic time scale disturbances over the tropical eastern Pacific during summer 1989, 1990 and 1991
[AD-A268821] p 1490 N94-18206
Reports of the 1992 Synoptic Symposium
[KNMI-TR-151] p 1494 N94-19698

SYNTAX
Proposal for a numerical array library
[DE93-015017] p 1516 N94-17786
Better termination analysis for active databases
[REPT-93-026] p 1614 N94-18144
Attribute evaluation during generalized parsing
[MEMO-INF-92-85] p 1526 N94-19224
Feasibility study in linguistically motivated object-oriented conceptual design of information systems
[PB93-197754] p 1618 N94-19331

SYNTHESIS (CHEMISTRY)
Modified aequorin shows increased bioluminescence activity
[AD-A268774] p 1347 N94-18185
Conversion of ethane and of propane to higher olefin hydrocarbons
[DE93-015282] p 1347 N94-18194
Synthesis of higher alcohols from carbon monoxide and hydrogen in a slurry reactor
[DE93-015086] p 1347 N94-18209
Nanostructured materials: Mind over matter
[DE93-017690] p 1597 N94-18480
Royal Society of Chemistry, Heterocyclic Chemistry Group, Lakeland Heterocyclic Symposium
[AD-A270374] p 1338 N94-18703
Temperature lowering in cryogenic chemical-synthesis techniques and system
[DE93-018348] p 1562 N94-18810
Molecular and polymeric ceramic precursors
[DE93-040364] p 1372 N94-18891
Final report on subcontract B076260 — borate synthesis
[DE93-019501] p 1604 N94-19565
Isolation mechanisms in III-V devices
[AD-A271197] p 1605 N94-19717

SYNTHETIC APERTURE RADAR
Flight demonstration of image fix-taking with SAR
[DE93-016499] p 1382 N94-17861
Tomographic mathematical ideas applied to radar detection
[AD-A268789] p 1384 N94-18186
AN/APS-137 Forward Looking Airborne Radar (FLAR) evaluation Spring 1992 experiment
[AD-A268899] p 1384 N94-18228
The spatial variance of ionospherically-induced phase errors in SAR imagery
[DE93-015643] p 1385 N94-18232
Arctic ice studies
[AD-A268608] p 1497 N94-18277
Application of Fourier-based features for classification of synthetic aperture radar imagery
[AD-A270450] p 1387 N94-18513
Resolution in radar mapping
[AD-A269730] p 1462 N94-18753
Modeling of current features in Gulf Stream SAR imagery
[AD-A270734] p 1499 N94-19609
Theoretical and experimental research on coherent microwave backscatter from the ocean
[AD-A271276] p 1500 N94-19743

SYNTHETIC FUELS
Fifteenth Symposium on Biotechnology for Fuels and Chemicals: Program and Abstracts
[DE93-010005] p 1376 N94-18045
Data collection plan for phase 2 Alternative Fuels Bus Data Collection Program
[DE93-010047] p 1378 N94-18913

SYSTEM EFFECTIVENESS
Denver TMA assessment
[NASA-CR-4554] p 1315 N94-18844
Molten carbonate fuel cell networks: Principles, analysis, and performance
[DE93-000281] p 1468 N94-18925

SYSTEM FAILURES
Workshop on multifactor aging mechanisms and models
[AD-A268668] p 1397 N94-18311
On timing faults in digital logic circuits
[AD-A268714] p 1402 N94-18400

SYSTEM IDENTIFICATION
Advances in the identification of transfer function models using Prony analysis
[DE93-017980] p 1548 N94-18094

SYSTEMS ANALYSIS
TANGO: A notation for describing advanced transaction models
[REPT-93-014] p 1613 N94-17936
An overview of the SAFSIM computer program
[DE93-017657] p 1519 N94-18002
Specification and analysis of a high speed transport protocol
[AD-A268941] p 1386 N94-18449
Deadbeat control by measurement feedback: A two sided approach
[REPT-93-20] p 1542 N94-19091
Scale sensitivity in the multiplicative AHP and SMART
[REPT-93-37] p 1611 N94-19157
Context-related scaling of human judgement in the multiplicative AHP, SMART and ELECTRE
[REPT-93-38] p 1611 N94-19158
Goal-driven LOTOS execution
[MEMO-INF-93-04] p 1527 N94-19227
A unified performability evaluation framework for computer and communication systems
[MEMO-INF-93-21] p 1537 N94-19264
Optimal safety system design using fault tree analysis
[MATHS-REPT-A-187] p 1529 N94-19382

SYSTEMS ENGINEERING
Reference model for project support environments, version 1.0
[AD-A269110] p 1520 N94-18251
VHDL simulation with access to transistor models
p 1402 N94-18381
Lunar base Controlled Ecological Life Support System (LCELSS): Preliminary conceptual design study
[NASA-CR-188479] p 1511 N94-18484
Integrated Terminal Weather System (ITWS)
[AD-A269684] p 1492 N94-18684
Operator performance in pattern matching as a function of reference material structure
[AD-A269889] p 1509 N94-18686
The development of a course sequence in real-time systems design
[AD-A269459] p 1522 N94-18726
MHD Integrated Topping Cycle Project
[DE93-040521] p 1589 N94-19055
Pegasus: Operating system support for distributed multimedia systems
[MEMO-INF-92-76] p 1536 N94-19160
The Cluster spacecraft p 1330 N94-19635
Systems engineering for Air Force C3I systems
[AD-A270482] p 1391 N94-19676

SYSTEMS INTEGRATION
On the use of differential GPS for automatic approach and landing of space and aircraft
[DLR-MITT-93-05] p 1316 N94-17921
Coordination of software-development activities among sites that are geographically separated
[DE93-019201] p 1524 N94-19076
Problem of control in an integral vision system: Use of a multi-agent system
[ETN-93-95007] p 1530 N94-19488

SYSTEMS MANAGEMENT
The organizational preparation of existing relational databases for the integration of expert systems
[AD-A268823] p 1614 N94-18191
Report of the Second CLICOM Experts Meeting
[WCDMP-19] p 1495 N94-19705

SYSTEMS SIMULATION
Goal-driven LOTOS execution
[MEMO-INF-93-04] p 1527 N94-19227
Sensitivity and uncertainty analysis of Markov reward models
[MEMO-INF-92-89] p 1559 N94-19386
Automated qualitative modeling of dynamic physical systems
[AD-A270835] p 1422 N94-19598

SYSTEMS STABILITY
Control of nonlinear systems
[AD-A270141] p 1542 N94-18898

SYSTOLIC ARRAYS
Systolic array IC for genetic computation
p 1400 N94-18361
A bit serial first level calorimeter trigger for an LHC detector
[USIP-92-08] p 1574 N94-18845
A programmable systolic trigger processor for FERA-bus data
[USIP-92-04] p 1405 N94-19292
Systolic design with asynchronous controls for digital-signal processing
[AD-A270976] p 1392 N94-19680

T

TABLES (DATA)
Station climatic summaries, North America. Volume 2: Alaska, Canada and Greenland
[AD-A269793] p 1493 N94-18732
Solar radiation in Saudi Arabia
[AD-A269970] p 1493 N94-18781

TABS (CONTROL SURFACES)
Compilation of 1992 annual reports of the navy ELF communications system ecological monitoring program. Volume 3: Tabs G - I
[AD-A269727] p 1388 N94-18741

TABULATION PROCESSES
FEEST: A method for tabulating equation of state and opacity tables
[DE93-017965] p 1347 N94-18092

TAGN
Molecular structure of low temperature form of triaminoguanidinium nitrate (TAGN)
[AD-A270409] p 1377 N94-18708

TAKEOFF
Wake structure and aerodynamic behavior of high lift aircraft configurations during unsteady maneuvers in ground effect p 1309 N94-18439
Procedures and design data for the formulation of aircraft configurations
[AD-A270150] p 1318 N94-18779

TAKEOFF RUNS
Take-off performance monitoring system algorithm and display development
[NLR-TP-91395-U] p 1317 N94-17734

TANTALUM
Dislocation-drag contribution to high-rate plastic deformation in shock-loaded tantalum
[DE93-018286] p 1361 N94-18802
Dynamical behavior of tantalum
[DE93-017877] p 1362 N94-18919
Influence of peak pressure and temperature on the shock-loading response of tantalum
[DE93-018561] p 1457 N94-19279

TARGET ACQUISITION
AN/APS-137 Forward Looking Airborne Radar (FLAR) evaluation Spring 1992 experiment
[AD-A268899] p 1384 N94-18228
Environmental characterization for target acquisition. Report 3: New concepts for evaluating low-grazing angle radar measurements
[AD-A269956] p 1388 N94-18777
The star identification, pointing and tracking system of UVSTAR, an attached payload instrument system for the Shuttle Hitchhiker-M platform p 1326 N94-19179

TARGET RECOGNITION
An analog retina model for detecting dim moving objects against a bright moving background
p 1399 N94-18350
Operator performance in pattern matching as a function of reference material structure
[AD-A269889] p 1509 N94-18686
Environmental characterization for target acquisition. Report 3: New concepts for evaluating low-grazing angle radar measurements
[AD-A269956] p 1388 N94-18777
Applications of motion estimation in image processing
[FEL-92-B356] p 1580 N94-19455
A non-homogeneous, spatio-temporal, wavelet multiresolution analysis and its application to the analysis of motion
[AD-A270621] p 1538 N94-19534
Tracking with time-delayed data in multisensor systems
[AD-A271334] p 1391 N94-19582

TARGETS
Hydrodynamic instability modeling for ICF
[DE93-018634] p 1587 N94-18274
A program for passively tracking a target using an array of sensors
[DE93-019554] p 1390 N94-19306
Effects of location cuing on redundant target processing
[IZF-1993-B-1] p 1510 N94-19443

TASK PLANNING (ROBOTICS)
Efficient domain-independent experimentation
[AD-A269530] p 1557 N94-18640

TASKS
Building a joint-service classification research roadmap: Criterion-related issues
[AD-A269735] p 1512 N94-18754

TATB
The use of post detonation analysis of stable isotope ratios to determine the type and production process of the explosive involved
[DE93-018497] p 1378 N94-19242

TAYLOR SERIES
A finite strain ring dynamical model for pneumatic tires
[AD-A269286] p 1444 N94-18266
Error propagation equations and tables for estimating the uncertainty in high-speed wind tunnel test results
[DE93-018685] p 1311 N94-18275

TDR SATELLITES
TDRS press release
[NASA-TM-109373] p 1335 N94-18965

TEACHING MACHINES
Computer-assisted instruction and natural language systems
[MEMO-INF-92-86] p 1527 N94-19225

TEAMS
Cognitive limitations in coordination in hierarchical information processing structures
[AD-A268825] p 1616 N94-18535

TEARING MODES (PLASMAS)
Resonant absorption of Alfven waves near a neutral point
[DE93-628761] p 1586 N94-18172

TECHNOLOGICAL FORECASTING
Emerging technologies planning guide, 1993 edition — information systems technology
[DE93-017196] p 1616 N94-18689

TECHNOLOGIES
Solid State Sciences Committee Forum
[AD-A270454] p 1342 N94-18715
Program descriptions
[NSF-92-123] p 1531 N94-19619

TECHNOLOGY ASSESSMENT
Metals 2000
[DE93-016761] p 1355 N94-17752
Cost effective energy strategies for the reduction of CO2 emissions in the United States: Country report for ETSAP Annex 4
[DE93-016842] p 1472 N94-17852
Information technology resources assessment
[DE93-015276] p 1613 N94-17894
Critical technologies for reactors used in nuclear electric propulsion
[DE93-017685] p 1337 N94-17909
Laboratory microfusion capability study
[DE93-014373] p 1583 N94-17912
The stability and utility of the ESPRIT project, MUSIC, performance-based indicators of usability and tools: An evaluation of the usability of the NPL iSDX telephone system
[NPL-DITC-213/92] p 1613 N94-17925
The perspectives in application of hot casting technology for ceramic parts of timekeeping devices
p 1375 N94-18013
Safeguarding our energy future
[DE93-016001] p 1466 N94-18109
Workshop on Innovation in Materials Processing and Manufacture: Exploratory Concepts for Energy Applications
[DE93-017674] p 1467 N94-18478
Fatigue technology assessment and strategies for fatigue avoidance in marine structures. Appendices
[AD-A269053] p 1455 N94-18716
Survey of ceramic machining in Japan
[DE93-018277] p 1372 N94-18946

TECHNOLOGY TRANSFER
Interactive Collaborative Environments (ICE) in the design to manufacturing process
[DE93-014994] p 1518 N94-17944
Lightweight materials for transportation: Program plan
[DE93-017381] p 1340 N94-18087
White House technology reinvestment project: Briefing and transcripts
[PB93-169829] p 1611 N94-18090
New applications for high average power beams
[DE93-018845] p 1439 N94-18522
Solid State Sciences Committee Forum
[AD-A270454] p 1342 N94-18715
MHD technology transfer, integration and review committee
[DE93-040519] p 1588 N94-18892
Silicon concentrator solar cell research
[DE93-018489] p 1468 N94-19015
The applications of modified metals in the construction industry
[VTT-TIED-1329] p 1365 N94-19374
Manufacturing technology
[DE93-019580] p 1381 N94-19480

TECHNOLOGY UTILIZATION
Current information technology resource requirements of the federal government: Fiscal year 1994
p 1612 N94-17756
Lightweight materials for transportation: Program plan
[DE93-017381] p 1340 N94-18087
Safeguarding our energy future
[DE93-016001] p 1466 N94-18109

Engineering research, development and technology thrust area report, FY92
[DE93-016334] p 1632 N94-18856

Beryllium processing technology review for applications in plasma-facing components
[DE93-018396] p 1363 N94-19028

Application of new technologies in the virtual library: Seminars in Turkey, Portugal, and Spain
[NASA-TM-109718] p 1611 N94-19131

Space Applications Industrial Laser System (SAILS)
p 1325 N94-19173

The applications of modified metals in the construction industry
[VTT-TIED-1329] p 1365 N94-19374

Legacy of the X Ray Laser Program
[DE93-019550] p 1442 N94-19554

Commercialization effort in support of electroslag-casting technology
[DE93-017988] p 1366 N94-19733

TECTONICS

Belgian Royal Observatory Communications, Series A, No. 104, Geophysics Series No. 175
[COMMUNICATIONS-SER-A-104] p 1482 N94-18622

Current (1985-1988) seismic activity in Belgium: Comparison with historical and instrumental seismic data
p 1482 N94-18624

What can gravimetry contribute to recent and current tectonics in Belgium? p 1482 N94-18626

Applications of Quaternary stratigraphic, soil-geomorphic, and quantitative geomorphic analyses to the evaluation of tectonic activity and landscape evolution in the Upper Coastal Plain, South Carolina
[DE93-016269] p 1484 N94-18725

The interpretation of crustal dynamics data in terms of plate motions and regional deformation near plate boundaries
[NASA-CR-194302] p 1487 N94-19432

TELECOMMUNICATION

The stability and utility of the ESPRIT project, MUSiC, performance-based indicators of usability and tools: An evaluation of the usability of the NPL iSDX telephone system
[NPL-DITC-213/92] p 1613 N94-17925

Broadband RF spectrum from electrostatic discharges on spacecraft
[AD-A269543] p 1385 N94-18287

CONTACT: An Air Force technical report on military satellite control technology
[AD-A269375] p 1334 N94-18408

Morphology and characteristics of disturbed HF skywave channels
[AD-A269755] p 1388 N94-18722

Compilation of 1992 annual reports of the navy ELF communications system ecological monitoring program. Volume 3: Tabs G - I
[AD-A269727] p 1388 N94-18741

Optoelectronic packaging: A review
[DE93-040059] p 1515 N94-19535

Program descriptions
[NSF-92-123] p 1531 N94-19619

TELECONFERENCING

Information technology resources assessment
[DE93-015276] p 1613 N94-17894

TELEMETRY

Missile antenna pattern coordinate system and data formats
[AD-A269153] p 1385 N94-18260

A rugged, low-cost advanced data acquisition system for field test projects
[DE93-010041] p 1615 N94-18334

TELEOPERATORS

Magnetostrictive actuators for human sensory feedback
[AD-A269266] p 1511 N94-17841

TELEROBOTICS

Magnetostrictive actuators for human sensory feedback
[AD-A269266] p 1511 N94-17841

TELESCOPES

Origins of solar activity. First year report, AASERT grant
[AD-A268848] p 1629 N94-18222

Calibration of a high frequency monostatic acoustic echosounder
[AD-A268901] p 1481 N94-18229

Space debris detection
[AD-A269254] p 1334 N94-18264

Laser guide star measurements at Lawrence Livermore National Laboratory
[DE93-018081] p 1441 N94-19251

TEMPERATURE

The temperature at the phase boundary during quasi-static motions of a two-phase thermoelastic bar
[AD-A268769] p 1596 N94-18388

TEMPERATURE CONTROL

Substrate temperature measurement and control during thermal plasma CVD
[DE93-040305] p 1433 N94-19135

TEMPERATURE DEPENDENCE

Phase transitions and neutron scattering
[DE93-016748] p 1594 N94-17866

Pulsed LASER for testing silicon strip detectors
[DE93-017816] p 1436 N94-17883

Fin-efficiency calculation for condensation in the presence of noncondensable gases
[DE93-017684] p 1409 N94-18004

Effect of phase change in a debris cloud on a backwall structure
[DE93-017506] p 1358 N94-18100

Relaxation of polar orientational order in nonlinear optical polymers by second harmonic generation
[AD-A269059] p 1370 N94-18515

In-situ growth monitoring of molecular beam epitaxy processes
[AD-A269287] p 1598 N94-18616

In situ observation of radiation induced amorphization of crystals with apatite structure
[DE93-018450] p 1599 N94-18816

Densities and viscosities of ternary ammonia/water fluids
[DE93-015966] p 1351 N94-19118

Thermodynamic q-distributions that aren't
[DE93-017385] p 1609 N94-19121

Selective methane oxidation over promoted oxide catalysts
[DE93-040002] p 1351 N94-19132

Thermophysical properties
[DE93-040219] p 1351 N94-19134

Selective methane oxidation over promoted oxide catalysts
[DE93-040001] p 1351 N94-19150

A simple description of flow instability with application to a packed bed
[DE93-017492] p 1420 N94-19345

Ultraviolet absorption cross-sections of some carbonyl compounds and their temperature dependence
[AERONAUTICA-ACTA-A-368-199]
p 1353 N94-19456

Temperature of aircraft cargo flame exposure during accidents involving fuel spills
[DE93-019633] p 1381 N94-19539

Excited atomic bromine energy transfer and quenching mechanisms
[AD-A270672] p 1572 N94-19607

Testing of protective coatings in hydrogen
[DE93-040326] p 1375 N94-19651

TEMPERATURE DISTRIBUTION

Mixture distributions in climatological research
[DE93-014125] p 1488 N94-17942

Development of a selective volumetric receiver for central receiver systems: Investigation of parameters and exergetic evaluation
[DLR-FB-93-05] p 1465 N94-18089

Spectral analysis of synoptic time scale disturbances over the tropical eastern Pacific during summer 1989, 1990 and 1991
[AD-A268821] p 1490 N94-18206

Application of infrared thermography in fluid mechanics p 1431 N94-18649

Liquid crystal heat transfer measurements
p 1432 N94-18653

TEMPERATURE EFFECTS

Modeling microstructural evolution and the mechanical response of superplastic materials
[DE93-014417] p 1355 N94-17711

Atlas of formability: Ultimet
[AD-A268352] p 1355 N94-17767

Atlas of formability: HAYNES 556
[AD-A268354] p 1356 N94-17768

Atlas of formability: HAYNES 188
[AD-A268355] p 1356 N94-17769

Atlas of formability: NICKELVAC K-500
[AD-A268351] p 1356 N94-17772

Atlas of formability: Haynes 230
[AD-A268325] p 1356 N94-17788

Atlas of formability: INCONEL 718
[AD-A268350] p 1356 N94-17789

Atlas of formability: Hastelloy C-22
[AD-A268324] p 1356 N94-17796

Atlas of formability: Permalloy - 80 flow stress curves
[AD-A268263] p 1356 N94-17801

Atlas of formability: Nickelvac C-276
[AD-A268264] p 1357 N94-17802

Atlas of formability: Ti-6Al-4V ELI
[AD-A268300] p 1357 N94-17803

Atlas of formability: ALLVAC 718
[AD-A268304] p 1357 N94-17804

Atlas of formability: Waspaloy
[AD-A268323] p 1593 N94-17805

Charpy impact toughness of martensitic steels irradiated in FFTF: Effect of heat treatment
[DE93-015960] p 1450 N94-17848

Synchronisation of cold induced vasodilation at various locations of one hand
[IZF-1992-B3] p 1504 N94-17966

Fin-efficiency calculation for condensation in the presence of noncondensable gases
[DE93-017684] p 1409 N94-18004

Effect of temperature and O-ring gland finish on sealing ability of Viton V747-75
[NASA-TP-3391] p 1368 N94-18075

Effect of phase change in a debris cloud on a backwall structure
[DE93-017506] p 1358 N94-18100

Evaluation of physiological and psychological impairment of human performance in cold stressed subjects
[AD-A268637] p 1506 N94-18632

Work plan for the Marine Aerosol Properties and the Thermal Imager Performance Trial (MAPTIP)
[AD-A270026] p 1483 N94-18712

Nondestructive inspection of graphite-epoxy laminates for heat damage using DRIFT and LPF spectroscopies
[DE93-017228] p 1343 N94-18761

LX-17 chemical kinetic material model for Chemical TOPAZ2D
[DE93-014363] p 1377 N94-18893

Effect of internal heating during hot compression testing on the stress-strain behavior and hot working characteristics of alloy 304L
[DE93-012701] p 1362 N94-18917

Environmental degradation of Alloy 600 and welded filler metal EN82 in an elevated temperature aqueous environment
[DE93-018049] p 1363 N94-18940

Thermal stresses in the microchannel heatsink cooled by liquid nitrogen
[DE93-018660] p 1418 N94-18995

Effects of irradiation temperature on Charpy and tensile properties of high-copper, low upper-shelf, submerged-arc welds
[DE93-017858] p 1445 N94-19047

Densities and viscosities of ternary ammonia/water fluids
[DE93-015966] p 1351 N94-19118

Thermodynamic q-distributions that aren't
[DE93-017385] p 1609 N94-19121

Shrinkage void formation and its effect on freeze and thaw processes of lithium and lithium-fluoride for space applications
[DE93-019303] p 1338 N94-19128

Influence of peak pressure and temperature on the shock-loading response of tantalum
[DE93-018561] p 1457 N94-19279

Suppressed electron-phonon scattering in superlattices
[AD-A270834] p 1604 N94-19597

Pressure and temperature effects on the kinetics and quality of diamond films
[AD-A270876] p 1606 N94-19771

TEMPERATURE GRADIENTS

Transport in the self-organized relaxed state of ion temperature gradient instability
[DE93-016769] p 1584 N94-17983

Geothermal activity near Clearlake, California
[DE93-016627] p 1485 N94-18894

Finite difference program for calculating hydride bed wall temperature profiles
[DE93-019272] p 1523 N94-19005

A laboratory model of a cooled continental shelf
[AD-A270862] p 1500 N94-19792

TEMPERATURE MEASUREMENT

Considerations for the use of the modified line reversal technique for gas temperature measurement
[DE93-015752] p 1576 N94-17857

Mixture distributions in climatological research
[DE93-014125] p 1488 N94-17942

Boundary layer heat budgets from wind profiler/RASS data: A feasibility study
[DE93-013187] p 1489 N94-18052

Development of a multi-point two-color pyrometer for tube and wall temperature and emissivity measurement at the CFFF
[DE93-014716] p 1429 N94-18207

Flame structure studies of a lean 20-torr H2/N2O/Ar flame employing molecular beam mass spectrometry
[AD-A268889] p 1349 N94-18456

Fundamentals of infrared thermography
p 1431 N94-18648

Heat transfer quantitative characterization: Passive and active methods p 1431 N94-18650

Liquid crystal heat transfer measurements
p 1432 N94-18653

The application of liquid crystal techniques to determine heat transfer rates p 1432 N94-18654

Imaging and blackbody emission spectra of hot particulates generated during laser ablation
[DE93-015818] p 1439 N94-18724
Substrate temperature measurement and control during thermal plasma CVD
[DE93-040305] p 1433 N94-19135
Construction and evaluation of an environmental chamber for calibration of temperature and pressure sensors for laser interferometers emperature and pressure sensors for laser interferometers)
[PB93-197838] p 1322 N94-19332

TEMPERATURE MEASURING INSTRUMENTS
Construction and evaluation of an environmental chamber for calibration of temperature and pressure sensors for laser interferometers emperature and pressure sensors for laser interferometers)
[PB93-197838] p 1322 N94-19332

TEMPERATURE PROFILES
An atlas of bathy-thermograph temperature cross-sections for Coral and Tasman Sea transects from 1960 to 1987
[AD-A268775] p 1497 N94-18329
Flame structure studies of a lean 20-torr H2/N2O/Ar flame employing molecular beam mass spectrometry
[AD-A268889] p 1349 N94-18456
Finite difference program for calculating hydride bed wall temperature profiles
[DE93-019272] p 1523 N94-19005

TEMPERATURE SENSORS
Synoptic ocean prediction experiment. EN216 CTD section data report
[AD-A268903] p 1497 N94-18230
Description of an infrared zoomcollimator
[FEL-93-A034] p 1580 N94-19424

TEMPLATES
Developmental testing of a prototype all-reflection Michelson interferometer
[AD-A269064] p 1430 N94-18406
Template based low data rate speech encoder
[AD-A270900] p 1392 N94-19748

TEMPORAL DISTRIBUTION
Observations of comets with the IUE
[NASA-CR-193652] p 1624 N94-17843
Spatiotemporal variability of non-urban ozone concentrations over the eastern United States and its potential replication by satellite data
[PB93-191328] p 1476 N94-19065
Radial evolution of the solar wind turbulence with application to charged particle transport
[NASA-CR-194081] p 1629 N94-19427

TEMPORAL RESOLUTION
An RS-170 to 700 frame per second CCD camera
[DE93-018367] p 1432 N94-18828
Spectrally and temporally resolved laser emission from vertical cavity surface emitting lasers
[DE93-019410] p 1442 N94-19563

TENSILE PROPERTIES
The Hall-Petch relationship and mechanisms of fracture in B2 compounds
[DE93-018887] p 1359 N94-18182
Effects of irradiation temperature on embrittlement of nuclear pressure vessel steels
[DE93-015428] p 1359 N94-18245
Continuum modeling of materials that can undergo martensitic phase transitions
[AD-A268767] p 1360 N94-18386
Development of ductile Fe3Al-based aluminides
[DE93-017865] p 1362 N94-18938
Tensile properties of as-cast iron-aluminide alloys
[DE93-017852] p 1363 N94-18975
Effects of irradiation temperature on Charpy and tensile properties of high-copper, low upper-shelf, submerged-arc welds
[DE93-017858] p 1445 N94-19047

TENSILE STRESS
Assessment of an improved multiaxial strength theory based on creep-rupture data for Inconel 600
[DE93-015929] p 1356 N94-17791
Construction of a tension-torsion anisotropic brittle damage elastic model
[ECL-91-27] p 1457 N94-19375
Delamination in composite materials as observed using an optical fiber strain gage
[AD-A270803] p 1344 N94-19662

TENSILE TESTS
Effects of irradiation temperature on Charpy and tensile properties of high-copper, low upper-shelf, submerged-arc welds
[DE93-017858] p 1445 N94-19047

TENSORS
Tensorial structure of a q-deformed sp(4,R) superalgebra
[DE93-624808] p 1545 N94-17685

TERMINAL FACILITIES
Terminal area forecasts, FY 1993-2005
[AD-A269855] p 1316 N94-18336

TERMINOLOGY
Technical development of a theory of programs
[ETN-93-95058] p 1532 N94-19652

TERMS
Defense Technical Information Center thesaurus
[AD-A268855] p 1615 N94-18319

TERNARY ALLOYS
Magnetic properties of single-crystalline UCu3Al2
[DE93-016607] p 1593 N94-17744
Magnetic and crystallographic structures in UTX intermetallic compounds
[DE93-018291] p 1605 N94-19735

TERNARY SYSTEMS
Calculation of the LiF-CeF3-BeF2 and LiF-PuF3-BeF2 ternary phase diagrams
[DE93-017437] p 1360 N94-18501

TERRACES (LANDFORMS)
Applications of Quaternary stratigraphic, soil-geomorphic, and quantitative geomorphic analyses to the evaluation of tectonic activity and landscape evolution in the Upper Coastal Plain, South Carolina
[DE93-016269] p 1484 N94-18725

TERRAIN
Environmental characterization for target acquisition. Report 3: New concepts for evaluating low-grazing angle radar measurements
[AD-A269956] p 1388 N94-18777
Robot navigation in unknown terrains: Introductory survey of non-heuristic algorithms
[DE93-019221] p 1316 N94-19300
Remote sensing of Earth terrain
[NASA-CR-194598] p 1464 N94-19681

TERRESTRIAL PLANETS
Planetary plasma waves
[NASA-CR-194295] p 1629 N94-19094

TEST CHAMBERS
Acoustic intensity measurements in the presence of low Mach number flow
[AD-A269995] p 1562 N94-18664

TEST FACILITIES
High-efficiency silicon concentrator cell commercialization
[DE93-018491] p 1467 N94-18409
A register of underwater acoustic test facilities in the US, Canada, and the United Kingdom
[AD-A270884] p 1500 N94-19785

TEST FIRING
Technology test bed
[NASA-TM-109354] p 1322 N94-18953

TEST STANDS
Technology test bed
[NASA-TM-109354] p 1322 N94-18953

TEXTBOOKS
A teaching tool for linear programming
[AD-A270240] p 1523 N94-18905

TEXTS
Intelligent help facilities: Generating natural language descriptions with examples
[AD-A269555] p 1521 N94-18290
Automatic documentation generation: The interaction of text and examples
[AD-A269670] p 1616 N94-18570
Generating object descriptions: Intergrating examples with text
[AD-A269992] p 1522 N94-18680

THALLIUM
Fabrication and microstructural development of Ag-clad TlBa2Ca2Cu3O(x) tapes
[DE93-017407] p 1597 N94-18500
Preparation and characterisation of the compound Tl(0.65) Bi(0.35) Ca(0.8) Sr(1.7) Cu2 O(y) using oxalate coprecipitation and analytical CBED and an initial preparation of Bi2Ca(n-1) Sr2Cu(n) O(4+2n) for n=5
[DE93-625470] p 1602 N94-19277

THEOREM PROVING
Contribution to the analysis of tableaus based decision methods
[ETN-93-94355] p 1560 N94-18067
Formal hardware verification of digital circuits
p 1401 N94-18367
Updated Contributions to the Twente Workshop on Hamiltonian Graph Theory
[MEMO-1076] p 1554 N94-19683
On Hamilton-connectedness of Cayley graphs
p 1554 N94-19684
On Hamiltonian properties of 2-tough graphs
p 1554 N94-19685
The complete closure of a graph
p 1555 N94-19690
Twenty odd statements in Twente
p 1555 N94-19691
Generalized closures of graphs p 1555 N94-19692

THEOREMS
Polling systems: Moment stability of station times and central limit theorems
[PB93-191955] p 1560 N94-18990
Attribute evaluation during generalized parsing
[MEMO-INF-92-85] p 1526 N94-19224
Excursions of stochastic processes, Cox-point processes, entrance behavior and resolvents
[PB93-197291] p 1558 N94-19323
On Hamilton-connectedness of Cayley graphs
p 1554 N94-19684

THEORETICAL PHYSICS
On the difference caused by CP violation in the energy spectra of pions in K(sup (+-))(yields)(pi)(+-)(pi)(+-)(pi)-+ decays
[DE93-624828] p 1564 N94-17687
International Centre for Theoretical Physics, Trieste Scientific activities in 1991
[DE93-624757] p 1606 N94-17792
Center of Excellence in Theoretical Geoplasma Research
[AD-A270210] p 1588 N94-18902
Experimental research in high energy physics
[DE93-011912] p 1574 N94-18916
Extensions of 2D gravity
[DE93-018525] p 1485 N94-18929
Search for top quark with D0 detector
[DE93-040170] p 1572 N94-19536

THERMAL ANALYSIS
FEM/SINDA: Combining the strengths of NASTRAN, SINDA, I-DEAS, and PATRAN for thermal and structural analysis p 1449 N94-17831
Heat load analysis on the cable-in-conduit with central core conductor for the TF coil Rebut layer design
[DE93-013783] p 1395 N94-17872
Current development in selected stress and thermal analysis software interfaces with PRO-ENGINEER
[DE93-014935] p 1518 N94-17943
Infrared detection with high-(Tc bolometers and response of Nb tunnel junctions to picosecond voltage pulses
[DE93-016963] p 1595 N94-17989
Knowledge sources for an intelligent MCM analyzer
[AD-A269224] p 1542 N94-18887
Thermal analysis of coatings and substrate materials during a disruption in fusion reactors
[DE93-017688] p 1588 N94-18971
Accelerated screening methods for determining chemical and thermal stability of refrigerant-lubricant mixtures. Part 1: Method assessment
[DE93-040215] p 1351 N94-19136
Thermo-hydraulic analysis of superconducting toroidal-field magnets for the Tokamak Physics Experiment
[DE93-018096] p 1590 N94-19269
Effects of pressure on the orientational ordering and phase transitions in solid C(60) and C(70)
[DE93-018858] p 1603 N94-19347
Proceedings: International Symposium on Thermal Engineering and Science for Cold Regions
[AD-A270636] p 1487 N94-19529

THERMAL BOUNDARY LAYER
Experimental investigation of turbulent Prandtl number and Reynolds analogy in transitional and post-transitional boundary layers
[AD-A270092] p 1418 N94-18867

THERMAL CONDUCTIVITY
Coupled MHD and transport analysis of improved confinement D3-D discharges
[DE93-016985] p 1585 N94-18057
Development of a cryogenic heat pipe
[DE93-018448] p 1417 N94-18831

THERMAL CONTROL COATINGS
Robotics
[NASA-TM-109351] p 1332 N94-18920

THERMAL CYCLING TESTS
Microstructurally based thermomechanical fatigue lifetime model of solder joints for electronic applications
[DE93-016508] p 1452 N94-17995
Embrittlement of surface mount solder joints by hot solder-dipped, gold-plated leads
[DE93-017659] p 1358 N94-18003
Structural stability of 1100 C heated Pd/k during absorption cycling in protium
[DE93-016270] p 1346 N94-18048
Solderability perservative coatings: Electroless tin versus organic azoles
[DE93-017634] p 1370 N94-18477
Damage accumulation in advanced metal matrix composites under thermal cycling/creep loadings
[AD-A271207] p 1344 N94-19720

THERMAL DEGRADATION
Study on radiation-induced deterioration of grease at high temperature, 3
[DE93-788368] p 1369 N94-18220
Workshop on multifactor aging mechanisms and models
[AD-A268668] p 1397 N94-18311

THERMAL DIFFUSION
LX-17 chemical kinetic material model for Chemical TOPAZ2D
[DE93-014363] p 1377 N94-18893

THERMAL ENERGY
Techniques for the estimation of Heats of Explosion (HEX) using thermochemical codes
[AD-A268584] p 1609 N94-18310
Melt spinning study
[NASA-CR-193823] p 1380 N94-19423

THERMAL EXPANSION
Structural stability of 1100 C heated Pd/k during absorption cycling in protium
[DE93-016270] p 1346 N94-18048

THERMAL FATIGUE
Finite difference program for calculating hydride bed wall temperature profiles
[DE93-019272] p 1523 N94-19005

THERMAL INSULATION
Thermal insulation of wet shielded metal arc welds
[AD-A268697] p 1445 N94-18465

THERMAL MAPPING
Infrared thermography p 1432 N94-18652

THERMAL NEUTRONS
Criticality benchmark comparisons leading to cross-section upgrades
[DE93-017184] p 1556 N94-18073
Thermal neutron multiplicity measurements using the pyrochemical multiplicity counter at Lawrence Livermore National Laboratory
[DE93-018538] p 1571 N94-19278

THERMAL PLASMAS
Advanced fusion diagnostics
[DE93-040085] p 1589 N94-19133
Substrate temperature measurement and control during thermal plasma CVD
[DE93-040305] p 1433 N94-19135

THERMAL PROTECTION
LX-17 chemical kinetic material model for Chemical TOPAZ2D
[DE93-014363] p 1377 N94-18893

THERMAL RESISTANCE
Study on radiation-induced deterioration of grease at high temperature, 3
[DE93-788368] p 1369 N94-18220
The fire resistance of profiled thin steel sheet structures
[VTT-TIED-1320] p 1380 N94-19373

THERMAL STABILITY
Study on radiation-induced deterioration of grease at high temperature, 3
[DE93-788368] p 1369 N94-18220
Analysis of deposit precursors in jet fuels using Fourier transform infrared spectroscopy
[AD-A269035] p 1377 N94-18489
Strained ring energetic binders
[AD-A269056] p 1377 N94-18491
Accelerated screening methods for determining chemical and thermal stability of refrigerant-lubricant mixtures. Part 1: Method assessment
[DE93-040215] p 1351 N94-19136
Isolation mechanisms in III-V devices
[AD-A271197] p 1605 N94-19717

THERMAL STRESSES
Workshop on multifactor aging mechanisms and models
[AD-A268668] p 1397 N94-18311
Effect of internal heating during hot compression testing on the stress-strain behavior and hot working characteristics of alloy 304L
[DE93-012701] p 1362 N94-18917
Thermal stresses in the microchannel heatsink cooled by liquid nitrogen
[DE93-018660] p 1418 N94-18995

THERMOCHEMISTRY
Techniques for the estimation of Heats of Explosion (HEX) using thermochemical codes
[AD-A268584] p 1609 N94-18310

THERMOCOUPLES
Flame structure studies of a lean 20-torr H2/N2O/Ar flame employing molecular beam mass spectrometry
[AD-A268889] p 1349 N94-18456

THERMODYNAMIC CYCLES
Thermodynamic theory of exergy analysis
[PB93-187847] p 1607 N94-18120
Adsorption analysis of ammonia in an aqueous solution
[DE93-019512] p 1353 N94-19552

THERMODYNAMIC PROPERTIES
A new multiphase equation of state for iron
[DE93-017629] p 1357 N94-17819
Diffusion in ordered alloys
[AD-A268232] p 1359 N94-18322
Carbon/carbon composites coated with SiC by chemical vapor deposition
[AD-A269934] p 1341 N94-18544
Wettability and reaction kinetics in metal matrix composites
[AD-A270377] p 1342 N94-18704
Structure-property relationships in radical-cation (electron-donor molecule) and anion-based (including fullerides) organic superconductors and their use in the design of new materials
[DE93-018617] p 1601 N94-19022
A free energy simulation method based study of interfacial segregation
[DE93-019462] p 1364 N94-19032
Thermophysical properties
[DE93-040219] p 1351 N94-19134
Proceedings: International Symposium on Thermal Engineering and Science for Cold Regions
[AD-A270636] p 1487 N94-19529
Adsorption analysis of ammonia in an aqueous solution
[DE93-019512] p 1353 N94-19552
Supercritical thermodynamics of sulfur and nitrogen species
[DE93-041221] p 1610 N94-19670
Damage accumulation in advanced metal matrix composites under thermal cycling/creep loadings
[AD-A271207] p 1344 N94-19720
Pressure and temperature effects on the kinetics and quality of diamond films
[AD-A270876] p 1606 N94-19771

THERMODYNAMICS
Lectures of Fermi liquid theory
[DE93-016630] p 1592 N94-17714
Thermodynamics of computation and information distance
[DE93-012730] p 1517 N94-17812
Thermodynamic theory of exergy analysis
[PB93-187847] p 1607 N94-18120
Structure, thermodynamics, and dynamical properties of supercooled liquids
[DE93-788387] p 1607 N94-18211
The temperature at the phase boundary during quasi-static motions of a two-phase thermoelastic bar
[AD-A268769] p 1596 N94-18388
Competitive dynamics and self-organization in photorefractive systems
[AD-A269663] p 1430 N94-18569
Molten carbonate fuel cell networks: Principles, analysis, and performance
[DE93-000281] p 1468 N94-18925
Ground movements associated with gas hydrate production
[DE93-019887] p 1486 N94-19018
Energy Conversion and Storage Program
[DE93-018602] p 1469 N94-19098
Thermodynamic q-distributions that aren't
[DE93-017385] p 1609 N94-19121
Supercritical thermodynamics of sulfur and nitrogen species
[DE93-041221] p 1610 N94-19670

THERMOELASTICITY
The temperature at the phase boundary during quasi-static motions of a two-phase thermoelastic bar
[AD-A268769] p 1596 N94-18388

THERMOELECTRIC GENERATORS
Feasibility survey of thermoelectric conversion technology using semiconductors
[DE93-520882] p 1595 N94-18105
Ultrasonic technique for inspection of GPHS capsule girth weld integrity
[DE93-040072] p 1448 N94-19189

THERMOELECTRIC MATERIALS
Feasibility survey of thermoelectric conversion technology using semiconductors
[DE93-520882] p 1595 N94-18105

THERMOELECTRIC POWER GENERATION
Feasibility survey of thermoelectric conversion technology using semiconductors
[DE93-520882] p 1595 N94-18105

THERMOELECTRICITY
Deep ion implantation into manganin to modify its pressure and electrothermocharacteristics
[DE93-630229] p 1359 N94-18218

THERMOGRAPHY
Measurement Techniques
[VKI-LS-1993-05] p 1430 N94-18643
Fundamentals of infrared thermography
p 1431 N94-18648
Application of infrared thermography in fluid mechanics p 1431 N94-18649
Heat transfer quantitative characterization: Passive and active methods p 1431 N94-18650
Perspective and future possibilities
p 1431 N94-18651
Infrared thermography p 1432 N94-18652

THERMOMECHANICAL TREATMENT
Development of ductile Fe3Al-based aluminides
[DE93-017865] p 1362 N94-18938

THERMONUCLEAR REACTIONS
Generalized energy principle for flute perturbations in axisymmetric mirror machines
[DE93-019399] p 1589 N94-19037

THERMOPHORESIS
Transport phenomena and interfacial kinetics in multiphase combustion systems
[AD-A270202] p 1349 N94-18765

THERMOPHYSICAL PROPERTIES
Malone refrigeration
[DE93-014468] p 1379 N94-17725
Thermophysical properties
[DE93-040219] p 1351 N94-19134

THERMOPLASTIC RESINS
Analysis of pultrusion processing for long fiber reinforced thermoplastic composite system
[NASA-CR-194504] p 1339 N94-17766
Process for preparing thermoplastic composites
[AD-D015864] p 1339 N94-18074
Polymer technology publication. Series no. 14, 1993
[PB93-195964] p 1372 N94-19052

THERMOPLASTICITY
Analysis of pultrusion processing for long fiber reinforced thermoplastic composite system
[NASA-CR-194504] p 1339 N94-17766
Strained ring energetic binders
[AD-A269056] p 1377 N94-18491

THERMOREGULATION
Metabolic changes and hemodynamic dysfunction following hypothermic shock
[AD-A269780] p 1506 N94-18598

THERMOSETTING RESINS
Analysis of pultrusion processing for long fiber reinforced thermoplastic composite system
[NASA-CR-194504] p 1339 N94-17766
Molecular composites from liquid crystalline polymers and liquid crystalline thermosets
[DE93-016608] p 1368 N94-18096

THERMOSPHERE
A physical model for one-dimension and time-dependent ionosphere. Part 1: Description of the model
[DE93-627958] p 1486 N94-19255
Venus lower thermosphere studies
[NASA-CR-193546] p 1629 N94-19418

THESAURI
Defense Technical Information Center thesaurus
[AD-A268855] p 1615 N94-18319

THESES
Numerical and symbolic signal representation and processing
[AD-A270271] p 1389 N94-18811

THICKNESS
Development of the microstructure based stochastic life prediction model
[AD-A269742] p 1361 N94-18742
Foil support structure for large electron guns
[DE93-018478] p 1322 N94-18890

THIN FILMS
Vibrational and electronic properties of clusters and ultrathin films
[DE93-012291] p 1367 N94-17678
Polarized thin films from dye-substituted polymers containing hydrophobically terminated stilbazolium radicals
[AD-D015873] p 1367 N94-17706
Finite element modeling of evaporation and condensation during sol-gel film and fiber formation
[DE93-017655] p 1345 N94-17820
Superhardness effect in Au/Ni multilayers
[DE93-016444] p 1357 N94-17860
Experimental contribution to the contact between two bodies and the effect of roughness
[ECL-91-41] p 1451 N94-17918
Titanium carbon-hydrogen layers on decorative surfaces p 1375 N94-18010
Studies of interactions between conducting polymer and organic vapors: Applications to chemical sensing
[DE93-015694] p 1369 N94-18233
Synthesis and study of high-T(sub c) superconducting electronic materials
[AD-A268851] p 1402 N94-18390
Solderability perservative coatings: Electroless tin versus organic azoles
[DE93-017634] p 1370 N94-18477
Mesoepitaxy: A universal route to oriented materials
[AD-A270437] p 1598 N94-18511
Growth of structures for integrated optoelectronic devices
[AD-A269014] p 1598 N94-18527
In-situ growth monitoring of molecular beam epitaxy processes
[AD-A269287] p 1598 N94-18616
Integration of ferroelectric/semiconductor thin films for SLM and photorefractive applications
[AD-A268645] p 1598 N94-18633

Scaling laws for diamond chemical vapor deposition. Diamond surface chemistry
[AD-A269874] p 1599 N94-18745
Thin film studies of the proximity Josephson effect
[AD-A270129] p 1600 N94-18876
Polycrystalline thin-film cadmium telluride solar cells fabricated by electrodeposition
[DE93-018201] p 1468 N94-18944
Growth of epitaxial semiconductor alloys and superlattices with continuously variable composition by pulsed-laser ablation
[DE93-018726] p 1601 N94-18998
Some superhigh-frequency and magnetic properties of chemically precipitated films
[AD-A266195] p 1351 N94-19110
Elastic properties of amorphous thin films studied by Rayleigh waves
[DE93-018375] p 1372 N94-19202
The microstructural mechanism of electromigration failure in narrow interconnects of Al alloys
[DE93-018598] p 1365 N94-19282
Picoindentation hardness measurements using atomic force microscopy
[AD-A270877] p 1604 N94-19579
Ionized-cluster beam/partially ionized beam deposition of electro-optical and nonlinear optical organic materials and device development
[AD-A270832] p 1604 N94-19596
The deposition of electro-optic films on semiconductors
[AD-A270823] p 1605 N94-19664
Single source precursors for the OMCVD of 3/5 compound semiconductors
[AD-A271147] p 1606 N94-19739
Nanofabrication by focused ion beam
[AD-A271290] p 1345 N94-19746
Magnetic Ultrathin Films: Multilayers and Surfaces, Interfaces, and Characterization, volume 313
[AD-A271402] p 1375 N94-19758

THIN PLATES
Effect of phase change in a debris cloud on a backwall structure
[DE93-017506] p 1358 N94-18100
Toward a characterization of the debris cloud created in a hypervelocity impact on a thin plate
[AD-A269190] p 1455 N94-18864
Interfacial cracks in plates: A three-dimensional numerical investigation p 1456 N94-19116

THIN WALLED SHELLS
Current capabilities for simulating the extreme distortion of thin structures subjected to severe impacts
p 1459 N94-19474

THOMSON SCATTERING
Nonlinear Thomson scattering of intense laser pulse from beams and plasmas
[AD-A269556] p 1438 N94-18460

THREE DIMENSIONAL BOUNDARY LAYER
Viscous-inviscid calculation of high-lift separated compressible flows over airfoils and wings
p 1309 N94-18440
Multigrid methods for flow transition in three-dimensional boundary layers with surface roughness
[NASA-CR-4540] p 1417 N94-18843
The effect of fine surface riblets on the flow around an inclined axially symmetrical body
[MPIS-105/1993] p 1420 N94-19356

THREE DIMENSIONAL COMPOSITES
JPRS report: Science and technology. Central Eurasia: Materials science
[JPRS-UMS-93-002] p 1339 N94-18833

THREE DIMENSIONAL FLOW
Application of ARC/INFO to regional scale hydrogeologic modeling
[DE93-015673] p 1481 N94-18107
An algebraic turbulence model for turbomachinery
p 1411 N94-18554
Several examples where turbulence models fail in inlet flow field analysis p 1412 N94-18556
Theoretical examination of the flow around a cylinder with a low dimensional Galerkin process
[MPIS-25/1992] p 1422 N94-19525
Visualization of turbulent flow with particles
[REPT-93-31] p 1423 N94-19645

THREE DIMENSIONAL MODELS
Three-dimensional simulation analysis of the first sections of a standing-wave free-electron laser two-beam accelerator
[DE93-016977] p 1436 N94-17869
Texture splats for 3D vector and scalar field visualization
[DE93-017104] p 1520 N94-18130
High-performance multiprocessor architecture for a 3-D lattice gas model p 1400 N94-18362
The GARTEUR high lift research programme
p 1307 N94-18430
ADCIRC: An advanced three-dimensional circulation model for shelves, coasts, and estuaries. Report 3: Development of a tidal constituent database for the western North Atlantic and Gulf of Mexico
[AD-A268685] p 1497 N94-18455
3D composite grids using Bezier curves and surfaces in component adaptive methods
[AD-A269188] p 1549 N94-18863
Flow volumes for interactive vector field visualization
[DE93-017102] p 1418 N94-18888
Volume rendering of 3D scalar and vector fields at Lawrence Livermore National Laboratory
[DE93-018000] p 1528 N94-19276
Crossover from BCS to Bose superconductivity: A functional integral approach
[DE93-019503] p 1604 N94-19566

THRESHOLDS (PERCEPTION)
The effects of reverberant impulse noise (blast waves) on hearing: Parametric studies
[AD-A269242] p 1506 N94-18911

THRUST
Constant-thrust orbit-raising transfer charts
[AD-A269088] p 1334 N94-18718

THRUST CONTROL
Phasing strategies of the Hermes type space shuttle: Its optimization considering the thrust failures
[LAAS-93242] p 1544 N94-19361

THUNDERSTORMS
Station climatic summaries: North America. Volume 1: The contiguous United States
[AD-A269567] p 1490 N94-18303
Station climatic summaries, North America. Volume 2: Alaska, Canada and Greenland
[AD-A269793] p 1493 N94-18732

TIDES
ADCIRC: An advanced three-dimensional circulation model for shelves, coasts, and estuaries. Report 3: Development of a tidal constituent database for the western North Atlantic and Gulf of Mexico
[AD-A268685] p 1497 N94-18455
Method for extracting tidal and inertial motion from ARGOS ice buoys applied to the Barents Sea during CEAREX
[PB93-190213] p 1499 N94-19063

TILTMETERS
Instrumentation developed at the Royal Observatory of Belgium for measuring slow displacements of the Earth
p 1483 N94-18628

TIME
About time p 1426 N94-18024
Space and time from quantum mechanics
[DE93-015263] p 1609 N94-18629

TIME DEPENDENCE
Exact solution of the generalized time-dependent Jaynes-Cummings Hamiltonian
[DE93-624773] p 1546 N94-17811
Three-dimensional simulation analysis of the first sections of a standing-wave free-electron laser two-beam accelerator
[DE93-016977] p 1436 N94-17869
Variable time-step integration for intense field effects
[DE93-013296] p 1382 N94-17909
Practical reporting times for environmental samples
[DE93-013461] p 1472 N94-17910
The effects of initial conditions and control time on optimal actuator placement by way of a max-min genetic algorithm
[DE93-017640] p 1525 N94-19124
Asymptotic derivation of the modified time-dependent SP2 equations and numerical calculations
[DE93-016466] p 1551 N94-19342
Time dependent identification of nonlinear structures
[ECL-92-64] p 1457 N94-19403

TIME DIVISION MULTIPLEXING
VHF air/ground communications for air traffic control. Volume 1: A decision tree approach to system innovations
[AD-A268485] p 1316 N94-18384

TIME LAG
Shop problems with two machines and time lags
[REPT-93-020] p 1518 N94-17927
A method for eliminating skew introduced by non-uniform buffer delay and wire lengths in clock distribution trees
[AD-A270649] p 1544 N94-19530
Stabilization of time-delay systems: An overview of the algebraic approach
[PB93-191989] p 1553 N94-19556
Tracking with time-delayed data in multisensor systems
[AD-A271334] p 1391 N94-19582

TIME MARCHING
An algebraic turbulence model for turbomachinery
p 1411 N94-18554

TIME MEASUREMENT
Proceedings of the 4th European Congress on Chronometry
[ETN-93-94633] p 1424 N94-18006
The clocks and the perception of time in the 18th century society p 1424 N94-18007
About time p 1426 N94-18024
Marine chronometry in the Neuchatel mountains (Switzerland) p 1427 N94-18025
Restoration of an 18th century English clock
p 1427 N94-18026
Techniques for low consumption circuits
p 1428 N94-18032
Evaluation of the consumption of electronic clocks
p 1408 N94-18033
Development of atomic standards at the Neuchatel Observatory p 1428 N94-18038
Multifunction chronograph movement using a modular structure multimotor p 1429 N94-18044

TIME OF FLIGHT SPECTROMETERS
Detonation reaction steps frozen by free expansion and analyzed by mass spectrometry
[DE93-012734] p 1376 N94-17813
Matrix- and substrate-assisted laser desorption for fast DNA sequencing
[DE93-015332] p 1501 N94-18242
The study of the phase structure of hadronic matter by searching for the deconfined quark-gluon phase transition using 2 TeV (bar-p)-p collisions, and by searching for critical phenomena in an exclusive study of multifragmentation using 1 GeV/nucleon heavy ion collisions
[DE93-018925] p 1570 N94-19103

TIME OPTIMAL CONTROL
The effects of initial conditions and control time on optimal actuator placement by way of a max-min genetic algorithm
[DE93-017640] p 1525 N94-19124

TIME SERIES ANALYSIS
Linear parameter identification methods for ARMA models with periodic coefficients
[REPT-92-070] p 1556 N94-17938
Fast-training algorithm for hidden-layer forward-feed neural networks
[AD-A269253] p 1540 N94-18263
Spectral analysis on the canonical autoregressive decomposition
[AD-A270083] p 1549 N94-18798
A survey of current approaches to modelling of hydrological time-series with respect to climate variability and change
[WMO/TD-534] p 1463 N94-19435
Methods for description and control of dynamical systems and their application
[MPIS-17/1992] p 1553 N94-19522
Generalized multichannel signal detection
[AD-A271385] p 1391 N94-19587

TIME TEMPERATURE PARAMETER
FEM/SINDA: Combining the strengths of NASTRAN, SINDA, I-DEAS, and PATRAN for thermal and structural analysis p 1449 N94-17831
Mechanical response comparison of gun propellants evaluated under equivalent time-temperature conditions
[AD-A270479] p 1378 N94-19674

TIMING DEVICES
Proceedings of the 4th European Congress on Chronometry
[ETN-93-94633] p 1424 N94-18006
The clocks and the perception of time in the 18th century society p 1424 N94-18007
The perspectives in application of hot casting technology for ceramic parts of timekeeping devices
p 1375 N94-18013
The optimal numerical algorithm for processing of phase coded time signals for radio-clocks
p 1426 N94-18018
Marine chronometry in the Neuchatel mountains (Switzerland) p 1427 N94-18025
Restoration of an 18th century English clock
p 1427 N94-18026
The mystery of the perpetual motion clock of Geiser and Son p 1427 N94-18027
Gear train behavior analyzer using laser beam scanning for watch movement p 1427 N94-18028
Universal measurement device for electronic watches and small clocks p 1427 N94-18029
Reliability control for wrist watches and their casements p 1427 N94-18030
Mutrometre: Construction for fast water proof measurements under low pressure and air suppression
p 1427 N94-18031
Multifunction chronograph movement using a modular structure multimotor p 1429 N94-18044
Military applications of high-accuracy frequency standards and clocks
[AD-A269303] p 1430 N94-18299

TIN OXIDES
Solderability perservative coatings: Electroless tin versus organic azoles
[DE93-017634] p 1370 N94-18477
TIRES
A finite strain ring dynamical model for pneumatic tires
[AD-A269286] p 1444 N94-18266
Measuring methods for evaluation of dynamic tyre properties
[ETN-93-95054] p 1381 N94-19650
TITANATES
The electromechanical properties of tetragonal BaTiO3 and PbTiO3 single crystals
[DE93-019008] p 1603 N94-19550
TITANIA
Transport phenomena and interfacial kinetics in multiphase combustion systems
[AD-A270202] p 1349 N94-18785
TITANIUM
The efficiency of continuous output of some titanium-doped gem-crystal lasers has exceeded 1 W
[AD-A269953] p 1439 N94-18674
Multi-terrawatt, 100 fsec laser system using flashlamp-pumped, dye-converted Ti:sapphire as an amplifier
[DE93-017190] p 1440 N94-18889
TITANIUM ALLOYS
Atlas of formability: Ti-6Al-4V ELI
[AD-A268300] p 1357 N94-17803
Mechanical properties of excimer laser modified titanium surfaces
[DE93-012663] p 1358 N94-17875
Implementation of a nonisothermal unified inelastic-strain theory into ADINA6.0 for a titanium alloy: User guide
[AD-A269927] p 1360 N94-18660
Fatigue resistant Ti3Al composites
[AD-A270305] p 1341 N94-18692
Intelligent materials systems and structures. Part 4: The influence of thermomechanical loading on the life of shape memory alloys
[PB93-195923] p 1363 N94-18952
Bibliography on silicides
[AD-A270516] p 1374 N94-19532
Microstructure and texture control of fatigue in hydrogen and marine environments
[AD-A271277] p 1344 N94-19744
TITANIUM COMPOUNDS
Titanium carbon-hydrogen layers on decorative surfaces p 1375 N94-18010
TITANIUM NITRIDES
Sputtered TiN coatings in plastic
p 1367 N94-18011
TITANIUM OXIDES
Nanostructured materials: Mind over matter
[DE93-017690] p 1597 N94-18480
Optical properties of oxide coatings prepared by ion-assisted deposition
[AD-A270024] p 1599 N94-18711
TOKAMAK DEVICES
Power compensators for phased operation of antenna arrays on JET and D3-D
[DE93-013208] p 1581 N94-17694
Arc detection and protection in high-power antenna systems
[DE93-013272] p 1382 N94-17695
ITER EDA design confinement capability
[DE93-013729] p 1582 N94-17697
Limits on m = 2, n = 1 error field induced locked mode instability in TPX with typical sources of poloidal field coil error field and a proto type correction coil, C-coil
[DE93-014408] p 1582 N94-17702
Using the Tritium Plasma Experiment to evaluate ITER PFC safety
[DE93-016614] p 1582 N94-17713
Plasma properties research: Task 3
[DE93-017087] p 1583 N94-17854
Heat load analysis on the cable-in-conduit with central core conductor for the TF coil Rebut layer design
[DE93-013783] p 1395 N94-17872
Filamentation, current profiles and transport in a tokamak
[DE93-016768] p 1584 N94-17948
Transport in the self-organized relaxed state of ion temperature gradient instability
[DE93-016769] p 1584 N94-17983
Analysis of the ITER H-mode confinement database
[DE93-016984] p 1585 N94-18056
Dependence of helium transport on plasma current and ELM frequency in H-mode discharges in D3-D
[DE93-016986] p 1585 N94-18058
AEOLUS-IT MHD simulation code based on a toroidally incompressible plasma model
[DE93-788461] p 1586 N94-18157
User's manual of Tokamak Simulation Code
[DE93-788388] p 1586 N94-18212
Active neutral particle diagnostics for high temperature plasma
[DE93-788457] p 1586 N94-18214
Ion mobility and transport barriers in the tokamak plasmas
[DE93-040320] p 1587 N94-18524
Parametric analysis of the ARIES-3D-He-3 tokamak reactor
[DE93-018293] p 1587 N94-18803
Thermal analysis of coatings and substrate materials during a disruption in fusion reactors
[DE93-017688] p 1588 N94-18971
Viscosity in the edge of tokamak plasmas
[DE93-018039] p 1588 N94-18988
Review Committee report on the conceptual design of the tokamak physics experiment
[DE93-018408] p 1588 N94-19012
The effects of radiolysis on the corrosion and stress corrosion behavior of 316 stainless steels
[DE93-019933] p 1363 N94-19021
Lower hybrid counter current drive for edge current density modification in D3-D
[DE93-019157] p 1589 N94-19073
Experiments on nonlinear absorption of ECH waves in MTX and a comparison with theory
[DE93-019158] p 1589 N94-19074
Thermo-hydraulic analysis of superconducting toroidal-field magnets for the Tokamak Physics Experiment
[DE93-018096] p 1590 N94-19269
ICRF direct electron heating experiments in TFTR
[DE93-017857] p 1590 N94-19273
Electron cyclotron resonance heating in the microwave tokamak experiment
[DE93-018083] p 1590 N94-19289
Radiative divertor modeling studies
[DE93-018092] p 1590 N94-19290
Behavior of the particle transport coefficients near the density limit in MTX
[DE93-019108] p 1591 N94-19311
Modelization, numerical simulation and optimal control of NET tokamak plasma configuration evolution for the future generation of fusion reactors
[ETN-93-95019] p 1591 N94-19364
Theoretical studies of turbulence and anomalous transport in toroidal confinement devices
[DE93-040684] p 1592 N94-19656
TOMOGRAPHY
Tomographic mathematical ideas applied to radar detection
[AD-A268789] p 1384 N94-18186
Surface wave group velocity tomography of East Asia, part 1
[AD-A270100] p 1484 N94-18868
Single sided tomography of extremely large dense objects
[DE93-017993] p 1580 N94-19268
TOPOGRAPHY
Three-dimensional high-resolution seismic profiling on the New Jersey outer continental shelf
[AD-A269835] p 1498 N94-18600
JPRS report: Central Eurasia. Aviation and cosmonautics, no. 1, January 1993
[JPRS-UAC-93-007] p 1632 N94-19147
Measurements of ocean surface and bottom backscattering strengths in the northwestern Atlantic Ocean
[AD-A270893] p 1500 N94-19786
TOPOLOGY
WBNGRID, a program for generation of C-H and C-O topology grids around wing/body/nacelle configurations: User's guide
[FFA-TN-1992-09] p 1311 N94-17721
Working visit to the University of L'Aquila, Italy
[FEL-93-B020] p 1618 N94-19452
The effects of initial conditions on the 3-D topology of temporally evolving wakes (ARI on 3-D bluff body wakes)
[AD-A271008] p 1423 N94-19774
TOROIDAL PLASMAS
Limits on m = 2, n = 1 error field induced locked mode instability in TPX with typical sources of poloidal field coil error field and a proto type correction coil, C-coil
[DE93-014408] p 1582 N94-17702
Self-regulated shear flow turbulence in confined plasmas
[DE93-015823] p 1583 N94-17743
Transport in the self-organized relaxed state of ion temperature gradient instability
[DE93-016769] p 1584 N94-17983
Toroidal solenoids in the electromagnetic field and Aharonov-Casher effect
[DE93-629861] p 1566 N94-18152
User's manual of Tokamak Simulation Code
[DE93-788388] p 1586 N94-18212
Ion mobility and transport barriers in the tokamak plasmas
[DE93-040320] p 1587 N94-18524
Lower hybrid counter current drive for edge current density modification in D3-D
[DE93-019157] p 1589 N94-19073
Finite beta plasma equilibrium in toroidally linked mirrors
[DE93-040318] p 1590 N94-19193
Modelization, numerical simulation and optimal control of NET tokamak plasma configuration evolution for the future generation of fusion reactors
[ETN-93-95019] p 1591 N94-19364
Theoretical studies of turbulence and anomalous transport in toroidal confinement devices
[DE93-040684] p 1592 N94-19656
TORQUE
Tooth form design supporting system in module design p 1428 N94-18036
Cooperative control of multiple space manipulators
[AD-A270291] p 1445 N94-18813
Dimensional crossover in the torque in a layered superconductor
[DE93-019544] p 1407 N94-19553
TORQUEMETERS
Control of torque in stepping motors of quartz watches and clocks p 1408 N94-18023
TORSIONAL STRESS
Construction of a tension-torsion anisotropic brittle damage elastic model
[ECL-91-27] p 1457 N94-19375
TORUSES
Contact 3-manifolds, integrable Hamiltonian systems and exotic symplectic structures in R(sup 4)
[DE93-624767] p 1551 N94-19248
TOTAL OZONE MAPPING SPECTROMETER
October 1979-1989 Southern Hemisphere total ozone as seen by TOMS
[NASA-TM-109375] p 1476 N94-18967
TOTAL QUALITY MANAGEMENT
Document control and conduct of operations
[DE93-016555] p 1613 N94-17880
Quality, management, and the interplay of self-assessment, process assessments, and performance-based observations
[DE93-018787] p 1448 N94-19336
TOUCH
Cortical substrate of haptic representation
[AD-A269583] p 1508 N94-18304
Robot navigation in unknown terrains: Introductory survey of non-heuristic algorithms
[DE93-019221] p 1316 N94-19300
TOUGHNESS
Charpy impact toughness of martensitic steels irradiated in FFTF: Effect of heat treatment
[DE93-015960] p 1450 N94-17848
Mechanism-dependent fractal character of fracture surfaces in high strength and toughness ASTM A723 steels
[AD-A268956] p 1360 N94-18542
TOXIC HAZARDS
Review of short-term, high-level exposure to metals: Antimony, barium, and cadmium
[AD-A268896] p 1505 N94-18392
A review and evaluation of the ADAM 2.1 dispersion model
[AD-A269896] p 1474 N94-18688
TOXICITY
A review and evaluation of the ADAM 2.1 dispersion model
[AD-A269896] p 1474 N94-18688
The role of chemical inhibition of gap junctional intercellular communication in toxicology
[AD-A269251] p 1502 N94-18924
A study of the effect of hydrocarbon structure on the induction of male rat nephropathy and metabolic structure
[AD-A270969] p 1504 N94-19789
TOXICOLOGY
Review of short-term, high-level exposure to metals: Antimony, barium, and cadmium
[AD-A268896] p 1505 N94-18392
The role of chemical inhibition of gap junctional intercellular communication in toxicology
[AD-A269251] p 1502 N94-18924
TRACE CONTAMINANTS
A technique for measuring winds in the lower atmosphere using incoherent Doppler lidar
[DE93-017163] p 1488 N94-17758
Analysis of HgI2 and PbI2 crystals and detectors by Particle-Induced X Ray Emission (PIXE) and Ion Backscattering Spectroscopy (IBS)
[DE93-017168] p 1594 N94-17896
A mobile remote sensing laboratory for water vapor, trace gas, aerosol, and wind speed measurements
[DE93-017158] p 1489 N94-18132

CDIAC catalog of numeric data and computer model packages
[DE93-017675] p 1475 N94-18832
Suitability of infrared spectroscopy for remote sensing of tropospheric trace gases
[KFK-5183] p 1479 N94-19507
Application of an atmospheric dispersion model to simulated pollutant releases in the Colorado Front range
[DE93-017118] p 1480 N94-19732

TRACE ELEMENTS
Carbon Dioxide Information Analysis Center: FY 1992 activities
[DE93-013845] p 1471 N94-17774
Analysis of HgI2 and PbI2 crystals and detectors by Particle-Induced X Ray Emission (PIXE) and Ion Backscattering Spectroscopy (IBS)
[DE93-017168] p 1594 N94-17896
CDIAC catalog of numeric data and computer model packages
[DE93-017675] p 1475 N94-18832
Global three dimensional model of tropospheric trace gases chemistry and transport
[AERONAUTICA-ACTA-A-370-199] p 1479 N94-19518

TRACKING (POSITION)
Tracking with time-delayed data in multisensor systems
[AD-A271334] p 1391 N94-19582
A stereoscopic vision system with applications to automated docking and tracking
[AD-A270754] p 1333 N94-19765

TRACKING FILTERS
Tracking with time-delayed data in multisensor systems
[AD-A271334] p 1391 N94-19582

TRACTION
Continuum modeling of materials that can undergo martensitic phase transitions
[AD-A268767] p 1360 N94-18386
The longitudinal free vibrations of a fixed-free two-phase elastic bar
[AD-A268768] p 1453 N94-18387
The temperature at the phase boundary during quasi-static motions of a two-phase thermoelastic bar
[AD-A268769] p 1596 N94-18388

TRAILING EDGE FLAPS
Calculation of maximum and high lift characteristics of multi element aerofoils p 1305 N94-18419
Efficient simulation of incompressible viscous flow over multi-element airfoils p 1306 N94-18421
Navier-Stokes calculations on multi-element airfoils using a chimera-based solver p 1306 N94-18422
Numerical solution of the Navier-Stokes equations for high-lift configurations on structured composite grids p 1306 N94-18423
High Reynolds number configuration development of a high-lift airfoil p 1306 N94-18424
A viscous-inviscid solver for high-lift incompressible flows over multi-element airfoils at deep separation conditions p 1306 N94-18425
Prediction of the high-lift performance of multi-element aerofoils using an unstructured Navier-Stokes solver p 1307 N94-18427
Navier-Stokes simulation of flow field around a blown-flap high-lift system p 1307 N94-18429
An experimental investigation of the optimum slat setting on a combat aircraft model p 1308 N94-18431
An experimental investigation of attachment-line transition on the slat of a combat aircraft model p 1308 N94-18432
Viscous phenomena affecting high-lift systems and suggestions for future CFD development p 1308 N94-18433
In-flight pressure distributions and skin-friction measurements on a subsonic transport high-lift wing section p 1308 N94-18435
High lift and the forward swept wing p 1308 N94-18436
A fast computing method for the flow over high-lift wings p 1308 N94-18437
Calculation of multielement airfoils and wings at high lift p 1309 N94-18438
Forty years of high-lift R/D: An aircraft manufacturer's experience p 1309 N94-18441
High-lift research: Application to the design of the ATR72 flap p 1309 N94-18442
The aero-mechanical design of a novel Fowler flap mechanism p 1309 N94-18443
High-lift design for large civil aircraft p 1310 N94-18445
High lift systems for transport aircraft with advanced airfoils p 1310 N94-18446
Choice and optimization of a high-lift system for an advanced amphibious aircraft p 1310 N94-18447

TRAILING EDGES
Lift enhancement device
[AD-D015868] p 1317 N94-17704
A design procedure for slotted flaps p 1305 N94-18418

TRAINING ANALYSIS
Aircrew life support, AFSC 122X0(1T1X1)
[AD-A268998] p 1511 N94-18394

TRAJECTORIES
Application of the A* algorithm to aircraft trajectory generation
[AD-A268728] p 1317 N94-18315
Cooperative control of multiple space manipulators
[AD-A270291] p 1445 N94-18813

TRAJECTORY ANALYSIS
Flexible integration of path-planning capabilities
[AD-A269594] p 1541 N94-18463
Constant-thrust orbit-raising transfer charts
[AD-A269088] p 1334 N94-18718
Electrokinetic transport of heterogeneous particles in suspensions
[NASA-CR-194478] p 1353 N94-19367

TRAJECTORY CONTROL
An application of parameter estimation to the stability and control of the BQM-147 unmanned aerial vehicle
[AD-A268741] p 1321 N94-18401
ControlShell: A real-time software framework
[AD-A269172] p 1523 N94-18879

TRAJECTORY MEASUREMENT
About the accuracy of an image-based navigation system during the runway approach
[DLR-MITT-93-01] p 1316 N94-18146
Missile antenna pattern coordinate system and data formats
[AD-A269153] p 1385 N94-18260

TRAJECTORY OPTIMIZATION
Application of the A* algorithm to aircraft trajectory generation
[AD-A268728] p 1317 N94-18315
Flexible integration of path-planning capabilities
[AD-A269594] p 1541 N94-18463

TRAJECTORY PLANNING
Flexible integration of path-planning capabilities
[AD-A269594] p 1541 N94-18463
Adaptive path planning: Algorithm and analysis
[DE93-008348] p 1523 N94-18926

TRANSCONDUCTANCE
Field emitter array RF amplifier development project, phase 1, option 1
[AD-A268687] p 1396 N94-18293
DC and small-signal physical models for the AlGaAs/GaAs high electron mobility transistor p 1401 N94-18370

TRANSDUCERS
Evaluation of the production-grade class 4 flextensional transducer shell
[AD-A268796] p 1340 N94-18201
Residual strain measurement on the production-grade class 4 flextensional transducer shell
[AD-A268828] p 1430 N94-18537
Transducers and method for making same
[AD-D015949] p 1408 N94-19759

TRANSFER FUNCTIONS
Fast-training algorithm for hidden-layer forward-feed neural networks
[AD-A269253] p 1540 N94-18263
Acoustic propagation modeling using MATLAB
[AD-A270905] p 1564 N94-19750

TRANSFORMATIONS (MATHEMATICS)
Groups on transformations in Finslerian spaces
[DE93-624765] p 1606 N94-17794
A noniterative improvement of Guyan reduction p 1449 N94-17833
Avoiding degenerate coframes in an affine gauge approach to quantum gravity
[DE93-013146] p 1607 N94-17892
Deformed traces and covariant quantum algebras for quantum groups GL(sub qp)(2) and GL(sub qp)(1/1)
[DE93-629862] p 1561 N94-18153
On paragrassmann differential calculus
[DE93-628594] p 1548 N94-18169
A general solution of the BV-master equation and BRST field theories
[DE93-628622] p 1561 N94-18171
EDF tests for normality in linear models after a Box-Cox transformation
[AD-A269068] p 1557 N94-18517

TRANSFORMERS
Solid-state, resistive hydrogen sensors for safety monitoring
[DE93-017769] p 1424 N94-17778

TRANSFUSION
Evaluation of dried storage of platelets for transfusion: Physiologic integrity and hemostatic functionality
[AD-A270756] p 1507 N94-19593

TRANSIENT HEATING
Liquid crystal heat transfer measurements p 1432 N94-18653
A simple description of flow instability with application to a packed bed
[DE93-017492] p 1420 N94-19345

TRANSIENT LOADS
Transient response of a viscous and anchored liquid bridge to an axial pulse
[LRT-WE-9-FB-7-1992] p 1379 N94-19492

TRANSIENT RESPONSE
Transient response of a viscous and anchored liquid bridge to an axial pulse
[LRT-WE-9-FB-7-1992] p 1379 N94-19492
Methods for description and control of dynamical systems and their application
[MPIS-17/1992] p 1553 N94-19522
Simulation of the behavior of micro-electronic capacitive pressure sensors
[LAAS-93190] p 1434 N94-19659

TRANSISTOR LOGIC
Asynchronous sequential circuit design using pass transistor iterative logic arrays p 1402 N94-18376
Pulse mode VLSI asynchronous circuits p 1402 N94-18377
Improved self arbitrated VLSI asynchronous circuits p 1402 N94-18378
VHDL simulation with access to transistor models p 1402 N94-18381

TRANSISTORS
VLSI for high-speed digital signal processing
[AD-A270406] p 1404 N94-18706
Superconducting flux flow devices, digital circuits and memories
[DE93-019072] p 1405 N94-19079

TRANSITION FLOW
Research activities at the Center for Modeling of Turbulence and Transition p 1410 N94-18546
Numerical investigation of complex, transitional, and chemically reacting flows p 1411 N94-18550
Numerical prediction of transition of the F-16 wing at supersonic speeds
[NASA-CR-194407] p 1312 N94-19433

TRANSITION METALS
Pressure induced metallization of the Mott Insulator 6(sub 2)
[DE93-018296] p 1600 N94-18969
Resonance Raman and photophysical studies of transition metal complexes in solution and entrapped in zeolites
[DE93-019892] p 1363 N94-19019
Electrocatalysts for oxygen electrodes
[DE93-040446] p 1354 N94-19653

TRANSITION POINTS
Dynamical behavior of octahedrite from the Henbury meteorite
[DE93-018834] p 1627 N94-19339

TRANSITION TEMPERATURE
Phase separation and superconductivity in La2CuO(4 + delta): Effects of oxygen diffusion
[DE93-016610] p 1594 N94-17907
Role of pressure in the study of fullerenes
[DE93-018839] p 1602 N94-19340

TRANSMISSION EFFICIENCY
Tooth form design supporting system in module design p 1428 N94-18036

TRANSMISSION ELECTRON MICROSCOPY
Characterization of vapor plume species and deposition residues resulting from pulsed laser ablation of a graphite/epoxy composite
[AD-A270101] p 1343 N94-18869
High resolution transmission electron microscopy of mesoporous MCM-41 type materials
[AD-A271271] p 1354 N94-19728

TRANSMISSION LINES
Design and test of a low jitter metal to metal contact solid dielectric switch
[DE93-016957] p 1394 N94-17755
A radial transmission line material measurement apparatus
[DE93-018508] p 1394 N94-17780

TRANSMISSION RATE (COMMUNICATIONS)
Protocol service decomposition for high-performance networking
[AD-A270613] p 1538 N94-19533

TRANSMISSIVITY
Time-resolved probing of electron thermal conduction in femtosecond-laser-pulse-produced plasmas
[DE93-016996] p 1585 N94-18129

TRANSMITTER RECEIVERS
Design of a general purpose and autonomous transmitter and receiver system for underwater acoustic experiments at sea
[AD-A269268] p 1495 N94-17822

TRANSMITTERS

Extending bandwidth of optical emitters using active matching technique
[AD-D015875] p 1394 N94-17707

Intentionally Short Range Communications (ISRC)
[AD-A268788] p 1384 N94-18216

The asymptotic theory of the reflection and transmission of a pulsed electromagnetic beam field at a planar interface separating two dispersive media
[AD-A269033] p 1385 N94-18404

TRANSONIC FLOW

Two-dimensional boundary surfaces for axi-symmetric external transonic flows
[AD-A269678] p 1312 N94-18571

Navier-Stokes, dynamics and aeroelastic computations for vortical flows, buffet and flutter applications
[NASA-CR-194520] p 1313 N94-19621

TRANSONIC SPEED

A study of the influence of a delta wing geometry on the induced drag at transonic speed (M=0.55) and high angles of attack
[FFA-TN-1992-14] p 1311 N94-17722

TRANSONIC WIND TUNNELS

Error propagation equations and tables for estimating the uncertainty in high-speed wind tunnel test results
[DE93-018685] p 1311 N94-18275

TRANSPARENCE

Time-resolved probing of electron thermal conduction in femtosecond-laser-pulse-produced plasmas
[DE93-016996] p 1585 N94-18129

TRANSPONDERS

Range safety transponder catalog
[AD-A270882] p 1323 N94-19581

Quasi-optical transponder using FET's and patch antennas
[AD-A271339] p 1407 N94-19584

TRANSPORT AIRCRAFT

Metals 2000
[DE93-016761] p 1355 N94-17752

In-flight pressure distributions and skin-friction measurements on a subsonic transport high-lift wing section p 1308 N94-18435

High-lift design for large civil aircraft
p 1310 N94-18445

High lift systems for transport aircraft with advanced airfoils p 1310 N94-18446

Procedures and design data for the formulation of aircraft configurations
[AD-A270150] p 1318 N94-18779

TRANSPORT PROPERTIES

Electron mobility in high resistivity silicon
[REPT-93-007] p 1565 N94-17933

Dependence of helium transport on plasma current and ELM frequency in H-mode discharges in D3-D
[DE93-016986] p 1585 N94-18058

Assessment and development of second order turbulence models p 1411 N94-18548

Optical and transport properties of metallic and semiconductor nanostructures
[AD-A270009] p 1598 N94-18609

Scaling laws for diamond chemical vapor deposition. 2: Atomic hydrogen transport
[AD-A269842] p 1371 N94-18740

Transport phenomena and interfacial kinetics in multiphase combustion systems
[AD-A270202] p 1349 N94-18785

LAHET calculations for accelerator neutron production
[DE93-016518] p 1570 N94-19120

ICRF direct electron heating experiments in TFTR
[DE93-017857] p 1590 N94-19273

Behavior of the particle transport coefficients near the density limit in MTX
[DE93-019108] p 1591 N94-19311

Electrokinetic transport of heterogeneous particles in suspensions
[NASA-CR-194478] p 1353 N94-19367

Radial evolution of the solar wind turbulence with application to charged particle transport
[NASA-CR-194081] p 1629 N94-19427

Global three dimensional model of tropospheric trace gases chemistry and transport
[AERONAUTICA-ACTA-A-370-199]
p 1479 N94-19518

TRANSPORT THEORY

A preliminary model for crack-tip hydrogen transport
[NPL-DMM(A)-84] p 1451 N94-17899

Ratio of specimen thickness to detection area for reliable hydrogen permeation measurement
[NPL-DMM(A)-103] p 1451 N94-17929

Chemical reactions in turbulent mixing flows
[AD-A269377] p 1410 N94-18472

Asymptotic derivation of the modified time-dependent SP2 equations and numerical calculations
[DE93-016466] p 1551 N94-19342

Improved approximations applied to the S(sub N) even-parity equation
[DE93-016467] p 1551 N94-19343

Exponential characteristic spatial quadrature for discrete ordinates neutral particle transport in two-dimensional cartesian coordinates
[AD-A270458] p 1554 N94-19671

TRANSPORTATION

Research activities, Faculty of Civil Engineering, Delft University of Technology, 1990 - 1991
[PB93-195022] p 1380 N94-19254

National Program Plan Fuel Cells in Transportation
[DE93-017557] p 1469 N94-19346

TRANSPUTERS

Comparative examinations of several field oriented position control structures for asynchronous servomotors with a multitransputer system
[ETN-93-95051] p 1406 N94-19390

TRANSVERSE LOADS

Development of engineering models for calculation of failure loads and defect states of steel concrete beams and plates
[ETN-93-95052] p 1460 N94-19648

TRANSVERSE WAVES

The electromechanical properties of tetragonal BaTiO3 and PbTiO3 single crystals
[DE93-019008] p 1603 N94-19550

TREES (MATHEMATICS)

Contribution to the analysis of tableaus based decision methods
[ETN-93-94355] p 1560 N94-18067

A parallel hashed oct-tree N-body algorithm
[DE93-012654] p 1526 N94-19205

Compensation approach for three or more dimensional random walks
[PB93-197499] p 1543 N94-19326

The complexity of the optimal spanning hypertree problem
[TR-471] p 1561 N94-19481

Heap construction in the parallel comparison tree model
[TR-409] p 1538 N94-19512

Finding the strong components in a directed graph
[PB93-187342] p 1555 N94-19708

Generalized regression trees: Function estimation via recursive partitioning and maximum likelihood
[AD-A271259] p 1560 N94-19726

TREES (PLANTS)

The carbon dioxide emissions game: Playing the net
[DE93-017670] p 1471 N94-17821

TRENDS

Trends in Information Management at Department of Energy Headquarters
[DE93-017197] p 1615 N94-18496

TRESCA FLOW

Assessment of an improved multiaxial strength theory based on creep-rupture data for Inconel 600
[DE93-015929] p 1356 N94-17791

TRIANGLES

Are bilinear quadrilaterals better than linear triangles?
[DE93-019223] p 1551 N94-19301

TRIANGULATION

Refining a triangulation of a planar straight-line graph to eliminate large angles
[DE93-016510] p 1528 N94-19344

Numerical modelling of crystal growth
[AD-A271206] p 1605 N94-19719

TRIBOLOGY

Titanium carbon-hydrogen layers on decorative surfaces p 1375 N94-18010

Physico chemical and mechanic approach of lubricating properties of graphite + additive powders
[ECL-93-02] p 1373 N94-19405

Contribution to the tribological study of magnetic-tape head contact
[ECL-92-57] p 1434 N94-19414

Microtribology of magnetic media
[AD-A271209] p 1407 N94-19722

Surface species in tribology
[AD-A270970] p 1446 N94-19754

Atomic-scale friction measurements using friction force microscopy. Part 2: Application to magnetic media
[AD-A270759] p 1447 N94-19767

Tribological studies of silicon for magnetic recording applications (Invited)
[AD-A270878] p 1447 N94-19784

TRIBUTARIES

DYNLET1 model formulation and user's guide
[AD-A269843] p 1498 N94-18723

TRIGGER CIRCUITS

Design and test of a low jitter metal to metal contact solid dielectric switch
[DE93-016957] p 1394 N94-17755

A bit serial first level calorimeter trigger for an LHC detector
[USIP-92-08] p 1574 N94-18845

Improved optical pseudospark switch
[AD-D015821] p 1580 N94-18947

A programmable systolic trigger processor for FERA-bus data
[USIP-92-04] p 1405 N94-19292

TRINITROTOLUENE

Instrumented experiments aboard the frigate WOLF. Wolf 2: Measurement results of the 5.5 kg TNT in the crew aft sleeping compartment
[PML-1992-12] p 1451 N94-17931

The minimum detection limits of RDX and TNT deposited on various surfaces as determined by ion mobility spectroscopy
[DE93-018521] p 1378 N94-19042

TRITIUM

Using the Tritium Plasma Experiment to evaluate ITER PFC safety
[DE93-016614] p 1582 N94-17713

The rise of accuracy for the multichannel scattering problem solving
[DE93-630145] p 1608 N94-18253

Finite difference program for calculating hydride bed wall temperature profiles
[DE93-019272] p 1523 N94-19005

TRITON

Working group for planetary system nomenclature
[NASA-CR-194406] p 1626 N94-18841

TROPICAL REGIONS

Spectral analysis of synoptic time scale disturbances over the tropical eastern Pacific during summer 1989, 1990 and 1991
[AD-A268821] p 1490 N94-18206

Internal instability of nonparallel flow on an equatorial beta-plane
[AD-A268927] p 1490 N94-18486

TROPICAL STORMS

Forecast model applications of retrieved three dimensional liquid water fields p 1492 N94-18606

Moist wind relationships p 1492 N94-18607

TROPOSPHERE

Kinetics programs for simulation of tropospheric photochemistry on the global scale
[DE93-019035] p 1476 N94-19104

Analysis of satellite-derived ozone and water vapor measurements
[NASA-CR-193810] p 1486 N94-19237

The split-step algorithm for microwave propagation modeling above a conducting surface
[FEL-92-A430] p 1390 N94-19447

Suitability of infrared spectroscopy for remote sensing of tropospheric trace gases
[KFK-5183] p 1479 N94-19507

Global three dimensional model of tropospheric trace gases chemistry and transport
[AERONAUTICA-ACTA-A-370-199]
p 1479 N94-19518

TRUCKS

Lightweight materials for transportation: Program plan
[DE93-017381] p 1340 N94-18087

Conceptual design of a sodium sulfur cell for US electric van batteries
[DE93-018683] p 1405 N94-19035

TRYPTOPHAN

Strategies for enhancing catecholamine-mediated neurotransmission
[NASA-CR-193807] p 1506 N94-18862

TUNABLE LASERS

Variable wide band fiber optic delay line
[AD-D015848] p 1576 N94-17716

The copper-pumped dye laser system at Lawrence Livermore National Laboratory
[DE93-014429] p 1435 N94-17723

Design of a tunable 4-MW free electron maser for heating fusion plasmas
[DE93-017172] p 1437 N94-18134

Tunable synchronously pumped intracavity two-stage optical frequency upconversion
[AD-A269105] p 1438 N94-18250

Single-transverse-mode, narrow-bandwidth pulsed tunable dye laser with hollow circular intracavity dielectric waveguide
[AD-A270022] p 1439 N94-18614

Tunable ytterbium-doped solid state laser
[AD-D015878] p 1440 N94-18747

A tunable compact high power far-infrared grating free-electron laser
[AD-A269875] p 1440 N94-18771

Tetravalent chromium (Cr(4+)) as laser-active ion for tunable solid-state lasers
[NASA-CR-194529] p 1441 N94-19369

Tetravalent chromium (Cr(4+)) as laser-active ion for tunable solid-state lasers
[NASA-CR-194528] p 1441 N94-19394

TUNGSTEN
Photorefractive tungsten bronze crystals for optical computing
[AD-A268659] p 1596 N94-18320
The effect of crystallographic orientation on the performance of single crystal tungsten subscale penetrators
[AD-A268988] p 1597 N94-18468
Recent advances in high density tungsten composite processing
[AD-A270764] p 1344 N94-19576

TUNGSTEN ALLOYS
Atlas of formability: HAYNES 188
[AD-A268355] p 1356 N94-17769
Bibliography on silicides
[AD-A270516] p 1374 N94-19532
Recent advances in high density tungsten composite processing
[AD-A270764] p 1344 N94-19576
Development and characterization of adiabatic shear prone tungsten heavy alloys
[AD-A270477] p 1366 N94-19673

TUNGSTEN OXIDES
Optical switch evaluation support
[AD-A270948] p 1581 N94-19601

TUNING
Decoherence and recoherence of beam in phase space
[DE93-014885] p 1573 N94-17784
Automatic tuning of an integral fuzzy controller
[REPT-93-006] p 1383 N94-17932
Limitations on the fidelity of 100 fs pulses produced by chirped pulse amplification
[DE93-017167] p 1396 N94-17991
A tunable CMOS constant current source
p 1401 N94-18369
The gyrotron backward-wave-oscillator experiment — final progress report
[AD-A268982] p 1403 N94-18452

TUNNEL JUNCTIONS
Synthesis and study of high-T(sub c) superconducting electronic materials
[AD-A268851] p 1402 N94-18390

TURBIDITY
Solar radiation in Saudi Arabia
[AD-A269970] p 1493 N94-18781

TURBINE BLADES
Defining the normal turbine inflow within a wind park environment
[DE93-010032] p 1489 N94-18046
SAND contact in DYNA3D
[DE93-016451] p 1340 N94-18113
The application of nondestructive techniques to the testing of a wind turbine blade
[DE93-016731] p 1447 N94-18128

TURBINES
Potassium-Rankine power conversion subsystem modeling for nuclear electric propulsion
[NASA-CR-191134] p 1468 N94-18821

TURBOCOMPRESSORS
Vane optimization for maximum efficiency using Design Of Experiments (DOX)
[AD-A270270] p 1320 N94-18907

TURBOFAN ENGINES
New techniques for contrail forecasting
[AD-A269686] p 1490 N94-18573

TURBOFANS
Vane optimization for maximum efficiency using Design Of Experiments (DOX)
[AD-A270270] p 1320 N94-18907

TURBOMACHINERY
Workshop on Computational Turbulence Modeling
[NASA-TM-109266] p 1410 N94-18545
An algebraic turbulence model for turbomachinery
p 1411 N94-18554
Simulation of three dimensional unsteady viscous flows in turbomachines
[ECL-92-15] p 1420 N94-19398

TURBULENCE
Vortex methods and statistics
[DE93-016974] p 1556 N94-17886
Defining the normal turbine inflow within a wind park environment
[DE93-010032] p 1489 N94-18046
Workshop on Computational Turbulence Modeling
[NASA-TM-109266] p 1410 N94-18545
Research activities at the Center for Modeling of Turbulence and Transition p 1410 N94-18546
Research on two equation models
p 1411 N94-18547
Assessment and development of second order turbulence models p 1411 N94-18548
Computational aero-acoustics as a branch of turbulence research p 1411 N94-18552
Turbulence modeling in aircraft icing
p 1412 N94-18555
Several examples where turbulence models fail in inlet flow field analysis p 1412 N94-18556
STREMR: Numerical model for depth-averaged incompressible flow
[AD-A269949] p 1417 N94-18672
Correlation of incoming boundary layer pitot pressure fluctuations with the unsteadiness of fin-induced shock wave turbulent boundary layer interactions
[AD-A270059] p 1417 N94-18796
Experimental investigation of turbulent Prandtl number and Reynolds analogy in transitional and post-transitional boundary layers
[AD-A270092] p 1418 N94-18867
Relation between the fluctuating wall pressure and the turbulent structure of a boundary layer on a cylinder in axial flow
[AD-A270242] p 1418 N94-18906
Numerical simulation of turbulent mixing and combustion near the inlet of a burner
[DE93-017960] p 1350 N94-18987

TURBULENCE EFFECTS
Work plan for the Marine Aerosol Properties and the Thermal Imager Performance Trial (MAPTIP)
[AD-A270026] p 1483 N94-18712
Experimental investigation of turbulent Prandtl number and Reynolds analogy in transitional and post-transitional boundary layers
[AD-A270092] p 1418 N94-18867
Numerical simulation of acoustic waves propagation in turbulent media
[ECL-92-37] p 1563 N94-19413

TURBULENCE MODELS
Navier-Stokes calculations on multi-element airfoils using a chimera-based solver p 1306 N94-18422
Workshop on Computational Turbulence Modeling
[NASA-TM-109266] p 1410 N94-18545
Research activities at the Center for Modeling of Turbulence and Transition p 1410 N94-18546
Assessment and development of second order turbulence models p 1411 N94-18548
Numerical investigation of complex, transitional, and chemically reacting flows p 1411 N94-18550
Computational aero-acoustics as a branch of turbulence research p 1411 N94-18552
A comparative study of turbulence models in predicting hypersonic inlet flows p 1314 N94-18553
An algebraic turbulence model for turbomachinery
p 1411 N94-18554
Turbulence modeling in aircraft icing
p 1412 N94-18555
Several examples where turbulence models fail in inlet flow field analysis p 1412 N94-18556
Introduction to the Modeling of Turbulence
[VKI-LS-1993-02] p 1414 N94-18578
An introduction to the modelling of turbulence
p 1414 N94-18579
An introduction to second moment closure
p 1414 N94-18580
Modelling force-field effects on turbulence
p 1414 N94-18581
A new form of second-moment closure
p 1414 N94-18582
An introduction to single-point closure methodology
p 1414 N94-18583
Second-moment closure: Present... and future?
p 1414 N94-18584
Contribution to the modelling of near-wall turbulence
p 1414 N94-18585
Two-equation models for high-Reynolds-number flow
p 1415 N94-18586
Application of second-moment closure in complex flows p 1415 N94-18590
Modelling engineering flows with Reynolds stress turbulence closure p 1415 N94-18591
Turbulence modelling challenges posed by complex flows p 1415 N94-18592
Turbulence modeling for compressible flows and implementation in Navier-Stokes solvers
p 1416 N94-18597

TURBULENT BOUNDARY LAYER
Research on two equation models
p 1411 N94-18547
Calculation of turbulent boundary layer wall pressure spectra
[AD-A269549] p 1416 N94-18642
Correlation of incoming boundary layer pitot pressure fluctuations with the unsteadiness of fin-induced shock wave turbulent boundary layer interactions
[AD-A270059] p 1417 N94-18796
Relation between the fluctuating wall pressure and the turbulent structure of a boundary layer on a cylinder in axial flow
[AD-A270242] p 1418 N94-18906
A new approach to the study of the turbulence layer
[NASA-CR-194546] p 1487 N94-19397

TURBULENT COMBUSTION
Spectral radiance measurements on a bluff body stabilized flame: Characterization of the IR signature
[PB93-195899] p 1347 N94-18081
Research activity on particle spin systems and related problems
[AD-A269456] p 1562 N94-18286
A coupled implicit solution method for turbulent spray combustion in propulsion systems p 1411 N94-18549
Numerical simulation of turbulent mixing and combustion near the inlet of a burner
[DE93-017960] p 1350 N94-18987

TURBULENT FLOW
Defining the normal turbine inflow within a wind park environment
[DE93-010032] p 1489 N94-18046
On memory effects in turbulence
[DLR-FB-93-03] p 1409 N94-18124
Research activity on particle spin systems and related problems
[AD-A269456] p 1562 N94-18286
Applications of the program UIFLOW-2D to the numerical simulation of axisymmetric flows
[AD-A268731] p 1410 N94-18326
Navier-Stokes computations of turbulent flow around high-lift configurations p 1306 N94-18420
Dispersion effects on millimeter wavelength attenuation efficiencies for a variety of fibers
[AD-A268992] p 1386 N94-18454
Chemical reactions in turbulent mixing flows
[AD-A269377] p 1410 N94-18472
Workshop on Computational Turbulence Modeling
[NASA-TM-109266] p 1410 N94-18545
Research activities at the Center for Modeling of Turbulence and Transition p 1410 N94-18546
Research on two equation models
p 1411 N94-18547
Assessment and development of second order turbulence models p 1411 N94-18548
A coupled implicit solution method for turbulent spray combustion in propulsion systems p 1411 N94-18549
Numerical investigation of complex, transitional, and chemically reacting flows p 1411 N94-18550
Analysis of supersonic flows using k-epsilon model and the RPLUS code: Progress towards high speed combustor analysis p 1411 N94-18551
A comparative study of turbulence models in predicting hypersonic inlet flows p 1314 N94-18553
An algebraic turbulence model for turbomachinery
p 1411 N94-18554
Introduction to the Modeling of Turbulence
[VKI-LS-1993-02] p 1414 N94-18578
An introduction to the modelling of turbulence
p 1414 N94-18579
An introduction to single-point closure methodology
p 1414 N94-18583
Inclusion of second-moment closures into finite-volume solvers p 1415 N94-18588
Application of second-moment closure in complex flows p 1415 N94-18590
Modelling engineering flows with Reynolds stress turbulence closure p 1415 N94-18591
Turbulence modelling challenges posed by complex flows p 1415 N94-18592
Examples of turbulence model applications
p 1415 N94-18593
Large-eddy simulation of turbulent diffusion in stably stratified shear flow p 1416 N94-18595
Numerical simulation of turbulent convective flow over wavy terrain p 1416 N94-18596
STREMR: Numerical model for depth-averaged incompressible flow
[AD-A269949] p 1417 N94-18672
Computational Fluid Dynamics (CFD) research branch technical briefs
[AD-A269698] p 1417 N94-18739
Experimental investigation of turbulent Prandtl number and Reynolds analogy in transitional and post-transitional boundary layers
[AD-A270092] p 1418 N94-18867
Relation between the fluctuating wall pressure and the turbulent structure of a boundary layer on a cylinder in axial flow
[AD-A270242] p 1418 N94-18906
Numerical simulations of turbulent buoyant flows by finite element method: Application to the study of strongly heated or cooled stratified flow
[ECL-92-28] p 1421 N94-19399
Numerical prediction of transition of the F-16 wing at supersonic speeds
[NASA-CR-194407] p 1312 N94-19433
Two-dimensional turbulent nonstationary superfluid counterflows: Numerical simulations, qualitative effects
[MPIS-23/1992] p 1422 N94-19510
Visualization of turbulent flow with particles
[REPT-93-31] p 1423 N94-19645

A review of hot-wire technique in compressible flows
[LR-724] p 1423 N94-19668

Forward scattering of a pulsed continuous wave signal through laminar and turbulent thermal plumes
[AD-A271210] p 1564 N94-19723

Collaborative research on combustion diagnostics and modeling between Rolls-Royce, Inc. and the United States Air Force Wright Laboratory
[AD-A270660] p 1354 N94-19778

TURBULENT JETS

Combustion instability phenomena of importance to liquid propellant engines
[AD-A268800] p 1348 N94-18389

TURBULENT MIXING

Chemical reactions in turbulent mixing flows
[AD-A269377] p 1410 N94-18472

Numerical investigation of complex, transitional, and chemically reacting flows p 1411 N94-18550

Numerical simulation of turbulent mixing and combustion near the inlet of a burner
[DE93-017960] p 1350 N94-18987

TURBULENT WAKES

Applications of the program UIFLOW-2D to the numerical simulation of axisymmetric flows
[AD-A268731] p 1410 N94-18326

Theoretical examination of the flow around a cylinder with a low dimensional Galerkin process
[MPIS-25/1992] p 1422 N94-19525

TURING MACHINES

Reducing extended transition systems
[MEMO-INF-93-09] p 1526 N94-19196

TURNING FLIGHT

VMC left turn curved approaches, test results — (visual meteorological conditions)
[AD-A269476] p 1316 N94-18728

TVD SCHEMES

Computational Fluid Dynamics
[VKI-LS-1993-04] p 1412 N94-18557

Multidimensional wave decompositions for the Euler equations p 1413 N94-18562

TWO DIMENSIONAL BODIES

Two-dimensional boundary surfaces for axi-symmetric external transonic flows
[AD-A269678] p 1312 N94-18571

TWO DIMENSIONAL FLOW

Calculation of multielement airfoils and wings at high lift p 1309 N94-18438

Numerical solutions for a flow with mixed convection in a vertical geometry
[DE93-011592] p 1419 N94-19058

Multigrid for a groundwater flow problem
[REPT-93-29] p 1420 N94-19144

Two-dimensional turbulent nonstationary superfluid counterflows: Numerical simulations, qualitative effects
[MPIS-23/1992] p 1422 N94-19510

TWO DIMENSIONAL MODELS

Mechanical modeling of the growth of salt structures
[DE93-015342] p 1596 N94-18243

The GARTEUR high lift research programme
p 1307 N94-18430

ADCIRC: An advanced three-dimensional circulation model for shelves, coasts, and estuaries. Report 3: Development of a tidal constituent database for the western North Atlantic and Gulf of Mexico
[AD-A268685] p 1497 N94-18455

STREMR: Numerical model for depth-averaged incompressible flow
[AD-A269949] p 1417 N94-18672

Subcritical crack growth in continuous-fiber reinforced ceramic composites
[DE93-018784] p 1343 N94-19335

The influence of the target strength model on computed perforation
[DE93-018659] p 1460 N94-19543

TWO PHASE FLOW

Study of multi-phase flow characteristics in an MHD power train
[DE93-018570] p 1586 N94-18272

A coupled implicit solution method for turbulent spray combustion in propulsion systems p 1411 N94-18549

TYPHOONS

The activities of equatorial anticyclones of the Western Pacific and the South China Sea and their effects on the tracks of typhoon movement
[AD-A269954] p 1492 N94-18675

TYROSINE

Strategies for enhancing catecholamine-mediated neurotransmission
[NASA-CR-193807] p 1506 N94-18862

U

UH-60A HELICOPTER

Aerodynamic characteristics of a helicopter rotor airfoil as affected by simulated ballistic damage
[AD-A269206] p 1311 N94-18413

ULTRAHIGH FREQUENCIES

High efficiency low cost monolithic module for SARSAT distress beacons
[NASA-CR-194234] p 1315 N94-18852

ULTRAHIGH VACUUM

Thin film studies of the proximity Josephson effect
[AD-A270129] p 1600 N94-18876

ULTRASONIC FLAW DETECTION

Nondestructive inspection of graphite-epoxy laminates for heat damage using DRIFT and LPF spectroscopies
[DE93-017228] p 1343 N94-18761

Three dimensional ultrasonic imaging: An aging aircraft nondestructive inspection tool
[DE93-018088] p 1448 N94-19252

ULTRASONIC RADIATION

Development of ultrasonic motor and application to silent alarm analog quartz watch p 1425 N94-18016

Ultrasonic process for destruction of chlorinated organic compounds in aqueous solution
[DE93-015551] p 1348 N94-18249

ULTRASONIC TESTS

Development and application of specially-focused ultrasonic transducers to location and sizing of defects in 75 mm- to 127 mm-thick austenitic stainless steel weld metals
[DE93-015975] p 1453 N94-18108

Ultrasonic technique for inspection of GPHS capsule girth weld integrity
[DE93-040072] p 1448 N94-19189

Three dimensional ultrasonic imaging: An aging aircraft nondestructive inspection tool
[DE93-018088] p 1448 N94-19252

Materials characterization of propellants using ultrasonics
[NASA-CR-193877] p 1378 N94-19494

ULTRASONIC WAVE TRANSDUCERS

Development and application of specially-focused ultrasonic transducers to location and sizing of defects in 75 mm- to 127 mm-thick austenitic stainless steel weld metals
[DE93-015975] p 1453 N94-18108

ULTRAVIOLET ABSORPTION

Detection of accreting gas toward HD 45677: A newly recognized, Herbig Be proto-planetary system
[NASA-CR-189312] p 1621 N94-19288

Ultraviolet absorption cross-sections of some carbonyl compounds and their temperature dependence
[AERONAUTICA-ACTA-A-368-199]
p 1353 N94-19456

Temperature dependence of ultraviolet absorption cross-sections of alternative hydrochlorofluorocarbons
[AERONAUTICA-ACTA-A-369-199]
p 1353 N94-19459

ULTRAVIOLET ASTRONOMY

Determination of nitrogen to carbon abundance ratios from transition layer emission lines
[NASA-CR-191921] p 1622 N94-19421

Ultraviolet observations of clusters of Wolf-Rayet stars in the SBm3 galaxy NGC 4214 and Ultraviolet and optical observations of LINER's
[NASA-CR-194307] p 1622 N94-19431

ULTRAVIOLET DETECTORS

Ultraviolet plume instrument calibration and sensor assessment
[AD-A269687] p 1337 N94-18574

UVPI imaging from the LACE satellite: The Strypi rocket plume
[AD-A270967] p 1335 N94-19787

ULTRAVIOLET LASERS

Ultra-shallow box-like profiles fabricated by pulsed UV-laser doping process
[DE93-017221] p 1437 N94-18083

ULTRAVIOLET PHOTOGRAPHY

UVPI imaging from the LACE satellite: The Strypi rocket plume
[AD-A270967] p 1335 N94-19787

ULTRAVIOLET RADIATION

Air pollution effects field research facility. 3: UV-B exposure and monitoring system
[DE93-013098] p 1470 N94-17773

Photosynthetic responses to the environment, volume 8
[AD-A269584] p 1502 N94-18305

Ultraviolet plume instrument calibration and sensor assessment
[AD-A269687] p 1337 N94-18574

Improved optical pseudospark switch
[AD-D015821] p 1580 N94-18947

Scientific studies in association with the Shuttle Solar Backscatter Ultraviolet (SSBUV) project
[NASA-CR-193404] p 1630 N94-19437

ULTRAVIOLET SPECTRA

Air pollution effects field research facility. 3: UV-B exposure and monitoring system
[DE93-013098] p 1470 N94-17773

Determination of nitrogen to carbon abundance ratios from transition layer emission lines
[NASA-CR-191921] p 1622 N94-19421

Spectrophotometry of emission-line stars in the magellanic clouds
[NASA-CR-194082] p 1628 N94-19425

Ultraviolet observations of clusters of Wolf-Rayet stars in the SBm3 galaxy NGC 4214 and Ultraviolet and optical observations of LINER's
[NASA-CR-194307] p 1622 N94-19431

ULTRAVIOLET SPECTROMETERS

Chemical dynamics in time and energy space
[DE93-018595] p 1350 N94-19097

A high resolution ultraviolet Shuttle glow spectrograph
p 1325 N94-19174

ULTRAVIOLET SPECTROSCOPY

IRAS high resolution studies and modeling of closely interacting galaxies. Galaxy collisions: Infrared observations and analysis of numerical models. UV spectroscopy of massive young stellar populations in interacting galaxies
[NASA-CR-194483] p 1627 N94-19218

Novel nonlinear laser diagnostic techniques
[AD-A270968] p 1442 N94-19788

ULYSSES MISSION

Magellan, Galileo, and Ulysses
[NASA-TM-109362] p 1628 N94-18958

UNDAMPED OSCILLATIONS

Transformation of energy and momentum due to Landau damping in space
[DE93-624921] p 1581 N94-17689

UNDERGROUND EXPLOSIONS

A comparison of single-station backazimuth estimates with regional event locations in the Central Appalachians
[AD-A269897] p 1483 N94-18690

Centrifuge modeling of explosion-induced craters in unsaturated sand
[AD-A270194] p 1417 N94-18790

UNDERWATER ACOUSTICS

Design of a general purpose and autonomous transmitter and receiver system for underwater acoustic experiments at sea
[AD-A269268] p 1495 N94-17822

Comments on computational underwater acoustics
[DE93-013789] p 1562 N94-17873

Parallel and vector adaptations of the underwater finite element parabolic equation model
[AD-A269990] p 1563 N94-18678

Estimating the oceanic sound speed environmental for long-range acoustic propagation
[AD-A270231] p 1499 N94-18903

BACKSCATTER.FOR: A program to calculate the backscattering strength of an inhomogeneous seabed
[AD-A269235] p 1499 N94-18910

Liquid sound speeds at pressure from the optical analyzer technique
[DE93-018362] p 1563 N94-19151

Comments on computational underwater acoustics
[DE93-019880] p 1563 N94-19270

Acoustic travel time perturbations due to an internal tide and internal wave field in the Barents Sea
[AD-A270879] p 1499 N94-19580

Analysis of data from Columbia Point Arena Ocean-Bottom Seismic Station (OBSS)
[AD-A271263] p 1500 N94-19727

Seismic studies of the geologic structure and physical properties of the seabed
[AD-A270895] p 1500 N94-19747

A register of underwater acoustic test facilities in the US, Canada, and the United Kingdom
[AD-A270884] p 1500 N94-19785

UNDERWATER PHOTOGRAPHY

High spatial resolution, range gated, underwater imaging method and apparatus
[AD-D015882] p 1430 N94-18530

UNDERWATER STRUCTURES

Fatigue technology assessment and strategies for fatigue avoidance in marine structures. Appendices
[AD-A269053] p 1455 N94-18716

UNDERWATER TESTS

Mutrometre: Construction for fast water proof measurements under low pressure and air suppression
p 1427 N94-18031

A register of underwater acoustic test facilities in the US, Canada, and the United Kingdom
[AD-A270884] p 1500 N94-19785

UNDERWATER VEHICLES

Damping in ferrous shape memory alloys
[AD-A271009] p 1368 N94-19775

UNIFIED FIELD THEORY
Gauge coupling unification in superstring derived standard-like models
[DE93-624801] p 1607 N94-17950
UNITED KINGDOM
Where is high-lift today? A review of past UK research programmes p 1305 N94-18416
UNITED STATES
Current information technology resource requirements of the federal government: Fiscal year 1994
p 1612 N94-17756
Terminal area forecasts, FY 1993-2005
[AD-A269855] p 1316 N94-18336
Trends in Information Management at Department of Energy Headquarters
[DE93-017197] p 1615 N94-18496
Seasonal variability of wind electric potential in the US
[DE93-018182] p 1493 N94-19051
Spatiotemporal variability of non-urban ozone concentrations over the eastern United States and its potential replication by satellite data
[PB93-191328] p 1476 N94-19065
UNIVERSE
The universe at moderate redshift
[NASA-CR-193771] p 1627 N94-19093
UNIVERSITIES
California Student Get Away Special Payload GAS-450
p 1324 N94-19164
The GAMCIT gamma ray burst detector
p 1324 N94-19168
Undergraduate origins of recent science and engineering doctorate recipients
[NSF-92-332] p 1610 N94-19389
Undergraduate course and curriculum development program and calculus and the bridge to calculus program: 1992 awards
[NSF-93-24] p 1610 N94-19446
UNIVERSITY PROGRAM
The first flight of the QUESTS GAS payload G-521
p 1325 N94-19170
UNIX (OPERATING SYSTEM)
CAVEMAN: Configuration and version management
[DE93-018066] p 1524 N94-19048
Cesar user library
[FFI-93/7021] p 1529 N94-19378
Learning about the Internet bibliography and beginner's guide
[AD-A268847] p 1532 N94-19707
UNLOADING
Efficiency and biofidelity of occupant simulations
p 1459 N94-19473
UNSTEADY AERODYNAMICS
Comparison between swept and delta canards on a model of a combat aircraft
[AD-A269561] p 1317 N94-17826
ISAC: A tool for aeroservoelastic modeling and analysis
[NASA-TM-109031] p 1321 N94-19316
UNSTEADY FLOW
Numerical investigation of complex, transitional, and chemically reacting flows p 1411 N94-18550
Computational Fluid Dynamics
[VKI-LS-1993-04] p 1412 N94-18557
Interferometric investigations of compressible dynamic stall over a transiently pitching airfoil
[NASA-TM-109380] p 1312 N94-19119
A simple description of flow instability with application to a packed bed
[DE93-017492] p 1420 N94-19345
Simulation of three dimensional unsteady viscous flows in turbomachines
[ECL-92-15] p 1420 N94-19398
Examinations of the friction behavior in nonstationary flow processes in pipes
[MITT-7] p 1423 N94-19730
UPPER SURFACE BLOWING
Design, development, and flight evaluation of the Boeing YC-14 USB powered lift aircraft p 1310 N94-18444
UPWIND SCHEMES (MATHEMATICS)
Investigation of a matrix-model for the artificial dissipation in a cell vertex finite volume scheme for solving the Navier-Stokes equations
[DLR-FB-92-33] p 1409 N94-18076
Efficient simulation of incompressible viscous flow over multi-element airfoils p 1306 N94-18421
High-lift system analysis method using unstructured meshes p 1307 N94-18426
Three dimensional network generation and Euler calculation for a wing fuselage canard configuration
[MBB-LME-211-S-PUB-511-A] p 1319 N94-19500
URANIUM ALLOYS
Magnetic properties of single-crystalline UCu3Al2
[DE93-016607] p 1593 N94-17744
Realistic theories of heavy electron and other strongly correlated materials
[DE93-010350] p 1571 N94-19204
URANIUM COMPOUNDS
Magnetic and crystallographic structures in UTX intermetallic compounds
[DE93-018291] p 1605 N94-19735
URANIUM ISOTOPES
Safety approaches for high power modular laser operation
[DE93-017213] p 1435 N94-17759
URANUS (PLANET)
Detailed analysis of low energy plasma data under the Voyager Uranus data analysis program
[NASA-CR-193668] p 1628 N94-17842
URINE
Nuclear Medicine Program
[DE93-013896] p 1504 N94-17699
USER MANUALS (COMPUTER PROGRAMS)
WBNGRID, a program for generation of C-H and C-O topology grids around wing/body/nacelle configurations: User's guide
[FFA-TN-1992-09] p 1311 N94-17721
Introductory user's guide to the ARL supercomputer facility at Aberdeen Proving Ground
[AD-A265204] p 1514 N94-17877
Format.m: A usage manual. Towards an efficient symbolic-numeric environment: Extending Mathematica's format rules
[MATHS-REPT-A-185] p 1547 N94-17969
APLAC: An object-oriented analog circuit simulator and design tool. 6.1 reference manual
[PB93-187193] p 1396 N94-18091
User's manual of Tokamak Simulation Code
[DE93-788388] p 1586 N94-18212
Teaching a computer simulation course with Ada
[AD-A267901] p 1521 N94-18308
DYNLET1 model formulation and user's guide
[AD-A269843] p 1498 N94-18723
Department of Defense Gateway Information System (DGIS) users' guide
[AD-A270140] p 1617 N94-18752
CAVEMAN: Configuration and version management

Improved HF data network simulator, software user's manual, volume 2
[AD-A270954] p 1393 N94-19753
Technology benefits model user manual, version 01.00.04
[AD-A270637] p 1620 N94-19777
USER REQUIREMENTS
The First International Conference on PCTE
[FEL-92-A134] p 1518 N94-17965
Computer/information security design approaches for Complex 21/Reconfiguration facilities
[DE93-018547] p 1535 N94-18930
Application of new technologies in the virtual library: Seminars in Turkey, Portugal, and Spain
[NASA-TM-109718] p 1611 N94-19131
UTILITIES
The value of windpower: An investigation using a qualified production cost model
[DE93-010043] p 1465 N94-17888
Directory of Energy Information Administration Models 1993
[DE93-016987] p 1616 N94-18707

V

VACUUM
On a conformal perfect fluid in the classical vacuum
[DE93-624797] p 1480 N94-17682
Impulsive moving mirror model in a Schroedinger picture with impulse effect in a Banach space
[DE93-629864] p 1561 N94-18155
Impulsive moving mirror model and the stability of Schroedinger equation with impulse effect in a Banach space
[DE93-629866] p 1548 N94-18196
RF vacuum microelectronics
[AD-A269454] p 1396 N94-18284
RF vacuum microelectronics
[AD-A270003] p 1403 N94-18667
VACUUM APPARATUS
Mechanical properties and impact damage resistance of composites fabricated by low cost, vacuum assisted, resin transfer molding
[AD-A270361] p 1342 N94-18702
VACUUM CHAMBERS
Detonation reaction steps frozen by free expansion and analyzed by mass spectrometry
[DE93-012734] p 1376 N94-17813
Process for preparing thermoplastic composites
[AD-D015864] p 1339 N94-18074
VACUUM PUMPS
A survey on technical problems in designing high-speed rotors with developing materials
[DE93-788519] p 1444 N94-18159
VACUUM SPECTROSCOPY
Chemical dynamics in time and energy space
[DE93-018595] p 1350 N94-19097
VACUUM SYSTEMS
Temperature lowering in cryogenic chemical-synthesis techniques and system
[DE93-018348] p 1562 N94-18810
VACUUM TUBE OSCILLATORS
Experimental and theoretical investigation of broadband high-power windows for millimeter waves
[KFK-5157] p 1391 N94-19617
VALENCE
Novel electrochemical materials prepared by sol-gel chemistry
[AD-A269060] p 1578 N94-18405
Characterization of diamond film nucleation and growth surface
[AD-A269400] p 1597 N94-18459
High pressure metallization of Mott Insulators: Magnetic, structural and electronic properties
[DE93-018295] p 1404 N94-18805
VALVES
Electrically controlled liquid-crystal heat valve
[AD-D015872] p 1443 N94-17705
VANADIUM ALLOYS
Effect of oxygen concentration and ordering on vanadium-oxygen alloy vibrational spectra
[DE93-627003] p 1355 N94-17692
Atlas of formability: Ti-6Al-4V ELI
[AD-A268300] p 1357 N94-17803
Bibliography on silicides
[AD-A270516] p 1374 N94-19532
VANADIUM OXIDES
Effect of oxygen concentration and ordering on vanadium-oxygen alloy vibrational spectra
[DE93-627003] p 1355 N94-17692
Nanostructured materials: Mind over matter
[DE93-017690] p 1597 N94-18480
VANES
Vane optimization for maximum efficiency using Design Of Experiments (DOX)
[AD-A270270] p 1320 N94-18907
VAPOR DEPOSITION
Gallium arsenide-based ternary compounds and multi-band-gap solar cell research
[DE93-010049] p 1467 N94-18483
Carbon/carbon composites coated with SiC by chemical vapor deposition
[AD-A269934] p 1341 N94-18544
Scaling laws for diamond chemical vapor deposition. 2: Atomic hydrogen transport
[AD-A269842] p 1371 N94-18740
Scaling laws for diamond chemical vapor deposition. Diamond surface chemistry
[AD-A269874] p 1599 N94-18745
Characterization of vapor plume species and deposition residues resulting from pulsed laser ablation of a graphite/epoxy composite
[AD-A270101] p 1343 N94-18869
Substrate temperature measurement and control during thermal plasma CVD
[DE93-040305] p 1433 N94-19135
The microstructural mechanism of electromigration failure in narrow interconnects of Al alloys
[DE93-018598] p 1365 N94-19282
Ionized-cluster beam/partially ionized beam deposition of electro-optical and nonlinear optical organic materials and device development
[AD-A270832] p 1604 N94-19596
Pressure and temperature effects on the kinetics and quality of diamond films
[AD-A270876] p 1606 N94-19771
VAPOR PHASES
Effect of phase change in a debris cloud on a backwall structure
[DE93-017506] p 1358 N94-18100
Photodissociation studies of polyatomic free radicals
[AD-A270084] p 1350 N94-18799
VAPOR PRESSURE
Studies on gel electrolyte based on nitrile-butadiene copolymers
[AD-A269450] p 1370 N94-18282
Station climatic summaries: North America. Volume 1: The contiguous United States
[AD-A269567] p 1490 N94-18303

Station climatic summaries, North America. Volume 2: Alaska, Canada and Greenland
[AD-A269793] p 1493 N94-18732

VAPORS
Studies of interactions between conducting polymer and organic vapors: Applications to chemical sensing
[DE93-015694] p 1369 N94-18233

VARIABILITY
A survey of current approaches to modelling of hydrological time-series with respect to climate variability and change
[WMO/TD-534] p 1463 N94-19435
Uncertainty versus interindividual variability
[DE93-018105] p 1559 N94-19549

VARIANCE (STATISTICS)
Polarimetric statistics of electromagnetic waves scattered by distributed targets
[PB93-195907] p 1389 N94-18951

VASODILATION
Synchronisation of cold induced vasodilation at various locations of one hand
[IZF-1992-B3] p 1504 N94-17966

VAX COMPUTERS
Heavy ion nuclear physics research
[DE93-018862] p 1565 N94-17776

VECTOR PROCESSING (COMPUTERS)
Cesar user library
[FFI-93/7021] p 1529 N94-19378
CVL: A C vector library manual. Version 2
[AD-A270614] p 1531 N94-19592

VECTOR QUANTIZATION
Color palette considerations for digital map displays
[AD-A269991] p 1462 N94-18679

VECTOR SPACES
Groups on transformations in Finslerian spaces
[DE93-624765] p 1606 N94-17794
Content based-grid node selection for vector field visualization
[REPT-93-35] p 1525 N94-19155

VECTORS (MATHEMATICS)
A modified direct preconditioner for indefinite symmetric Toeplitz systems
[DE93-015234] p 1516 N94-17800

VEGARD-KAPLAN BANDS
A high resolution ultraviolet Shuttle glow spectrograph
p 1325 N94-19174

VEGETATION
Surface fluxes important to cloud development
[DE93-016633] p 1488 N94-17715
Biophysical characterization and surface radiation balance
[NASA-CR-194659] p 1470 N94-17762

VEGETATION GROWTH
Assessing impacts of climate change on forests: The state of biological modeling
[DE93-015916] p 1471 N94-17790

VEHICLE WHEELS
Measuring methods for evaluation of dynamic tyre properties
[ETN-93-95054] p 1381 N94-19650

VELOCITY
The use of velocity spectra for stacking receiver functions with application to IRIS/IDA stations OBNINSK (OBN) and ARTI (ARU), Russia
[AD-A269087] p 1483 N94-18717

VELOCITY DISTRIBUTION
Moist wind relationships p 1492 N94-18607
Surface wave group velocity tomography of East Asia, part 1
[AD-A270100] p 1484 N94-18868
Analysis of regional bodywave phases from earthquakes in western China, part 2
[AD-A270125] p 1485 N94-18873
PEACE: A Plasma Electron and Current Experiment
p 1329 N94-19632
Numerical modelling of crystal growth
[AD-A271206] p 1605 N94-19719
Examinations of the friction behavior in nonstationary flow processes in pipes
[MITT-7] p 1423 N94-19730

VELOCITY MEASUREMENT
Portable, solid state, fiber optic coupled Doppler interferometer system for detonation and shock diagnostics
[DE93-013917] p 1423 N94-17700
A mobile remote sensing laboratory for water vapor, trace gas, aerosol, and wind speed measurements
[DE93-017158] p 1489 N94-18132
Materials characterization of propellants using ultrasonics
[NASA-CR-193877] p 1378 N94-19494
Velocity measurements in a boundary layer with a density gradient
[DE93-019627] p 1422 N94-19515
Feasibility study for a measuring system velocity projectile
[FEL-91-A368] p 1434 N94-19797

VELOCITY MODULATION
The A((2)pi(sub u))-X((2)pi(sub g)) system of Br2(+) studied by velocity modulation spectroscopy
[USIP-93-04] p 1569 N94-18847

VENTILATION
Indoor environment program
[DE93-018601] p 1513 N94-18935

VENUS (PLANET)
Working group for planetary system nomenclature
[NASA-CR-194406] p 1626 N94-18841

VENUS ATMOSPHERE
Venus lower thermosphere studies
[NASA-CR-193546] p 1629 N94-19418

VENUS SURFACE
Working group for planetary system nomenclature
[NASA-CR-194406] p 1626 N94-18841

VERTICAL DISTRIBUTION
A one dimensional numerical model, with an application to the vertical distribution of dissolved oxygen in the ocean
[DE93-018481] p 1495 N94-17779
The vertical distribution of heating in the tropical atmosphere
[AD-A270452] p 1490 N94-18514
Using computerized tomography to determine ionospheric structures
[DE93-018904] p 1485 N94-19002

VERTICAL LANDING
Single STAGE Rocket Technology (SSRT) DC-X test program environmental assessment
[AD-A265940] p 1337 N94-17879
Lift and pitching moment induced on jet STOVL aircraft hovering in ground effect
[AD-A269700] p 1317 N94-18577

VERTICAL MOTION
New techniques for contrail forecasting
[AD-A269686] p 1490 N94-18573

VERTICAL TAKEOFF
Single STAGE Rocket Technology (SSRT) DC-X test program environmental assessment
[AD-A265940] p 1337 N94-17879
Overview of STOVL aircraft propulsion research offtakes and vertical lift systems
[NASA-TM-106387] p 1321 N94-19353

VERY HIGH FREQUENCIES
VHF air/ground communications for air traffic control. Volume 1: A decision tree approach to system innovations
[AD-A268485] p 1316 N94-18384
VHF air/ground communications for air traffic control: A decision tree approach to system innovations, volume 2
[AD-A268632] p 1386 N94-18495

VERY LARGE SCALE INTEGRATION
Synthesis techniques and analysis tool for on-chip fault-tolerance
[AD-A269148] p 1521 N94-18259
The 1991 3rd NASA Symposium on VLSI Design
[NASA-CR-194589] p 1397 N94-18337
New dynamic FET logic and serial memory circuits for VLSI GaAs technology p 1397 N94-18339
Automated ILA design for synchronous sequential circuits p 1397 N94-18340
Single phase dynamic CMOS PLA using charge sharing technique p 1397 N94-18341
Cellular logic array for computation of squares
p 1398 N94-18343
Fault tolerant sequential circuits using sequence invariant state machines p 1398 N94-18344
VLSI architectures for geometrical mapping problems in high-definition image processing
p 1398 N94-18345
Low power signal processing research at Stanford
p 1393 N94-18351
Pulse-firing winner-take-all networks
p 1399 N94-18353
VLSI synthesis of digital application specific neural networks p 1399 N94-18355
Measurement selection for parametric IC fault diagnosis p 1399 N94-18356
Fuzzy control of magnetic bearings
p 1399 N94-18357
Direct kinematics solution architectures for industrial robot manipulators: Bit-serial versus parallel
p 1399 N94-18358
Simplified microprocessor design for VLSI control applications p 1400 N94-18359
A modified reconfigurable data path processor
p 1400 N94-18360
Systolic array IC for genetic computation
p 1400 N94-18361
High-performance multiprocessor architecture for a 3-D lattice gas model p 1400 N94-18362
Verification of VLSI designs p 1400 N94-18363
A new variable testability measure
p 1400 N94-18364
Controlling state explosion during automatic verification of delay-insensitive and delay-constrained VLSI systems using the POM verifier p 1400 N94-18365
Formal verification of an MMU and MMU cache
p 1400 N94-18366
Formal hardware verification of digital circuits
p 1401 N94-18367
A verification logic representation of indeterministic signal states p 1401 N94-18372
Parallel optimization algorithms and their implementation in VLSI design p 1401 N94-18374
Asynchronous sequential circuit design using pass transistor iterative logic arrays p 1402 N94-18376
Pulse mode VLSI asynchronous circuits
p 1402 N94-18377
Improved self arbitrated VLSI asynchronous circuits
p 1402 N94-18378
A special purpose silicon compiler for designing supercomputing VLSI systems p 1402 N94-18379
ARPA/CSTO rapid VLSI implementation
[AD-A269170] p 1403 N94-18695
VLSI for high-speed digital signal processing
[AD-A270406] p 1404 N94-18706
An innovative neural manufacturing concept
[DE93-017212] p 1527 N94-19238
FASTBUS simulation models in VHDL
[USIP-92-07] p 1515 N94-19295
High precision on-line standard arithmetic operators: Design and implementation
[ETN-93-95006] p 1552 N94-19487
Computation of large numbers and VLSI: Application to GCD, to stretched GCD and at euclidian distance
[ETN-93-95009] p 1552 N94-19499
Silicon compilation: From the circuit to the system
[ETN-93-95010] p 1406 N94-19501
VLSI implementation of neuromorphic learning networks
[AD-A270825] p 1407 N94-19665
Signal processing algorithms for heterogeneous architectures
[AD-A271248] p 1392 N94-19724

VERY LOW FREQUENCIES
A study of the amplification of laser and VLF waves using a simple pendulum model
[AD-A270857] p 1442 N94-19770

VESTIBULAR TESTS
Pilot studies on object motion perception during linear self-motion after long duration centrifugation of human subjects
[IZF-1993-B-3] p 1510 N94-19439

VIABILITY
Cellular and molecular level responses after radiofrequency radiation exposure, alone or in combination with x rays or chemicals
[AD-A268189] p 1501 N94-17729

VIBRATION
Vibrational and electronic properties of clusters and ultrathin films
[DE93-012291] p 1367 N94-17678
Design and test of a low jitter metal to metal contact solid dielectric switch
[DE93-016957] p 1394 N94-17755
Wavelet transform for time-frequency analysis of the vibrational signature and its application
[AD-A269928] p 1454 N94-18661
Unimolecular photodissociation dynamics of ketene (CH2CO): The singlet/triplet branching ratio and experimental observation of the vibrational level thresholds of the transition-state
[DE93-019252] p 1352 N94-19304

VIBRATION DAMPING
Generalization of optimal control theory: Linear and nonlinear structures
[PB93-188621] p 1540 N94-18125
The longitudinal free vibrations of a fixed-free two-phase elastic bar
[AD-A268768] p 1453 N94-18387
Analysis and design of robust decentralized controllers for nonlinear systems
[DE93-019224] p 1543 N94-19302

VIBRATION ISOLATORS
Modeling and new equipment definition for the vibration isolation box equipment system
[NASA-CR-193185] p 1379 N94-17763
Generalization of optimal control theory: Linear and nonlinear structures
[PB93-188621] p 1540 N94-18125

VIBRATION MODE
Predicted structural response of the lightweight-interceptor technology demonstration vehicle
[DE93-014676] p 1333 N94-17782

Comparison of the modeling solutions with the hydrogen discharge data
[DE93-015115] p 1565 N94-17797
Eigenvalue routines in NASTRAN: A comparison with the Block Lanczos method p 1450 N94-17838

VIBRATION TESTS
The 7th International Cryocooler Conference
[AD-A268451] p 1379 N94-18147

VIBRATIONAL SPECTRA
Effect of oxygen concentration and ordering on vanadium-oxygen alloy vibrational spectra
[DE93-627003] p 1355 N94-17692
An ab initio study of the weakly bonded CO-Cl2 complex
[AD-A269000] p 1349 N94-18395
Wavelet transform for time-frequency analysis of the vibrational signature and its application
[AD-A269928] p 1454 N94-18661

VIBRATIONAL STATES
Vibrational dynamics in photoinduced electron transfer
[DE93-040874] p 1567 N94-18533

VIDEO DATA
Pegasus project description
[MEMO-INF-92-75] p 1536 N94-19159
Pegasus: Operating system support for distributed multimedia systems
[MEMO-INF-92-76] p 1536 N94-19160

VIGNETTING
Considerations for the use of the modified line reversal technique for gas temperature measurement
[DE93-015752] p 1576 N94-17857

VISCOELASTICITY
A finite strain ring dynamical model for pneumatic tires
[AD-A269286] p 1444 N94-18266
Wave propagation near explosive sources
[AD-A270102] p 1418 N94-18870
Dynamical behavior of tantalum
[DE93-017877] p 1362 N94-18919

VISCOMETERS
Some problems in the rheological characterisation of composite rocket propellants
[AD-A268806] p 1376 N94-18203

VISCOMETRY
Advanced in macrostatistical hydrodynamics
[DE93-018479] p 1410 N94-18270

VISCOPLASTICITY
Inelastic deformation and damage at high temperature
[DE93-018155] p 1448 N94-17814

VISCOSITY
Investigation of a matrix-model for the artificial dissipation in a cell vertex finite volume scheme for solving the Navier-Stokes equations
[DLR-FB-92-33] p 1409 N94-18076
Some problems in the rheological characterisation of composite rocket propellants
[AD-A268806] p 1376 N94-18203
Advanced in macrostatistical hydrodynamics
[DE93-018479] p 1410 N94-18270
Measurement of viscosity, density, and gas solubility of refrigerant blends in selected synthetic lubricants
[DE93-040221] p 1350 N94-18977
Viscosity in the edge of tokamak plasmas
[DE93-018039] p 1588 N94-18968
Polymer technology publication. Series no. 14, 1993
[PB93-195964] p 1372 N94-19052
Densities and viscosities of ternary ammonia/water fluids
[DE93-015966] p 1351 N94-19116
Locally adaptive remeshing scheme for calculating fluid instabilities
[DE93-019577] p 1422 N94-19568

VISCOUS DAMPING
Time dependent identification of nonlinear structures
[ECL-92-64] p 1457 N94-19403

VISCOUS FLOW
Vortex methods and statistics
[DE93-016974] p 1556 N94-17886
Efficient simulation of incompressible viscous flow over multi-element airfoils p 1306 N94-18421
Viscous phenomena affecting high-lift systems and suggestions for future CFD development
p 1308 N94-18433
A fast computing method for the flow over high-lift wings p 1308 N94-18437
Computational techniques for high-speed flows with viscous and chemical effects p 1412 N94-18560
Simulation of three dimensional unsteady viscous flows in turbomachines
[ECL-92-15] p 1420 N94-19398
Transient response of a viscous and anchored liquid bridge to an axial pulse
[LRT-WE-9-FB-7-1992] p 1379 N94-19492
Numerical simulation of viscous flows in chemical nonequilibrium
[MBB-LME-211-S-PUB-506] p 1421 N94-19497
Theoretical examination of the flow around a cylinder with a low dimensional Galerkin process
[MPIS-25/1992] p 1422 N94-19525

VISCOUS FLUIDS
Axial response of differently excited anchored viscous liquid bridges in zero-gravity
[LRT-WE-9-FB-1-1992] p 1379 N94-19489
Free fall liquid column dynamics in a droptower
[LRT-WE-9-FB-6-1992] p 1379 N94-19491
Transient response of a viscous and anchored liquid bridge to an axial pulse
[LRT-WE-9-FB-7-1992] p 1379 N94-19492

VISIBILITY
Visibility impairment assessment: Importance of using theoretically derived optical characterizations
[DE93-017147] p 1470 N94-17749
Station climatic summaries: North America. Volume 1: The contiguous United States
[AD-A269567] p 1490 N94-18303
The urban perspectives of acid rain
[DE93-018881] p 1474 N94-18523
Station climatic summaries, North America. Volume 2: Alaska, Canada and Greenland
[AD-A269793] p 1493 N94-18732

VISIBLE SPECTRUM
Overview of research in progress at the Center of Excellence
[NASA-CR-194329] p 1618 N94-19256

VISION
Localization of figure background segregation mechanisms in primate visual cortex
[PB93-187961] p 1508 N94-18121
Effects of location cuing on redundant target processing
[IZF-1993-B-1] p 1510 N94-19443

VISUAL ACUITY
US Army aviation epidemiology data register: Prevalence of refractive error among US aircrew members
[AD-A269550] p 1505 N94-18289
Psychophysical analyses of perceptual representations
[AD-A268711] p 1508 N94-18313

VISUAL AIDS
Three-dimensional cloud visualization based on satellite imagery
[AD-A269318] p 1490 N94-18300

VISUAL DISCRIMINATION
Psychophysical analyses of perceptual representations
[AD-A268711] p 1508 N94-18313

VISUAL FIELDS
Stochastic models of attention and search
[AD-A268622] p 1508 N94-18292

VISUAL FLIGHT
VMC left turn curved approaches, test results --- (visual meteorological conditions)
[AD-A269476] p 1316 N94-18728

VISUAL OBSERVATION
Ultraviolet observations of clusters of Wolf-Rayet stars in the SBm3 galaxy NGC 4214 and Ultraviolet and optical observations of LINER's
[NASA-CR-194307] p 1622 N94-19431

VISUAL PERCEPTION
Localization of figure background segregation mechanisms in primate visual cortex
[PB93-187961] p 1508 N94-18121
Stochastic models of attention and search
[AD-A268622] p 1508 N94-18292
Visual perception of features and objects
[AD-A269879] p 1508 N94-18682
Interdisciplinary training in life science (FY 1991 ASSERT)
[AD-A269220] p 1512 N94-18886
Overview of research in progress at the Center of Excellence
[NASA-CR-194329] p 1618 N94-19256
Serial pattern complexity: Irregularity and hierarchy
[PB93-191914] p 1509 N94-19348
Stimulus-driven capture and attentional set: Selective search for color and visual abrupt onsets
[IZF-1992-B-9] p 1509 N94-19419
Pilot studies on object motion perception during linear self-motion after long duration centrifugation of human subjects
[IZF-1993-B-3] p 1510 N94-19439

VISUAL STIMULI
Localization of figure background segregation mechanisms in primate visual cortex
[PB93-187961] p 1508 N94-18121
Stimulus-driven capture and attentional set: Selective search for color and visual abrupt onsets
[IZF-1992-B-9] p 1509 N94-19419
Effects of location cuing on redundant target processing
[IZF-1993-B-1] p 1510 N94-19443

VISUAL TASKS
Stimulus-driven capture and attentional set: Selective search for color and visual abrupt onsets
[IZF-1992-B-9] p 1509 N94-19419

VITON RUBBER (TRADEMARK)
Effect of temperature and O-ring gland finish on sealing ability of Viton V747-75
[NASA-TP-3391] p 1368 N94-18075

VOICE COMMUNICATION
Template based low data rate speech encoder
[AD-A270900] p 1392 N94-19748
A real-time spoken-language system for interactive problem-solving, combining linguistic and statistical technology for improved spoken language understanding
[AD-A270901] p 1392 N94-19749
Improved HF data network simulator, volume 1
[AD-A270953] p 1393 N94-19752
Improved HF data network simulator, software user's manual, volume 2
[AD-A270954] p 1393 N94-19753
Control of integrated voice/data multi-hop radio networks via reduced-load approximations
[AD-A270661] p 1393 N94-19779

VOICE CONTROL
Feasibility study in linguistically motivated object-oriented conceptual design of information systems
[PB93-197754] p 1618 N94-19331

VOICE DATA PROCESSING
Template based low data rate speech encoder
[AD-A270900] p 1392 N94-19748
A real-time spoken-language system for interactive problem-solving, combining linguistic and statistical technology for improved spoken language understanding
[AD-A270901] p 1392 N94-19749

VOIDS
Evaluation of the production-grade class 4 flextensional transducer shell
[AD-A268796] p 1340 N94-18201
Binding of copper to nanocavity surfaces in silicon
[DE93-019073] p 1364 N94-19080
Shrinkage void formation and its effect on freeze and thaw processes of lithium and lithium-fluoride for space applications
[DE93-019303] p 1338 N94-19128

VOLCANOES
Effects of the Mount Pinatubo eruption on solar insolation: Four case studies
[DE93-018454] p 1475 N94-18817

VOLTAGE CONVERTERS (DC TO DC)
High temperature co-axial winding transformers
[NASA-CR-194580] p 1407 N94-19643

VOLTERRA EQUATIONS
Time dependent identification of nonlinear structures
[ECL-92-64] p 1457 N94-19403

VORTEX BREAKDOWN
Navier-Stokes, dynamics and aeroelastic computations for vortical flows, buffet and flutter applications
[NASA-CR-194520] p 1313 N94-19621

VORTEX GENERATORS
Several examples where turbulence models fail in inlet flow field analysis p 1412 N94-18556

VORTICES
Vortex methods and statistics
[DE93-016974] p 1556 N94-17886
Filamentary magnetohydrodynamic plasmas
[DE93-015616] p 1583 N94-17945
Wake structure and aerodynamic behavior of high lift aircraft configurations during unsteady maneuvers in ground effect p 1309 N94-18439
Close-coupled oscillating canard effects on post-stall lift enhancement
[AD-A268938] p 1321 N94-18541
Computational aero-acoustics as a branch of turbulence research p 1411 N94-18552
Several examples where turbulence models fail in inlet flow field analysis p 1412 N94-18556
Compact advection schemes on unstructured grids
p 1413 N94-18564
Lift and pitching moment induced on jet STOVL aircraft by the ground vortex
[AD-A269816] p 1318 N94-18733
Interferometric investigations of compressible dynamic stall over a transiently pitching airfoil
[NASA-TM-109380] p 1312 N94-19119
Research and training activities of the Joint Institute for Aeronautics and Acoustics
[NASA-CR-194742] p 1421 N94-19493
Three dimensional network generation and Euler calculation for a wing fuselage canard configuration
[MBB-LME-211-S-PUB-511-A] p 1319 N94-19500
Estimation of wake vortex advection and decay using meteorological sensors and aircraft data
[AD-A270763] p 1316 N94-19661

Examinations of converging cylindrically symmetric second sound propagation in He2
[MPIS-9/1992] p 1564 N94-19715

VORTICITY

Vortex methods and statistics
[DE93-016974] p 1556 N94-17886

Filamentary magnetohydrodynamic plasmas
[DE93-015616] p 1583 N94-17945

Research on two equation models
p 1411 N94-18547

Implementation of the turn function method in KIVA-F90
[DE93-018394] p 1419 N94-19027

Numerical modelling of crystal growth
[AD-A271206] p 1605 N94-19719

VORTICITY EQUATIONS

Cell vertex methods for steady inviscid flow
p 1413 N94-18563

Variational approaches to CFD: Applications to potential Euler and Navier-Stokes equations
p 1413 N94-18565

Implementation of the turn function method in KIVA-F90
[DE93-018394] p 1419 N94-19027

VOYAGER 2 SPACECRAFT

Voyager's last encounter
[NASA-TM-109361] p 1628 N94-18957

VSAT (NETWORK)

Multichannel error correction code decoder
[NASA-TM-106331] p 1333 N94-19313

W

WAFERS

Selective electrochemical wafer thinning for silicon characterization
[DE93-015083] p 1592 N94-17742

RF vacuum microelectronics
[AD-A269454] p 1396 N94-18284

Integrated circuits: Resistless processing simplifies production and cuts costs
[DE93-018069] p 1405 N94-18941

WAKES

Wake field in electron-positron plasmas
[DE93-624929] p 1584 N94-17955

Enhanced acceleration in a self-modulated-laser wakefield accelerator
[AD-A268452] p 1586 N94-18148

Wake structure and aerodynamic behavior of high lift aircraft configurations during unsteady maneuvers in ground effect p 1309 N94-18439

WALKING

Road march performance of special operations soldiers carrying various loads and load distributions
[AD-A269198] p 1512 N94-18882

WALL FLOW

Research on two equation models
p 1411 N94-18547

Contribution to the modelling of near-wall turbulence
p 1414 N94-18585

Relation between the fluctuating wall pressure and the turbulent structure of a boundary layer on a cylinder in axial flow
[AD-A270242] p 1418 N94-18906

WALL PRESSURE

Calculation of turbulent boundary layer wall pressure spectra
[AD-A269549] p 1416 N94-18642

Correlation of incoming boundary layer pitot pressure fluctuations with the unsteadiness of fin-induced shock wave turbulent boundary layer interactions
[AD-A270059] p 1417 N94-18796

Relation between the fluctuating wall pressure and the turbulent structure of a boundary layer on a cylinder in axial flow
[AD-A270242] p 1418 N94-18906

WALL TEMPERATURE

Development of a multi-point two-color pyrometer for tube and wall temperature and emissivity measurement at the CFFF
[DE93-014716] p 1429 N94-18207

Parabolized Navier-Stokes computation of surface heat transfer characteristics for supersonic and hypersonic KE projectiles
[AD-A268858] p 1410 N94-18391

Correlation of incoming boundary layer pitot pressure fluctuations with the unsteadiness of fin-induced shock wave turbulent boundary layer interactions
[AD-A270059] p 1417 N94-18796

Finite difference program for calculating hydride bed wall temperature profiles
[DE93-019272] p 1523 N94-19005

Analysis of film cooling in rocket nozzles
[NASA-CR-194674] p 1338 N94-19438

WALLS

Report of the 1991 Workshop on Particle-Material Interactions for Fusion Research
[DE93-788393] p 1573 N94-18156

Thermal analysis of coatings and substrate materials during a disruption in fusion reactors
[DE93-017688] p 1588 N94-18971

WARNING SYSTEMS

Development of ultrasonic motor and application to silent alarm analog quartz watch p 1425 N94-18016

Aircraft fire sentry. Volume 1: Summary
[AD-A270087] p 1315 N94-18822

Aircraft fire sentry. Volume 2: Appendices A, B, C and D
[AD-A270088] p 1315 N94-18823

WASHING

A comparison of wet and dry scrubbing systems for control of metals and dioxin/furan emissions from incinerators
[DE93-017446] p 1474 N94-18502

WASPALOY

Atlas of formability: Waspaloy
[AD-A268323] p 1593 N94-17805

WASTE DISPOSAL

Rapid geophysical surveyor
[DE93-016637] p 1461 N94-17851

Research activities, Faculty of Civil Engineering, Delft University of Technology, 1990 - 1991
[PB93-195022] p 1380 N94-19254

WASTE ENERGY UTILIZATION

Feasibility survey of thermoelectric conversion technology using semiconductors
[DE93-520882] p 1595 N94-18105

Molten carbonate fuel cell networks: Principles, analysis, and performance
[DE93-000281] p 1468 N94-18925

WASTE TREATMENT

Rapid geophysical surveyor
[DE93-016637] p 1461 N94-17851

Ultrasonic process for destruction of chlorinated organic compounds in aqueous solution
[DE93-015551] p 1348 N94-18249

WASTE WATER

Ultrasonic process for destruction of chlorinated organic compounds in aqueous solution
[DE93-015551] p 1348 N94-18249

WATER

Aluminum powder/water reaction ignited by electrical pulsed power
[AD-A269223] p 1376 N94-17840

Search for lunar water ice in cometary impact craters
[AD-A270130] p 1627 N94-18877

Calculation of molecular excitation rates
[NASA-CR-193782] p 1571 N94-19236

WATER CIRCULATION

Ecological and environmental impacts of construction in the coastal zone
[AD-A269196] p 1475 N94-18881

WATER CURRENTS

Overview of physical oceanographic measurements taken during the Mount Mitchell cruise to ROPME sea area
[DE93-018460] p 1497 N94-18494

Method for extracting tidal and inertial motion from ARGOS ice buoys applied to the Barents Sea during CEAREX
[PB93-190213] p 1499 N94-19063

Time domain calculations of the second-order drift force on a floating two-dimensional object in current and waves
[REPT-93-13] p 1419 N94-19087

WATER DEPTH

A laboratory model of a cooled continental shelf
[AD-A270862] p 1500 N94-19792

WATER FLOW

Preliminary design of a water cooled avionics cooling rack
[AD-A268826] p 1320 N94-18536

WATER HAMMER

Examinations of the friction behavior in nonstationary flow processes in pipes
[MITT-7] p 1423 N94-19730

WATER POLLUTION

Ecological and environmental impacts of construction in the coastal zone
[AD-A269196] p 1475 N94-18881

WATER TABLES

Application of ARC/INFO to regional scale hydrogeologic modeling
[DE93-015673] p 1461 N94-18107

Similarity solutions for gravity-dominated spreading of a lens of organic contaminant
[REPT-93-24] p 1420 N94-19139

WATER TUNNEL TESTS

The effect of fine surface riblets on the flow around an inclined axially symmetrical body
[MPIS-105/1993] p 1420 N94-19356

WATER VAPOR

Surface fluxes important to cloud development
[DE93-016633] p 1488 N94-17715

A mobile remote sensing laboratory for water vapor, trace gas, aerosol, and wind speed measurements
[DE93-017158] p 1489 N94-18132

Analysis of satellite-derived ozone and water vapor measurements
[NASA-CR-193810] p 1486 N94-19237

WATER WAVES

Design of a general purpose and autonomous transmitter and receiver system for underwater acoustic experiments at sea
[AD-A269268] p 1495 N94-17822

Wind products for use in coastal wave and surge models
[AD-A269753] p 1497 N94-18414

Full Boltzmann discrete spectral wave model, implementation and nondimensional tests
[AD-A269885] p 1498 N94-18685

Acoustic travel time perturbations due to an internal tide and internal wave field in the Barents Sea
[AD-A270879] p 1499 N94-19580

WATERPROOFING

Mutrometre: Construction for fast water proof measurements under low pressure and air suppression
p 1427 N94-18031

Development of a new concept diver's watch
p 1429 N94-18041

WATERWAYS

Overview of physical oceanographic measurements taken during the Mount Mitchell cruise to ROPME sea area
[DE93-018460] p 1497 N94-18494

DYNLET1 model formulation and user's guide
[AD-A269843] p 1498 N94-18723

Centrifuge modeling of explosion-induced craters in unsaturated sand
[AD-A270194] p 1417 N94-18780

The ecological and environmental impacts of manmade marshes
[AD-A269213] p 1475 N94-18885

WAVE AMPLIFICATION

A study of the amplification of laser and VLF waves using a simple pendulum model
[AD-A270857] p 1442 N94-19770

WAVE ATTENUATION

Seismic studies of the geologic structure and physical properties of the seabed
[AD-A270895] p 1500 N94-19747

WAVE DISPERSION

Transformation of energy and momentum due to Landau damping in space
[DE93-624921] p 1581 N94-17689

Phase-space description of plasma waves: Linear and nonlinear theory
[IRF-SR-211] p 1587 N94-18860

WAVE EQUATIONS

The phase mixing of shear Alfven waves
[DE93-624920] p 1581 N94-17688

On higher dimensional Ermakov systems: Canonical reductions
[MATHS-REPT-A-182] p 1548 N94-18140

Multidimensional wave decompositions for the Euler equations p 1413 N94-18562

Modeling of current features in Gulf Stream SAR imagery
[AD-A270734] p 1499 N94-19609

WAVE FUNCTIONS

A hydrogen atom in the curved space. Expansion over free solutions on the three-dimensional sphere
[DE93-629868] p 1549 N94-18198

WAVE GENERATION

Full Boltzmann discrete spectral wave model, implementation and nondimensional tests
[AD-A269885] p 1498 N94-18685

WAVE INTERACTION

Correlation of incoming boundary layer pitot pressure fluctuations with the unsteadiness of fin-induced shock wave turbulent boundary layer interactions
[AD-A270059] p 1417 N94-18796

A method for solving the KDV equation and some numerical experiments
[DE93-624726] p 1550 N94-19246

WAVE PACKETS

Schroedinger's hope
[AD-A270988] p 1581 N94-19772

WAVE PROPAGATION

Understanding curved detonation waves
[DE93-014581] p 1408 N94-17728

Microwave scattering from TAE modes
[DE93-018170] p 1583 N94-17809

Radio wave propagation in structured ionization for satellite and radar applications
[AD-A268457] p 1382 N94-17844
Comments on computational underwater acoustics
[DE93-013789] p 1562 N94-17873
Wake field in electron-positron plasmas
[DE93-624929] p 1584 N94-17955
Modeling shock initiation in Composition B
[DE93-016544] p 1376 N94-18095
Plasma production by helicon waves
[DE93-788396] p 1586 N94-18213
Crystal optics of high energy gamma-beams
[DE93-630228] p 1577 N94-18217
On the Michelson-Morley experiment
[DE93-629908] p 1608 N94-18268
Acoustic intensity measurements in the presence of low Mach number flow
[AD-A269995] p 1562 N94-18664
Wave propagation near explosive sources
[AD-A270102] p 1418 N94-18870
Shock propagation in crustal rock
[AD-A270148] p 1485 N94-18899
Estimating the oceanic sound speed environmental for long-range acoustic propagation
[AD-A270231] p 1499 N94-18903
Shock-loading response of advanced materials
[DE93-018344] p 1455 N94-19033
Stress pulse phenomena
[DE93-019064] p 1456 N94-19078
Transmission of acoustic waves through strongly heterogeneous, two-dimensional velocity models
[REPT-93-09] p 1563 N94-19083
Liquid sound speeds at pressure from the optical analyzer technique
[DE93-018362] p 1563 N94-19151
Comments on computational underwater acoustics
[DE93-019880] p 1563 N94-19270
Acoustic propagation modeling using MATLAB
[AD-A270905] p 1564 N94-19750

WAVE REFLECTION
Studies of enhanced radar backscatter
[AD-A269544] p 1385 N94-18288

WAVE SCATTERING
Millimeter wave reflectivity measurement system
[AD-A270008] p 1387 N94-18601
Fast iterative solution of sparsely sampled seismic inverse problems
[REPT-93-16] p 1486 N94-19081
Acoustic travel time perturbations due to an internal tide and internal wave field in the Barents Sea
[AD-A270679] p 1499 N94-19580

WAVE-PARTICLE INTERACTIONS
Implementation of the digital wave-processing experiment p 1329 N94-19628
A study of the amplification of laser and VLF waves using a simple pendulum model
[AD-A270857] p 1442 N94-19770

WAVEFORMS
The d(exp 3)delta-a(exp 3)delta and b(exp 3)phi-a(exp 3)delta systems of ZrS, Part 2: Appendix, list of wavenumbers
[USIP-92-05] p 1602 N94-19293
The wideband plasma wave investigation
p 1328 N94-19627

WAVEGUIDE WINDOWS
Experimental and theoretical investigation of broadband high-power windows for millimeter waves
[KFK-5157] p 1391 N94-19617

WAVEGUIDES
Comments on computational underwater acoustics
[DE93-013789] p 1562 N94-17873
Advances and applications of ABCI
[DE93-016971] p 1383 N94-18055
Waveguide and resonator perturbation techniques for measuring chirality and non-reciprocity of biisotropic materials
[PB93-187243] p 1384 N94-18116
Designs for a 10.6 micrometer electromagnetic wiggler Free-Electron Laser (FEL)
[AD-A269695] p 1439 N94-18576
Single-transverse-mode, narrow-bandwidth pulsed tunable dye laser with hollow circular intracavity dielectric waveguide
[AD-A270022] p 1439 N94-18614

WAVELENGTH DIVISION MULTIPLEXING
Advanced optical fiber communication systems
[AD-A269120] p 1577 N94-18254
Integrated Photonics Research: Post-deadline papers
[AD-A269232] p 1609 N94-18908

WAVELENGTHS
The A((2)pi(sub u))-X((2)pi(sub g)) system of Br2(+) studied by velocity modulation spectroscopy
[USIP-93-04] p 1569 N94-18847

The d(exp 3)delta-a(exp 3)delta and b(exp 3)phi-a(exp 3)delta systems of ZrS, Part 2: Appendix, list of wavenumbers
[USIP-92-05] p 1602 N94-19293

WAVELET ANALYSIS
Multivariate wavelet representations and approximations
[AD-A269350] p 1546 N94-17825
Wavelet transform for time-frequency analysis of the vibrational signature and its application
[AD-A269928] p 1454 N94-18661
Introduction to wavelets
[AD-A268465] p 1389 N94-18801
Application of wavelet transform techniques to spread spectrum demodulation and jamming
[AD-A267389] p 1389 N94-19009
A non-homogeneous, spatio-temporal, wavelet multiresolution analysis and its application to the analysis of motion
[AD-A270621] p 1538 N94-19534

WEAK INTERACTIONS (FIELD THEORY)
On the difference caused by CP violation in the energy spectra of pions in K(sup (+-))(yields)(pi)(+-)(pi)(+-)(pi)-+ decays
[DE93-624828] p 1564 N94-17687
Extraction of Z(prime) coupling data from Z(prime) (yields) jj at the LHC and SSC
[DE93-018576] p 1570 N94-19096

WEAPON SYSTEMS
Review of short-term, high-level exposure to metals: Antimony, barium, and cadmium
[AD-A268896] p 1505 N94-18392

WEAPONS
Temperature of aircraft cargo flame exposure during accidents involving fuel spills
[DE93-019633] p 1381 N94-19539

WEAR
Interdisciplinary research on wear of materials
[AD-A268190] p 1443 N94-17730
Effect of temperature and O-ring gland finish on sealing ability of Viton V747-75
[NASA-TP-3391] p 1368 N94-18075
Studies of dynamic contact of ceramics and alloys for advanced heat engines
[DE93-016366] p 1368 N94-18110
MHD integrated topping cycle project
[DE93-040520] p 1588 N94-18978
Contribution to the tribological study of magnetic-tape head contact
[ECL-92-57] p 1434 N94-19414
Atomic-scale friction measurements using friction force microscopy. Part 1: General principles and new measurement techniques
[AD-A270749] p 1446 N94-19678
Microtribology of magnetic media
[AD-A271209] p 1407 N94-19722
Tribological studies of silicon for magnetic recording applications (Invited)
[AD-A270878] p 1447 N94-19784

WEAR RESISTANCE
Joining and Adhesion of Advanced Inorganic Materials Symposium
[AD-A269748] p 1342 N94-18720

WEAR TESTS
Interdisciplinary research on wear of materials
[AD-A268190] p 1443 N94-17730

WEATHER
New techniques for contrail forecasting
[AD-A269686] p 1490 N94-18573
CDIAC catalog of numeric data and computer model packages
[DE93-017675] p 1475 N94-18832
Eastern Europe: A climatological study
[AD-A269200] p 1493 N94-18883

WEATHER FORECASTING
Rapid oceanic cyclogenesis studies
[AD-A269258] p 1490 N94-18265
Preparation of data assimilation and model evaluation experiment data sets
[AD-A269996] p 1498 N94-18665
Atlas of SSM/I satellite ice concentration interpolated to operational ice model domains of the Arctic for 1992
[AD-A270306] p 1499 N94-18727
Organized track system: Air ways above the ocean
p 1495 N94-19702
Calamity weather: Environmental calamities and meteorology p 1495 N94-19703

WEATHER STATIONS
Report of the Experts Meeting on Reference Climatological Stations (RCS) and National Climate Data Catalogues (NCC)
[WMO-TD-535] p 1494 N94-19312

WEIGHT (MASS)
SeaSoar and CTD sections across the Iceland-Faeroes Front and Faeroe Shetland Channel, August 1990
[IOS-295-1992] p 1496 N94-18064

WEIGHT ANALYSIS
Study on radiation-induced deterioration of grease at high temperature, 3
[DE93-788368] p 1369 N94-18220

WEIGHT MEASUREMENT
Testing of protective coatings in hydrogen
[DE93-040326] p 1375 N94-19651

WEIGHT REDUCTION
Regenerative fuel cells for High Altitude Long Endurance Solar Powered Aircraft
[DE93-016991] p 1465 N94-17853
Lightweight materials for transportation: Program plan
[DE93-017381] p 1340 N94-18087

WEIGHTING FUNCTIONS
Nontraditional windows in spectral analysis
[AD-A271336] p 1553 N94-19583

WEIGHTLESSNESS
Space research with intact organisms: The role of Space Station Freedom p 1502 N94-19213
Axial response of differently excited anchored viscous liquid bridges in zero-gravity
[LRT-WE-9-FB-1-1992] p 1379 N94-19489

WEIGHTLESSNESS SIMULATION
The brain electrical activity in different G situations
[AERONAUTICA-ACTA-A-372-199]
p 1507 N94-19523

WELD STRENGTH
Microstructural analysis of solid-state resistance welds
[DE93-017295] p 1443 N94-17761
Thermal insulation of wet shielded metal arc welds
[AD-A268697] p 1445 N94-18465

WELD TESTS
Initiation and growth of microcracks in high strength steel butt welds
[AD-A268751] p 1454 N94-18466

WELDABILITY
Technique to eliminate helium induced weld cracking in stainless steels
[DE93-015982] p 1357 N94-17859
Helium-induced weld degradation of HT-9 steel
[DE93-015981] p 1358 N94-17915

WELDED JOINTS
Microstructural analysis of solid-state resistance welds
[DE93-017295] p 1443 N94-17761
Helium-induced weld degradation of HT-9 steel
[DE93-015981] p 1358 N94-17915
Development and application of specially-focused ultrasonic transducers to location and sizing of defects in 75 mm- to 127 mm-thick austenitic stainless steel weld metals
[DE93-015975] p 1453 N94-18108
Initiation and growth of microcracks in high strength steel butt welds
[AD-A268751] p 1454 N94-18466
Environmental degradation of Alloy 600 and welded filler metal EN82 in an elevated temperature aqueous environment
[DE93-018049] p 1363 N94-18940
Modeling of single-crystal laser-weld microstructures
[DE93-017853] p 1445 N94-18976
Effects of irradiation temperature on Charpy and tensile properties of high-copper, low upper-shelf, submerged-arc welds
[DE93-017858] p 1445 N94-19047
Ultrasonic technique for inspection of GPHS capsule girth weld integrity
[DE93-040072] p 1448 N94-19189
Overlay welding irradiated stainless steel
[DE93-018767] p 1446 N94-19334

WELDING
Automatic soldering for watch circuit components
p 1428 N94-18037
Initiation and growth of microcracks in high strength steel butt welds
[AD-A268751] p 1454 N94-18466
Design considerations for remotely operated welding in space: Task definition and visual weld monitoring experiment
[AD-A268752] p 1445 N94-18634

WELDING MACHINES
Initiation and growth of microcracks in high strength steel butt welds
[AD-A268751] p 1454 N94-18466

WELLS
Penetrometer compatible, fiber-optic sensor for continuous monitoring of chlorinated hydrocarbons: Field test results
[DE93-017974] p 1352 N94-19266

WETLANDS
Ecological and environmental impacts of construction in the coastal zone
[AD-A269196] p 1475 N94-18881

WETTABILITY
Wetting behavior of alternative solder alloys
[DE93-016730] p 1359 N94-18127

Solderability perservative coatings: Electroless tin versus organic azoles
[DE93-017634] p 1370 N94-18477
Wettability and reaction kinetics in metal matrix composites
[AD-A270377] p 1342 N94-18704

WETTING
Wetting behavior of alternative solder alloys
[DE93-016730] p 1359 N94-18127

WHEAT
FT-NIR spectroscopy in quantitative and qualitative measurements of cereal products
[VTT-TIED-1331] p 1346 N94-17973

WHEELS
Friction drive position transducer
[AD-D015851] p 1424 N94-17717

WHISKER COMPOSITES
Bibliography on ceramic matrix composites and reinforcing whiskers, platelets, and fibers, 1970-1990
[AD-A270139] p 1371 N94-18750

WHITE DWARF STARS
Eclipsing cataclysmic variables. Deep eclipses in H0928+501. YY Draconis, the whirling dervish. New x ray pulsar candidates from HEAO-1
[NASA-CR-194027] p 1621 N94-18855

WHITE HOLES (ASTRONOMY)
Maximal hypersurfaces in asymptotically stationary spacetimes
[MPA-708] p 1621 N94-18141

WIGGLER MAGNETS
A superconducting short period undulator for a harmonic generation FEL experiment
[DE93-017581] p 1436 N94-17998
FEL experiment with a focusing wiggler
[DE93-788586] p 1438 N94-18160
Magnetic field measurements of a superconducting undulator for a Harmonic Generation FEL experiment at the NSLS
[DE93-017621] p 1438 N94-18504
Designs for a 10.6 micrometer electromagnetic wiggler Free-Electron Laser (FEL)
[AD-A269695] p 1439 N94-18576
Coherence and linewidth studies of a 4-nm high power FEL
[DE93-018533] p 1441 N94-19030
Compact free electron lasers for medical applications
[AD-A271272] p 1442 N94-19729

WILDLIFE
Assessing impacts of climate change on forests: The state of biological modeling
[DE93-015916] p 1471 N94-17790

WIND (METEOROLOGY)
Surface fluxes important to cloud development
[DE93-016633] p 1488 N94-17715
A review of wind field models for atmospheric transport
[DE93-016085] p 1488 N94-17895
A mobile remote sensing laboratory for water vapor, trace gas, aerosol, and wind speed measurements
[DE93-017158] p 1489 N94-18132
Spectral analysis of synoptic time scale disturbances over the tropical eastern Pacific during summer 1989, 1990 and 1991
[AD-A268821] p 1490 N94-18206
SPNDL: A concept for a small satellite Doppler lidar wind sounder p 1327 N94-19181

WIND DIRECTION
AN/APS-137 Forward Looking Airborne Radar (FLAR) evaluation Spring 1992 experiment
[AD-A268899] p 1384 N94-18228
Station climatic summaries: North America. Volume 1: The contiguous United States
[AD-A269567] p 1490 N94-18303
Station climatic summaries, North America. Volume 2: Alaska, Canada and Greenland
[AD-A269793] p 1493 N94-18732

WIND MEASUREMENT
Boundary layer heat budgets from wind profiler/RASS data: A feasibility study
[DE93-013187] p 1489 N94-18052
Some potential errors in satellite wind estimates using the geostrophic approximation and the thermal wind
[AD-A269784] p 1491 N94-18599
Impact of shorter wavelengths on optical quality for laws
[NASA-CR-193873] p 1579 N94-18858
SPNDL: A concept for a small satellite Doppler lidar wind sounder p 1327 N94-19181
Shape of wind gusts at a 130m tower at Wilhelmshaven (Germany)
[BER-BAND-B3] p 1494 N94-19503

WIND PROFILES
A review of wind field models for atmospheric transport
[DE93-016085] p 1488 N94-17895
SPNDL: A concept for a small satellite Doppler lidar wind sounder p 1327 N94-19181

WIND TUNNEL MODELS
A wind tunnel model control surface actuator interface
[AD-A268729] p 1322 N94-18324
A study of the use of half-models in high-lift wind-tunnel testing p 1308 N94-18434
High lift systems for transport aircraft with advanced airfoils p 1310 N94-18446
Survey on the application of a 3D general purpose wind-tunnel research model
[LR-713] p 1323 N94-19372

WIND TUNNEL TESTS
Aerodynamic characteristics of a helicopter rotor airfoil as affected by simulated ballistic damage
[AD-A269206] p 1311 N94-18413
Experimental investigation of flow around a multielement airfoil p 1305 N94-18417
High Reynolds number configuration development of a high-lift airfoil p 1306 N94-18424
The GARTEUR high lift research programme
p 1307 N94-18430
An experimental investigation of the optimum slat setting on a combat aircraft model p 1308 N94-18431
An experimental investigation of attachment-line transition on the slat of a combat aircraft model
p 1308 N94-18432
A study of the use of half-models in high-lift wind-tunnel testing p 1308 N94-18434
High-lift design for large civil aircraft
p 1310 N94-18445
High lift systems for transport aircraft with advanced airfoils p 1310 N94-18446
The world's largest wind tunnel
[NASA-TM-109371] p 1322 N94-18963

WIND TUNNELS
A wind tunnel model control surface actuator interface
[AD-A268729] p 1322 N94-18324
Perspective and future possibilities
p 1431 N94-18651
Acoustic intensity measurements in the presence of low Mach number flow
[AD-A269995] p 1562 N94-18664
The world's largest wind tunnel
[NASA-TM-109371] p 1322 N94-18963
Langley's 50th year
[NASA-TM-109365] p 1632 N94-18980

WIND TURBINES
The value of windpower: An investigation using a qualified production cost model
[DE93-010043] p 1465 N94-17888
FAROW: A tool for fatigue and reliability of wind turbines
[DE93-017639] p 1465 N94-18001
Defining the normal turbine inflow within a wind park environment
[DE93-010032] p 1489 N94-18046
The application of nondestructive techniques to the testing of a wind turbine blade
[DE93-016731] p 1447 N94-18128
Analysis of superconducting magnetic energy storage applications at a proposed wind farm site near Browning, Montana
[DE93-018793] p 1466 N94-18276
A rugged, low-cost advanced data acquisition system for field test projects
[DE93-010041] p 1615 N94-18334
Optimizing wind turbine control system parameters
[DE93-018861] p 1469 N94-19036

WIND VELOCITY
Feasibility of a wind-ellipse criterion in a vortex advisory system for Schiphol Airport
[NLR-TP-91384-U] p 1315 N94-17733
A technique for measuring winds in the lower atmosphere using incoherent Doppler lidar
[DE93-017163] p 1488 N94-17758
The value of windpower: An investigation using a qualified production cost model
[DE93-010043] p 1465 N94-17888
A review of wind field models for atmospheric transport
[DE93-016085] p 1488 N94-17895
A mobile remote sensing laboratory for water vapor, trace gas, aerosol, and wind speed measurements
[DE93-017158] p 1489 N94-18132
AN/APS-137 Forward Looking Airborne Radar (FLAR) evaluation Spring 1992 experiment
[AD-A268899] p 1384 N94-18228
Some potential errors in satellite wind estimates using the geostrophic approximation and the thermal wind
[AD-A269784] p 1491 N94-18599
Station climatic summaries, North America. Volume 2: Alaska, Canada and Greenland
[AD-A269793] p 1493 N94-18732
Moments of ambient Doppler spectra
[DE93-017948] p 1390 N94-19114

WIND VELOCITY MEASUREMENT
Shape of wind gusts at a 130m tower at Wilhelmshaven (Germany)
[BER-BAND-B3] p 1494 N94-19503

WINDING
High temperature co-axial winding transformers
[NASA-CR-194580] p 1407 N94-19643

WINDOWS (COMPUTER PROGRAMS)
Heavy ion nuclear physics research
[DE93-018862] p 1565 N94-17776
Why are human-computer interfaces difficult to design and implement?
[AD-A268843] p 1514 N94-18317

WINDPOWER UTILIZATION
The value of windpower: An investigation using a qualified production cost model
[DE93-010043] p 1465 N94-17888
Analysis of superconducting magnetic energy storage applications at a proposed wind farm site near Browning, Montana
[DE93-018793] p 1466 N94-18276
Optimizing wind turbine control system parameters
[DE93-018861] p 1469 N94-19036
Seasonal variability of wind electric potential in the US
[DE93-018182] p 1493 N94-19051

WINDPOWERED GENERATORS
The value of windpower: An investigation using a qualified production cost model
[DE93-010043] p 1465 N94-17888
Analysis of superconducting magnetic energy storage applications at a proposed wind farm site near Browning, Montana
[DE93-018793] p 1466 N94-18276

WINDSHIELDS
Explicit solution techniques for impact with contact constraints p 1459 N94-19470

WING FLAPS
High-Lift System Aerodynamics
[AGARD-CP-515] p 1305 N94-18415
Where is high-lift today? A review of past UK research programmes p 1305 N94-18416
Experimental investigation of flow around a multielement airfoil p 1305 N94-18417
A design procedure for slotted flaps
p 1305 N94-18418

WING OSCILLATIONS
Lift enhancement device
[AD-D015868] p 1317 N94-17704

WING SLOTS
A design procedure for slotted flaps
p 1305 N94-18418

WINGS
Lift enhancement device
[AD-D015868] p 1317 N94-17704
High-Lift System Aerodynamics
[AGARD-CP-515] p 1305 N94-18415
Prediction of the high-lift performance of multi-element aerofoils using an unstructured Navier-Stokes solver
p 1307 N94-18427
The GARTEUR high lift research programme
p 1307 N94-18430
Viscous phenomena affecting high-lift systems and suggestions for future CFD development
p 1308 N94-18433
In-flight pressure distributions and skin-friction measurements on a subsonic transport high-lift wing section p 1308 N94-18435
A fast computing method for the flow over high-lift wings p 1308 N94-18437
Calculation of multielement airfoils and wings at high lift p 1309 N94-18438
Forty years of high-lift R/D: An aircraft manufacturer's experience p 1309 N94-18441
High-lift research: Application to the design of the ATR72 flap p 1309 N94-18442
The aero-mechanical design of a novel Fowler flap mechanism p 1309 N94-18443
High lift systems for transport aircraft with advanced airfoils p 1310 N94-18446
Dynamic response analysis of composite structural members during missile launch
[AD-A270023] p 1332 N94-18760
Airflow research
[NASA-TM-109372] p 1312 N94-18964
Design for cyclic loading endurance of composites
[NASA-TM-106407] p 1457 N94-19351
Numerical investigation of the incompressible flow around a wing with a fixed spoiler
[ISL-R-109/91] p 1313 N94-19524

WIRELESS COMMUNICATION
Information technology resources assessment
[DE93-015276] p 1613 N94-17894

WOLF-RAYET STARS

Ultraviolet observations of clusters of Wolf-Rayet stars in the SBm3 galaxy NGC 4214 and Ultraviolet and optical observations of LINER's
[NASA-CR-194307] p 1622 N94-19431

WORDS (LANGUAGE)

Neural networks to classify speaker independent isolated words recorded in radio car environments
[REPT-93-013] p 1383 N94-17935

Feasibility study in linguistically motivated object-oriented conceptual design of information systems
[PB93-197754] p 1618 N94-19331

WORK HARDENING

A review of the stages of work hardening
[DE93-016456] p 1359 N94-18114

WORKING FLUIDS

Malone refrigeration
[DE93-014468] p 1379 N94-17725

WORKLOADS (PSYCHOPHYSIOLOGY)

Revision and verification of a seven-point workload estimate scale
[AD-A269194] p 1511 N94-18412

Integrated Terminal Weather System (ITWS)
[AD-A269884] p 1492 N94-18684

WORKSTATIONS

Advanced optical fiber communication systems
[AD-A269120] p 1577 N94-18254

Dialog-Based Learning (DBL) for adaptive interface agents and programming-by-demonstrations systems
[AD-A269154] p 1540 N94-18261

Cesar user library
[FFI-93/7021] p 1529 N94-19378

X

X RAY ABSORPTION

Dynamic behaviors of fragments ejected from the surface of carbon materials by laser ablation
[DE93-788620] p 1438 N94-18161

Potential dependent structural changes of underpotentially deposited copper on an iodine treated platinum surface determined in situ by surface EXAFS and its polarization dependence
[AD-A269890] p 1360 N94-18687

X RAY ANALYSIS

Analysis of HgI2 and PbI2 crystals and detectors by Particle-Induced X Ray Emission (PIXE) and Ion Backscattering Spectroscopy (IBS)
[DE93-017168] p 1594 N94-17896

Potential dependent structural changes of underpotentially deposited copper on an iodine treated platinum surface determined in situ by surface EXAFS and its polarization dependence
[AD-A269890] p 1360 N94-18687

Quantification of volume flaw sizes in ceramics by image processing of 3D x ray tomographic data sets
[DE93-018573] p 1372 N94-18932

X RAY ASTRONOMY

The Einstein Observatory catalog of IPC x ray sources. Volume 4E: Right ascension range 08h 00m to 11h 59m
[NASA-TM-108401-VOL-4E] p 1625 N94-18612

The Einstein Observatory catalog of IPC x ray sources. Volume 5E: Right ascension range 12h 00m to 15h 59m
[NASA-TM-108401-VOL-5E] p 1625 N94-18613

The Einstein Observatory catalog of IPC x ray sources. Volume 6E: Right ascension range 16h 00m to 19h 59m
[NASA-TM-108401-VOL-6E] p 1625 N94-18615

The Einstein Observatory catalog of IPC x ray sources. Volume 7E: Right ascension range 20h 00m to 23h 59m
[NASA-TM-108401-VOL-7E] p 1625 N94-18618

The Einstein Observatory catalog of IPC x ray sources. Volume 1E: Documentation
[NASA-TM-108401-VOL-1E] p 1626 N94-18619

The Einstein Observatory catalog of IPC x ray sources. Volume 2E: Right ascension range 00h 00m to 03h 59m
[NASA-TM-108401-VOL-2E] p 1626 N94-18620

The Einstein Observatory catalog of IPC x ray sources. Volume 3E: Right ascension range 04h 00m to 07h 59m
[NASA-TM-108401-VOL-3E] p 1626 N94-18621

Related investigations on the physics of high energy emission from active galactic nuclei
[NASA-CR-193615] p 1630 N94-18836

Telescope for x ray and gamma ray studies in astrophysics p 1324 N94-19166

Rosat and optical observations of two X-ray transients: MX 0836-42 and GS 0834-430
[MPE-PREPRINT-237] p 1622 N94-19451

IRAS galaxies observed in the ROSAT survey: Starbursts or central activity p 1623 N94-19528

Particle induced background by Roentgen satellites
[MPE-242] p 1631 N94-19714

Stellar coronae at the end of the main sequence: A Rosat survey of the late M dwarfs
[NASA-CR-194700] p 1628 N94-19794

X RAY BINARIES

Pulse-timing studies of x ray pulsars
[NASA-CR-193778] p 1621 N94-18611

X RAY DENSITY MEASUREMENT

Development and application of local 3-D x ray CT reconstruction software for imaging critical regions in large ceramic turbine rotors
[DE93-015159] p 1369 N94-18166

X RAY DIFFRACTION

High pressure metallization of Mott Insulators: Magnetic, structural and electronic properties
[DE93-018295] p 1404 N94-18805

Neutron-induced collision cascade mixing in Nb/V superlattices
[DE93-018575] p 1600 N94-18933

Refinement of unit cell parameters by least-squares: Comments on an old technique and the development of a new computer program
[AD-A270610] p 1531 N94-19590

Cooperative formation of inorganic-organic interfaces in the synthesis of silicate mesostructures
[AD-A271196] p 1375 N94-19742

X RAY FLUORESCENCE

In vivo animal models of body composition in aging
[DE93-012527] p 1501 N94-17889

X ray studies of microstructures in semiconductor and superconducting materials
[DE93-040690] p 1601 N94-19056

X RAY IMAGERY

Development and application of local 3-D x ray CT reconstruction software for imaging critical regions in large ceramic turbine rotors
[DE93-015159] p 1369 N94-18166

X RAY LASERS

Analysis of neon soft x ray spectra from short-pulse laser-produced plasmas
[DE93-014420] p 1582 N94-17708

X-ray laser oscillator-amplifier experiments
[DE93-017165] p 1436 N94-17868

Production of dense vapor targets for laser-plasma interaction studies with intense, ultra-short pulses
[DE93-017175] p 1584 N94-17993

Development of short pulse soft x ray lasers
[DE93-017150] p 1437 N94-18131

Optical design for photonics. Organization of the 1993 Photonics Science Topical Meetings. Technical digest series, volume 9
[AD-A269027] p 1578 N94-18396

Development of robust multilayer optics for use in high-peak power radiation environments
[DE93-018557] p 1580 N94-18931

Legacy of the X Ray Laser Program
[DE93-019550] p 1442 N94-19554

X RAY SCATTERING

Simulation of emittance dilution in electron storage ring from Compton backscattering
[DE93-017611] p 1386 N94-18503

X RAY SOURCES

Absorption and x ray measurements from ultra-intense laser-plasma interactions
[DE93-016538] p 1585 N94-18115

Pulse-timing studies of x ray pulsars
[NASA-CR-193778] p 1621 N94-18611

The Einstein Observatory catalog of IPC x ray sources. Volume 4E: Right ascension range 08h 00m to 11h 59m
[NASA-TM-108401-VOL-4E] p 1625 N94-18612

The Einstein Observatory catalog of IPC x ray sources. Volume 5E: Right ascension range 12h 00m to 15h 59m
[NASA-TM-108401-VOL-5E] p 1625 N94-18613

The Einstein Observatory catalog of IPC x ray sources. Volume 6E: Right ascension range 16h 00m to 19h 59m
[NASA-TM-108401-VOL-6E] p 1625 N94-18615

The Einstein Observatory catalog of IPC x ray sources. Volume 7E: Right ascension range 20h 00m to 23h 59m
[NASA-TM-108401-VOL-7E] p 1625 N94-18618

The Einstein Observatory catalog of IPC x ray sources. Volume 1E: Documentation
[NASA-TM-108401-VOL-1E] p 1626 N94-18619

The Einstein Observatory catalog of IPC x ray sources. Volume 2E: Right ascension range 00h 00m to 03h 59m
[NASA-TM-108401-VOL-2E] p 1626 N94-18620

The Einstein Observatory catalog of IPC x ray sources. Volume 3E: Right ascension range 04h 00m to 07h 59m
[NASA-TM-108401-VOL-3E] p 1626 N94-18621

Eclipsing cataclysmic variables. Deep eclipses in H0928+501. YY Draconis, the whirling dervish. New x ray pulsar candidates from HEAO-1
[NASA-CR-194027] p 1621 N94-18855

Rosat and optical observations of two X-ray transients: MX 0836-42 and GS 0834-430
[MPE-PREPRINT-237] p 1622 N94-19451

IRAS galaxies observed in the ROSAT survey: Starbursts or central activity p 1623 N94-19528

X RAY SPECTRA

Analysis of neon soft x ray spectra from short-pulse laser-produced plasmas
[DE93-014420] p 1582 N94-17708

X-ray laser oscillator-amplifier experiments
[DE93-017165] p 1436 N94-17868

Dynamic behaviors of fragments ejected from the surface of carbon materials by laser ablation
[DE93-788620] p 1438 N94-18161

Search for resonant electron transfer and double excitation in Kr(sup 34+) + H2 collisions
[DE93-018776] p 1569 N94-18999

X RAY SPECTROSCOPY

Guidelines for the expression of uncertainties in surface chemical analysis by Auger Electron Spectroscopy (AES) and X ray Photoelectron Spectroscopy (XPS)
[NPL-DMM(A)-99] p 1346 N94-17900

X ray absorption spectroscopic studies of the active sites of nickel- and copper-containing metalloproteins
[DE93-017142] p 1347 N94-18059

Absorption and x ray measurements from ultra-intense laser-plasma interactions
[DE93-016538] p 1585 N94-18115

X ray studies of microstructures in semiconductor and superconducting materials
[DE93-040690] p 1601 N94-19056

Legacy of the X Ray Laser Program
[DE93-019550] p 1442 N94-19554

X RAY TELESCOPES

Telescope for x ray and gamma ray studies in astrophysics p 1324 N94-19166

X RAYS

Conical geometry for sagittal focusing as applied to x rays from synchrotrons
[DE93-017238] p 1593 N94-17760

PVDF measurement of soft x ray induced shock and filter debris impulse
[DE93-017633] p 1382 N94-17806

Characteristics and pulsed radiation response of non-ideal quartz shock stress gauges
[DE93-017628] p 1424 N94-17999

Tomographic mathematical ideas applied to radar detection
[AD-A268789] p 1384 N94-18186

Soft X Ray Projection Lithography. Organization of the 1993 photonics science optical meetings
[AD-A269159] p 1579 N94-18693

Development of robust multilayer optics for use in high-peak power radiation environments
[DE93-018557] p 1580 N94-18931

Search for resonant electron transfer and double excitation in Kr(sup 34+) + H2 collisions
[DE93-018776] p 1569 N94-18999

New room temperature high resolution solid-state detector (CdZnTe) for hard x rays and gamma rays
p 1324 N94-19165

X-29 AIRCRAFT

High lift and the forward swept wing
p 1308 N94-18436

X-29: Research aircraft
[NASA-TM-109370] p 1318 N94-18962

XENON

Dynamics of short-pulse excitation, ionization and harmonic conversion
[DE93-017220] p 1436 N94-17996

Y

YAG LASERS

Space Applications Industrial Laser System (SAILS)
p 1325 N94-19173

YAGI ANTENNAS

Modeling a Yagi array antenna for VHF radar use
[AD-A268973] p 1387 N94-18525

YBCO SUPERCONDUCTORS

Infrared detection with high-(Tc bolometers and response of Nb tunnel junctions to picosecond voltage pulses
[DE93-016963] p 1595 N94-17989

Mechanical properties of fiber-reinforced YBa2Cu3O(x) and Bi2Sr2CaCu2O(x) bars
[DE93-017689] p 1454 N94-18479

Photoemission studies of Zn, Co, and Gd substituted YBa2Cu3O(7-delta)
[DE93-017403] p 1597 N94-18498

High performance YBCO films
[AD-A269090] p 1599 N94-18719

Imaging and blackbody emission spectra of hot particulates generated during laser ablation
[DE93-015818] p 1439 N94-18724

High energy resolution ARPES measurements of the normal and superconducting states of Bi2Sr2CaCu2O(8 + delta)
[DE93-018294] p 1599 N94-18804

Superconductivity and magnetism in niobium doped YBa2Cu3O7 related high-(Tc) ceramics
[DE93-018086] p 1601 N94-19049
YC-14 AIRCRAFT
Design, development, and flight evaluation of the Boeing YC-14 USB powered lift aircraft p 1310 N94-18444
YIELD STRENGTH
The Hall-Petch relationship and mechanisms of fracture in B2 compounds
[DE93-018887] p 1359 N94-18182
Dynamical behavior of tantalum
[DE93-017877] p 1362 N94-18919
Influence of peak pressure and temperature on the shock-loading response of tantalum
[DE93-018561] p 1457 N94-19279
Contribution to the identification of nonlinear behavior laws in material mechanics
[ECL-92-36] p 1458 N94-19411
YTTERBIUM
Tunable ytterbium-doped solid state laser
[AD-D015878] p 1440 N94-18747
YTTRIUM ALLOYS
Realistic theories of heavy electron and other strongly correlated materials
[DE93-010350] p 1571 N94-19204
YTTRIUM OXIDES
Nanostructured materials: Mind over matter
[DE93-017690] p 1597 N94-18480
YTTRIUM-IRON GARNET
Nonlinear dynamics and instabilities in ferromagnetic resonance experiments: Examinations of spheres from yttrium iron garnet in coincidence area of the first Suhl instabilities
[ETN-93-95072] p 1604 N94-19612

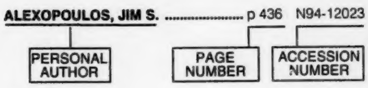
Z

ZEOLITES
Conversion of ethane and of propane to higher olefin hydrocarbons
[DE93-015282] p 1347 N94-18194
Resonance Raman and photophysical studies of transition metal complexes in solution and entrapped in zeolites
[DE93-019892] p 1363 N94-19019
ZINC
Photoemission studies of Zn, Co, and Gd substituted YBa2Cu3O(7-delta)
[DE93-017403] p 1597 N94-18498
ZINC ALLOYS
Gold-copper-zinc coatings as an alternative to gold-copper-cadmium p 1367 N94-18012
ZINC OXIDES
Nanostructured materials: Mind over matter
[DE93-017690] p 1597 N94-18480
Pressureless densification of ceramic matrix composites
[AD-A269137] p 1371 N94-18691
ZINC SULFIDES
Optical switch evaluation support
[AD-A270948] p 1581 N94-19601
ZINC TELLURIDES
New room temperature high resolution solid-state detector (CdZnTe) for hard x rays and gamma rays
p 1324 N94-19165
ZIRCONIUM
Omega phase formation in shock-loaded zirconium
[DE93-018343] p 1595 N94-18162
Total hemispherical emittance of Niobium-1 percent zirconium fuel cladding for the SP-100 space reactor
[AD-A270456] p 1576 N94-19589
ZIRCONIUM COMPOUNDS
The d(exp 3)delta-a(exp 3)delta and b(exp 3)phi-a(exp 3)delta systems of ZrS, Part 2: Appendix, list of wavenumbers
[USIP-92-05] p 1602 N94-19293
Advanced civil engineering materials based on inorganic polymers
[AD-A270837] p 1374 N94-19600
ZIRCONIUM OXIDES
Pressureless densification of ceramic matrix composites
[AD-A269137] p 1371 N94-18691
Optical properties of oxide coatings prepared by ion-assisted deposition
[AD-A270024] p 1599 N94-18711
ZOOM LENSES
Description of an infrared zoomcollimator
[FEL-93-A034] p 1580 N94-19424

PERSONAL AUTHOR INDEX

SCIENTIFIC AND TECHNICAL AEROSPACE REPORTS VOLUME 32 NUMBER 4

Typical Personal Author Index Listing



Listings in this index are arranged alphabetically by personal author. The page number helps you locate the citation in the abstract section. The accession number denotes the number by which the citation is identified.

A

AARONS, JULES p 1486 N94-19008
ABARE, A. C. p 1582 N94-17708
ABBOTT, JAMES R. p 1410 N94-18270
ABDALLA, M. C. B. p 1545 N94-17686
ABDULEZER, LOREN p 1325 N94-19171
ABE, TETSUYA p 1444 N94-18159
ABERLE, A. p 1468 N94-19015
ABGRALL, R. p 1412 N94-18561
ABGRALL, REMI p 1311 N94-17957
ABLES, E. p 1572 N94-19545
ABRAHAM, KUZHIKALAIL M. p 1394 N94-17718
ABRASHOFF, JAMES D. p 1564 N94-17738
ABRUNA, H. D. p 1360 N94-18687
ACETI, R. p 1325 N94-19172
ACEVEDO, D. p 1360 N94-18687
ACUNA, M. H. p 1329 N94-19629
ADAIR, R. K. p 1570 N94-19029
ADAMCZAK, DAVID W. p 1318 N94-18779
ADAMS, J. p 1375 N94-19651
ADAMS, J. R. p 1399 N94-18352
ADAMS, T. F. p 1460 N94-19603
ADAMS, WILLIAM M., JR. p 1321 N94-19316
ADAN, I. J. B. F. p 1543 N94-19326
AEBY, PIERRE-ANDRE p 1367 N94-18012
AFANASEV, G. N. p 1566 N94-18152
AGARWAL, V. K. p 1397 N94-18311
AGGSON, T. p 1328 N94-19624
AGRAWAL, SHREEKANT p 1306 N94-18422
AHLSTROM, D. J. p 1399 N94-18357
AHMAD, S. M. W. p 1383 N94-17952
AHRENS, E. T. p 1594 N94-17907
AHRENS, KLEMENS p 1406 N94-19387
AHRENS, THOMAS J. p 1485 N94-18899
AINSWORTH, R. W. p 1431 N94-18644
p 1431 N94-18645

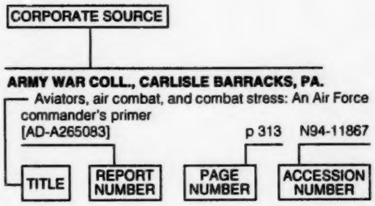
CORPORATE SOURCE INDEX

SCIENTIFIC AND TECHNICAL AEROSPACE REPORTS VOLUME 32 NUMBER 4

Typical Corporate Source Index Listing



CORPORATE SOURCE
ARMY WAR COLL., CARLISLE BARRACKS, PA.
Aviators, air combat, and combat stress: An Air Force commander's primer
[AD-A265083] p 313 N94-11867
TITLE
REPORT NUMBER
PAGE NUMBER
ACCESSION NUMBER

Listings in this index are arranged alphabetically by corporate source. The title of the document provides the user with a brief description of the subject matter. The report number helps to indicate the type of document cited (e.g., NASA report, translation, NASA contractor report). The accession number denotes the number by which the citation is identified. The page number helps you locate the citation in the abstract section. The titles are arranged under each corporate source in ascending accession number order.

A

ACADEMY OF SCIENCES OF THE ARMENIAN SSR, ERIVAN.
Generalized closures of graphs p 1555 N94-19692
Two problems related to results of Chvatal-Erdoes
p 1555 N94-19693

ADMIRALTY RESEARCH ESTABLISHMENT, GOSPORT (ENGLAND).
Low frequency acoustics of laminated composite axisymmetric structures
[DRA-TM(USGR)-93302] p 1344 N94-19391

ADVISORY GROUP FOR AEROSPACE RESEARCH AND DEVELOPMENT, NEUILLY-SUR-SEINE (FRANCE).
Non Linear Dynamics and Chaos
[AGARD-LS-191] p 1607 N94-18236
High-Lift System Aerodynamics
[AGARD-CP-515] p 1305 N94-18415

AERONAUTICAL RESEARCH INST. OF SWEDEN, STOCKHOLM.
WBNGRID, a program for generation of C-H and C-O topology grids around wing/body/nacelle configurations: User's guide
[FFA-TN-1992-09] p 1311 N94-17721
A study of the influence of a delta wing geometry on the induced drag at transonic speed (M=0.55) and high angles of attack
[FFA-TN-1992-14] p 1311 N94-17722
CFD investigations of the hypersonic double delta wing greta: Sanger project no. 3.2
[FFA-TN-1992-42] p 1311 N94-17919
Spectrum fatigue testing of T-shaped tension clips
[FFA-TN-1992-22] p 1452 N94-17970
Impact response of composite laminates: A guide to closed form solutions
[FFA-TN-1992-33] p 1339 N94-17971
A review of aeronautical fatigue investigations in Sweden during the period May 1991 to April 1993
[FFA-TN-1993-22] p 1457 N94-19358

High-lift system analysis method using unstructured meshes p 1307 N94-18426

NATIONAL CENTER FOR MFG. SCIENCES, ANN ARBOR, MI.

Development of alternatives to lead-bearing solders
[DE93-016509] p 1357 N94-17862

NATIONAL DEFENCE RESEARCH ESTABLISHMENT, UMEA (SWEDEN).

Condensed gases under winter conditions: A study for the rescue services
[FOA-C-40305-4.5] p 1473 N94-18139

NATIONAL INST. FOR FUSION SCIENCE, NAGOYA (JAPAN).

Electron stripping cross sections for light impurity ions in colliding with atomic hydrogens relevant to fusion research
[DE93-788476] p 1566 N94-18158

NATIONAL INST. OF STANDARDS AND TECHNOLOGY, GAITHERSBURG, MD.

Pulse radiolytic studies of electron transfer processes and applications to solar photochemistry
[DE93-018715] p 1464 N94-17781

Equipment for investigation of cryogenic compaction of nanosize silicon nitride powders
[DE93-018740] p 1340 N94-18180

Initial Graphics Exchange Specification (IGES)
[AD-A270049] p 1522 N94-18794

Thermophysical properties
[DE93-040219] p 1351 N94-19134

NATIONAL LAB. FOR HIGH ENERGY PHYSICS, TSUKUBA (JAPAN).

Proceedings of the 3rd Workshop on Balloon-Borne Experiments with Superconducting Magnet Spectrometers
[DE93-788362] p 1630 N94-18219

NATIONAL OCEANIC AND ATMOSPHERIC ADMINISTRATION, BOULDER, CO.

Analysis of meteorological conditions during AGASP-4: 30 March - 23 April 1992
[PB93-190205] p 1489 N94-18126

NATIONAL OCEANIC AND ATMOSPHERIC ADMINISTRATION, RESEARCH TRIANGLE PARK, NC.

Spatiotemporal variability of non-urban ozone concentrations over the eastern United States and its potential replication by satellite data
[PB93-191328] p 1476 N94-19065

NATIONAL OCEANIC AND ATMOSPHERIC ADMINISTRATION, SEATTLE, WA.

Method for extracting tidal and inertial motion from ARGOS ice buoys applied to the Barents Sea during CEAREX
[PB93-190213] p 1499 N94-19063

NATIONAL PHYSICAL LAB., TEDDINGTON (ENGLAND).

A preliminary model for crack-tip hydrogen transport
[NPL-DMM(A)-84] p 1451 N94-17899

Guidelines for the expression of uncertainties in surface chemical analysis by Auger Electron Spectroscopy (AES) and X ray Photoelectron Spectroscopy (XPS)
[NPL-DMM(A)-99] p 1346 N94-17900

PostScript: A study in conformity
[NPL-DITC-214/93] p 1517 N94-17917

The stability and utility of the ESPRIT project, MUSiC, performance-based indicators of usability and tools: An evaluation of the usability of the NPL iSDX telephone system
[NPL-DITC-213/92] p 1613 N94-17925

Ratio of specimen thickness to detection area for reliable hydrogen permeation measurement
[NPL-DMM(A)-103] p 1451 N94-17929

Strategies for testing form assessment software
[NPL-DITC-211/92] p 1518 N94-17930

NATIONAL SCIENCE FOUNDATION, WASHINGTON, DC.

Undergraduate origins of recent science and engineering doctorate recipients
[NSF-92-332] p 1610 N94-19389

Undergraduate course and curriculum development program and calculus and the bridge to calculus program: 1992 awards
[NSF-93-24] p 1610 N94-19446

A foundation for the 21st Century: A progressive framework for the National Science Foundation. Report of the National Science Board Commission on the future of the National Science Foundation
[NSB-92-196] p 1611 N94-19618

Program descriptions
[NSF-92-123] p 1531 N94-19619

Guide to programs, fiscal year 1993
[NSF-92-78] p 1633 N94-19620

NATIONAL TRANSPORTATION SAFETY BOARD, WASHINGTON, DC.

Aircraft accident report: Midair collision, Mitsubishi MU-2B-60, N74FB, and PIPER PA-32-301, N82419, Greenwood Municipal Airport, Greenwood, Indiana, 11 September 1992
[PB93-910406] p 1315 N94-19352

NAVAL ACADEMY, ANNAPOLIS, MD.

Delamination in composite materials as observed using an optical fiber strain gage
[AD-A270803] p 1344 N94-19662

Essential shift: Scientific revolution in the 20th century
[AD-A270810] p 1610 N94-19663

A stereoscopic vision system with applications to automated docking and tracking
[AD-A270754] p 1333 N94-19765

Applications of neural networks in fault detection of rotating machinery
[AD-A270755] p 1448 N94-19766

NAVAL AIR WARFARE CENTER, CHINA LAKE, CA.

Refinement of unit cell parameters by least-squares: Comments on an old technique and the development of a new computer program
[AD-A270610] p 1531 N94-19590

NAVAL AIR WARFARE CENTER, INDIANAPOLIS, IN.

Embedded Computer Performance Measurement (ECPM). Advanced avionics subsystems and technology multiprocessor ECPM software documentation
[AD-A269921] p 1320 N94-18658

NAVAL AIR WARFARE CENTER, WARMINSTER, PA.

Reference model for project support environments, version 1.0
[AD-A269110] p 1520 N94-18251

NAVAL BIODYNAMICS LAB., NEW ORLEANS, LA.

Bibliography of scientific publications of the Naval Biodynamics Laboratory, 1980 - 1992
[AD-A268886] p 1505 N94-18226

NAVAL COMMAND, CONTROL AND OCEAN SURVEILLANCE CENTER, SAN DIEGO, CA.

Evaluation of the production-grade class 4 flextensional transducer shell
[AD-A268796] p 1340 N94-18201

Intentionally Short Range Communications (ISRC)
[AD-A268788] p 1384 N94-18216

Survey of collision avoidance and ranging sensors for mobile robots, revision 1
[AD-A269846] p 1541 N94-18474

Residual strain measurement on the production-grade class 4 flextensional transducer shell
[AD-A268828] p 1430 N94-18537

Work plan for the Marine Aerosol Properties and the Thermal Imager Performance Trial (MAPTIP)
[AD-A270026] p 1483 N94-18712

Coupled neural-dendritic processes: Cooperative stochastic effects and the analysis of spike trains
[AD-A270041] p 1506 N94-18793

Marine-modified LOWTRAN: The contribution of sun glint
[AD-A269547] p 1500 N94-19762

NAVAL HEALTH RESEARCH CENTER, SAN DIEGO, CA.

A comparison of polygraphic and actigraphic monitoring of sleep using a 5-channel programmable-sensitivity actigraph
[AD-A270731] p 1507 N94-19608

NAVAL MEDICAL RESEARCH INST., BETHESDA, MD.

Cerebral ischemia and reperfusion injury: A brief review
[AD-A270480] p 1507 N94-19675

NAVAL POSTGRADUATE SCHOOL, MONTEREY, CA.

The organizational preparation of existing relational databases for the integration of expert systems
[AD-A268823] p 1614 N94-18191

Adaptations to micropep and rocket to allow performance evaluation of multiple grain and/or airbreathing motors
[AD-A268798] p 1337 N94-18202
Spectral analysis of synoptic time scale disturbances over the tropical eastern Pacific during summer 1989, 1990 and 1991
[AD-A268821] p 1490 N94-18206
Calibration of a high frequency monostatic acoustic echosounder
[AD-A268901] p 1481 N94-18229
Three-dimensional cloud visualization based on satellite imagery
[AD-A269318] p 1490 N94-18300
An application of parameter estimation to the stability and control of the BQM-147 unmanned aerial vehicle
[AD-A268741] p 1321 N94-18401
A computational and experimental investigation of incompressible oscillatory airfoil flow and flutter problems
[AD-A268748] p 1311 N94-18402
Developmental testing of a prototype all-reflection Michelson interferometer
[AD-A269064] p 1430 N94-18406
Specification and analysis of a high speed transport protocol
[AD-A268941] p 1386 N94-18449
Parallelization of the Air Force Space Command (AFSPACECOM) satellite motion models
[AD-A269327] p 1334 N94-18470
Cognitive limitations in coordination in hierarchical information processing structures
[AD-A268825] p 1616 N94-18535
Preliminary design of a water cooled avionics cooling rack
[AD-A268826] p 1320 N94-18536
Close-coupled oscillating canard effects on post-stall lift enhancement
[AD-A268938] p 1321 N94-18541
Two-dimensional boundary surfaces for axi-symmetric external transonic flows
[AD-A269678] p 1312 N94-18571
Wavelet transform for time-frequency analysis of the vibrational signature and its application
[AD-A269928] p 1454 N94-18661
Resolution in radar mapping
[AD-A269730] p 1462 N94-18753
Implementation of electronic data interchange in the department of defense: Lessons learned from private industry
[AD-A269532] p 1534 N94-18768
Computer-Aided Prototyping System (CAPS) within the software acquisition process. A case study
[AD-A268705] p 1522 N94-18786
An investigation of low Marangoni number fluid flow in a cold corner
[AD-A271317] p 1422 N94-19569
Nontraditional windows in spectral analysis
[AD-A271336] p 1553 N94-19583
Acoustic propagation modeling using MATLAB
[AD-A270905] p 1564 N94-19750
A study of the amplification of laser and VLF waves using a simple pendulum model
[AD-A270857] p 1442 N94-19770

NAVAL RESEARCH LAB., BAY SAINT LOUIS, MS.
The Navy tessellated spheroid map projection system: A comprehensive definition
[AD-A269989] p 1462 N94-18677
Parallel and vector adaptations of the underwater finite element parabolic equation model
[AD-A269990] p 1583 N94-18678
Color palette considerations for digital map displays
[AD-A269991] p 1462 N94-18679
Atlas of SSM/I satellite ice concentration interpolated to operational ice model domains of the Arctic for 1992
[AD-A270306] p 1499 N94-18727
Estimating the oceanic sound speed environmental for long-range acoustic propagation
[AD-A270231] p 1499 N94-18903
Faulted structure of the bottom simulating reflector on the Blake Ridge, western North Atlantic
[AD-A271289] p 1500 N94-19745

NAVAL RESEARCH LAB., WASHINGTON, DC.
Enhanced acceleration in a self-modulated-laser wakefield accelerator
[AD-A268452] p 1586 N94-18148
UVPI imaging from the LACE satellite: The Nihka rocket plume
[AD-A268456] p 1334 N94-18149
RADARC HF ionospheric prediction program for OTH radar
[AD-A269557] p 1385 N94-18291
Nonlinear Thomson scattering of intense laser pulse from beams and plasmas
[AD-A269556] p 1438 N94-18460
Ultraviolet plume instrument calibration and sensor assessment
[AD-A269687] p 1337 N94-18574
Designs for a 10.6 micrometer electromagnetic wiggler Free-Electron Laser (FEL)
[AD-A269695] p 1439 N94-18576
Efficient simulation of DEDS by means of standard clock techniques: Queueing and integrated radio network examples
[AD-A269878] p 1432 N94-18681
Morphology and characteristics of disturbed HF skywave channels
[AD-A269755] p 1388 N94-18722
A tunable compact high power far-infrared grating free-electron laser
[AD-A269875] p 1440 N94-18771
Connection machine software conversion of a Navy oceans model
[AD-A269876] p 1535 N94-18772
Neutral networks: An NRL perspective
[AD-A269122] p 1541 N94-18773
A user task analysis for command and control systems and its use in human-computer interaction research
[AD-A269877] p 1512 N94-18774
A high resolution ultraviolet Shuttle glow spectrograph
p 1325 N94-19174
Modeling of current features in Gulf Stream SAR imagery
[AD-A270734] p 1499 N94-19609
Template based low data rate speech encoder
[AD-A270900] p 1392 N94-19748
Control of integrated voice/data multi-hop radio networks via reduced-load approximations
[AD-A270661] p 1393 N94-19779
Measurements of ocean surface and bottom backscattering strengths in the northwestern Atlantic Ocean
[AD-A270893] p 1500 N94-19786
UVPI imaging from the LACE satellite: The Strypi rocket plume
[AD-A270967] p 1335 N94-19787

NAVAL SURFACE WARFARE CENTER, BETHESDA, MD.
Mechanical properties and impact damage resistance of composites fabricated by low cost, vacuum assisted, resin transfer molding
[AD-A270361] p 1342 N94-18702
Results of a joint Navy/Air Force operational test to evaluate USAF Integrated Maintenance Information Systems (IMIS), Interactive Electronic Technical Manual (IETM) technology applied to the F/A-18 aircraft
[AD-A271322] p 1619 N94-19571

NAVAL SURFACE WARFARE CENTER, DAHLGREN, VA.
NSWCWODET participation in Space Shuttle mission STS-46
[AD-A268875] p 1332 N94-18321
Absolute positioning by collecting Global Positioning System (GPS) data along short baselines

Detection of single molecules in microspheres
[DE93-017776] p 1567 N94-18493

The urban perspectives of acid rain
[DE93-018881] p 1474 N94-18523

Imaging and blackbody emission spectra of hot particulates generated during laser ablation
[DE93-015818] p 1439 N94-18724

CDIAC catalog of numeric data and computer model packages
[DE93-017675] p 1475 N94-18832

Development of ductile Fe3Al-based aluminides
[DE93-017865] p 1362 N94-18938

Survey of ceramic machining in Japan
[DE93-018277] p 1372 N94-18946

Tensile properties of as-cast iron-aluminide alloys
[DE93-017852] p 1363 N94-18975

Modeling of single-crystal laser-weld microstructures
[DE93-017853] p 1445 N94-18976

Energy Efficiency and Renewable Energy Program
[DE93-017936] p 1468 N94-18986

Software distribution using xnetlib
[DE93-018278] p 1523 N94-18989

Growth of epitaxial semiconductor alloys and superlattices with continuously variable composition by pulsed-laser ablation
[DE93-018726] p 1601 N94-18998

Inventory management plan for a research and development local area network
[DE93-018381] p 1617 N94-19026

Effects of irradiation temperature on Charpy and tensile properties of high-copper, low upper-shelf, submerged-arc welds
[DE93-017858] p 1445 N94-19047

An ORACLE CASE history: Experiences with ORACLE CASE tools
[DE93-010827] p 1617 N94-19057

Surface modification of sapphire for IR window application
[DE93-019168] p 1602 N94-19075

Coordination of software-development activities among sites that are geographically separated
[DE93-019201] p 1524 N94-19076

Research program activities of the ORNL Analytical Chemistry Division
[DE93-017938] p 1339 N94-19117

Densities and viscosities of ternary ammonia/water fluids
[DE93-015966] p 1351 N94-19118

Computer codes for checking, plotting and processing of neutron cross-section covariance data and their application
[DE93-018459] p 1570 N94-19129

Prediction of non-equilibrium solidification modes in austenitic stainless steel laser welds
[DE93-018457] p 1364 N94-19203

Atomic resolution electron energy loss spectroscopy in the scanning transmission electron microscope
[DE93-015334] p 1352 N94-19239

ICRF direct electron heating experiments in TFTR
[DE93-017857] p 1590 N94-19273

Low-aluminum-content iron-aluminum alloys
[DE93-017862] p 1365 N94-19274

Analytical and experimental evaluation of joining silicon nitride to metal and silicon carbide to metal for advanced heat engine applications
[DE93-018128] p 1446 N94-19291

PUMMA: Parallel Universal Matrix Multiplication Algorithms on distributed memory concurrent computers
[DE93-019163] p 1538 N94-19299

Robot navigation in unknown terrains: Introductory survey of non-heuristic algorithms
[DE93-019221] p 1316 N94-19300

Are bilinear quadrilaterals better than linear triangles?
[DE93-019223] p 1551 N94-19301

Analysis and design of robust decentralized controllers for nonlinear systems
[DE93-019224] p 1543 N94-19302

The Fourier analysis technique and epsilon-pseudo-eigenvalues
[DE93-018805] p 1551 N94-19337

Effect of EMP fields on cell membrane potentials
[DE93-015819] p 1503 N94-19341

Ceramic technology project data base
[DE93-019360] p 1374 N94-19561

A comparison of iterative methods for a model coupled system of elliptic equations
[DE93-040482] p 1553 N94-19655

Commercialization effort in support of electroslag-casting technology
[DE93-017988] p 1366 N94-19733

OAK RIDGE Y-12 PLANT, TN.

Summary report for supercritical carbon dioxide extraction and carbonization of Resorcinol-Formaldehyde (RF) foams
[DE93-016924] p 1346 N94-17987

Nondestructive inspection of graphite-epoxy laminates for heat damage using DRIFT and LPF spectroscopies
[DE93-017228] p 1343 N94-18761

OBSERVATOIRE CANTONAL, NEUCHATEL (SWITZERLAND).

Development of atomic standards at the Neuchatel Observatory p 1428 N94-18038

OFFICE NATIONAL D'ETUDES ET DE RECHERCHES AEROSPATIALES, PARIS (FRANCE).

Stability analysis through bifurcation theory, 1
p 1608 N94-18238

Stability analysis through bifurcation theory, 2
p 1608 N94-18239

Non-linear flight dynamics p 1319 N94-18240

A viscous-inviscid solver for high-lift incompressible flows over multi-element airfoils at deep separation conditions p 1306 N94-18425

The GARTEUR high lift research programme
p 1307 N94-18430

Viscous-inviscid calculation of high-lift separated compressible flows over airfoils and wings
p 1309 N94-18440

Fundamentals of infrared thermography
p 1431 N94-18648

Application of infrared thermography in fluid mechanics p 1431 N94-18649

Heat transfer quantitative characterization: Passive and active methods p 1431 N94-18650

Perspective and future possibilities
p 1431 N94-18651

OFFICE OF NAVAL RESEARCH, ARLINGTON, VA.

Naval research reviews. Mixing enhancement for air-breathing propulsion. Non-axisymmetric jets increase mixing, volume 44 and volume 45
[AD-A268966] p 1521 N94-18543

Technology, design, simulation, and evaluation for SEP-hardened circuits p 1399 N94-18352

UNIVERSITAET DER BUNDESWEHR MUENCHEN, NEUBIBERG (GERMANY).

Axial response of differently excited anchored viscous liquid bridges in zero-gravity
[LRT-WE-9-FB-1-1992] p 1379 N94-19489

Free fall liquid column dynamics in a droptower
[LRT-WE-9-FB-6-1992] p 1379 N94-19491

Transient response of a viscous and anchored liquid bridge to an axial pulse
[LRT-WE-9-FB-7-1992] p 1379 N94-19492

UNIVERSITEIT TWENTE, ENSCHEDE (NETHERLANDS).

Pegasus project description
[MEMO-INF-92-75] p 1536 N94-19159

Pegasus: Operating system support for distributed multimedia systems
[MEMO-INF-92-76] p 1536 N94-19160

A simple calculus of finite probabilistic processes
[MEMO-INF-93-08] p 1558 N94-19195

Reducing extended transition systems
[MEMO-INF-93-09] p 1526 N94-19196

Simulation models of UCN, FDDI-2 and DQDB
[MEMO-INF-93-10] p 1536 N94-19197

ACOS: A performance based approach to build a parallel complex object server
[MEMO-INF-93-11] p 1537 N94-19198

MART: An overview of the Mobile Autonomous Robot Twente project
[MEMO-INF-93-12] p 1543 N94-19199

Modelling software for structure metrics
[MEMO-INF-93-13] p 1526 N94-19200

Wide-address spaces: Exploring the design space
[MEMO-INF-92-77] p 1537 N94-19219

Abstracting inter-object communications using composition filters
[MEMO-INF-92-78] p 1526 N94-19220

DataTypeLog: A deductive object oriented query language
[MEMO-INF-92-79] p 1526 N94-19221

The TM typing rules
[MEMO-INF-92-80] p 1526 N94-19222

An annotated bibliography on parallel parsing: Updated version
[MEMO-INF-92-84] p 1537 N94-19223

Attribute evaluation during generalized parsing
[MEMO-INF-92-85] p 1526 N94-19224

Computer-assisted instruction and natural language systems
[MEMO-INF-92-86] p 1527 N94-19225

On asynchronous testing
[MEMO-INF-93-03] p 1543 N94-19226

Goal-driven LOTOS execution
[MEMO-INF-93-04] p 1527 N94-19227

Specification and verification of a dynamic leader election protocol in a broadcast network
[MEMO-INF-93-05] p 1558 N94-19228

The TM manual version 1.3 working document
[MEMO-INF-93-06] p 1527 N94-19229

A highly concurrent medium access control strategy for high speed multiwavelength networks using transceivers with limited tunability
[MEMO-INF-93-07] p 1390 N94-19230

Advances in architectural concepts to support distributed systems design
[MEMO-INF-93-17] p 1527 N94-19261

Stochastic grammars: Theory and applications
[MEMO-INF-93-19] p 1528 N94-19262

A unified performability evaluation framework for computer and communication systems
[MEMO-INF-93-21] p 1537 N94-19264

Adaptive uniformization: Technical details
[MEMO-INF-93-22] p 1558 N94-19265

Specifying and proving communication closedness in protocols
[MEMO-INF-93-23] p 1390 N94-19267

Action systems and action refinement in the development of parallel systems: An algebraic approach
[MEMO-INF-93-14] p 1538 N94-19296

A language of finite probabilistic processes and its interleaving semantics
[MEMO-INF-93-24] p 1558 N94-19354

Adaptive uniformization
[MEMO-INF-92-88] p 1558 N94-19385

Sensitivity and uncertainty analysis of Markov reward models
[MEMO-INF-92-89] p 1559 N94-19386

Updated Contributions to the Twente Workshop on Hamiltonian Graph Theory
[MEMO-1076] p 1554 N94-19683

Cycles containing all vertices of maximum degree
p 1554 N94-19686

Long paths and cycles in tough graphs
p 1554 N94-19689

UNIVERSITY OF CENTRAL FLORIDA, ORLANDO.

Final construction and operation of a continuous far-infrared free-electron laser for scientific applications
[AD-A269248] p 1440 N94-18912

UNIVERSITY OF EASTERN KENTUCKY, RICHMOND.

Analysis of deposit precursors in jet fuels using Fourier transform infrared spectroscopy
[AD-A269035] p 1377 N94-18489

UNIVERSITY OF SOUTHERN CALIFORNIA, LOS ANGELES.

An ab initio study of the weakly bonded CO-Cl2 complex
[AD-A269000] p 1349 N94-18395

Kinetic aspects of lattice mismatch in molecular beam epitaxial growth on planar and patterned substrates
[AD-A270424] p 1597 N94-18506

A multi-level data-flow architecture for signal and data processing applications
[DE93-041272] p 1539 N94-19588

UNIVERSITY OF SOUTHERN CALIFORNIA, MARINA DEL REY.

Employing knowledge resources in a new text planner architecture
[AD-A269669] p 1516 N94-17732

EXPECT: Intelligent support for knowledge base refinement
[AD-A269602] p 1612 N94-17745

Bias in planning and explanation-based learning
[AD-A269608] p 1610 N94-17746

Intelligent help facilities: Generating natural language descriptions with examples
[AD-A269555] p 1521 N94-18290

Retrieving and integrating data from multiple information sources
[AD-A269588] p 1615 N94-18461

On masking effect
[AD-A269593] p 1541 N94-18462

Flexible integration of path-planning capabilities
[AD-A269594] p 1541 N94-18463

Towards versatile and practical knowledge acquisition
[AD-A269596] p 1615 N94-18464

Automatic documentation generation: The interaction of text and examples
[AD-A269670] p 1616 N94-18570

Learning database abstractions for query reformulation
[AD-A269531] p 1616 N94-18641

Generating object descriptions: Intergrating examples with text
[AD-A269992] p 1522 N94-18680

ARPA/CSTO rapid VLSI implementation
[AD-A269170] p 1403 N94-18695

Automatically generating abstractions for planning
[AD-A269772] p 1541 N94-18759

UNIVERSITY OF SOUTHERN MISSISSIPPI, BAY SAINT LOUIS.
Preparation of data assimilation and model evaluation experiment data sets [AD-A269996] p 1498 N94-18665
UNIVERSITY OF SOUTHERN MISSISSIPPI, LONG BEACH.
Coastal Ocean Modeling Workshop [AD-A268955] p 1497 N94-18393
UNIVERSITY OF WESTERN AUSTRALIA, NEDLANDS.
Single phase dynamic CMOS PLA using charge sharing technique p 1397 N94-18341
UNIVERSITY OF WESTERN MICHIGAN, KALAMAZOO.
Correlated charge-changing ion-atom collisions [DE93-018717] p 1564 N94-17775
Search for resonant electron transfer and double excitation in Kr(sup 34+) + H2 collisions [DE93-018776] p 1569 N94-18999
Low-energy continuum-electron emission at 0 degrees from O(q+) + He collisions [DE93-018777] p 1570 N94-19108
UTAH UNIV., SALT LAKE CITY.
Characterization of fluid physics effects on cardiovascular response to microgravity (G-572) p 1323 N94-19163

CONTRACT NUMBER INDEX

SCIENTIFIC AND TECHNICAL AEROSPACE REPORTS VOLUME 32 NUMBER 4

Typical Contract Number Index Listing

AF PROJ. 2306 .... p 92 N94-11866

CONTRACT NUMBER | PAGE NUMBER | ACCESSION NUMBER

Listings in this index are arranged alphanumerically by contract number. Under each contract number the accession numbers denoting documents that have been produced as a result of research done under that contract are arranged in ascending order. The page number helps to locate the citation in the abstract section. The accession number denotes the number by which the citation is identified.

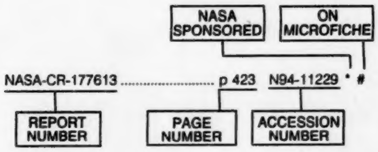
REPORT NUMBER INDEX

SCIENTIFIC AND TECHNICAL AEROSPACE REPORTS VOLUME 32 NUMBER 4

Typical Report Number Index Listing



Listings in this index are arranged alphanumerically by report number. The accession number denotes the number by which the citation is identified. The page number helps to locate the citation in the abstract section. An asterisk (*) indicates that the item is a NASA report. A pound sign (#) indicates that the item is available on microfiche.

APPENDIX

NASA SCIENTIFIC AND TECHNICAL INFORMATION PROGRAM PRODUCTS AND SERVICES

The NASA Scientific and Technical Information (STI) Program provides for the collection and announcement of aerospace-related reports and literature obtained worldwide through agreements and exchanges. The result of the collection is the comprehensive NASA STI Database that covers aeronautics, space, and supporting disciplines.

The STI Database, documents generated or obtained by NASA, and products and services derived from or supporting the database are made available to the NASA research community and to the public. Descriptions and sources of these items are presented in the following pages.

Scientific and Technical Aerospace Reports (STAR) is an abstract journal, listing citations with abstracts for aerospace-related reports obtained from worldwide sources. *STAR* is issued on the first of each month, and announces current documents that have been entered into the NASA STI Database during the previous month. The reports are of the following types:

- NASA, NASA contractor, and NASA grantee reports;
- Reports issued by other U.S. Government agencies, domestic and foreign institutions, universities, and private firms;
- Translations in report form;
- NASA-owned patents and patent applications
- Other U.S. Government agency and foreign patents and patent applications
- Domestic and foreign dissertations and theses.

Journal, book, and conference literature, journal translations, and certain foreign dissertations having the same subject scope as *STAR* are announced in a companion journal, *NASA Open Volumes on Aerospace (NOVA). NOVA* is issued on the 15th of each month and is available from the NASA Center for AeroSpace Information, at the address below.

ELIGIBILITY AND REGISTRATION FOR NASA STI PRODUCTS AND SERVICES

Organizations of the type listed below that have registered with NASA can receive products and services.

- NASA offices and installations, contractors, subcontractors, grantees, and consultants;
- Other U.S. Government agencies and their contractors;
- Libraries in the United States that have arrangements with NASA to maintain collections of NASA documents for public reference;
- Other organizations in the United States having a need for NASA documents in work related to aeronautics and space research;
- Organizations abroad that have established reciprocal documents exchange arrangements with NASA.

The central service points—central points of document acquisition and control within qualified organizations—or individuals are eligible to register for NASA STI products and services. Domestic organizations or individuals may be eligible to receive various classes of NASA publications and services and should address their requests for registration or further information to:

ATTN: Registration Services
NASA Center for AeroSpace Information
800 Elkridge Landing Road
Linthicum Heights, MD 21090-2934
301-621-0390

Organizations abroad should direct requests to:

National Aeronautics and Space Administration
Scientific and Technical Information Program (JTT)
International STI Program
Washington, DC 20546-0001
USA
703-271-5640

SUBJECT SCOPE

The subject scope of *STAR* and *NOVA* includes all aspects of aeronautics and space research and development, supporting basic and applied research, and applications. Aerospace aspects of Earth resources, energy development, conservation, oceanography, environmental protection, urban transportation, and other topics of high national priority are also covered.

HOW TO USE *STAR* SUBJECT CATEGORIES

Abstracts in *STAR* are categorized by 10 major subject divisions that are divided further into 76 specific subject categories. The subject divisions and categories are listed in the Table of Contents together with a note for each that defines its scope and provides any cross-references. For example:

> **16 SPACE TRANSPORTATION**
>
> Includes passenger and cargo space transportation, e.g., shuttle operations; and space rescue techniques. For related information see also *03 Air Transportation and Safety* and *18 Spacecraft Design, Testing and Performance*. For space suits see *54 Man/System Technology and Life Support.*

CROSS-REFERENCES

Individual *STAR* abstracts are not ordinarily cross-referenced, except for certain conference reports or book translations that have had separate abstracts written for their component papers or chapters. Citations and abstracts of the components follow immediately after those of the parent document. When the subject content of a component differs sufficiently from the general content of the parent, a cross-reference citation also is printed at the end of the category to which it normally would have been assigned if it were independent.

DOCUMENTS ON MICROFICHE

Documents available on microfiche are designated by a pound sign (#) following the accession number.

LIMITED REPRODUCIBILITY

A note of limited reproducibility appears in the citation, if there are factors affecting the reproducibility of more than 20% of the document. These factors include faint or broken type, color photographs, black and white photographs, foldouts, dot matrix print, or some other factor that limits the reproducibility of the document. This notation also appears on the microfiche header.

COLOR COPIES

An increasing number of NASA scientific and technical reports are being produced with color graphs, charts, illustrations, and photographs. An indication that a document has color pages follows the source and pricing (SAP) information in the *STAR* citation.

Registered users of the NASA Scientific and Technical Information Program will receive ordered documents with color at no additional cost, as long as stock copies of the document are available. Otherwise, an additional fee of $2.00 per color page will be charged. The NASA Center for AeroSpace Information staff will contact registered users to determine individual user's needs.

Patents and patent applications owned by NASA are announced in *STAR* under appropriate subject categories and are referenced in the *STAR* indexes. In the Report Number Index, patents are indexed by the NASA Case Number, and the U.S. Patent Class. Patent applications are indexed by the NASA Case Number and the U.S. Patent Application Serial Number.

Printed copies of patents (which are not microfiched) are available for purchase from the U.S. Patent and Trademark Office.

When ordering patents, the U.S. Patent Number should be used, and payment must be remitted in advance, by money order or check payable to the Commissioner of Patents and Trademarks. Prepaid purchase coupons for ordering are also available from the U.S. Patent and Trademark Office.

NASA patent application specifications are sold in both paper copy and microfiche by the NASA Center for AeroSpace Information (CASI). The N accession number should be used in ordering either paper copy or microfiche from CASI.

The patents and patent applications announced in *STAR* are owned by NASA and are available for royalty-free licensing. Requests for licensing terms and further information should be addressed to:

National Aeronautics and Space Administration
Associate General Counsel for Intellectual Property
Code GP
Washington, DC 20546-0001

SOURCES FOR DOCUMENTS

One or more sources from which a document announced in *STAR* is available to the public is ordinarily given on the last line of the citation. The most commonly indicated sources and their acronyms or abbreviations are listed below, and their addresses are listed on page A-6. If the publication is available from a source other than those listed, the publisher and his address will be displayed on the availability line or in combination with the corporate source line.

Avail: CASI. Sold by the NASA Center for AeroSpace Information. Prices for hard copy (HC) and microfiche (MF) are indicated by a price code following the letters HC or MF in the *STAR* citation. Current values for the price codes are given in the tables on page A-7.

NOTE ON ORDERING DOCUMENTS: When ordering publications from CASI, use the N accession number or other report number. It is also advisable to cite the title and other bibliographic identification.

Avail: SOD (or GPO). Sold by the Superintendent of Documents, U.S. Government Printing Office, in hard copy.

Avail: BLL (formerly NLL): British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England. Photocopies available from this organization at the price shown. (If none is given, inquiry should be addressed to the BLL.)

Avail: DOE Depository Libraries. Organizations in U.S. cities and abroad that maintain collections of Department of Energy reports, usually in microfiche form, are listed in *Energy Research Abstracts*. Services available from the DOE and its depositories are described in a booklet, *DOE Technical Information Center - Its Functions and Services* (TID-4660), which may be obtained without charge from the DOE Technical Information Center.

Avail: ESDU. Pricing information on specific data, computer programs, and details on Engineering Sciences Data Unit (ESDU) topic categories can be obtained from ESDU International Ltd. Requesters in North America should use the Virginia address while all other requesters should use the London address, both of which are on page A-6.

Avail: Fachinformationszentrum, Karlsruhe. Gesellschaft für wissenschaftlich-technische Information mbH 7514 Eggenstein-Leopoldshafen 2, Germany.

Avail: HMSO. Publications of Her Majesty's Stationery Office are sold in the U.S. by Pendragon

House, Inc. (PHI), Redwood City, CA. The U.S. price (including a service and mailing charge) is given, or a conversion table may be obtained from PHI.

Avail: Issuing Activity, or Corporate Author, or no indication of availability. Inquiries as to the availability of these documents should be addressed to the organization shown in the citation as the corporate author of the document.

Avail: NASA Public Document Rooms. Documents so indicated may be examined at or purchased from the National Aeronautics and Space Administration (JBD-4), Public Documents Room (Room 1H23), Washington, DC 20546-0001, or public document rooms located at NASA installations, and the NASA Pasadena Office at the Jet Propulsion Laboratory.

Avail: NTIS. Sold by the National Technical Information Service. Initially distributed microfiche under the NTIS SRIM (Selected Research in Microfiche) are available. For information concerning this service, consult the NTIS Subscription Section, Springfield, VA 22161.

Avail: Univ. Microfilms. Documents so indicated are dissertations selected from *Dissertation Abstracts* and are sold by University Microfilms as xerographic copy (HC) and microfilm. All requests should cite the author and the Order Number as they appear in the citation.

Avail: US Patent and Trademark Office. Sold by Commissioner of Patents and Trademarks, U.S. Patent and Trademark Office, at the standard price of $1.50 each, postage free. (See discussion of NASA patents and patent applications on page A-3.)

Avail: (US Sales Only). These foreign documents are available to users within the United States from the National Technical Information Service (NTIS). They are available to users outside the United States through the International Nuclear Information Service (INIS) representative in their country, or by applying directly to the issuing organization.

Avail: USGS. Originals of many reports from the U.S. Geological Survey, which may contain color illustrations, or otherwise may not have the quality of illustrations preserved in the microfiche or facsimile reproduction, may be examined by the public at the libraries of the USGS field offices whose addresses are listed on page A-6. The libraries may be queried concerning the availability of specific documents and the possible utilization of local copying services, such as color reproduction.

FEDERAL DEPOSITORY LIBRARY PROGRAM

In order to provide the general public with greater access to U.S. Government publications, Congress established the Federal Depository Library Program under the Government Printing Office (GPO), with 53 regional depositories responsible for permanent retention of material, inter-library loan, and reference services. At least one copy of nearly every NASA and NASA-sponsored publication, either in printed or microfiche format, is received and retained by the 53 regional depositories. A list of the regional GPO libraries, arranged alphabetically by state, appears on page A-8. These libraries are *not* sales outlets. A local library can contact a regional depository to help locate specific reports, or direct contact may be made by an individual.

PUBLIC COLLECTION OF NASA DOCUMENTS

An extensive collection of NASA and NASA-sponsored publications is maintained by the British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England for public access. The British Library Lending Division also has available many of the non-NASA publications cited in *STAR*. European requesters may purchase facsimile copy or microfiche of NASA and NASA-sponsored documents, those identified by both the symbols # and * from ESA — Information Retrieval Service European Space Agency, 8-10 rue Mario-Nikis, 75738 CEDEX 15, France.

SUBMITTING DOCUMENTS

All users of this abstract service are urged to forward reports to be considered for announcement in *STAR*. This will aid NASA in its efforts to provide the fullest possible coverage of all scientific and technical publications that might support aeronautics and space research and development. If you have prepared relevant reports (other than those you will transmit to NASA, DOD, or DOE through the usual contract- or grant-reporting channels), please send them for consideration to the NASA Center for AeroSpace Information, 800 Elkridge Landing Road, Linthicum Heights, MD 21090-2934.

Reprints of journal articles, book chapters, and conference papers are also welcome. These will be considered for announcement in *STAR's* companion journal, *NOVA*.

You may specify a particular source to be included in a report announcement if you wish; otherwise the report will be placed on a public sale at the NASA Center for AeroSpace Information. Copyrighted publications will be announced but not distributed or sold.

PURCHASE OF *STAR*

STAR is publicly available on annual subscription from the NASA Center for AeroSpace Information (CASI) at $94.00/domestic, $117.00/foreign. Single copy prices: $33.00/domestic, $41.00/foreign.

An annual, cumulative *STAR Index* is also available at $54.00/domestic, $65.00/foreign.

STAR is available to registered users on annual subscription from the NASA Center for AeroSpace Information, ATTN: Registration Services, 800 Elkridge Landing Road, Linthicum Heights, MD 21090-2934.
